

# THE HOME COMPANION

IN ACCIDENT, DISEASE, EMERGENCY, HEALTH, AND SICKNESS.

FORMING A SUPPLEMENT TO "THE HOME COMPANION," AN ILLUSTRATED WEEKLY MAGAZINE, PRICE ONE PENNY. PUBLISHED AT 69, FLEET-STREET, LONDON; AND SOLD BY ALL BOOKSELLERS.

SUPPLEMENT, No. 1.]

ALWAYS ON SALE.

[PRICE ONE PENNY.]

## INTRODUCTION.

"Accidents will happen in the best regulated families."—Children will play with fire and get burnt; horses will run away and break people's legs, ribs, collar-bones, or some other bones; little boys will leave orange-peel on the pavement to throw elderly people down and dislocate their limbs; dust or lime will blow in people's eyes; carts or horses will run over little children that get in the way, or won't get out of it; boats will upset and immerse people in the water and nearly drown them; quarrelsome people will fight and bruise or stab one another; adders will bite people that meddle with them, and sometimes those that won't; knives will slip and cut awkward persons' hands; and all sorts of accidents will happen, in spite of everything. They always have ever since I can remember; and then people say that things have gone on in this way ever since the world began. But this is not all.

Aldermen like good things, so do other people; but then they suffer for it; for they get indigestion, or apoplexy, or some other disease, and therefore we may set it down as a rule that what people call "good things" are in reality bad things. Young ladies will dance at parties, and then run into the cold draughty passages, or eat ices, or drink cold water when in a perspiration, and then their mammae wonder the next day how it is they are ill; besides, they will go out in pretty little thin shoes in cold, wet, drizzling weather, and without a bonnet or handkerchief on. How can they be astonished when the next morning introduces them to a sore throat or influenza? Yes, and the young men are not a bit better; they will wear thin boots and light coats in wet weather, because it looks stylish; and then they go and play cricket, or row, and drink cider, or cold water, or some other cold fluid, and lie down in the shade when over-heated. Now all this is very wrong, and I hope it is not altogether through wilfulness, or obstinacy, or whatever you may choose to call it. You know what is said about ladies on that point—

"When a woman will, she will—  
You may depend on't,  
And when she won't, she won't—  
And there's an end on't."

Now my object is to furnish such rules, hints, cautions, and directions, that, if followed, will assist in preventing, checking, or curing disease, alleviating pain, and perhaps preventing death or serious permanent injury, likely to result from accidents, imprudence, or wilfulness. We know that medical aid cannot always be commanded at once, especially in country towns or villages, and for want of proper directions many a life or limb may be lost, or rendered permanently useless; therefore to obviate such disastrous results I have compiled the following pages, which will furnish ample directions for all the common emergencies, diseases, and accidents that are likely to come under the notice of an individual during his career in life; and in order to make the directions more explicit, I have occasionally introduced neat little woodcuts. It should be borne in mind by every one that reads these pages, that I do not attempt to instruct them in the treatment of serious diseases or accidents, books will not supply this information; it is only to be acquired by practice and thought. My object is, 1st. to enable people generally to distinguish a disease or accident of a serious kind from one that requires only a simple remedy, so that professional aid may be sought immediately; 2nd. to enable all persons to treat simple diseases or accidents; 3rd. to enable any one to act in emergent cases until such time as medical aid can be procured.

In performing the task of compilation I have endeavoured to bring together as much useful information regarding each accident, or emergency, as could be crowded into a small volume, and have consulted all the best works, British and foreign, that bear upon the several subjects treated of, besides bringing a large stock of practical experience, acquired at home and in foreign countries.

In the directions given, I have endeavoured rather to secure simplicity of language than elegant diction; but there are words that will creep in (in fact they must be used), and this cannot be avoided, because no other words can be found to convey the same meaning. When my readers meet with such, let them consult either "Walker's Pronouncing Dictionary, revised by R. A. Davenport," or "Maunder's Treasury of Knowledge;" but in the absence of such works a common English dictionary will no doubt solve the difficulty.

If, after all my efforts, I shall have alleviated one suffering being, cured one aching body, prevented some serious injury by furnishing ample hints to obviate bungling or unnecessary interference, and saved either life, limb, health, happiness, or pocket, then my labours will be rewarded and my satisfaction complete.

THE HOME COMPANION.

## GENERAL DIRECTIONS FOR THE PRESERVATION OF HEALTH.

1. If you have a sound constitution, do not meet with any serious accidents, and follow the rules necessary to preserve health, I have no doubt that you will arrive at a good old age.
2. The chief conditions essential to health are—1. Pure air; 2. Good nourishing food; 3. Cleanliness; 4. Exercise; 5. Proper temperature; 6. Amusements; 7. Exemption from distress of mind and harassing cares; 8. Early rising.

### I.—PURE AIR.

3. The air fit for respiration or breathing, consists chiefly of two gases,—one called *oxygen*, which furnishes about 20 parts or measures in every 100 measures of air; and another called *nitrogen*, which furnishes about 80 parts or measures, and the remaining very small proportion consists of another gas, called *carbonic acid gas*.

4. When a full-grown, healthy person inhales the air, the lungs draw in about 20 cubic inches of it at every inspiration; and, therefore, he will use about 57 hogsheads in 24 hours. As the air passes into the lungs, it contains a large proportion of oxygen; but when it passes out, or is expired, it has lost the chief part of this gas, which is replaced by a greater proportion of carbonic acid gas; \* therefore, air once breathed is not fit to be breathed again.

5. When air contains any other ingredients than those enumerated above—viz., oxygen, nitrogen, and carbonic acid gas, or the proportions of those ingredients differ, it cannot be breathed for any length of time without producing injurious results.

6. The reason air is injurious when it contains too great a proportion of carbonic acid gas, is because this gas is not fit for respiration. You know that it is very dangerous to sit in a close room where there is a charcoal fire, and frequent cases have been recorded of persons dying in consequence; indeed, suicide has been committed by using a charcoal fire. Now the reason is this: the charcoal, when it burns, unites with the oxygen in the air of the room, and forms carbonic acid; if the air of the room does not contain much oxygen, the charcoal will not burn as well as if it does, because oxygen is a supporter of combustion, as well as life. This carbonic acid gas, about which I have told you, is often found in wells and pits, and would kill any one that went into them; therefore, if ever you have occasion to go down into such places, be sure and let down a lighted candle first, and if it goes out, you will know that it is very improper to descend, while the gas is there. Now, as you may want to know how this gas is to be got rid

\* For the manner in which the oxygen of the air acts upon the charcoal, and how carbonic acid is given off from the lungs, see *Family Friend*, vol. III., p. 150.

will tell you. Get some lime, and sprinkle it with water; throw it into the well, and wait for a short time; then lower your lighted candle, and if it burns, you can go down; but if it burns dimly, throw down a trifle more lime, and you may then descend with perfect safety, because the carbonic acid has united with the lime, and formed a carbonate of lime.

7. This carbonic acid gas, then, is generated, in all rooms where human beings, or breathing animals, are congregated; and, therefore, ventilation is required to carry off the vitiated air, and supply pure and respirable air.

8. Ventilation is required in all apartments, even our stables, and cow-houses, but especially in our sleeping apartments. Various methods have

Fig. 1.

been used for the purpose of ventilating rooms, and among others, that proposed by Dr. Arnott, which consists in making an aperture, opening into the chimney as near to the ceiling as possible. This aperture is fitted with a metal frame (Fig. 1, B), having a moveable part (A), which opens into the chimney, but cannot open into the room; therefore the return of smoke is prevented. The back part of the moveable piece is fitted with a weight which regulates its motion. These valves are generally made plain, but by attaching a piece of cord (C), and having a gilt frame, with a landscape painted on the moveable piece, as in Fig. 1, they may be made ornamental to a room. By means of this valve, the most impure air in a room is allowed to escape into the chimney, and as any person may admit this plan, from the Queen's in Buckingham Palace, where it was used many years ago, to the humblest peasant in the realm, I have given this plan in preference to any other mode; besides ventilation is too vast a subject to enter into fully now.

In ventilating large rooms, churches, town-halls, &c., it is desirable to

Fig. 2.

have shafts to admit fresh air, and one for the escape of foul air. A plan has been introduced of late years, which is exhibited in Fig. 2. The direction of the admission of air is seen by the arrows; the current of fresh air entering at the upper part on one side, according to the direction of the wind; that on the right of the diagram entering the room by the skirting-board, which is pierced with small holes, or narrow slits, of an inch in width, and nearly the depth of the skirting; and that on the left passing through the floor. The outlet for the vitiated air is placed in the centre of the ceiling, over the chandeliers, and this is

provided with a valve (v), which opens upwards; above this is a gaslight, (s) which rarefies the air, and so draws up the foul air from the room, like a cupping-glass does the blood from our bodies.

9. The chief points requiring attention in ventilating rooms or houses consist:—1. Of having an inlet for fresh air, and an outlet for vitiated air; 2. The air admitted should be as pure as possible free from local vitiations, such as drains, smoke of manufactories, &c.; 3. When air is admitted into an apartment, it should be at the lowest part, and the aggregate area of admission should be twice as great as that of the outlet; 4. When there are galleries in a hall, church, &c., they should be supplied with fresh air from the outside of the building, and not from the body of the room; 5. Air may be warmed when admitted into a large room, by making it pass over pipes filled with hot water; 6. All ventilating shafts, chimneys, &c., should be as smooth inside as possible, as every projection impedes the currents of air.

10. Where gas or oil is consumed for lighting a room, a large amount of carbonic acid and water is generated, and this takes place in every room where we have even candles. Now, the reason is this—the hydrogen of the gas, or oil, or tallow, unites with the oxygen of the air, taking eight measures of oxygen to one of itself, to form nine measures of water, which is deposited on the windows and walls, if provision is not made for its escape; then the carbon unites with a portion of the oxygen to form carbonic acid gas, six parts, by weight, of the carbon combining with sixteen parts, by weight, of oxygen.

11. Every room should have a fireplace, and particularly bed-rooms, but when there is not one, some other means of ventilation should be contrived, such as inserting a revolving ventilator like fig. 3, in the upper part of the room, over the door. Such a contrivance may be procured and fixed for about sixpence or eightpence, and when the upper sash of the window is left down for about an inch, the room will be rendered quite sweet and wholesome.

12. Whenever persons leave a room in which they have sat for some time, the window should be opened and the door set ajar; the same plan should be pursued with bed-rooms. I know many persons that sleep with their windows little open, and the plan is not objectionable except in damp weather. In high houses it is advisable to light the staircase by a sky-

light hung in the centre, so that it will serve for the purpose of ventilation as well.

## II.—FOOD.

13. It is highly necessary that the food partaken of by man should be of a nutritious kind, because there is a continual waste of substance going on, which therefore requires a continual supply of nutritious aliment or food to support it.

14. Our bodies are composed of certain essential elements, which they have not the power of forming or of changing into others; that is to say, we cannot create any one of the material elements entering into the composition of our bodies, nor can we change one of them into another; hence it follows that we must derive them from our food.

15. The elements of which our bodies are composed are thirteen:—1. carbon; 2. hydrogen; 3. oxygen; 4. nitrogen; 5. phosphorus; 6. sulphur; 7. iron; 8. chlorine; 9. sodium; 10. potassium; 11. calcium; 12. magnesium; 13. fluorine.

16. Man is designed to live on a mixed diet, experience proves that such is the case, and anatomy establishes it as a fact. We are not carnivorous or herbivorous, but omnivorous; that is to say, we do not live wholly upon flesh, or vegetables, but devour both kinds. It is found that the most perfect physical development, and greatest amount of intellect, is found among those races that adopt a mixed diet, and there is no question that a considerable variety of food is absolutely necessary for the preservation of health and life.

17. We have already learned (§ 14) that there are certain elements entering into our composition, and that we cannot form any one of them, but that they are derived from our food. Let us now see how some of them are supplied by the food. As infants we live upon milk, which is undoubtedly the best type we have of food, containing, as it does, a mixture of oleaginous, albuminous, and saccharine substances. The materials of which milk is composed are required and used to form cartilage, cellular tissue, membrane, &c. Then we are fed with farinaceous foods, sweetened with sugar, which contribute to form fat, and other foods furnish fibrine, albumen, casein, and gluten, to keep up the muscular and albuminous tissues. Fatty matters, saccharine and starchy compounds, act as fuel to maintain the animal heat, and save the tissues of the body from being injured by the excessive action of oxygen.

18. When food is taken into the mouth and masticated, it is mixed with the saliva and other fluids, and is then forced into the stomach, where it undergoes a peculiar process, being mixed with a fluid called the gastric juice, which is an acid secretion and powerful solvent and antiseptic. This juice converts the aliment or food into a homogeneous semi fluid pulpy mass called chyme, and the process has received the name of *chymification*, which we commonly call digestion, and the chyme itself formed is acid.

19. When the food has been chymified or digested, it passes from the stomach into one of the small intestines, where it is acted upon by the bile and other fluids, and becomes separated into two portions—one a milky kind of fluid called chyle, which is an alkaline, and another the refuse of the food, or excrementitious matter. The chyle is absorbed by small vessels, and conveyed to a particular part of the body, whence it is conveyed by a tube to be poured into the venous system, and thus nourish our bodies.

20. When improper food is taken, it cannot be digested so readily as that which is proper, hence it is returned from a particular part of the stomach (which acts as a sentry with orders not to let any undigested food pass) to be acted upon again by the gastric juice until it is fit for the purpose of nutrition.

21. Certain articles of food take a longer time to digest than others, because they are naturally more difficult of digestion. Fatty or oily matters are very difficult to digest, and therefore dyspeptic persons should never use these substances, as the gastric juice possesses very little influence on them, and the oily particles float on the contents of the stomach, becoming rancid, and giving off acrid volatile fatty acids, which cause heartburn, nausea, and eructations, which frequently end in vomiting. This is generally the case after eating fresh pork or mutton fats, goose, &c. From experiments and observations made by Dr. Beaumont, it appears that the frequent use of fatty matters causes the presence of bile in the gastric fluids; and that the gastric juice is better able to act upon these fatty matters when the bile is present. His experiments were made on a Canadian, who had an opening into his stomach caused by a gun-shot wound. By means of this opening, Dr. Beaumont was enabled to introduce various kinds of food into the stomach, and withdraw it from time to time for the purpose of making his observations. The experiments led him to determine the time required to digest fatty substances, which is as follows:

Food.	How Prepared.	Hours.	Minutes.
Beef, salt (fresh.)	Boiled.	5	30
Mutton, salt.	Boiled.	4	30
Butter.	Melted.	3	30
Cheese (old and strong.)	Ras.	3	30
Milk.	Raw.	2	15
Milk.	Boiled.	2	0
Liver (beef, fresh.)	Boiled.	2	0
Brains (animal.)	Boiled.	1	45

\* For the description, properties, &c., of these several substances, see "Familiar Lectures on Chemistry," by Family Tutor, vol. I., p. 11, and 12.

† See papers upon "The Physiology of Health and Disease," in Family Tutor, vol. I., p. 151, &c. [The Family Tutor is published fortnightly, by all Booksellers, price 2d.]

# IN ACCIDENT, DISEASE, EMERGENCY, HEALTH, AND SICKNESS.

22. All individuals that suffer from indigestion or dyspepsia should avoid fat meat, roast goose or duck, marrow, butter, oil, liver, brains, yolk of egg, milk, and especially cream; all kinds of fried food, rich cheese, melted butter, pastry, hashes, stews, and fat broths; buttered toast, or cakes, and suet puddings; nuts, walnuts, cocoa-nuts, chocolate, and, in fact, all oily or fatty matters that are apt to disturb the stomach, even mayonaisse, thyme, parsley, water-cresses, radishes, onions, and nutmeg; and all kinds of sauces, such as soy, catsup, &c.

23. Vegetables are not easily digested, the operation goes on slower than with meats and farinaceous substances. The following Table exhibits their relative digestibility:

Food.	How Prepared.	Hours.	Minutes.
Beets.	Boiled.	3.	15
Potatoes (Irish.)	Boiled.	3.	30
Turnips (Ant.)	Boiled.	3.	45
Carrots (orange.)	Boiled.	3.	15
Potatoes (Irish.)	Baked.	2.	30
" "	Roasted.	2.	40
Paranips.	Boiled.	2.	30
Cabbage.	Boiled.	1.	20

It therefore appears that potatoes are the most easily digested among the vegetable, and that cabbage is the least digestible. It is important that vegetable as well as other food should be masticated thoroughly to assist the process of digestion. We know by experience that mealy potatoes digest better than waxy ones, therefore dyspeptic persons should not eat new potatoes.

24. Animal food is facilitated in its digestion by perfect mastication or chewing, and tenderness of fibre. The digestibility of animal food, however, is influenced by many circumstances, such as age, fatness, freshness, mode of killing it, and sex. The flesh of young animals is more tender than that of older ones. The flesh of females is more tender than that of males; and that of emaculated animals more tender, and better flavoured than either of them. Fresh meat does not digest so well as that which has been kept; violent exertion previous to death makes the flesh more tender, hence the reason game is so much esteemed. The digestibility of various kinds of meat is given by Dr. Beaumont as follows:

Food.	How Prepared.	Hours.	Minutes.
Venison (steak.)	Broiled.	1.	35
Pig (suckling.)	Roasted.	2.	30
Lamb (fresh.)	Boiled.	2.	30
Pork (newly salted)	Baked.	3.	0
" "	Stewed.	3.	0
" (steak.)	Broiled.	3.	15
" (newly salted.)	Fried.	3.	15
" (fat and lean.)	Roasted.	3.	15
Beef (fresh & lean)	Roasted.	3.	0
" (steak.)	Stewed.	3.	0
" (fresh & lean, dried.)	Roasted.	3.	30
" (with mustard)	Boiled.	3.	30
" (old, hard, & salted.)	Fried.	4.	0
Vent (fresh.)	Boiled.	4.	15
" "	Broiled.	4.	0
Mutton (fresh.)	Fried.	4.	30
" "	Boiled.	3.	0
" "	Roasted.	3.	15

25. The digestibility of food is affected by the state of mind and body, habit, and many other circumstances relating to the individual. Passion retards digestion; and excitement of any kind is injurious. It is beneficial to rest before and after a meal, and this applies to mind as well as body. An hour's rest is of great importance; then exercise should follow; but the exercise should be moderate.

26. Certain foods are more nutritious than others, and I cannot do better than give the relative nutritive properties of flesh, fowl, and fish, in order that any one may choose for themselves:

Beef .....	26 parts of nutritive matter.
Veal .....	25 " "
Mutton .....	24 " "
Pork .....	24 " "
Chicken .....	27 " "
Cod .....	24 " "
Haddock .....	18 " "
Sole .....	31 " "

27. The time required for the digestion of food, by the healthy stomach, is from three to four hours; and food should not be taken for an hour or so after the stomach has disposed of its contents.

28. Dr. Coombs observes, that "the number and periods of our meals should be in proportion to the real wants of the system, as modified by age, sex, health, and manner of life, and as indicated by the true returns of appetite." It is well to have fixed periods for our meals; which should not exceed three for grown up people, although five is generally the number. Children require feeding more often than adults. The best time for breakfast is as soon after rising and dressing as possible, and the meal should consist of a light diet and coffee. It is improper for delicate persons to exercise either body or mind much before breakfast; it produces exhaustion and languor. Lanchon is not a necessary meal, except when the period between breakfast and dinner is too long. It should consist of a light diet,

and be partaken of about five hours after breakfast. Dinner should be taken about one or two o'clock; and after partaking of the most digestible food it is advisable to rest, if possible, for a short time; and then take a light supper. You remember the old saying,

"After dinner a walk,  
After supper a nap."

This should consist of a light nutritive diet, with a moderate quantity of tea or coffee, and be partaken of about six o'clock in the evening. Suppers are unnecessary to persons that dine late, and at any time lighter than dinner to those who take much exercise.

29. Food is rendered injurious to dyspeptic people by certain processes of cooking, but most animal and vegetable substances require the aid of the cook to make them digestible, except oysters, and some few fruits, such as pears, apples, &c. Pickling, salting, and smoking makes meat hard, and more indigestible, consequently unfit for persons labouring under indigestion, unless it be bacon. Boiling is the best process that food can undergo to make it digestible (see § 24). Over-boiling renders some food very indigestible,—for example, eggs; and it lessens the nutritive quality of others. Roasting, next to boiling, is the best method of cooking meat, which should not be underdone, or overdone. Broiling makes meat more savoury, but broiled meats are unsuited for persons with delicate stomachs. Baking and frying should never be practised for animal food, as it makes it very indigestible, and gives rise to unpleasant symptoms (see § 31). Baked rice, tapioca, and other kinds of puddings, are exceptions to this rule.

30. It is impossible to fix the proper amount of food to be taken at any one meal, as much will depend upon habits, age, constitution, and other conditions; but the following hints are worth remarking:—Never open your appetite; that is to say, do not eat until you are obliged to drop your knife and fork, because you cannot eat any more; rather endeavour to rise from your meal with a sense of satisfaction, ease, and some little appetite. Always remember that your stomach may be overworked the same as your body, and that, unlike yourself, it cannot cry out "Hold, enough!" when you give it too much to do.

31. When eating, chew your food slowly and thoroughly, so that it may be well mixed with saliva. If you eat too fast, it is not properly prepared for the operation of the gastric juice, and cannot afford your body so much nourishment as if it were thoroughly masticated. Never use too many kinds of food at one meal.

32. The best bread is that which is a day old; it may be dried from the loaf or made into dry toast. If ordinary bread disagrees with you, try the unfermented bread, avoid pastry, pancakes, dumplings, &c.

33. The best kinds of meat for dyspeptic people are beef and mutton; fowls or chicken (boiled); and rabbits. If you are troubled with indigestion, avoid pork, either fresh or pickled, veal, ducks, geese, or lamb.

34. The best kinds of fish are soles, whiting, and oysters; the two latter boiled and eaten without butter, and the latter eaten raw.

35. The best vegetables are potatoes, nicely boiled and mashed, or baked in their skins (see § 23). Avoid peas, beans, and cabbage.

36. Drink water, or toast and water, and, if necessary, add a little brandy, as wine is apt to disagree with dyspeptic people. Allsop's pale ale is a mild, tonic malt liquor, and less objectionable than most fermented liquors. Tea and coffee are not objectionable, if not too strong. Avoid chocolate and cocoa.

## III.—CLEANLINESS.

37. It is highly important that the skin should be frequently cleansed, in order to remove the residue of the fluid poured out through its minute orifices. If this residue is not removed by some means, certain diseases are produced, or, at the least, aggravated.

38. The best method of cleansing the skin is to wash it frequently,—not merely the face and hands, but the whole body; therefore it is desirable to bathe, or to use cold affusion.

39. Baths are divided into warm and cold—the former comprising hot, tepid, and vapour baths, and the latter the plunge and shower bath. To this we may add cold affusion.

40. A hot bath ranges from 97° to 106° of Fahrenheit, and is used to promote a copious perspiration. A tepid bath ranges from 86° to 98° Fahrenheit; and the vapour bath from 109° to 130° Fahrenheit. The two last are used in acute rheumatism, gout, and skin diseases. The period of immersion or use should not be less than twenty minutes, nor exceed one hour. An excellent vapour bath is made by placing a bucket of boiling water under the chair upon which a person is seated, and surrounding the chair and person with a blanket. When the vapour decreases, throw a hot brick into the bucket. If the vapour of sulphur is required, the bath should be superintended by a medical man.

41. There are several forms of warm bath, such as the foot bath, the hip bath, and the hand bath; but warm water is the remedy employed, except in certain cases ordered otherwise by a medical man.

42. The plunge bath varies in temperature from 42° to 58° Fahrenheit. If properly used, it increases the circulation and muscular elasticity, gives strength to the whole system, and promotes the secretions. It should never be taken by those who are in a delicate state of health without the advice of a medical man. To benefit by this bath, the bather should be warm, and only make three plunges, and then come out of the bath. He should then get an agreeable glow over the whole body, and a sense of being refreshed; but if the immersion be too long, the action of the heart and vessels becomes languid, a sense of coldness at the stomach is felt, and sometimes faintness.

and alarming symptoms ending in death follow, especially if the temperature is under 50°.

43. The *shower bath* is too well known to need any description. Its use should be avoided in advanced life, every period of pregnancy, certain diseases of the chest, and early infancy. Its beneficial effect is increased by keeping the feet in warm water during the shower; this is found to be the case in chronic headache and some nervous affections. If not in good health never use this bath without consulting a medical man.

44. *Cold affusion* is performed by suddenly pouring water over the whole surface of the body, either by means of a sponge or a jug. It is a modification of the shower bath, and is extremely useful in nervous complaints, and is an excellent prophylactic.

45. Next to washing and bathing, frequent change of the clothing next to the skin tends to keep the body in health. The teeth also require cleaning.

#### IV.—EXERCISE.

46. Exercise may be muscular, general active, general passive, or mental.

47. Muscular exercise is extremely useful; it develops the active organs of locomotion—the muscles—and increases the circulation and nervous energy.

48. Muscular exercise should not be protracted to any great extent when persons are of delicate constitutions or their systems debilitated by diseases. It should be gradual and easy.

49. All muscular exertion practised for the benefit of the health should be voluntary to have the desired effect. It should be made a pastime, not a task.

50. Active bodily exercise consists in walking, running, jumping, riding, dancing, rowing, boxing, &c. These may be made amusing as well as healthful; and when the weather does not permit females to walk or ride, the exercise of driving, or throwing a few small leather balls over the head, can be practised in-doors. The former is exhilarating, and the latter tends to expand the chest and increase the circulation.

51. All bodily exercise must be proportioned to the strength and health of people.

52. Passive bodily exercise consists in sailing, carriage-riding, boating, &c.

53. Mental exercise should not be too severe; the brain should not be abused; it requires rest as well as the muscles. An inactive life is bad; but beware of taxing the brain too much. Remember that many eminent men have killed themselves by intense study.

54. Repose of body is necessary as well as repose of mind, and eight hours is a fair allowance for adults; however, many persons only take six.

Fig. 4.

#### V.—TEMPERATURE.

55. Sudden alternations of heat and cold are injurious, especially to young persons; therefore the clothing should be adapted to the temperature of the season of the year and the climate.

56. When persons have damp or wet clothes on them, they should change them as soon as possible, because the evaporation of the watery particles will reduce the temperature of the body, check the perspiration, and cause inflammation of some part.

57. The proper temperature for the body, in health, ranges from 60° to 72°.

58. Dry and sufficient clothing is a great remedy against disease; it prevents colds, rheumatism, fevers, and many other serious disorders.

#### VI.—AMUSEMENTS.

59. Amusements may be solitary to many. Among the former, we may class reading and drawing; and among the latter, dancing, music, theatrical exhibitions, lectures, &c.

60. The object of amusements should be to combine instruction with pleasure, and so to please the mind.

61. Amusements may be sensual, intellectual, and moral. The first is to be avoided, the others to be cultivated; for all that can ennoble us, and place us higher in the scale of creation, is to be cherished and applauded.

#### VII.—EXEMPTION FROM HARASSING CARES.

62. Mental distress and anxiety act injuriously upon the body, and tend to shorten life. We can scarcely have a better example of this than in medical men, who seldom live to a great age. But let us see what Dr. Caspar, of Berlin, says about the duration of life: "Taking 100 individuals in each class, the number who attained the age of 70 have been among divines, 42; agriculturists, 40; employes in high offices, 35; mercantile persons, 35; military men, 32; employes in lower offices, 32; advocates, 28; teachers—professors, 27; medical men, 24."

63. The continuance of life depends upon the physical condition of the body, which is influenced by the mind; hence it is affirmed that married men live longer than bachelors, because it is supposed, notwithstanding all the cares attending the matrimonial state, that they are much happier. Dr. Caspar, of Berlin, thus speaks of the relative mortality: "The mortality of bachelors, from the age of 30 to 45, is 27 per cent. Of married men of the same ages, 18 per cent. For 41 bachelors who attain the age of 40, there are 78 married men. The difference is more striking as age advances. At the age of 60 there are but 28 bachelors alive for 48 married."

men; at 70 years, 11 bachelors for 27 married men; and at 80 years, for 3 bachelors there are 9 married men."

#### VIII.—EARLY RISING.

64.—Early rising conduces to health and to prolong life; and I might cite many examples of men who attained a great age and were always early risers. The Duke of Wellington is a remarkable instance of this; Napoleon is another.

65. Perhaps you remember the old maxim,

"Early to bed, early to rise,  
Makes a man healthy, wealthy, and wise."

Do not forget this distich, because it contains much useful advice.

#### MEDICINES.

##### ARTICLES REQUIRED FOR MIXING MEDICINES.

66. Three glass measures, one to measure ounces, another to measure drachms, and a measure for minims or small doses.

A pestle and mortar of glass or Wedgwood ware, a glass funnel, and glass stirring rods.

A spatula or flexible knife for spreading ointments, making pills, &c.

A set of scales and weights.

A small slab of marble, slate, or porcelain, for making pills upon, mixing ointments, &c.

##### WEIGHTS AND MEASURES USED FOR MEDICINES.

67. *Weights.*—When you open your box containing the scales and weights, you will observe that there are several square pieces of brass of different sizes and thicknesses, and stamped with a variety of characters. These are the weights, which I will now explain to you.

68. Medicines are made up by troy weight, although drugs are bought by avoirdupois weight, and of course you know that there are only 12 ounces to the pound troy, which is marked lb.; then each ounce, which contains 8 drachms, is marked ʒi.; each drachm, containing 3 scruples, is marked ʒi.; and each scruple of 20 grains is marked ʒi. The grain weights are marked by little circles, each circle signifying a grain.

For example, fig. 5 represents a five-grain weight. Besides these weights you will find others marked ʒss, which means ½ a scruple; ʒss, meaning ½ a drachm; and ʒss, meaning ½ an ounce.

When there are ounces, drachms, or scruples, the number of them is shown by Roman figures, thus: i. ii. iii. iv. v., &c., and prescriptions are written so.

69. *Measures.*—Liquid medicines are measured by the following Table:

60 minims.....	are contained in	1 fluid drachm.
8 fluid drachms.....		1 fluid ounce.
16 fluid ounces.....		1 pint.
8 pints.....		1 gallon.

and the signs which distinguish each are as follows:—c, means a gallon; o, a pint; ʒ, a fluid ounce; ʒ, a fluid drachm; and m, a minim.

Fig. 6.

71. In order that we may measure medicines accurately, we have graduated glass vessels (Fig. 6): 1. for measuring ounces; 2. for drachms and minims; and 3. for minims.

72. When proper measures are not at hand, it is necessary to adopt some other method of determining the quantities required, and therefore I have drawn up the following table for that purpose:

A tumbler.....	usually contains about	10 ounces.
A taceup.....		6 "
A wineglass.....		2 "
A tablespoon.....		5 drachms.
A dessertspoon.....		3 "
A teaspoon.....		1 "

Some persons keep a medicine-glass, which is graduated, so as to show the number of spoonfuls it contains.

##### PROCESSES OF MAKING MEDICINES.

73. *To powder substances.*—Place the substance in the mortar and strike it gently with direct perpendicular blows of the pestle, until it separates into several pieces, then remove all but a small portion, which bruise gently at first, and then triturate it; that is, rub the pestle round and round the mortar from right to left, or in the direction of the arrows in fig. 7, observing that the circles described by the pestle in the mortar should gradually decrease in diameter, and the increase again, as in fig. 8, because by this means every part of the powder is subjected to the process of pulverization.

Fig. 7.

Fig. 8.

74. Some substances require to be prepared in a particular manner before they can be powdered, or to be assisted by adding some other body. For example, camphor powders more easily when a few drops of spirits of wine are added to it; mace, nutmegs, and such oily aromatic substances are better for the addition of a little white sugar; resins and gum resins should be powdered in a cold place,

and if they are intended to be dissolved, a little fine well washed white sand mixed with them assists the process of powdering. Tough roots, like gentian and columba, should be cut into thin slices; and fibrous roots, like ginger, cut in length, otherwise the powder will be full of small fibres. Vegetable matters require to be dried before they are powdered, such as peppermint, loosestrife, senna, &c.

75. Be careful not to pound too hard in a glass, porcelain, or Wedgewood's ware mortar; they are intended only for substances that pulverize easily, and for the purpose of mixing or incorporating medicines. Never use acids in a marble mortar, and be sure that you do not powder galls or any other astringent substances in an iron mortar.

76. Sifting is frequently required after powdering substances, and this is usually done by employing a fine sieve, or tying the powder up in a piece of muslin, and striking it against the left hand over a piece of paper.

77. Filtering is frequently required for the purpose of obtaining clear fluids, such as infusions, eye-washes, and other medicines; and it is therefore proper that you should know how to perform the simple operation. We must first of all make the filter-paper; this is done by taking a square sheet of white blotting-paper (A B C D, fig. 9), and doubling it over (at A B), so as to form an angular piece, which is then doubled upon itself (at A E), and the base rounded off (so as to leave it like the shaded part). We next procure a piece of iron or copper wire, and twist it into the form of fig. 10. This is to place the funnel, to prevent it passing too far into the neck of the bottle. We must now open out the filter-paper very carefully, and having placed it in the funnel, moisten it with a little water. Then place the wire (fig. 10) in the space (A fig. 11) between the funnel and the bottle, and pour the liquid down one of the glass stirring-rods, or gently down the side of the paper, otherwise the fluid is apt to burst the paper.

78. Maceration is another process that is frequently required to be performed in making up medicines, and consists simply in immersing the medicines in cold water or spirits for a certain time.

79. Digestion resembles maceration, except that the process is assisted by a gentle heat. The ingredients are placed in a Florence flask, such as salad oil is sold in, which is fitted with a plug of tow or wood, and has a piece of wire twisted round the neck, as in fig. 12. The flask is held by means of the wire over the flame of a spirit lamp, or else placed in some sand warmed in an old iron saucepan over the fire, care being taken not to place more of the flask below the sand than the portion occupied by the ingredients.

80. Infusion is one of the most frequent operations required in making up medicines, its object being to extract the aromatic and volatile principles of substances that would be lost by decoction or digestion; and to extract the soluble from the insoluble parts of bodies. Infusions may be made with cold water, in which case they are weaker, but more pleasant. The general method employed consists in slicing, bruising, or powdering the ingredients first, then placing them in a common jug (which should be as globular as possible) and pouring boiling water over them; cover the jug with a cloth folded six or eight times, but if there is a lid to the jug so much the better; when the infusion has stood the time directed, hold a piece of very coarse linen over the spout, and pour the liquid through it into another jug.

81. Decoction, or boiling, is employed to extract the mucilaginous or gummy parts of substances, their bitter, astringent, or other qualities, and is nothing more than boiling the ingredients in a saucepan with the lid slightly raised. Be sure never to use an iron saucepan for astringent decoctions, such as oak bark, galls, &c., as it will turn the saucepan black and spoil the decoction. The enamelled saucepans are very useful for decoctions, but an excellent plan is to put the ingredients into a jar and boil the jar, thus preparing it by a water bath, as it is technically termed.

82. Extracts are made by evaporating the liquors obtained by infusion or decoction, but these can be bought much cheaper and better of chemists and druggists, and so can tinctures, confections, cerates, plasters, and syrups, but as every one is not always in the neighbourhood of druggists, I shall give recipes for those most generally useful, and the method of making them.

#### PRECAUTIONS TO BE OBSERVED IN GIVING MEDICINES.

83. Sex.—Medicines for females should not be so strong as those for males, therefore it is advisable to reduce the doses about  $\frac{1}{3}$ th.

84. Temperament.—Persons of a phlegmatic temperament bear stimulants and purgatives better than those of a sanguine temperament, therefore the latter require smaller doses.

85. Habits.—Purgatives never act so well upon persons accustomed to take them, as upon those who are not, therefore it is better to change the form of purgative from pill to potion, powder to draught, or aromatic to saline. Purgatives should never be given when there is an irritable state of the bowels.

86. Stimulants and narcotics never act so quickly upon persons accustomed to use spirits freely, as upon those who live abstemiously.

\* A very convenient and ingenious plan of sifting powders is described and illustrated in the fifth volume of *Family Friend*, p. 206. [The *Family Friend* is published weekly by all Booksellers, price 2d.]

† For the directions respecting the decanting, straining, and filtering of liquids, see *Family Friend*, vol. v., p. 174.

87. Climate.—The action of medicines is modified by climate and seasons. In summer certain medicines act more powerfully than in winter, and the same person cannot bear the dose in July that he could in December.

88. General Health.—Persons whose general health is good bear stronger doses than the debilitated, and those who have suffered for a long time.

89. Idiosyncrasy.—Walker will inform you that this long term means a peculiar temperament or disposition not common to people generally. For example, some persons cannot take calomel in the smallest dose without being salivated, or rhubarb without having convulsions; others cannot take squills, opium, senna, &c., therefore it is wrong to insist upon their taking these medicines.

90. Form Best Suited for Administration.—Fluids act quicker than solids; and powders sooner than pills.

91. Best Method of Preventing the Nauseous Taste of Medicines.—Castor oil may be taken in milk, coffee, or spirit, such as brandy; but the best method of covering the nauseous flavour is to put a tablespoonful of strained orange juice in a wine-glass, pour the castor oil into the centre of the juice, and then squeeze a few drops of lemon-juice upon the top of the oil. Cod-liver oil may be taken like castor-oil in orange-juice. Peppermint-water almost prevents the nauseous taste of Epsom salts; a strong solution of extract of liquorice covers the disagreeable taste of aloes; milk, that of cinchona bark; and cloves that of senna.

92. An excellent way to prevent the taste of medicines is to have the medicine in a glass, as usual, and a tumbler of water by the side of it, then take the medicine and retain it in the mouth, which should be kept closed, and if you then commence drinking the water, the taste of the medicine is washed away. Even the bitterness of quinine and aloes may be prevented by this means.

93. Giving Medicines to Persons.—Medicines should be given in such a manner that the effect of the first dose should not have ceased when the next dose is given, therefore the intervals between the doses should be regulated accordingly.

#### DOSES OF MEDICINE FOR DIFFERENT AGES.

94. It must be plain to every one that children do not require such powerful medicine as adults, or old people, and therefore it is desirable to have some fixed method of determining or regulating the administration of doses of medicine. Now, we will suppose that the dose for a full-grown person is one drachm, then the following proportions will be suitable for the various ages given; keeping in view other circumstances such as sex, temperament, habits, climate, state of general health, and idiosyncrasy.

Age.	Proportion.	Proportionate Dose.
Weeks 7	one-fiftieth	of grains 4
Months 7	one-twelfth	of grains 5
Under 2 years	one-eighth	of grains 7½
" 3	one-sixth	of grains 10
" 4	one-fourth	of grains 15
" 7	one-third	of scruple 2
" 11	one half	of drachm 1
" 20	two-fifths	of scruple 2
Above 21	the full dose	of drachm 1
" 65	The inverse gradation of the above.	

#### TERMS USED TO EXPRESS THE PROPERTIES OF MEDICINES.

*Absorbents* are medicines which destroy acidities in the stomach and bowels, such as magnesia, prepared chalk, &c.

*Alteratives* are medicines which restore health to the constitution, without producing any sensible effect, such as sarsaparilla, sulphur, &c.

*Analeptics* are medicines that restore the strength which has been lost by sickness, such as gentian, bark, &c.

*Anodynes* are medicines which relieve pain, and they are divided into three kinds, *purgatives*, *hypnotics*, and *narcotics* (see these terms); camphor is anodyne as well as narcotic.

*Antacids* are medicines which destroy acidity, such as lime, magnesia, soda, &c.

*Antalkalics* are medicines given to neutralize alkalies in the system, such as citric, nitric, or sulphuric acids, &c.

*Anthelmintics* are medicines used to expel and destroy worms from the stomach and intestines, such as turpentine, cowhage, male fern, &c.

*Antibilious* are medicines which are useful in bilious affections, such as calomel, &c.

*Antirheumatics* are medicines used for the cure of rheumatism, such as colchicum, iodide of potash, &c.

*Antiscorbutics* are medicines against scurvy, such as citric acid, &c.

*Antiseptics* are substances used to correct putrefaction, such as bark, camphor, &c.

*Antispasmodics* are medicines which possess the power of overcoming spasms of the muscles, or allaying severe pain from any cause unconnected with inflammation, such as valerian, ammonia, &c.

*Aperients* are medicines which move the bowels gently, such as dandelion-root, &c.

*Aromatics* are cordial, spicy, and agreeably-flavoured medicines, such as cardamoms, cinnamon, &c.

*Astringents* are medicines which contract the fibres of the body, diminish excessive discharges, and act indirectly as tonics, such as oak-bark, galls, &c.

*Attenuants* are medicines which are supposed to thin the blood, such as ammoniated iron, &c.

*Balanoids* are medicines of a soothing kind, such as tolu, Peruvian bark, &c.

**Carminatives** are medicines which allay pain in the stomach and bowels, and expel flatulence, such as aniseed-water, &c.

**Cathartics** are strong purgative medicines, such as jalap, &c.

**Cordials** are exhilarating and warming medicines, such as aromatic confection, &c.

**Corratives** are medicines and food which increase the strength, such as iron, gentian, sago, &c.

**Demulcents** correct acrimony, diminish irritation, and soften parts by covering their surfaces with a mild and viscid matter, such as linseed-tea, &c.

**Diasthetics** are medicines which remove obstructions, such as iodide of potash, &c.

**Diaphoretics** clean the surfaces over which they pass, such as soap, &c.

**Diaphoretics** produce perspiration, such as tartrate of antimony, &c.

**Digestives** are remedies applied to ulcers or wounds, to promote the formation of matter, such as resin ointments, warm poultices, &c.

**Disruptants** possess the power of repelling or resolving tumours, such as galbanum, &c.

**Diuritics** act upon the kidneys and bladder, and increase the flow of urine, such as nitre, squilla, &c.

**Drastics** are violent purgatives, such as gamboge, &c.

**Emetics** produce vomiting, or the discharge of the contents of the stomach, such as mustard, tartar emetic, warm water, &c.

**Emollients** are remedies used externally to soften the parts they are applied to, such as spermaceti, palm oil, &c.

**Epiuritics** are medicines which blister or cause effusion of serum under the cuticle, such as Spanish flies, &c.

**Errhines** are medicines which produce sneezing, such as tobacco, &c.

**Escarotics** are medicines which corrode or destroy the vitality of the part to which they are applied, such as lunar caustic, &c.

**Expectorants** are medicines which increase expectoration, or the discharge from the bronchial tubes, such as ipecacuanha, &c.

**Febri-fuges** are remedies used in fevers, such as antimonial wines, &c.

**Hydragogues** are medicines which have the effect of removing the fluid of dropsy, by producing water evacuations, such as gamboge, calomel, &c.

**Hypnotics** are medicines that relieve pain by procuring sleep, such as hops, &c.

**Laxatives** are medicines which cause the bowels to act rather more than natural, such as magnesia, &c.

**Narcotics** are medicines which cause sleep or stupor, and allay pain, such as opium, &c.

**Nutrients** are remedies that nourish the body, such as sugar, sago, &c.

**Paragorics** are medicines which actually assuage pain, such as compound tincture of camphor, &c.

**Prophylactics** are remedies employed to prevent the attack of any particular disease, such as quinine, &c.

**Purgatives** are medicines that promote the evacuation of the bowels, such as senna, &c.

**Refrigerants** are medicines which suppress an unusual heat of the body, such as wood-sorrel, tamarind, &c.

**Rubefacients** are medicaments which cause redness of the skin, such as mustard, &c.

**Sedatives** are medicines which depress the nervous energy, and destroy sensation, so as to compose, such as foxglove, &c.

**Salagogues** are medicines which promote the flow of saliva or spittle, such as salt, calomel, &c.

**Soporifics** are medicines which induce sleep, such as hops, &c.

**Stimulants** are remedies which increase the action of the heart and arteries, or the energy of the part to which they are applied, such as saffron, which is an internal stimulant, and savine, which is an external one.

**Stomachics** restore the tone of the stomach, such as gentian, &c.

**Styptics** are medicines which constrict the surface of a part, and prevent the effusion of blood, such as kino, &c.

**Sudorifics** promote profuse perspiration or sweating, such as ipecacuanha, &c.

**Tonics** give general strength to the constitution, restore the natural energies, and improve the tone of the system, such as chamomile, &c.

**Vesicants** are medicines which blister, such as strong liquid ammonia, &c.

## DRUGS, &c., WITH THEIR PROPERTIES AND DOSES.

96. I have arranged the various drugs, &c., according to their properties, and have given the doses of each; but in compiling this list I have necessarily omitted many from each class, because they cannot be employed except by a medical man. The doses are meant for adults.

97. Medicines have been divided into four grand classes—1. General Stimulants; 2. Local Stimulants; 3. Chemical Remedies; 4. Mechanical Remedies.

### I.—GENERAL STIMULANTS.

98. General stimulants are subdivided into two classes, diffusible and permanent stimulants; the first comprising narcotics and anti-spasmodics, and the second tonics and astringents.

99. Narcotics are medicines which stupify and diminish the activity of the nervous system. Given in small doses, they generally act as stimulants, but an increased dose produces a stupifying effect. Under this head we include alcohol, camphor, ether, the hop, and opium.

100. Alcohol, or rectified spirit, is a very powerful stimulant, and is never used as a remedy without being diluted to the degree called proof spirit; and even then it is seldom used internally. It is used externally in restraining bleeding, when there is not any vessel of importance wounded. It is

also used as a lotion to burns, and is applied by dipping a piece of lint into the spirit, and laying it over the part. Freely diluted (one part to eighteen) with water, it forms a useful collyrium, or wash, in the last stage of ophthalmia. Used internally, it acts as a very useful stimulant when diluted and taken moderately, increasing the general excitement, and giving energy to the muscular fibres; hence it becomes very useful in certain cases of debility, especially in habits disposed to create acidity; and in the low stage of low fevers. Dose.—It is impossible to fix anything like a dose for this remedy, as much will depend upon the individual; but diluted with water, and sweetened with sugar, from half an ounce to two ounces may be given three or four times a day. In cases of extreme debility, however, much will depend upon the disease. Caution.—Remember that alcohol is an irritant poison, and that the indulgence in its use daily originates dyspepsia or indigestion, and many other serious complaints. Of all kinds of spirits, the best cordial and stomachic is brandy.

101. Camphor (*Camphoru*) is not a very steady stimulant, as its effect is transitory; but in large doses it acts as a narcotic, abating pain, and inducing sleep. In moderate doses it operates as a diaphoretic and anti-spasmodic, increasing the heat of the body, allaying irritation, and spasm. It is used externally as a liniment when dissolved in oil, alcohol, or acetic acid, being employed to allay rheumatic pains; and it is also useful as an embrocation in sprains, bruises, chilblains, and, when combined with opium, it has been advantageously employed in flaccid colic, and severe diarrhoea, being rubbed over the bowels. When reduced to a fine powder, by the addition of a little spirit of wine, and friction, it is very useful as a local stimulant to indolent ulcers, especially when they discharge a foul kind of matter; a pinch is taken between the finger and thumb, and sprinkled into the ulcer, which is then dressed as usual. When dissolved in oil of turpentine, and a few drops are placed in a hollow tooth and covered with jeweller's wool, or scraped lint, it gives almost instant relief to tooth-ache. Used internally, it is apt to excite nausea, and even vomiting, especially when given in the solid form. As a stimulant it is of great service in all low fevers, malignant measles, malignant sore throat, and running snail-pox; and when combined with opium and bark, it is extremely useful in checking the progress of malignant ulcers, and gangrene. As a narcotic it is very useful, because it allays pain and irritation without increasing the pulse very much. When powdered and sprinkled upon the surface of a blister, it prevents the cantharides acting in a peculiar and painful manner upon the bladder; combined with senna it increases its purgative properties; and it is also used to correct the nausea produced by squills, and the irritating effects of drastic purgatives and mezerion. Dose.—From four grains to one scruple, repeated at short intervals when used in small doses, and long intervals when employed in large doses. Doses of the various preparations.—Camphor mixture from  $\frac{1}{2}$  an ounce to 3 ounces; compound tincture of camphor (*Puregoric Elixir*) from 15 minims to 1 drachm. Caution.—When given in an over-dose it acts as a poison, producing vomiting, giddiness, delirium, convulsions, and sometimes death. Mode of Exhibition.—It may be rubbed up with almond emulsion, or mucilage, or the yolk of eggs, and by this means suspended in water, or combined with chloroform as a mixture, in which form it is a valuable stimulant in cholera and other diseases. (See Mixtures).

102. Ether is a diffusible stimulant, narcotic, and anti-spasmodic. Sulphuric ether (*Spiritus Aetheris Sulphurici*) is used externally both as a stimulant and an anæsthetic. In the former case its evaporation is prevented by covering a rag moistened with it with oiled silk, in order to relieve headache; and in the latter case it is allowed to evaporate, and thus produce coldness, hence it is applied over scalded surfaces by means of rags dipped in it. As a local application, it has been found to afford almost instant relief in ear-ache, when combined with almond oil, and dropped into the ear. Internally it is used as a stimulant and narcotic in low fevers, and cases of great exhaustion. Dose from 15 minims to  $\frac{1}{4}$  drachm, repeated at short intervals, as its effects soon pass off. It is usually given in a little camphor julap, or water. Nitric ether (*Spiritus Aetheris Nitrici*) is a refrigerant, diuretic, and anti-spasmodic, and is well known as "sweet spirit of nitre." Used externally, its evaporation relieves headache, and it is sometimes applied to burns. Internally, it is used to relieve nausea, flatulence, and thirst in fevers; also as a diuretic. Dose from 10 minims to 1 drachm. Compound spirit of sulphuric ether (*Spiritus Aetheris Sulphurici Compositus*) is a very useful stimulant, narcotic, and anti-spasmodic. Used internally in cases of great exhaustion, attended with irritability. Dose from  $\frac{1}{4}$  a drachm to 2 drachms in camphor julap. When combined with laudanum it prevents the nauseating effects of the opium, and acts more beneficially as a narcotic.

103. The Hop (*Humulus lupulus*) is a narcotic, tonic, and diuretic; it reduces the frequency of the pulse, and does not affect the head like most anodynes. Used externally it acts as an anodyne and discutient, and is useful as a fomentation for painful tumours, rheumatic pains in the joints, and severe contusions. A pillow, stuffed with hops, acts as a narcotic. When the powder is mixed with lard, it acts as an anodyne dressing in painful ulcers. Dose, of the extract, from 5 grains to 1 scruple; of the tincture, from  $\frac{1}{4}$  a drachm to 2 drachms; of the powder, from 5 grains to 1 scruple; of the infusion,  $\frac{1}{2}$  an ounce to 1 ounce.

104. Opium is a stimulant, narcotic, and anodyne; used externally it acts almost as well as when taken into the stomach, and without affecting the head or causing nausea. Applied to irritable ulcers in the form of tincture, it promotes their cure, and allays pain. Cloths dipped in a strong solution, and applied over painful bruises, tumours, or inflamed joints, allays pain. A small piece of solid opium, stuffed into a hollow tooth, relieves tooth-ache. A weak solution of opium forms a valuable collyrium in

ophthalmia, and two drops of the wine of opium dropped into the eye, acts as an excellent stimulant in bloodshot-eye, or after long continued inflammation, it is useful in strengthening the eye. Applied as a liniment, in combination with ammonia and oil, or with camphorated spirit, it relieves muscular pain. When combined with oil of turpentine, it is useful as a liniment in spasmodic colic. Used internally it acts as a very powerful stimulant; then as a sedative, and finally as an anodyne and narcotic, allaying pain in the most extraordinary manner, by acting directly upon the nervous system. In acute rheumatism it is a most excellent medicine when combined with calomel and tartrate of antimony; but its exhibition requires the judicious care of a medical man. *Doses of the various preparations*: *Confection of opium*, from 5 grains to  $\frac{1}{4}$  a drachm; *extract of opium*, from 1 to 5 grains (this is a valuable form, as it does not produce so much after derangement of the nervous system as solid opium); *pills of soap and opium*, from 5 to 10 grains; *compound squacumha powder* ("Dover's powder"), from 5 to 20 gr. ins; *compound kino powder*, from 5 to 20 grains; *wine of opium*, from 10 minims to 1 drachm. *Caution*. Opium is a powerful poison when taken in too large a quantity (See Poisons), and therefore should be used with extreme caution. It is on this account that I have omitted some of its preparations.

105. **ANTISPASMODICS**, are medicines which possess the power of overcoming spasms of the muscles, or allaying any severe pain which is not attended by inflammation. The class includes a great many, but the most safe and serviceable you will find to be ammonia, assafoetida, galbanum, valerian, bark, ether, camphor, and opium; with the minerals, oxide of zinc and calomel.

106. *Ammonia* (*Ammonia sesquicarbonas*), or "Volatile salt," is an antispasmodic, antacid, stimulant, and diaphoretic. Used externally, combined with oil, it forms a cheap and useful liniment, but it should be dissolved in *puer's* spirit before the oil is added. One part of this salt, and three parts of extract of belladonna, mixed and spread upon leather, makes an excellent plaster for relieving rheumatic pains. As a local stimulant it is well known, as regards its effects in hysterics, faintness, and lassitude, when applied to the nose as common smelling salts. It is used internally as an adjunct to infusion of gentian in dyspepsia or indigestion, and in moderate doses in gout. *Dose*, from 5 to 20 grains. *Caution*. Over-doses act as a narcotic and irritant poison. *Bicarbonate of Ammonia* (*Ammonia bicarbonas*), used internally the same as the "Volatile salt." *Dose*, from 6 to 24 grains. It is frequently combined with Epsom salts. *Solution of sesquicarbonate of ammonia* (*Liquor ammonie sesquicarbonatis*), used the same as the volatile salt. *Dose*, from  $\frac{1}{4}$  a drachm to 1 drachm, combined with some milky fluid like almond emulsion.

107. *Asafoetida* is an antispasmodic, expectorant, excitant, and antheimic; used internally it is extremely useful in dyspepsia, flatulent colic, hysteria, and nervous diseases; and where there are no inflammatory symptoms, it is an excellent remedy in whooping cough and asthma; used locally as an enema, it is useful in flatulent colic, and convulsions that come on through teething. *Doses of various preparations*:—*Solid gum*, from 10 to 20 grains as pills; *mixture*, from  $\frac{1}{2}$  an ounce to 1 ounce; *tincture*, from 15 minims to 1 drachm; *ammoniated tincture*, from 20 minims to 1 drachm. *Caution*. Never give it when inflammation exists.

108. *Galbanum* is stimulant, antispasmodic, expectorant, and deobstruent; used externally, it assists in dissipating indolent tumours when spread upon leather as a plaster, and is useful in weakness of the legs from rickets, being applied as a plaster to the loins. Used internally it is useful in chronic or old standing rheumatism and hysteria. *Doses of preparations*:—*Of the gum*, from 10 to 30 grains as pills; *tincture*, from 15 minims to 1 drachm. It may be made into an emulsion with mucilage and water.

109. *Valerian* is a powerful antispasmodic, tonic, and excitant, acting chiefly on the nervous centres. Used internally it is employed in hysteria, nervous languors, and spasmodic complaints generally. It is useful in low fevers. *Doses of various preparations*:—*Powder*, from 10 grains to 1 drachm, three or four times a day; *tincture*, from 2 to 4 drachms; *ammoniated tincture*, from 1 to 2 drachms; *infusion*, from 2 to 3 ounces or more.

110. *Bark* (*Cinchona lancifolia cortex*), or, as it is commonly called, "Peruvian bark," is an antispasmodic, tonic, astringent, and stomachic; used externally, it is an excellent detergent for foul ulcers, and those that heal slowly. Used internally, it is particularly valuable in intermittent fever or ague, malignant measles, dysentery, diarrhoea, intermittent rheumatism, St. Vitus' dance, indigestion, nervous affections, malignant sore throat, erysipelas; and its use is indicated in all cases of debility. *Doses of its preparations*:—*Powder*, from 5 grains to 2 drachms, mixed in wine, water, milk, syrup, or solution of liquorice; *infusion*, from 1 to 3 ounces; *decoction*, from 1 to 3 ounces; *tincture* and *compound tincture*, each from 1 to 3 drachms. *Caution*. If it causes oppression at the stomach, combine it with an aromatic; if it causes vomiting, give it in wine or soda-water; if it purges, give opium; and if it constipates, give rhubarb.

111. *Ether* (*sulphuric*), is given internally as an antispasmodic in difficult breathing and spasmodic asthma; also in hysteria, cramp of the stomach, hicough, locked jaw, and cholera. It is useful in checking sea-sickness. *Dose*, from 20 minims to 1 drachm. *Caution*. An over-dose induces apoplectic symptoms.

112. *Cumpher* is given internally as an antispasmodic in hysteria, cramp in the stomach, flatulent colic, and St. Vitus' dance. *Dose*, from 2 to 20 grains.

113. *Opium* is employed internally in spasmodic affections, such as cholera, spasmodic asthma, whooping-cough, flatulent colic, and St. Vitus'

dance. *Dose*, from  $\frac{1}{4}$  of a grain to 2 grains of the solid opium, according to the disease.

114. *Oxide of Zinc* (*Zinci oxydum*) is an antispasmodic, astringent, and tonic. Used externally, as an ointment, it forms a useful astringent in affections of the eyelids, arising from relaxation, or as a powder, it is an excellent detergent for unhealthy ulcers. Used internally, it has proved efficacious in St. Vitus' dance and some other spasmodic affections. *Dose*, from 1 to 6 grains, twice a day.

115. *Calomel* (*Hydrargyri chloridum*) is an antispasmodic, alterative, deobstruent, purgative and emetic. Used internally, combined with opium, it acts as an antispasmodic in locked jaw, cholera, and many other spasmodic affections. As an alterative and deobstruent, it has been found useful in leprosy and itch, when combined with antimonials and guaiacum, and in enlargement of the liver and glandular affections. It acts beneficially in dropsies, by producing watery motions. In typhus, it is of great benefit when combined with antimonials; and it may be given as a purgative in almost any disease, provided there is not any inflammation of the bowels, irritability of the system, or great debility. *Dose*, as a deobstruent and alterative, from 1 to 5 grains daily; as a cathartic, from 5 to 15 grains; to produce pyalism or salivation, from 1 to 2 grains, in a pill, with  $\frac{1}{2}$  grain of opium, night and morning. *Caution*: When taking calomel, exposure to cold or dampness should be guarded against, as such an imprudence would bring out an eruption of the skin, attended with fever. When this does occur, leave off the calomel, and give bark, wine, and purgatives; take a warm bath twice a day, and powder the surface of the body with powdered starch.

116. **TONICS** are given to improve the tone of the system, and restore the natural energies and general strength of the body. They consist of bark (See § 110), quassia, gentian, chamomile, wormwood, and angostura bark.

117. *Quassia* is a simple tonic, and can be used with safety by any one, as it does not increase the animal heat, or quicken the circulation. Used internally, in the form of infusion, it has been found of great benefit in indigestion and nervous irritability, and is useful after bilious fevers and diarrhoea. *Dose*, of the infusion, from  $\frac{1}{2}$  to 2 ounces, three times a day.

118. *Gentian* is an excellent tonic and stomachic; but when given in large doses, it acts as an aperient. It is used internally in all cases of general debility, and, when combined with bark, is used in intermittent fevers. It has also been employed in indigestion, and it is sometimes used, combined with volatile salt, in that disease (§ 106); but at other times alone, in the form of infusion. After diarrhoea it proves a useful tonic. Used externally its infusion is sometimes applied to foul ulcers. *Dose*, of the infusion  $\frac{1}{2}$  to 2 ounces; of the tincture 1 to 4 drachms; of the extract from 10 to 30 grains.

119. *Chamomile* (*Anthemis nobilis*).—The flowers of the chamomile are tonic, slightly anodyne, antispasmodic, and emetic. They are used externally as fomentations, in colic, face-ache, and tumours, and to unhealthy ulcers. They are used internally in the form of infusion, with carbonate of soda, ginger, and other stomachic remedies; in dyspepsia, flatulent colic, debility following dysentery and gout. Warm infusion of the flowers acts as an emetic; and the powdered flowers are sometimes combined with opium or kino, and given in intermittent fevers. *Dose*, of the powdered flowers, from 10 grains to 1 drachm, twice or thrice a day; of the infusion from 1 to 2 ounces, as a tonic, three times a day; and from 6 ounces to 1 pint, as an emetic; of the extract, from 3 to 20 grains.

120. *Wormwood* (*Artemisia absinthium*) is a tonic and anthelmintic. It is used externally as a discutient and antispasmodic. It is used internally in long-standing cases of dyspepsia, in the form of infusion, with or without aromatics. It has also been used in intermittents. *Dose*, of the infusion, from 1 to 2 ounces, three times a day; of the powder, from 1 to 2 scruples.

121. *Angostura bark* (*Cortex angostura*), or *cusparia*, is a tonic and stimulant. It expels flatulence, increases the appetite, and produces a grateful warmth in the stomach. It is used internally in intermittent fevers, dyspepsia, hysteria, and all cases of debility, where a stimulating tonic is desirable, particularly after bilious diarrhoea. *Dose* of the powder from 10 to 30 grains, combined with cinnamon powder, magnesia, or rhubarb; of the extract from  $\frac{1}{2}$  to 10 grains; of the infusion from 1 to 3 ounces. *Caution*. It should never be given in inflammatory diseases, or hectic fever.

122. **ASTRINGENTS** are medicines given for the purpose of diminishing excessive discharges, and to act indirectly as tonics. This class includes catechu, kino, oak bark, logwood, rose leaves, chalk, and white vitriol.

123. *Catechu* (*Acacia catechu*) is a most valuable astringent. It is used externally, when powdered, to promote the contraction of flabby ulcers. As a local astringent it is useful in relaxed uvula, a small piece being dissolved in the mouth; small spotty ulcerations of the mouth and throat, and bleeding gums, and for these two affections it is used in the form of infusion, to wash the parts. It is given internally in diarrhoea, dysentery, and hemorrhage from the bowels. *Dose* of the infusion from 1 to 3 ounces; of the tincture from 1 to 4 drachms; of the powder from 10 to 30 grains. *Caution*. It must not be given with soda or any alkali; nor metallic salts, albumen, or gelatine, as its property is destroyed by this combination.

124. *Kino* (*Pterocarpus erinaceus*) is a powerful astringent. It is used externally to ulcers to give tone to them when flabby and discharging foul and thin matter. It is used internally in the same diseases as catechu (§ 123). *Dose* of the powder from 10 to 30 grains; of the tincture from 1 to 2 drachms; of the compound powder from 10 to 20 grains; of the infusion from 1 to 1½ ounce. *Caution*.—(See § 123.)

125. *Oak bark* (*Quercus robur cortex*) is an astringent and tonic. It is

used externally in the form of decoction, to restrain bleeding from lacerated surfaces. As a local astringent it is used in the form of decoction as a gargle in sore throat and relaxed uvula. It is used internally in the same diseases as catechu (§ 123), and when combined with aromatics and bitters, in intermittent fevers. Dose of the powder from 15 to 30 grains; of the decoction from 2 to 8 drachms.

126. *Logwood (Hæmatoxylon)* is not a very satisfactory astringent. It is used internally in diarrhoea, the last stage of dysentery, and a lax state of the intestines. Dose of the extract from 10 grains to 1 drachm; of the decoction from 1 to 3 ounces, three or four times a day.

127. *Rose leaves (Rosa Gallica)* are astringent and tonic. They are used internally in spitting of blood, hæmorrhage from the stomach, intestines, &c., as a gargle for sore throat, and for the night sweats of consumption. The infusion is frequently used as a tonic with diluted sulphuric acid (oil of vitriol), after low fevers. Dose of infusion from 2 to 4 ounces.

128. *Chalk (Creta preparata)*, when prepared by washing, becomes an astringent as well as antacid. It is used internally in diarrhoea, in the form of mixture, and externally as an application to burns, scalds, and excoriations. Dose of the mixture from 1 to 2 ounces.

129. *White vitriol (Zinci sulphus)*, or sulphate of zinc, is an astringent, tonic, and emetic. It is used externally as a collyrium for ophthalmia (See "Domestic Pharmacopœia"), and as a detergent for scrofulous ulcers, in the proportion of 3 grains of the salt to 1 ounce of water. It is used internally in indigestion, and many other diseases; but it should not be given unless ordered by a medical man, as it is a poison.

## II.—LOCAL STIMULANTS.

130. Local stimulants comprise emetics, cathartics, diuretics, diaphoretics, expectorants, sialogogues, errhines, and epispastics.

131. *EMETICS* are medicines given for the purpose of causing vomiting, as in cases of poisoning. They consist of ipecacuanha, chamomile (§ 119), and mustard.

132. *Ipecacuanha* is an emetic, diaphoretic, and expectorant. It is used internally to excite vomiting in doses of from 20 to 30 grains of the powder, or 1 to 1½ ounce of the infusion, every half hour until vomiting takes place. To make it act well and easily the patient should drink half-pint doses of warm water. As a diaphoretic it should be given in doses of 3 grains, mixed with some soft substance, such as crumbs of bread, and repeated every 4 hours. Dose of the wine from 20 minims to 1 drachm (as a diaphoretic); and from 1 drachm to 1½ ounce (as an emetic). Caution. Do not give more than the doses named above, because although a safe emetic, yet it is an acrid-narcotic poison.

133. *Mustard* is too well-known to require describing. It is an emetic, diuretic, stimulant, and rubefacient. It is used externally as a poultice, (which is made of the powdered seeds, bread-crumbs, and water\*), in all cases where a stimulant is required, such as sore throats, rheumatic pains in the joints, cholera, cramps in the extremities, diarrhoea, and many other diseases. When applied it should not be left on too long, as it is apt to cause ulceration of the part. From 10 to 30 minutes is quite long enough. When used internally as an emetic, a large tea-spoonful mixed with a tumbler of warm water generally operates quickly and safely, frequently when other emetics have failed. In dropsy it is sometimes given in the form of whey, which is made by boiling ½ an ounce of the bruised seeds in a pint of milk, and straining off the curd. From 3 to 4 ounces of this is to be taken for a dose 3 times a day.

134. *CATHARTICS* are divided into laxatives and purgatives. The former comprise manna, tamarinds, castor oil, sulphur, and magnesia; the latter, senna, rhubarb, jalap, colocynth, buckthorn, aloes, cream of tartar, scammony, calomel (§ 115), Epsom salts, Glauber's salts, sulphate of potash, and Venice turpentine.

135. *Manna* is a very gentle laxative, and therefore used for children and delicate persons. Dose for children from 1 to 4 drachms; and for adults from 1 to 2 ounces, combined with rhubarb and cinnamon water.

136. *Tamarinds* are gently laxative and refrigerant. As it is agreeable, this medicine will generally be eaten by children when they will not take other medicines. Dose from ½ to 1 ounce. As a refrigerant beverage in fevers it is extremely grateful. (See § 282.)

137. *Castor oil* is a most valuable medicine, as it generally operates quickly and mildly. It is used externally, combined with citron ointment, as a topical application in common leprosy. It is used internally as an ordinary purgative for infants, as a laxative for adults, and in diarrhoea and dysentery. In colic it is very useful and safe; and also after delivery. Dose for infants from 40 drops to ½ drachm; for adults from ½ to 1½ ounce. (See § 91.)

138. *Sulphur*.—Sublimed sulphur is laxative and diaphoretic. It is used externally in skin diseases, especially itch, both in the form of ointment and as a vapour-bath. It is used internally in hæmorrhoids, combined with magnesia, as a laxative for children, and as a diaphoretic in rheumatism. Dose from 1 scruple to 2 drachms, mixed in milk or with treacle. When combined with an equal proportion of cream of tartar it acts as a purgative.

139. *Magnesia*.—Calined magnesia possesses the same properties as the carbonate. Dose from 10 to 30 grains, in milk or water. Carbonate of magnesia is an antacid and laxative, and is very useful for children when teething, and heartburn in adults. Dose, from ½ to 2 drachms, in water or milk.

140. *Senna* is a purgative, but is apt to gripe when given alone; there-

fore it is combined with some aromatic, such as cloves or ginger, and the infusion should be made with cold instead of hot water. It usually acts in about four hours, but its action should be assisted by drinking warm fluid.

Dose of the confection, commonly called "*lenitive electuary*," from 1 to 3 or 4 drachms at bedtime; of the infusion, from 1 to 2 ounces; of the tincture, from 1 to 2 drachms; of the syrup (used for children), from 1 drachm to 1 ounce. Caution. Do not give Senna in any form except confection, in hæmorrhoids, and never in irritability of the intestines.

141. *Rhubarb (Rhei radix)*, is a purgative, astringent, and stomachic. It is used externally in the form of powder to ulcers, to promote a healthy action. It is given internally in diarrhoea, dyspepsia, and a debilitated state of the bowels. Combined with a mild preparation of calomel (*Nithargyrum cum creta*), it forms an excellent purgative for children. Dose of the infusion from 1 to 2 ounces; of the powder from 1 scruple to ½ a drachm as a purgative, and from 6 to 10 grains as a stomachic; of the tincture and compound tincture from 1 to 4 drachms; of the compound pill from 1 to 30 grains.

142. *Jalap* is a powerful cathartic and hydrogogue, and is apt to gripe. Dose of the powder from 10 to 30 grains, combined with a drop or two of aromatic oil; of the compound powder from 15 to 40 grains; of the tincture, from 1 to 3 drachms; of the extract, from 10 to 20 grains. The watery extract is better than the alcoholic.

143. *Colocyth* is a powerful drastic cathartic, and should never be given alone unless ordered by a medical man, as its action is too violent for some constitutions. Dose of the extract, from 5 to 15 grains; of the compound extract from 5 to 15 grains.

144. *Buckthorn (Rhamnus)* is a brisk purgative for children in the form of syrup. Dose of the syrup from 1 to 6 drachms.

145. *Aloes* is a purgative and cathartic in large, and tonic in smaller doses. Dose of powder from 2 to 10 grains, combined with soap, bitter extracts, or other purgative medicines, and given in the form of pills; of the compound pill from 5 to 20 grains; of the pill of aloes and myrrh from 5 to 20 grains; of the tincture from 4 drachms to 1 ounce; of the compound tincture from 1 to 4 drachms; of the extract from 6 to 10 grains; of the compound decoction from 4 drachms to 2 ounces.

146. *Cream of tartar (Potassa bitartus)* is a purgative and refrigerant. It is used externally in dropsy, especially of the belly, in doses of from 1 scruple to 1 drachm. As a refrigerant drink, it is dissolved in hot water, and sweetened with sugar, and is used in febrile diseases, care being taken not to allow it to rest too much upon the bowels. Dose, as a purgative, from 2 to 4 drachms; as a hydrogogue from 4 to 6 drachms, mixed with honey or treacle. Caution. Its use should be followed by tonics, especially gentian (§ 118) and angostura (§ 121).

147. *Scammony (Convolvulus scammonia)*, is a drastic purgative, generally acting quickly and powerfully; sometimes producing nausea and even vomiting, and being very apt to gripe. It is used internally, to produce watery evacuations in dropsy, to remove intestinal worms, and correct the slimy motions of children. Dose of the powder from 5 to 16 grains, given in liquorice water, treacle, or honey; of the confection from 20 to 30 grains. Caution. Do not give it in an irritable or inflamed state of the bowels.

148. *Epsom Salts* is a purgative and diuretic. It generally operates quickly, and therefore is extremely useful in acute diseases. It is found to be beneficial in dyspepsia when combined with infusion of gentian and a little ginger. It forms an excellent enema with olive oil. Dose from ½ to 2 ounces, dissolved in warm tea or water. Infusion of roses (§ 127) partially covers its taste and assists its action.

149. *Glauber's Salt (Sodæ sulphas)* is a very good purgative. Dose, from ½ to 2 ounces, dissolved in warm water.

150. *Sulphate of Potash* is a cathartic and obstructant. It is used internally, combined with aloes or rhubarb in obstructions of the bowels, and is an excellent saline purgative in dyspepsia and jaundice. Dose of the powdered salt from 10 grains to 1 drachm.

151. *Venice turpentine* is cathartic, diuretic, stimulant, and anthelmintic. It is used externally as a rubefacient, and is given internally in flatulent colic, in tape-worm, rheumatism, and other diseases. Dose, as a diuretic, from 10 drops to 1 drachm; as a cathartic, from 10 to 12 drachms; as an anthelmintic, from 1 to 2 ounces, every 8 hours, till the worm be ejected.

152. *DIURETICS* are medicines which promote an increased secretion of urine. They consist of nitre, acetate of potassa, squills, juniper, and oil of turpentine.

153. *Nitre (Nitrax potassa)* is a diuretic and refrigerant. It is used externally as a detergent when dissolved in water, and as a lotion to inflamed and painful rheumatic joints. It is given internally in doses of from 10 grains to a drachm, or even 2 drachms; in spitting blood it is given in 1 drachm doses with great benefit. As a topical application it is beneficial in sore throat, a few grains being allowed to dissolve in the mouth.

154. *Acetate of Potassa* is diuretic and cathartic. It is given internally in dropsy with great benefit, in doses of from 1 scruple to 1 drachm, every 3 or 4 hours, to act as a diuretic in combination with infusion of quassia. Dose, as a cathartic, from 2 to 3 drachms.

155. *Squills (Scilla maritima)* is diuretic and expectorant when given in small doses; and emetic and purgative when given in large doses. It is used internally in dropsies, in combination with calomel and opium; in asthma, with ammoniacum; in catarrh, in the form of oxymel. Dose of the dried bulb powdered from 1 to 4 grains every 6 hours; of the compound pill, from 10 to 20 grains; of the tincture, from 10 minims to 1 drachm; of the oxymel, from ½ to 2 drachms; of the vinegar, from 20 minims to 2 drachms.

156. *Juniper (Juniperus communis)* is diuretic and stomachic. It is

\* Vinegar is not necessary.

given internally in dropsies. \*Dose of the infusion from 2 to 3 ounces Every 4 hours; of the oil, from 1 to 5 minims.

157. *Oil of Turpentine* is a diuretic, anthelmintic, and rubefacient. It is used externally in flatulent colic, sprinkled over flannels dipped in hot water and wrung out dry. It is used internally in the same diseases as Venice turpentine (§ 151). Dose from 5 minims to 1 ounce.

158. **DIAPHORETICS** are medicines given to increase the secretion from the skin by sweating. They comprise acetate of ammonia, calomel (§ 115), antimony, opium (§ 104), camphor (§ 101), and sarsaparilla.

159. *Solution of acetate of ammonia (Liquor ammonia acetatis)* is a most useful diaphoretic. It is used externally as a discutient, as a lotion to inflamed milk-breasts, as a collyrium, and a lotion in scald head. It is given internally to promote perspiration in febrile diseases, which it does most effectually, especially when combined with camphor mixture. Dose, from  $\frac{1}{2}$  to 1½ ounce every 3 or 4 hours.

160. *Antimony—Tartar emetic (Antimonii potassio-tartras)* is diaphoretic, emetic, expectorant, alterative, and rubefacient. It is used externally as an irritant in white swellings and deep-seated inflammation, in the form of an ointment. It is given internally in pleurisy, bilious fevers, and many other diseases; but its exhibition requires the skill of a medical man to watch its effects. Dose, from  $\frac{1}{2}$  of a grain to 4 grains. Caution. It is a poison, and therefore requires great care in its administration.—*Antimonial Powder (Pulvis antimonialis compoitus)* is a diaphoretic, emetic, and alterative. It is given internally in febrile diseases, to produce determination to the skin; in rheumatism, when combined with opium or calomel, it is of great benefit. Dose, from 3 grains to 1 scruple every 4 hours, taking plenty of warm fluids between each dose.

161. *Sarsaparilla (Sarza)* is diaphoretic, alterative, diuretic, and tonic. It is given internally in cutaneous diseases, old-standing rheumatism, scrofula, and debility. Dose of the decoction, from 4 to 8 ounces; of the compound decoction, from 4 to 8 ounces; of the extract, from 5 grains to 1 drachm.

162. **EXPECTORANTS** are medicines given to promote the secretion from the wind-pipe, &c. They consist of antimony (§ 160), ipecacuanha (§ 132), squills (§ 155), ammoniacum, and tolu.

163. *Ammoniacum* is an expectorant, antispasmodic, and deobstruent. It is used externally as a discutient, and is given internally, with great benefit, in asthma, hysteria, chronic catarrh. Dose, from 10 to 30 grains.

164. *Tolu (Balsamum toluatum)* is an excellent expectorant, when there are no inflammatory symptoms. It is given internally in asthma and chronic. Dose of the balsam, from 5 to 30 grains, combined with mucilage and suspended in water; of the tincture, from  $\frac{1}{2}$  to 2 drachms; of the syrup, from  $\frac{1}{2}$  to 4 drachms.

165. **SIALOGOGUES** are given to increase the flow of saliva or spittle. They consist of ginger and calomel (§ 115).

166. *Ginger* is a sialogogue, carminative, and stimulant. It is used internally in flatulent colic, dyspepsia, and to prevent the griping of medicines. When chewed it acts as a sialogogue, and is therefore useful in relaxed uvula. Dose, from 10 to 20 grains of the powder; of the tincture, from 10 minims to 1 drachm.

167. I shall pass over the class of *errhines*, or medicines to cause sneezing, to consider **EPISPASTICS** and **RUBEFACIENTS**; or those remedies which are applied to blister and cause redness of the surface. They consist of cantharides, ammonia (§ 106), Burgundy pitch, and mustard (§ 133).

168. *Cantharides (Cantharis)* or Spanish flies, when used internally, are diuretic and stimulant; and epispastic and rubefacient when applied externally. Mode of application:—A portion of the blistering plaster (*emplastrum cantharidis*) is spread with the thumb upon brown paper, linen, or leather, to the size required; its surface then slightly moistened with olive oil and sprinkled with camphor, and the plaster applied by a light bandage. Caution. If a blister is to be applied to the head, shave it at least ten hours before it is put on; and it is better to place a thin piece of gauze, wetted with vinegar, between the skin and the blister. If a distressing feeling is experienced about the bladder, give warm and copious draughts of linseed-tea, milk, or decoction of quince seeds, and apply warm fomentations of milk and water to the blistered surface. The period required for a blister to remain on varies from 8 to 10 hours for adults, and from 20 minutes to 2 hours for children: as soon as it is removed, if the blister is not raised, apply a "spongio-piline" poultice, and it will then rise properly. When it is required to act as a rubefacient, the blister should remain on from 1 to 3 hours for adults, and from 15 to 40 minutes for children. To dress a blister: Cut the bag of cuticle containing the serum at the lowest part, by snipping it with the scissors, so as to form an opening like this—V; and then apply a piece of calico spread with spermaceti or some other dressing. \*Never attempt to exhibit cantharides internally, as it is a poison, and requires extreme caution in its use even by medical men.

169. *Burgundy pitch* is warmed and spread upon linen or leather, and applied over the chest in cases of catarrh, difficult breathing, and hooping cough; over the loins in debility or lumbago; and over any part that it is desirable to excite a mild degree of inflammation in.

### III.—CHEMICAL REMEDIES.

170. The chemical remedies comprise refrigerants, antacids, antalkalies, and escharotics.

171. **REFRIGERANTS** are medicines given for the purpose of suppressing an unnatural heat of the body. They are Seville oranges, lemons, tamarinds (§ 136), nitre (§ 153), and cream of tartar (§ 146).

172. *Seville oranges* and sweet oranges are formed into a refrigerant

beverage,\* which is extremely grateful in febrile diseases. The rind is a nice mild tonic; carminative, and stomachic. Dose of the tincture, from 1 to 4 drachms; of the infusion, from 1 to 2 ounces.

\*173. *Lemons* are used to form a refrigerant beverage,\* which is given to quench thirst in febrile and inflammatory diseases. Lemon-juice given with carbonate of potash ( $\frac{1}{2}$  an ounce of the juice to 20 grains of the salt), and taken while effervescing, allays vomiting; a tablespoonful, taken occasionally, allays hysterical palpitations of the heart. It is useful in scurvy caused by eating too much salt food. The rind forms a nice mild tonic and stomachic in certain forms of dyspepsia. Dose of the infusion\* (made the same as orange-peel), from 1 to 2 ounces.

174. **ANTACIDS** are given to correct acidity in the system. They are soda, ammonia (§ 106), chalk (§ 128), and magnesia (§ 139.)

175. *Soda, carbonate of, and sesquicarbonate of soda*, are antacids and deobstruents. It is used internally in acidity of the stomach and dyspepsia. Dose of both preparations, from 10 grains to half a drachm.

176. **ANTALKALIES** are given to neutralize an alkaline state of the system. They are citric acid, lemon-juice (§ 173), and tartaric acid.

177. *Citric acid* is used to check profuse sweating, and as a substitute for lemon-juice when it cannot be procured. Dose, from 10 to 30 grains.

178. *Tartaric acid*, when largely diluted, forms an excellent refrigerant beverage and antalkali. It enters into the composition of extemporaneous soda water.\* Dose, from 10 to 30 grains.

179. **ESCHAROTICS** are remedies used to destroy the vitality of a part. They comprise lunar caustic, blue-stone, and solution of chloride of zinc.

180. *Lunar caustic, or nitrate of silver*, is an excellent remedy in erysipelas when applied in solution (1 drachm of the salt to 1 ounce of water), which should be brushed all over the inflamed part, and for an inch beyond it. This blackens the skin, but it soon peels off. To destroy warts, proud flesh, and unhealthy edges of ulcers, &c., it is invaluable; and as an application to bed-sores, pencilled over with a solution of the same strength and in the same manner as for erysipelas. Caution. It is a poison.

181. *Blue-stone, or sulphate of copper*, is used in a solution of from 4 to 15 grains to the ounce of water, and applied to foul and indolent ulcers, by means of rag dipped in it, and is rubbed, in substance, on fungous growths, warts, &c., to destroy them. Caution. It is a poison.

182. *Solution of chloride of zinc*, or more commonly known as "Sir William Burnett's Disinfecting Fluid," is a valuable escharotic in destroying the parts of poisoned wounds, such as the bite of a mad dog. It is also very useful in restoring the hair after the scalp has been attacked with ring-worm; but its use requires extreme caution, as it is a powerful escharotic. In itch, diluted (1 part to 32) with water, it appears to answer very well. Caution. It is a most powerful poison.

### IV.—MECHANICAL REMEDIES.

183. The mechanical remedies comprise anthelmintics, demulcents, diluents, and emollients.

184. **ANTHELMINTICS** are medicines given for the purpose of expelling or destroying worms. They are cowhage, scammony (§ 147), male fern-root, calomel (§ 115), gamboge, and turpentine (§§ 151 and 157.)

185. *Cowhage (Macuna)* is used to expel the round worm (*lumbricus terreis*), which it does by wounding it with the fine prickles. Dose, of the confection, for a child 3 or 4 years old, a teaspoonful early, for 3 mornings, followed by a dose of castor-oil. (See "Domestic Pharmacopœia, § 211.")

186. *Male Fern-root (Aspidium felix mas)* is a powerful anthelmintic and an astringent. It is used to kill tapeworm (*tenia solium*). Dose, 3 drachms of the powdered root mixed in a teacupful of water, to be taken in the morning while in bed, and followed by a brisk purgative 2 hours afterwards; or 30 drops of the ethereal tincture, to be taken early in the morning. (See "Domestic Pharmacopœia, § 293.")

187. *Gamboge (Cambogia)* is a powerful drastic and anthelmintic. It is used internally in dropsies, and for the expulsion of tapeworm; but its use requires caution, as it is an irritant poison. Dose, from 2 to 6 grains, in the form of pills, combined with colocynth, soap, rhubarb, or bread-crumbs.

188. **DEMULCENTS** are used to diminish irritation, and soften parts by protecting them with a viscid matter. They are tragacanth, linseed, marsh-mallow, mallow, liquorice, arrowroot, isinglass, suet, wax, and almonds.

189. *Tragacanth* is used to allay tickling cough, and lubricate abraded parts. It is usually given in the form of mucilage. Dose, from 10 grains to 1 drachm, or more.

190. *Linseed* is emollient and demulcent. It is used externally when reduced to powder, as a poultice; and the oil combined with lime water is applied to burns and scalds. It is used internally as an infusion in diarrhoea, dysentery, and irritation of the intestines after certain poisons, and in catarrh. Dose of the infusion as much as the patient pleases.

191. *Marsh-mallow (Althœa)* is used internally in the same diseases as linseed (§ 190). The leaves are used externally as a fomentation, and the boiled roots are bruised and applied as an emollient poultice. Dose, the same as linseed.

192. *Mallow (Malva)* is used externally as a fomentation and poultice in inflammation, and the infusion is used internally in dysentery diseases of the kidneys, and the same diseases as marsh-mallow (§ 191). It is also used as an enema. The Dose is the same as for linseed and marsh-mallow.\*

193. *Liquorice (Glycyrrhiza Glabra)* is an agreeable demulcent, and is given in the form of decoction in catarrh, and some forms of dyspepsia, and the extract is used in catarrh. Dose of the extract, from 10 grains to 1 drachm; of the decoction from 2 to 4 ounces.

\* For receipts to form these agreeable drinks, and also summer beverages, see *Farm Friend*, vol. III., p. 12.

194. *Arrowroot*, isinglass, almonds, suet, and wax, are too well known to require descriptions. (See "Domestic Pharmacopœia" for preparations.)

195. *Diluents* are chiefly watery compounds, such as weak tea, water, thin broth, gruel, &c.

196. *Emollients* consist of unctuous remedies, such as cerates and ointments, and any materials that combine heat with moisture. (See "Spongio-piline," § 312.)

## DOMESTIC PHARMACOPŒIA.

197. In compiling this part of my hints, I have endeavoured to supply that kind of information that is so often wanted in the time of need, and cannot be obtained when a medical man or a druggist is not near. The doses are all fixed for adults, unless otherwise ordered, and may be reduced by consulting the Table given in § 83. The various remedies are arranged in sections, according to their uses, as being more easy for reference.

### I.—COLLYRIA, OR EYE-WASHES.

198. *Alum*.—Dissolve  $\frac{1}{2}$  a drachm of alum in 8 ounces of water. *Use*, as an astringent. When the strength of the alum is doubled, and only half the quantity of water used, it acts as a discutient.

199. *Camom*.—Add 1 ounce of diluted acetic acid to 3 ounces of decoction of poppy heads. *Use*, as an anodyne wash.

200. *Compound Alum*.—Dissolve alum and white vitriol, of each 1 drachm in 1 pint of water, and filter through paper. *Use*, as an astringent wash.

201. *Zinc and Lead*.—Dissolve white vitriol and acetate of lead, of each 7 grains, in 4 ounces of elder-flower water, then add 1 drachm of laudanum (tincture of opium), and the same quantity of spirit of camphor; then strain. *Use*, as a detergent wash.

202. *Acetate of Zinc*.—Dissolve  $\frac{1}{2}$  a drachm of white vitriol in 5 ounces of water. Dissolve 2 scruples of acetate of lead in 5 ounces of water. Mix these solutions, then set aside for a short time, and afterwards filter. *Use*, as an astringent; this forms a most valuable collyrium.

203. *Sulphate of Zinc*.—Dissolve 10 grains of white vitriol in a pint of water or rose-water. *Use*, for weak eyes.

204. *Zinc and Camphor*.—Dissolve a scruple of white vitriol in 8 ounces of water, then add 1 drachm of spirit of camphor, and strain. *Use*, as a stimulant.

205. *Compound Zinc*.—Dissolve 10 grains of white vitriol in 8 ounces of camphor water (*Mistura camphore*), and the same quantity of decoction of poppy heads. *Use*, as an anodyne and detergent; useful for weak eyes.

### II.—CONFECTIONS AND ELECTUARIES.

206. *Confections* are used as vehicles for the administration of more active medicines, and *Electuaries* are made for the purpose of rendering some remedies palatable. Both should be kept in closely covered jars.

207. *Almond Confection*.—Remove the outer coat from an ounce of sweet almonds, and beat them well in a mortar with 1 drachm of powdered gum arabic, and  $\frac{1}{2}$  an ounce of white sugar. *Use*, to make a demulcent mixture, known as almond emulsion.

208. *Alum Confection*.—Mix 2 scruples of powdered alum with 4 scruples of treacle. *Dose*,  $\frac{1}{2}$  a drachm. *Use*, as an astringent in sore throat and relaxed uvula, and ulcerations of the mouth.

209. *Orange Confection*.—Take 1 ounce of the freshly rasped rind of orange, and mix it with 3 ounces of white sugar, after it is well beaten. *Dose*, from 1 drachm to 1 ounce. *Use*, as a gentle stomachic and tonic, and for giving tonic powders in.

210. *Black Pepper Confection*.—Take of black pepper and elecampane-root each 1 ounce; fennel seeds, 3 ounces; honey and sugar, of each 3 ounces. Rub the dry ingredients to a fine powder, and when the confection is wanted, add the honey, and mix well. *Dose*, from 1 to 2 drachms. *Use*, in hemorrhoids.

211. *Cowhage*.—Mix as much of the fine hairs or spicules of cowhage as it will take up. *Dose*, a teaspoonful every morning and evening. *Use*, as an anthelmintic.

212. *Senna Confection*.—Take of senna 4 ounces, figs  $\frac{1}{2}$  a pound, cassia pulp, tamarind pulp, and the pulp of prunes, each 4 ounces; coriander seeds, 2 ounces; liquorice,  $\frac{1}{2}$  ounce; sugar,  $\frac{1}{2}$  pound; water,  $\frac{1}{2}$  pint. Rub the senna with the coriander, and separate, by sifting, 5 ounces of the mixture. Boil the water with the figs and liquorice added, until it is reduced to one half; then press out and strain the liquor. Evaporate the strained liquor in a jar by boiling (§ 81) until 12 fluid ounces remain; then add the sugar, and make a syrup. Now mix the pulps with the syrup, add the sifted powder, and mix well. *Dose* (See § 140.) *Use*, purgative.

213. *Castor Oil and Senna Confection*.—Take 1 drachm of powdered gum arabic, and 2 ounces of confection of senna (§ 212), and mix by gradually rubbing together in a mortar, with  $\frac{1}{2}$  an ounce of castor oil. *Dose*, from 1 to 2 drachms. *Use*, purgative.

214. *Sulphur and Senna Confection*.—Take of sulphur and sulphate of potash each  $\frac{1}{2}$  an ounce; of confection of senna, 2 ounces; and oil of sweet almond, 20 minims; mix well. *Dose*, from 1 to 2 drachms. *Use*, purgative.

215. *Cream of Tartar Confection*.—Take 1 ounce of cream of tartar, and 1 drachm of powdered ginger; mix into a thick paste with treacle. *Dose*, 2 drachms. *Use*, purgative.

216. *Antispasmodic Electuary*.—Take 6 drachms of powdered valerian and orange leaves, mixed and made into an electuary, with a sufficient quantity of syrup of wormwood. *Dose*, from 1 to 2 drachms, to be taken 3 or 4 times a day.

### III.—DECOCTIONS.

217. These preparations soon spoil, and therefore should only be made in small quantities, particularly in summer (§ 81).

218. *Of Chimaphila*.—Take 1 ounce of pyrola (chimaphila or winter-green), and boil it in a pint and a half of water until it is only 1 pint; then strain. *Dose*, from 1 to 2 ounces, four times a day. *Use*, in dropsies, as a diuretic.

219. *Of Logwood*.—Boil  $\frac{1}{2}$  ounces of bruised logwood in 2 pints of water until it comes to 1 pint; then add 1 drachm of bruised cassia, and strain. *Dose*, from 1 to 2 ounces. *Use*, (See § 126), as an astringent.

220. *Of Dandelion*.—Take 2 ounces of the freshly-sliced root, and boil in 2 pints of water until it comes to 1 pint; then add 1 ounce of compound tincture of horse-radish. *Dose*, from 2 to 4 ounces. *Use*, in a sluggish state of the liver.

### IV.—EMBROCATIONS AND LINIMENTS.

221. These remedies are used externally as local stimulants, to relieve deep-seated inflammations when other means cannot be employed, as they are more easily applied locally.

222. *Anodyne and Discutient*.—Take 2 drachms of scraped white soap,  $\frac{1}{2}$  a drachm of extract of henbane, and dissolve them by a gentle heat in 6 ounces of olive oil. *Used* in doses of 2 or 3 drachms at a time, for glandular enlargements which are painful and stubborn.

223. *Strong Ammoniated*.—Add 1 ounce of strong liquid ammonia (*Liquor ammonia fortis*) to 2 ounces of olive oil; shake them well together until they are properly mixed. *Use*. Employed as a stimulant in rheumatic pains, paralytic numbnesses, chronic glandular enlargements, lumbago, sciatica, &c.

224. *Compound Ammoniated*.—Add 6 teaspoonfuls of oil of turpentine to the strong ammoniated liniment above; *Use*, for the diseases mentioned and for the head of strong ammoniated liniment, and chronic affections of the knee and ankle-joints.

225. *Lime and Oil*.—Take equal parts of common linseed-oil and lime-water (*Liquor calcis*), and shake well. *Use*. Applied to burns, scalds, sun-peelings, &c.

226. *Camphorated*.—Take  $\frac{1}{2}$  an ounce of camphor, and dissolve it in 2 ounces of olive oil. *Use*, as a stimulant, soothing application, in stubborn breasts, glandular enlargements, dropsy of the belly, and rheumatic pains.

227. *Soap Liniment with Spanish Flies*.—Take 3  $\frac{1}{2}$  ounces of soap tincture, and  $\frac{1}{2}$  an ounce of tincture of Spanish flies; mix and shake well. *Use*, as a stimulant to chronic bruises, sprains, rheumatic pains, and indolent swellings.

228. *Turpentine*.—Take 2  $\frac{1}{2}$  ounces of resin cerate (*ceratum resine*), and melt it by standing the vessel in hot water; then add  $\frac{1}{2}$  ounces of oil of turpentine, and mix. *Use*, as a stimulant application to ulcers, burns, scalds, &c.

### V.—ENEMAS.

229. Are a peculiar kind of medicines, administered by injecting them into the rectum or outlet of the body. The intention is either to empty the bowels, kill worms, protect the lining membrane of the intestines from injury, restrain copious discharges, to allay spasms in the bowels, or nourish the body. These clysters, or glisters, are administered by means of bladder and pipes, or a proper apparatus.

230. *Laxative*.—Take 2 ounces of Epsom salts, and dissolve in  $\frac{1}{2}$  of a pint of gruel, or thin broth, with an ounce of olive oil. *Use*, as all enemata are used.

231. *Nutritive*.—Take  $\frac{1}{2}$  ounces of strong beef tea, and thicken with hartshorn shavings or arrow-root.

232. *Turpentine*.—Take  $\frac{1}{2}$  an ounce of oil of turpentine, the yolk of one egg, and  $\frac{1}{2}$  a pint of gruel. Mix the turpentine and egg, and then add the gruel. *Use*, as an anthelmintic.

233. *Common*.—Dissolve 1 ounce of salt in 12 ounces of gruel.

234. *Castor oil*.—Mix 2 ounces of castor oil with 1 drachm of starch, then rub them together, and add 14 ounces of thin gruel. *Use*, purgative.

235. *Opium*.—Rub 2 grains of opium with 2 ounces of starch, then add 2 ounces of warm water. *Use*, as an anodyne, in colic, spasms, &c.

236. *Oil*.—Mix 4 ounces of olive oil with  $\frac{1}{2}$  an ounce of mucilage and  $\frac{1}{2}$  a pint of warm water. *Use*, as a demulcent.

237. *Assafoetida*.—Dissolve 2 drachms of the gum in a pint of barley-water. *Use* as an anthelmintic, or in convulsions from teething.

### VI.—GARGLES.

238. Are remedies used to stimulate chronic sore throats, or a relaxed state of the swallow, or uvula.

239. *Acidulated*.—Mix 1 part of white vinegar with 3 parts of honey of roses, and 24 of barley-water. *Use*, in chronic inflammations of the throat, malignant sore throat, &c.

240. *Astringent*.—Take 2 drachms of roses and mix with 8 ounces of boiling water, infuse for 1 hour, strain, and add 1 drachm of alum and 1 ounce of honey of roses. *Use*, in severe sore throat, relaxed uvula, &c.

241. *For salivation*.—Mix from 1 to 4 drachms of bruised gall-nuts with a pint of boiling water, and infuse for 2 hours, then strain and sweeten.

242. *Tonic and stimulant*.—Mix 6 ounces of decoction of bark with 2 ounces of tincture of myrrh, and  $\frac{1}{2}$  a drachm of diluted sulphuric acid. *Use*, in scorbutic affections.

243. *Alum*.—Dissolve 1 drachm of alum in 15 ounces of water, then add

half an ounce of treacle and 1 drachm of diluted sulphuric acid. *Use*, as astringent.

244. *Myrrh*.—Add 6 drachms of tincture of myrrh to 7 ounces of infusion of linseed, and then add 2 drachms of diluted sulphuric acid. *Use*, as a detergent.

245. *For slight inflammation of the throat*.—Add 1 drachm of sulphuric ether to half an ounce of syrup of marsh-mallows, and 6 ounces of barley-water. To be used frequently.

## VII.—LOTIONS.

246. *LOTIONS* are usually applied to the parts required by means of a piece of linen rag wetted with them, or by wetting the bandage itself.

247. *Emollient*.—Use decoction of marsh-mallow or linseed.

248. *Elder-flowers*.—Add 2½ drachms of elder-flowers to 1 quart of boiling water, infuse for 1 hour, and strain. *Use*, as a discutient.

249. *Sedative*.—Dissolve 1 drachm of extract of henbane in 24 drachms of water.

250. *Opium*.—Mix 2 drachms of bruised opium with half a pint of boiling water, allow it to grow cold, and use for painful ulcers, bruises, &c.

251. *Stimulant*.—Dissolve 1 drachm of caustic potash in 1 pint of water, and then gradually pour it upon 24 grains of camphor and 1 drachm of sugar, previously bruised together in a mortar. *Used* as in fungoid and flabby ulcers.

252. *Ordinary*.—Mix 1 drachm of salt with 8 ounces of water. *Used*, for foul ulcers and flabby wounds.

253. *Cold evaporating*.—Add two drachms of Sulard's extract (*Liquor plumbi diacetatis*), and the same quantity of sweet spirit of nitre (*Spiritus aetheris nitrici*) to a pint of cold water. *Use*, as a lotion for contusions, sprains, inflamed parts, &c.

254. *Hydrochlorate of ammonia*.—Dissolve half an ounce of sal ammoniac (*Ammonia hydrochloras*) in 6 ounces of water, then add an ounce of distilled vinegar and the same quantity of rectified spirit. *Use*, as a refrigerant.

255. *Yellow lotion*.—Dissolve 1 grain of corrosive sublimate (*Hydrargyri chloridum*, A VIOLENT POISON) in an ounce of lime-water, taking care to bruise the crystals of the salt in order to assist its solution. *Use*, as a detergent.

256. *Black wash*.—Add half a drachm of calomel to 4 ounces of lime-water, or 8 grains to an ounce of lime-water; shake well. *Use*, as a detergent.

257. *Acetate of lead with opium*.—Take 10 grains of acetate of lead, and a drachm of powdered opium, mix, and add an ounce of vinegar and 4 ounces of warm water, set aside for an hour, then filter. *Use*, as an astringent.

258. *Kresote*.—Add a drachm of kresote to a pint of water, and mix by shaking. *Use*, as an application in *tinea capitis*, or other cutaneous diseases.

259. *Galls*.—Boil one drachm of bruised galls in 12 ounces of water until only half a pint remains, then strain, and add 1 ounce of laudanum. *Use*, as an astringent.

## VIII.—OINTMENTS AND CERATES.

260. These remedies are used as topical applications to parts, generally ulcers, and are usually spread upon linen or other materials.

261. *Camphorated*.—Mix ½ an ounce of camphor with 1 ounce of lard, having, of course, previously powdered the camphor. *Use*, as a discutient and stimulant in indolent tumours.

262. *Chalk*.—Mix as much prepared chalk as you can into some lard, so as to form a thick ointment. *Use*, as an application to burns and scalds.

263. *For Itch*.—Mix 4 drachms of sublimed sulphur, 2 ounces of lard, and 2 drachms of sulphuric acid together. To be rubbed into the body.

264. *For Scrofulous Ulcerations*.—Mix 1 drachm of ioduret of zinc, and 1 ounce of lard together. *Use*, twice a day to the ulcerations.

265. *Catechu*.—Mix 1 ounce of powdered catechu, 2½ drachms of powdered alum, 1 ounce of powdered white resin, and 2½ ounces of olive oil together. *Use*.—To apply to flabby and indolent ulcers.

266. *Tartar Emetic*.—Mix 20 grains of tartar emetic and 10 grains of white sugar with 1½ drachms of lard. *Use*, as a counter-irritant in white swellings, &c. (§ 160.)

## IX.—PILLS.

267. *Strong Purgative*.—Take of powdered aloes, scammony, and gamboge each 15 grains, mix and add sufficient Venice turpentine to make into a mass, then divide into 12 pills. *Dose*, 1 or 2 occasionally.

268. *Milder Purgative*.—Take 4 grains of powdered scammony and the same quantity of compound extract of colocynth, and 2 grains of calomel, mix well, and add a few drops of oil of cloves, or thin gum water, to enable the ingredients to combine properly, divide into 2 pills. *Dose*, 1 or 2 when necessary.

269. *Common Purgative*.—Take of powdered jalap and compound extract of colocynth each 4 grains, of calomel 2 grains, mix as usual, and divide into 2 pills. *Dose*, 1 or 2 occasionally.

270. *Tonic*.—Mix 24 grains of extract of gentian and the same of green vitriol (*sulphate of iron*) together, and divide into 12 pills. *Dose*, 1 to 2 when necessary. *Use* in debility.

271. *Cough*.—Mix 1 drachm of compound powder of ipecacuanha with 1 scruple of gum ammoniacum and dried squill bulb, and make into a mass with mucilage, then divide into 20 pills. *Dose*, 1, 3 times a day.

272. *Astringent*.—Mix 16 grains of acetate of lead (*Sugar of lead*) with 4 grains of opium, and make into a mass with syrup, so as to make 8 pills.

*Dose*, from 1 to 2. *Use* as an astringent in obstinate diarrhoea, dysentery and cholera.

## X.—MIXTURES.

273. *Fever, simple*.—Add 3 ounces of the spirit of mindererus (*Liquor ammonia acetatis*) to 5 ounces of water, or medicated water, such as cinnamon, aniseed, &c. *Dose* for an adult, 1 ounce every 3 hours. *Use*, as a diaphoretic.

274. *Aromatic*.—Mix 3 drachms of aromatic confection with 2 drachms of compound tincture of cardamoms, and 8 ounces of peppermint water. *Dose*, from 1 to 1½ ounce. *Use*, in flatulent cholera and spasms of the bowels.

275. *Cathartic*.—Dissolve 1 ounce of Epsom salts in 4 ounces of compound infusion of senna, then add 3 ounces of peppermint water. *Dose*, from 1½ to 2 ounces. *Use*, as a warm stomachic and cathartic.

276. *Diuretic*.—Add ½ an ounce of sweet spirit of nitre, 2 drachms of tincture of squills, and 2 ounces of liquid acetate of ammonia, to 8 ounces of decoction of broom. *Dose*, 1 ounce every 2 hours. *Use*, in dropsical.

277. *Cough*.—Dissolve 3 grains of tartar emetic and 15 grains of opium in 1 pint of boiling water, then add 4 ounces of treacle, 2 ounces of vinegar, and 1 pint more of boiling water. *Dose*, from 2 drachms to 1 ounce. *Use*, in common catarrh, bronchitis, and irritable cough.

278. *Cough, for Children*.—Mix 2 drachms of ipecacuanha wine with ½ an ounce of oxymel of squills, and the same quantity of mucilage, and 2 ounces of water. *Dose*, 1 teaspoonfull for children under 1 year, 2 teaspoonfulls from 1 to 5 years, and a tablespoonfull from 5 years every time the cough is troublesome.

279. *Anti-spasmodic*.—Dissolve 50 grains of camphor in 2 drachms of chloroform, and then add 2 drachms of compound tincture of lavender, 6 drachms of mucilage of gum arabic, 8 ounces of aniseed, cinnamon, or some other aromatic water, and 2 ounces of water; mix well. *Dose*, 1 tablespoonfull every ½ hour if necessary. *Use* in cholera in the cold stage, when cramps are severe, or exhaustion very great; as a general anti-spasmodic in doses of 1 dessert spoonful when the spasms are severe.

280. *Tonic and Stimulant*.—Dissolve 1 drachm of extract of bark, and ½ a drachm of powdered gum arabic in 6 ounces of water, then add 1 ounce of syrup of marsh-mallow, and the same quantity of syrup of tolu. *Dose*, 1 tablespoonfull every 3 hours. *Use*, after fevers and catarrhs.

281. *Stomachic*.—Take 20 grains of powdered rhubarb, and dissolve it in 3½ ounces of peppermint water, then add 20 drops of volatile and compound tincture of gentian, each 1½ drachm. *Mix*. *Dose*, from 1 to 1½ ounces. *Use* as a tonic, stimulant, and stomachic.

## XI.—DRINKS.

282. *Tamarind*.—Boil 2 ounces of the pulp of tamarinds in 2 pints of milk, then strain. *Use*, as a refrigerant drink.

283. *Tamarind*.—Dissolve 2 ounces of the pulp in 2 pints of warm water and allow it to get cold, then strain. *Use*, refrigerant.

## XII.—POWDERS.

284. *Compound Soda*.—Mix 1 drachm of calomel, 5 drachms of sesqui carbonate of soda, and 10 drachms of compound chalk powder together. *Dose*, 5 grains. *Use*, as a mild purgative for children during teething.

285. *Tonic*.—Mix 1 drachm of powdered rhubarb with the same quantity of dried carbonate of soda, then add 2 drachms of powdered Calumba root. *Dose*, from 10 to 20 grains as a tonic after fevers, in all cases of debility and dyspepsia attended with acidity.

286. *Rhubarb and Magnesia*.—Mix 1 drachm of powdered rhubarb with 2 drachms of carbonate of magnesia, and ½ a drachm of ginger. *Dose*, from 15 grains to 1 drachm. *Use*, as a purgative for children.

287. *Sulphur and Potash*.—Mix 1 drachm of sulphur with 4 scruples bicarbonate of potash, and 2 scruples of nitre. *Dose*, from ½ a drachm to 1 drachm. *Use*, as a purgative, diuretic, and refrigerant.

288. *Anti-Diarrhœal*.—Mix 1 grain of powdered ipecacuanha, and grain of powdered opium, with the same quantity of camphor. *Dose*, 1 of these powders to be given in jam, treacle, &c., five or six times a day if necessary.

289. *Anti-spasmodic*.—Mix 4 grains of subnitrate of bismuth, 48 grains carbonate of magnesia, and the same quantity of white sugar, and divide in 4 equal parts. *Dose*, 1-4th part. *Use*, in obstinate pain in stomach with cramps, unattended by inflammation.

290. *Anti-Pertussal, or Against Hooping Cough*.—Mix 1 drachm of powdered belladonna-root, and 5 drachms of white sugar, together. *Dose*, 5 grains morning and evening for children under 1 year; 12 grains for those between 2 and 3 years of age; 24 grains for those between 5 and 10; 48 grains for adults. *Caution*, this should be prepared by a chemist, as belladonna is a poison, and occasional doses of castor-oil should be given while it is being taken.

291. *Purgative (common)*.—Mix 10 grains of calomel, with 1 drachm powdered jalap, and 20 grains of sugar. *Dose*, 50 grains for adults.

292. *Sudorific*.—Mix six grains of compound antimonial powder, and grains of sugar together. *Dose*, as mixed, to be taken at bed-time. *Use* in catarrh and fever.

## XIII.—MISCELLANEOUS.

293. *Ethereal Tincture of Male Fern*.—Digest 1 ounce male-fern in 3 ounces of sulphuric ether, then strain. *Dose*, 30 drops early morning. *Use*, to kill tape-worm.

294. *Emulsion, Laxative*.—Rub down an ounce of castor-oil in 2 dr

of mucilage of gum arabic, 3 ounces of dill-water, and add a drachm of tincture of jalap gradually. *Dose*, as prepared thus, to be taken while fasting in the morning.

295. *Emulsion, Purgative*.—Rub down 6 grains of scammony with 4 drachms of white sugar in a mortar, and gradually add 4 ounces of almond emulsion, and 2 drops of oil of cloves. *Dose*, as prepared, early in the morning.

296. *To Prevent Pitting after Small-pox*.—Spread a sheet of thin leather with the ointment of ammoniacum with mercury, and cut out a place for the mouth, eyes, and nostrils. This forms what is called a mask, and, after anointing the eyelids with a little blue ointment (*Unguentum hydragryri*), it should be applied to the face, and allowed to remain for 3 days for the distillat kind, and 4 days for the running variety. *Period to apply it*:—Before the spots fill with matter, although it will answer sometime even after they have become pustulous. It may be applied to any part in the same way.

297. *Mucilage of Gum Arabic*.—Rub 1 ounce of gum arabic in a mortar, with 4 ounces of warm water. *Use*, for coughs, &c.

298. *Mucilage of Starch*.—Rub 1 drachm of starch with a little water, and gradually add 5 ounces of water, then boil until it forms a mucilage. *Use*, for enemata, topical application, and demulcent.

### DOMESTIC SURGERY.

299. Under this head I propose giving such hints and advice as will enable any one to act on an emergency, or in ordinary trivial accidents requiring simple treatment; and also to distinguish between simple accidents, and the best means to adopt in all cases that fall under a person's notice. The subject naturally divides itself into five parts:—1st, Dressings; 2nd, Bandages; 3rd, Apparatus; 4th, Minor Operations; 5th, Accidents.

#### I.—DRESSINGS.

300. *Dressings* are substances usually applied to parts for the purpose of soothing, promoting their reunion when divided, protecting them from external injuries, as a means of applying various medicines, to absorb discharges, protect the surrounding parts, and securing cleanliness.

301. Certain instruments are required for the application of dressings in domestic surgery, viz. Scissors, a pair of tweezers, or simple forceps, a knife, needles and thread, a razor, a lancet, a quill, and a sponge.

302. The materials required for dressings consist of lint, scraped linen, carded cotton, tow, ointments spread on calico, adhesive plaster, compresses, poultices, old rags of linen or calico, and water.

303. The following rules should be attended to in applying dressings: 1. Always prepare the new dressing before removing the old one; 2. Always have hot and cold water at hand, and a vessel to place the foul dressings in; 3. Have one or more persons at hand ready to assist, and tell each person what they are to do before you commence, it prevents confusion; thus one is to wash out and band the sponges, another to heat the adhesive plaster, or band the bandages and dressings, and, if requisite, a third to support the limb, &c.; 4. Always stand on the outside of a limb to assist; 5. Place the patient in as easy a position as possible so as not to fatigue him; 6. Arrange the bed after changing the dressings, but in some cases you will have to do so before the patient is placed on it; 7. Never be in a hurry when applying dressings, do it quietly; 8. When a patient desires moving from one bed to another, the best way is for one person to lie on each side of the patient, and each to place an arm behind his back, he passes his arms over their necks, then let their other arms be under his thighs and by holding each others' hands, the patient can be raised with ease and removed to another bed. If the leg is injured the third person should steady it, and if the arm, the same precaution should be adopted. Sometimes a stout sheet is passed under the patient, and by several people holding the sides, the patient is lifted without any fatigue or much disturbance.

304. *Lint* may be made in a hurry, by nailing the corners of a piece of linen to a board, and scraping its surface with a knife. It is used either alone or spread with ointment. Scraped lint, is the fine filaments of ordinary lint, and is used to stimulate ulcers and absorb discharges; it is what the French call *Charpie*.

305. *Scraped Lint* is made into various shapes, for particular purposes. For example, when it is screwed up into a conical shape, as in Fig. 13, it is called a *tent*, and is used to dilate fistulous openings, so as to allow the matter to escape freely, to plug wounds, so as to promote the formation of a clot of blood, and thus arrest the hæmorrhage.

scraped lint into a ball, and the middle is then doubled and pushed into a deep seated wound so as to press upon the bleeding vessel, while the loose lint is used to assist in forming a clot, or it is used in deep ulcers to keep the matter and keep the edges apart. This form is called the *bourdonnet*. Another form is that called the *pelote*, which is merely a ball of scraped lint tied up in a piece of ligament rag, as in Fig. 14. This is used in the treatment of protrusion of the navel in children.

306. *Carded Cotton* is used as a dressing for superficial ulcers, and care should be taken to free it from specks, as flies are apt to lay their eggs there, and generate maggots.

308. *Ointments* are spread on calicoes, lint, or even thin layers of tow by means of a knife; they should not be spread too thick.

309. *Adhesive Plaster* is cut into strips, ranging in width according to the nature of the wound, &c., but the usual width is about  $\frac{1}{2}$  of an inch. Isinglass plaster is not so irritating as diachylon, and is more easily removed.

310. *Compresses* are made of pieces of linen, calico, lint, or tow, doubled or cut into various shapes. They are used to confine dressings in their places, and to apply an equal pressure over parts. They should be free from darns, hems, and knots. Ordinary compresses are square, oblong, and triangular. The *pierced compress*, fig. 15, is made by folding up a square piece of linen 5 or 6 times on itself, and then nicking the sides with the scissors, so as to cut out small pieces. It is then opened out and spread out.

other times doubly; or they are graduated by placing square pieces of cloth on one another, so arranged that they decrease in size each time. They are used for keeping up pressure upon certain parts.

311. *Pads* are made by sewing tow inside pieces of linen, or folding linen and sewing the pieces together. They are used to keep off pressure from parts, such as that caused by splints in fractures.

312. *Poultices* are usually made of linsed-meal, oatmeal, or bread, either combined with water and other fluids; sometimes they are made of carrots, and mustard.

The required form and size is cut off, and the edges are pared or bevelled off with a pair of scissors, so that the crutch may come in contact with the surrounding skin in order to prevent evaporation of the fluid used; for, as it only forms the vehicle, we can employ the various poultices generally used with much less expenditure of time and money, and increased cleanliness. For example, a *vinegar poultice* is made by moistening the fabric with distilled vinegar; an *alum poultice*, by using a strong solution of alum; a *charcoal poultice*, by sprinkling powdered charcoal on the moistened surface of the material; a *yeast poultice*, by using warmed yeast, and moistening the fabric with hot water, which is to be well squeezed out previous to the absorption of the yeast; a *beer poultice*, by employing warm porter-dregs or strong beer as the fluid; and a *carrot poultice*, by using the expressed and evaporated liquor of boiled carrots. The material costs about one-farthing a square inch. As a fomentation it is most invaluable, and by moistening the material with compound camphor liniment or hartshorn, it acts the same as a mustard poultice.\* It is a real blessing to the poor, who cannot afford to waste "the staff of life" in making poultices.

Water is used as a lotion to keep the parts cool, or as a dressing to unhealthy ulcers; in the latter case it is applied by means of a piece of lint dipped in it, and laid over the part, so as to allow the water to evaporate, lint is

#### II.—BANDAGES.

They are better after they have been washed are to retain dressings, apparatus, or parts of the body in their positions, support the soft parts, and maintain equal pressure.

315. Bandages are simple and compound; the former are simple strips rolled up tightly like a roll of ribbon. There is also another simple kind which is rolled from both ends,—this is called a *double-headed bandage*. The compound bandages are formed of many pieces.

316. Bandages for the head should be 2 inches wide and 5 yards long; for the neck, 2 inches wide and 3 yards long; for the arm, 2 inches wide and 7 yards long; for the leg, 2½ inches wide and 7 yards long; for the thigh, 3 inches wide and 8 yards long; and for the body, 4 or 6 inches wide

to be bandaged, and hold the roll between the little, ring, and middle finger of the left hand, using the thumb and fore-finger of the same hand to guide it, and the right hand to keep it firm, and pass the bandage partly round the leg towards the left hand. It is sometimes necessary to reverse this order, and therefore it is well to be able to use both hands. Particular parts require a different method of applying bandages, and therefore I shall describe the most useful separately, and there are different ways of putting on the same bandage, which consist in the manner the folds or turns are made. For example, the *circular bandage* is formed by horizontal turns, each of which overlaps the one made before it (See Fig. 16); the *spiral* consists of spiral turns; the *oblique* follows a course oblique

\* Full directions will, no doubt, be supplied to those who purchase the material, if inquired for.

or slanting to the centre of the limb; and the recurrent folds back again to the point whence it started. (See fig. 17).

Fig. 16.

319. To confine the Ends of Bandages, some persons use pins, others slit the end for a short distance, and tie the two strips into a knot as in fig. 16; and some use a strip of adhesive plaster, but this is a dirty method. Always place the point of a pin in such a position that it should not be likely to prick the patient, or the person dressing the limb, or be likely to draw out by using the limb; therefore, as a general rule, turn the head of the pin from the free end of the bandage, or towards the upper part of the limb.

320. The Oblique bandage is generally used for arms and legs to retain dressings.

321. The spiral bandage is generally applied to the trunk and extremities, but it is apt to fall off even when very carefully applied; therefore generally use another called the recurrent.

322. The recurrent bandage (Fig. 17) is the best kind of bandage that we can employ for general purposes. The method of putting it on is as follows:—Apply the end of the bandage that is free, with the outside of it next to the skin, and hold this end with the finger and thumb of the left hand, while some one supports the heel of the patient; then with the right hand pass the bandage over the piece you are holding, and keep it crossed thus, until you can place

Fig. 17.

your right forefinger upon the spot where it crosses the other bandage, where it must be kept firm. Now hold the roll of the bandage in your left hand, with the palm looking upwards, and taking care to keep that part of the bandage between your right forefinger, and the roll in your left hand quite slack; turn your left hand over, and bring the bandage down upon the leg as in Fig. 17; then pass the roll under the leg towards your right hand, and repeat this until the leg is bandaged up to the knee, taking care not to drag the bandage at any time during the process of bandaging. When you arrive at the knee, pass the bandage round the leg in circles just below the knee, and pin it as usual. Bandaging is very easy, and if you once see any one apply a bandage properly, and attend to these rules, there will not be any difficulty; but bear one thing in mind, without which you will never put on a bandage even decently; that is, never to drag or pull at a bandage, but make the turns while it is slack, and you have your right forefinger placed upon the point where it is to be folded down. When a limb is properly bandaged, the folds should run in a line corresponding to the shin-bone (See Fig. 17). Use, to retain dressings, and for varicose veins.

323. A bandage for the chest is always placed upon the patient while in a sitting posture; and it may be put on in circles or spirally. Use in fractures of the ribs, to retain dressings, and after severe contusions.

324. A bandage for the belly is placed on the patient as directed in § 323, if spirally carrying it from above downwards. Use to compress the belly after dropsy, or retain dressings.

325. The hand is bandaged by crossing the bandage over the back of the hand. Use, to retain dressings.

326. For the head, a bandage may be circular, as in Fig. 18; or spiral, as in the same figure; or both. In applying the one, as in Fig. 18, commence by placing one circular turn just over the ears; then bring it down from left to right, and round the head again so as to alternate a spiral with a circular turn. Use to retain dressings on the head, or over the eye; but this form soon gets slack. The circular bandage is the best, crossing it over both eyes.

Fig. 18.

327. For the Foot.—Place the end just above the outer ankle, and make two circular turns to prevent its slipping; then bring it down from the inside of the foot over the instep towards the outer part; pass it under the sole of the foot, and upwards and inwards over the instep towards the inner ankle, then round the ankle, and repeat again, so as to make it like Fig. 19. Use to retain dressings to the instep, heel or ankle.

Fig. 19.

328. For the leg and foot, commence and proceed as directed in § 327; then continue it up the leg as ordered in § 322.

329. As it sometimes happens that it is necessary to apply a bandage at once, and the materials are not at hand, it is desirable to know how to substitute something else that any one may apply with ease. This is found to be effected by handkerchiefs, and an experienced surgeon (Mr. Mayor) has paid great attention to the subject, and brought it to much perfection. It is to him, therefore, that I am indebted for most of these hints.

330. Any ordinary handkerchief will do; but a square of linen folded into various shapes answers better. The shapes generally required are as follows:—The triangle, the long square, the cravat, and the cord.

331. The triangular handkerchief is made by folding it from corner to corner. Use, as a bandage for the head. Application. Place the base round the head, and the short part hanging down behind, then tie the long ends over it.

332. The long-square is made by folding the handkerchief into three parts, or double it once upon itself. Use, as a bandage to the ribs, back, &c. If one handkerchief is not long enough sew two together.

333. The cravat is folded as usual with cravats. Use, as a bandage for the head, arms, legs, feet, neck, &c.

The cord is used to compress vessels, being, in fact, a temporary tourniquet when a knot is made in it, and placed over the vessel to be compressed. It is merely a handkerchief twisted in its long diameter.

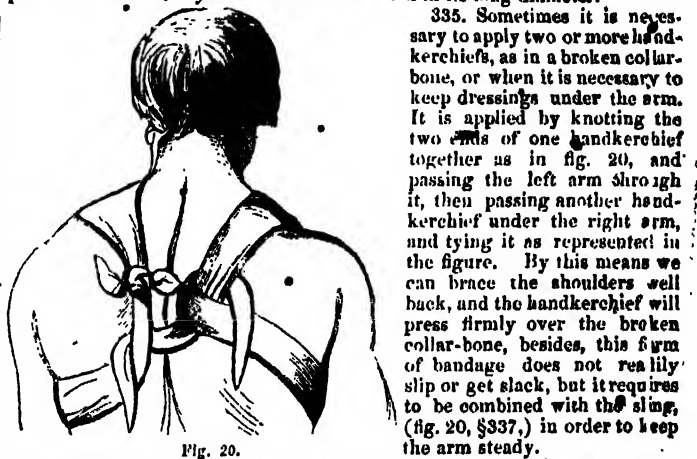

Fig. 20.

336. When a woman has an inflamed breast that requires support, or dressings to be kept to it, tie two ends of the handkerchief round her neck, and bring the body of it over the breast, and pass it upwards and backwards under the arm of that side, and tie the ends of those around the neck.

Fig. 21.

337. An excellent sling is formed by placing one handkerchief around the neck, and knotting the two ends over the breast-bone, as in fig. 21. Then placing the other in triangle under the arm, to be supported with the hand near to the hand, tie the ends over the other handkerchief, and pin the top to the other part after passing it around the elbow, as in fig. 21.

### III.—APPARATUS.

338. When a person receives a severe contusion of the leg or foot, or breaks his leg, or has painful ulcers over the leg, or is unable from some cause to bear the pressure of the bedclothes, it is advisable to know how to keep them from hurting the leg. This may be done by bending up a fire-guard, or placing a chair, resting upon the edge of it back and front of the seat over the leg, or putting a box on each side of it and placing a plank over them; but the best way is to make a cradle, as it is called. This is done by getting three pieces of wood, and three pieces of iron wire, and passing the wire through the wood as in fig. 22. This can be placed to any height, and is very useful in all cases where pressure cannot be borne.

339. When a person breaks his leg, and splints cannot be had directly get a bunch of straw or twigs, and roll it up in a handkerchief, and place one on each side of the leg or arm, and bind another handkerchief firmly around them, or make a long bag about three inches in diameter, or of more, of coarse linen (duck, or carpet, and stuff this full of straw sawdust or sand, sew up the end, and use this the same as the twigs. It forms an excellent extemporaneous splint. Another good plan is to get a hat-box made of chip, and cut it into suitable lengths, or for want of all these, some bones out of a pair of saws, and run them through a stout piece of rug, protecting the leg with a fold of rug, linen, &c.

340. When dry warmth is required to be applied to any part, fry a flour pancake and lay it over the part; or warm some sand

in the patient's socks, and put it to the part; salt does as well, and may be put into a paper bag; or warm jars, and rolled up in flannel.

#### IV.—MINOR OPERATIONS.

341. Bleeding is sometimes necessary at once in certain accidents, such as concussion, and therefore it is well to know how to do this. First of all bind up the arm above the elbow with a piece of bandage or a handkerchief, pretty firmly, then place your finger over the veins at the bend of the arm, and feel if there is any pulsation, if there is try another vein, and if it does not pulsate or beat, choose that one. Now rub the arm from the wrist towards the elbow, place the left thumb upon the vein, and hold the lancet as you would a pen, and nearly at right angles to the vein, taking care to prevent its going in too far, by keeping the thumb near to the point, and resting the hand upon the little finger. Now place the

Fig. 24.

Fig. 25.

point of the lancet on the vein, push suddenly inwards, depress the elbow, raise the hand upwards and outwards as to cut obliquely across the vein, as fig. 24. When sufficient blood is drawn off, which is known by feeling the pulse at the wrist, and near to the thumb, as shown by the black line in fig. 25, bandage the arm. If the pulse feels like a piece of cord, more blood should be taken away, but if it is soft, and can be easily pressed, the bleeding should be stopped. When you bandage the arm place a piece of lint over the opening made by the lancet, and pass a bandage lightly, but firmly, around the arm, so as to cross it over to the bend of the elbow.

342a. Dry Cupping is performed by throwing a piece of paper dipped into wine, and ignited into a wide-glass, and placing it over the part, such as the neck, temples, &c. It thus draws the flesh into the glass, and causes a termination of blood to the part, which is useful in headache, or many other complaints. This is an excellent method of extracting the poison from wounds made by adders, mad dogs, fish, &c.

Fig. 26.

343. Ordinary Cupping is performed the same as dry cupping, with this exception, that the part is scarified or scratched with a lancet, so as to cause the blood to flow. Then the glass is placed over it again with the lighted paper in it, and when sufficient blood has been taken away, then the parts are sponged, and a piece of sticking plaster applied over them.

#### LEECHES AND THEIR APPLICATION.

344. The leech used for medical purposes is called the *hirudo Medicinalis*, to distinguish it from other varieties, such as the *h. sanguisuga*, or horse-leech, and the *h. medicinalis*, or Lisbon leech. It varies from 2 to 4 inches in length, and is of a blackish brown colour, marked on the back with six yellow spots, and edged with a yellow line on each side. Formerly

Fig. 27.

leeches were supplied by Lincolnshire, Yorkshire, and other fenny countries, but latterly most of the leeches are procured from France, where they are now becoming scarce.

346. When leeches are applied to a part, it should be thoroughly freed from down or hair by shaving, and all dirt, liniments, &c. carefully and effectually washed away by washing. If the leech is hungry it will soon bite. If great difficulty is experienced in getting them to fasten on. When this is the case, roll the leech in a little porter, or moisten the surface with a little blood, or milk, or sugar and water. Leeches may be applied by holding them over the part with a piece of linen cloth, or by means of a glass, as in Fig. 28.

Fig. 28.

347. When applied to the gums, care

should be taken to use a leech glass, as they are apt to creep down the patient's throat; a large swan's quill will answer the purpose of a leech glass. When leeches are gorged, they will drop off themselves; never tear them off from a person, but just dip the point of a moistened finger in some salt and touch them with it.

345. Leeches are supposed to abstract about two drachms of blood, or six leeches draw about an ounce; but this is independent of the bleeding after they have come off, and more blood generally flows then than during the time they are sucking.

348. After leeches come away, encourage the bleeding by flannels dipped in hot water and wrung out dry, and then apply a warm "spongio-piline" poultice. If the bleeding is not to be encouraged, cover the bites with rag dipped in olive oil, or spread with spermaceti ointment, having previously sponged the parts clean.

349. When bleeding continues from leech bites, and it is desirable to stop it, apply pressure with the fingers over the part, or dip a rag in a strong solution of alum and lay over them, or use the tincture of sesquichloride of iron, or apply a leaf of matio to them, placing the under surface of the leaf next to the skin, or touch each bite with a finely-pointed piece of lunar caustic; and if all these tried in succession fail, pass a fine needle through a fold of the skin so as to include the bite, and twist a piece of thread round it, as in Fig. 29. Be sure never to allow any one to go to sleep with leech bites bleeding, without watching them carefully; and never apply too many to children.

Fig. 29.

350. After leeches have been used they should be placed in water, containing 16 per cent. of salt, which facilitates the removal of the blood they contain; and they should afterwards be placed one by one in warm water, and the blood forced out by gentle pressure. The leeches should then be thrown into fresh water, which is to be renewed every 24 hours; and they may then be re-applied after an interval of 8 or 10 days; a second time they may be disgorged, after which they should be placed in reservoirs made of millstones, covered with Roman cement, and filled with water, which should be frequently changed. The bottom of the reservoir should be covered with a layer of clay, 14 inches deep, in which several aquatic plants (the typha, and the pond-weed, for example), are allowed to grow. Instead of the reservoir you may use a tub with lumps of clay moistened with water, and moss, and stones; they are thus enabled to clean themselves from the slime which covers their bodies and kills them.

351. If a leech is accidentally swallowed, or by any means gets into the body, employ an emetic, or enema, of salt and water.

352. Scarification is useful for contusions, and inflammation of parts. It is performed by scratching, or slightly cutting through the skin with a lancet, holding the lancet as you would a pen when you are ruling

#### V.—ACCIDENTS.

Burns.—If the skin is much injured, spread some linen pretty thickly with chalk ointment (§ 262), and lay over the part, and give the patient some brandy and water. If much exhausted; then send for a medical man. If the injury is very painful, use the same ointment, or apply carded cotton dipped in lime-water and linseed-oil (§ 225). If you please you may lay cloths dipped in ether over the parts, or cold lotions

354. Scalds.—Treat the same as burns (§ 353), or cover with scraped raw potato; but the chalk ointment is the best. In the absence of all these, cover the parts with treacle, and dust on plenty of flour.

355. Body in Flames.—Lay the person down on the floor of the room, and cover the tablecloth, rug, or other large cloth over him, and roll him on the floor.

356. Put in the Eye

your forefinger upon the cheek-bone, having the patient before you; then draw up the finger, and you will probably be able to remove the dirt; but if this will not enable you to get at it, repeat this operation while you have a netting-needle or bodkin placed over the eyelid; this will turn it inside out as in Fig. 30, and enable you to remove the sand or eyelash, &c., with the corner of a fine silk handkerchief. As soon as the substance is removed, bathe the eye with cold water, and exclude the light for a day. If the inflammation is severe, take a purgative, and use a refrigerant lotion (§ 253).

Fig. 30.

357. Lime the Eye.—Syringe it well with warm vinegar and water (1 ounce to 8 ounces of water); take a purgative, and exclude light.

358. Iron or Steel Spicule in the Eye.—This occurs while turning iron or steel in a lathe. Drop a solution of sulphate of copper (from 1 to 3 grains of the salt to 1 ounce of water) into the eye, or keep the eye open

Always send off for a surgeon immediately as an accident occurs, but treat as directed until he arrives.

in a wine-glassful of the solution. Take a purgative, bathe with gold lotion, and exclude light to keep down inflammation.

359. *Dislocated Thumb*.—This is frequently done while boxing, or by a fall. Make a clove hitch, by passing the loop *a* behind *b*, as in Fig. 31, and apply over the thumb by placing a piece of rag under the string to prevent it cutting the thumb; then pull in the same line as the thumb, as in Fig. 32. Afterwards apply a cold lotion (§ 254.)

Fig. 31.

*Cuts and Wounds*.—Cut thin strips

Fig. 33.

of sticking-plaster, and bring the parts together; or if large and deep, cut two broad pieces so as to look like the teeth of a comb, and place one on each side of the wound, which must be cleaned previously. These pieces must be arranged as in Fig. 33, so that they shall interlace one another; then by laying hold of the pieces on the right hand side with one hand, and those on the other side with the other hand, and pulling them from one another, the edges of the wound are brought together, and without any difficulty.

361. *Ordinary Cuts* are dressed by thin strips (§ 360), applied as in Fig. 34; that is, by pressing down the plaster on one side of the wound, and keeping it there and pulling in the opposite direction, then suddenly depressing the hand when the edges of the wound are brought together.

the lotion to drop on the cloth, and thus keep it always wet.

363. *Hæmorrhage*, when caused by an artery being divided or torn, may be known by the blood jumping out of the wound, and being of a bright scarlet colour. If a vein is injured, the blood is darker, and flows continuously. To stop the latter, apply pressure by means of a compress (§ 310) and bandage. To arrest arterial bleeding get a piece of wood (part of a mop-handle will do), and tie a piece of tape to one end of it (a Fig. 36); then tie a piece

Fig. 36.

of tape loosely over the arm, and pass the other end of the wood under it (*b*); twist the stick round and round until the tape compresses the arm sufficiently to arrest the bleeding, and then confine the other end by tying the string round the arm as in Fig. 36. If the bleeding is very obstinate, and it occurs in the arm, place a cork underneath the string, on the inside of the fleshy part; that is on the opposite part to *b* in Fig. 36, where the artery may be felt beating by any one; if in the leg, place the cork in the direction of a line drawn from the inner part of the knee to a little of the outside of the groin. It is an excellent thing to accustom yourself to find out the position of these arteries, or indeed any that are superficial, and to explain to every one in your house where they are, and how to stop bleeding. If a stick cannot be got, take a handkerchief, make a cord bandage of it (§ 334) and tie a knot in the middle; the knot acts as a compress, and should be placed over the artery, while the two ends are to be tied around the limb. Observe always to place the ligature between the wound and the heart. Putting your finger into a bleeding wound, and making pressure until a surgeon arrives, will generally stop violent bleeding.

364. *Bleeding from the Nose*, from whatever cause, may generally be stopped by putting a tent (Fig. 13) into the nostrils; if this does not do, apply a cold lotion to the forehead (§ 253 and 254); raise the head, and place both arms over the head, so that it will rest on both hands; dip the tent, slightly moistened into some powdered gum arabic, and plug the nostrils again; or dip the tent into equal parts of powdered gum arabic and alum, and plug the nose. If the bowels are confined, take a purgative.

365. *Violent Shocks* will sometimes stun a person, and he will remain unconscious. Untie strings, collars, &c.; loose anything that is tight, and interfere with the breathing; raise the head; see if there is bleeding from any part; apply smelling-salts to the nose, and hot bottles to the feet.

366. In *Convulsion*, the surface of the body is cold and pale, and the pulse weak and small, the breathing slow and gentle, and the pupil of

Fig. 35.

the eye generally contracted or small. You can get an answer by speaking loud, so as to arouse the patient. Give a little brandy and water, keep the place quiet, apply warmth, and do not raise the head too high. If you tickle the feet, he feels it.

367. In *Compression of the Brain*, from any cause, such as apoplexy, or a piece of fractured bone pressing on it, there is loss of sensation. If you tickle the feet, he does not feel it. You cannot arouse him so as to get an answer. The pulse is slow and laboured; the breathing slow, laboured, and snoring; the pupil enlarged. Raise the head, unloose strings or tight things, and send for a surgeon. If one cannot be got at once, apply mustard-poultices to the feet, and leeches to the temples (Fig. 28, § 348.)

368. *Choking*.—When a person has a fish bone in the throat, press the forefinger upon the root of the tongue, so as to induce vomiting; if this does not do, let them swallow a large piece of potato or soft bread; and if these fail give a mustard emetic. (§ 133.)

369. *Drowning*.—Attend to the following essential rules: 1. Lose no time; 2. Handle the body gently; 3. Carry the body with the head gently raised, and never hold it up by the feet; 4. Send for medical assistance immediately, and in the meantime act as follows: 1. Strip the body, rub it dry; then wrap it in hot blankets, and place it in a warm bed in a warm room; 2. Cleanse away the froth and mucus from the nose and mouth; 3. Apply warm bricks, bottles, bags of sand, &c. to the arm-pits, between the thighs and soles of the feet; 4. Rub the surface of the body with the hands enclosed in warm dry worsted socks; 5. If possible, put the body into a warm bath; 6. To restore breathing put the pipe of a common bellows into one nostril, carefully closing the other and the mouth; at the same time drawing downwards, and pushing gently backwards the upper part of the windpipe, to allow a more free admission of air; blow the bellows gently, in order to inflate the lungs, till the breast be raised a little; then set the mouth and nostrils free, and press gently on the chest; repeat this until signs of life appear. When the patient revives apply smelling salts to the nose, give warm wine or brandy and water. *Cautions*. 1. Never rub the body with salt or spirits; 2. Never roll the body on casks; 3. Continue the remedies for 12 hours without ceasing.

370. *Hanging*; loose the cord, or whatever suspended the person, and proceed as for drowning (§ 369), taking the additional precaution to apply 8 or 10 leeches to the temples. (§ 346.)

371. *Apparent Death from Drunkenness*.—Raise the head, unloose the clothes; maintain warmth of surface, and give a mustard emetic as soon as the person can swallow.

372. *Apoplexy*.—Raise the head; unloose all tight clothes, strings, &c.; apply cold lotions (§ 253, 254) to the head, which should be shaved; apply leeches to the temples, and send for a surgeon.

373. *Suffocation* from noxious gases, &c. Remove to the fresh air; dash cold vinegar and water in the face, neck, and breast; keep up the warmth of the body; if necessary apply mustard poultices to the soles of the feet, and try artificial respirations as in drowning. (§ 369.)

374. *Lightning and Sun-stroke*. Treat the same as apoplexy. (§ 372.)

## POISONS.\*

### GENERAL OBSERVATIONS.

375. A Poison is a substance which is capable of altering, or destroying, some or all of the functions necessary to life.

376. When a person is in good health and is suddenly attacked, after having taken some food or drink, with violent pain, cramp in the stomach, sense of sickness or nausea, vomiting, convulsive twitchings and a sense of suffocation; or if he be seized, under the same circumstances, with giddiness, delirium, or unusual sleepiness, then poisoning may be supposed.

377. Poisons have been divided into four classes: 1st. Those causing local symptoms. 2nd. Those producing spasmodic symptoms. 3rd. Narcotic or sleepy symptoms; and 4th. Paralytic symptoms.

378. Poisons may be mineral, animal, or vegetable.

379. 1st. Always send immediately for a medical man; 2nd. Save all fluids vomited, and articles of food, cups, glasses, &c., used by the patient before being taken ill, and lock them up; 3rd. Examine the cups, to guide you in your treatment; that is, smell them, and look at them.

380. As a rule, give emetics after poisons that cause sleepiness and raving; chalk, milk, eggs, butter, and warm water, or oil after poisons that cause vomiting and pain in the stomach and bowels with purging; and when there is no inflammation about the throat, tickle it with a feather to excite vomiting.

381. *ARSENIC* (White Arsenic; Orpiment, or Yellow Arsenic; realgar or Red Arsenic; Scheele's Green, or Arsenite of Copper; King's Yellow; Arsenic Drops; and Arsenical Paste).—E. Little or no taste. Within an hour heat and pain in the stomach, followed by vomiting of green, yellow, and bloody matter, burning, and violent thirst; purging, and twisting about the navel; pulse small, quick, and irregular; breathing laboured, voice hoarse, and speaking painful; skin cold and clammy. Sometimes there are cramps and convulsions, followed by death.—T. Give plenty of warm water, new milk in large quantities, gruel, linseed tea, apply leeches to the bowels, foment, and give starch or gruel enemas. Scrape the iron rust off anything you can get at, mix it with plenty of water and give in large draughts frequently, and give an emetic of sulphate of zinc (white vitriol.) *Caution*. Never give large draughts of fluid until those given before have been vomited, because the stomach will not contract properly if filled with fluid, and the object is to get rid of the poison as speedily as possible.

382. *COPPER* (Blue vitriol, or blue stone; verdigrise; verditer; verdigrise).—The abbreviations used are as follow:—E. effects or symptoms. T. treatment. A. antidotes or counter poisons. D. A. dangerous antidotes.

*crystals*)—E. An acid, rough, disagreeable taste in the mouth; a dry parched tongue, with sense of strangling in the throat; coppery eructations; frequent spitting; nausea; frequent desire and effort to vomit, or copious vomiting; severe darting pains in the stomach; griping; frequent purging; belly swollen and painful; skin hot; and violent burning thirst breathing difficult; intense headache and giddiness; followed by cold sweats, cramps in the legs, convulsions and death.—A. White of eggs mixed with water (12 to 1 pint), to be given in wine-glassfuls every two minutes prussian blue; iron filings mixed with water, or very strong coffee.—D. A. Vinegar, bark, alkalies, gall nuts.—T. If there is much pain in the belly or stomach, apply leeches. Give large draughts of milk and water to encourage vomiting.

383. **MERCURY** (*Corrosive sublimate; calomel; red precipitate; vermilion; turpeth mineral; prussiate of mercury*).—E. Acid metallic taste; tightness and burning in the throat; pain in the back part of the month, stomach, and bowels; anxiety of countenance; nausea and vomiting of bloody and bilious fluids; profuse purging, and difficulty of making water; pulse small, hard, and quick; skin clammy, icy coldness of the hands and feet; and death in 24 or 36 hours.—A. White of eggs mixed with water, given as above (§ 382); milk; flour and water, mixed pretty thick; linseed tea; and barley water.—T. Give large draughts of warm water, if you cannot get anything else; foment the bowels with poppy-head fomentations, and apply leeches if the belly is very tender.

384. **ANTIMONY** (*Tartar emetic; butter of; hermes mineral*).—E. A rough metallic taste in the month, nausea, copious vomitings, frequent hicough, purging, colicky pains, frequent and violent cramps, sense of choking, severe heartburn, pain at the pit of the stomach, difficult breathing, wildness of speech, cramps in the legs, and death.—A. Decoction or tincture of galls; strong tea; decoction, or powder of Peruvian bark.—D. A. White vitriol, or speccavanha, as emetics.—T. Give large draughts of water, or sugar and water, to promote vomiting; apply leeches to the throat and stomach if painful; and give one grain of extract of opium dissolved in a wine-glassful of sugar and water, as soon as the vomiting ceases, and repeat three times at intervals of a quarter of an hour.

385. **TRI** (*Butter of tin; putty powder*).—E. Colic and purging.—A. Milk.—T. Give warm or cold water to promote vomiting, or tickle the throat with a feather.

386. **ZINC** (*White vitriol; flowers of; chloride of*).—E. An astringent taste, sensation of choking, nausea, vomiting, purging, pain and burning in the throat and stomach, difficult breathing, pallor and coldness of the surface; pinched face, cramps of the extremities, but with the exception of the chloride, seldom death.—A. For the two first give copious draughts of milk, and white of eggs and water, mucilage, and olive oil; for the third, carbonate of soda, and warm water in frequent draughts, with the same as for the other compounds.—T. Relieve urgent symptoms by leeching and fomentations, and after the vomiting give castor-oil. For the chloride use frictions and warmth. (§ 340).

387. **SILVER** (*Lunar caustic; flowers of silver*). **GOLD** (*Chloride of*); and **BISMUTH** (*nitrate; flowers of; pearl white*), are not frequently met with as poisons.—E. Burning pain in the throat, mouth, and the usual symptoms of corrosive poisons.—A. For silver, common salt and water; for gold and bismuth, no antidotes are known.—T. Give milk and mucilaginous fluids, and castor-oil.

388. **ACIDS** (*Hydrochloric or spirit of salt, nitric or aquafortis; sulphuric or oil of vitriol*).—E. Acid-burning taste, acute pain in the gullet and throat; vomiting of bloody fluid, which effervesces when chalk is added to it; hicough, tenderness of the belly, cold sweats, pinched face, convulsions, and death.—A. Give calcined magnesia, chalk, soap and water.—D. A. Carbonated alkalies. *Caution*.—Do not give water if oil of vitriol has been taken.—T. Excite vomiting; give fluids after the poison has been ejected.

389. **CHLORINE** (*gas*).—E. Violent coughing, tightness of the chest, debility, inability to stand.—A. The vapour of caustic ammonia to be inhaled—10 drops of liquid ammonia to 1 ounce of water to be taken.—T. Dash cold water over the face, and relieve urgent symptoms.

390. **LEAD** (*sugar of; red lead; white lead, wine sweetened by; and water impregnated with*).—E. Sugary astringent metallic taste, tightness of the throat, colicky pains, violent vomiting, hicough, convulsions, and death.—A. Epsom or Glauber's salts; plaster of Paris; or phosphate of soda.—T. An emetic of sulphate of zinc (24 grains to half pint of water); leeches to belly, and fomentations if necessary.

391. **PHOSPHORUS**.—E. Intense burning and pain in the throat and stomach.—A. Magnesia and carbonate of soda.—T. Large draughts of cold water, and tickle the throat with a feather. *Caution*. Do not give oil or milk.

392. **LIME**.—E. Burning in the throat and stomach, cramps in the belly, hicough, vomiting, and paralysis of limbs.—A. Vinegar or lemon juice.—T. Thin starch water to be drank frequently.

393. **ALKALIES** (*Caustic; potash; soda; ammonia*).—E. Acid, hot, disagreeable taste; burning in the throat, nausea, and vomiting bloody matter, profuse purging, pain in the stomach, colic, convulsions, and death.—A. Vinegar and vegetable acids.—T. Give linseed tea, milk, almond or olive oil, and excite vomiting.

394. **BARYTA** (*carbonate; pure and muriate*). (See Lime, § 392.)

395. **NITRE**.—E. Heart-burn, nausea, violent vomiting, purging, difficult breathing, violent pain in the bowels and death.— (See Arsenic, § 381.)

396. **MALEFIC POISONS** (*Bone-berries; fool's parsley; deadly nightshade;*

\* See Narcotics.

*water-hemlock; thorn apple; opium; camphor, &c.*).—E. Giddiness, faintness, nausea, vomiting, stupor, delirium, and death.—T. Give emetics, large draughts of fluids, tickle the throat, apply smelling salts to the nose, dash cold water over the face and chest, apply mustard poultices, and, above all, endeavour to rouse the patient by walking between two persons; and, if possible, by electricity.

397. **VEGETABLE IRRITATING POISONS** (*Mazereau; monk's-hood; bitter apple; gamboge; white hellebore, &c.*).—E. Acrid, biting, bitter taste, choking sensation, dryness of the throat, retching, vomiting, purging, pains in the stomach and bowels, breathing difficult, and death.—T. Give emetics of chamomile, mustard, or sulphur of zinc; large draughts of warm milk, or other bland fluids to foment and leech the belly if necessary, and give strong infusion of coffee.

398. **OXALIC ACID**.—E. Vomiting and acute pain in the stomach, general debility, cramps, and death.—A. Chalk.—T. Give large draughts of lime-water or magnesia.

**SPANISH FLIES**.—E. Acrid taste, burning heat in the throat, stomach, and belly; bloody vomitings, colic, purging, retention of urine, convulsions, death.—T. Large draughts of olive oil, thin gruel, milk, starch enemata, and camphorated water.

400. **POISONOUS FISH** (*Old-wife; sea-lobster; mussel; tunny; blowers; rock-fish; &c.*).—E. Intense pain in the stomach after swallowing the fish, vomiting, purging, and sometimes cramps.—T. Give an emetic, excite vomiting by tickling the throat, and plenty of warm water. Follow emetics by active purgatives, abate inflammation by the usual remedies, and drink freely of sugar and water.

401. **BITES OF REPTILES** (*Viper; Adder; viper; Indian serpents; rattlesnake*).—E. Violent and quick inflammation of the part, extending towards the body, soon becoming livid; nausea, vomiting; convulsions; difficult breathing; mortification; cold sweats and death.—T. Suppose that the wrist has been bitten, as in *b* fig. 37,

Fig. 37.

immediately tie a tape between the wound and the heart (*a*), scarily the parts with a pen-knife, razor, or lancet, and apply a cupping-glass over the bite (§ 342), frequently removing it and bathing the wound with volatile alkali, or heat a poker and burn the wound well, or drop some of Sir Wm. Burnett's Disinfecting Fluid into the wound. Give plenty of warm drinks, and cover up in bed.

402. **MAD ANIMALS, BITE OF**.—E. Hydrophobia, or a fear of fluids.—T. Tie a string tightly above the part, as in *b* fig. 38, cut out the bite, and canterize the wound with a red-hot poker, lunar caustic, or Sir Wm. Burnett's Disinfecting Fluid. Then apply a piece of "spongio-pilule," give a purgative, and plenty of warm drink.

Fig. 38.

403. **INSECT STINGS** (*Wasp, bee, gnat, hornet, gad-fly, scorpion*).—E. Swelling, nausea, and r.—T. Press the barrel of a watch-key over the part so as to expose the which must be removed. Lay a rag moistened with hartshorn and oil over the part. Give 6 or 8 drops of hartshorn in 2 ounces of infusion of chamomile, and cover up in bed.

#### LIST OF EXCELLENT FAMILY WORKS SUPPLIED BY THE AGENT OF WHOM YOU OBTAINED THIS SUPPLEMENT.

THE FAMILY FRIEND, (New Series from the 3rd July, 1852), price 2d., Weekly; Monthly Part, 9d.; Quarterly Volumes, 2s. 6d.

The First Series of THE FAMILY FRIEND, in Seventy-two Numbers, price 2d. each, or Six Volumes, price 2s. 6d. each.

THE FAMILY TUTOR AND SCHOOL COMPANION, on the 1st and 15th of each Month, price 2d.; Volumes, 2s. 6d.

WALKS ABROAD AND EVENINGS AT HOME, price 2d. Monthly; Volumes, 2s. 6d.

GRANDFATHER WHITEHEAD'S CATECHISMS, upon all the Sciences, price 2d. each; One Volume, price 2s. 6d.

AUNT MARY'S STORY BOOKS FOR YOUNG PEOPLE, price 2d. each; One Volume, price 1s. 6d.

FAMILY PASTIME, or, HOMES MADE HAPPY; Two Volumes, price 1s. each.

ILLUSTRATED TWO-PENNY SCHOOL-BOOKS, including—1st. *Spelling and Reading*, 2nd.—*Spelling and Reading, Graded Grammar, Writing and Composition, Arithmetic and Geography*,—forming the First Series; each complete at 2d., or in One Volume, 1s. 6d. The Second Series,—*Geology, Astronomy, Natural History, Physical Training, Moral Culture*, 2d. each, or One Volume, price 1s. 6d.

All the Numbers and Parts of the "Home Companion" kept on Sale.

Printed by WILLIAM J. BOLT-COURT, London, and published for the Proprietor by JOHN BENNETT, 69, Fleet street, London.

Subsequent Numbers, 1d.]

## A BOOK FOR THE HOME F.

BY JOHN CRITCHLEY PRINCE.

When the night cometh round, and our  
duties are done,  
And a calm stealth over the breast;  
When the bread that is needful is honestly  
won,  
And our wordly thoughts nestle to rest  
How sweet at that hour is the truth-written  
page,  
With fancy and action allied!  
The magic of childhood, the place of age,  
Is a Book for the Home Fireside!

There, manhood may strengthen a wavering  
mind,  
By the sage's severest of lore;  
There, woman, with sweetness and pathos  
combined,  
Make the fountains of feeling run o'er;  
There the voices of children may warble  
like birds,  
What the poet has uttered with pride;  
And the faint and desponding take heart  
at the words  
Of a Book for the Home Fireside!

Many souls have been trained into good-  
ness and grace,  
And many stern hearts chastened down;  
Many men have been nerved to look up with  
calm face,  
Whatever misfortune might frown;  
Many minds have been roused to new life,  
and grown great,  
Though baffled, obstructed, and tried;—  
Have been schooled to endure, taught to  
"labour and wait,"  
By a Book for the Home Fireside!

And not with the presence of Home is it  
gone,  
For abroad in the fulness of day  
Its spirit remains with us, cheering us on,  
O'er the roughness of life's common way.

And nature looks lovely, but lovelier yet  
Through the glass of reflection described;  
We have read of her wonders,—and who  
would forget?  
In the Book for the Home Fireside!

Whatever be my fortune, in shadow or shine,  
Mid comfort, stern labour, or woe,  
May I ne'er miss the taste of those waters  
divine  
From the well-springs of genius that flow.  
I should lose, a sweet charm, I should lack  
a great joy,  
And my heart would seem withered and  
dried,  
Did I want what has been my delight from  
a boy,  
A Book for the Home Fireside!

Bless the bards and the prosemen, whatever  
their clime,  
Who bequeath us the wealth of their  
thought,  
Their truth revelations, their visions sub-  
lime,  
Their fancies so tenderly wrought.  
We were poor, with the riches of kings for  
our dower,  
Without what their pens have supplied,  
And that brain must be barren which owns  
not the power  
Of a Book for the Home Fireside!

Dear child! let thy leisure be fluted with  
the page,  
But one nor too light nor austere;  
May its precepts improve thee, its spirit  
bloom;  
And its sentiments soften and cheer  
May it keep thy affections in fi-  
bloom;  
Console thee, and teach thee  
Be a flower in the sunshine  
the gloom,  
A Book for the Home Fireside!

## THE SMITH FAMILY.

### THEIR ADVENTURES WITH A ROBBER.

BY PAUL CRETON.

THE Smiths of Smithville had for a long time been very much annoyed by the depredations of some unknown individual, whose confused ideas concerning the rights of property led to the frequent abstraction of divers goods and chattels from the premises of the said Smiths, in a furtive and mysterious manner. Bags of wheat and oats vanished from the granary, pork from the cellar, and corn from the crib; in one night a sheep, that had just been slaughtered, coolly trotted away; and on another occasion, several gallons of maple syrup evaporated in the night-time. Milking-stools went off on three legs, and one morning Mr. Smith's best axe was found to have "cut stick." Log-chains became rattle-snakes and crept off, iron wedges made splits in the Smith property, boots walked away, and jacks rode off with the team-horse.

Vain were the efforts of the elder and younger Smiths to discover the mystery of these disappearances, and to entrap the offender. Despairing of bringing him to justice, the Smiths found they could do nothing more than take measures to insure the safety of their property. Accordingly they built a new granary, with strong walls, a narrow, grated window, and a heavy oak door, to which was attached a formidable padlock. This prison-like portion of the barn was built sufficiently large to allow the Smiths to lock up with the grain a great deal of portable property, such as was most likely to tempt the cupidity of thieves.

After the granary was finished, a month passed, during which time the depredations of the robber or robbers were confined to the orchard and hen-roost; when, late one Sunday evening, the elder Smith, as he was sitting tipped against the kitchen wall, smoking his pipe, preparatory to his retiring, bethought him that he had neglected to lock the granary before leaving the barn. This was by no means a singular circumstance, considering that the granary was usually locked by the younger Smith, who had that night "gone a-courting."

It was a moonlight evening, and Mr. Smith on approaching the barn was considerably startled at seeing the door ajar. Certain of having shut the door an hour previously, Mr. Smith thought of robbers. His suspicions were confirmed, when, on a nearer approach, he plainly heard a movement in the

barn. Too cautious to endanger his life by boldly attacking the robber, Mr. Smith, with considerable trepidation, resolved to watch his movements and discover who he was.

Looking through a crack in the east side of the barn, he saw a ghoul-like figure glide across the floor towards the granary. A happy thought entered Mr. Smith's brain. Stealing into the barn, he crept silently along by the mow, until near the granary, when—clap! he shut the door, adjusted the padlock, turned the key, and was off as if for his life!

"It is impossible to say what made Mr. Smith tremble so. It might have been the smothered cry of alarm which issued from the granary walls, and rang fully on his ears—a cry well calculated to awaken superstitious fear. But Mr. Smith never owned that he was frightened; although on reaching the kitchen, he was as white as a ghost, or as ghosts are supposed to be.

"What is the matter?" cried Mrs. Smith.  
"I've caught the robber!" ejaculated Smith in a breath. "He's looked up in the granary. Give me my boots!"

"Why—what—what are you going to do?"  
"Get help! He's a desperate fellow, and 'twill be dangerous to meddle with him alone!"

It is impossible to describe the excitement of Mr. and Mrs. Smith on that memorable occasion. The latter took it upon herself to load the old musket, while her husband went for the neighbours.

Mr. Smith exchanged his slippers for his boots, and ran first to Deacon Naffles' house, where he expected to find the younger Smith, who was courting Naffles' daughter. He was surprised to see the house all dark—as if the Naffles' had retired to rest and blown out the candle. He knocked, however, furiously, as the occasion required. After some delay, Deacon Naffles came down in his night-clothes, stared at Smith in astonishment, and demanded his business at that time of night.

"Caught the thief—locked up—in the granary—where's Peter?"  
"Hal caught a thief!" cried Deacon Naffles, who, having lost some property, as well as his neighbour, was interested in the intelligence. "Good enough! keep him till morning!"

"Twont do!" replied Mr. Smith, in an excited manner. "He's a desprit fellow—break out—I must rouse the neighbours—where's my son, Peter?"

"O Sally is sick to night—so Peter courted her only about an hour, and went home."

"Went home!"  
"Yes," said the deacon, "half an hour ago."  
The elder Smith clapped his hand to his forehead, as if he had been struck either by an idea, or some other weighty substance.

"Gracious!" he exclaimed.  
"What?" asked the deacon.  
"I believe," stammered the elder Smith—"I—I have locked up!"  
"Who?"  
"Peter!"

"I bet you have!" cried the deacon. "I heard him say he had got to carry the buggy-cushions into the granary before he went to bed."

"Look here," whispered the elder Smith, "I beg of you never to mention this—I—I—if it should get out!"

"O, I'll keep the secret!" interrupted the deacon, trying to preserve a becoming gravity. "The joke is safe—and I'd advise you to hurry home and let out Peter."

The elder Smith turned on his heel and vanished—feeling very weak—probably from the effects of the excitement he had undergone.

Let us now look in upon the younger Smith, who was actually shut up in the granary. It is impossible to describe his rage on finding himself thus entrapped. After shouting until he was hoarse, and nearly deaf, he closed his teeth angrily, and sat down on a bag of meal to wait the result.

Peter had not long been in this dark dungeon, before he heard a noise in the barn. Supposing it was the old man, who, having discovered his error, was coming to liberate him, his anger evaporated, and he could not laughing at the ludicrous mistake.

But there was a mystery about the sounds he heard, which caused the younger Smith to doubt whether they were made by his father, after all. Listened. They turned the key cautiously in the lock. Slowly, stealthily the door opened, while Peter scarcely breathed. Somebody entered noiselessly, touched young Smith's shoulder as he passed, and began to explore the further part of the dungeon. Peter dropped on his hands and knees, and taking advantage of the noise made by the robber, crept out. Then, to shut the door and lock it, was the work of a moment.

was locked up.  
Listening a moment, and hearing no sound, Peter became firmly convinced that he had committed no error, but caught a real thief, and immediately for assistance.

Shortly after, very much ashamed of his mistake, the elder Smith sneaked into the barn, and approached the granary. (It is necessary in this place to observe that the elder Smith had looked up his son with the key which belonged to the granary, and which he had carried away with him, and that Peter looked up the thief with a false key, which the latter had brought with him, and carelessly left in the lock on entering the granary, and which the younger Smith had carried away.)

And now the elder Smith made haste to open the door.

"Peter!" he called, putting his head into the granary.

No sound replied.

"Are you asleep? Come, don't go playing any tricks on me—it was all a—e—for I really took you to be a rob!"

Mr. Smith's tongue was stopped by a violent blow on the mouth. Mr. S. in an instant, was tumbled down amidst a wilderness of barrels, bags, rakes, and shovels. Mr. Smith was considerably stunned by the blow and fall, and when Mr. Smith got upon his legs again, the door was closed and locked. Mr. Smith was a prisoner. I leave the reader to imagine his feelings!

Meanwhile, Peter was raising forces to assist in taking the thief out of the granary in safety. Having first told his story to Mrs. Smith, who was exceedingly astonished, he hastened to alarm Joe Ferris, a stout fellow, who lived in the woods near by, and who had complained of losing quite as much property as the Smiths. Mrs. F. put her head out of the window, and wished to know what Peter wanted. The young man asked for Joe. After some hesitation, the woman replied that her husband had the headache, and could not get up.

"It's very important!" said Peter. "I've caught the thief, and locked him up in the granary!"

"O—have you?" said Mrs. Ferris in a feeble voice. "How fortunate! But as my husband has the headache, I think you had better keep the—man till morning."

"No, we'll have him to-night!" cried Peter, and away he ran.

Now, if the younger Smith thought he was regaling Mrs. Ferris with glad tidings, he was considerably in error. The truth is, in closing the window, she was as pale as death. The reader may guess the cause of her agitation, when I inform him that there was no Joe Ferris sick with the headache in the house.

But Mrs. F. was a woman of energy and decision. She caught up a hammer, threw her shawl over her head, and left the house. She was soon in Mr. Smith's barn with her hand on the granary door.

"Joseph!" she whispered.

No reply.

"Joseph—it is me—are you here?" she added, knocking on the door.

"Let me out," said a voice within.

Without any further delay, Mrs. Ferris having thrown the barn-door wide open, so that she could perform her operations, commenced hammering the padlock in a most destructive manner.

Now Mr. Smith, who was within, was exceedingly astonished at what he heard. He certainly wished to be let out, but he had no desire to have the padlock smashed, without first trying other means. Something like the truth flashed upon his mind, however, when he reflected that the person who was breaking the lock had called him Joseph, and that the voice was marvellously like a woman's. With great anxiety of mind he waited for the door to open.

At length the lock was torn away, and Mrs. Ferris whispered—

"Come, quick, Joseph! There's no time to lose! They'll be here in a minute!"

She caught somebody by the arm, and that somebody followed her into the moonlight. Then he caught her by the arm, and both stopped, looking each other full in the face.

Mrs. Ferris screamed, turned paler than the moonlight, and dropped her hammer. Mr. Smith was scarcely less astonished; but recovering himself, he said, rather coolly, considering the occasion—

"You are late to-night, Mrs. Ferris; allow me to see you home."

She could not refuse his arm; and when she saw that he was conducting her to his house, instead of her own, she had not the power to say a word, or make the least resistance.

The good lady's feelings, on being brought before Mrs. Smith, can be "more easily imagined than described." In her fear and confusion, she made some very startling truths; and with tears in her eyes, and on her knees, begged her "kind, dear friends," to be merciful, and not to expose her. Mrs. Smith recovered from her amazement and exclaimed "I never! I never! I never!" and Mr. Smith, who was not the least excited of the three, indulged in some equally sensible remarks.

Meanwhile, Mr. Joe Ferris, who was the man who had taken the younger Smith's place in the granary, and given it up in turn to the elder Smith, went home by a circuitous route, wondering by what strange accident he had got caught, and congratulating himself on his escape. He had left his door, when, hearing his name called by somebody in the road, he turned and saw three men going by.

"Joe Ferris, is that you?" cried the voice of the younger Smith. "Come on, if you are ready. I've got Bill Hodges and Mr. Blake—and I think we'll be enough for one thief—but the more the merrier, so come on. I knew you would go in for the fun, in spite of your headache."

Joe was quite as much in the dark now, as when he was locked up in the granary; but concluding it would be best to put a bold face on the matter, and accompanying Peter, he appeared himself ready, and jumped over the fence. At first he was afraid of committing himself, but the conversation by the way showing him—as he thought—exactly how the ground lay, he laughed heartily at the queer manner in which the thief was caught, and boldly

volunteered to be the first to enter the granary where he was confined; at the same time chuckling joyously at the anticipation of the younger Smith's dismay, on finding, instead of a thief, his own father under lock and key!

With great glee the men proceeded at once to the granary, where Peter proposed leaving his companions, in order to go to the house for a lantern, and to see if his father had returned; upon which Joe Ferris laughed all to himself, and advised the younger Smith to be sure and bring the old man, if he was anywhere to be found!

"Hallo!" cried Bill Hodges; "the granary door is open! the thief has broke out!"

Peter came back filled with consternation. Joe Ferris was no less surprised. The strange events of the night were involved in a deeper mystery than ever, when the elder Smith, having heard the approach of Peter and his companions, made his appearance with a light.

"Hallo, neighbour!" cried Joe Ferris, "what is all this hubbub about? Peter has been telling us about thieves."

"I declare, father," said the younger Smith, "after you shut me up for a thief, I shut up a real thief, and left him in my place."

"I know it; your mother has told me," replied the elder Smith; "and when I came to let you out"—

"O! I see it all!" groaned Peter—"he got away!"

"Yes, and shut me up!"

"And how did you get out?"

Why, the thief's wife had the kindness to conv. and break the lock!"

So saying, the elder Smith held the lantern up to the face of Ferris, who turned ghastly white, and trembled as if he had been in an ague fit.

The whole affair was now explained, to the astonishment of everybody in general, and of Joe in particular, who was too much astonished to make any resistance, while Peter and his companions were tying his hands behind him.

Ferris and his wife were accommodated with lodgings in Mr. Smith's house that night; and, on the following day, a search having been instituted, and all sorts of goods found on Joe's premises, they were both committed to jail, to await their trial.

What their sentence was, when convicted of the crime charged against them, I have quite forgotten; but it is certain that the good people of Smithville were troubled no more with the mysterious disappearance of their goods and chattels, and that the Smiths remembered with peculiar satisfaction the manifold mistakes committed on the night of their adventures with the robbers.

## THE SETTING SUN.

BY THEODORE SEDGWICK FAY.

FAREWELL, O Sun!  
To the horizon's rim  
Low bowed, thy glory dim,  
Thy journey done:  
So some fallen monarch lies,  
Blinding the sight no more,  
At will scanned earless o'er,  
By common eyes.  
Lower—more low—  
The broken edge, between,  
Of our old earth is seen  
Ascending slow;  
As its unswerving bound,  
With mountain, sea, and plain,  
Nation and town, again  
Comes steady round.  
Linger awhile!  
Still let thy crimson beam  
Through the dark forest stream  
O'er the field smile.  
In vain! thy hour is past:  
Never on earth was given  
A glory so like heaven,  
And given to last.

Now almost gone:  
How mournfully we gaze  
On thy slow-sinking blaze.  
Farewell, O Sun!  
So some beloved one dies,  
And takes, in faith's warm light,  
His everlasting flight  
From our wet eyes.  
Thou dost not set:  
Though plunged our globe beneath,  
Though quenched in seeming death,  
Thou shinest yet.

In God's appointed time,  
Thou wilt, like him once slain,  
Yes, as  
Uprise sublime.  
Yes, even now,  
O'er realms, to thee revealed,  
From our small view concealed,  
Bendeth thy brow.  
Thou seest, from pole to pole,  
Blue gleaming at thy feet,  
With many a shore and fleet,  
Atlantic roll.  
Beneath thy eye,  
Arctic ice-cliff and plain,  
Warm field of golden grain,  
And Indian valley flow:  
While on the ship's lone way,  
Around the Cape, stern tossed,  
The dark and frowning coast  
Smiles in thy ray.

And so, when I,  
Life's weary traveler o'er,  
Reach that black, fatal shore,  
At length to die,  
Almighty God! teach me,  
As Earth's brief phantoms fade,  
To follow undismayed,  
Trusting in Thee.

Beyond Death's night,  
Let nobler prospect's rise,  
New fields and fairer skies  
Break on my sight:  
And so, my tired race run,  
May my last moments shine,  
Radiant and calm, like thine,  
O setting Sun!

HONOURABLE ORIGIN OF A NAME.—The villages of Winnebourg and Metternich, near Coblenz—the former the birth-place, the latter the property of Prince Metternich—led M. Dumas into a little digression on the subject of the celebrated diplomatist. The family name, we are informed, was originally Metter, but received the addition of the last syllable in the following manner:—"In one of the great battles of the 16th century, the Emperor of Germany saw an entire regiment take to flight, with the exception of one man, who stood his ground and defended himself gallantly, till he fell with wounds. The Emperor inquired his name. 'It was Metter,' said the soldier, at supper, talking of the regiment in question. 'They all fled—but Metter held.' Everybody knows that *met* is the German for 'not.' The family adopted the additional monosyllable, and hence the origin of the house of Metternich.—*Blackwood's Magazine*

## THAT LAZY FELLOW, THEOPHILUS BRIGGS.

BY AUGUSTIN.

I AM sorry I have undertaken to say anything about Theophilus. Not that I am afraid he will read this, and attack me with a stick. No danger. Theophilus never opens a magazine—rarely ever opens a newspaper, and when he does he only reads the anecdotes. Besides, I don't intend to name where he lives. There is no danger. Even if the bookseller reads the *Companion*, and sends for Theophilus and shows it to him, and urges him "not to stand it," he is too lazy to get angry; or if he does, he is far too lazy to attack any one.

No; the reason I am sorry I undertook to say anything about him, is because there is so very little I can possibly say. There is no use in attempting to say anything about his father. It is true he kept shop, and sold marbles to me when I was a boy, and was in the militia. I have racked my memory, and cannot recollect anything concerning him except that he sold tape, and nails, and calico, over his little counter, as far back as I can remember, without one single incident which I can possibly dress up into an interesting narration.

As to Mrs. Briggs, she was simply, solely, and only Mrs. Briggs, and that is literally all I, or anybody else, ever knew about her. She made a new bonnet and two new calico dresses for herself every year, made and mended the clothes of Mr. Briggs and Theophilus, ground the coffee, baked the biscuits, and occasionally the cakes, helped a neighbour to work, suckled Theophilus when he was a baby, thrashed him when he was a boy, and knocked upon the partition, (Mr. Briggs's family lived in the back part of his shop,) when dinner was ready. Love and marriage are always interesting, and if I knew anything about theirs, I would relate it, even if I had to add a little fiction in the way of an opposing father, or a wonderful rescue of Mrs. Briggs, that was to be, by Mr. Briggs from some mad dog or runaway horse, or something or other. But nobody ever knew or said anything about their marriage. I suppose they went to school together, and grew up together, and got married together, so much as a matter of course as not to excite any stir at all in Pikeville—yes, I will call our man by that name, for there is no use wounding, or running the risk of wounding, Theophilus's feelings.

Much more has now been said about Mr. and Mrs. Briggs than I thought could possibly be said; so I feel encouraged to go on and speak about their only son.

I might have described the death and quiet funeral of his father, and how his mother followed his father to the little graveyard just three months after that funeral. But I forbear. Easy, unoffending, kind-hearted in their lives, they sleep peacefully together. If they did and said nothing else during their lives, they, at least, injured no one, and it is a vast deal better the world should be peopled with such people, than with active, but wrangling and hard-hearted couples.

I want to dwell on the loveable qualities of Mrs. Briggs as a mother—for there is something to me actually *holy* in the character of a mother, apart from all other qualities of the female. Yet I cannot conscientiously do it in her case. True, she suckled Theophilus and Lucinda his sister, and slapped them when they cried, and gave them cakes when they stopped crying, and nursed them when they had eaten too much cake, or had the hooping-cough. All this is true, but it was only what the mere animal mother has instinct to do. At this moment, you might ask Theophilus or Lucinda, and they could not tell one single thing done by their mother to improve their minds, or waken their immortal souls to the knowledge of immortality.

She did teach Lucinda a peculiar way of preparing pickles, so that they answered either for preserves or pickles, having a remarkable half-sweet, half-sour taste, but I believe this is all, except, of course, that Lucinda learned from her how to cut out, and sew, and cut candle-papers. This was all she received from her mother beyond her mere existence.

Theophilus had his father's fat figure, red hair, and every-day sort of face, inherited his father's little shop, his father's habits of opening the shutters late in the morning, breakfasting late in the back-room, sitting on a tea-chest in front of the door, or by the little stove in the shop, as it happened to be summer or winter, all day cutting a stick, or chatting with somebody. If a customer came in, he rose slowly, clasped his pocket-knife by shutting it against his thigh, slipped it in his pocket, went round the counter, weighed the sugar wanted, or measured off the gingham, just like a man who had plenty of time to do it in.

Lucinda inherited her mother's realm in the back-room, and kept up the rapping when dinner was ready, as it had been kept up for the last forty years by her mother. I always thought her superior to her mother. She was rather pretty, medium size, lively black eye, red lips, rosy cheek, loving heart—only needed the mind within her to be lighted, to glow and sparkle, and be a lovely and fascinating girl. Apparently, however, the very same path lay before her as before her mother:—grinding coffee, baking tarts, making pickles, making garments, mending socks, and combing her hair, seemed to be literally and absolutely all that lay before her through life, with some slight change as to the maternal duties of nursing in case she married.

From Monday till Saturday, every day seemed to be a mere repetition of the preceding one. On Sunday they went to church regularly; but I do firmly believe that they always returned without the increase of a single idea—at least, of any one strong enough to waken and move them on a higher course of thought, and feeling, and action.

Everybody in the town—there are about four hundred persons in Pikeville—liked Theophilus and Lucinda well enough; but the brother was hardly ever mentioned, without the adjective *lazy* attached. "That lazy fellow,

Theophilus Briggs," was his usual designation. It was only a few days ago, when I was attending on Mrs. Milson—for I am a practicing surgeon in Pikeville,—that I overheard Mrs. Jones tell Mrs. Smithers, who had also dropped in to sit up with Mrs. Milson, that Mr. Briggs was heard to express himself more strongly in admiration of her—Mrs. Smithers's—daughter Jane, than was altogether consistent with mere admiration.

"Well, what then?" said Mrs. Smithers—I thought rather tartly.

"Why, nothing," replied Mrs. Jones, "except that Theophilus is old enough to marry."

"Do you think I'd let my Jane marry that lazy fellow, Theophilus Briggs?" said Mrs. Smithers, in a half-groan, loud enough to waken my patient.

I could not stand it. My surgery is right opposite Briggs's shop, and I have seen so very much of him sitting on his tea-chest, that I felt myself to be more acquainted with him than anybody else. I am only going to stay a few months longer in Pikeville, to gain a little more reading and practice in my profession, and then I intend going to a wider field; and so I determined I would take the first opportunity to talk with my neighbour—see if I could not benefit him a little. I think it was the Monday after, that that I did so. I had that morning operated for *strabismus* on Henry Milson's left eye—had read hard upon the operation, both before and after it—had ridden over to Squire Smithers', and got back—had drawn my dentist chair near the widow to read a little more upon Mrs. Milson's very delicate diagnosis, when I saw Theophilus sitting as usual on the box opposite. No one was with him. I laid aside my book, went out, locked the door, and went over, determined to spend the hour, before the bell rang for supper, in talking to Theophilus.

In order not to make too sudden an attack, I drew out my knife as I slowly sauntered over, took a seat by Theophilus on the box, split off of it a splinter to chip, and chatted a few minutes about the warm, beautiful weather we had.

"There is something," said I, "in this bright, blooming weather, that warns one through and through. It is like spending an hour with Jane Smithers to have an hour of such sunshine!"

My figure was not extravagant. I have been married two years, and, besides, Jane is so lovely and intelligent, and warm-hearted, and laughing a girl, that to call her embodied sunshine is a compliment to the sun, not to her!

I saw I had hit the nail on the head. Theophilus coloured, and looked up with more life in his eye than I had ever seen before.

"Think so?" said he.

"I'll tell you what it is," said I, "that girl is a prize. She deserves to marry a man. All her sunshine would be wasted on anything else."

"Don't understand," replied my companion, rather earnestly.

I had no time to lose, for the sun was getting low—so I came right to the point. Nothing but a hearty slap will waken a sleepy-headed man.

"Theophilus," said I—and I glanced at the well-formed head and open countenance of the man, and saw he was worth talking to, notwithstanding his drooping shoulders and listless habits. "Theophilus," said I, putting my hand on his shoulder, "I know you love Jane: I know you won't get her, unless you change very much in some things. I am going to leave here in a short time, and I want to have a plain talk with you before I go, because I like you. You won't be offended?"

"No."

"You have one grand fault. It has wrapped itself all around you like a boa constrictor—which you saw in the show here last March. It is sliming you over with its saliva, and will swallow you up, presently, before you know it."

"What do you mean, Doctor?"

"Just exactly this: you are *lazy*—daily becoming more so."

"Well, fact is, I believe I am, but I don't see why I should slave myself. I make enough for me and Lucinda to live on. And if I ever do marry"—here he coloured—"I dare say something will turn up. Everything is cheap. I will have a plenty to live on."

Phidias cut a Venus out of the quarries in Mount Hybla. Here was a rougher, deader quarry, to get a perfect man out of!

"You were created by God?"

"What a question!"

"Well, He is working out some great plan in the millions that have trod, are treading, and will tread the earth. He don't create these millions by millions, but individual by individual, giving each man his peculiar duty in the world. He made you to do something—or He would not have made you at all—there would have been no object in it."

"Very well."

"You see, no man was created to be nothing and do nothing. Every man has his own business, and it is his duty to God to do all he can, to the utmost of his strength in that business—for God as loudly commands you to be not slothful in business, as he does not to steal, lie, or murder."

"I see!"

"There are many different sorts of business in the world. It is by division of labour that each is carried on; just as in a large printing establishment: one class of workmen have the sole duty of preparing the paper; another the duty of setting the type; another the duty of passing the sheets through the press; another the duty of receiving them from the steam-driven cylinders; another the duty of taking them, thus completely printed, and folding them for the post or for binding. You see, by the energy of each class, and of each individual of each class, the whole work moves with order and speed, scattering printed sheets over the reading world."

"Whether a man plough or plow law, or act as a legislator, or sell goods, or doctor, it is only when a man throws his whole force into his peculiar

## THAT LAZY FELLOW, THEOPHILUS BRIGGS.

he does his duty. Every blow of Peter's hammer, down yonder in the blacksmith's shop, every piece of business you do, every visit I pay as a doctor, has a double object, you see—individual profit and general improvement;—at least it ought to have. Well, then, every wasted moment, every half-effort of any man, is just so much lost—lost to the man himself—lost to the public. Every one of us has his business—every man's work in that business has a certain value. Every hour, then, you waste on this box in lazy trifling, not only confirms you in the disease of indolence, not only habituates your mind to idle thought and talk—but every such an hour is an actual and deliberate theft of just so much value as that hour spent in work would have yielded—a theft from your own fortune, Theophilus, and a theft from the public."

"Every man has his place, Doctor. Mine is a mighty little one. Not much to be done in it!"

"But do you do with all your might, all you can possibly do in it?"

"I might do a great deal more business if I would, but I do not make a living; that's all I want."

"Ah, but what do you mean by a living? The living a rational man ought to live, is not only to have plenty of food and clothing, but a plenty of books and papers for the living of his mind—pictures and statuary too, where it can be afforded. You ought to be active, too, if it was only not to set an example of laziness—if it was only to stir everybody all around you into greater energy and enterprise by your example. Besides, you ought to get rich as fast as you can—if it was only to increase your power of doing good."

"Doing good? Pshaw, you are preaching!"

"Yes, doing good. If you were rich, you could educate orphans, build asylums and colleges. If you had five thousand pounds to spare, and the soul to give it, you might build up a free school in this very town, which would give all the children a good education, and refine and improve the place beyond anything you can think. If you,"—continued I,—"had spent those hours in some business, which you have spent in lying on this box doing nothing, you would be able to do it now—and would thus have made yourself a blessing to the town for ever!"

My lazy friend here clasped his everlasting knife, and put it in his pocket. It was a good omen. "Theophilus," said I, standing in front of him, "consider, will you, my dear fellow, what a tremendous mass of work is upon all men now! The generation passing away, is leaving to us the world-wide business which has strained its efforts to the utmost. The cultivation of the immense raw material consumed in the ten thousand manufactories of the world, is passing from their hard hands into ours. The machinery of these ten thousand manufactories has to be kept up in uninterrupted speed. The innumerable roads and vessels by which the commerce of the world is carried through it; the million inventions by which cities are lighted with gas, by which thought is flashed on lightning around the world, by which all surgery is performed without pain,—pshaw! you know all the thousand new inventions, from a new plough to a new telescope—all these have to be kept up in full use."

"But, Doctor—"

"Wait a moment!—our government has to be kept up, too, in all its branches—made to do more and more for its own citizens—more and more for the freedom of the old world. What a vast amount of legislating has to be done! and what a vast deal of voting; and of reading, and thought, that the voting may be intelligent and good! The vast system of education, too, has to be kept up. All the thousands of schools and colleges have to be kept supplied with able teachers."

"Don't know what you mean."

"I mean that our generation inherits the work of the six thousand years since creation,—has to keep it up in full vigour. Besides, millions of acres more have to be brought under cultivation. Thousands of manufactories more have to be established. Thousands of new steamships have to be built. Thousands on thousands of miles of railroads and telegraphs have to be added to those now in use."

"Plenty of work to do, I'll acknowledge."

"That's not all, all the thousand new evils of this new age have to be held down—and strangled. Intemperance has to be banished; quackery in science and politics has to be unmasked and killed. The world, my dear fellow, has a vast deal to do, and a vast deal of evil to be kept from doing."

"But I haven't to do all this!"

"Very true; but suppose everybody was to sit on his tea-chest and say the same, would anything be done then?"

My lazy friend put an almond in his mouth, and slowly cracked it, as he meditated my question.

"Theophilus," continued I, hoping the glacier of his mind was slowly detaching itself under the warmth of my eloquence, and was about to move.

"Theophilus," said I, "tell me; what have you done since your father"

"Well, I have sold goods, and snatched with the neighbours, and—and one to church on Sunday, and—and—that's all, I believe?"

"Except eating your meals and sleeping, and sitting out here in the sun, without a bit more real thought than occupies a bullfrog squatted on a log."

"said you wouldn't get angry, you know," said I; and I laid one hand on each of his shoulders, and looked him steadily in the eyes, while I continued, with all the earnestness I was capable of—"Theophilus, in that yours there sleeps a mind which you might waken to think and will, to make you a blessing to yourself and everybody. In that yours there slumbers a heart, which might be roused to such a love and zeal, as would warm you and all around you through and through! You might do so much more; you might be so much happier if you only would. What to see you live on in such idleness. Why, I would not wonder to see you lying in the gutter there, in the mud, all the time."

Why, man, you are a living corpse! There is almost as little stir about you—you do almost as little in the town, as if you were in the graveyard, instead of your shop. This tea-chest is your coffin; you are just as useless, sitting idle on it, as if you were lying dead in it."

"I believe you are half right, Doctor."

"I am whole right. Just look at it. If you were only to devote every hour to doing something—enlarging your business, or improving your mind by reading, or doing something or other, it doesn't matter what, so that it be something!—the habit of activity would grow upon you; your business and your money would increase; your mind would act more the more you used it; your heart would warm; you would be a new man. You would feel like a healthy man after a brisk walk on a cold bright morning—cheerful, hearty, happy. You would enjoy your very meals more. You would be far more respected. You would become, at least, very well off. You would be able to marry Jane; for I believe she loves you in spite of your present laziness, though she would have the sense never to marry you, even if her mother would let her, while you are what you have been all along. You could build up a bright and happy home. You could hope to be elected to any office almost, in the land. You see, a broad and indefinite course of usefulness, and honour, and happiness is before you, if you will only waken out of the mud of your sloth, and think, and act, and live!"

Theophilus had risen from the box, and stood before me really awakened. That picture of Jane and house-keeping touched him.

"You may be as happy and as prosperous as you please, by being active. You will sink lower and lower into brutal sloth, by being—just as you are. You ain't thirty years old, Theophilus," continued I; "if now, in the spring and heat of young blood, you are so lazy, what on earth will you be when you get older? What on earth but a poor, miserable, idling, drivelling, chattering, good-for-nothing old bachelior, rotting before you are dead; your soul dwindled and dead within you, like the kernel of a frost-bitten peach?"

"Strikes me, you talk plain enough, doctor?"

"Have to shout when one talks to the deaf! have to cut and slash when the limb is mortified; have to apply mustard plaster where we want action to follow."

"Well, doctor, what would you have me to do?"

"Do? Why, split this tea-chest into kitchen wood; rise two hours earlier to-morrow morning; subscribe this evening for a good newspaper, and a magazine—there's the *Home Companion*; clean out your shop, and paint it, and fill it with more goods, and advertise. When you do talk, and when other people talk with you, talk yourself, and make them talk about something. When you go to church, listen to every word sung, or prayed, or preached, if it be only for the sake of keeping your mind busy. You are in a comatose state—stir about with all your might, or your lethargy will become fixed."

Here the bell rung for supper, and I arose.

"Much obliged for your visit, doctor; believe I'll take your mustard and medicine—don't know—I'll see."

"Shall, if I can make him!" said Lucinda, who had been sitting near the door inside, listening, with female curiosity, to our talk, but keeping unseen and still. As she spoke, she came to the door. Her eyes were really awake, she checked flushed, and I knew my visit had not been lost, at least, upon her. I could see the Venus starting out from the block!

"Good bye, doctor," said both, as they shook me warmly by the hand, which was unnecessary, as I was not going to be absent from town. I answered cordially, and walked slowly away. The sun was just down. "Rose at four," murmured I, recalling the events of the day; "read two hours; did that *strabismus* case; rode over to Squire Smithers'; read up Mrs. Milson's case; had a talk with that lazy fellow, Theophilus. Put that down in note-book among my 'Cases in Pikesville,' as 'Case of Mental Catalepsy;' write out treatment—WATCH EFFECTS."

**TAKING NOTES.**—Some years ago, when there were slaves in Massachusetts, and some of the best men in the community owned them, there was a clergyman in a town in Essex county, whom we may call Mr. Cogswell, who had an old and favourite servant, by the name of Cuffee. As was often the case, Cuffee had as much liberty to do as he pleased, as anybody else in the house; and he probably entertained a high respect for himself.

Cuffee, on the Sabbath, might have been seen in the minister's pew, looking round with a grand air, and, so far as appearance indicated, profiting quite as much by his master's preaching as many others about him.

Cuffee noticed, one Sunday morning, that several gentlemen were taking notes of the sermon; and he determined to do the same thing. So, in the afternoon, he brought a sheet of paper, and pen and ink. The minister, happening to look down into his pew, could hardly maintain his gravity, as he saw his negro, "spread out" to his task, with one side of his face nearly touching the paper, and his tongue thrust out of his mouth. Cuffee kept at his notes, however, until the sermon was concluded, knowing nothing, and caring as little, about the wonderment of his master.

When the minister reached home, he sent for Cuffee to come into his study.

"Well, Cuffee," said he, "what were you doing in meeting, this afternoon?"

"Doing, Massa? Taking notes," was his reply.

"You taking notes!" exclaimed the master.

"Sartin, Massa; all the gentlemen take notes."

"Well, let me see them," said Mr. Cogswell.

Cuffee thereupon produced his sheet of paper; and his master found it scrawled all over with all sorts of marks and lines, as though a dozen of spiders, dipped in ink, had marched over it.

"Why, this is all nonsense," said the minister, as he looked at the "notes."

"Well, Massa," Cuffee replied, "I thought so all the time you was preaching!"

## THE PHANTOM LIGHT: CHRISTMAS STORY.

BY FITZ-JAMES O'BRIEN

On the south-western coast of Ireland there is a little nook of country over which impetuous tourists step disdainfully, nor notice the many exquisite beauties that lie there like hidden violets, lovely, but unseen. It is a land of hoary castles, and many a mouldering tradition—a land where the blue sea indents the shore into sweet and sunny bays, seeming as if the ocean loved the earth and sought to steal half-timidly into its arms;—a land where wild and rugged rocks start up by every solitary pathway—strange, uncouth, fantastic in their forms, like night-mares petrified. It is rife, too, with the chronicles of the past; and white-haired Senachies will sit by the bog-wood blaze the long night through, telling of vanished days, and long-forgotten deeds of the old sea-kings of the coast, ruthless, reckless men, who, sitting on the summits of their lofty watch-towers all day long, gazed across the wide Atlantic for some hapless bark whose rich spoils might fill their greedy coffers.

There were entrancing stories, too, of beautiful maidens, who, captured by these pirate chieftains in their ocean forays, pined and pined in their captivity until they died. One, I well remember; and many a night in boyhood I listened eagerly to the tale.

The galley of one of these fierce rulers of the coast captured an Italian bark, and amongst other prizes was one more inestimable than a freight of jewels. This was a noble Venetian maiden, beautiful and proud! The chieftain claimed her as his share, and bore her to his dark, sullen, sea-beaten castle. In time, he conquered the hate she bore him as her captor, so far as to win her consent to be his bride. She wedded, but still in secret did she hate him, and in this hollow intercourse the years wore on. One day, there came a minstrel to the castle; he, too, was from sunny Italy; and the exiled lady's eye lightened, and her bosom heaved, as she for the first time for years heard the sweet liquid accents of her mother tongue. She had him to her chamber, where he lay at her feet all day, and sang sweet canzonets that breathed of love. The lady listened—she could not help it, he sang so feebly—and from listening came to love. For a brief time

they were happy; but it was very brief. In an evil hour their passion was discovered, and by the mandate of the furious sea-king, the minstrel was doomed to die. That night, when all was still, and the inmates of the castle wrapt in slumber, a woman's foot stole gently down the winding stair that led to the armoury, where the ammunition was deposited; and one might have heard in the silence of that dangerous chamber, the loud pulses that throbbed in that woman's burning heart. In another instant a yellow sound was heard. The sea rushed back in terror from the shore, the sea-birds felt stupefied from their cries on the cliffs, the trees bent as if to the power of some mighty storm, while, with a stunning roar and crimson flash, the massive castle shot up into the air, and the next instant minstrel, lady, and pirate-king, were sepulchred beneath the ruins!

There was not a moss-covered stone throughout that land but had its tradition; and some there were that had whole centuries of legends heaped upon them. One spot in particular seemed to be the especial haunt of all such lore, and truly there never was a meetier dwelling for romance! It was a small and lovely lake. In the midst was set a green island, which the rippling waves clasped as if in very love; while on its emerald turf through which the white rocks peeped, arose an old, grey castle. Above the crumbling top the snowy sea-gulls gleaned as they floated in the sunshine, and the rabbits played beneath its walls in many a wild and antic gambol. Beyond this island lay a narrow, rocky channel, through which the sea rushed foaming into the lake, and where, on one side, a tall and spectral stone stood up as if to guard the pass. It was the traditioned grave of a famous saint, who, the peasants said, might be sometimes seen in the dusk of twilight weeping for a brief while over the sins of a wicked world. Farther still, over the seaward shores of the lake, gleamed the blue ocean, that, like a beauty-bestowing cestus, girdled around that fairy scene. It was a hallowed spot—so still, so lovely, and so beautiful—a place where youth might wander with untrammelled feet, and never tire—a sanctuary, where Age in its infirmity might nestle, and scarcely feel the chilling breath of Time! The atmosphere around it seemed redolent of poetry and joy; the fields were always green, the waves were ever blue, the sun sent down from heaven his brightest beams to decorate its beauty.

There was a lofty mountain, too—a sullen, haughty-looking giant, who, with his dark fir-groves that waved like a beard upon his cheek, sat watching jealously the azure lake that sparkled gem-like at his rugged foot. Sometimes, in the winter time, when the winds whirled around his summit, strange sounds of wrath would be heard afar up his steep declivities, and lightnings would flash around his crown, as if he was engaged in fearful combat with some spirit of the air who sought to steal his treasure from him. Then, again, in the golden summer, when Old Ocean's heart was calm, how gently its billowy bosom throbbed against his rocky base; with what low, sweet sighing, the wind came down the deep defiles, and waned with the waves! Then the apple-trees were borne down with fruit, and the storm-cock revelled on the crimson berries of the mountain ash. Flocks of fishing-boats went out each dawn, and in the dusk of night returned; and then, if more than ordinary success had crowned their toils, what revelling there was around each humble hearth! It was a calm, a blessed place—that remote and lonely lake; and many a time and oft its features mingle with my dreams, and make my slumbers happy!

On the northern side of this lake there stood, some years ago, a pretty cottage,—a long, low edifice, with thatched roof, and deep eaves where the swallow nested in the early spring. It was a picture of rural comfort, compact—so compact that it looked like a man who wraps himself up as closely as possible on a cold day—and the small, narrow-paned windows with which its thick walls were pierced, gave no promise of chilly draughts, and their long retinue of coughs and syrups. Two tall and ancient ash-trees stood opposite the door, which opened upon a sort of esplanade and grass from which a few stone steps led immediately down to the beach of white sand, and the cool blue waters that kissed its brow. Along the side of the slight hill on which the cottage stood, and communicating with the esplanade by a simple wicket-gate, stretched out a noble orchard. It was full of venerable apple and pear trees, whose boughs, though gnarled and twisted into a thousand fantastic devices, gave no indication, when summer came, of any of the feebleness of age, but burst into an amplitude of fruit and blossom that would have caused all Hesperides to wither with envy had they witnessed it.

Through this orchard a winding walk of flowers was traced—a rivulet of blossom, that in the early spring gushed with anemones, and pale, spiritual, snowdrops! It was pleasant beyond utterance to stand in that orchard walk, and peeping, as it were, through a casement of rich green leaves, watch the sun set as it fell like a mantle of changing silk over wave, and wood, and island! First, on the dark mountain top, a small bright spot of crimson glory settled like some beauteous bird that came to nestle there at eve. Then, it grew larger and more vivid, till, pouring down the mountain side, gushing lava—stream of light—it burst over the blue lake, and spread like rosy oil upon its waters. And when the sun swam forth, like a fiery wan, from behind the golden clouds, how still became the woods, winds and waves hushed with adoration!

Then came on the hour for twilight dreams! The old grey castle meditated again with the pulses of its antique life. Banners, shadowy as robes of angels, waved heavily on the walls; knights rode gallantly its postern-gates, while fair ladies, sighing, watched them from their turret chambers; for a brief while the Spirit of the Past, faded before the returned Spirit of the Past.

Next came moonlight—the hour of fairy revel when in the deep rings that marked the sword, an elfin multitude whirled in joyous dances, as the brown leaves whirl in the autumn. How the rays

**Carminatives** are medicines which allay pain in the stomach and bowels, and expel flatulence, such as aniseed-water, &c.

**Cathartics** are strong purgative medicines, such as jalap, &c.

**Cordials** are exhilarating and warming medicines, such as aromatic confection, &c.

**Corroborants** are medicines and food which increase the strength, such as iron, gentian, sago, &c.

**Demulcents** correct acrimony, diminish irritation, and soften parts by covering their surfaces with a mild and viscid matter, such as linseed-tea, &c.

**Deobstruents** are medicines which remove obstructions, such as iodide of potash, &c.

**Detergents** clean the surfaces over which they pass, such as soap, &c.

**Diaphoretics** produce perspiration, such as tartaric acid, &c.

**Diuretics** are remedies applied to ulcers or wounds, to promote the formation of matter, such as resin ointments, warm poultices, &c.

**Disinfectants** possess the power of repelling or repelling vapours, such as salubrium, &c.

**Diuretics** act upon the kidneys and bladder, and increase the flow of urine, such as nitre, squills, &c.

**Drastics** are violent purgatives, such as gamboge, &c.

**Emetics** produce vomiting, or the discharge of the contents of the stomach, such as mustard, tartar emetic, warm water, &c.

**Emollients** are remedies used externally to soften the parts they are applied to, such as spermaceti, palm oil, &c.

**Epiplastics** are medicines which blister or cause effusion of serum under the cuticle, such as Spanish flies, &c.

**Errhines** are medicines which produce sneezing, such as tobacco, &c.

**Escarotics** are medicines which corrode or destroy the vitality of the part to which they are applied, such as lunar caustic, &c.

**Expectorants** are medicines which increase expectoration, or the discharge from the bronchial tubes, such as ipecacuanha, &c.

**Febri-fuges** are remedies used in fevers, such as antimonial wines, &c.

**Hydragogues** are medicines which have the effect of removing the fluid of dropsy, by producing water evacuations, such as gamboge, calomel, &c.

**Hypnotics** are medicines that relieve pain by procuring sleep, such as hops, &c.

**Laxatives** are medicines which cause the bowels to act rather more than natural, such as manna, &c.

**Narcotics** are medicines which cause sleep or stupor, and allay pain, such as opium, &c.

**Nutrients** are remedies that nourish the body, such as sugar, sago, &c.

**Paregorics** are medicines which actually assuage pain, such as compound tincture of camphor, &c.

**Prophylactics** are remedies employed to prevent the attack of any particular disease, such as quinine, &c.

**Purgatives** are medicines that promote the evacuation of the bowels, such as senna, &c.

**Refrigerants** are medicines which suppress an unusual heat of the body, such as wood-sorrel, tamarind, &c.

**Rubefacients** are medicaments which cause redness of the skin, such as mustard, &c.

**Sedatives** are medicines which depress the nervous energy, and destroy sensation, so as to compose, such as foxglove, &c.

**Stalogogues** are medicines which promote the flow of saliva or spittle, such as salt, calomel, &c.

**Soporifics** are medicines which induce sleep, such as hops, &c.

**Stimulants** are remedies which increase the action of the heart and arteries, or the energy of the part to which they are applied, such as sassafras, which is an internal stimulant, and saffron, which is an external one.

**Stomachics** restore the tone of the stomach, such as gentian, &c.

**Styptics** are medicines which constrict the surface of a part, and prevent the effusion of blood, such as kino, &c.

**Sudorifics** promote profuse perspiration or sweating, such as ipecacuanha, &c.

**Tonics** give general strength to the constitution, restore the natural energies, and improve the tone of the system, such as chamomile, &c.

**Vesicants** are medicines which blister, such as strong liquid ammonia, &c.

## DRUGS, &c., WITH THEIR PROPERTIES AND DOSES.

96. I have arranged the various drugs, &c., according to their properties, and have given the doses of each; but in compiling this list I have necessarily omitted many from each class, because they cannot be employed except by a medical man. The doses are meant for adults.

97. Medicines have been divided into four grand classes—1. General Stimulants; 2. Local Stimulants; 3. Chemical Remedies; 4. Mechanical Remedies.

### 1.—GENERAL STIMULANTS.

98. General stimulants are subdivided into two classes, diffusible and permanent stimulants; the first comprising narcotics and anti-spasmodics, and the second tonics and astringents.

99. Narcotics are medicines which stupify and diminish the activity of the nervous system. Given in small doses, they generally act as stimulants, but an increased dose produces a stupifying effect. Under this head we include alcohol, camphor, ether, the hop, and opium.

100. Alcohol, or rectified spirit, is a very powerful stimulant, and is never used as a remedy, without being diluted to the degree called proof spirit; and even then it is seldom used internally. It is used externally in restraining bleeding, when there is not any vessel of importance wounded. It is

also used as a lotion to burns, and is applied by dipping a piece of lint into the spirit, and laying it over the part. Freely diluted (one part to eighteen) with water, it forms a useful collyrium, or wash, in the last stage of ophthalmia. Used internally, it acts as a very useful stimulant when diluted and taken moderately, increasing the general excitement, and giving energy to the muscular fibres; hence it becomes very useful in certain cases of debility, especially in habits disposed to prostrate acidity; and in the low stage of low fevers. Dose.—It is impossible to fix anything like a dose for this remedy, as much will depend upon the individual; but diluted with water, and sweetened with sugar, from half an ounce to two ounces may be given three or four times a day. In cases of extreme debility, however, much will depend upon the disease. Caution.—Remember that alcohol is an irritant poison, and that the indulgence in its use daily originates dyspepsia or indigestion, and many other serious complaints. Of all kinds of spirits, the best cordial and stomachic is brandy.

101. Camphor (*Camphora*) is not a very steady stimulant, as its effect is transitory; but in large doses it acts as a narcotic, abating pain, and inducing sleep. In moderate doses it operates as a diaphoretic and anti-spasmodic, increasing the heat of the body, allaying irritation, and spasm. It is used externally as a liniment when dissolved in oil, alcohol, or acetic acid, being employed to allay rheumatic pains; and it is also useful as an embrocation in sprains, bruises, chilblains, and, when combined with opium, it has been advantageously employed in flutulent colic, and severe diarrhoea, being rubbed over the bowels. When reduced to a fine powder, by the addition of a little spirit of wine, and friction, it is very useful as a local stimulant to indolent ulcers, especially when they discharge a foul kind of matter; a pinch is taken between the finger and thumb, and sprinkled into the ulcer, which is then dressed as usual. When dissolved in oil of turpentine, and a few drops are placed in a hollow tooth and covered with Jeweller's wool, or scraped lint, it gives almost instant relief to tooth-ache. Used internally, it is apt to excite nausea, and even vomiting, especially when given in the solid form. As a stimulant it is of great service in all low fevers, malignant measles, malignant sore throat, and running small-pox; and when combined with opium and bark, it is extremely useful in checking the progress of malignant ulcers, and gangrene. As a narcotic it is very useful, because it allays pain and irritation without increasing the pulse very much. When powdered and sprinkled upon the surface of a blister, it prevents the cantharides acting in a peculiar and painful manner upon the bladder; combined with senna it increases its purgative properties; and it is also used to correct the nausea produced by squills, and the irritating effects of drastic purgatives and mezerion. Dose.—From four grains to one scruple, repeated at short intervals when used in small doses, and long intervals when employed in large doses. Doses of the various preparations.—Camphor mixture from  $\frac{1}{4}$  an ounce to 3 ounces; compound tincture of camphor (*Paregoric Elixir*) from 15 minims to 1 drachm. Caution.—When given in an over-dose it acts as a poison, producing vomiting, giddiness, delirium, convulsions, and sometimes death. Mode of Exhibition.—It may be rubbed up with almond emulsion, or mucilage, or the yolk of eggs, and by this means suspended in water, or combined with chloroform as a mixture, in which form it is a valuable stimulant in cholera and other diseases. (See Mixtures).

102. Ether is a diffusible stimulant, narcotic, and anti-spasmodic. Sulphuric ether (*Spiritus Etheris Sulphurici*) is used externally both as a stimulant and an anodyne. In the former case its evaporation is prevented by covering a rag moistened with it with oiled silk, in order to relieve headache; and in the latter case it is allowed to evaporate, and thus produce coldness, hence it is applied over scalded surfaces by means of rags dipped in it. As a local application, it has been found to afford almost instant relief in ear-ache, when combined with almond oil, and dropped into the ear. Internally it is used as a stimulant and narcotic in low fevers, and cases of great exhaustion. Dose from 15 minims to 1 drachm, repeated at short intervals, as its effects soon pass off. It is usually given in a little camphor julap, or water. Nitric ether (*Spiritus Etheris Nitrici*) is a refrigerant, diuretic, and anti-spasmodic, and is well known as "sweet spirit of nitre." Used externally, its evaporation relieves headache, and it is sometimes applied to burns. Internally, it is used to relieve nausea, flatulence, and thirst in fevers; also as a diuretic. Dose from 10 minims to 1 drachm. Compound spirit of sulphuric ether (*Spiritus Etheris Sulphurici Compositus*) is a very useful stimulant, narcotic, and anti-spasmodic. Used internally in cases of great exhaustion, attended with irritability. Dose from  $\frac{1}{4}$  a drachm to 2 drachms in camphor julap. When combined with laudanum it prevents the nauseating effects of the opium, and acts more beneficially as a narcotic.

103. The Hop (*Humulus lupulus*) is a narcotic, tonic, and diuretic; it reduces the frequency of the pulse, and does not affect the head like most anodynes. Used externally it acts as an anodyne and discutient, and is useful as a fomentation for painful tumours, rheumatic pains in the joints, and severe contusions. A pillow, stuffed with hops, acts as a narcotic. When the powder is mixed withlard, it acts as an anodyne dressing in painful ulcers. Dose, of the extract, from 5 grains to 1 scruple; of the tincture, from  $\frac{1}{4}$  a drachm to 2 drachms; of the powder, from 5 grains to 1 scruple; of the infusion,  $\frac{1}{2}$  an ounce to 1 ounce.

104. Opium is a stimulant, narcotic, and anodyne; used externally it acts almost as well as when taken into the stomach, and without affecting the head or causing nausea. Applied to irritable ulcers in the form of tincture, it promotes their cure, and allays pain. Cloths dipped in a strong solution, and applied over painful bruises, tumours, or inflamed joints, allays pain. A small piece of solid opium, stuffed into a hollow tooth, relieves tooth-ache. A weak solution of opium forms a valuable collyrium in

# IN ACCIDENT, DISEASE, EMERGENCY, HEALTH, AND SICKNESS.

ophthalmia, and two drops of the wine of opium dropped into the eye, acts as an excellent stimulant for oodshot-eye, or after long-continued inflammation, it is useful in strengthening the eye. Applied as a liniment, in combination with ammonia, oil, or with camphorated spirit, it relieves muscular pain. When combined with oil of turpentine, it is useful as a liniment in spasmodic colic. Used internally it acts as a very powerful stimulant; then as a sedative, and finally as an anodyne and narcotic, allaying pain in the most extraordinary manner, by acting directly upon the nervous system. In acute rheumatism it is a most excellent medicine when combined with calomel and tartrate of antimony; but its exhibition requires the judicious care of a medical man. Doses of the various preparations: *Confection of opium*, from 5 grains to 1 drachm; *extract of opium*, from 1 to 5 grains (this is a valuable form, as it does not produce so much after-deregulation of the nervous system as solid opium); *pills of soap and opium*, from 5 to 10 grains; *compound ipecacuanha powder* ("Dover's powder"), from 5 to 20 grains; *compound kino powder*, from 5 to 30 grains; *wine of opium*, from 10 minims to 1 drachm. *Caution*. Opium is a powerful poison when taken in too large a quantity (See Poisons), and therefore should be used with extreme caution. It is on this account that I have omitted some of its preparations.

105. **ANTISPASMODICS**, are medicines which possess the power of overcoming spasms of the muscles, or allaying any severe pain which is not attended by inflammation. The class includes a great many, but the most safe and serviceable you will find to be ammonia, asafoetida, galbanum, valerian, bark, ether, camphor, and opium; with the minerals, oxide of zinc and calomel.

106. *Ammonia* (*Ammonia sesquicarbonas*), or "Volatile salt," is an antispasmodic, antacid, stimulant, and diaphoretic. Used externally, combined with oil, it forms a cheap and useful liniment, but it should be dissolved in proof spirit before the oil is added. One part of this salt, and three parts of extract of belladonna, mixed and spread upon leather, makes an excellent plaster for relieving rheumatic pains. As a local stimulant it is well known, as regards its effects in hysteria, faintness, and lassitude, when applied to the nose as common smelling salts. It is used internally as an adjunct to infusion of gentian in dyspepsia or indigestion, and in moderate doses in gout. Dose, from 5 to 20 grains. *Caution*. Over-doses act as a narcotic and irritant poison. *Bicarbonate of Ammonia* (*Ammonia bicarbonas*), used internally the same as the "Volatile salt." Dose, from 6 to 24 grains. It is frequently combined with Epsom salts. *Solution of sesquicarbonate of ammonia* (*Liquor ammoniæ sesquicarbonatis*), used the same as the volatile salt. Dose, from 1/2 a drachm to 1 drachm, combined with some milky fluid like almond emulsion.

107. *Asafoetida* is an antispasmodic, expectorant, excitant, and anthelmintic; used internally it is extremely useful in dyspepsia, flatulent colic, hysteria, and nervous diseases; and where there are no inflammatory symptoms, it is an excellent remedy in whooping-cough and asthma; used locally as an enema, it is useful in flatulent colic, and convulsions that come on through teething. Doses of various preparations: *Solid gum*, from 10 to 20 grains as pills; *mixture*, from 1/4 an ounce to 1 ounce; *tincture*, from 15 minims to 1 drachm; *ammoniated tincture*, from 20 minims to 1 drachm. *Caution*. Never give it when inflammation exists.

108. *Galbanum* is stimulant, antispasmodic, expectorant, and deobstruent; used externally, it assists in dissipating indolent tumours when spread upon leather as a plaster, and is useful in weakness of the legs from rickets, being applied as a plaster to the loins. Used internally it is useful in chronic or old standing rheumatism and hysteria. Doses of preparations:—Of the gum, from 10 to 30 grains as pills; *tincture*, from 15 minims to 1 drachm. may be made into an emulsion with mucilage and water.

109. *Valerian* is a powerful antispasmodic, tonic, and excitant, acting chiefly on the nervous centres. Used internally it is employed in hysteria, nervous languors, and spasmodic complaints generally. It is useful in low fevers. Doses of various preparations:—*Powder*, from 10 grains to 1 drachm, three or four times a day; *tincture*, from 2 to 4 drachms; *ammoniated tincture*, from 1 to 2 drachms; *infusion*, from 2 to 3 ounces or more.

110. *Bark* (*Cinchona lanceifolia cortex*), or, as it is commonly called, "Peruvian bark," is an antispasmodic, tonic, astringent, and stomachic; used externally, it is an excellent detergent for foul ulcers, and those that heal slowly. Used internally, it is particularly valuable in intermittent fever or ague, malignant measles, dysentery, diarrhoea, intermittent rheumatism, St. Vitus' dance, indigestion, nervous affections, malignant sore throat, erysipelas; and its use is indicated in all cases of debility. Doses of its preparations:—*Powder*, from 5 grains to 2 drachms, mixed in wine, water, milk, syrup, or solution of liquorice; *infusion*, from 1 to 3 ounces; *decocction*, from 1 to 3 ounces; *tincture* and *compound tincture*, each from 1 to 3 drachms. *Caution*. If it causes oppression at the stomach, combine it with an aromatic; if it causes vomiting, give it in wine or soda-water; if it purges, give opium; and if it constipates, give rhubarb.

111. *Ether* (*sulphuric*), is given internally as an antispasmodic in difficult breathing and spasmodic asthma; also in hysteria, cramp of the stomach, hicough, locked-jaw, and cholera. It is useful in checking sea-sickness. Dose, from 20 minims to 1 drachm. *Caution*. An over-dose induces apoplectic symptoms.

112. *Camphor* is given internally as an antispasmodic in hysteria, cramp in the stomach, flatulent colic, and St. Vitus' dance. Dose, from 2 to 20 grains.

113. *Opium* is employed internally in spasmodic affections, such as cholera, spasmodic asthma, whooping-cough, flatulent colic, and St. Vitus'

dance. Dose, from 1/2 of a grain to 2 grains of the solid opium, according to the disease.

114. *Oxide of Zinc* (*Zinci oxydum*) is an antispasmodic, astringent, and tonic. Used externally, as an ointment, it forms a useful astringent in affections of the eyelids, arising from relaxation, or as a powder, it is an excellent detergent for unhealthy ulcers. Used internally, it has proved efficacious in St. Vitus' dance and some other spasmodic affections. Dose, from 1 to 6 grains, twice a day.

115. *Calomel* (*Hydrargyri chloridum*) is an antispasmodic, deobstruent, purgative and emetic. Used internally, combined with it acts as an antispasmodic in locked-jaw, cholera, and many other spasmodic affections. As an alterative and deobstruent, it has been found useful in leprosy and itch, when combined with antimonials and guaiacum, and in enlargement of the liver and glandular affections. It acts beneficially in dropsies, by producing watery motions. In typhus, it is of great benefit when combined with antimonials; and it may be given as a purgative in almost any disease, provided there is not any inflammation of the bowels, irritability of the system, or great debility. Dose, as a deep alterative, from 1 to 5 grains daily, as a cathartic, from 5 to 1 to produce pyalism or salivation, from 1 to 2 grains, in a pill, with 1/2 of opium, night and morning. *Caution*: When taking calomel, exposure to cold or dampness should be guarded against, as such an imprudence would bring out an eruption of the skin, attended with fever. When this does occur, leave off the calomel, and give bark, wine, and purgatives; take a warm bath twice a day, and powder the surface of the body with powdered starch.

116. Tonics are given to improve the tone of the system, and restore the natural energies and general strength of the body. They consist of bark (See § 110), quassia, gentian, chamomile, wormwood, and angostura bark.

117. *Quassia* is a simple tonic, and can be used with safety by any one, as it does not increase the animal heat, or quicken the circulation. Used internally, in the form of infusion, it has been found of great benefit in indigestion and nervous irritability, and is useful after bilious fevers and diarrhoea. Dose, of the infusion, from 1 1/2 to 2 ounces, three times a day.

118. *Gentian* is an excellent tonic and stomachic; but when given in large doses, it acts as an aperient. It is used internally in all cases of general debility, and, when combined with bark, is used in intermittent fevers. It has also been employed in indigestion, and it is sometimes used, combined with volatile salt, in that disease (§ 106); but at other times alone, in the form of infusion. After diarrhoea it proves a useful tonic. Used externally its infusion is sometimes applied to foul ulcers. Dose, of the infusion 1 1/2 to 2 ounces; of the tincture 1 to 4 drachms; of the extract from 10 to 30 grains.

119. *Chamomile* (*Anthemis nobilis*).—The flowers of the chamomile are tonic, slightly anodyne, antispasmodic, and emetic. They are used externally as fomentations, in colic, face-ache, and tumours, and to unhealthy ulcers. They are used internally in the form of infusion, with carbonate of soda, ginger, and other stomachic remedies; in dyspepsia, flatulent colic, debility following dysentery and gout. Warm infusion of the flowers acts as an emetic; and the powdered flowers are sometimes combined with opium or kino, and given in intermittent fevers. Dose, of the powdered flowers, from 10 grains to 1 drachm, twice or thrice a day; of the infusion from 1 to 2 ounces, as a tonic, three times a day; and from 6 ounces to 1 pint, as an emetic; of the extract, from 5 to 20 grains.

120. *Wormwood* (*Artemisia absinthium*) is a tonic and anthelmintic. It is used externally as a discutient and antiscapic. It is used internally in long-standing cases of dyspepsia, in the form of infusion, with or without aromatics. It has also been used in intermittents. Dose, of the infusion, from 1 to 2 ounces, three times a day; of the powder, from 1 to 2 scruples.

121. *Angostura bark* (*Cortex angostura*), or cusparia, is a tonic. It expels flatulence, increases the appetite, and produces a warmth in the stomach. It is used internally in intermittent fevers, dyspepsia, hysteria, and all cases of debility, where a stimulating tonic is desirable, particularly after bilious diarrhoea. Dose of the powder from 10 to 20 grains, combined with cinnamon powder, magnesia, or rhubarb; of the extract from 3 to 10 grains; of the infusion from 1 to 2 ounces. *Caution*. It should never be given in inflammatory diseases, or hectic fever.

122. **ASTRINGENTS** are medicines given for the purpose of diminishing excessive discharges, and to act indirectly as tonics. This class includes catechu, kino, oak bark, logwood, rose leaves, chalk, and white vitriol.

123. *Catechu* (*Acacia catechu*) is a most valuable astringent. It is used externally, when powdered, to promote the contraction of flabby ulcers. As a local astringent it is useful in relaxed uvula, a small piece being dissolved in the mouth; small spotty ulcerations of the month and throat, and bleeding gums, and for these two affections it is used in the form of infusion, to wash the parts. It is given internally in diarrhoea, dysentery, and hemorrhage from the bowels. Dose of the infusion from 1 to 3 ounces; of the tincture from 1 to 4 drachms; of the powder from 10 to 30 grains. *Caution*. It must not be given with soda or any alkali; nor metallic salts, or gelatine, as its property is destroyed by this combination.

124. *Kino* (*Pterocarpus erinaceus*) is a powerful astringent. It is used externally to ulcers to give tone to them when flabby and thin matter. It is used internally in the same diseases. Dose of the powder from 10 to 30 grains; of the tincture from 1 to 2 drachms; of the compound powder from 10 to 20 grains; of the infusion from 1 1/2 to 2 ounces. *Caution*.—(See § 123.)

125. *Oak bark* (*Quercus robur cortex*) is an astringent and tonic. It is

used externally in the form of decoction, to restrain bleeding from lacerated surfaces. As a local astringent it is used in the form of decoction as a sore throat and relaxed uvula. It is used internally in the same diseases as catechu (§ 123), and when combined with aromatics and bitters, in intermittent fevers. Dose of the powder from 15 to 30 grains; of the decoction from 2 to 8 drachms.

126. *Logwood (Hæmatoxylum)* is not a very satisfactory astringent. It is used internally in diarrhoea, the last stage of dysentery, and a lax state of the intestines. Dose of the extract from 10 grains to 1 drachm; of the decoction from 1 to 3 ounces, three or four times a day.

127. *Rose leaves (Rosa Gallica)* are astringent and tonic. They are used internally in spitting of blood, hæmorrhage from the stomach, intestines, &c., as a gargle for sore throat, and for the night sweats of consumption. The infusion is frequently used as a tonic with diluted sulphuric acid (oil of vitriol), after low fevers. Dose of infusion from 2 to 4 ounces.

128. *Chalk (Creta preparata)*, when prepared by washing, becomes an astringent as well as antacid. It is used internally in diarrhoea, in the form of mixture, and externally as an application to burns, scalds, and excoriations. Dose of the mixture from 1 to 2 ounces.

129. *White vitriol (Zinci sulphas)*, or sulphate of zinc, is an astringent, tonic, and emetic. It is used externally as a collyrium for ophthalmia (See "Domestic Pharmacopœia"), and as a detergent for scrofulous ulcers, in the proportion of 3 grains of the salt to 1 ounce of water. It is used internally in indigestion, and many other diseases; but it should not be given unless ordered by a medical man, as it is a poison.

## II.—LOCAL STIMULANTS.

130. Local stimulants comprise emetics, cathartics, diuretics, diaphoretics, expectorants, sialogogues, errhines, and epispastics.

131. **EMETICS** are medicines given for the purpose of causing vomiting, as in cases of poisoning. They consist of ipecacuanha, chamomile (§ 119), and mustard.

132. *Ipecacuanha* is an emetic, diaphoretic, and expectorant. It is used internally to excite vomiting in doses of from 20 to 30 grains of the powder, or 1 to 1½ ounce of the infusion, every half hour until vomiting takes place. To make it act well and easily the patient should drink half-pint doses of warm water. As a diaphoretic it should be given in doses of 3 grains, mixed with some soft substance, such as crumbs of bread, and repeated every 4 hours. Dose of the wine from 20 minims to 1 drachm (as a diaphoretic); and from 1 drachm to 1½ ounce (as an emetic). Caution. Do not give more than the doses named above, because although a safe emetic, yet it is an acrid-narcotic poison.

133. *Mustard* is too well-known to require describing. It is an emetic, diuretic, stimulant, and rubefacient. It is used externally as a poultice, (which is made of the powdered seeds, bread-crumbs, and water\*), in all cases where a stimulant is required, such as sore throats, rheumatic pains in the joints, cholera, cramps in the extremities, diarrhoea, and many other diseases. When applied it should not be left on too long, as it is apt to cause ulceration of the part. From 10 to 30 minutes is quite long enough. When used internally as an emetic, a large tea-spoonful mixed with a tumbler of warm water generally operates quickly and safely, frequently when other emetics have failed. In dropsy it is sometimes given in the form of whey, which is made by boiling ½ an ounce of the bruised seeds in a pint of milk, and straining off the curd. From 3 to 4 ounces of this is to be taken for a dose 3 times a day.

134. **CATHARTICS** are divided into laxatives and purgatives. The former comprise manna, tamarinds, castor oil, sulphur, and magnesia; the latter, senna, rhubarb, jalap, colocynth, buckthorn, aloes, cream of tartar, scammony, calomel (§ 115), Epsom salts, Glauber's salts, sulphate of potash, and Venice turpentine.

135. *Manna* is a very gentle laxative, and therefore used for children and delicate persons. Dose for children from 1 to 4 drachms; and for adults from 1 to 2 ounces, combined with rhubarb and cinnamon water.

136. *Tamarinds* are gently laxative and refrigerant. As it is agreeable, this medicine will generally be eaten by children when they will not take other medicines. Dose from ½ to 1 ounce. As a refrigerant beverage in fevers it is extremely grateful. (See § 282.)

137. *Castor oil* is a most valuable medicine, as it generally operates quickly and mildly. It is used externally, combined with citron ointment, as a topical application in common leprosy. It is used internally as an ordinary purgative for infants, as a laxative for adults, and in diarrhoea and dysentery. In colic it is very useful and safe; and also after delivery. Dose for infants from 40 drops to 2 drachms; for adults from ½ to 1½ ounce. (See § 91.)

138. *Sulphur*.—Sublimed sulphur is laxative and diaphoretic. It is used externally in skin diseases, especially itch, both in the form of ointment and as a vapour-bath. It is used internally in hæmorrhoids, combined with magnesia, as a laxative for children, and as a diaphoretic in rheumatism. Dose from 1 scruple to 2 drachms, mixed in milk or with treacle. When combined with an equal proportion of cream of tartar it acts as a purgative.

139. *Magnesia*.—Calced magnesia possesses the same properties as the carbonate. Dose from 10 to 30 grains, in milk or water. Carbonate of magnesia is an antacid and laxative, and is very useful for children when teething, and heartburn in adults. Dose, from ½ to 2 drachms, in water or

140. *Senna* is a purgative, but is apt to gripe when given alone; there-

fore it is combined with some aromatic, such as cloves or ginger, and the infusion should be made with cold instead of hot water. It usually acts in about four hours, but its action should be assisted by drinking warm fluids.

Dose of the confection, commonly called "lenitive electuary," from 1 to 3 or 4 drachms at bedtime; of the infusion, from 1 to 2 ounces; of the tincture, from 1 to 2 drachms; of the syrup (used for children), from 1 drachm to 1 ounce. Caution. Do not give senna in any form except confection, in hæmorrhoids, and never in irritability of the intestines.

141. *Rhubarb (Rhei radix)*, is a purgative, astringent, and stomachic. It is used externally in the form of powder to ulcers, to promote a healthy action. It is given internally in diarrhoea, dyspepsia, and a debilitated state of the bowels. Combined with a mild preparation of calomel (*Hydrargyrum cum creta*), it forms an excellent purgative for children. Dose of the infusion from 1 to 2 ounces; of the powder from 1 scruple to ½ a drachm as a purgative, and from 6 to 10 grains as a stomachic; of the tincture and compound tincture from 1 to 4 drachms; of the compound pill from 10 to 20 grains.

142. *Jalap* is a powerful cathartic and hydrogogue, and is apt to gripe. Dose of the powder from 10 to 30 grains, combined with a drop or two of aromatic oil; of the compound powder from 15 to 40 grains; of the tincture, from 1 to 3 drachms; of the extract, from 10 to 20 grains. The watery extract is better than the alcoholic.

143. *Colocynth* is a powerful drastic cathartic, and should never be given alone unless ordered by a medical man, as its action is too violent for some constitutions. Dose of the extract, from 5 to 15 grains; of the compound extract from 5 to 15 grains.

144. *Buckthorn (Rhamnus)* is a brisk purgative for children in the form of syrup. Dose of the syrup from 1 to 6 drachms.

*Aloes* is a purgative and cathartic in large, and tonic in smaller doses. Dose of powder from 2 to 10 grains, combined with soap, bitter extracts, or other purgative medicines, and given in the form of pills; of the compound pill from 5 to 20 grains; of the pill of aloes and myrrh from 5 to 20 grains; of the tincture from 4 drachms to 1 ounce; of the compound tincture from 1 to 4 drachms; of the extract from 6 to 10 grains; of the compound decoction from 4 drachms to 2 ounces.

146. *Cream of tartar (Potassa bitartas)* is a purgative and refrigerant. It is used internally in dropsy, especially of the belly, in doses of from 1 scruple to 1 drachm. As a refrigerant drink, it is dissolved in hot water, and sweetened with sugar, and is used in febrile diseases, care being taken not to allow it to rest too much upon the bowels. Dose, as a purgative, from 2 to 4 drachms; as a hydrogogue from 4 to 6 drachms, mixed with honey or treacle. Caution. Its use should be followed by tonics, especially gentian (§ 113) and angostura (§ 121).

147. *Scammony (Convolvulus scammonia)*, is a drastic purgative, generally acting quickly and powerfully; sometimes producing nausea and even vomiting, and being very apt to gripe. It is used internally, to produce watery evacuations in dropsy, to remove intestinal worms, and correct the slimy motions of children. Dose of the powder from 5 to 16 grains, given in liquorice water, treacle, or honey; of the confection from 20 to 30 grains. Caution. Do not give it in an irritable or inflamed state of the bowels.

148. *Epsom Salts* is a purgative and diuretic. It generally operates quickly, and therefore is extremely useful in acute diseases. It is found to be beneficial in dyspepsia when combined with infusion of gentian and a little ginger. It forms an excellent enema with olive oil. Dose from ½ to 2 ounces, dissolved in warm tea or water. Infusion of roses (§ 127) partially covers its taste and assists its action.

149. *Glauber's Salt (Soda sulphas)* is a very good purgative. Dose, from ½ to 2 ounces, dissolved in warm water.

150. *Sulphate of Potash* is a cathartic and deobstruent. It is used internally, combined with aloes or rhubarb in obstructions of the bowels, and is an excellent saline purgative in dyspepsia and jaundice. Dose of the powdered salt from 10 grains to 1 drachm.

151. *Venice turpentine* is cathartic, diuretic, stimulant, and anthelmintic. It is used externally as a rubefacient, and is given internally in flatulent colic, in tape-worm, rheumatism, and other diseases. Dose, as a diuretic, from 10 drops to 1 drachm; as a cathartic, from 10 to 12 drachms; as an anthelmintic, from 1 to 2 ounces, every 8 hours, till the worm be ejected.

152. **DIURETICS** are medicines which promote an increased secretion of urine. They consist of nitre, acetate of potassa, squills, juniper, and oil of turpentine.

153. *Nitre (Nitras potassa)* is a diuretic and refrigerant. It is used externally as a detergent when dissolved in water, and as a lotion to inflamed and painful rheumatic joints. It is given internally in doses of from 10 grains to a drachm, or even 2 drachms; in spitting blood it is given in 1 drachm doses with great benefit. As a topical application it is beneficial in sore throat, a few grains being allowed to dissolve in the mouth.

154. *Acetate of Potassa* is diuretic and cathartic. It is given internally in dropsy with great benefit, in doses of from 1 scruple to 1 drachm, every 3 or 4 hours, to act as a diuretic in combination with infusion of quassia. Dose, as a cathartic, from 2 to 3 drachms.

155. *Squills (Scilla maritima)* is diuretic and expectorant when given in small doses; and emetic and purgative when given in large doses. It is used internally in dropsies, in combination with calomel and opium; asthma, with ammoniacum; in catarrh, in the form of oxymel. Dose of the dried bulb powdered from 1 to 4 grains every 6 hours; of the compound pill, from 10 to 20 grains; of the tincture, from 10 minims to 1 drachm; of the oxymel, from 1 to 2 drachms; of the vinegar, from 20 minims to 2 drachms.

156. *Juniper (Juniperus communis)* is diuretic and stomachic. It is

\* Vinegar is not necessary.

given internally in dropsies. \*Dose of the infusion from 2 to 3 ounces every 4 hours; of the oil, from 1 to 5 minims.

157. *Oil of Turpentine* is a diuretic, anthelmintic, and rubefacient. It is used externally in flatulent colic, sprinkled over flannels dipped in hot water and wrung out dry. It is used internally in the same diseases as Venice turpentine (§ 151). Dose from 5 minims to 1 ounce.

158. *DIAPHORETICS* are medicines given to increase the secretion from the skin by sweating. They comprise acetate of ammonia, calomel (§ 115), antimony, opium (§ 104), camphor (§ 101), and sarsaparilla.

159. *Solution of acetate of ammonia (Liquor ammoniac acetatis)* is a most useful diaphoretic. It is used externally as a discutient, as a lotion to inflamed milk-breasts, as a collyrium, and a lotion in scald head. It is given internally to promote perspiration in febrile diseases, which it does most effectually, especially when combined with camphor mixture. Dose, from  $\frac{1}{2}$  to 1½ ounce every 3 or 4 hours.

160. *Antimony—Tartar emetic (Antimonii potassio-tartras)* is diaphoretic, emetic, expectorant, alterative, and rubefacient. It is used externally as an irritant in white swellings and deep-seated inflammation, in the form of an ointment. It is given internally in pleurisy, bilious fevers, and many other diseases; but its exhibition requires the skill of a medical man to watch its effects. Dose, from  $\frac{1}{2}$  of a grain to 4 grains. Caution. It is a poison, and therefore requires great care in its administration.—*Antimonial Powder (Pulvis antimonialis compositus)* is a diaphoretic, emetic, and alterative. It is given internally in febrile diseases, to produce determination to the skin; in rheumatism, when combined with opium or calomel, it is of great benefit. Dose, from 3 grains to 1 scruple every 4 hours, taking plenty of warm fluids between each dose.

161. *Sarsaparilla (Sarza)* is diaphoretic, alterative, diuretic, and tonic. It is given internally in cutaneous diseases, old-standing rheumatism, scrofula, and debility. Dose of the decoction, from 4 to 8 ounces; of the compound decoction, from 4 to 8 ounces; of the extract, from 5 grains to 1 drachm.

162. *EXPECTORANTS* are medicines given to promote the secretion from the wind-pipe, &c. They consist of antimony (§ 160), ipecacuanha (§ 132), squills (§ 155), ammoniacum, and tolu.

163. *Ammoniacum* is an expectorant, antispasmodic, and deobstruent. It is used externally as a discutient, and is given internally, with great benefit, in asthma, hysteria, chronic catarrh. Dose, from 10 to 30 grains.

164. *Tolu (Balsamum toluatum)* is an excellent expectorant, when there are no inflammatory symptoms. It is given internally in asthma chronic. Dose of the balsam, from 5 to 30 grains, combined with mucilage and suspended in water; of the tincture, from  $\frac{1}{2}$  to 2 drachms; of the syrup, from  $\frac{1}{2}$  to 4 drachms.

165. *SIALOOGUES* are given to increase the flow of saliva or spittle. They consist of ginger and calomel (§ 115).

166. *Ginger* is a sialogogue, carminative, and stimulant. It is used internally in flatulent colic, dyspepsia, and to prevent the griping of medicines. When chewed it acts as a sialogogue, and is therefore useful in relaxed uvula. Dose, from 10 to 20 grains of the powder; of the tincture, from 10 minims to 1 drachm.

167. I shall pass over the class of *errhines*, or medicines to cause sneezing, to consider *EPISPASTICS* and *RUBEFACIENTS*; or those remedies which are applied to blister and cause redness of the surface. They consist of cantharides, ammonia (§ 106), Burgundy pitch, and mustard (§ 133).

168. *Cantharides (Cantharis)* or Spanish flies, when used internally, are diuretic and stimulant; and epispastic and rubefacient when applied externally. Mode of application:—A portion of the blistering plaster (*emplastrum cantharidis*) is spread with the thumb upon brown paper, linen, or leather, to the size required; its surface then slightly moistened with olive oil and sprinkled with camphor, and the plaster applied by a tight bandage. Caution. If a blister is to be applied to the head, shave it at least ten hours before it is put on; and it is better to place a thin piece of gauze, wetted with vinegar, between the skin and the blister. If a distressing feeling is experienced about the bladder, give warm and copious draughts of linseed-tea, milk, or decoction of quince seeds, and apply warm fomentations of milk and water to the blistered surface. The period required for a blister to remain on varies from 8 to 10 hours for adults, and from 20 minutes to 2 hours for children: as soon as it is removed, if the blister is not raised, apply a "spongio-piline" poultice, and it will then rise properly. When it is required to act as a rubefacient, the blister should remain on from 1 to 3 hours for adults, and from 15 to 40 minutes for children. To dress a blister: Cut the bag of cuticle containing the serum at the lowest part, by snipping it with the scissors, so as to form an opening like this—V; and then apply a piece of calico spread with spermaceti or some other dressing. \*\* Never attempt to exhibit cantharides internally, as it is a poison, and requires extreme caution in its use even by medical men.

169. *Burgundy pitch* is warmed and spread upon linen or leather, and applied over the chest in cases of catarrh, difficult breathing, and whooping cough; over the loins in debility or lumbago; and over any part that it is desirable to excite a mild degree of inflammation in.

### III.—CHEMICAL REMEDIES.

170. The chemical remedies comprise refrigerants, antacids, antalkalies, and escharotics.

171. *REFRIGERANTS* are medicines given for the purpose of suppressing an unnatural heat of the body. They are Seville oranges, lemons, tamarinds (§ 186), nitre (§ 153), and cream of tartar (§ 146.)

172. *Seville oranges* and sweet oranges are formed into a refrigerant

beverage,\* which is extremely grateful in febrile diseases. The rind is a nice mild tonic; carminative, and stomachic. Dose of the tincture, from 1 to 4 drachms; of the infusion, from 1 to 2 ounces.

\*173. *Lemons* are used to form a refrigerant beverage,\* which is given to quench thirst in febrile and inflammatory diseases. Lemon-juice given with carbonate of potash ( $\frac{1}{2}$  an ounce of the juice to 30 grains of the salt), and taken while effervescing, allays vomiting; a tablespoonful, taken occasionally, allays hysterical palpitations of the heart. It is useful in scurvy caused by eating too much salt food. The rind forms a nice mild tonic and stomachic in certain forms of dyspepsia. Dose of the infusion (made the same as orange-peel), from 1 to 2 ounces.

174. *ANTACIDS* are given to correct acidity in the system. They are soda, ammonia (§ 106), chalk (§ 128), and magnesia (§ 139.)

175. *Soda, carbonate of, and sesquicarbonate of soda*, are antacids and deobstruents. It is used internally in acidity of the stomach and dyspepsia. Dose of both preparations, from 10 grains to half a drachm.

176. *ANTALKALIES* are given to neutralize an alkaline state of the system. They are citric acid, lemon-juice (§ 173), and tartaric acid.

177. *Citric acid* is used to check profuse sweating, and as a substitute for lemon-juice when it cannot be procured. Dose, from 10 to 30 grains.

178. *Tartaric acid*, when largely diluted, forms an excellent refrigerant beverage and antalkali. It enters into the composition of extemporaneous soda water.\* Dose, from 10 to 30 grains.

179. *ESCHAROTICS* are remedies used to destroy the vitality of a part. They comprise lunar caustic, blue-stone, and solution of chloride of zinc.

180. *Lunar caustic, or nitrate of silver*, is an excellent remedy in erysipelas when applied in solution (1 drachm of the salt to 1 ounce of water), which should be brushed all over the inflamed part, and for an inch beyond it. This blackens the skin, but it soon peels off. To destroy warts, proud flesh, and unhealthy edges of ulcers, &c., it is invaluable; and as an application to bed-sores, pencilled over with a solution of the same strength and in the same manner as for erysipelas. Caution. It is a poison.

181. *Blue-stone*, or sulphate of copper, is used in a solution of from 4 to 15 grains to the ounce of water, and applied to foul and indolent ulcers, by means of rag dipped in it, and is rubbed, in substance, on fungous growths, warts, &c., to destroy them. Caution. It is a poison.

182. *Solution of chloride of zinc*, or more commonly known as "Sir William Burnett's Disinfecting Fluid," is a valuable escharotic in destroying the parts of poisoned wounds, such as the bite of a mad dog. It is also very useful in restoring the hair after the scalp has been attacked with ring-worm; but its use requires extreme caution, as it is a powerful escharotic. In itch, diluted (1 part to 32) with water, it appears to answer very well. Caution. It is a most powerful poison.

### IV.—MECHANICAL REMEDIES.

183. The mechanical remedies comprise anthelmintics, demulcents, diluents, and emollients.

184. *ANTHELMINTICS* are medicines given for the purpose of expelling or destroying worms. They are cowhage, scammony (§ 147), male fern-root, calomel (§ 115), gamboge, and turpentine (§§ 151 and 157.)

185. *Cowhage (Macuna)* is used to expel the round worm (*lumbricus terreus*), which it does by wounding it with the fine prickles. Dose, of the confection, for a child 3 or 4 years old, a teaspoonful early, for 3 mornings, followed by a dose of castor-oil. (See "Domestic Pharmacopoeia," § 211.)

186. *Male Fern-root (Aspidium felix mas)* is a powerful anthelmintic and an astringent. It is used to kill tapeworm (*taenia solium*). Dose, 3 drachms of the powdered root mixed in a tea-cupful of water, to be taken in the morning while in bed, and followed by a brisk purgative 2 hours afterwards; or 30 drops of the ethereal tincture, to be taken early in the morning. (See "Domestic Pharmacopoeia," § 293.)

187. *Gamboge (Cambogia)* is a powerful drastic and anthelmintic. It is used internally in dropsies, and for the expulsion of tapeworm, but its use requires caution, as it is an irritant poison. Dose, from 2 to 6 grains, in the form of pills, combined with colocynth, soap, rhubarb, or bread-crumbs.

188. *DEMULCENTS* are used to diminish irritation, and soften parts by protecting them with a viscid matter. They are tragacanth, linseed, marsh-mallow, mallow, liquorice, arrowroot, isinglass, suet, wax, and almonds.

189. *Tragacanth* is used to allay tickling cough, and lubricate abraded parts. It is usually given in the form of mucilage. Dose, from 10 grains to 1 drachm, or more.

190. *Linseed* is emollient and demulcent. It is used externally when reduced to powder, as a poultice; and the oil combined with lime water is applied to burns and scalds. It is used internally as an infusion in diarrhoea, dysentery, and irritation of the intestines after certain poisons, and catarrh. Dose of the infusion as much as the patient pleases.

191. *Marsh-mallow (Althaea)* is used internally in the same diseases as linseed (§ 190). The leaves are used externally as a fomentation, and the boiled roots are bruised and applied as an emollient poultice. Dose, the same as linseed.

192. *Mallow (Malva)* is used externally as a fomentation and poultice in inflammation, and the infusion is used internally in dysentery diseases of the kidneys, and the same diseases as marsh-mallow (§ 191). It is also used as an enema. The Dose is the same as for linseed and marsh-mallow.

193. *Liquorice (Glycyrrhiza Glabra)* is an agreeable demulcent, and given in the form of decoction in catarrh, and some forms of dyspepsia, and the extract is used in catarrh. Dose of the extract from 10 grains to 1 drachm; of the decoction from 2 to 4 ounces.

\* For receipts to form these agreeable drinks, and also summer beverages, Friend, vol. III., p. 12.

194. *Arrowroot*, isinglass, almonds, suet, and wax, are too well known to require descriptions. (See "Domestic Pharmacopœia" for preparations.)

195. *DILUENTS* are chiefly watery compounds, such as weak tea, water, thin broth, gruel, &c.

196. *EMOLLIENTS* consist of unctuous remedies, such as cerates and ointments, and any materials that combine heat with moisture. (See "Spongio-pilule," § 312.)

### DOMESTIC PHARMACOPŒIA.

197. In compiling this part of my hints, I have endeavoured to supply that kind of information that is so often wanted in the time of need, and cannot be obtained when a medical man or a druggist is not near. The doses are all fixed for adults, unless otherwise ordered, and may be reduced by consulting the Table given in § 83. The various remedies are arranged in sections, according to their uses, as being more easy for reference.

#### I.—COLLYRIA, OR EYE-WASHES.

198. *Alum*.—Dissolve  $\frac{1}{2}$  a drachm of alum in 8 ounces of water. *Use*, as an astringent. When the strength of the alum is doubled, and only half the quantity of water used, it acts as a diuretic.

199. *Common*.—Add 1 ounce of diluted acetic acid to 3 ounces of decoction of poppy heads. *Use*, as an anodyne wash.

200. *Compound Alum*.—Dissolve alum and white vitriol, of each 1 drachm in 1 pint of water, and filter through paper. *Use*, as an astringent wash.

201. *Zinc and Lead*.—Dissolve white vitriol and acetate of lead, of each 7 grains, in 4 ounces of elder-flower water, then add 1 drachm of laudanum (tincture of opium), and the same quantity of spirit of camphor; then strain. *Use*, as a detergent wash.

202. *Acetate of Zinc*.—Dissolve  $\frac{1}{2}$  a drachm of white vitriol in 5 ounces of water. Dissolve 2 scruples of acetate of lead in 5 ounces of water. Mix these solutions, then set aside for a short time, and afterwards filter. *Use*, as an astringent; this forms a most valuable collyrium.

203. *Sulphate of Zinc*.—Dissolve 10 grains of white vitriol in a pint of water or rose-water. *Use*, for weak eyes.

204. *Zinc and Camphor*.—Dissolve a scruple of white vitriol in 8 ounces of water, then add 1 drachm of spirit of camphor, and strain. *Use*, as a stimulant.

205. *Compound Zinc*.—Dissolve 10 grains of white vitriol in 8 ounces of camphor water (*Mistura camphoræ*), and the same quantity of decoction of poppy heads. *Use*, as an anodyne and detergent; useful for weak eyes.

#### II.—CONFECTIONS AND ELECTUARIES.

206. *Confections* are used as vehicles for the administration of more active medicines, and *Electuaries* are made for the purpose of rendering some remedies palatable. Both should be kept in closely covered jars.

207. *Almond Confection*.—Remove the outer coat from an ounce of sweet almonds, and beat them well in a mortar with 1 drachm of powdered gum arabic, and  $\frac{1}{2}$  an ounce of white sugar. *Use*, to make a demulcent mixture, known as almond emulsion.

208. *Alum Confection*.—Mix 2 scruples of powdered alum with 4 scruples of treacle. *Dose*,  $\frac{1}{2}$  a drachm. *Use*, as an astringent in sore throat and relaxed uvula, and ulcerations of the mouth.

209. *Orange Confection*.—Take 1 ounce of the freshly rasped rind of orange, and mix it with 3 ounces of white sugar, after it is well beaten. *Dose*, from 1 drachm to 1 ounce. *Use*, as a gentle stomachic and tonic, and for giving tonic powders in.

210. *Black Pepper Confection*.—Take of black pepper and elecampane-root each 1 ounce; fennel seeds, 3 ounces; honey and sugar, of each 2 ounces. Rub the dry ingredients to a fine powder, and when the confection is wanted, add the honey, and mix well. *Dose*, from 1 to 2 drachms. *Use*, in hæmorrhoids.

211. *Cowhage*.—Mix as much of the fine hairs or spicula of cowhage into treacle as it will take up. *Dose*, a teaspoonful every morning; and evening. *Use*, as an anthelmintic.

212. *Senna Confection*.—Take of senna 4 ounces, figs  $\frac{1}{2}$  a pound, cassia pulp, tamarind pulp, and the pulp of prunes, each 4 ounces; coriander seeds, 2 ounces; liquorice,  $\frac{1}{2}$  ounce; sugar,  $\frac{1}{2}$  pound; water,  $\frac{1}{2}$  pint. Rub the senna with the coriander, and separate, by sifting, 5 ounces of the mixture. Boil the water with the figs and liquorice added, until it is reduced to one half; then press out and strain the liquor. Evaporate the strained liquor in a jar by boiling (§ 81) until 12 fluid ounces remain; then add the sugar, and make a syrup. Now mix the pulps with the syrup, add the sifted powder, and mix well. *Dose* (See § 140.) *Use*, purgative.

213. *Castor Oil and Senna Confection*.—Take 1 drachm of powdered gum arabic, and 2 ounces of confection of senna (§ 212), and mix by gradually rubbing together in a mortar, with  $\frac{1}{2}$  an ounce of castor oil. *Dose*, from 1 to 2 drachms. *Use*, purgative.

214. *Sulphur and Senna Confection*.—Take of sulphur and sulphate of ash, each  $\frac{1}{2}$  an ounce; of confection of senna, 2 ounces; and oil of sweet almond, 20 minims; mix well. *Dose*, from 1 to 2 drachms. *Use*, purgative.

215. *Cream of Tartar Confection*.—Take 1 ounce of cream of tartar, and a drachm of powdered ginger; mix into a thick paste with treacle. *Dose*, drachms. *Use*, purgative.

216. *Antispasmodic Electuary*.—Take 6 drachms of powdered valerian d orange leaves, mixed and made into an electuary, with a sufficient quantity of syrup of wormwood. *Dose*, from 1 to 2 drachms, to be taken 3 or three times a day.

#### III.—DECOCTIONS.

217. These preparations soon spoil, and therefore should only be made in small quantities, particularly in summer (§ 81).

218. *Of Chimaphila*.—Take 1 ounce of pyrola (chimaphila or winter-green), and boil it in a pint and a half of water until it is only  $\frac{1}{2}$  pint; then strain. *Dose*, from 1 to 2 ounces, four times a day. *Use*, in dropsies, as a diuretic.

219. *Of Logwood*.—Boil  $\frac{1}{2}$  ounces of bruised logwood in 2 pints of water until it comes to 1 pint; then add 1 drachm of bruised cassia, and strain. *Dose*, from 1 to 2 ounces. *Use*, (See § 126), as an astringent.

220. *Of Dandelion*.—Take 2 ounces of the freshly-sliced root, and boil in 2 pints of water until it comes to 1 pint; then add 1 ounce of compound tincture of horse-radish. *Dose*, from 2 to 4 ounces. *Use*, in a sluggish state of the liver.

#### IV.—EMBROCATIONS AND LINIMENTS.

221. These remedies are used externally as local stimulants, to relieve deep-seated inflammations when other means cannot be employed, as they are more easily applied locally.

222. *Anodyne and Discutient*.—Take 2 drachms of scraped white soap,  $\frac{1}{2}$  a drachm of extract of henbane, and dissolve them by a gentle heat in 6 ounces of olive oil. *Used* in doses of 2 or 3 drachms at a time, for glandular enlargements which are painful and stubborn.

223. *Strongly Ammoniated*.—Add 1 ounce of strong liquid ammonia (*Liquor ammonia fortius*) to 2 ounces of olive oil; shake them well together until they are properly mixed. *Use*. Employed as a stimulant in rheumatic pains, paralytic numbnesses, chronic glandular enlargements, lumbago, sciatica, &c.

224. *Compound Ammoniated*.—Add 6 teaspoonfuls of oil of turpentine to the strong ammoniated liniment above. *Use*, for the diseases mentioned under the head of strong ammoniated liniment, and chronic affections of the knee and ankle-joints.

225. *Lime and Oil*.—Take equal parts of common linseed-oil and lime-water (*Liquor calcis*), and shake well. *Use*. Applied to burns, scalds, sun-peelings, &c.

226. *Camphrated*.—Take  $\frac{1}{2}$  an ounce of camphor, and dissolve it in 2 ounces of olive oil. *Use*, as a stimulant, soothing application, in stubborn breasts, glandular enlargements, dropsy of the belly, and rheumatic pains.

227. *Soap Liniment with Spanish Flies*.—Take 3 $\frac{1}{2}$  ounces of soap tincture, and  $\frac{1}{2}$  an ounce of tincture of Spanish flies; mix and shake well. *Use*, as a stimulant to chronic bruises, sprains, rheumatic pains, and indolent swellings.

228. *Turpentine*.—Take 2 $\frac{1}{2}$  ounces of resin cerate (*ceratum resinæ*), and melt it by standing the vessel in hot water; then add  $\frac{1}{2}$  ounces of oil of turpentine, and mix. *Use*, as a stimulant application to ulcers, burns, scalds, &c.

#### V.—ENEMAS.

229. Are a peculiar kind of medicines, administered by injecting them into the rectum or outlet of the body. The intention is either to empty the bowels, kill worms, protect the lining membrane of the intestines from injury, restrain copious discharges, to allay spasms in the bowels, or nourish the body. These clysters, or glisters, are administered by means of bladders and pipes, or a proper apparatus.

230. *Laxative*.—Take 2 ounces of Epsom salts, and dissolve in  $\frac{1}{2}$  of a pint of gruel, or thin broth, with an ounce of olive oil. *Use*, as all enemata are used.

231. *Nutritive*.—Take 12 ounces of strong beef tea, and thicken with hartshorn-shavings or arrow-root.

232. *Turpentine*.—Take  $\frac{1}{2}$  an ounce of oil of turpentine, the yolk of one egg, and  $\frac{1}{2}$  a pint of gruel. Mix the turpentine and egg, and then add the gruel. *Use*, as an anthelmintic.

233. *Common*.—Dissolve 1 ounce of salt in 12 ounces of gruel.

234. *Castor oil*.—Mix 2 ounces of castor oil with 1 drachm of starch, then rub them together, and add 14 ounces of thin gruel. *Use*, purgative.

235. *Opium*.—Rub 2 grains of opium with 2 ounces of starch, then add 2 ounces of warm water. *Use*, as an anodyne, in colic, spasms, &c.

236. *Oil*.—Mix 4 ounces of olive oil with  $\frac{1}{2}$  an ounce of mucilage and  $\frac{1}{2}$  a pint of warm water. *Use*, as a demulcent.

237. *Assafœtida*.—Dissolve 2 drachms of the gum in a pint of barley-water. *Use* as an anthelmintic, or in convulsions from teething.

#### VI.—GARGLES.

238. Are remedies used to stimulate chronic sore throats, or a relaxed state of the swallow, or uvula.

239. *Acidulated*.—Mix 1 part of white vinegar with 3 parts of honey of roses, and 24 of barley-water. *Use*, in chronic inflammations of the throat, malignant sore throat, &c.

240. *Astringent*.—Take 2 drachms of roses and mix with 8 ounces of boiling water, infuse for 1 hour, strain, and add 1 drachm of alum and 1 ounce of honey of roses. *Use*, in severe sore throat, relaxed uvula, &c.

241. *For salivation*.—Mix from 1 to 4 drachms of bruised gall-nuts with a pint of boiling water, and infuse for 2 hours, then strain and sweeten.

242. *Tonic and stimulant*.—Mix 6 ounces of decoction of bark with 2 ounces of tincture of myrrh, and  $\frac{1}{2}$  a drachm of diluted sulphuric acid. *Use*, in scorbutic affections.

243. *Alum*.—Dissolve 1 drachm of alum in 15 ounces of water, then add

half an ounce of treacle and 1 drachm of diluted sulphuric acid. *Use*, as astringent.

244. *Morrh.*—Add 6 drachms of tincture of myrrh to 7 ounces of infusion of linseed, and then add 2 drachms of diluted sulphuric acid. *Use*, as a detergent.

245. *For slight inflammation of the throat.*—Add 1 drachm of sulphuric ether to half an ounce of syrup of marsh-mallows, and 6 ounces of barley-water. To be used frequently.

#### VII.—LOTIONS.

246. *Lotions* are usually applied to the parts required by means of a piece of linen rag wetted with them, or by wetting the bandage itself.

247. *Emollient.*—Use decoction of marsh-mallow or linseed.

248. *Elder-flowers.*—Add 2½ drachms of elder-flowers to ½ quart of boiling water, infuse for 1 hour, and strain. *Use*, as a discutient.

249. *Sedative.*—Dissolve 1 drachm of extract of henbane in 24 drachms of water.

250. *Opium.*—Mix 2 drachms of bruised opium with half a pint of boiling water, allow it to grow cold, and use for painful ulcers, bruises, &c.

251. *Stimulant.*—Dissolve 1 drachm of caustic potash in 1 pint of water, and then gradually pour it upon 24 grains of camphor and 1 drachm of sugar, previously bruised together in a mortar. *Used* as in fungoid and flabby ulcers.

252. *Ordinary.*—Mix 1 drachm of salt with 8 ounces of water. *Used*, for foul ulcers and flabby wounds.

253. *Cold evaporating.*—Add two drachms of Sulard's extract (*Liquor plumbi diacetatis*), and the same quantity of sweet spirit of nitre (*Spiritus atheris nitrivi*) to a pint of cold water. *Use*, as a lotion for contusions, sprains, inflamed parts, &c.

254. *Hydrochlorate of ammonia.*—Dissolve half an ounce of sal ammoniac (*Ammonia hydrochloras*) in 6 ounces of water, then add an ounce of distilled vinegar and the same quantity of rectified spirit. *Use*, as a refrigerant.

255. *Yellow lotion.*—Dissolve 1 grain of corrosive sublimate (*Hydrargyri chloridum*, A VIOLENT POISON) in an ounce of lime-water, taking care to bruise the crystals of the salt in order to assist its solution. *Use*, as a detergent.

256. *Black wash.*—Add half a drachm of calomel to 4 ounces of lime-water, or 8 grains to an ounce of lime-water; shake well. *Use*, as a detergent.

257. *Acetate of lead with opium.*—Take 10 grains of acetate of lead, and a drachm of powdered opium, mix, and add an ounce of vinegar and 4 ounces of warm water, set aside for an hour, then filter. *Use*, as an astringent.

258. *Kreasote.*—Add a drachm of kreasote to a pint of water, and mix by shaking. *Use*, as an application in *linen capitis*, or other cutaneous diseases.

259. *Galls.*—Boil one drachm of bruised galls in 12 ounces of water until only half a pint remains, then strain, and add 1 ounce of laudanum. *Use*, as an astringent.

#### VIII.—OINTMENTS AND CERATES.

260. These remedies are used as topical applications to parts, generally ulcers, and are usually spread upon linen or other materials.

261. *Camphorated.*—Mix ½ an ounce of camphor with 1 ounce of lard, having, of course, previously powdered the camphor. *Use*, as a discutient and stimulant in indolent tumours.

262. *Chalk.*—Mix as much prepared chalk as you can into some lard, so as to form a thick ointment. *Use*, as an application to burns and scalds.

263. *For Itch.*—Mix 4 drachms of sublimed sulphur, 2 ounces of lard, and 2 drachms of sulphuric acid together. To be rubbed into the body.

264. *For Scirrhous Ulcerations.*—Mix 1 drachm of ioduret of zinc, and 1 ounce of lard together. *Use*, twice a day to the ulcerations.

265. *Catechu.*—Mix 1 ounce of powdered catechu, 2½ drachms of powdered alum, 1 ounce of powdered white resin, and 2½ ounces of olive oil together. *Use*—To apply to flabby and indolent ulcers.

266. *Tartar Emetic.*—Mix 20 grains of tartar emetic and 10 grains of white sugar with 1½ drachms of lard. *Use*, as a counter-irritant in white swellings, &c. (§ 160.)

#### IX.—PILLS.

267. *Strong Purgative.*—Take of powdered aloes, scammony, and gamboge each 15 grains, mix and add sufficient Venice turpentine to make into a mass, then divide into 12 pills. *Dose*, 1 or 2 occasionally.

268. *Milder Purgative.*—Take 4 grains of powdered scammony and the same quantity of compound extract of colocynth, and 2 grains of calomel, mix well, and add a few drops of oil of cloves, or thin gum water, to enable the ingredients to combine properly, divide into 2 pills. *Dose*, 1 or 2 when necessary.

269. *Common Purgative.*—Take of powdered jalap and compound extract of colocynth each 4 grains, of calomel 2 grains, mix as usual, and divide into 2 pills. *Dose*, 1 or 2 occasionally.

270. *Tonic.*—Mix 24 grains of extract of gentian and the same of green vitriol (*sulphate of iron*) together, and divide into 12 pills. *Dose*, 1 to 2 when necessary. *Use* in debility.

271. *Cough.*—Mix 1 drachm of compound powder of ipecacuanha with 1 scruple of gum ammoniacum and dried squill bulb, and make into a mass with mucilage, then divide into 20 pills. *Dose*, 1, 3 times a day.

272. *Astringent.*—Mix 16 grains of acetate of lead (*Sugar of lead*) with 4 grains of opium, and make into a mass with syrup, so as to make 8 pills.

*Dose*, from 1 to 2. *Use* as an astringent in obstinate diarrhoea, dysentery, and cholera.

#### X.—MIXTURES.

273. *Fever, simple.*—Add 8 ounces of the spirit of mindererus (*Liquor ammoniac acetatis*) to 5 ounces of water, or medicated water, such as cinnamon, aniseed, &c. *Dose* for an adult, 1 ounce every 3 hours. *Use*, as a diaphoretic.

274. *Aromatic.*—Mix 2 drachms of aromatic confection with 2 drachms of compound tincture of cardamoms, and 8 ounces of peppermint water. *Dose*, from 1 to 1½ ounce. *Use*, in flatulent colic and spasms of the bowels.

275. *Cathartic.*—Dissolve 1 ounce of Epsom salts in 4 ounces of compound infusion of senna, then add 3 ounces of peppermint water. *Dose*, from 1½ to 2 ounces. *Use*, as a warm stomachic and cathartic.

276. *Diuretic.*—Add ½ an ounce of sweet spirit of nitre, 2 drachms of tincture of squills, and 2 ounces of liquid acetate of ammonia, to 8 ounces of decoction of broom. *Dose*, 1 ounce every 2 hours. *Use*, in dropsical.

277. *Cough.*—Dissolve 3 grains of tartar emetic and 15 grains of opium in 1 pint of boiling water, then add 4 ounces of treacle, 2 ounces of vinegar, and 1 pint more of boiling water. *Dose*, from 2 drachms to 1 ounce. *Use*, in common catarrh, bronchitis, and irritable cough.

278. *Cough, for Children.*—Mix 2 drachms of ipecacuanha wine with ½ an ounce of oxymel of squills, and the same quantity of mucilage, and 3 ounces of water. *Dose*, 1 teaspoonful for children under 1 year, 2 teaspoonfuls from 1 to 5 years, and a tablespoonful from 5 years every time the cough is troublesome.

279. *Anti-spasmodic.*—Dissolve 50 grains of camphor in 2 drachms of chloroform, and then add 2 drachms of compound tincture of lavender, 2 drachms of mucilage of gum arabic, 8 ounces of aniseed, cinnamon, or some other aromatic water, and 2 ounces of water; mix well. *Dose*, 1 tablespoonful every ½ hour if necessary. *Use* in cholera in the cold stage, when cramps are severe, or exhaustion very great; as a general anti-spasmodic in doses of 1 dessert spoonful when the spasms are severe.

280. *Tonic and Stimulant.*—Dissolve 1 drachm of extract of bark, and ½ a drachm of powdered gum arabic in 6 ounces of water, then add 1 ounce of syrup of marsh-mallow, and the same quantity of syrup of tolu. *Dose*, 1 tablespoonful every 3 hours. *Use*, after fevers and catarrhs.

281. *Stomachic.*—Take 20 grains of powdered rhubarb, and dissolve it in 3½ ounces of peppermint water, then add sal volatile and compound tincture of gentian, each 1½ drachm. Mix. *Dose*, from 1 to 1½ ounces. *Use* as a tonic, stimulant, and stomachic.

#### XI.—DRINKS.

282. *Tamarind.*—Boil 2 ounces of the pulp of tamarinds in 2 pints of milk, then strain. *Use*, as a refrigerant drink.

283. *Tamarind.*—Dissolve 2 ounces of the pulp in 2 pints of warm water and allow it to get cold, then strain. *Use*, refrigerant.

#### XII.—POWDERS.

284. *Compound Soda.*—Mix 1 drachm of calomel, 5 drachms of sesqui carbonate of soda, and 10 drachms of compound chalk powder together. *Dose*, 5 grains. *Use*, as a mild purgative for children during teething.

285. *Tonic.*—Mix 1 drachm of powdered rhubarb with the same quantity of dried carbonate of soda, then add 2 drachms of powdered Calumba root. *Dose*, from 10 to 20 grains as a tonic after fevers, in all cases of debility and dyspepsia attended with acidity.

286. *Rhubarb and Magnesia.*—Mix 1 drachm of powdered rhubarb with 2 drachms of carbonate of magnesia, and ½ a drachm of ginger. *Dose*, from 15 grains to 1 drachm. *Use*, as a purgative for children.

287. *Sulphur and Potash.*—Mix 1 drachm of sulphur with 4 scruples bicarbonate of potash, and 2 scruples of nitre. *Dose*, from ½ a drachm to 1 drachm. *Use*, as a purgative, diuretic, and refrigerant.

288. *Anti-Diarrhœal.*—Mix 1 grain of powdered ipecacuanha, and grain of powdered opium, with the same quantity of camphor. *Dose*, these powders to be given in jam, treacle, &c., five or six times a day if necessary.

289. *Anti-spasmodic.*—Mix 4 grains of subnitrate of bismuth, 48 grains carbonate of magnesia, and the same quantity of white sugar, and divide in 4 equal parts. *Dose*, 1-4th part. *Use*, in obstinate pain in stomach with cramps, unattended by inflammation.

290. *Anti-Pertussis, or Against Hooping Cough.*—Mix 1 drachm of powdered belladonna-root, and 5 drachms of white sugar, together. *Dose*, 2 grains morning and evening for children under 1 year; 12 grains for between 2 and 3 years of age; 24 grains for those between 5 and 10; 48 grains for adults. *Caution*, this should be prepared by a chemist, as belladonna is a poison, and occasional doses of castor-oil should be given while it is being taken.

291. *Purgative (common).*—Mix 10 grains of calomel, with 1 drachm powdered jalap, and 20 grains of sugar. *Dose*, 50 grains for adults.

292. *Sudorific.*—Mix six grains of compound antimonial powder, and grains of sugar together. *Dose*, as mixed, to be taken at bed-time. *Use* in catarrh and fever.

#### XIII.—MISCELLANEOUS.

293. *Ethereal Tincture of Male Fern.*—Digest ½ ounce male-fern in 8 ounces of sulphuric ether, then strain. *Dose*, 30 drops early morning. *Use*, to kill tape-worm.

294. *Emulsion, Laxative.*—Rub down an ounce of castor-oil in 2 dr

mucilage of gum arabic, 3 ounces of dill-water, and add a drachm of tincture of jalap gradually. *Dose*, as prepared thus, to be taken while fasting in the morning.

295. *Emulsion, Purgative*.—Rub down 6 grains of scammony with 6 drachms of white

with the ointment of ammoniacum with mercury, and cut out a place for the mouth, eyes, and nostrils. This forms what is called a mask, and, after anointing the eye-lids with a little blue ointment (*Unguentum hydragryi*), it should be applied to the face, and allowed to remain for 3 days for the distinet kind, and 4 days for the running variety. *Period to apply it*:—Before the spots fill with matter, although it will answer sometimes even after they have become pustulous. It may be applied to any part in the same way.

297. *Mucilage of Gum Arabic*.—Rub 1 ounce of gum arabic in a mortar, with 4 ounces of warm water. *Use*, for coughs, &c.

298. *Mucilage of Starch*.—Rub 1 drachm of starch with a little water, and gradually add 5 ounces of water, then boil until it forms a mucilage. *Use*, for enemas, topical application, and demulcent.

### DOMESTIC SURGERY.

299. Under this head I propose giving such hints and advice as will enable any one to act on an emergency, or in ordinary trivial accidents requiring simple treatment; and also to distinguish between serious and simple accidents, and the best means to adopt in all cases that are likely to fall under a person's notice. The subject naturally divides itself into five parts:—1st, Dressings; 2nd, Bandages; 3rd, Apparatus; 4th, Mutilations; 5th, Accidents.

#### I.—DRESSINGS.

300. *Dressings* are substances usually applied to parts for soothing, promoting their reunion when divided, protecting external injuries, as a means of applying various medicines, charges, protect the surrounding parts, and securing cleanliness.

301. Certain instruments are required for the application of dressings in domestic surgery, viz. Scissors, a pair of tweezers, or simple knife, needles and thread, a razor, a lancet, a piece of lunar caustic, and a sponge.

302. The materials required for dressings consist of lint, scraped linen, basted cotton, tow, ointments spread on calico, adhesive plaster, compresses, poultices, old rags of linen or calico, and water.

303. The following rules should be attended to in applying dressings:—1. Always prepare the new dressing before removing the old one: 2. Always have hot and cold water at hand, and a vessel to place the foul dressings in: 3. Have one or more persons at hand ready to assist, and tell each person what they are to do before you commence, it prevents confusion; thus one is to wash out and hand the sponges, another to heat the adhesive plaster, or hand the bandages and dressings, and, if requisite, a third to support the limb, &c.: 4. Always stand on the outside of the limb to dress it: 5. Place the patient in as easy a position as possible so as not to fatigue him: 6. Arrange the bed after changing the dressings, but in cases where you will have to do so before the patient is placed on it: 7. Never be in a hurry when applying dressings, do it quietly: 8. When a patient requires moving from one bed to another, the best way is for one person to stand on each side of the patient, and each to place an arm behind his back while he passes his arms over their necks, then let their other arms be held under his thighs and by holding each others' hands, the patient can be raised with ease and removed to another bed. If the leg is injured a third person should steady it, and if the arm, the same precaution should be adopted. Sometimes a stout sheet is passed under the patient, and by several people holding the sides, the patient is lifted without any fatigue or much disturbance.

304. *Lint* may be made in a hurry, by nailing the corners of a piece of linen to a board, and scraping its surface with a knife. It is used either alone or spread with ointment. Scraped Lint, is the fine filaments of ordinary lint, and is used to stimulate ulcers and absorb discharges: it is what the French call *Charpie*.

305. *Scraped Lint* is made into various shapes, for particular purposes. For example, when it is sewed up into a conical shape, as in Fig. 13, it is called a *tent*, and is used to dilate fistulous openings, so as to allow the matter to escape freely, to plug wounds, so as to promote the formation of a clot of blood, and thus arrest bleeding. When it is rolled into little balls they are called *boulettes*, and are used for absorbing matter in cavities, or blood in wounds. Another useful form is made by rolling a mass of scraped lint into a long roll and then tying it in the middle with a piece of thread; the middle is then doubled and pushed into a deep seated wound so as to press upon the bleeding vessel, while the ends remain loose and assist in forming a clot, or it is used in deep seated ulcers to absorb the matter and keep the edges apart. This form is called the *bourdonnet*. Another form is that called the *pelote*, which is merely a ball of scraped lint tied up in a piece of linen rag, as in Fig. 14. This is used in the treatment of protrusion of the navel in children.

306. *Cuppled Cotton* is used as a dressing for superficial burns, and care should be taken to free it from specks, as flies are apt to lay their eggs there, and generate maggots.

307. *Tow* is chiefly employed as a padding for splints, as compresses, and also as an outer dressing where there is much discharge from a surface.

308. *Ointments* are spread on calicoes, lint, or even thin layers of tow by means of a knife; they should not be spread too thick.

*Plaster* is cut into strips, ranging in width according to wound, &c., but the usual width is about 2 or 3 inches.

*Compresses* are made of pieces of linen, calico, lint, or tow, doubled or cut into various shapes. They are used to confine dressings in their places, and to apply an equal pressure over parts. They should be free from darns, hems, and knots. Ordinary compresses are square, oblong, and triangular. The *pierced compress*, fig. 15, is made by folding up a square piece of linen 5 or 6 times on itself, and then nicking the sides with the scissors, so as to cut out small pieces. It is then opened out, and spread with ointment. It is applied to discharging surfaces, for the purpose of allowing the matter to pass freely through the holes, and is frequently covered by a thin layer of tow. Compresses are also made in the shape of a Maltese cross, and half a cross, sometimes split singly, and at other times doubly; or they are graduated by placing square pieces of folded cloth one on another, so arranged that they decrease in size each time. They are used for keeping up pressure upon certain parts.

FIG. 15.

311. *Pads* are made by sewing tow inside pieces of linen, or folding linen and sewing the pieces together. They are used to keep off pressure from parts, such as that caused by splints in fractures.

312. *Poultices* are usually made of linseed-meal, oatmeal, or bread, either combined with water and other fluids; sometimes they are made of carrots, charcoal, potatoes, yeast, and linseed-meal, mustard, &c., but the best and most economical kind of poultice is a fabric made of sponge and wool, matted together, and backed by Indian-rubber. It is called "Markwick's Patent Spongio-piline," and when I tell you that it gained a prize medal at the Great Exhibition last year, that will be some recommendation for its use. The method of using this poultice is as follows:—A piece of the material of the required form and size is cut off, and the edges are pared or bevelled off with a pair of scissors, so that the escharotome may come in contact with the surrounding skin in order to prevent evaporation of the fluid used; for, as we can employ the various poultices generally used

For example, a *vinegar* poultice is made by moistening the fabric with distilled vinegar; an *alum* poultice, by using a strong solution of alum; a *charcoal* poultice, by sprinkling powdered charcoal on the moistened surface of the material; a *yeast* poultice, by using warmed yeast, and moistening the fabric with hot water, which is to be well squeezed out previous to the absorption of the yeast; a *beer* poultice, by employing warm porter-dregs or strong beer as the fluid; and a *carrot* poultice, by using the expressed and evaporated liquor of boiled carrots. The material costs about one-farthing a square inch. As a fomentation it is most invaluable, and by moistening the material with compound camphor liniment or hartshorn, it acts the same as a mustard poultice.\* It is a real blessing to the poor, who cannot afford to waste "the staff of life" in making poultices.

313. *Water* is used as a lotion to keep the parts cool, or as a dressing to unhealthy ulcers; in the latter case it is applied by means of a piece of lint dipped in it, and laid over the part, so as to allow the water to evaporate, and sometimes the lint is covered with a piece of oiled silk to prevent evaporation.

#### —BANDAGES.

314. *Bandages* are strips of calico, linen, flannel, muslin, elastic-webbing, bunting, or some other substance of various lengths, such as 3, 4, 8, 10, or 12 yards, and 1, 1½, 2, 2½, 3, 4, or 6 inches wide, free from hems or darns; soft and unglazed. They are better after they have been washed. Their uses are to retain dressings, apparatus, or parts of the body in their proper positions, support the soft parts, and maintain equal pressure.

315. Bandages are simple and compound; the former are simple strips rolled up tightly like a roll of ribbon. There is also another simple kind which is rolled from both ends,—this is called a double-headed bandage. The compound bandages are formed of many pieces.

316. Bandages for the head should be 2 inches wide and 5 yards long; for the neck, 2 inches wide and 3 yards long; for the arm, 2 inches wide and 7 yards long; for the leg, 2½ inches wide and 7 yards long; for the thigh, 3 inches wide and 8 yards long; and for the body, 4 or 6 inches wide and 10 or 12 yards long.

317. To apply a single-headed bandage, lay the outside of the end next to the part to be bandaged, and hold the roll between the little, ring, and middle fingers, and the palm of the left hand, using the thumb and fore-finger of the same hand to guide it, and the right hand to keep it firm, and pass the bandage partly round the leg towards the left hand. It is sometimes necessary to reverse this order, and therefore it is well to be able to use both hands. Particular parts require a different method of applying bandages, and therefore I shall describe the most useful separately, and there are different ways of putting on the same bandage, which consist in the manner the folds or turns are made. For example, the *circular* bandage is formed by horizontal turns, each of which over-laps the one made before it (See Fig. 16); the *spiral* consists of spiral turns; the *oblique* follows a course oblique

\* Full directions will, no doubt, be supplied to those who purchase the material, if inquired for.

or slanting to the centre of the limb; and the recurrent folds back again to the point whence it started. (See fig. 17).

Fig. 16.

319. To confine the *Ends of Bandages*, some persons use pins, others slit the end for a short distance, and tie the two strips into a knot as in fig. 16; and some use a strip of adhesive plaster, but this is a dirty method. Always place the point of a pin in such a position that it should not be likely to prick the patient, or the person dressing the limb, or be likely to draw out by using the limb; therefore, as a general rule, turn the head of the pin from the free end of the bandage, or towards the upper part of the limb.

320. The *Oblique bandage* is generally used for arms and legs to retain dressings.

321. The *Spiral bandage* is generally applied to the trunk and extremities, but it is apt to fall off even when very carefully applied; therefore we generally use another called the recurrent.

322. The *recurrent bandage* (Fig. 17) is the best kind of bandage that we

Fig. 17.

can employ for general purposes. The method of putting it on is as follows:—Apply the end of the bandage that is free, with the outside of it next to the skin, and hold this end with the finger and thumb of the left hand, while some one supports the heel of the patient; then with the right hand pass the bandage over the piece you are holding, and keep it crossed thus, until you can place your right forefinger upon the spot where it crosses the other bandage, where it must be kept firm. Now hold the roll of the bandage in your left hand, with the palm looking upwards, and taking care to keep that part of the bandage between your right forefinger, and the roll in your left hand quite slack; turn your left hand over, and bring the bandage down upon the leg as in Fig. 17; then pass the roll under the leg towards your right hand, and repeat this until the leg is bandaged up to the knee, taking care not to drag the bandage at any time during the process of bandaging. When you arrive at the knee, pass the bandage round the leg in circles just below the knee, and pin it as usual. Bandaging is very easy, and if you once see any one apply a bandage properly, and attend to these rules, there will not be any difficulty; but bear one thing in mind, without which you will never put on a bandage even decently; that is, never to drag or pull at a bandage, but make the turns while it is slack, and you have your right forefinger placed upon the point where it is to be folded down. When a limb is properly bandaged, the folds should run in a line corresponding to the shin-bone (See Fig. 17). Use, to retain dressings, and for varicose veins.

323. A bandage for the chest is always placed upon the patient while in a sitting posture; and it may be put on in circles or spirally. Use in fractures of the ribs, to retain dressings, and after severe contusions.

324. A bandage for the belly is placed on the patient as directed in § 323, if spirally carrying it from above downwards. Use to compress the belly after dropsy, or retain dressings.

325. The hand is bandaged by crossing the bandage over the back of the hand. Use, to retain dressings.

326. For the head, a bandage may be circular, as *b* in Fig. 18; or spiral, as *a* in the same figure; or both. In applying the one, as in Fig. 18, commence by placing one circular turn just over the ears; then bring it down from left to right, and round the head again so as to alternate a spiral with a circular turn. Use to retain dressings on the head, or over the eye; but this form soon gets slack. The circular bandage is the best, crossing it over both eyes.

Fig. 18.

327. For the foot.—Place the end just above the outer ankle, and make two circular turns to prevent its slipping; then bring it down from the inside of the foot over the instep towards the outer part; pass it under the sole of the foot, and upwards and inwards over the instep towards the inner ankle, then round the ankle, and repeat again, so as to make it like Fig. 19. Use to retain dressings to the instep, heel or ankle.

Fig. 19.

328. For the leg and foot, commence and proceed as directed in § 327; then continue it up the leg as ordered in § 322.

329. As it sometimes happens that it is necessary to apply a bandage at once, and the materials are not at hand, it is desirable to know how to substitute something else that any one may apply with ease. This is found to be effected by handkerchiefs, and an experienced surgeon (Mr. Mayor) has paid great attention to the subject, and brought it to much perfection. It is to him, therefore, that I am indebted for most of these hints.

330. Any ordinary handkerchief will do; but a square of linen folded into various shapes answers better. The shapes generally required are as follows:—The triangle, the long square, the cravat, and the cord.

331. The *triangular handkerchief* is made by folding it from corner to corner. Use, as a bandage for the head. Application. Place the base round the head, and the short part hanging down behind, then tie the long ends over it.

332. The *long-square* is made by folding the handkerchief into three parts, or double it once upon itself. Use, as a bandage to the ribs, back, &c. If one handkerchief is not long enough sew two together.

333. The *cravat* is folded as usual with cravats. Use, as a bandage for the head, arms, legs, feet, neck, &c.

334. The *cord* is used to compress vessels, being, in fact, a temporary tourniquet when a knot is made in it, and placed over the vessel to be compressed. It is merely a handkerchief twisted in its long diameter.

335. Sometimes it is necessary to apply two or more handkerchiefs, as in a broken collar-bone, or when it is necessary to keep dressings under the arm. It is applied by knotting the two ends of one handkerchief together as in fig. 20, and passing the left arm through it, then passing another handkerchief under the right arm, and tying it as represented in the figure. By this means we can brace the shoulders well back, and the handkerchief will press firmly over the broken collar-bone, besides, this form of bandage does not readily slip or get slack, but it requires to be combined with the sling, (fig. 20, § 337,) in order to keep the arm steady.

Fig. 20.

336. When a woman has an inflamed breast that requires support, or dressings to be kept to it, tie two ends of the handkerchief round her neck, and bring the body of it over the breast, and pass it upwards and backwards under the arm of that side, and tie the ends of those around the neck.

Fig. 21.

337. An excellent sling is formed by placing one handkerchief around the neck, and knotting the two ends over the breast-bone, as in fig. 21. Then placing the other in triangle under the arm, to be supported with the base near to the hand, tie the ends over the other handkerchief, and pin the top to the other part after passing it around the elbow, as in fig. 21.

### III.—APPARATUS.

338. When a person receives a severe contusion of the leg or foot, or breaks his leg, or has painful ulcers over the leg, or is unable from some cause to bear the pressure of the bedclothes, it is advisable to know how to keep them from hurting the leg. This may be done by bending up a fire-guard, or placing a chair, resting upon the edge of it back and front of the seat over the leg, or putting a box on each side of it and placing a plank over them; but the best way is to make a *cradle*, as it is called. This is done by getting three pieces of wood, and three pieces of wire, and passing the wire through the wood as in fig. 22. This can be placed to any height, and is very useful in all cases where pressure cannot be borne.

Fig. 22.

339. When a person breaks his leg, and splints cannot be had directly get a bunch of straw or twigs, and roll it up in a handkerchief, and place one on each side of the leg or arm, and bind another handkerchief firmly around them, or make a long bag about three inches in diameter, or more, of coarse linen (duck, or carpet, and stuff this full of straw, sawdust or sand, sew up the end, and use this the same as the twigs. It forms an excellent extemporaneous splint. Another good plan is to get a hat-box made of chip, and cut it into lengths, or for want of all these, some bones out of a fowl, and run them through a stout piece of rug, proper the object is

Fig. 23. a fold of rug, linen, &amp;c.

340. When dry warmth is required to be applied to *diter*; verdigrise fry a flour pancake and lay it over the part; or wax. T. treatment. A.

in the patient's socks, and lay it to the part; salt does as well, and may be put into a paper bag; or warm water put into ginger-beer bottles or stone jars, and rolled up in flannel.

#### IV.—MINOR OPERATIONS.

341. Bleeding is sometimes necessary at once in certain accidents, such as concussion, and therefore it is well to know how to do this. First of all bind up the arm above the elbow with a piece of bandage or a handkerchief,

Fig. 24.

Fig. 25.

342. *Dry Cupping* is performed by throwing a piece of paper dipped into spirit of wine, and ignited into a wine-glass, and placing it over the part, such as the neck, temples, &c. It thus draws the flesh into the glass, and causes a termination of blood to the part, which is useful in headach, or many other complaints. This is an excellent method of extracting the poison from wounds made by adders, mad dogs, fish, &c.

Fig. 26.

pretty firmly, then place your finger over the veins at the bend of the arm, and feel if there is any pulsation, if there is try another vein, and if it does not pulsate or beat, choose that one. Now rub the arm from the wrist towards the elbow, place the left thumb upon the vein, and hold the lancet as you would a pen, and nearly at right angles to the vein, taking care to prevent its going in too far, by keeping the thumb near to the point, and resting the hand upon the little finger. Now place the point of the lancet on the vein, push it suddenly inwards, depress the elbow, and raise the hand upwards and outwards so as to cut obliquely across the vein, as in fig. 24. When sufficient blood is drawn off, which is known by feeling the pulse at the wrist, and near to the thumb, as shown by the black line in fig. 25, bandage the arm. If the pulse feels like a piece of cord, more blood should be taken away, but if it is soft, and can be easily pressed, the bleeding should be stopped. When you bandage the arm place a piece of lint over the opening made by the lancet, and pass a bandage lightly, but firmly, around the arm, so as to cross it over to the bend of the elbow.

343. *Ordinary Cupping* is performed the same as dry cupping, with this exception, that the part is scarified or scratched with a lancet, so as to cause the blood to flow. Then the glass is placed over it again with the lighted paper in it, and when sufficient blood has been taken away, then the parts are sponged, and a piece of sticking plaster applied over them.

#### LEECHES AND THEIR APPLICATION.

344. The leech used for medical purposes is called the *hirudo Medicinalis*, to distinguish it from other varieties, such as the *h. sanguisuga*, or horse-leech, and the *h. provincialis*, or Lisbon leech. It varies from 2 to 4 inches in length, and is of a blackish brown colour, marked on the back with six yellow spots, and edged with a yellow line on each side. Formerly leeches were supplied by Lincolnshire, Yorkshire, and other sunny countries, but latterly most of the leeches are procured from France, where they are now becoming scarce.

Fig. 27.

345. When leeches are applied to a part, it should be thoroughly freed from down or hair by shaving, and all dirt, liniments, &c. carefully and effectually cleared away by washing. If the leech is hungry it will soon bite, but sometimes great difficulty is experienced in getting them to fasten on. When this is the case, roll the leech in a little porter, or moisten the surface with a little blood, or milk, or sugar and water. Leeches may be applied by holding them over the part with a piece of linen cloth, or by means of a glass, as in Fig. 28.

347. When applied to the gums, care should be taken to avoid any account of the leech, see *Family Tutor*, vol. II.

should be taken to use a leech glass, as they are apt to creep down the patient's throat; a large swan's quill will answer the purpose of a leech glass. When leeches are gorged, they will drop off themselves; never tear them off from a person, but just dip the point of a moistened finger in some salt and touch them with it.

345. Leeches are supposed to abstract about two drachms of blood, or six leeches draw about an ounce; but this is independent of the bleeding after they have come off, and more blood generally flows then than during the time they are sucking.

348. After leeches come away, encourage the bleeding by flannels dipped in hot water and wrung out dry, and then apply a warm "spongio-piline" poultice. If the bleeding is not to be encouraged, cover the bites with rag dipped in olive oil, or spread with spermaceti ointment, having previously sponged the parts clean.

349. When bleeding continues from leech bites, and it is desirable to stop it, apply pressure with the fingers over the part, or dip a rag in a strong solution of alum and lay over them, or use the tincture of sesquichloride of iron, or apply a leaf of matico to them, placing the under surface of the leaf next to the skin, or touch each bite with a finely-pointed piece of lunar caustic; and if all these tried in succession fail, pass a fine needle through a fold of the skin so as to include the bite, and twist a piece of thread round it, as in Fig. 29. Be sure never to allow any one, to go to sleep with leech bites bleeding, without watching them carefully; and never apply too many to children.

Fig. 29.

350. After leeches have been used they should be placed in water, containing 16 per cent. of salt, which facilitates the removal of the blood they contain; and they should afterwards be placed one by one in warm water, and the blood forced out by gentle pressure. The leeches should then be thrown into fresh water, which is to be renewed every 24 hours; and they may then be re-applied after an interval of 8 or 10 days; a second time they may be disgorged, after which they should be placed in reservoirs made of millstones, covered with Roman cement, and filled with water, which should be frequently changed. The bottom of the reservoir should be covered with a layer of clay, 14 inches deep, in which several aquatic plants (the typha, and tris pendulo-acorus, for example), are allowed to grow. Instead of the reservoir you may use a tub with lumps of clay moistened with water, and moss, and stones; they are thus enabled to clean themselves from the slime which covers their bodies and kills them.

351. If a leech is accidentally swallowed, or by any means gets into the body, employ an emetic, or enema, of salt and water.

352. *Scarification* is useful in severe contusions, and inflammation of parts. It is performed by scratching, or slightly cutting through the skin with a lancet, holding the lancet as you would a pen when you are ruling lines on paper.

#### V.—ACCIDENTS.\*

353. *Burns*.—If the skin is much injured, spread some linen pretty thickly with chalk ointment (§ 262), and lay over the part, and give the patient some brandy and water if much exhausted; then send for a medical man. If not much injured, and very painful, use the same ointment, or apply carded cotton dipped in lime-water and linseed-oil (§ 225). If you please you may lay cloths dipped in either over the parts, or cold lotions (§ 253 and 251).

354. *Scalds*.—Treat the same as burns (§ 353), or cover with scraped raw potato; but the chalk ointment is the best. In the absence of all these, cover the parts with treacle, and dust on plenty of flour.

355. *Body in Flames*.—Lay the person down on the floor of the room, and throw the tablecloth, rug, or other large cloth over him, and roll him on the floor.

356. *Dust in the Eye*.—Place your forefinger upon the cheek-bone, having the patient before you; then draw up the finger, and you will probably be able to remove the dirt; but if this will not enable you to get at it, repeat this operation while you have a netting-needle or bodkin placed over the eyelid; this will turn it inside out as in Fig. 30, and enable you to remove the sand or eyelash, &c., with the corner of a fine silk handkerchief. As soon as the substance is removed, bathe the eye with cold water, and exclude the light for a day. If the inflammation is severe, take a purgative, and use a refrigerant lotion (§ 253).

Fig. 30.

357. *Lime in the Eye*.—Syringe it well with warm vinegar and water (1 ounce to 8 ounces of water); take a purgative, and exclude light.

358. *Iron or Steel Spicula in the Eye*.—This occurs while turning iron or steel in a lathe. Drop a solution of sulphate of copper (from 1 to 3 grains of the salt to 1 ounce of water) into the eye, or keep the eye open

\* Always send off for a surgeon immediately an accident occurs, but treat as directed until he arrives.

in a wine-glassful of the lotion. Take a purgative, bathe with gold lotion, and exclude light to keep down inflammation.

359. *Dislocated Thumb.*—This is frequently done while boxing, or by a fall. Make a clove hitch, by passing the loop a behind *b*, as in Fig. 31, and apply over the thumb by placing a piece of rag under the string to prevent it cutting the thumb; then pull in the same line as the thumb, as in Fig. 32. Afterwards apply a cold lotion (§ 254.)

Fig. 31.

#### Cuts and Wounds.

—Cut thin strips of sticking-plaster, and bring the parts together; or if large and deep, cut two broad pieces so as to look like the teeth of a comb, and place one on each side of the wound, which must be cleaned previously. These pieces must be arranged as in Fig. 33, so that they shall interlace one another; then by laying hold of the pieces on the right hand side with one hand, and those on the other side with the other hand, and pulling them from one another, the edges of the wound are brought together, and without any difficulty.

Fig. 33.

361. *Ordinary Cuts* are dressed by thin strips (§ 360), applied as in Fig. 34; that is, by pressing down the plaster on one side of the wound, and keeping it there and pulling in the opposite direction, then suddenly depressing the hand when the edges of the wound are brought together.

Fig. 34.

the lotion to drop cloth, and thus keep ways wet.

363. *Hæmorrhage*, caused by an artery divided or torn, may be known by the blood jumping out of the wound, and being of a bright scarlet colour. If a vein is injured, the blood is darker, and flows continuously. To stop the latter, apply pressure by means of a compress (§ 310) and bandage. To arrest arterial bleeding get a piece of wood (part of a mop-handle will do), and tie a piece of tape to one end of it (a Fig. 36); then tie a piece

Fig. 35.

of tape loosely over the arm, and pass the other end of the wood under it (*b*); twist the stick round and round until the tape compresses the arm sufficiently to arrest the bleeding, and then confine the other end by tying the string round the arm as in Fig. 36. If the bleeding is very obstinate, and it occurs in the arm, place a cork underneath the string, on the inside of the fleshy part; that is on the opposite part to *b* in Fig. 36, where the artery may be felt beating by any one; if in the leg, place the cork in the direction of a line drawn from the inner part of the knee to a little of the outside of the groin. It is an excellent thing to accustom yourself to find out the position of these arteries, or indeed any that are superficial, and to explain to every one in your house where they are, and how to stop bleeding. If a stick cannot be got, take a handkerchief, make a cord bandage of it (§ 334) and tie a knot in the middle; the knot acts as a compress, and should be placed over the artery, while the two ends are to be tied around the limb. Observe always to place the ligature between the wound and the heart. Putting your finger into a bleeding wound, and making pressure until a surgeon arrives, will generally stop violent bleeding.

Fig. 36.

364. *Bleeding from the Nose*, from whatever cause, may generally be stopped by putting a tent (Fig. 13) into the nostrils; if this does not do, apply a cold lotion to the forehead (§ 253 and 254); raise the head, and place both hands over the head, so that it will rest on both hands; dip the tent, slightly moistened into some powdered gum-arabic, and plug the nostrils again; or dip the tent into equal parts of powdered gum-arabic and alum, and plug the nose. If the bowels are confined, take a purgative.

365. *Violent Shocks* will sometimes stun a person, and he will remain unconscious. Untie strings, collars, &c.; loose anything that is tight, and interferes with the breathing; raise the head; see if there is bleeding from any part; apply smelling-salts to the nose, and hot bottles to the feet.

366. In *Convulsion*, the surface of the body is cold and pale, and the pulse weak and small, the breathing slow and gentle, and the pupil of

the eye generally contracted or small. You can get an answer by speaking loud, so as to arouse the patient. Give a little brandy and water, keep the place quiet, apply warmth, and do not raise the head too high. If you tickle the feet, he feels it.

367. In *Compression of the Brain*, from any cause, such as apoplexy, or a piece of fractured bone pressing on it, there is loss of sensation. If you tickle the feet, he does not feel it. You cannot arouse him so as to get an answer. The pulse is slow and laboured; the breathing slow, laboured, and snoring; the pupil enlarged. Raise the head, unloose strings or tight things, and send for a surgeon. If one cannot be got at once, apply mustard-poultices to the feet, and leeches to the temples (Fig. 28; § 346.)

368. *Choking.*—When a person has a fish bone in the throat, press the forefinger upon the root of the tongue, so as to induce vomiting; if this does not do, let them swallow a large piece of potato or soft bread; and if these fail give a mustard emetic. (§ 133.)

369. *Drowning.*—Attend to the following essential rules: 1. Lose no time; 2. Handle the body gently; 3. Carry the body with the head gently raised, and never hold it up by the feet; 4. Send for medical assistance immediately, and in the meantime act as follows: 1. Strip the body, rub it dry; then wrap it in hot blankets, and place it in a warm bed in a warm room; 2. Cleanse away the froth and mucus from the nose and mouth; 3. Apply warm bricks, bottles, bags of sand, &c. to the arm-pits, between the thighs and soles of the feet; 4. Rub the surface of the body with the hands enclosed in warm dry worsted socks; 5. If possible, put the body into a warm bath; 6. To restore breathing put the pipe of a common bellows into one nostril, carefully closing the other and the mouth; at the same time drawing downwards, and pushing gently backwards the upper part of the windpipe, to allow a more free admission of air; blow the bellows gently, in order to inflate the lungs, till the breast be raised a little; then set the mouth and nostrils free, and press gently on the chest; repeat this until signs of life appear. When the patient revives apply smelling salts to the nose, give warm wine or brandy and water. *Cautions.* 1. Never rub the body with salt or spirits; 2. Never roll the body on casks; 3. Continue the remedies for 12 hours without ceasing.

370. *Hanging;* loose the cord, or whatever suspended the person, and proceed as for drowning (§ 369), taking the additional precaution to apply 8 or 10 leeches to the temples. (§ 346.)

371. *Apparent Death from Drunkenness.*—Raise the head, unloose the clothes; maintain warmth of surface, and give a mustard emetic as soon as the person can swallow.

372. *Apoplexy.*—Raise the head; unloose all tight clothes, strings, &c.; apply cold lotions (§ 253, 254) to the head, which should be shaved; apply leeches to the temples, and send for a surgeon.

373. *Suffocation* from noxious gases, &c. Remove to the fresh air; dash cold vinegar and water in the face, neck, and breast; keep up the warmth of the body; if necessary apply mustard poultices to the soles of the feet, and try artificial respirations as in drowning. (§ 369.)

374. *Lightning and Sun-stroke.* Treat the same as apoplexy. (§ 372.)

## POISONS.\*

### GENERAL OBSERVATIONS.

375. A Poison is a substance which is capable of altering, or destroying, some or all of the functions necessary to life.

376. When a person is in good health and is suddenly attacked, after having taken some food or drink, with violent pain, cramp in the stomach, sense of sickness or nausea, vomiting, convulsive twitchings and a sense of suffocation; or if he be seized, under the same circumstances, with giddiness, delirium, or unusual sleepiness, then poisoning may be supposed.

377. Poisons have been divided into four classes: 1st. Those causing local symptoms. 2nd. Those producing spasmodic symptoms. 3rd. Narcotic or sleepy symptoms; and 4th. Paralytic symptoms.

378. Poisons may be mineral, animal, or vegetable.

379. 1st. Always send immediately for a medical man; 2nd. Save all fluids vomited, and articles of food, cups, glasses, &c., used by the patient before being taken ill, and lock them up; 3rd. Examine the cups, to guide you in your treatment; that is, smell them, and look at them.

380. As a rule, give emetics after poisons that cause sleepiness and raving; chalk, milk, eggs, butter, and warm water, or oil after poisons that cause vomiting and pain in the stomach and bowels with purging; and when there is no inflammation about the throat, tickle it with a feather to excite vomiting.

381. *ARSENIC (White Arsenic; Orpiment, or Yellow Arsenic; realgar or Red Arsenic; Scheele's Green, or Arsenite of Copper; King's Yellow; Arque Drops; and Arsenical Paste).*—E. Little or no taste. Within an hour heat and pain in the stomach, followed by vomiting of green, yellow, and bloody matter, burning, and violent thirst; purging, and twisting about the navel; pulse small, quick, and irregular; breathing laboured, voice hoarse, and speaking painful; skin cold and clammy. Sometimes there are cramps and convulsions, followed by death.—T. Give plenty of warm water, new milk in large quantities, gruel, linseed tea, apply leeches to the bowels, foment, and give starch or gruel enemas. Scrape the iron rust off anything you can get at, mix it with plenty of water and give in large draughts frequently, and give an emetic of sulphate of zinc (white vitriol.) *Caution.* Never give large draughts of fluid until those given before have been vomited, because the stomach will not contract properly if filled with fluid, and the object is to get rid of the poison as speedily as possible.

382. *COPPER (Blue vitriol, or blue stone; verdigrise; verditer; verdigrise*

\* The abbreviations used are as follow:—E. effects or symptoms. T. treatment. A. antidotes or counter poisons. D. A. dangerous antidotes.

*crystals*)—E. An acid, rough, disagreeable taste in the mouth; a dry parched tongue, with sense of strangling in the throat; coppery eructations; frequent spitting; nausea; frequent desire and effort to vomit, or copious vomiting; severe darting pains in the stomach; griping; frequent purging; belly swollen and painful; skin hot; and violent burning thirst; breathing difficult; intense headache and giddiness; followed by cold sweats, cramps in the legs, convulsions and death.—A. White of eggs mixed with water (12 to 1 pint), to be given in wine-glassfuls every two minutes; prussian blue; iron filings mixed with water, or very strong coffee.—D. A. Vinegar, bark, alkalies, gall nuts.—T. If there is much pain in the belly or stomach, apply leeches. Give large draughts of milk and water to encourage vomiting.

383. **MERCURY** (*Corrosive sublimate; calomel; red precipitate; vermilion; turbeth mineral; prussiate of mercury*).—E. Acid metallic taste; tightness and burning in the throat; pain in the back part of the mouth, stomach, and bowels; anxiety of countenance; nausea and vomiting of bloody and bilious fluids; profuse purging, and difficulty of making water; pulse small, hard, and quick; skin clammy, icy coldness of the hands and feet; and death in 24 or 36 hours.—A. White of eggs mixed with water, given as above (§ 382); milk; flour and water, mixed pretty thick; linseed tea; and barley water.—T. Give large draughts of warm water, if you cannot get anything else; foment the bowels with poppy-head fermentations, and apply leeches if the belly is very tender.

384. **ANTIMONY** (*Tartar emetic; butter of; kermes mineral*).—E. A rough metallic taste in the mouth, nausea, copious vomitings, frequent hicough, purging, colic pains, frequent and violent cramps, sense of choking, severe heartburn, pain at the pit of the stomach, difficult breathing, wildness of speech, cramps in the legs, and death.—A. Decoction or tincture of galls; strong tea; decoction, or powder of Peruvian bark.—D. A. White vitriol, or sipecauanha, as emetics.—T. Give large draughts of water, or sugar and water, to promote vomiting; apply leeches to the throat and stomach if painful; and give one grain of extract of opium dissolved in a wineglassful of sugar and water, as soon as the vomiting ceases, and repeat three times at intervals of a quarter of an hour.

385. **TIN** (*Butter of tin; putty powder*).—E. Colic and purging.—A. Milk.—T. Give warm or cold water to promote vomiting, or tickle the throat with a feather.

386. **ZINC** (*White vitriol, flowers of; chloride of*).—E. An astringent taste, sensation of choking, nausea, vomiting, purging, pain and burning in the throat and stomach, difficult breathing, pallor and coldness of the surface; pinched face, cramps of the extremities, but with the exception of the chloride, seldom death.—A. For the two first give copious draughts of milk, and white of eggs and water, mangel, and olive oil; for the third, carbonate of soda, and warm water in frequent draughts, with the same as for the other compounds.—T. Relieve urgent symptoms by leeching and fomentations, and after the vomiting give castor-oil. For the chloride use frictions and warmth. (§ 340).

387. **SILVER** (*Lunar caustic; flowers of silver*). **GOLD** (*Chloride of*); and **BISMUTH** (*nitrate; flowers of; pearl white*), are not frequently met with as poisons.—E. Burning pain in the throat, mouth, and the usual symptoms of corrosive poisons.—A. For silver, common salt and water; for gold and bismuth, no antidotes are known.—T. Give milk and mucilaginous fluids, and castor-oil.

388. **ACIDS** (*Hydrochloric or spirit of salt; nitric or aquafortis; sulphuric or oil of vitriol*).—E. Acid-burning taste, acute pain in the gullet and throat; vomiting of bloody fluid, which effervesces when chalk is added to it; hicough, tenderness of the belly, cold sweats, pinched face, convulsions, and death.—A. Give calcined magnesia, chalk, soap and water.—D. A. Carbonated alkalies. *Caution*.—Do not give water if oil of vitriol has been taken.—T. Excite vomiting; give fluids after the poison has been ejected.

389. **CHLORINE** (*gas*).—E. Violent coughing, tightness of the chest, debility, inability to stand.—A. The vapour of caustic ammonia to be 10 drops of liquid ammonia to 1 ounce of water to be taken.—T. Dash cold water over the face, and relieve urgent symptoms.

390. **LEAD** (*sugar of; red lead; white lead; wine sweetened by; and water impregnated with*).—E. Sugary astringent metallic taste, tightness of the throat, colic pains, violent vomiting, hicough, convulsions, and death.—A. Epsom or Glauber's salts; plaster of Paris; or phosphate of soda.—T. An emetic of sulphate of zinc (24 grains to half pint of water), leeches to belly, and fomentations if necessary.

391. **PHOSPHORUS**.—E. Intense burning and pain in the throat and —A. Magnesia and carbonate of soda.—T. Large draughts of cold water, and tickle the throat with a feather. *Caution*. Do not give oil or milk.

392. **LIME**.—E. Burning in the throat and stomach, cramps in the belly, hicough, vomiting, and paralysis of limbs.—A. Vinegar or lemon juice.—T. Thin starch water to be drank frequently.

393. **ALKALIES** (*Caustic; potash; soda; ammonia*).—E. Acrid, hot, disagreeable taste; burning in the throat, nausea, and vomiting bloody matter, profuse purging, pain in the stomach, colic, convulsions, and death.—A. Vinegar and vegetable acids.—T. Give linseed tea, milk, almond or olive oil, and excite vomiting.

394. **BARYTA** (*carbonate; pure and puritate*). (See *Lime*, § 392.)

395. **NITRE**.—E. Heart-burn, nausea, violent vomiting, purging, convulsions, difficult breathing, violent pain in the bowels and death.—T. (See *Arsenic*, § 381.)

396. **NARCOTIC POISONS** (*Dane-berries; Jooks pearsley; deadly nix*

\* See Narcotics.

*water-hemlock; thorn apple; opium; camphor &c.*).—E. Giddiness, faintness, nausea, vomiting, stupor, delirium, and death.—T. Give emetics, large draughts of fluids, tickle the throat, apply smelling salts to the nose, dash cold water over the face and chest, apply mustard poultices, and, above all, endeavour to rouse the patient by walking between two persons; and, if possible, by electricity.

397. **VEGETABLE IRRITATING POISONS** (*Mezereum; monk's-hood; bitter apple; gamboge; white hellebore, &c.*).—E. Acrid, biting, bitter taste, choking sensation, dryness of the throat, retching, vomiting, purging, pains in the stomach and bowels, breathing difficult, and death.—T. Give emetics of chamomile, mustard, or sulphur of zinc; large draughts of warm milk, or other bland fluids; foment and leech the belly if necessary, and give strong infusion of coffee.

398. **OXALIC ACID**.—E. Vomiting and acute pain in the stomach, general debility, cramps, and death.—A. Chalk.—T. Give large draughts of lime-water or magnesia.

399. **SPANISH FLIES**.—E. Acrid taste, burning heat in the throat, stomach, and belly; bloody vomitings, colic, purging, retention of urine, convulsions, death.—T. Large draughts of olive oil, thin gruel, milk, starch enemata, and camphorated water.

400. **POISONOUS FISH** (*Old-wife; sea-lobster; mussel; tunny; blowers; rock-fish; &c.*).—E. Intense pain in the stomach after swallowing the fish, vomiting, purging, and sometimes cramps.—T. Give an emetic, excite vomiting by tickling the throat, and plenty of warm water. Follow emetics by active purgatives, abate inflammation by the usual remedies, and drink freely of sugar and water.

401. **BITES OF REPTILES** (*Viper; black viper; Indian serpents; rattlesnake*).—E. Violent and quick inflammation of the part, extending towards the body, soon becoming livid; nausea, vomiting; convulsions; difficult breathing; mortification; cold sweats and death.—T. Suppose that

the wrist has been bitten, as in *b* fig. 37, immediately tie a tape between the wound and the heart (*a*), scarify the parts with a pen-knife, razor, or lancet, and apply a cupping-glass over the bite (§ 342), frequently removing it and bathing the wound with volatile alkali, or heat a poker and burn the wound well, or drop some of Sir Wm. Burnett's Disinfecting Fluid into the wound. Give plenty of warm drinks, and cover up in bed.

402. **MAD ANIMALS, BITE OF**.—E. Hydrophobia, or a fear of fluids.—T. Tie a string tightly above the part, as in *Fig. 38*, cut out the bite, and cauterize the wound with a red-hot poker, lunar caustic, or Sir Wm. Burnett's Disinfecting Fluid. Then apply a piece of "spongio-piline," give a purgative, and plenty of warm drink.

403. **INSECT STINGS** (*Wasp, bee, gnat, hornet, gad-fly, scorpion*).—E. Swelling, nausea, and fever.—T. Press the barrel of a watch-key over the part so as to expose the sting, which must be removed. Lay a rag moistened with hartshorn and oil over the part. Give 6 or 8 drops of hartshorn in 2 ounces of infusion of chamomile, and cover up in bed.

#### LIST OF EXCELLENT FAMILY WORKS SUPPLIED BY THE AGENT OF WHOM YOU OBTAINED THIS SUPPLEMENT.

THE FAMILY FRIEND, (New Series from the 3rd July, 1852), price 2d., Weekly; Monthly Parts, 9d.; Quarterly Volumes, 2s. 6d.

The First Series of THE FAMILY FRIEND, in Seventy two Numbers, price 2d. each, or Six Volumes, price 2s. 6d. each.

THE FAMILY TUTOR AND SCHOOL COMPANION, on the 1st and 15th of each Month, price 2d.; Volumes, 2s. 6d.

WALKS ABROAD AND EVENINGS AT HOME, price 2d. Monthly; Volumes, 2s. 6d.

GRANDFATHER WHITEHEAD'S CATECHISMS, upon all the Sciences, price 2d. each; One Volume, price 2s. 6d.

AUNT MARY'S STORY BOOKS FOR YOUNG PEOPLE, price 2d. each; One Volume, price 1s. 6d.

FAMILY PASTIME, or, HOMES MADE HAPPY; Two Volumes, price 1s. each.

ILLUSTRATED TWO-PENNY SCHOOL-BOOKS, including—1st. *Spelling and Reading*, 2nd. *Spelling and Reading, Graded Grammar, Writing and Composition, Arithmetic and Geography*,—forming the First Series, each complete at 2d., or in One Volume, 1s. 6d. The Second Series,—*Geology, Astronomy, Natural History, Physical Training, Moral Culture*, 2d. each, or One Volume, price 1s. 6d.

All the Numbers and Parts of the "Home Companion" kept on Sale.

Printed by WILLIAM TYLER, Bolt-court, London, and published for the Proprietor by JOHN BURNETT, 69, Fleet street, London.

# THE HOME COMPANION;

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 1.—Vol. I.]

SATURDAY, JANUARY 3, 1852.

First Impression of 500,000 Gratis;  
Subsequent Numbers, 1d.

## A BOOK FOR THE HOME FIRESIDE.

BY JOHN CRITCHLEY PRINCE.

When the night cometh round, and our  
duties are done,  
And a calm stealth over the breast;  
When the bread that is needful is honestly  
won,  
And our wordly thoughts nestle to rest  
How sweet at that hour is the truth-written  
page,  
With fancy and fiction allied!  
The magic of childhood, the place of age,  
Is a Book for the Home Fireside!  
There, manhood may strengthen a wavering  
mind,  
By the sage's severest of lore;  
There, woman, with sweetness and pathos  
combined,  
Make the fountains of feeling run o'er;  
There the voices of children may warble  
like birds,  
What the poet has uttered with pride;  
And the faint and desponding take heart  
at the words  
Of a Book for the Home Fireside!  
Many souls have been trained into good-  
ness and grace,  
And many stern hearts chastened down;  
Many men have been nerved to look up with  
calm face,  
Whatever misfortune might frown;  
Many minds have been roused to new life,  
and grown great,  
Though baffled, obstructed, and tried:—  
Have been schooled to endure, taught to  
"labour and wait,"  
By a Book for the Home Fireside!  
And not with the presence of Home is it  
gone,  
For abroad in the fullness of day  
Its spirit remains with us, cheering us on,  
O'er the roughness of life's common way.

And nature looks lovely, but lovelier yet  
Through the glass of reflection described;  
We have read of her wonders,—and who  
would forget!  
In the Book for the Home Fireside!  
Whatever be my fortune, in shadow or shine,  
Mid comfort, stern labour, or woe,  
May I ne'er miss the taste of those waters  
divine  
From the well-springs of genius that flow.  
I should lose a sweet chara, I should lack  
a great joy,  
And my heart would seem withered and  
laid I want what has been my delight from  
a boy,  
A Book for the Home Fireside!  
Bless the bards and the prosemen, whatever  
their clime,  
Who bequeath us the wealth of their  
thought,  
Their truth revelations, their visions sub-  
lime,  
Their fancies so tenderly wrought.  
We were poor, with the riches of kings for  
our dower,  
Without what their pens have supplied,  
And that brain must be barren which owns  
not the power  
Of a Book for the Home Fireside!  
Dear child! let thy leisure be linked with  
the page,  
But one nor too light nor austere;  
May its precepts improve thee, its spirit  
engage,  
And its sentiments soften and cheer;  
May it keep thy affections in freshness and  
bloom,  
Console thee, and teach thee and guide;  
Be a flower in the sunshine,—a star in  
the gloom,—  
A Book for the Home Fireside!

## THE SMITH FAMILY.

### THEIR ADVENTURES WITH A ROBBER.

BY PAUL CRETON.

THE Smiths of Smithville had for a long time been very much annoyed by the depredations of some unknown individual, whose confused ideas concerning the rights of property led to the frequent abstraction of divers goods and chattels from the premises of the said Smiths, in a furtive and mysterious manner. Bags of wheat and oats vanished from the granary, pork from the cellar, and corn from the crib; in one night a sheep, that had just been slaughtered, coolly trotted away; and on another occasion, several gallons of maple syrup evaporated in the night-time. Milking-stools went off on three legs, and one morning Mr. Smith's best axe was found to have "cut stick." Log-chains became rattle-snakes and crept off, iron wedges made splits in the Smith property, boots walked away, and jack rode off with the same horse.

Vain were the efforts of the elder and younger Smiths to discover the mystery of these disappearances, and to entrap the offender. Despairing of bringing him to justice, the Smiths found they could do nothing more than take measures to insure the safety of their property. Accordingly they built a new granary, with strong walls, a narrow, grated window, and a heavy oak door, to which was attached a formidable padlock. This prison-like portion of the barn was built sufficiently large to allow the Smiths to lock up with the grain a great deal of portable property, such as was most likely to tempt the cupidity of thieves.

After the granary was finished, a month passed, during which time the depredations of the robber or robbers were confined to the orchard and hen-roost; when, late one Sunday evening, the elder Smith, as he was sitting tipped against the kitchen wall, smoking his pipe, preparatory to his retiring, bethought him that he had neglected to lock the granary before leaving the barn. This was by no means a singular circumstance, considering that the granary was usually locked by the younger Smith, who had that night "gone a-courting."

It was a moonlight evening, and Mr. Smith on approaching the barn was considerably startled at seeing the door ajar. Certain of having shut the door an hour previously, Mr. Smith thought of robbers. His suspicions were confirmed, when, on a nearer approach, he plainly heard a movement in the

barn. Too cautious to endanger his life by boldly attacking the robber, Mr. Smith, with considerable trepidation, resolved to watch his movements and discover who he was.

Looking through a crack in the east side of the barn, he saw a ghost-like figure glide across the floor towards the granary. A happy thought entered Mr. Smith's brain. Stealing into the barn, he crept silently along by the mow, until near the granary, when—clap! he shut the door, adjusted the padlock, turned the key, and was off as if for his life!

It is impossible to say what made Mr. Smith tremble so. It might have been the smothered cry of alarm which issued from the granary walls, and rang fully on his ears—a cry well calculated to awaken superstitious fear. But Mr. Smith never owned that he was frightened; although on reaching the kitchen, he was as white as a ghost, or as ghosts are supposed to be.

"What is the matter?" cried Mrs. Smith.  
"I've caught the robber!" ejaculated Smith in a breath. "He's looked up in the granary. Give me my boots!"

"Why—what—what are you going to do?"  
"Get help! He's a desperate fellow, and 'twill be dangerous to meddle with him alone!"

It is impossible to describe the excitement of Mr. and Mrs. Smith on that memorable occasion. The latter took it upon herself to load the old musket, while her husband went for the neighbours.

Mr. Smith exchanged his slippers for his boots, and ran first to Deacon Naffles' house, where he expected to find the younger Smith, who was courting Naffles' daughter. He was surprised to see the house all dark—as if the Naffles' had retired to rest and blown out the candle. He knocked, however, furiously, as the occasion required. After some delay, Deacon Naffles came down in his night-clothes, stared at Smith in astonishment, and demanded his business at that time of night.

"Caught the thief—locked up—in the granary—where's Peter?"

"Hal caught a thief!" cried Deacon Naffles, who, having lost some property, as well as his neighbour, was interested in the intelligence. "Good enough! keep him till morning!"

"Twont do!" replied Mr. Smith, in an excited manner. "He's a despit fellow—break out—I must rouse the neighbours—where's my son Peter?"

"O Sally is sick to night—so Peter courted her only about an hour, and went home."

"Went home!"

"Yes," said the deacon, "half an hour ago."

The elder Smith clapped his hand to his forehead, as if he had been struck either by an idea, or some other weighty substance.

"Gracious!" he exclaimed.

"What?" asked the deacon.

"I believe," stammered the elder Smith—"I—I have locked up!"

"Who?"

"Peter!"

"I bet you have!" cried the deacon. "I heard him say he had got to carry the buggy-cushions into the granary before he went to bed."

"Look here," whispered the elder Smith, "I beg of you never to mention this—I—I—if it should get out!"

"O, I'll keep the secret!" interrupted the deacon, trying to preserve a becoming gravity. "The joke is safe—and I'd advise you to hurry home and let out Peter."

The elder Smith turned on his heel and vanished—feeling very weak—probably from the effects of the excitement he had undergone.

Let us now look in upon the younger Smith, who was actually shut up in the granary. It is impossible to describe his rage on finding himself thus entrapped. After shouting until he was hoarse, and nearly deaf, he closed his teeth angrily, and sat down on a bag of meal to wait the result.

Peter had not long been in this dark dungeon, before he heard a noise in the barn. Supposing it was the old man, who, having discovered his error was coming to liberate him, his anger evaporated, and he could not help laughing at the ludicrous mistake.

But there was a mystery about the sounds he heard, which caused the younger Smith to doubt whether they were made by his father, after all. He listened. They turned the key cautiously in the lock. Slowly, stealthily the door opened, while Peter scarcely breathed. Somebody entered noiselessly, touched young Smith's shoulder as he passed, and began to explore the further part of the dungeon. Peter dropped on his hands and knees, and taking advantage of the noise made by the robber, crept out. Then, to shut the door and lock it, was the work of a moment. Somebody was locked up.

Listening a moment, and hearing no sound, Peter became firmly convinced that he had committed no error, but caught a real thief, and was immediately for assistance.

Shortly after, very much ashamed of his mistake, the elder Smith sneaked into the barn, and approached the granary. "It is necessary in this place to observe that the elder Smith had picked up his son with the key which belonged to the granary, and which he had carried away with him, and that Peter locked up the thief with a false key, which the latter had brought with him, and carelessly left in the lock on entering the granary, and which the younger Smith had carried away."

And now the elder Smith made haste to open the door.

"Peter!" he called, putting his head into the granary.

No sound replied.

"Are you asleep? Come, don't go playing any tricks on me—it was all a mistake—for I really took you to be a rob!"

Mr. Smith's tongue was stopped by a violent blow on the mouth. Mr. Smith, in an instant, was tumbled down amidst a wilderness of barrels, bags, rakes, and shovels. Mr. Smith was considerably stunned by the blow and fall, and when Mr. Smith got upon his legs again, the door was closed and locked. Mr. Smith was a prisoner. I leave the reader to imagine his feelings!

Meanwhile, Peter was raising forces to assist in taking the thief out of the granary in safety. Having first told his story to Mrs. Smith, who was exceedingly astonished, he hastened to alarm Joe Ferris, a stout fellow, who lived in the woods nearby, and who had complained of losing quite as much property as the Smiths. Mrs. F. put her head out of the window, and wished to know what Peter wanted. The young man asked for Joe. After some hesitation, the woman replied that her husband had the headache, and could not get up.

"It's very important!" said Peter. "I've caught the thief, and locked him up in the granary!"

"O—have you?" said Mrs. Ferris in a feeble voice. "How fortunate! But as my husband has the headache, I think you had better keep the—the man till morning."

"No, we'll have him to-night!" cried Peter, and away he ran.

Now, if the younger Smith thought he was regaling Mrs. Ferris with glad tidings, he was considerably in error. The truth is, in closing the window, she was as pale as death. The reader may guess the cause of her agitation, when I inform him that there was no Joe Ferris sick with the headache in the house.

But Mrs. F. was a woman of energy and decision. She caught up a hammer, threw her shawl over her head, and left the house. She was seen in Mr. Smith's barn with her hand on the granary door.

"Joseph!" she whispered.

No reply.

"Joseph—it is me—are you here?" she added, knocking on the door.

"Let me out," said a voice within.

Without any further delay, Mrs. Ferris having thrown the barn-door wide open, so that she could perform her operations, commenced hammering the padlock in a most destructive manner.

Now Mr. Smith, who was within, was exceedingly astonished at what he heard. He certainly wished to be let out, but he had no desire to have the padlock smashed, without first trying other means. Something like the truth flashed upon his mind, however, when he reflected that the person who was breaking the lock had called him Joseph, and that the voice was marvellously like a woman's. With great anxiety of mind he waited for the door to open.

At length the lock was torn away, and Mrs. Ferris whispered—

"Come, quick, Joseph! There's no time to lose! They'll be here in a minute!"

She caught somebody by the arm, and that somebody followed her into the moonlight. Then he caught her by the arm, and both stopped, looking each other full in the face.

Mrs. Ferris screamed, turned paler than the moonlight, and dropped her hammer. Mr. Smith was scarcely less astonished; but recovering himself, he said, rather coolly, considering the occasion—

"You are late to-night, Mrs. Ferris; allow me to see you home."

She could not refuse his arm; and when she saw that he was conducting her to his house, instead of her own, she had not the power to say a word, or make the least resistance.

The good lady's feelings, on being brought before Mrs. Smith, can be "more easily imagined than described." In her fear and confusion, she confessed some very startling truths, and with tears in her eyes, and on her knees, begged her "kind, dear friends," to be merciful, and not to expose her. Mrs. Smith recovered from her amazement and exclaimed "I never! I never! I never!" and Mr. Smith, who was not the least excited of the three, indulged in some equally sensible remarks.

Meanwhile, Mr. Joe Ferris, who was the man who had taken the younger Smith's place in the granary, and given it up in turn to the elder Smith, went home by a circuitous route, wondering by what strange accident he happened to get caught, and congratulating himself on his escape. He had reached his door, when, hearing his name called by somebody in the road, he turned and saw three men going by.

"Joe Ferris, is that you?" cried the voice of the younger Smith. "Come on, if you are ready. I've got Bill Hodges and Mr. Blake—and I think we'll be enough for one thief—but the more the merrier, so come on. I knew you would go in for the fun, in spite of your headache."

Joe was quite as much in the dark now, as when he was locked up in the granary; but concluding it would be best to put a bold face on the matter, and accompanying Peter, he speared himself roady, and jumped over the fence. At first he was afraid of committing himself, but the conversation by the way showing him—as he thought—exactly how the ground lay, he laughed heartily at the queer manner in which the thief was caught, and boldly

volunteered to be the first to enter the granary where he was confined; at the same time chuckling joyously at the anticipation of the younger Smith's dismay, on finding, instead of a thief, his own father under lock and key!

With great glee the men proceeded at once to the granary, where Peter proposed leaving his companions, in order to go to the house for a lantern, and to see if his father had returned; upon which Joe Ferris laughed all to himself, and advised the younger Smith to be sure and bring the old man, if he was anywhere to be found!

"Hallo!" cried Bill Hodges; "the granary door is open! the thief has broke out!"

Peter came back filled with consternation. Joe Ferris was no less surprised. The strange events of the night were involved in a deeper mystery than ever, when the elder Smith, having heard the approach of Peter and his companions, made his appearance with a light.

"Hallo, neighbour!" cried Joe Ferris, "what is all this hubbub about? Peter has been telling us about thieves."

"I declare, father," said the younger Smith, "after you shut me up for a thief, I shut up a real thief, and left him in my place."

"I know it; your mother has told me," replied the elder Smith; "and when I came to let you out?"

"O! I see it all!" groaned Peter—"he got away!"

"Yes, and shut me up!"

"And how did you get out?"

"Why, the thief's wife had the kindness to come and break the lock!"

So saying, the elder Smith held the lantern up to the face of Ferris, who turned ghastly white, and trembled as if he had been in an ague fit.

The whole affair was now explained, to the astonishment of everybody in general, and of Joe in particular, who was too much astonished to make any resistance, while Peter and his companions were tying his hands behind him.

Ferris and his wife were accommodated with lodgings in Mr. Smith's house that night; and, on the following day, a search having been instituted, and all sorts of goods found on Joe's premises, they were both committed to jail, to await their trial.

What their sentence was, when convicted of the crime charged against them, I have quite forgotten; but it is certain that the good people of Smithville were troubled no more with the mysterious disappearance of their goods and chattels, and that the Smiths remembered with peculiar satisfaction the manifold mistakes committed on the night of their adventures with the robbers.

## THE SETTING SUN.

BY THEODORE SEDGWICK FAY.

FAREWELL, O Sun!

To the horizon's rim

Low bowed, thy glory dim,

Thy journey done:

So some fallen monarch lies,

Blinding the sight no more,

At will scanned careless o'er,

By common eyes.

Lower—more low—

The broken edge, between,

Of our old earth is seen

Ascending slow;

As its unswerving bound,

With mountain, sea, and plain,

Nation and town, again

Comes steady round.

Linger awhile!

Still let thy crimson beam

Through the dark forest str.

O'er the field smile.

In vain! thy hour is past:

Never on earth was giv'n

A glory so like heaven,

And giv'n to last.

Now almost gone:

How mournfully we gaze

On thy slow-sinking blaze.

Farewell, O Sun!

So some beloved one dies,

And takes, in faith's warm light,

His everlasting flight

From our wet eyes.

Thou dost not set:

Though plunged our globe beneath,

Though quenched in seeming death,

Thou shinest yet.

In God's appointed time,  
Thou wilt, like Him once slain,  
Before our eyes again  
Uprise sublime.

Yes, even now,  
O'er realms, to thee revealed,  
From our small view concealed,  
Bendeth thy brow.

Thou set'st, from pole to pole,  
Blue gleaming at thy feet,  
With many a shore and fleet,  
Atlantic roll.

Beneath thy eye,  
Arctic ice-cliff and plain,  
Warm field of golden grain,  
And Indian valley lie;

While on the ship's lone way,  
Around the Cape, storm tossed,  
The dark and frowning coast  
Smiles in thy ray.

And so, when I,  
Life's weary travel o'er,  
Reach that black, fatal shore,  
At length to die,

Almighty God! teach me,  
As Earth's brief phantoms fade,  
To follow undismayed,  
Trusting in Thee.

Beyond Death's night,  
Let nobler prospect rise,  
New fields and fairer skies  
Break on my sight.

And so, my tired race run,  
May my last moments shine,  
Radiant and calm, like thine,  
O setting Sun!

HONOURABLE ORIGIN OF A NAME.—The villages of Winneburg and Metternich, near Coblenz—the former the birth-place, the latter the property of Prince Metternich—led M. Dumas into a little digression on the subject of the celebrated diplomatist. The family name, we are informed, was originally Metter, but received the addition of the last syllable in the following manner:—"In one of the great battles of the 15th century, the Emperor of Germany saw an entire regiment take to flight, with the exception of one man, who stood his ground and defended himself gallantly, till he fell covered with wounds. The Emperor inquired his name. 'It was Metter. That night, at supper, talking of the regiment in question—'They all fled—but Metter not.' Everybody knows that *met* is the German for 'not.' The family adopted the additional monosyllable, and hence the origin of the house of Metternich.—*Blackwood's Magazine*."

# THAT LAZY FELLOW, THEOPHILUS BRIGGS.

BY AUGUSTIN.

I AM sorry I have undertaken to say anything about Theophilus. Not that I am afraid he will read this, and attack me with a stick. No danger. Theophilus never opens a magazine—rarely ever opens a newspaper, and when he does he only reads the anecdotes. Besides, I don't intend to name where he lives. There is no danger. Even if the bookseller reads the *Companion*, and sends for Theophilus and shows it to him, and urges him "not to stand it," he is too lazy to get angry; and if he does, he is far too lazy to attack any one.

No; the reason I am sorry I undertook to say anything about him, is because there is so very little I can possibly say. There is no use in attempting to say anything about his father. It is true he kept shop, and sold marbles to me when I was a boy, and was in the militia. I have racked my memory, and cannot recollect anything concerning him except that he sold tape, and nails, and calico, over his little counter, as far back as I can remember, without one single incident which I can possibly dress up into an interesting narration.

As to Mrs. Briggs, she was simply, solely, and only Mrs. Briggs, and that is literally all I, or anybody else, ever knew about her. She made a new bonnet and two new calico dresses for herself every year, made and mended the clothes of Mr. Briggs and Theophilus, ground the coffee, baked the biscuits, and occasionally the cakes, helped a neighbour to work, suckled Theophilus when he was a baby, thrashed him when he was a boy, and knocked upon the partition, (Mr. Briggs's family lived in the back part of his shop, when dinner was ready. Love and marriage are always interesting, and if I knew anything about theirs, I would relate it, even if I had to add a little fiction in the way of an opposing father, or a wonderful rescue of Mrs. Briggs, that was to be, by Mr. Briggs from some mad dog or runaway horse, or something or other. But nobody ever knew or said anything about their marriage. I suppose they went to school together, and grew up together, and got married together, so much as a matter of course as not to excite any stir at all in Pikeville—yes, I will call our man by that name, for there is no use wounding, or running the risk of wounding, Theophilus's feelings.

Much more has now been said about Mr. and Mrs. Briggs than I thought could possibly be said; so I feel encouraged to go on and speak about their only son.

I might have described the death and quiet funeral of his father, and how his mother followed his father to the little graveyard just three months after that funeral. But I forbear. Easy, unoffending, kind-hearted in their lives, they sleep peacefully together. If they did and said nothing else during their lives, they, at least, injured no one, and it is a vast deal better the world should be peopled with such people, than with active, but wrangling and hard-hearted couples.

I want to dwell on the loveable qualities of Mrs. Briggs as a mother—for there is something to me actually *holy* in the character of a mother, apart from all other qualities of the female. Yet I cannot conscientiously do it in her case. True, she suckled Theophilus and Lucinda his sister, and slapped them when they cried, and gave them cakes when they stopped crying, and nursed them when they had eaten too much cake, or had the whooping-cough. All this is true, but it was only what the mere animal mother has instinct to do. At this moment, you might ask Theophilus or Lucinda, and they could not tell one single thing done by their mother to improve their minds, or waken their immortal souls to the knowledge of immortality.

She did teach Lucinda a peculiar way of preparing peaches, so that they answered either for preserves or pickles, having a remarkable half-sweet, half-sour taste, but I believe this is all, except, of course, that Lucinda learned from her how to cut out, and sew, and cut candle-papers. This was all she received from her mother beyond her mere existence.

Theophilus had his father's fat figure, red hair, and every-day sort of face, inherited his father's little shop, his father's habits of opening the shutters late in the morning, breakfasting late in the back-room, sitting on a tea-chest in front of the door, or by the little stove in the shop, as it happened to be summer or winter, all day cutting a stick, or chatting with somebody. If a customer came in, he rose slowly, clasped his pocket-knife by shutting it against his thigh, slipped it in his pocket, went round the counter, weighed the sugar wanted, or measured off the gingham, just like a man who had plenty of time to do it in.

Lucinda inherited her mother's realm in the back-room, and kept up the rapping when dinner was ready, as it had been kept up for the last forty years by her mother. I always thought her superior to her mother. She was rather pretty, medium size, lively black eye, red lips, rosy cheek, loving heart—only needed the mind within her to be lighted, to glow and sparkle, and be a lovely and fascinating girl. Apparently, however, the very same path lay before her as before her mother—grinding coffee, baking tarts, making pickles, making garments, mending socks, and combing her hair, seemed to be literally and absolutely all that lay before her through life, with some slight change as to the maternal duties of nursing in case she married.

From Monday till Saturday, every day seemed to be a mere repetition of the preceding one. On Sunday they went to church regularly; but I don't firmly believe that they always returned without the increase of a single idea—at least, of any one strong enough to waken and move them on a higher course of thought, and feeling, and action.

Everybody in the town—there are about four hundred persons in Pikeville—liked Theophilus and Lucinda well enough; but the brother was hardly ever mentioned, without the adjective *lazy* attached. "That lazy fellow,"

Theophilus Briggs," was his usual designation. It was only a few days ago, when I was attending on Mrs. Wilson—for I am a practicing surgeon in Pikeville,—that I overheard Mrs. Jones tell Mrs. Smithers, who had also dropped in to sit up with Mrs. Wilson, that Mr. Briggs was heard to express himself more strongly in admiration of her—Mrs. Smithers's daughter Jane, than was altogether consistent with mere admiration.

"Well, what then?" said Mrs. Smithers—"I thought rather tartly.

"Why, nothing," replied Mrs. Jones, "except that Theophilus is old enough to marry."

"Do you think I'd let my Jane marry that lazy fellow, Theophilus Briggs?" said Mrs. Smithers, in a half-groan, loud enough to waken my patient.

I could not stand it. My surgery is right opposite Briggs's shop, and I have seen so very much of him sitting on his tea-chest, that I felt myself to be more acquainted with him than anybody else. I am only going to stay a few months longer in Pikeville, to gain a little more reading and practice in my profession, and then I intend going to a wider field; and so I determined I would take the first opportunity to talk with my neighbours—see if I could not benefit him a little. I think it was the Monday afternoon that I did so. I had that morning operated for *strabismus* on Henry Milson's left eye—had read hard upon the operation, both before and after it—had ridden over to Squire Smithers', and got back—had drawn my dentist chair near the window to read a little more upon Mrs. Milson's very delicate diagnosis, when I saw Theophilus sitting as usual on the box opposite. No one was with him. I laid aside my book, went out, locked the door, and went over, determined to spend the hour, before the bell rang for supper, in talking to Theophilus.

In order not to make too sudden an attack, I drew out my knife as I slowly sauntered over, took a seat by Theophilus on the box, split off of it a splinter to chip, and chatted a few minutes about the warm, beautiful weather we had.

"There is something," said I, "in this bright, blooming weather, that warms one through and through. It is like spending an hour with Jane Smithers to have an hour of such sunshine!"

My figure was not extravagant. I have been married two years, and, besides, Jane is so lovely and intelligent, and warm-hearted, and laughing a girl, that to call her embodied sunshine is a compliment to the sun, not to her!

I saw I had hit the nail on the head. Theophilus coloured, and looked up with more life in his eye than I had ever seen before.

"Think so?" said he.

"I'll tell you what it is," said I, "that girl is a prize. She deserves to marry a man. All her sunshine would be wasted on anything else."

"Don't understand," replied my companion, rather earnestly.

I had no time to lose, for the sun was getting low,—so I came right to the point. Nothing but a hearty slap will waken a sleepy-headed man.

"Theophilus," said I—and I glanced at the well-formed head and open countenance of the man, and saw he was worth talking to, notwithstanding his drooping shoulders and listless habits. "Theophilus," said I, putting my hand on his shoulder, "I know you love Jane. I know you won't get her, unless you change very much in some things. I am going to leave here in a short time, and I want to have a plain talk with you before I go, because I like you. You won't be offended?"

"No."

"You have one grand fault. It has wrapped itself all around you like a boa constrictor—which you saw in the show here last March. It is slining you over with its saliva, and will swallow you up, presently, before you know it."

"What do you mean, Doctor?"

"Just exactly this: you are *lazy*—daily becoming more so."

"Well, fact is, I believe I am, but I don't see why I should slay myself. I make enough for me and Lucinda to live on. And if I ever do marry"—here he coloured—"I dare say something will turn up. Everything is cheap. I will have a plenty to live on."

Phidias cut a Venus out of the quarries in Mount Hybla. Here was a rougher, deader quarry, to get a perfect man out of!

"You were created by God!"

"What a question!"

"Well, He is working out some great plan in the millions that have trod, are treading, and will tread the earth. He don't create these millions by millions, but individual by individual, giving each man his peculiar duty in the world. He made you to do something—or He would not have made you at all—there would have been no object in it."

"Very well."

"You see, no man was created to be nothing and do nothing. Every man has his own business, and it is his duty to God to do all he can, to the utmost of his strength in that business—for God as loudly commands you to be not slothful in business, as he does not to steal, lie, or murder."

"I see!"

"There are many different sorts of business in the world. It is by division of labour that each is carried on; just as in a large printing establishment: one class of workmen have the sole duty of preparing the paper; another the duty of setting the type; another the duty of passing the sheets through the press; another the duty of receiving them from the steam-driven cylinders; another the duty of taking them, thus completely printed, and folding them for the post or for binding. You see, by the energy of each in their target each individual of each class, the whole work moves with, or, more correctly, scattering printed sheets over the reading world."

"Whether a man ploughs or plaid law, or acts as a legislator in the deep, or doctor, it is only when a man throws his whole force whirled in joyous

## THAT LAZY FELLOW, THEOPHILUS BRIGGS.

business that he does his duty. Every blow of Peter's hammer, down yonder in the blacksmith's shop, every piece of business you do, every visit I pay as a doctor, has a double object, you see—individual profit and general improvement;—at least it ought to have. Well, then, every wasted moment, every half-effort of any man, is just so much lost—to the man himself—lost to the public. Every one of us has his business—every man's work in that business has a certain value. Every hour, then, you waste on this box in lazy trifling, not only confirms you in the disease of indolence, not only habituates your mind to idle thought and talk—but every such an hour is an actual and deliberate theft of just so much value as that hour spent in work would have yielded—a theft from your own fortune, Theophilus, and a theft from the public."

"Every man has his place, Doctor. Mine is a mighty little one. Not much to be done in it!"

"Yes, but do you do with all your might, all you can possibly do in it?"

"Why no; I might do a great deal more business if I would, but I do enough to make a living; that's all I want."

"Ah, but what do you mean by a *living*? The living a rational man ought to live, is not only to have plenty of food and clothing, but a plenty of books and papers for the living of his mind—pictures and statuary too, where it can be afforded. You ought to be active, too, if it was only not to set an example of laziness—if it was only to stir everybody all around you into greater energy and enterprise by your example. Besides, you ought to get rich as fast as you can—if it was only to increase your power of doing good."

"Doing good? Pahaw, you are preaching!"

"Yes, doing good. If you were rich, you could educate orphans, build asylums and colleges. If you had five thousand pounds to spare, and the soul to give it, you might build up a free school in this very town, which would give all the children a good education, and refine and improve the place beyond anything you can think. If you,"—continued I,—"*had spent those hours in some business, which you have spent in lying on this box doing nothing, you would be able to do it now—and would thus have made yourself a blessing to the town for ever!*"

My lazy friend here clasped his everlasting knife, and put it in his pocket. It was a good omen. "Theophilus," said I, standing in front of him, "consider, will you, my dear fellow, what a tremendous mass of work is upon all men, now! The generation passing away, is leaving to us the world-wide business which has attained its efforts to the utmost. The cultivation of the immense raw material consumed in the ten thousand manufactories of the world, is passing from their hard hands into ours. The machinery of these ten thousand manufactories has to be kept up in uninterrupted speed. The lumberable roads and vessels by which the commerce of the world is carried through it; the million inventions by which cities are lighted with gas, by which thought is flashed on lightning around the world, by which all surgery is performed without pain,—pahaw! you know all the thousand new inventions, from a new plough to a new telescope—all these have to be kept up in full use."

"But, Doctor—"

"Wait a moment!—our government has to be kept up, too, in all its branches—made to do more and more for its own citizens—more and more for the freedom of the old world. What a vast amount of legislating has to be done! and what a vast deal of voting; and of reading, and thought, that the voting may be intelligent and good! The vast system of education, too, has to be kept up. All the thousands of schools and colleges have to be kept supplied with able teachers."

"Don't know what you mean."

"I mean that our generation inherits the work of the six thousand years since creation,—has to keep it up in full vigour. Besides, millions of acres more have to be brought under cultivation. Thousands of manufactories more have to be established. Thousands of new steamships have to be built. Thousands on thousands of miles of railroads and telegraphs have to be added to those now in use."

"Plenty of work to do, I'll acknowledge."

"That's not all, all the thousand new evils of this new age have to be held down and strangled. Intemperance has to be banished; quackery in science and politics has to be unmasked and killed. The world, my dear fellow, has a vast deal to do, and a vast deal of evil to be kept from doing."

"But I hav'n't to do all this!"

"Very true; but suppose everybody was to sit on his tea-chest and say the same, would anything be done then?"

My lazy friend put an almond in his mouth, and slowly cracked it, as he meditated my question.

"Theophilus," continued I, hoping the glacier of his mind was slowly detaching itself under the warmth of my eloquence, and was about to move.

"Theophilus," said I, "tell me; what have you *done* since your father died?"

"Well, I have sold goods, and chatted with the neighbours, and—and gone to church on Sunday, and—and—that's all, I believe?"

"Except eating your meals and sleeping, and sitting out here in the sun, without a bit more real thought than occupies a bullfrog squatted on a log. You said you wouldn't get angry, you know," said I; and I laid one hand on each of his shoulders, and looked him steadily in the eyes, while I continued, with all the earnestness I was capable of—"Theophilus, in that bread of yours there sleeps a mind which you might waken to think and will, to make you a blessing to yourself and everybody. In that

ry but (one) these slumbers a heart, which might be roused to such a love as would warm you and all around you through and it do so much more; you might be so much happier if ate to see you live on in such idleness. Why, I would artily a que in lying in the gutter there, in the mud, all the time.

"man, you are a living corpse! There is almost as little stir about you—you do almost as little in the town, as if you were in the graveyard, instead of your shop. This tea-chest in your Coffin; you are just as useless, sitting idle on it, as if you were lying dead in it."

"I believe you are half right, Doctor."

"I am whole right. Just look at it. If you were only to devote every hour to doing something—enlarging your business, or improving your mind by reading, or doing something or other, it doesn't matter what, so that it be *something*!—the habit of activity would grow upon you; your business and your money would increase; your mind would act more the more you used it; your heart would warm; you would be a new man. You would feel like a healthy man after a brisk walk on a cold bright morning—cheerful, hearty, happy. You would enjoy your very meals more. You would be far more respected. You would become, at least, very well off. You would be able to marry Jane; for I believe she loves you in spite of your present laziness, though she would have the sense never to marry you, even if her mother would let her, while you are what you have been all along. You could build up a bright and happy home. You could hope to be elected to any office almost, in the land. You see, a broad and indefinite course of usefulness, and honour, and happiness is before you, if you will only waken out of the mud of your sloth, and think, and act, and live!"

Theophilus had risen from the box, and stood before me really awakened. That picture of Jane and housekeeping touched him.

"You may be as happy and as prosperous as you please, by being active. You will sink lower and lower into brutal sloth, by being—just as you are. You ain't thirty years old, Theophilus," continued I; "if now, in the spring and heat of young blood, you are so lazy, what on earth will you be when you get older? What on earth but a poor, miserable, idling, drivelling, chattering, good-for-nothing old bachelor, rotting before you are dead; your soul dwindled and dead within you, like the kernel of a frost-bitten peach?"

"Strikes me, you talk plain enough, doctor?"

"Have to shout when one talks to the deaf! have to cut and slash when the limb is mortified; have to apply my stard plaster where we want action to follow."

"Well, doctor, what would you have me to do?"

"Do? Why, split this tea-chest into kitchen wood; rise two hours earlier to-morrow morning; subscribe this evening for a good newspaper, and a magazine—there's the *Home Companion*; clean out your shop, and paint it, and fill it with more goods, and advertise. When you do talk, and when other people talk with you, talk yourself, and make them talk about *something*. When you go to church, listen to every word sung, or prayed, or preached, if it be only for the sake of keeping your mind busy. You are in a comatose state—stir about with all your might, or your lethargy will become fixed."

Here the bell rung for supper, and I arose.

"Much obliged for your visit, doctor; believe I'll take your mustard and medicine—don't know—I'll see."

"Shall, if I can make him!" said Lucinda, who had been sitting near the door inside, listening, with female curiosity, to our talk, but keeping unseen and still. As she spoke, she came to the door. Her eyes were really awake, her cheek flushed, and I knew my visit had not been lost, at least, upon her. I could see the Venus starting out from the block!

"Good bye, doctor," said both, as they shook me warmly by the hand, which was unnecessary, as I was not going to be absent from town. I answered cordially, and walked slowly away. The sun was just down. "Rose at four," murmured I, recalling the events of the day; "read two hours; did that *strabismus* case; rode over to Squire Smithers'; read up Mrs. Milson's case; had a talk with that lazy fellow, Theophilus. Put that lawn in note-book among my 'Cases in Pikeville,' as 'Case of Mental 'atalepsy;' write out treatment—WATCH EFFECTS."

**TAKING NOTES.**—Some years ago, when there were slaves in Massachusetts, and some of the best men in the community owned them, there was a clergyman in a town in Essex county, whom we may call Mr. Cogswell, who had an old and favourite servant, by the name of Cuffee. As was often the case, Cuffee had as much liberty to do as he pleased, as anybody else in the house; and he probably entertained a high respect for himself.

Cuffee, on the Sabbath, might have been seen in the minister's pew, looking round with a grand air, and, so far as appearance indicated, profiting quite as much by his master's preaching as many others about him.

Cuffee noticed, one Sunday morning, that several gentlemen were taking notes of the sermon; and he determined to do the same thing. So, in the afternoon, he brought a sheet of paper, and pen and ink. The minister, happening to look down into his pew, could hardly maintain his gravity, as he saw his negro, "spread out" to his task, with one side of his face nearly touching the paper, and his tongue thrust out of his mouth. Cuffee kept at his notes, however, until the sermon was concluded, knowing nothing, and caring as little, about the wonderment of his master.

When the minister reached home, he sent for Cuffee to come into his study.

"Well, Cuffee," said he, "what were you doing in meeting, this afternoon?"

"Doing, Massa? Taking notes," was his reply.

"You taking notes!" exclaimed the master.

"Sartin, Massa; all the gentlemen take notes."

"Well, let me see them," said Mr. Cogswell.

Cuffee thereupon produced his sheet of paper; and his master found it scrawled all over with all sorts of marks and lines, as though a dozen of spiders, dipped in ink, had marched over it.

"Why, this is all nonsense," said the minister, as he looked at the "notes."

"Well, Massa," Cuffee replied, "I thought so all the time you was preaching!"

## THE PHANTOM LIGHT: A CHRISTMAS STORY.

BY FITZ-JAMES O'BRIEN

ON the south-western coast of Ireland there is a little nook of country over which impetuous tourists step disdainfully, nor notice the many exquisite beauties that lie there like hidden violets, lovely, but unseen. It is a land of hoary castles, and many a mouldering tradition—a land where the blue sea indents the shore into sweet and sunny bays, seeming as if the ocean loved the earth and sought to steal half-timidly into its arms;—a land where wild and rugged rocks start up by every solitary pathway—strange, uncouth, fantastic in their forms, like night-mares petrified. It is rife, too, with the chronicles of the past; and white-haired Senachies will sit by the bog-wood blaze the long night through, telling of vanished days, and long-forgotten deeds of the old sea-kings of the coast, ruthless, reckless men, who, sitting on the summits of their lofty watch-towers all day long, gazed across the wide Atlantic for some hapless bark whose rich spoils might fill their greedy coffers.

There were entrancing stories, too, of beautiful maidens, who, captured by these pirate chieftains in their ocean forays, pined and pined in their captivity until they died. One, I well remember; and many a night in boyhood I listened eagerly to the tale.

The galley of one of these fierce rulers of the coast captured an Italian bark, and amongst other prizes was one more inestimable than a freight of jewels. This was a noble Venetian maiden, beautiful and proud! The chieftain claimed her as his share, and bore her to his dark, sullen, sea-beaten castle. In time, he conquered the hate she bore him as her captor, so far as to win her consent to be his bride. She wedded, but still in secret did she hate him, and in this hollow intercourse the years wore on. One day, there came a minstrel to the castle; he, too, was from sunny Italy, and the exiled lady's eye lightened, and her bosom heaved, as she for the first time for years heard the sweet liquid accents of her mother tongue. She bade him to her chamber, where he lay at her feet all day, and sang sweet canzonets that breathed of love. The lady listened—she could not help it; he sang so feelingly—and from listening came to love. For a brief time

they were happy; but it was very brief. In an evil hour their passion was discovered, and by the mandate of the furious sea-king, the minstrel was doomed to die. That night, when all was still, and the inmates of the castle wrapt in slumber, a woman's foot stole gently down the winding stair that led to the armoury, where the ammunition was deposited; and one might have heard in the silence of that dangerous chamber, the loud pulses that throbbed in that woman's burning heart. In another instant a hollow sound was heard. The sea rushed back in terror from the shore, the sea-birds fell stupefied from their eyries on the cliffs, the trees bent as if to the power of some mighty storm, while, with a stunning roar and crimson flash, the massive castle shot up into the air, and the next instant minstrel, lady, and pirate-king, were sepulchred beneath the ruins!

There was not a moss-covered stone throughout that land but had its tradition; and some there were that had whole centuries of legends heaped upon them. One spot in particular seemed to be the especial haunt of all such lore, and truly there never was a meetier dwelling for romance! It was a small and lovely lake. In the midst was set a green island, which the rippling waves clasped as if in very love; while on its emerald turf through which the white rocks peeped, arose an old, grey castle. Above the crumbling top the snowy sea-gulls gleamed as they floated in the sunshine, and the rabbits played beneath its walls in many a wild and antic gambol. Beyond this island lay a narrow, rocky channel, through which the sea rushed foaming into the lake, and where, on one side, a tall and spectral stone stood up as if to guard the pass. It was the traditioned grave of a famous saint, who, the peasants said, might be sometimes seen in the dusk of twilight weeping for a brief while over the sins of a wicked world. Farther still, over the seaward shores of the lake, gleamed the blue ocean, that, like a beauty-bestowing centurion, girdled around that fairy scene. It was a hallowed spot—so still, so lovely, and so beautiful—a place where youth might wander with untrammelled feet, and never tire—a sanctuary, where Age in its infirmity might nestle, and scarcely feel the chilling breath of Time! The atmosphere around it seemed redolent of poetry and joy; the fields were always green, the waves were ever blue, the sun sent down from heaven his brightest beams to decorate its beauty.

There was a lofty mountain, too—a sullen, haughty-looking giant, who, with his dark fir-groves that waved like a beard upon his cheek, sat watching jealously the azure lake that sparkled gem-like at his rugged foot. Sometimes, in the winter time, when the winds whirled around his summit, strange sounds of wrath would be heard afar up his steep declivities, and lightnings would flash around his crown, as if he was engaged in fearful combat with some spirit of the air who sought to steal his treasure from him. Then, again, in the golden summer, when Old Ocean's heart was calm, how gently its billowy bosom throbbed against his rocky base; with what low, sweet sighing, the wind came down the deep defiles, and wandered with it. Then the apple-trees were borne down with fruit, and the storm-cocoon on the crimson berries of the mountain ash. Flocks of fishing-boats went out each dawn, and in the dusk of night returned; and then, if more than ordinary success had crowned their toils, what revelling there was around each humble hearth! It was a calm, a blessed place—that remote and lonely lake; and many a time and oft its features mingle with my dreams, and make my slumbers happy!

On the northern side of this lake there stood, some years ago, a pretty cottage—a long, low edifice, with thatched roof, and deep eaves where the swallow nested in the early spring. It was a picture of rural comfort, compact—so compact that it looked like a man who wraps himself up as closely as possible on a cold day—and the small, narrow-paned windows with which its thick walls were pierced, gave no promise of chilly draughts, and their long retinue of coughs and syrups. Two tall and ancient ash-trees stood opposite the door, which opened upon a sort of esplanade and grass garden, from which a few stone steps led immediately down to the beach of smooth, white sand, and the cool blue waters that kissed its brow. Along the side of the slight hill on which the cottage stood, and communicating with the esplanade by a simple wicket-gate, stretched out a noble orchard. It was full of venerable apple and pear trees, whose boughs, though gnarled and twisted into a thousand fantastic devices, gave no indication, when summer came, of any of the feebleness of age, but burst into an amplitude of fruit and blossom that would have caused all Hesperides to wither with envy had they witnessed it.

Through this orchard a winding walk of flowers was traced—a rivulet of blossom, that in the early spring gushed with anemones, and pale, spiritual, snowdrops! It was pleasant beyond utterance to stand in that orchard walk, and peeping, as it were, through a casement of rich green leaves, watch the sun set as it fell like a mantle of changing silk over wave, and wood, and plain! First, on the dark mountain top, a small bright spot of crimson glory settled like some beauteous bird that came to nestle there at evening, it grew larger and more vivid, till, pouring down the mountain side, a gushing lava—stream of light—it burst over the blue lake, and spread like rosy oil upon its waters. And when the sun swam forth, like a fiery swan, from behind the golden clouds, how still became the woods, winds and waves hushed with adoration!

Then came the hour for twilight dreams! The old grey castle seemed again with the pulses of its antique life. Banners, shadowy as the robes of angels, waved heavily on the walls; knights rode gallantly to postern-gates, while fair ladies, sighing, watched them from their turret-hambers; for a brief while the Spirit of the Present, faded before the spirit of the Past.

Next came moonlight—the hour of fairy revelry when in the green rings that marked the sward, an elfin multitude whirled anon, as the brown leaves whirl in the autumn winds. How the

of the pale moonlight fell across the transparent lake like the silver trellis-work that guards a costly mirror. How dark became the woods, how white the shore, and how peacefully that little cottage slept beneath the shadow of the trees. How wild and musical was the boatman's song as it came floating across the waters, telling in sonorous verse the deeds of some forgotten chieftain. Moonlight on that lake was very beautiful—so beautiful that one could have wished it moonlight there for ever!

It was a warm and cosy room. In fact, it was an unmistakable winter-room, and the wide hearth, filled with blazing logs of bog-wood, that hissed and spluttered like live things, as the flame licked them with its fiery tongue, seemed made expressly for ghost stories in the long December nights. Warm corners into which elders could draw their chairs, and with easy incredulity at the stories of *The Headless Coach*, or *The Poohs*, while the juveniles listened to the wild tales with wondering faces, over which the changing firelight would throw a half unearthly shade. Then, the furniture, too, had an air of supreme comfort. There were none of your requisited antiques, your Elizabethan or prie-Dieu chairs, the very look of which makes every well-constituted back ache; but real, honest, old-fashioned fellows, that looked as hospitable as ever they could, and seemed, with their wide arms and large backs, to be giving a perpetual invitation to come and sit on them. These were respectable family chairs, and would no more have submitted to the modern indignity of being swathed half their time in clumsy saving covers, than they would to the profane touch of French polish. The decorations of the mantel-piece were also in keeping. No Bohemian vases, or French mirrors, or pendule clocks—there were none of these. But there was a long narrow mirror in three compartments, surrounded by a gilt frame, considerably tarnished; some specimens of native amber and copper ore from the neighbouring mines; a periwinkle soldier, a shell jacket was a little out at the elbow; a fortune-teller, of old cloth, on a round card, where she twirled nightly for the amusement of those curious in the affairs of destiny; some porcupine's quills; and a Chinese, in carved ivory, completed these unpretending decorations.

But the reader is very naturally asking, all this time, where this chamber is. Question easy of solution! Does he recollect the long, low, picturesque cottage, described a few pages back? Yes! Then this room is the best in that romantic little tenement.

This cottage belonged to a widow lady, the quietest of all widows, who, having ventured once on the treacherous sea of matrimony, after a ten years' cruise returned to port alone—or, to drop metaphor, buried her husband. He, however, left after him a dear memento of his love, and the devotedness with which Mrs. Tregar watched over her infant daughter, was the best tribute she could pay to the memory of the father. Our widow did not dream of marrying again; she perhaps felt herself unequal to undertaking the responsibility of another spouse, so she resigned herself to weeds, and took to cultivating flowers. In that pure mountain solitude, the young Avisia grew to womanhood, and though far removed from the influence of cities and their stimulative education, she possessed that natural beauty and inborn grace that adorns the wild-flower of the hills, but which the forced blossom of the hot-house lacks. She was, to a certain extent, formed by books; and who is it that books will not form? And the wild scenery amid which she lived, and the fresh buoyant air which she breathed, braced her intellect and made her feelings healthy. She was contemplative, too, and full of that shadowy romance, in whose atmosphere youth loves to wander, and which sometimes clings to Age, like a green vine, trailing its flexile shoots across the crevices of some decaying wall. Sometimes, however—probably from her character being self-formed—there was a wild energy in her thoughts that startled, coming, as it did, from one so gentle; and a pale fire seemed to play in her mild dove-like eyes, which, though harmless as the gloves of a phosphoric sea, one felt was a light that hovered over the resting place of passion, as the ignis-fatuus hovers above the graves of men.

But enough of description. Let us return to the little parlour, and take our places amid the group that sat around the fire, gazing out upon the white snow, and enjoying the cheering bog-wood blaze. Mrs. Tregar, a tall, aristocratic-looking lady, with mild grey eyes, was busily employed in knitting an enormous counterpane of elaborate pattern, a work that—like Penelope's web—seemed doomed never to be completed; and a short, fat little man, with a round, shiny head, fringed with a tangle of white hair, and a florid, good-humoured face, lit up by a pair of fine intellectual eyes, was endeavouring to explain to her a new-fangled knitting machine, invented by himself, which was to save half the time expended in the old process, but which, with a perverseness peculiar to some inventions, obstinately refused to do anything but prick the inventor's fingers. This was Mrs. Tregar's brother, who, properly speaking, bore the appellation of "Francis Bell, Esq.," who was never known as, or called anything, save "Uncle Tot."

For miles around the country, this humble name was a talisman among the poor, and scarce a cabin raised its smoky chimney in the neighbourhood, but would count a score of times when that round, shiny head, popped in upon some mission of charity and mercy. Uncle Tot was an ambitious turn. He possessed a sanctum of his own at the top of the house, that he called his "shop;" and in this sacred retreat he was continually giving birth to (or rather calling into existence) certain contrivances which, generally speaking, were more curious than useful. His conversation possessed some strange peculiarities, and smacked greatly of his pursuits. Metaphors and similes, borrowed from the "shop," were frequently found interlarding his discourse, and sometimes they came in with such a singular

"Brother," said Mrs. Tregar, raising her eyes from the work which she had been attending to with a very pre-occupied air—"do you know that the nearer this marriage approaches, the more unhappy I feel about it?"

"Unhappy!" cried Uncle Tot, suspending his useless struggles with the newly-invented knitting apparatus, and staring at his sister with a rather bewildered air—"unhappy! Why, what the deuce makes you unhappy, Agatha? Arthur, poor boy, is in love with Avisia, and Avisia is in love with Arthur. They are to be married at Christmas. They will live long until you and I die, and then they will have our remnant of the family estate. Everything is going on as smoothly as a patent plane on a satin-wood plank—what more would you have?"

"I would have them start in life, Tot, without encumbrance. I would have their necks free from that millstone, debt—that incubus that paralyses one's best energies."

"Ah!" said Uncle Tot, with a sigh—"you allude to that mortgage. It can't be helped now, and it were wiser to dismiss it from your mind altogether. We must take life as we meet it—cross-grained, rough-grained, long-grained, or smooth-grained, clean or knotty—we must work it as well as we are able, and take the best shaving we can from whatever side comes uppermost."

"Our neighbour, Saville, who held the mortgage, was a kind man," pursued Mrs. Tregar, thoughtfully—"and would not have troubled us while he lived; but now that he is dead, and affairs have passed into his daughter's hands, Heaven only knows how long we shall be left in peace."

"Tush, tush! sister," cried Uncle Tot, while a shade of sadness stole over his round, bright face—"don't worry yourself with apprehensions that are groundless. Miss Saville will not annoy you. She is a lady, although she is a merchant's daughter; she is young, and the young are always generous; and if the interest is but paid up regularly, depend on it the principal will never be called for. Don't fret, Agatha, don't fret."

"It is hard not to fret, brother—very hard—when I remember that all those broad acres, that now call the Savilles owners, were once ours; not even ours alone, but had descended, generation after generation, until they reached us, and should have descended again from us to our children. When I recollect the many times that my father took me out, in the summer evenings, to walk beneath the shadow of the old ruined towers where our ancestors had lived and died, and told me stories of the high honour and ancient greatness of our family; when I see the peasants that I know in my youth, now gazing sadly at me as I pass, and sighing, lament that I am no longer their mistress; when all these memories rush upon my mind, brother, it is hard to be philosophical—it is hard to be a Christian, and not cry."

"Poor Agatha!" said Uncle Tot, gently; "thou hast too high a spirit to brook misfortune."

"When one has been linked, through generations, with the land," pursued Mrs. Tregar, not heeding the interruption, "a love more potent than that life springs up between us and the soil. The trees, the fields, the streams make up items in our existence; and the pang of parting with them is as bitter as the losing of a limb."

"But, Agatha, dear sister," cried Uncle Tot, warmly—"what is done cannot be recalled. Your husband was extravagant, and his profligacy paid the penalty. Nor ought you to be dissatisfied. You still hold a magnificent old estate, and which, though small in comparison, is still sufficient to maintain you in becoming state. There are thousands around you, who know not where the meal of to-day will come from; instead of repining, you should bless God that you are not like them."

"Even that poor miserable remnant that you talk of, reprised Mrs. Tregar, bitterly—"even that is not our own; it is mortgaged to more than half its value, and the young plebeian heiress, that lives in yonder castle,"—and, as she spoke, she pointed to a handsome turreted edifice on the opposite shores of the lake—"could, at any moment, foreclose the mortgage, and strip us of our home. There is little use in disguising the fact, Uncle Tot, but we are living here on sufferance."

Uncle Tot sighed, but did not reply. This topic was Mrs. Tregar's only weak point; and he felt that further argument was useless. His sister had imbibed in all their purity and strength, those feelings of aristocratic pride to which the Irish gentry cling so tenaciously. From her childhood up, tales of the ancient dignity of her race had been poured into her ears; and the respect and honours paid to her by her father's tenantry had made her egotistic and proud. In other respects, she was a good woman. Charitable, mild, and condescending beyond measure to her inferiors; but when a wealthy merchant, such as Mr. Saville, or any one whom she did not consider as well-born as herself, sought to place themselves on an equality with her, her nature seemed completely changed—her mildness turned to scorn, her warmth became a freezing dignity, and her demeanour was so repulsive, that one could not believe it to be the same woman. If, then, her goodness made her respected through the country, her manners made her disliked; and in proportion as she beheld her self sinking in worldly circumstances, so much the higher did her false pride rise up, like those defiant tongues of flame that seem to menace the heavens the moment before the tenement they are consuming totters wholly to the ground.

(Continued in No. 2.)

THE ROYAL MOTTO OF ENGLAND.—*Dieu et mon Droit* was the parole of the day given by Richard the First of England to his army at the battle of Gisors, in France. In this battle the French were defeated; and, in remembrance of that victory, Richard made *Dieu et mon Droit* the motto of the royal arms of England, and it has ever since been retained.

# SHADOW AND SUNSHINE.

OR, WHO SHALL WIN!

BY CHARLES CRAYON.

## CHAPTER I.

Self-dattered, inexperienced, high in hope,  
When young, with sanguine cheeks and careless eye,  
We cut our cable, launch into the world,  
And fondly dream each wind and wave our friend. — YOUNG.

SEVERAL years since, in the goodly city of Philadelphia, the scenes transpired which are related in these pages. In an elegant mansion, in the most aristocratic portion of the city, a young man was reposing peacefully upon the sofa, putting a fragrant regalia and glancing over the columns of an evening paper. He was a courteous, well-formed young man; and though his features might not attract the notice of a stranger, the lines of his countenance showed a firm determination when his mind was once formed, and an iron will that would not be easily overcome by obstacles. His hair, which was of a light brown, was brushed from a high forehead, and hung in loose curls almost upon his shoulders. The furniture of the room was of that description which betokened it the abode of wealth, and a rich and well-filled book-case ornamented the room. Perhaps its contents might not have been of the class which would interest the general reader, for, on a closer inspection, they would have been found to consist mostly of medical works. But from this circumstance, and the fact that the door-plate bore the engraving of "Henry Morton, M.D.," the visitor might soon come to a conclusion in regard to the profession of the occupant of the room.

While he was reading, the door was suddenly thrown open, and another young man entered, with a possession and familiarity which proved him no stranger to the other. The new comer was what might have been called a handsome man. He was dressed in the height of fashion, sported white kids, and a gold regulator, and jewellery enough decorated his person to have furnished a shop quite respectably. His hair, which was of a jet black, was arranged with all the taste which the labours of a veteran barber, and the intrinsic merit of bear's-grease could produce; and a heavy moustache seemed the object of his especial care.

"Heyday, Harry!" he exclaimed, on entering; "here you are, like a good citizen, poring over the paper as if for your life. Come take a walk with me."

"Thank you; but I have no desire to walk to-day; besides, at this time you know I must be at home."

"Pooh, man! I would not confine myself to voluntary martyrdom as you do for all the patrons in the world."

"But I am sure you cannot call it confinement, for, as to that, you spend twice the time in doors that I do. While you are moping away your mornings either in bed, or saying silly things to your lady friends, I am not only fulfilling my duties, but alleviating the pains of suffering humanity."

"Ha! ha! my dear fellow! You are growing sentimental, surely. I presume the community are highly grateful to Dr. Henry Morton for his unwearied labours in the cause of suffering humanity."

"You seem inclined to joke, to-day."

"Perhaps I do; but, by Jove! I am sure you do not. Your face is long enough to frighten a timid man out of his wits. Why, Harry, what is the trouble with you?"

"Trouble?"

"Certainly. You are having a fit of the blues, I am positive. If it was not for the friendship I have towards you, I should certainly force you to take a dose of your own medicine."

"Come, Duval, don't talk nonsense; I have heard enough of it for once. Do be sober a moment in your life, and not waste every hour of it in idle talk, if not in something worse."

"Really, you are becoming quite a moralist. I shall expect to hear, the next thing, that you are about to deliver a lecture to young men on their duties to the age in which they live. Something has put you most comfoundedly out of spirits. Come home with me, and we will crack a bottle of champagne; that will restore your humour."

"No, no; I have been out all day, and I have no inclination for pleasure just now."

"I perceive that you have not; but, by the way, how do you prosper with Miss Montrose?"

"I hardly know myself," replied Morton, suddenly losing his listlessness; "but I think I am not getting on very bravely."

"Pooh! Keep up your courage; have you seen the governor yet?"

"Not to speak with him on that subject."

"Do it by all means. Procrastination is the thief of time, you know; but if you speak in season, you will surely succeed; for you have a strong hold on the old boy's affections."

"True, he seems to regard me with favour, and I wish the same was true of his daughter."

"A fig for her opinion! Of course she will agree with her respected daddy on that point. The fact is, my friend, ladies are not very particular on these points: if a fellow is only good-looking," (Mr. Duval stroked his favourite moustache,) "and has plenty of brass, he must be successful."

"Well, I think I may as well follow your advice in this respect, and have these matters settled as soon as possible."

"Very true. But I must be going if I cannot persuade you to accompany me. By the way, shall we spend the evening at Talbot's?"

"Yes, if you—no; on a second thought, I think not."

"Why, what the deuce has transmogrified you so strangely? You are fast settling into an old man. At this rate you will soon cut my acquaintance. Be persuaded to go with me to-night, by all means."

"No, not this evening," was the reply, in a decided tone.

"But your late losses have not discouraged you. I really pitied you this evening, you were so unfortunate. But then you know it is all in chance—all in chance, my dear boy; so take courage, and try again. And I see, by your looks, that it is of no use to urge you further. However, I hope to-morrow will find you in better spirits. Meanwhile, as I cannot stop longer at present, I wish you a very good afternoon."

And with this speech Mr. Lorenzo Duval left the room. After he had retired, its remaining occupant became deeply engaged in thought. Finally his feelings found vent in words.

"How long I have suffered myself to be led by Duval! I have been duped by him times without number. I have been led into scenes of dissipation and vice; but from henceforth I will no longer be his victim. As surely as I have the power of judging, with all his professions, I shall be a villain at heart. But in future I will beware of him." At this moment a ring at the bell interrupted his soliloquy, and a messenger was brought which seemed of great importance, for he snatched his hat and left the room. In his absence we will enlighten the reader in regard to his character and situation.

Henry Morton was a young disciple of Esculapius, who had just commenced the practice of his profession in the city. He was a graduate of one of the first medical colleges, and among the young practitioners of the day, no name stood higher than his own. He was an orphan. Both his parents had paid the debt we all owe, while he was still a thoughtless boy, and he was left in the hands of those who had no interest in him except a pecuniary one. Of course, under such circumstances, the attention paid to his moral culture was limited, and he was left in a great measure to form his own character. When he arrived at man's estate, he came into possession of all the property left by his paternal parent; and this, had he possessed no more valuable qualifications, was sufficient to introduce him into the first circles of society. It would be superfluous to add that he was considered an object of peculiar attraction by all artful young ladies and scheming mammae. But our hero was not a man to be caught napping, and so at the time of which we write, all the artifices of the one, and all the smiles of the other, had been wasted upon him. All, did we say? Perhaps we were incorrect, for of all who had aimed to secure his attentions, none had been successful. But we fancy that if the reader could have been allowed to take a peep into his heart, he would have found that there was at least one individual whose destiny had a peculiar interest for him.

This was the young lady in regard to whom Duval held a conversation with our hero. Lillian Montrose was the only daughter of parents who could boast that they were one of the first families in the city of Philadelphia. That she was taught to believe that merit and worth were only to be found in the circles of rank and wealth, was the natural result of the atmosphere she breathed. Possessing an attractive form, beauty of rare description, and an evenly balanced and well cultivated mind, she was calculated to attract attention, and win admiration in the sphere in which she moved. She had not moved long in the gay world around her, before she had learned to thoroughly despise the heartlessness and inconsistency which the golden curtain concealed. The voice of flattery had fallen so often upon her ear, that she could look with no feelings, except those of disgust, upon the swarms of butterflies, in human form, that ever congregated around the disciples of wealth and beauty; and many had sought to win the hand and heart of the fair heiress. But, as yet, they had all signally failed; and, though some of them saw fit to attach to her the appellation of a heartless coquette, she had never given any of them the slightest reason for encouragement. This state of affairs was in no wise agreeable to her friends; and Mr. Montrose, her worthy father, had waxed exceeding wrath, on several occasions when he learned that his daughter had turned a deaf ear to the tender whispers. But she had inherited a good share of the family pride of which her parent was wont to boast, and, though ever calm and unruffled in the presence of her father, he knew her disposition too well to attempt to dissuade her when her mind was once fixed.

So much for an introduction; if the reader has lived through it, we congratulate him.

## CHAPTER II.

"I am weary, I am weary,  
Of the voice of seeming friends,  
For I know they love me not,  
Whatever they may pretend;

"They're round me smiling ever,  
When fortune smiles too,  
But perchance should compass hover  
O'er my pathway—they're untrue."

On the day subsequent to the scene related at the opening of our story, Mr. Montrose, senior, sat in his counting-room. From a hasty glance at him, we think a stranger would not infer that he was a man who had lost his health by a too close application to business, or would even be likely to do so. He was a man past the prime of life—the hand of age had been here and there a lock of his hair; but his round, rubicund cheeks, and portly form were the personification of good humour; and, as the world goes, was a happy, good-natured old fellow, ever ready to do a kind act, and it would not compromise the honour of his family. This was his wont, and he had been educated to look at family honour and rank as objects for which a constant solicitude was to be maintained. But to youth. As he sat in his counting-room, Henry Morton, the young physician, was knocking, and the next moment was ushered into his presence.

"At this moment a form suddenly spring from an alley our hero was passing; the light of the moon revealed a swarthy countenance—a bright blade glittered in the moonlight, swiftly it descended, and had a sudden movement on his part arrested it, the next moment it had drunk the very life-blood of Henry."—See No. 2, p. 23.

"Ah! good morning, doctor. I am happy in seeing you," exclaimed Mr. Montrose, with the most gracious of smiles. "Pray be seated."

The young knight of the magic staff accepted the invitation, and in a few moments was chatting away with the old aristocrat on all the interesting matters of the day. Montrose had always looked with favour on his young friend, and has his father had been one of his inseparable friends in the days of boyhood, he was always glad to spend an hour in his company. But on his occasion, our hero determined to come to the point immediately; so he addressed his old friend abruptly on the matter nearest his heart.

"Mr. Montrose," said he, "I trust I shall not presume too much upon the friendship you have ever shown me, and the interest you have felt for me as the son of one of your early friends, if I ask your attention for a moment to a serious subject."

Mr. Montrose merely nodded assent, and looked as serious as it was possible for such an exceedingly pleasant man, with such an exceedingly pleasant countenance, to look.

"Perhaps you have noticed," continued the young physician, "that for some time past I have manifested more than an ordinary interest in your daughter?"

"I have certainly noticed it," was the reply, "and I assure you that it has been agreeable to my feelings in the highest degree."

Morton's countenance lost a shade of its solemn expression as he heard his remark, and he continued—

"Then, perhaps, you may not be surprised if I inform you that I have formed a deep attachment for her, and consider her the only person who could make an agreeable companion for life."

"Such a remark can afford me no other feelings than those of the warmest," replied Montrose, showing as much happiness as it was possible for the countenance of such a jolly old fellow to express.

"Then may I consider that I have sanction in making her an offer of my hand and heart?" inquired Morton, with the air of a man who had at last arrived at the point around which he has been hovering so long.

"Certainly—by all means, my dear boy; rest assured that such a consummation would be all I could desire," exclaimed the corpulent old worthy, taking heartily the hand of his young companion. "I could never desire a happier destiny for my daughter than to see her united to the son of one of my dearest friends, and one who ever stood high in my esteem."

He expressed his gratitude as well as his tumultuous feelings would allow, a moment after adding the remark—

"But we must remember that there is another party to be consulted in this matter, before we make any definite arrangements."

"And who may that be?" inquired Montrose, as if he could not imagine his father.

"The young lady who is interested," replied Morton, hardly able to repress a smile.

"O, certainly, by all means! But you will find no difficulty there—none at all, I assure you. She has refused several of the smooth-faced young dandies, but they are brainless fellows—brainless fellows, I assure you."

"Perhaps we may as well arrive at positive certainty on that point as soon as possible," remarked Morton, as he was about leaving.

"Ah, yes, certainly; but give yourself no uneasiness on that score—none at all. Well, if you must go, good morning, Henry, good morning;" and bowing to his future parent, Morton left the room.

Ere the western twilight had faded away, he sought the presence of the lady in whom he manifested so much interest. He was received with all the cordiality of a friend; but he fancied, from her manner, that the thought of ever welcoming him in a nearer capacity had never entered her mind. But he was a straightforward, practical man; so he came directly to the object of his visit. Without any mad protestations of love, or fifty oaths that she was the only divinity he had ever worshipped, he frankly told her of the esteem he had felt for her, and made her an offer of his hand and heart. That the young lady manifested some surprise at his declaration, we cannot deny; but she neither fainted nor showed the slightest disposition to swoon. After a moment of reflection, she replied, as directly as our hero had spoken:—

"Mr. Morton, you have been plain with me, and it is but just that I should answer you as frankly. To say that I have not the highest respect for you as a gentleman, and the warmest regard as a friend, would certainly misrepresent my feelings. For many years I have treated you as one in whom I felt a deeper interest than in the thousand light, worthless specimens of your sex, with whom the rules of society have compelled me to associate. But when you sue for the devotion of my heart, you ask for something which is now beyond my power to bestow. Were not that love already bestowed on another, our mutual positions would be different."

Morton had fancied that a refusal would not surprise him; but we think, if the truth must be told, that he was surprised. But he thanked the lady for her frankness, and trusted that he should ever be numbered among the list of her friends. With this remark he withdrew.

An hour afterwards he sat in his office. "Just as I expected," he soliloquised—"a flat refusal. But who could have anticipated me in this matter? I was not aware that she felt an uncommon interest in any one else. It would be an insult to her good sense to imagine that she would countenance the attentions of any of the soft-headed fops around her. But one thing I am sure of. She is no coquette. It evidently gave her pain to refuse me, though she did it in a straightforward business-like manner; and that was what no other woman of my acquaintance would have done. Well, I may as well give up all thoughts of the other sex, and apply myself to my duties." At

that moment his eye fell on a note, which had, until then, been lying on the table unnoticed. He glanced at the superscription—it was directed to him. "From Duval," said he, surveying the chirography. He opened it, and read as follows:—

"MY DEAR FELLOW:—I trust that you have so far recovered from your melancholy fit of yesterday as to be able to accompany me to our old place of rendezvous this evening. A glass of wine, and a ture at the two tables, will do you good. I will call for you at eight. Yours, A. D."

"Accompany him I will not," exclaimed Morton, earnestly, after he had perused the note. Had it not been for Duval, I should have been a happier and better man. He first led me to the gaming-table, and, flushed with success, I acquired a love for games of hazard. But my late losses have opened my eyes. True, my estate is large; but it will not last always. Already I am seriously involved; but I solemnly resolve, from this time, that I will risk no more in such a dangerous chance. My name is still untarnished, and by close application to duty, I may regain all I have lost, without sacrificing the property my parents bequeathed me. But Duval shall understand my feelings, and this night, too."

At this moment the French clock on the mantel chimed the hour of eight, and simultaneously with its sound, the door opened, and Duval stood in the room. He was an individual who would have been likely to pass in a crowd for a handsome man, but on a more minute examination, a sinister expression might be discovered lurking upon his countenance, and one who had studied masterly the physiognomy of mankind, would have been ready to pronounce him one with a heart base enough to plan almost any villainous scheme, and a head cool enough to carry it out. But the world would be frightened to hear things called by their right names; and as the family from which he sprung had been wealthy and proud for two or three generations, he found a ready admittance to the highest circles of his native city. But whether his schemes in regard to our hero were successful or not, these pages will develop. We left him in the office of his intended dupe.

"Ah, good evening, my friend!" he exclaimed with an apparently sincere manner; "you see I am punctual."

"Good evening, Mr. Duval; I perceive you are."

"Really, you see fit to be very obsequious. I had hoped you had regained your wonted spirits; but come, go with me, and I warrant you will soon shake off the blues."

"Thanks for your invitation; but I have decided not to go."

"Not to go!"

"Yes, that is my conclusion."

"Why, man, are you crazy? You are becoming as punctilious as a Methodist preacher. Why on earth do you not go?"

"Since you desire it, I will give you my reasons," replied Morton, calmly. "It was at your solicitation that I was first induced to run into those excesses so ruinous to the body and the mind. If I continue in them, my destruction would be certain. But I am beginning to see their consequences, and let it suffice for me to say that my course is decided on. Under these circumstances, you can judge of my feelings towards you; and rest assured, Mr. Duval, that when I am desirous of your company in future, you will receive an intimation to that effect."

"Very well, Doctor Morton," replied Duval, with his face livid with rage; "if that is the case, you may be sure that I shall annoy you no more." And muttering a smothered anathema, he strode haughtily away.

### CHAPTER III.

"I like an open, honest heart,  
Where frankness loves to dwell,  
Which has no room for base deceit,  
Nor hollow words can tell."

"But in whose throbbings plain are seen  
The import of the mind,  
Whose gentle breathings utter nought  
But accents true and kind."—ANON.

"LILIAN," said Mr. Montrose to his daughter one evening, a few days after his conversation with Morton, "I wish to have a short colloquy with you."

Lilian smiled, for she wondered what subject could be uppermost in her father's mind that he saw fit to dignify with so much importance; but, like a dutiful daughter, she laid aside the magazine she was perusing, and seated herself on the sofa beside her respected parent.

Mr. Montrose coughed slightly, a habit to which he was addicted when he was much pleased; and his round cheeks were as smooth and even as the surface of an apple dumpling.

"Lilian," said he, "did Henry call on you the other evening?"

"Yes, father," replied she, just beginning to have an idea of the nature of the subject on which he wished to converse, "he did."

"So I supposed; in fact, I knew he was about to call on you."

"Indeed!" ejaculated Lilian, looking very innocent.

"Yes; and he called at my counting-room a short time previous."

"Did he?" inquired the demure Miss, very indifferently.

"Certainly; and he conversed with me in regard to the subject in which he manifested so much interest."

The daughter made no reply, for the excellent reason, that she had nothing to say.

"Well," continued Mr. Montrose, concluding that he was not making much progress, "you say that he made you a call?"

"Yes, father."

"And did he speak to you about—an important matter?"

"Yes; that is, he said a few words in regard to what I considered rather an important matter."

"Well, he made you an offer, did he?"

"He did."

The worthy old gentleman found it almost impossible to refrain from expressing his delight. His eyes twinkled in the expanse of his plump countenance like two stars in the clouds, and the vigour with which he rubbed his hands might have been a lesson for an experienced washerwoman. But there was one question more which he had almost forgotten to ask. However, he suddenly propounded it.

"And of course you accepted him?"

"Accepted him?"

"Why, certainly."

"No, sir, I did not."

"You did not!" exclaimed the worthy sire, suddenly ceasing to rub his hands, and the equanimity of his feelings being sadly disturbed. "Surely you can have nothing against the son of my old friend?"

"No, sir."

"And I fancied that you had always respected him as a friend."

"I certainly have."

"Have you ever heard a word derogatory to his character?"

"Nothing."

"Then why did my daughter refuse her hand to one who she esteemed stood so high in her esteem?"

"Because that hand was already pledged to another."

"To another!" exclaimed the old gentleman, fairly losing sight of his usual composure, and almost leaping from his seat.

His daughter nodded assent.

"And why have I never known of this before?"

"I have waited for an opportunity to speak of it; but I supposed you would introduce the subject."

"Lilian," said Mr. Montrose, in a more serious tone, "you have ever been a dutiful and affectionate daughter; but remember, that this is a serious matter. Not only your happiness, but the good name of our family, which has been so long untarnished, is at stake. If I have ever advised you in regard to these matters, a desire to maintain that has been the object of my solicitude. I desire not to dictate to you in these matters, but reflect maturely, and tell me if you are certain, that the object of your choice is a man fitted to render you happy."

"I am sure he is."

"And is he of a good family?" inquired the father, earnestly.

"He is."

"And pray, who may he be?" interrogated Mr. Montrose, whose curiosity was elevated to the highest point.

Lilian hesitated a moment, but then replied—

"Alfred Whitman."

Her father again appeared pleased, and commenced rubbing his hands once more quite vigorously.

"Very well, Lilian; very well; Whitman is rapidly rising in his profession, and is now looked upon as one of the most promising young lawyers in the city. From what I have observed of him, I am convinced that he is an honourable, upright man. But," he added, thoughtfully, a moment after, "in regard to his family—I do not know. You say it is respectable?"

"O, yes. His father died many years since, but his mother knew some of the most worthy ladies of my acquaintance."

Mr. Montrose again expressed his satisfaction, and, after nuzzing a few moments, bade his daughter good evening, and left the room.

Late that evening Morton sat in his office. He seemed buried in deep thought; but just as a neighbouring church-bell tolled the hour before midnight, he rose from his seat, and, with a ponderous key, opened a safe which stood in one corner of the room.

"I may as well know the worst," he soliloquised, "and then I shall be able to make some definite arrangement. If I go on without, it will only be travelling in the dark; and when a man has become so much involved that he dare not examine into the state of his affairs, he is surely to be pitied."

So saying, he drew a bundle of papers from one of the compartments, and spreading them on the table before him, was soon intently engaged in their perusal. Grasping a pen, he was then engaged in tracing figures upon the paper on his table, ever and anon comparing them with those on the documents before him. Sometimes he uttered indignant exclamations and broken sentences, but he raised not his eyes from the task which absorbed his attention. Hours passed on, but he laboured steadily at the work before him.

The first grey tinge of dawn was just visible in the eastern horizon when he arose from his seat. Carefully he gathered up the papers before him, and restored them to the place from which he had taken them. He paced the floor abstractedly for a few moments, and then seated himself at a window. He threw up the sash, and the cool, clear air of heaven fanned his fevered brow.

"Fool that I was," he exclaimed, "to suffer myself to repose in fancied security so long! But I might have known that this would prove the fatal consequence of gaming. True, I knew that I had involved my property to some extent, but I could not have believed that it was so seriously. Had I gone on another step in my mad course, my ruin would have been complete. And it was all the work of that villain Duval. Thank heaven, I am free from him at last! but it will be well for him never to cross my path again. No; let me be calm. It was all owing to my own folly in suffering myself to be made his willing dupe. But here I am, and something must be done. It will conflict sadly with my feelings to do it; but I must dispose of some of my real estate to cancel these gaming debts which hang around me. It will be a great sacrifice, but it must be done. Then I will devote myself wholly to my profession, and at least insure for myself the good name which I had so nearly lost."

(Continued in No. 2.)

## THE HOME COMPANION PORTFOLIO

We strongly recommend to our Subscribers the adoption of the "HOME COMPANION PORTFOLIO," for the preservation of the Weekly Numbers or the Monthly Parts. These Portfolios are made with elastic cords at the back, to hold Fifty-two Numbers,

or Twelve Parts, which comprise one Volume. At the end of each year they may be taken out and bound, and the Portfolio may be employed to preserve the Numbers or Parts of the succeeding Volume. The price is Two SHILLINGS. The outlay will be saved by the preservation of the Numbers, which, hereafter, may be difficult to obtain. The Portfolio is beautifully embossed, and illuminated with silver, by a new invention. It is an ornament for the drawing-room table. —Order of any Bookseller.

The Monthly Parts of the HOME COMPANION (price 5d. or 6d. each) will be issued with the Monthly Magazines. A number will appear weekly, price 1d. No. 2 is now ready.

**PRIZE ENIGMAS.**—The Editor of the FAMILY FRIEND announces his intention of offering, at Christmas (1851), a Prize of ONE HUNDRED GUINEAS, for the best Solution of an ENIGMA to be competed for by GENTLEMEN; FIFTY GUINEAS for the Solution of another Enigma, to be competed for by LADIES; and TWENTY-FIVE GUINEAS for an Enigma to be competed for by JUVENILES of both sexes. Further particulars will be given in the Numbers of THE FRIEND. There will be numerous Minor Prizes.

The Number of THE FRIEND containing these Enigmas may be had of Booksellers everywhere (price 2d.), on or before the 1st of JANUARY, 1852. The same number will contain the Rules of the Competition.

## THE HOME COMPANION.

JANUARY 3, 1852.

For the first time in the World's history, that leviathan in the work of human progress, the "Press," has been called upon to supply 500,000 copies of a new Magazine. But a few years ago, it would have been impossible to produce such an enormous number with sufficient rapidity. Instead of a simultaneous issue of half a million of copies, printed and distributed throughout the kingdom within the space of about three weeks, nearly seven months would have been consumed in the printing alone. Even now, with the aid of steam—which has increased our power of production from 250 to 800 copies per hour—one machine, working 10 hours per day, would be occupied 62½ days in throwing off our first impression. However, by stereotyping the forms, and keeping two machines working night and day, without intermission, we have been able to produce the 500,000 copies in 16 days and nights.

To supply this number, we required 1000 reams of paper, of 500 sheets each. These reams, being placed upon the top of each other, would form a pile nearly equal to the height of St. Paul's! The weight of this pile would be about 20,000 lbs. The sheets, separately laid out, would cover 61 square acres of land, leaving a large overplus; or, laid lengthways, end to end, they would extend above one thousand eight hundred and thirty-six miles.

It is an adopted estimate that every printed paper finds, on the average, five readers. Upon this basis, it is calculated that the present publication will be read by 2,500,000 persons. It is a problem how many of the great multitude will adopt it as their Home Companion. OUR FAITH IN THE RESULT IS SUFFICIENTLY EVIDENCED BY THE BOLDNESS OF OUR EXPERIMENT, THE GRATUITOUS DISTRIBUTION OF OUR FIRST NUMBER HAVING COST US UPWARDS OF TWENTY HUNDRED POUNDS.

## THE PHILOSOPHY OF PASTIME.

EVERY one who has read *Æsop*, no doubt remembers the well-worn anecdote of the unstrung bow. It is so simple, so clear, and so beautiful in its application to the subject on which we are about to enter, that we cannot resist the inclination to recite it to our readers. "A fop found the wise Phrygian in company with some little boys, joining in their innocent amusements, and forgetting for awhile his age and experience. The fop sneered at the philosopher, for taking part in these puerile pursuits. *Æsop*, with that practical satire for which he is distinguished, replied by placing an unstrung bow before the would-be wit, and demanded an explanation of the riddle. The fop was a man of the world, but not a man of brains, and could not expound the mystery. Then *Æsop* said, "the mind of man, like that bow, if always bent, would in the end lose its elasticity, and become useless; by giving it occasional freedom, you preserve its tone, and it will serve your purpose."

The principle enunciated by *Æsop*, is inborn with our natures: it exists in every human heart, and finds utterance in action. The necessity of occasional relaxation is a self-evident fact, which it needs no philosopher to teach us; an axiom which the voice of nature causes to echo through our being. There is no condition of existence so miserable of degraded, as that in which this potent desire is not recognised and gratified. Our impulses all tend to it, and to check them is the worst of punishments. The most hopeless captive, pining in his dungeon, has still his pet spider, or tame rat, or "prison-flower,"\* on which he lavishes all that remains of the exuberant feelings that once filled his bosom, and tries to transform into pastime what once would have overpowered him with disgust.

In the early stages of the world, when mental pleasures were confined to a superior few, Pastime partook of the character of the age, and developed itself in a physical direction. The sports of the ancient Greeks and Romans were all calculated to assist in the cultivation of bodily, rather than mental energy; unless we except the disputations of Plato in the groves of Academe—at which meetings, we have reason to believe, the lighter graces of the intellect were mingled with the sterner features of philosophy. The famous Olympian Games, which were celebrated at the full moon, under the direction of the inhabitants of Elis, possessed the elements of a mental, as well as physical gymnasium. For, amongst the chariot races and gladiatorial engagements, which chiefly constituted the entertainment, we find that the victor most honoured was he who won the triumphal wreath of the Poet. Glancing over the history of our own land, we look in vain, among its earlier stages, for any indication of the popular inclination towards pastimes which might tend to refine or elevate the intellect. Fitz-Stephen, a monk of Canterbury, who flourished in the reigns of Stephen and Richard I., gives an elaborate account of the sports and pastimes of the English people. Among these, however, we find chronicled only such amusements as cock-fighting on Shrove Tuesday, foot-ball, sham-fights, and more of the same class, all tending to make a people athletic, but savage. One of the amusements entered upon in the Easter Holidays, which were peculiarly devoted to revelling, is sufficiently singular to deserve a notice in passing. A pole was fixed in the middle of a deep and rapid stream, with a shield suspended from its summit. Any youth who wished to shew his dexterity, took his place in the prow of a boat, without oars or rudder, and with a spear in his hand. The boat was allowed to float swiftly down towards the pole, and the feat consisted in striking the shield with such force, that the spear was shivered in the holder's hands, while he passed on unmoved. But if, from want of strength or dexterity, the shield was not struck with sufficient force to break the lance, then the unhappy essayist was thrown back into the water with the shock; whence he was rescued by boats stationed close by for that purpose. This sport closely resembles that called "the Quintain," afterwards introduced in the reign of Henry III.; about which period, also, the French game of Tennis made its first appearance in this country.

About the year 1391, a temporary revolution threatened the existence of the sports which had become almost hereditary with the English people. Cock-fighting, bear-baiting, and wrestling, gave way for a while before the mighty influence of the Drama. Unhappily, however, for the prospects of the stage, these dramatic representations were nothing more than absurd travesties upon sacred subjects, got up by a set of illiterate parish clerks; and which in their treatment were at once blasphemous and ridiculous. Some of these plays, or "mysteries," as they were called, had for their foundation the creation of the world; and in them a character, personating the Deity, was frequently introduced, conversing with all the distinguished personages in Scriptural history! An amusement so blasphemous and revolting to good taste, could not long endure; and in a short time after we find the people pursuing the "good old sports!"—which we suppose formed one of the many advantages which a certain class of persons see in an epoch that they lovingly denominate "the good old times." Some time after this, we see James I. writing a work on the Sports and Pastimes of the English, and advocating the cause of such barbarous amusements as bull and bear-baiting, cock-fighting, &c., a system of national education that was very wisely suppressed by his successor, Charles.

Presently, the influence of France, that all-powerful arbiter in trifles, began to exhibit itself in England; the pastimes of the higher classes became of a more elevated order, although still characterised by considerable absurdities. Ladies, instead of going to the Tower to see a combat between a lion and a bear, turned their attention to those allegorical poems called

\* See the interesting history of *Piccolino*, or the *Prison-flower*; by X. B. Xanthine.

"masques," which were then becoming fashionable, and which were occasionally performed before the court. There ladies of quality might be seen figuring away as Chloe or Phyllis, holding ivory handled crooks, and spouting bad pastorals; while the gentlemen, as Corydons, supplicated in very indifferent couplets that the cruel fair ones might look more tenderly upon their sorrows.

Modern Pastime has partaken of modern progress, and the games that are now creeping into our homes, many of which we owe to our Gallic neighbours, are an agreeable and instructive improvement upon the hoisterous pastimes that in former years made the cross-beams of each old English parlour ring with merry laughter. Hunt the Copper, Blindman's Buff, and Hanging the mistletoe, are now supplanted by such games as *Boutin*, Charades, and Definitions. There is an interesting Fireside Pastime entitled the "Game of Twenty Questions," of which we once remember reading an account in connection with the celebrated statesman Canning. Canning, with a number of friends, all men of intellect, and holding grave offices, was dining at someone's house, whose name has now escaped our memory. After the ladies had retired, and the wine had just begun to circulate, some one proposed that the Game of Twenty Questions should be played. The motion was eagerly adopted, and Canning was allotted the task of discovering the object fixed on by the rest of the party. The principle of the game is this:—one of the assembly is placed outside the door, and while there, the rest fix on some particular and well-known object, which the person outside must endeavour to discover by putting indiscriminately twenty questions to those in the secret.

Canning conducted this interrogation with all the critical acumen of a lawyer and statesman; weighing with the most anxious care each question and its answer, and apparently taking as much pains about his final success, as if the matter in question had been the discovery or management of a State secret. The entire of the party exhibited, during the progress of the game, a keen and singular interest, and Canning is described as labouring under a considerable degree of excitement, and when he had finally exhausted the number of queries allowed by the rules of the game, and had to hazard his only guess, he did it with an agitated and anxious air that was curious to witness in one who was accustomed to decide the destiny of nations. The great statesman was, however, successful; the object fixed on had been the wand of office of the Usher of the Black Rod, and Mr. Canning declared that he had guessed it at an early stage of the proceedings—he had felt convinced what it was, but was afraid of destroying his only chance by guessing too rashly. A singular fact connected with this evening's amusement, illustrative, in a striking manner what a wholesome influence such pastimes exercise over a family circle. The game on this particular night lasted nearly two hours, during which time not one drop of wine was drunk! This in a day when after-dinner pleasures were universally enjoyed, is the best commentary upon the advantages that must result from the introduction of fireside games.

The history of many of our fireside pastimes dates from periods of great antiquity, and the origins of some are involved in considerable mystery. The Enigma is one of the most ancient of the pastimes which we retain at present; the title is derived from the Greek words *avvayvay*, to hint a thing darkly; and *avvay*, an obscure speech. The Jews were not unacquainted with enigmas, and Gale, in his *Court of Gentiles*, seems to think that the Egyptians borrowed them from that ancient people. The celebrated enigma propounded by the Sphinx is one of the earliest on record. But there is still extant one more famous still, which is notorious for having occupied the attention of the learned in every age, and baffling every attempt to solve it. It is of Spanish origin, and is copied from the Bologna marbles preserved in the Volturno family. It is written in Latin, but we subjoin a translation of this mysterious problem:—

## LITERAL TRANSLATION.

D. M.

ALIA LALIA CRISTUS;

NEITHER MAN, NOR WOMAN, NOR HERMAPHRODITE, NOR GIRL, NOR YOUTHFUL WOMAN, NOR AGED DAME, NOR CHASTE WOMAN, NOR HARLOT, NOR FRAUD,

BUT ALL;

SNATCHED AWAY,

NEITHER BY FAMINE, NOR BY THE SWORD, NOR BY POISON,

BUT BY ALL;

NEITHER IN THE SKIES, NOR IN THE WATERS, NOR ON THE EARTH,

BUT EVERYWHERE SHE LIES;—

NEITHER HUSBAND, LOVER, OR INTIMATE FRIEND, HE WHO GRIEVES, HE WHO REJOICES, OR HE WHO WEeps, KNOWS HER, OR THIS FUNERAL TILL, THIS PYRAMID, OR THIS SEPULCHRE,

BUT ALL THINGS;

AND LUCIUS ADATHO PRISCUS KNOWS NOT FOR WHOM IT MAY HAVE BEEN PLACED.

The term Riddle, which is used indiscriminately for all puzzles depending upon the particular arrangement of words, has for its origin the Belgic "racden," and the Saxon "arothan," and corresponds with the *scrupus* or *scrupus* of the Latins. The alchemists of old were great dealers in riddles, and nearly all their recipes for constructing that chimera—the philosopher's stone—were couched in enigmatical language, which probably was quite as incomprehensible to the writers as the readers. Obscure laws were called by the ancients, "enigmatica legis," and the Egyptian language was nothing more than one great enigma. Of late years, these problems have assumed a more instructive shape than that of concealing absurd sorceries.

Our senior contemporary, *The Family Friend*, deserves well of the community for the ingenious manner in which enigmas have been applied to the diffusion of useful knowledge. An enigma, as it now stands, is recognised as being founded upon some one word or object, regarding which, a number of paradoxical assertions can be asserted, and afterwards reconciled by some peculiar process of reasoning. When the enigma is founded upon a scientific fact, it may be made the medium of conveying knowledge, and impressing it more forcibly on the memory, than twice the number of set lessons.

The Charade, which seems to be an offspring of the Enigma, owes its title and origin to a French gentleman of the same name, who probably invented the ingenious trifle in some idle hour. At first its application was confined to those little versified affairs which one sees in the pamphlets of puzzles which annually make their appearance; but lately the Charade has assumed a dramatic character, and constitutes, in that form, one of our most popular home pastimes.

There can be no feature which adds so great a charm to the domestic circle as the introduction of those *délassements*, which combine with amusement some degree of intellectuality; and few who have not tried this experiment, will believe how much the mental powers of youth are developed by these simple games.

Science, by combining the commonest materials, produces such fabrics as glass and gunpowder; and a man of mind will treat the most trifling matters in such a way as frequently to render it the most profitable. A definition may point a moral, and an enigma illustrate a great fact; and even the simplest of fireside games may train young minds to thought, and serve as an intellectual whetstone.

It is much to be regretted that there does not circulate amongst the lower classes of society a larger desire for amusements of this description. The mining population of Cornwall and Wales, who spend too much of their substance in debauchery and riot, might be much elevated if a system of home pastimes could be introduced among them. The false excitement of gin would then be supplied by an intellectual excitement; and being omitted at home, the "duffling shops," where the reckless men spend all their money, would lose their customers, and consequently their ill-got profits. It is no use to say that these classes of men are not capable of enjoying such amusements. We ourselves know a mine in South Wales, where the men have established a most excellent brass band amongst themselves, have a very good collection of instruments, and evince the greatest attachment to their musical recreations. Nearly all the performers had once been notorious drunkards, but now partake of nothing stronger than tea or water.

Amongst the large factory districts of England, too, where vice reigns supreme, what a change for the better might be accomplished by the establishment of some kind of club, where reading and other pastimes should offer some inducement for the wretched gin-drinkers of the neighbourhood to quit the poisonous atmosphere of the gin-shops for a quiet hour by a happy fireside. See how the Lowell factory girls have produced and supported unassisted a most excellent periodical. The example is one worthy of imitation.

Let no one sneer at the title with which we have opened this little paper, or fancy that the venerated name of Philosophy is desecrated by a conjunction with that of Pastime. The wisest and greatest men may, without laying down their dignity, take up the rattle of the child—and an unassuming gravity is too frequently a cloak with which fools endeavour to conceal their folly. Lady Hester Stanhope relates of her illustrious relative, Peter, that he was accustomed to say, that he "would not give a fig for a man who would not talk nonsense."—Neither would we.

Those, then, who would cultivate true happiness within the limits of their home, (and it is a plant that is seldom reared,) should endeavour to fill the leisure hours of the fireside with some amusing and instructive game, which should give increased status to "EVENINGS AT HOME."—See p. 18.

## THE RAGGED GIRL'S SUNDAY.

BY MARY BENNETT.

"O DEAR mamma, that little girl  
Forgets this is the day  
When children should be clean and neat,  
And read, and learn, and pray."

"Her face is dirty, and her frock—  
Holes in her stockings, see!  
Her hair is such a fright—Oh! dear  
How wicked she must be!"

"She's playing in the kennel dirt  
With ragged girls and boys—  
Whilst I on Sunday scarcely touch  
My clean and pretty toys."

"I go to church, and sit so still—  
I in the garden walk—  
Or take my place beside the fire  
And hear nice Sunday talk."

"I read my Bible—learn my hymns,  
My Catechism say—

That wicked little girl does not—  
She only cares to play."

"Ah! hush that boasting tongue, my love,  
Reprens self-glorying pride—  
You can do nothing of yourself—  
Friends all your actions guide."

"Thank them, if you are clean and neat,  
Thank them if you are taught  
To keep the holy Sabbath day  
Or do what else you ought."

"The nestling bird that waits for food  
With open beak and eager cry—  
The new-born lamb that on the grass  
Beside its dam doth lie,

"Are not so helpless, child, as you?  
Then let us proud thoughts fling  
You ragged girl has no kind friends  
To make her good and wise."

A PEDLAR COME UP WITH.—A pedlar, calling on an old lady to dispose of some goods, inquired of her if she could tell him of any road that no pedlar had ever travelled? "Yes," said she, "I know of one, and only one, which no pedlar has ever travelled (the pedlar's countenance brightened) and that's—the road to heaven."

## \* THE BLOOMER COSTUME

BY R. KEMP PHILP.

THE first man that carried an umbrella was mobbed through the streets of London. The first American lady that assumed "pantalettes," became at once the object of stupid curiosity and idle gossip. Editors with little to write, and loungers with nothing to do, let loose their mischievous pens and tongues, and made notorious, by brainless criticism and heartless ridicule, that which should have been received in a kind and gentlemanly spirit. The question of costume is a material branch of social economy. It is also important in relation to health. And as a matter of taste, it is a premier consideration.

Fashion has ever been most arbitrary and capricious. At one period, ladies wore frills around their necks that seemed designed to sweep the cobwebs from the ceilings. At another time, long trains, that were either necessarily thrown across the arm, and became a constant burthen, or were borne behind by pages, who appeared like so many chickens following a peacock. Horned head-dresses were once the rage. When Isabel of Bavaria kept her court at Vincennes, it was necessary to make all the doors of the palace both higher and wider, to admit the enormous head-dresses of the queen and her ladies. The men in China wear petticoats; the women, pantalettes. The Scotch used to go with naked legs. Greek women wear pantalettes. Italian and Swiss women wear short petticoats. Welsh women wear short petticoats, and in many cases dispense with stockings and shoes. Not long ago, large balloon sleeves were adopted, which looked as if the wearer had thrust her arms through inflated pillow cases. At one time, gowns were very short-waisted, scanty in the skirt, and fell trolloping about the legs and heels in a most unbecoming manner. At another period, ladies had their skirts hooped, so that they were obliged to be tilted up to enable them to pass a narrow doorway. Latterly, the hoops have been dispensed with, but a superabundance of material has been arranged, by a contrivance which we dare not name, though our eyes have too often been familiarised therewith, by the unblushing display made in the windows of ladies' "establishments" in London. Here are

THE TWO EXTREMES.

Mrs. Bloomer, the advocate and designer of the new Costume which bears her name, has made no unreasonable innovation. She is described by authentic sources as a lady of intellect and taste. She has chosen her style, and has a right to it, without the interference of stupid critics, whose absurd fancies in dress, from head to foot, would, if rightly estimated, find no place among either the useful or the ornamental. We find the following testimony to her character, in the *Boston Museum*:—

"Some few persons at a distance have supposed, because Mrs. Bloomer came out as a fearless advocate of short dresses and trousers, that her manners were coarse, bold, and masculine; and that her appearance in the street must, as a matter of course, be far from that of a refined and modest lady. Nothing, however, can be farther from the truth than such a supposition. We have met with her in various parts of the Empire States, and whether she appears in the streets of her own town, or among strangers, she evinces the same elegance of breeding and child-like simplicity, so universally admired in the female sex. She sees nothing but what should be seen, hears nothing but what should be heard. If there should by chance be congregated upon the side-walks a company of low-minded persons, who should take it upon themselves, as the 'lords of the creation,' to dictate what women should or should not wear, and should express these views in the hearing of Mrs. Bloomer, she neither drops her head in shame and mortification, pouts out her lips, and glances past them in a passion, nor turns upon her heel to give them a cold look of disdain and contempt, but is both blind and deaf to everything that passes, and her countenance continues to express that same purity

and happiness within, that would be expected from a child of fifteen engaged in cultivating a bed of flowers, and her thoughts occupied only with the goodness and wisdom of an all-wise God."

We receive this testimony with much satisfaction. Mrs. Bloomer is the editress of an American publication, which occupies a highly respectable standing. We shake hands with our sister contemporary across the broad Atlantic. We admire her courage and her taste, and have no hesitation in saying that we like

THE BLOOMER COSTUME.

That it will influence future fashions, we are certain; because the new style comes recommended not merely as a matter of taste, but upon grounds of delicacy and health. The present mode of dress entails upon its votaries the horrible system of tight-lacing, by which thousands of Earth's fairest creatures are brought prematurely to the grave. Upon this ground, if upon no other, it ought to be changed. We need not say much in advocacy of the Bloomer costume. It is "out," and the wet and windy days of winter will do more than our own pen, to extinguish the love of inflated petticoats. The illustrations of the new dress, which we have given, are the most stylish of those yet adopted. There are many modifications adapted to age and station; and, doubtless, before the fashion comes fully in, there will be many intermediate stages. The ladies' pantalettes are a step in the Bloomer direction. We would be the last to recommend to the ladies a premature stride to any extreme that may provoke curiosity or scandal. Most ladies, though blooming, are not Bloomers; they must wait, therefore, the changing current of public feeling. We shall be sorry if any person, aiming at notoriety, should damage a cause which is really good. It cannot be denied that the lady who so dexterously stepped upon the platform at the Literary Institution, John-street, to display and advocate the Bloomer attire, did anything but a good service by exhibiting herself to the crowd at a charge of twopence for admission! Every cause is marred by some such indiscretions. A movement against established customs and usages should always be conducted with great decorum. The Bloomer dress combines greater grace, comfort, delicacy, and safety, than any style we have yet seen. We believe it was old Cobbett who said of the Quakers, that they, if they could have their will, "would have the sky drab, the sea drab, the flowers drab, the grass and the trees drab—in fact, everything drab." He said this, or something like it. We are not so inclined. We like beauty in everything. Nature renders it everywhere; and the female form, most beautiful of all beauties, should not be defaced by hangings that would supply a bed, nor be deformed by machinery that would cripple a horse. The movement has been begun in good earnest, and we have no doubt that the advocates of the change will long be found

KEEPING UP THE AGITATION!

"MEN talk in raptures," says Witherspoon, "of youth and beauty, wit and sprightliness, and a hundred other shining qualities; but after seven years' union not one of them is to be compared to good family management which is seen at every meal and felt at every hour in a husband's life."

## ZOOLOGICAL REBUS.

HERE many a beast of home and foreign clime,  
Becomes the theme of Enigmatic rhyme:  
Find out the name of each by art displayed,  
And their initials, properly arrayed,  
Shall show what we essay to be to you,  
At all times kind, agreeable, and true.  
As a fit exercise to brace the mind,  
The haunts and habits of each creature find.  
So shall you rise above the beast that walks the road,  
And joy to "look through Nature up to Nature's  
God!"

[Answered in No. 2.]

## CHARADES, ENIGMAS, &amp;c.

When by the margin of some stream  
Your pleasant way you speed,  
While gentle zephyrs murmur round,  
My first you'll see the reed.

When clustering armies tread the earth,  
And men kill fellow-men,

Till earth is dyed with human gore,  
My second aids them then,

My whole;—ah! words must fail me now,  
To tell the same and worth;  
Suffice it that the name shall live.  
So long as lives the earth.—E. D. C.

[Answered in No. 2.]

## MUMBO JUMBO; OR, THE JUGGLER.

HAVE you heard!—Mumbo Jumbo, of great renown  
In *serab* Jugglery, has just come to town.  
"Would be quite impossible to tell unto you  
All his curious tricks, but I'll tell you a few.

1. Quietly the juggler sat on a chair,  
He whipped off his head, and yet left there the hair!
2. Immediately after a monkey he took,  
Put on a new head—'twas a lady's short cloak!
3. He next took a lady's own puppy "dear,"  
And added a vowel—a balm did appear!
4. A county of England he took—in a minute,  
By seizing a portion, no people were in it!
5. A county of Ireland (also a town),  
By turning and twisting, was turned into stone!
6. Of an officer's plume (or a feather would suit),  
He cut off the tail, and lo! 'twas a fruit!

[Answered in No. 2.]

## UNCLE O'S ENIGMA.

1. No one has seen me by myself, yet largely I abound,  
Both on the surface of the earth and underneath the ground;
2. I am lighter than a feather, mounting up into the sky,  
Yet down in mines the deepest, like a thief I often lie.
3. To man I'm quite obedient, if he manage me aright,  
And yet I've often slain him when he trifled with my might.
5. I've a sharp and useful sister, we are often found together,  
In all places, and all companies, and every kind of weather;
6. You won't see either separate, yet when we are joined in two,  
There is nothing you more clearly see beneath the shining sun.
7. As you look on us united we may vanish from your sight,  
And yet we are not sundered, though you cannot trace our flight.  
We rise together to the sun, to move unseen in air,  
Or we rest within the crimson cloud, where the sun is bright and fair;
8. We ride amongst the mist on the lofty mountain's brow,  
Or we glide along the stream in the valley far below;
9. The snow has been our dwelling-place, (11) the ice may be our grave,  
We have hung upon the tiny leaf, we've been cradled in the wave;
12. The mountain lake has been our bed, we have mingled in the roar  
Of the waters in the cataract, the billows on the shore;
13. But for us both the flame upon the hearth would soon expire,  
Yet, united, we give greatest help in putting out a fire;
14. In city, town, and village, we oft run beneath your feet,  
Yet at your wish we climb the house the highest in the street;  
We are thought of little value when in plenty we abound,  
Yet when scanty, or when wanting, how precious are we found!
15. We can quench the parching thirst, we can cool the feverish brow,  
We have been like life from very death to many a one I trow.
16. We're the greatest friends of cleanliness, and would sweep all filth away,  
Making every house, street, court, and lane, sweet as the new-mown hay;
17. We have a negro cousin, as dark as very night,  
And yet with her we often join to make the darkness light;—  
But of her, my sister, or myself, to tell more should I try,  
I fear a key to what I've said I'd only thus supply!
18. So I'll stop, and ask you now to guess my name, and their names too,  
And to bring of this enigma all the meaning full in view;  
I cannot promise you for this, what some would count a prize,  
But more knowledge is no small reward to all the truly wise.

[Answered in No. 2.]

## A TRANSPOSITION.

## EOAIHCNRS

HERE are nine letters, which transpose,  
And a sweet flower they'll soon disclose;  
Transpose again, and they'll as clear reveal  
That which, if yours, you'd anxious strive to heal.

[Answered in No. 2.]

What sort of a noise possesses horns?

[Answered in No. 2.]

## THE REMARKABLE ADVENTURES OF BARON BRAG.—AN UNNATURAL HISTORY FOUNDED UPON NATURAL HISTORY.

(To be Continued until Discontinued.)

The celebrated Baron Brag, in ambush near a stream,  
kills three Ducks and an enormous Woodcock! It is  
supposed that the shot scattered widely in the mouth of  
the towing-places.

On taking the Woodcock out of the water, the Baron  
is astonished to find that its bill has stuck through a large  
Carp, which is thereby caught!

Having reached home he is astonished upon taking off  
his boots, to find that they contain a number of snakes—  
the whole making a capital day's sport!

## OUR CORNER CUPBOARD!

*Corner-cups have always been popular. The chimney-corner, for instance, is endeared to the heart from the earliest to the latest hour of existence. The corner-cupboard! what stores of sweet things has it contained for us in our youth—with what luxuries its shelves have groined in manhood! A snug corner in a will! who ever objected to such a thing! A corner in a woman's heart! once got there, and you may soon command the entire domain. A corner in the Temple of Fame! arrive at that, and you become immortal.*

ROBERT HALL said of family prayer, "It serves as an edge and border, to preserve the web of life from unravelling."

It is more from carelessness about truth, than from intentional lying, that there is so much falsehood in the world.

Be not affronted at a jest. If one throw salt at thee thou wilt receive no harm, unless thou hast sore places.

It is a bad sign when a preacher tries to drive home his logic by thumping the desk violently with his clenched hand. His arguments are so fist-ical.

A QUEEN gatherer of statistics says, that of one hundred and fifty-eight women whom he met in the streets of a city in a given time, one hundred were sucking their parasol handles.

ALL the good things of this world are no further good to us than as they are of use; and whatever we may heap up to give to others, we enjoy only as much as we can use, and no more.

A LITTLE girl, walking one day with her mother in a grave-yard, reading one after another the praises of those who slept beneath, said, "I wonder where they bury the sinners!"

WINTER, which strips the leaves from around us, makes us see the distant regions they formerly concealed; so does old age rob us of our enjoyments, only to enlarge the prospect of eternity before us.—*Jean Paul Richter.*

It was the custom of the higher order of the Germans to drink mead, a beverage made with honey, for thirty days after every wedding. From this custom comes the expression, to "spend the honeymoon."

AN Irishman dropped a letter into the post office, the other day, with the following memorandum on its corner for the benefit of all indolent postmasters into whose hands it might fall: "Please hasten the delay of this!"

A YOUNG lady, recently married to a farmer, one day visited the cow-house, when she thus interrogated the milk-maid: "By-the-by, Mary, which of these cows is it that gives the butter-milk? And which one gives the skim-milk?"

THE nearer young men approach manhood, the less liberty they allow their necks. On "entering the world," a dandy submits to almost as much choking as felons do when going out of it. Queer that there should be such a close connexion between gentility and strangulation.

NOT long ago, on the coast of Africa, a captain was going to throw one of his crew, who was dying, overboard, before he was dead. So the man says—"You are not a-going to bury me alive, are you?" "Oh!" says the captain, "you needn't be so jolly particular to a few minutes!"

A SCOTCHMAN thus describes an accident: Vonce a long vile ago, I vent into mine abble orchard, to climb a bear tree to get some peaches to make vrow a plumb-budding mit; and when I gets on the tobermost branch, I vall from the lowermost limb, mit von leg on both sides of the fence, and like to stove my outside in."

A TALKING-MATCH lately "came off" at New Orleans for five dollars a side. It continued, according to the *Advertiser*, for thirteen hours, the rivals being a Frenchman and a Kentuckian. The bystanders and judges were all talked to sleep, and when they waked up in the morning, they found the Frenchman dead, and the Kentuckian whispering in his ear.

DR. B. of Boston was called to visit a lady in Chelsea. After continuing his calls for some weeks, she expressed her fears that it might be inconvenient for him to come so far on her account. "O, madam," replied the doctor, innocently, "I have another patient in the neighbourhood, and thus you know, I kill two birds with one stone!"

A YANKEE who visited the mother country some time ago, and who was asked, on coming back, how he liked Great Britain:—Well, he said, England was a very nice little country, exceedingly fertile, well cultivated, very populous, and very wealthy; "but," said he, "I never liked to take a morning walk, after breakfast, because the country is so small that I was always afraid of walking off the edge."

A YOUNG lady of eighteen, Miss B., was engaged to be married to a gentleman of thirty-six. Her mother having noticed her low spirits for some time, inquired the reason. "Oh dear, mamma," replied the young lady, "I was thinking about my husband being twice my age!" "That's very true; but he's only thirty-six." "He's only thirty-six now, dear mamma; but when I'm sixty—" "Well," "Oh, dear! why, then he'll be a hundred and twenty!"

"MR. SMITH, you said you suspected the prisoner was a rogue the moment you saw him—why did you so suspect him?"

"Because he shed my rooms without beating down the price."

"Is that a rule without many exceptions?"

"It's a rule without no exceptions, yer vorship—honest men are always stingy, and are never satisfied unless they get a dollar's worth of meat for ninety cents worth of money."

"You can take your seat, Mr. Smith. Crier, call the next witness."

"John Rutherford"—*Dutchman*

## OUR MEMORANDUM BOOK!

Boys that are philosophers at six years of age, are generally blockheads at twenty-one. By forcing children, you get so much into their heads, that they become cracked in order to hold it.

A TASTE for reading will always carry you into the best possible company, and enable you to converse with men who will instruct you by their wisdom, and charm you by their wit—who will soothe you when fretted, refresh you when weary, counsel you when perplexed, and sympathize with you at all times. Evil spirits, in the middle ages, were exorcised and driven away by bell, book, and candle; you want but two or three agents—the book and the candle.

THOUGH a printer may be sitting all day, yet, in his own way, he is a great traveller, (or at least his hand is,) as we shall prove. A good printer will set 8,000 oms a day, or about 24,000 letters. The distance travelled over by his hand will average about one foot per letter, going to the boxes in which they are contained, and, of course, returning, making two feet for every letter he sets. This would make a distance each day of 48,000 feet, or a little more than nine miles; and in the course of the year, leaving out Sundays, that member travels about 2,000 miles.

### JEFFERSON'S TEN RULES.

1. Never put off till to-morrow what you can do to-day.
2. Never trouble another for what you can do yourself.
3. Never spend your money before you have it.
4. Never buy what you do not want because it is cheap.
5. Pride costs us more than hunger, thirst, and cold.
6. We seldom repent of having eaten too little.
7. Nothing is troublesome that we do willingly.
8. How much pain the evils have cost us that have never happened.
9. Take things always by the smooth handle.
10. When angry, count ten before you speak; if very angry, a hundred.

It is said that bees and wasps will not sting a person whose skin is imbued with honey. Hence those who are much exposed to the venom of these little creatures, when they have occasion to hive bees, or take a nest of wasps, smear their face and hands with honey, which is found to be the best preservative. When we are annoyed with insult, persecution, and oppression, from perverse and malignant men, the best defence against their venom is to have the spirit bathed in honey. Let every part be saturated with meekness, gentleness, forbearance, and patience, and the most spiteful enemy will be disappointed in his endeavours to inflict a sting. We shall remain uninjured, while his venom returns to corrode his own malignant bosom; or what is far better, the honey with which he comes in contact will neutralize his hatred, and the good returned for evil will overcome evil with good.

### ONE.

One hour lost in the morning by laying in bed will put back all the business of the day.

One hour gained by early rising is worth one month of labour in a year.

One hole in the fence will cost ten times as much as it will to fix it at once.

One diseased sheep will spoil a flock.

One unruly animal will learn all others in company bad tricks.

One drunkard will keep a family poor and make them miserable.

One wife that is always telling how fine her neighbour dresses, and how little she can get will look pleasanter if she talks about something else.

One husband that is peevish or lazy, and deprives his family of necessary comforts, such as their neighbours enjoy, is not as desirable a husband as he ought to be.

One kind word may turn aside a torrent of anger.

One doubt may lead to disbelief.

One glass of wine is better than two.

One God alone can be God.

### THE FOUR GREAT POWERS OF CONTINENTAL EUROPE.

The Russian possessions in Europe, Asia, and America, cover an area of 262,251 square miles, with a population of 67,935,000. The annual expenditure of the Russian States amounts to £20,000,000, and the public debt is £122,000,000. Notes to an amount of £62,000,000 are in circulation. The Russian army numbers 700,000 men, and the fleet consists of 715 vessels, with 5,500. The mercantile marine has 1,100 vessels, of 100,000 tons. The average value of annual exports is £28,120,000; and of imports, £22,000,000.

Austria has 12,158 square miles, and 37,900,000 inhabitants. The expenditure is £33,000,000, and the public debt is £183,000,000. Bank-notes in circulation, £42,000,000. The army numbers 500,000 men, and the fleet has 156 vessels and 600 guns. There are 580 merchant ships, with a tonnage of 162,426 tons. Imports, £14,000,000; exports, £13,000.

France, minus her colonies, has 279,793 square miles, with 35,500,000 inhabitants. Expenditure, £64,000,000; debt, £221,000,000; notes, £17,000,000; army, 265,463 men; fleet, 328 vessels, 3,000 guns; mercantile marine ships, 4,353—joint tonnage, 113,048 tons; imports, £40,000,000; exports, £47,000,000.

Prussia, 5,104 square miles, and 16,400,000 inhabitants. Expenditure, £18,000,000; debt, £30,000,000; bank-notes, £9,000,000; standing army (minus the Landwehr) 217,200 men; fleet, 38 vessels, 84 guns, and 977 merchant vessels, of 4 joint tonnage of 2,977 tons.

**TUTOR'S ENGLISH GRAMMAR** is illustrated by numerous spirited Wood Engravings, by which a dry and tedious study is made peculiarly easy and interesting. Price 2s. 6d.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

**WATCHES.**—The best and cheapest in the United Kingdom, are to be had in every shape, pattern, and variety, from the Established Manufactory of **EDWARD GRAYTON**, 61, Fleet Street, London.

**THRESHER'S NOTTINGHAM** HOSIERY, comprising all the varieties of silk, Lisle thread, cotton, cashmere, and marine stockings, socks, waistcoats, drawers, gloves, &c.; also the unbleached cotton hose and half hose, with woollen feet, for pedestrian tours. Thresher's India gauze waistcoats, and Thresher's silken thread hose of various colours, for ladies' travelling wear. Manufactured only by **THRESHER AND GLENN**, Hosiers to the Queen, 152, Strand.

**TO CHESS PLAYERS.**—Price 6d. per packet. **"THE FAMILY FRIEND CHESS DIAGRAMS AND ADHESIVE MEN."** The chess diagrams are printed upon stout paper, with a line across the centre for turning over, just like the folding chess-boards. The Chess Men are clearly printed, and rendered strongly adhesive at the back, so that in constructing a problem, or announcing a move in a game by correspondence, it is only necessary to stick the several pieces on to their respective squares. By this simple invention, chess players may keep valuable memoranda of remarkable positions occurring in actual play, and make collections of first-rate problems.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

**BENNETT'S MODEL WATCH**, as on view at the Great Exhibition, No. 1, Class 10, in Gold and silver cases, and in five qualities, to suit all customers; to be had at **BENNETT'S WATCH AND CLOCK MANUFACTORY**, 65, Chancery Lane.

J. Bennett, Clock and Instrument Maker to the Royal Observatory, the Board of Ordnance, the Admiralty, and to the Queen, respectfully invites all who value perfect Time-keepers to inspect his stock of Gold and Silver Watches, now the most complete in London, with all the recent improvements for performance, climate, taste, and economy. Every Watch skilfully examined, timed, and its performance guaranteed.

A large and choice stock of 4, 6, and 8 Guinea Levers; elegant Gold Watches, 8, 10, 12, and 14 Guineas; excellent Silver Watches from £2 13s. 6d.; Office, Shop, and School Dials of every size, £3, £1, and £5 each. Church Clocks to order. A splendid assortment of Gold Chains, Rings, and Brooches. One Thousand Thermometers may be selected from, at 1s. each.

**THE FAMILY FRIEND**, an established Magazine, published upon the First and Fifteenth of every Month, price Two-pence. Thirty-two pages, beautifully printed, and neatly covered. The following is a type of the opinion formed of **THE FAMILY FRIEND**, and expressed by upwards of THREE HUNDRED NEWSPAPERS.

"The Boys and Girls will like it, for it contains good Stories; the Young Ladies will like it, for the sake of its pretty Poetry, and its Receipts for various kinds of Fancy-Work; Young Men will like it, for it smacks of Science; the Women will like it, for it abounds in useful Household Receipts; the Men will like it, for it treats of Gardening and Natural History, and advises wives to be kind to their husbands; those who love amusement will like it, for it swarms with Conundrums; everybody will like it, for it has a corner for everybody; and nobody need be afraid of finding any harm in it."—*Galeshead Observer*.

The Work may be had up to the end of December, 1851, in FIVE VOLUMES, price 2s. 6d. each.

The Fourth Volume contains a **QUADRUPLE INDEX** to the First Four Volumes, embodying about THREE THOUSAND FIVE HUNDRED REFERENCES to matters of everyday usefulness. The Work forms a most perfect Encyclopedia of Domestic Economy.

London: HOULSTON & STONEMAN, 65, Paternoster Row; and all Booksellers.

**THE FAMILY TUTOR, AND SCHOOL COMPANION**, was published on the 1st of January, 1851, and subsequently on the 1st and 15th of each Month, in Parts price 6d. each.

**THE FAMILY TUTOR**, as its name implies, is a Work of a highly instructive character, and realises, as far as can be accomplished in print, the advantages of a Private Tutor to every reader—a Tutor whose teachings are lively, kind, and comprehensible, making the acquirement of knowledge a PLEASURE, not a TASK.

The First Volume contains—A COMPLETE ENGLISH GRAMMAR, Improved and Simplified; FAMILIAR LECTURES ON CHEMISTRY; TALKS OF HISTORY AND OF TRAVEL; ZOOLOGY; THE PHYSICAL HISTORY OF MAN; THE PHYSIOLOGY OF HEALTH AND DISEASE; CELESTIAL AND TERRESTRIAL PHENOMENA OF THE MOON'S MATHEMATICAL, GEOMETRICAL, ARITHMETICAL, AND OTHER PROBLEMS; EDUCATIONAL EXERCISES; "THE TUTOR AND HIS PUPILS," being Answers to Educational Questions; and A VARIETY OF RECREATION.

The Second Volume contains a complete System of NATURAL GEOGRAPHY, with beautiful Illustrations, displaying the Costume and the Architectural and Natural Features of the various Peoples and Countries of the world.

**THE FAMILY TUTOR** may be had complete up to the end of 1851, in Two Volumes, price 3s. 6d. each.

London: HOULSTON & STONEMAN, 65, Paternoster Row; and all Booksellers.

## ADDRESS.

READER! We propose to become your "*Home Companion*," and in the earnestness of our desire we have set aside the usual rules of etiquette, and have thrust ourselves upon you, hoping that after your first objections to our boldness have past away, you will not only receive us, but anxiously desire our presence, weekly.

We are bent upon good purposes; and the spirit with which we have started is an earnest of the zeal that will be manifested in our future labours. We have marked out our field, and are determined to occupy it.

We need not explain our plans: they speak through the pages which now lie before you. We make no pledges, enter into no engagements. As your weekly *Companion* we may be dismissed at any moment if our conduct shall prove unsatisfactory. We are ambitious to secure an unprecedented popularity, and have not enough to know that in the present age hollow pretensions will not serve those who make them for more than a very short season. \*To our present and future deeds, therefore, and not to empty promises, we invite your attention. We shall rejoice to continue in friendly Companionship with you so long as you consider us worthy.

Our Work will appear regularly every week for the present, and may be had of any Bookseller. We date from the commencement of the year for the better arrangement of the Numbers into Volumes hereafter.

No. 2 is now ready.

New Edition, fcap. 8vo. price 5s.

**THE COOK'S ORACLE**, containing Receipts for Plain Cookery, on the most economical Plan, for Private Families. Being the Result of Actual Experiments instituted in the Kitchen of the late **WILLIAM KITCHENER, M.D.**

"To Dr. Kitchener the merit of reforming the history of English Cookery is justly due; and to him Mr. Soyer must also yield the distinction of simplifying economical house-keeping, of introducing accurate proportions into every receipt, and of elevating cookery to the dignity of a science."—*See Fraser's Magazine*, August, 1851.

London: HOULSTON & STONEMAN, 65, Paternoster Row.

This collection of **PRACTICAL WORKS** contains a mass of authentic and useful information on various departments of Industry. They are illustrated with numerous explanatory woodcuts; and embody, in a cheap form, the knowledge which Young Persons especially require to qualify them for their peculiar Duties in Active Life.

London: HOULSTON & STONEMAN, 65, Paternoster Row.

Just published, handsomely bound, price 7s. 6d.

**THE ILLUSTRATED SUNDAY VOLUME.**—Also in the Park, price One Shilling each. Part I. is now ready; and may be had of all Book-sellers, price One Shilling.  
G. Cox, 17, King William Street, Strand.

**THE QUADRUPLE INDEX.**—The Fourth Volume of the *Family Friend* contains a Quadruple Index, embodying upwards of Three Thousand Five Hundred References to the Contents of the Work. Persons wishing to judge of the *Friend*, may receive copies of this Index Gratis, by applying, post-paid, to Mr. J. BENNETT, 69, Fleet Street, London.

Price One Penny.

**THE NEEDLEWORK ALMANACK**, containing Crochet and Knitted Collars, D'Oyleys, and Patterns for Embroidered D'Oyleys, Tablecloths, Handkerchiefs, Gloves, &c., &c.; Complete Calendar; Bill, Stamp, and other Tables; Hints for Husbands and Wives, Scraps for Scrap-Books, &c., &c.  
London: 69, Fleet Street.

Will be published in December, 1851,

**FAMILY PASTIME**, Vol. II., price 1s., containing a Christmas Tale, and a New Assortment of Enigmas, Charades, Rebuses, Conundrums, &c. In this Volume, the whole of the *Family Friend* Price Enigmas up to the end of 1851 will be inserted, with their Solutions.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

Just published, price One Penny,

**THE KITCHEN ALMANACK**, (Sheet) containing a tabular arrangement showing the Food in Season for each Month in the Year; Domestic Hints; Rules for Marketing; Calendar, Stamp, Bill, and other Tables; with numerous Maxims for the Kitchen, and a full-sized fac-simile of The Willow-Pattern Plate printed in blue ink.  
London: 69, Fleet Street.

Now ready, price 1s., crown 8vo., cloth gilt,

**FAMILY PASTIME, or, HOMES MADE HAPPY**: consisting of entirely Original Anagrams, Enigmas, Charades, Conundrums, Fire-side Games, Practical Puzzles, &c., &c., with their Solutions for which Prizes to the amount of Fifty Guineas have been awarded by the Editor of the *Family Friend*. Upwards of Three Hundred Competitors have contributed to the Mass of Entertaining Literature, from which the contents of this Work have been selected.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

Just published, beautifully bound, with an Interior View of the CRYSTAL PALACE gilt upon the Cover, Vol. I. of the

**PARLOUR LITERATURE OF ALL NATIONS**, (being Vol. I. of THE PARLOUR MAGAZINE) price 5s. The ParLOUR Magazine is the only Book printed in the Crystal Palace, and will remain as a handsome and appropriate memento of it. THE PARLOUR LITERATURE OF ALL NATIONS will be completed in two handsome Volumes, price Five Shillings each.

Covers for Binding the Volumes, uniform with the above, may be had of all Booksellers, price 1s. 6d. each.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

Now ready, and may be had of all Booksellers, handsomely bound in Cloth, price 2s. 6d.

**THE STANDARD ELOCUTIONIST.**

Or in Numbers, in a neat wrapper, at 2d. each. The study of Elocution, both in Schools and Families, has become an indispensable feature in the educational business of our times. The value of this accomplishment is now universally acknowledged; indeed, without its cultivation, it is felt that our young folks would possess but few claims to a polished address, or a charming and graceful delivery. Falling in most cordially with this opinion, the Proprietor of the Standard Elocutionist ventures to send it forth as his feeble contribution to the cause of Educational Progress.

London: Published by KENT & RICHARDS, Paternoster Row, and sold by all Booksellers.

In the Press, and shortly will be published,

**GRANDFATHER WHITEHEAD'S CATECHISMS**, designed to make the Acquirement of Useful Knowledge by the Young, and by Beginners of all Ages, easy and pleasing. The Catechisms will be published Monthly, each containing 32 pages, crown 8vo., illustrated by numerous Diagrams. The price of each Catechism will be 2d., stitched in a neat Wrapper. The whole Series, bound in cloth, 2s. 6d.

1. Natural Philosophy—Elementary Principles.

London: HOULSTON & STONEMAN, 65, Paternoster Row.

## Rules for Correspondents.

17, out of our 2,500,000 readers, only one in a thousand addresses us in our Editorial capacity within the first month of our career, we shall receive two thousand five hundred letters. So, now, Reader, as you may be one in your cycle of a thousand, heed what your *Companion* says before you put pen to paper.

Consider that an Editor is human, and expect not from his hands or head that which may not come within the fair compass of his ability and duty.

Keeping this in view, your requests shall always meet with prompt and polite attention. Information shall be afforded to you upon various subjects, suggested by your solicitations.

Of course, your letters will be prepaid; will always be legibly and briefly written, and will be dictated in a fair, round-hand. "To the Editor of *The Home Companion*, 69, Fleet Street, London." Don't puzzle the postman, by stupid hieroglyphics; nor annoy our neighbour *Punch* by erroneous postal deliveries, only to disappoint and annoy him, by exhibiting the amount of correspondence pouring into us. But let the display to the postman's eye, of a clear bold hand, be a sort of *prima facie* evidence that the packet is for the *Companion*.

And while you think what the Editor may do for you, consider, sometimes, what you may do for him.—What advice, what hints, what practical benefits you may diffuse through the pages of his "Glean Book." Let there subsist a literary *Companionship*, mutually beneficial and interesting. So shall our path be cheered by pleasant intercommunications, making our occupation a pleasure, and its fruits to millions.

**STATIONERS.**—Books and paper were formerly sold only at stalls, hence the dealers were called stationers. The company of stationers of London is of great antiquity, and existed long before printing was invented; yet it was not incorporated until 3 Philip and Mary, 1555. Their old dwelling was in Paternoster-row.—*Mortimer*.

**STARCHING OF LINEN.**—Starch is a sediment produced at the bottom of vessels wherein wheat has been steeped in water; is soft and friable, easily broken into powder; and is used to stiffen and clear linen, with blue; its powder is employed to powder the hair. The art of starching linen was brought into England by Mrs. Dingheim, a Flemish woman, 1 Mary, 1555.—*Stowe*.

**GERMAN PASTE.**—"Sir—I send you a receipt for making German paste for cage birds, which will be found of better quality and cheaper than what is sold in the shops.—Boil four eggs until quite hard, then throw them into cold water; remove the white, and grate or pound the yolks until quite fine, and add a pound of white meal and a tablespoonful of olive oil. Mix the whole up together, and press the dough through a tin colander so as to form into small grains like sand. Fry them over a gentle fire, gradually stirring them until of a light brown colour, when they are fit for use.—*M.*"

**DRUNKARDS.**—The phrase "Drunk as a lord," arose out of an old proverb, "Drunk as a beggar;" and we are told that it was altered owing to the vice of drunkenness prevailing more among the great of late years. Drunkenness was punished in many of the early nations with exemplary severity. In England, a canon law restrained it in the clergy so early as A.D. 747. Constantine, King of Scots, punished this offence against society with death. He used to say, that a drunkard was but the mimic of a man, and differed from the beast only in shape, A.D. 876. Drunkenness was restrained in the community in England in 975; and by several later laws.—*Dick of Dates*.

**SUPPER RECOMMENDED.**—Dr. Holland asserts that we die injuriously with the night by bringing the time of dinner so close upon it. The interval of four or five hours between the earliest meal of the day and the time of going to bed, is by no means the most favourable to sound rest. The early stage of digestion is passed over, during which there is a natural tendency to repose, and it is at this time when the system, as respects the

influence of food, is taking up a more active state—and when exercise, rather than the recumbent posture, is expedient in forwarding helpfully the latter stages of this process. The old method of supper at bed-time is sequel to dinner in the middle of the day was better in regard to comfort and completeness of rest at night, and the habit of good sleep may often be retrieved by adopting a plan of this kind when every anodyne has failed of effect.

**DRESS.**—Excess in dress was restrained by a law in England, in the reign of Edward IV., 1465. And again in the reign of Elizabeth, 1574.—*Stowe*. Sir Walter Raleigh, we are told, wore a white satin pinked vest, close sleeved to the wrist, and over the body a brown doublet finely flowered, and embroidered with pearls. In the feather of his hat, a large ruby and pearl drop at the bottom of the sprig, in place of a button. His breeches, with his stockings and ribbon garters, fringed at the end, all white; and buff shoes, which on great court days were so gorgeously covered with precious stones, as to have exceeded the value of £5,000; and he had a suit of armour of solid silver, with sword and belt blazoned with diamonds, rubies, and pearls. King James's favourite, the duke of Buckingham, could afford to have his diamonds tacked so loosely on, that when he chose to shake a few off on the ground, he obtained all the fame he desired from the pickers-up, who were generally *les Dames de la Cour*.—*Dick of Dates*.

**DECEITFULNESS.**—We don't fight—let that be understood. Not that we are afraid to die; but that we have courage to live. First, we set up the resolution never to do another a wilful injury; next, if an injury be alleged against us, we will examine, determine, and repair it, according to our best ability. We care not for scandal; we can live it down. Scandal is based either upon truth or falsehood. If upon truth, take a lesson, and avoid giving cause for it in the future; if upon falsehood, it will wither up and die, and people will point at it as a loathsome thing, poisoned by its own venom. We have seen many an adder crushed by a cart-wheel, and left dead upon the dusty road. And in the moral world, we have seen the greatness of truth crush into atoms the most crafty device of calumny and falsehood. We shall see this again; it is a daily occurrence in the world's progress. Great fighters are often great cowards, in all real trials of the heart. They have muscle—not brains. A gentleman was once challenged, for having, contrary to previous arrangement, opened a ball, by taking the hand of a certain lady. He replied to the challenge—"Sir—because I opened a ball last night, I see no reason why a ball should open this morning!" This reply was

A MOST DECIDED HIT!

**INK.**—The ancient black inks were composed of soot and very black, and Vitruvius and Pliny mention lamp-black; but they had likewise various colours, as red, gold, silver, and purple. Red ink was made by them of vermilion and various kinds of gum. **INDIAN INK** is brought from China, and must have been in use by the people of the east from the earliest ages, most of the artificial Chinese productions being of very great antiquity. It is usually brought to Europe in small quadrangular cakes, and is composed of a fine black and animal glue.—*Intable or Sympathetic Ink* is the same given in fluids, which, when written with, will remain invisible until after a certain operation. Various kinds were known at very early periods. Ovid teaches young women to deceive their guardians by writing to their lovers with new milk, and afterwards making the writing invisible with ashes or soot. A receipt for preparing invisible ink was given by Peter Borel, in 1653. Receipts for making it were given by Le Mort, in 17, and by others.—*Beckmann*.

in game and poultry arrive from the country, in consequence of the doctors drawing the entrails before they despatch them. It may not be wise to look a gift horse in the mouth, and to remonstrate might give offence; but I respectfully suggest that a hint on this point from you will convey very general and desirable information, particularly at the Christmas season, when an exchange of presents usually take place between friends. D.—[Many persons are in the habit of paunching hares, and drawing poultry, before they pack them in baskets, but the practice is a bad one; for the entrails of the animals should be left, and no air admitted into the interior of the body, until they are required for trussing. It is easier to complain of than to remedy the evil pointed out by D. however, because sportsmen, who have much reason to walk over, or stalk through, a hare as soon as

ents, and poultry should be ordered for the occasion, and sent just as we see it exhibited in the London shops, undrawn and untrussed, with the head on. Sportsman desirous to make presents of their game, should also avoid paunching it, and above all, dry it before it is packed, as hares or birds killed in wet weather, and packed wet, are apt to become mouldy if they have far to travel.]

**WASHER.**—"Mr. Editor, during a recent exertion in Kent, my attention has been much directed to the importance of adopting means for the diffusion of local information; and this idea has been chiefly suggested by incidents connected with my little tour. We live in an age when persons of all ranks and conditions are thirsting of knowledge; and with regard to those who occupy the humbler position in society, it ought to be a ruling desire to furnish them with such information as may tend to enlarge and improve the mind. One useful publication (*The Servants' Magazine*) explains to its readers somewhat concerning the familiar objects by which they are surrounded, and I was much pleased to hear, lately, in a public garden, a respectable-looking nursemaid communicating to her youthful charge knowledge which she had evidently derived from a paper in that work, entitled *Flowers for the Nursery*. Soon after, a few days after, by the side of the river Thames, near Old Milton, a little girl, evidently the one smut servant of an humble family, came up to me with a baby in her arms, and a piece of common river-weed in her hand, eagerly inquiring if I would tell her the name and uses of the "thing" which she had picked up. It was no small pleasure to converse for a few moments with this intelligent child, who spoke with the greatest delight of being taken by her mistress to see the Zoological Gardens in the Regent's Park. The thought of local histories, however, did not occur to me, till walking one morning on the East Cliff, at Dover, I passed the dwelling in the rock, and observed the nests with which its inhabitants had planted their wild and romantic solitude. Then it was, that remembering the incident of the little girl, the idea which I beg leave to suggest to you, forcibly occurred to me. Now, Mr. Editor, my thought is simply this: that local tracts, at a cost of not more than two or threepence each, might be rendered widely useful. Take, for example, Dover, the sea, the rocks, the wild flowers, the crows that build their nests among the crags, the pebbles, and the sea-weeds. What a delight might it not be rendered to the fisherman to read concerning his sunny prey to the intelligent boy who ranges among the rocks in quest of the finest flowers, to know their names and uses; and to many who toil wearily up the steep ascent that leads to Dover Castle, with its ruined church and lighthouse, if their labour was rewarded by information relative to those relics of old times, if they were not left to exclaim sadly, as two countrywomen whom we passed, 'There's nobody here to tell us anything.' It may be, that some among your numerous *Companions* may follow out this idea, and lend their aid towards compiling such tracts, of an amusing, intelligent, and pious character, by aid of which, much valuable information might be beneficially diffused.—Truly, yours, M. R."

**TRUE PAPERS.**—If young ladies will tear up the *Home Companion* after reading it—if they will forget the claims of friendship, and turn coldly upon the favourite of the previous hour, there is no use in which we would have our pet sheet so willingly supplied as to that of holding watch at night over those lovely locks that are to spread their enchantments, like newly-opened flowers, at the dawn of the morning. To rest so near the lovely cheek of innocence is a privilege which we shall never be found to speak slightly of. But there is one other duty which we prefer discharging—that of strengthening and embellishing the mind, and keeping it from rust and corruption. To do this we must be a *Companion* through years, not merely through moments. We shall be jealous, therefore, of any neglectful treatment. We cannot lie upon dusty shelves, nor wrap round spluttering candles, nor ensfold lullabies for boys or girls. We wish to be bound to and by our readers through a long and agreeable acquaintance. All our details and arrangements are constructed with this view, and at the end of each year we shall issue an Index and a Cover that will compass, with our several numbers, a volume elegant and useful. We now conclude our first labour, and expectance a dreary pleasant weariness. Use us kindly, gentle reader, and while we dose say no unkind things of us, but rather applaud the will that would serve you more ably if it had the power. And remember that we inflexibly protest against every misapplication, save to be used as **TRUE PAPERS!**—Our Second Number is now ready, and will accompany you home upon your calling on any Bookseller.

## SCANDAL—A WARNING TO THE LADIES.

ALTERED FROM THE ORIGINAL OF ANN E. PORTER.

AUNT WOODBURY, though she had great confidence in her own power of secret-keeping, was known throughout the neighbourhood for her love of gossip, and her insatiable thirst for the marvellous. No one delighted more to drink water out of another's well, and running water out of her neighbour's cistern. She knew how often Mrs. Smith went shopping, and how much she gave per yard for all she bought. She learned how many dozen eggs her neighbour Todd sold during the season; and she never rested quiet in her bed afterwards until she found out how many eggs this same lady put in her cakes and pies.

She was particularly prying into the affairs of newly-married ladies and young housekeepers; their secrets, could she once get hold of them, were not only rolled under the tongue like a sweet morsel, but were digested, and re-digested, as if she had the two stomachs of a ruminating animal. She never attended parties, for she was a member of the "Old Presbyterian Church," in the flourishing village of Glastonbury.

There were two streets in this village, one called North Street, in which was the Methodist Meeting-House; the late South Street, where Aunt Woodbury lived, and where also she went to meeting, very regularly, in the large, old-fashioned, high-steeped Presbyterian House. Well, as I said, she never attended parties—that self-denial was a part of her creed, one of the steps of the ladder which elevated her above some of her neighbours; but, in lieu thereof, she was a most punctual member of "The Sewing Society," and no one did better service with fingers and tongue. She was also (we must present the bright side of her character) a most punctual attendant upon every church meeting. Her husband, "Good Brother Woodbury," as he was called in the neighbourhood, was an elder, and, of course, conversant with all the private business of the church. As in honour bound, he never revealed it even to his loving spouse, unless under peculiar circumstances, which circumstances we shall presently explain. Well, some items of their private business would sometimes leak out in the church meetings—often in the prayers—at other times in the remarks of brethren, whose hearts were burdened with care or sorrow. Whenever one prayed "for that erring brother who had gone astray," or that the "Achan might be removed out of the camp," then Sister Woodbury's wits were suddenly set to work.

"Well, pa," she would say, as soon as she arrived, and had deposited her bonnet and shawl in its place, and seated herself by the fire—"well, pa, what now? Who have you got up before the session this week? It does seem as if wickedness increased in high places. I thought when we got Mr. Clark out of the church for going to see Mrs. Hall so much, we should have some peace. But do pray tell what now?"

"Nothing particular that I know of, my dear."

"Nothing particular, Mr. Woodbury! Just as if I didn't know any better. Do you suppose Mr. Green would pray as he did if there wasn't some trouble? But that's just the way with you men, afraid to tell your wives anything. Just as if I couldn't keep a secret."

"Well, to tell the truth," said the patient husband, on one such occasion, "I did not attend the last session meeting, and there may be some business that I know nothing about. It does strike me that there was something rather peculiar in the prayers to-night."

"Yes, indeed, there was; and I should like to know what it is that troubles the elders so. You, as one of them, ought certainly to know. It is very strange that you should neglect the meetings."

The good elder did not answer; for, had he told the real cause of his non-attendance, it would have excited his wife's combativeness a little more than he cared to do just then. The truth was, he had one infirmity wholly beyond his ability to overcome, and which placed him completely in the power of his wife whenever he was intrusted with a secret. It had caused him much trouble, especially when finding, some years after his marriage, that his wife's head, or rather her tongue, was totally deficient in secretiveness. He could conceal nothing from her; for, however he might resolve, and re-resolve, to look fast within his inner sanctuary any important matter, he invariably found that, before he was aware, she was mistress of his treasure. He never tempted her, like "Blue Beard" with his key, but alas! she possessed a duplicate. You may wonder, my dear married ladies, and wish you knew the mystery. It is easily explained. Elder Woodbury talked in his sleep; and his wife, by asking questions cautiously, could elicit correct answers on almost any subject she chose to select. Again and again have the elders wondered how matters, known, as they supposed, only to themselves, should be village talk.

At last, the following incident gave them some clue to the mystery. It seems that Mrs. Woodbury had judged correctly in supposing that the session had some cause for praying as they did. There was one offending brother; and Elder Woodbury, having some inkling of the matter, and knowing his peculiarity and his wife's failing, had resolved to be absent from the meetings.

His safety lay in his ignorance. But he was defeated in this plan. The next afternoon, when the session was to meet, he found, on his return from his place of business to dinner, that his wife had aired his clean shirt, brought out his coat, and made ready his shaving materials. His favourite dinner was steaming on the table, and his wife said, pleasantly—

"Our minister has been here, and says that he hopes you will not fail to attend the meeting this afternoon. He has many burdens to bear, and needs all the sympathy and aid his church can give him."

Poor Mr. Woodbury! He did sympathize with his minister, and no one in the church was more ready to bear his share of the burdens; but he wanted to have no more secret cases of discipline intrusted to his keeping. However, warned by his dinner, and pleased with the good humour of his wife, he was persuaded to go, hoping that he should hereafter be able to keep watch and aid his church even in sleep.

Alas, for his resolution! He came home quite late, and very tired, with his mind perplexed and disturbed (a most favourable state for sleep talking). He said little; neither did his wife ask any questions. Those were reserved for the occasion.

Her husband was sleeping soundly when she laid her head upon her pillow; but she had no idea of following his example. A good, strong cup of green tea had produced its enlivening effect upon her again. Towards midnight the elder became more restless, and began to mutter in his sleep; his wife pushed her nightcap from her ears, and listened with all the eagerness of a cat when she hears the scratching of a mouse. She could catch nothing distinctly at first. At last, she heard the words, "Poor Pratt!" She repeated to herself—"Poor Pratt! What in the world can that mean?" Now Mr. Pratt, one of the prominent men in the church, and a trader in the place, was their nearest neighbour. "It was wrong, wrong," muttered the elder; "but the temptation was great." He then became easy awhile, leaving Mrs. Woodbury in a delectable state of suspense and curiosity. Once more he turned, and she heard him say, "It was stealing, after all." "What! has Pratt been stealing?" she ventured to ask. "Oh yes, yes," he answered. Just then, the old clock in the kitchen struck twelve, and aroused the sleeper to conscious wakefulness. His wife feigned slumber, while he arose and walked the room for some minutes; then taking a glass of cold water, he retired again and slept soundly till morning.

Mrs. Woodbury was not slow in completing her usual domestic operations the next morning. After "putting things to rights," and giving a careful look to her cakes in the oven, she threw on her blanket-shawl and hood, and went in to see her neighbour, Mrs. Todd. The latter was busy in her kitchen; but Mrs. Woodbury, telling her not to mind her presence, seated herself by the cooking-stove and took her knitting-work.

"How nice your wheat bread looks, Mrs. Todd! I think your flour must be good. Pray, where do you get it?"

"We always buy of Mr. Pratt," was Mrs. Todd's answer, as she busied herself arranging her loaves in the oven.

"Well, so have we," answered the elder's wife; but, somehow or other, the last we bought didn't seem to be just the thing—a little "runny"—and, when baked, full of large holes. Now bread, to be good, should look more uniform, full of small holes, like a piece of nice sponge."

"Yes, I know that. But I have had no trouble if I get the best flour. But it comes very high."

"Yes, it is a great price. No wonder Pratt is getting rich. I guess he makes great profits."

"He asks enough, if that is all. But they do say, if his debts were paid, he wouldn't be worth much."

"Very likely. And I guess his wife an't no great profit to him: keeps a servant all the time, so as to devote more time to her children."

"She has only three; and I get along with my four, and do all my own work. I've my doubts whether children are any better for so much attention."

"My husband says *example* is better than precept on all. Mrs. Pratt's teaching won't do much good, if her husband don't set a better example."

"Well, I don't know much against the man, after all," said Mrs. Todd, as she went on rolling her pie-crust. "They're rather strict with their children, and too close-mouthed; but pretty good neighbours, after all."

"Well, I can tell you something about 'em that'll astonish you, Mrs. Todd!"

"What can you mean?" asked the good woman, as she dropped

## SCANDAL.—A WARNING TO THE LADIES.

rolling-pin, and stood with powdered hands and wondering eyes to listen.

"It's a matter now before the session; and, I suppose, I've no business to tell of it; but you must promise not to let it be known. I wouldn't have it come from me for the world."

"Oh, of course not. You know I never would reveal it."

"Well, only think, he's accused of stealing! Yes, downright stealing! The elders and deacons are dreadfully worried about it; but they don't wish anybody to know it just now."

"Well, I never! Who would have believed it?"

"For my part, I never took any great fancy to the Pratts—rather stiff sort of folks, I always thought. But I must run and see to my own baking."

"Don't, pray, be in such a hurry. Why, I am so astonished I can hardly believe my senses!"

"Well, it's the sober truth, and we shall all know more about it soon."

As my readers may anticipate, it was soon a village secret that Mr. Pratt had been guilty of a great theft. All knew it but the accused party and his family; and they wondered, in sadness of heart, at the coldness of their neighbours and old friends, and the sudden falling off in their sales. They had not lived in the village many years; but, with the exception of a few who thought Mrs. Pratt not sufficiently gossiping to their taste, they were universally beloved. It was true that their income was small; but good management and economy "made both ends meet." It was true, also, that Mrs. Pratt preferred to take the whole management of her children, instead of sending them to the village school, and intrusted her housework to a faithful domestic, though she still "looked well to the ways of her household." An unpretending, meek, and pious woman, she aimed to do her duty to God and man. She could not, of course, be insensible to the cold looks and evident neglect of her neighbours; nor could her husband be ignorant of a great change in the course of one month in his business.

Some two months had elapsed; the gossiping tongues had not ceased their wagging; when Aunt Patty Dunn wended her way to the minister's, one morning, for the purpose of making her semi-annual visit. Now Aunt Patty was a rare sort of a news-vender. To be sure, there was no need of a "Daily Gazette" where she lived, unless to report the foreign news, for she made up a regular budget of all domestic concerns, not forgetting "prices current" and "terrible disasters." Like some of our more modern papers, she also added "births" and "intended marriages;" and, in little choice tit-bits of scandal, well seasoned, she excelled even the more noted caterers for the public taste in our large cities. But, with all this, she had the peculiar faculty of never getting into trouble herself, or exciting the indignation of others. Had she been an editor, she would never have been sued for libel, or obliged to sue for quittance under the upraised cowhide. Her curiosity and benevolence were so well balanced, and her destructiveness so small, that, though she delighted to retail gossip, she always "smoothed over" the harder parts of her story, so as to avoid giving offence. She was an amusing companion for mending-day, when one must, perforce, darn stockings, sew tapes, and stitch rents. Then, Aunt Patty, with her snuff and her spectacles, her old velvet bag and her knitting-wool, was heartily welcome.

But I am digressing. As I was saying, Aunt Patty made her semi-annual visit to the minister's, and, of course his good wife must listen to a rehearsal of events that had taken place since her last visit. The Pratts were not forgotten. Now, in some sort of moral affinity, Mrs. Pratt and Aunt Patty were good friends; not that the former confided greatly in her sociable neighbour, for she was not one to "hew for herself others that could hold no water," but the kind heart and native shrewdness of the chatty gossip won her interest. It was not necessary, however, to tell any one now that the Pratts were perplexed and troubled—I mean any one as familiar in their family as Aunt Patty. Not a word, however, had been exchanged between them on the subject. When at their house, the ladylike reserve of Mrs. Pratt forbade such allusions, even to those most in her confidence. But once at the minister's, Aunt Patty (who had long thought about it) resolved upon a bold step. She would learn from the minister himself what the session was going to do with Mr. Pratt.

"I was determined to ask you," said she, after making known her errand; "for I do feel so sorry for his wife. She don't complain a word; but I believe she is dying by inches. Why, I reckon she's lost ten pounds within a month."

"But how did this story get round, Aunt Patty?" asked the minister, sitting down by her side, as if thoroughly interested in all she had to say.

This was a new thing to the vendor of news, quite a treat, to have Mr. Laurens interested in her stories; so she launched forth and told all that "they said," and that Sister Todd said, and that Brother Hanson said; "and, to tell the truth," she added, "I am afraid Sister Woodbury is at the bottom of it, for she always knows all the church affairs; and how in the world she finds out, I can't tell, for a pruder man than the Elder never lived."

The minister heard her through patiently, and then merely added—

"I am sorry this affair has made so much talk and trouble. I will explain it all to you, Aunt Patty, before long." After saying this, he immediately entered his study.

It was this very day that Mr. Pratt returned from his shop almost disheartened. He found his wife in the nursery surrounded by her sleeping children. She, too, had had a gloomy day. Not a word was said for some minutes. Mr. Pratt drew off his boots and put on his slippers, took the newspaper from his pocket, and, after putting more wood upon the fire, said—

"Shall I read aloud, Mary?"

She burst into tears. Those few kind words had unlocked the sealed fountain.

"I must tell you," she added, "that Bridget has left us. She gave no reason, but said she liked us; we had treated her well, and paid her wages regularly, but she would rather not stay any longer."

"This is strange," said Mr. Pratt, laying down his newspaper, and rising; "and, what is more, it is not the only strange thing of late. Why, Mary, my business has decreased fifty per cent; and, with the exception of Mr. Laurens and Elder Woodbury, and a few others, I seem to have hardly a friend left. What does it mean?"

"Why, husband, you say you have hardly a friend left. I feel as if I had none. I meet averted faces and cold looks wherever I go. I do not know what we have done to merit this. I must tell you one little incident that occurred to-day. I sent Charley out for a walk, and he stopped to play awhile with some 'little boys.' But James Todd said, 'No, we won't play with Charley Pratt; his father's a thief!' I do not generally listen to the complaints of children; but, taking this in connection with other things, it has troubled me."

"It is unaccountable," said Mr. Pratt. "I am determined"—but just then the door-bell rang.

It was their minister, Mr. Laurens. He stayed some time longer than was his custom, and, though no reference was made to Mr. Pratt's peculiar situation, yet there was much sympathy and cordiality in his manner. It did them much good; and both Mr. and Mrs. Pratt retired that night in better spirits than they had known for some weeks.

The next day was Sunday. At the close of the service in the afternoon Mr. Laurens stated that he wished all the members of the church to meet him in the vestry on the afternoon of the next day. He hoped none would be absent, as there was some business of importance to be transacted. He particularly requested all the church members to be present, ladies not excepted.

The good housewives of the village, such as were numbered among the church members, were early at the wash-tub on the following morning, speculating, meanwhile, as to how the Pratts would feel, and what they would do and say. "Of course, they'll not be there," said one and another, as they met on their way to the vestry. But they were disappointed; for both Mr. and Mrs. Pratt were in their accustomed seats at the appointed hour, unconscious of the surprise their presence occasioned, and equally ignorant of the object of the meeting.

The minister was late—an unusual thing with him; but, when he entered, who should come with him but Joseph Pratt, a young man well known to them all—for he was, as Aunt Patty would have said, "Old 'Siah Pratt's son, that used to live at the Hollow." The old man was dead, and the widow, with her children, moved into a neighbouring town. Little had been heard from them since, and they had been almost forgotten by many. But this son, Joseph, had been a very interesting lad; and becoming, as he hoped, a sincere Christian, had joined the church just before leaving his native village. After a short prayer, Mr. Laurens said—

"Our young brother, Mr. Pratt, has a few words to say to the church."

The latter rose in evident agitation—

"Through the kindness of your session," he said, "I should not have been required to make this public acknowledgment of the sin I have committed; but, learning that an innocent man is suffering for my error, I resolved to come here in person and make my confession before the church. When my family left this place, as you are all aware, we were poor. I was clerk for Mr. Barnum, whom you probably all remember—"

"Yes, that we do," Aunt Patty inwardly ejaculated; "one of the greatest skin-flints the town ever produced."

"And as he moved about the same time we did, I still continued with him. He gave me five pounds a year and my board. Sickness and trouble came upon our family. I will not stop to tell you now of the death of my young brother and sister, or of the efforts of my mother to keep the children together; enough, that she laboured beyond her strength, and thus produced a disease which finally ended her life. One stormy night, after closing the shop, I went home to stay with her until morning. I found her destitute of almost every comfort. I had expended all the wages due to me, and I had not a penny wherewith to buy her the medicine prescribed by the doctor, and some wine, which he had said might possibly restore her strength a little. I hastened back to ask Mr. Barnum for a month's pay in advance. He was very surly, and refused me. As I left his door, and was hastening back, I met a gentleman on my way who said he wished to pay two pounds to Mr. Barnum, and requested me to hand it to him. I took the money. The gentleman rode away, and I stood for a moment irresolute what to do. But I thought of my mother; the temptation was too great, and I yielded—resolving, however, to pay the sum the moment I should receive my wages. Stifling all thoughts, save of my dying mother, I immediately purchased the articles she needed and ran home. I dared not tell her how I came by them; but, when she blessed me that night, and called me her beloved son, I shuddered as I thought how she might feel if she knew the crime I had committed. She grew worse rapidly, and I did not leave her until she died—no, not until the grave hid her from my sight."

"Meanwhile, my employer had found out my theft; and, when I returned to the shop, he threatened me with imprisonment. I went to the gentleman from whose hand I took the money, and told my story. He wept as I related it; and through his influence, I was saved from jail, and also put in a way to earn a larger salary than that given by Barnum. The latter was still determined upon revenge, and wrote to the session of this church that I was guilty of theft, and had proved myself an unworthy member. He knew my attachment to the home of my childhood, and to the church of which I am

member. The session dealt kindly with me, and concluded to keep the matter secret, if possible, until I had time, by sincere repentance for my sin, to regain my character; for sin it was, though the temptation was great."

We have not time, or rather we will not, lest we should be tedious, enlarge upon the story of this young man. Such suffering, and such temptation, are, alas! too common in this world of ours, where everything appears to be so much out of joint—hoarded gold and starving poor, splendid palaces and beggars' rage, the iron heel of despotism and the despairing cry of crushed humanity.

That good Elder Woodbury's wife (not Elder Woodbury's good wife, dear reader) was little profited by this meeting, we may learn from her remark to Mrs. Todd on her way home.

"Well, really, I do think it's odd enough that we all forgot that old 'S Pratt's son was a member of the church!'"

The false reports about Mr. John Pratt were, of course, soon silenced though it took some little time before many could really believe that he had not robbed a bank, or forged a note for some five hundred pounds or so.

[Reader! what thinkest thou of scandal? Has it ever flowed from thy tongue? Think of the sufferings of that "good Elder Woodbury," and avoid the error of his secret-loving scandal-talking spouse. Remember that one word may propagate a lie, while a thousand cannot overtake and undo its mischievous effects. And let this sublime principle be ever fresh upon thy heart, "Forgive us our trespasses, as we forgive them that trespass against us."—ED. H. C.]

## EDDA MURRAY.

BY ENNA DUVAL.

"Learn to win a lady's faith  
Nobly, as the thing is high;  
Bravely, as for life and death—  
With a loyal gravity.  
Lead her from the festive boards  
Point her to the starry skies,

'Guard her from your truthful words,  
Pure from courtship's flatteries.  
By your truth she shall be true—  
Ever true as wives of yore—  
And her 'Yes,' once said to you,  
Shall be 'Yes' for evermore."—E.

It was a hot sultry afternoon, at a fashionable summer resort by the sea-side. The three great events of the day were accomplished—namely, the bath, dinner, and the arrival of the mail; the visitors, therefore, had nothing to do but to get rid of the afternoon in as noisy a manner as possible, keeping themselves as warm and uncomfortable as they could, in order to prove that they were enjoying themselves after the most approved fashion. Ladies could be seen in every direction, passing from one hotel to another, sitting in and out of cottages, dressed in the most incongruous style—in silks and gauzes, fitted for a full-dress dinner or evening party; and surmounting this dressy costume was—the only really sensible article to be seen in this dominion of Folly—the prim, plain, country sun-bonnet. Fashion had established that hats at the sea-side were vulgar, and accordingly, every belle mounted one of these useful, but exceedingly ugly head-dresses. Carriages and waggons of every description started to and fro. A fine equipage drew up in front of the entrance of one of the principal hotels, and the owner of it, Mr. Martin, a prosperous merchant, with his fussy, dressy, good-natured, fat little wife, entered it. As Mr. Martin handed his wife in, he asked—

"Where's Edda?"

"Oh! let her alone, my dear," replied his wife, "she will get over her mooping after a time. She's fretted herself into a sick headache, and is lying down."

"Confound the fellow," muttered Mr. Martin, "I wish she had never seen him. If I had my way she should be divorced from him. What right has a man to a wife when he cannot support her? Now, as long as he lives, I suppose, our poor little darling will be down-hearted."

"Oh!" said the wife, settling herself back comfortably in the luxurious carriage, after having carefully disposed the folds of her rich silk gown, and heavily embroidered mantle, in a manner to crush them the least, "wait until he gets fairly settled, and the winter parties, and concerts, and operas commence, then Edda will cheer up."

"I hope so, with all my heart," ejaculated Mr. Martin; "and if money, amusements, and fine clothes can make her what she was two years ago, I shall be glad enough, for I hate a gloomy face."

While they were thus talking, their niece, the subject of their conversation, was lying in her bedroom, burying her throbbing head in the pillows of the couch, wishing that an endless sleep would come to her, and deaden the painful sense of grief.

Poor Edda Murray! Two short years before, a happier girl could not have been found. Then, she had never known a trouble. Her aunt and uncle, Mr. and Mrs. Martin, who were childless, and possessed ample means, had taken her at the time of her parents' death, which had occurred during her infancy, and from that moment up to the present, she had been their spoiled pet and darling. They were good-natured, indolent people, caring for but little else than the amusements of the world. As Edda grew old enough to enter society, they took great pleasure in dressing her extravagantly, and accompanying her to every gay resort of fashion. According to Mrs. Martin's ideas, every girl should be married early; and when Edda was addressed by Mr. Murray, near the close of her first winter, and seemed pleased with his attentions, her aunt's rapture knew no bounds. Mr. Martin

was pleased also, for Murray, though a young man, was a rising and was steady and industrious.

Ralph Murray was a reserved, dignified young man, rather stern for his years, with the most rigid ideas of justice and propriety, even in trifles; exact in everything, and making but little allowance for others less exact than himself. He did not require more than he was willing to give in return; but he had no consideration, no patience; and when disappointed, was apt to become cold, moody, and uncompromising. In woman, he had always required, "that monster—perfection!" His mother had been a model of feminine propriety. He had no sisters, but a whole troop of cousins, who happened to be laughing, good-natured creatures; but they were his utter abomination; he never countenanced them, pronouncing them silly, frivolous, and senseless; but how they laughed and teased him when his engagement with Edda Martin was announced—verily they had their revenge.

Edda was, indeed, a spoiled pet, full of caprices and whim, beautiful and graceful as a fairy, and as untamed and uncontrollable as an unwedded Undine. But, poor child! marriage brought no happy spirit to dwell in her household. How could it? For they had married under the influence of the maddest infatuation. Their love was beautiful while it lasted; but soon the husband grew exacting; the angel became a mere woman; and the darling, who had never obeyed any will but her own, discovered she had a lord and master, whose will was stronger and more unbending than even her own had ever been. Then Edda was extravagant and thriftless, and thoughtless, a real child-wife, like poor Dora, that creation of Dickens' fancy, but with more spirit and temper than "Little Blossom." Edda's character had in it qualities which would have made her a fine woman, properly and gradually developed; but her husband placed her on the scale of his own model of perfection, and endeavoured to drag her up to this idea of perfection, without waiting for Nature to assist him. It was the old, old story told over again—incompatibility of tempers—unreasonableness on his part, waywardness and temper on hers.

God sent them a little babe, but the child brought no tenderness to the heart of either parent for the other. Then trouble came upon Ralph Murray in his business—unfortunate speculations, failures in others he had trusted; but instead of going to his wife, and talking affectionately, but candidly, remembering all the while what a spoiled darling she had been, he considered himself aggrieved by her lavish expenditure, and told her haughtily that she was now the wife of a young merchant, and not the niece of a rich man, and ought to have sense enough to observe economy. Poor Edda was offended, bitter words passed between them, and they parted in anger. Her aunt found her in tears—happening to come in just as the irritated husband had left her. Edda turned to her thoughtless, childless aunt, for comfort, telling her the whole story of her wrongs; and Mrs. Martin pronounced Mr. Murray a brute, to treat her poor child so unkindly. Mr. Martin thought always as his wife did, and in the first flush of temper, they carried the weeping angry wife, with her young babe, away from her husband's roof, the exasperated uncle leaving for Mr. Murray an angrily-worded note, in which he said that Edda had never ceased to be his niece, even if she had been so unfortunate to become the wife of a parsimonious merchant, and an unkind husband. The following day Ralph Murray was a bankrupt.

The news of other heavy failures of houses indebted to him, brought his affairs to a crisis, and all his troubles seemed piled mountain high upon him; at once. Poor Edda would have gone instantly to her husband when she heard of his trouble—for she had immediately repented her hasty step—but he did not dare; she remembered his sternness, and dreaded a repulse, which she felt she deserved. Then a new cause of anxiety displayed itself, her boy sickened, and after a few hours' illness, he died in her arms.

Two months passed by, and still Ralph Murray treated his wife with the same silent indifference. He never sought an interview nor an explanation; it seemed as if the death of their child, instead of softening him, had, to his mind, broken off all connection between them. Edda grieved incessantly, until at last her health became seriously affected. When the travelling season came, the physicians who had been called in to heal her poor broken heart, recommended an instant departure for the sea-side. Fine apartments were procured, very elegance, every luxury surrounded her; but she looked more wretched, more unhappy every day.

She knew that their beautiful house belonged to another—everything had been sold; that she no longer had a home with her husband; and the consciousness that she was a childless, lonely wife, became daily more insupportable. Poor girl! life seemed very dark and hopeless to her. Her trouble had lifted her spirit on almost a lifetime; all the childish, capricious waywardness of girlhood had disappeared; sorrow had done the work of years; and she was now a woman—but a suffering loving woman, ready to make any sacrifice, perform any duty, to atone for the past. Her uncle and aunt caressed her, and sympathized with her, while they incessantly spoke of her husband with words of reproach and blame; and when she would check them, saying the greater part of the blame rested on herself, they would think her still more lovely and amiable, and lift their hands in surprise. How reproaching to her conscience was their sympathy! and she grew more and more despairing and hopeless.

At midnight she would pace her room, wringing her little hands with remorse for the past. Her husband's stern face would rise before her, blended with the beautiful, loving expression his countenance had worn during the delicious season of courtship. Then she would recall every noble, honourable trait in his character, and remember her own wilful conduct. All, all was over; and henceforth she would have to live without him.

All her friends upheld her, and blamed Mr. Murray. They called him stern, cold, and heartless. The fashionable world thought her a lucky woman in possessing a rich old uncle to take care of her. Her quarrel with her

cross husband had taken place in the very nick of time, they said; now she need not suffer from his mischances—when she would so willingly have borne the very heaviest burden poverty could impose. But what could she do but dly suffer?

Day after day passed by, still no message came from her husband. Her uncle had told her that the principal creditors had willingly and generously arranged matters; for, as every one said, the failure had resulted from misfortune, not from mismanagement, and that he had heard that a friend had offered Mr. Murray a situation in a commercial house, with a chance of becoming a partner in time. Then the next news that reached her was, that he was actually leaving for his new home. And would Ralph leave her without a word—a line? she asked herself over and over again.

At last a letter came—a cold, stern, haughty letter, bidding her farewell, as if for ever. There were one or two tender passages in it; but the tone of the whole letter was so cold and unforgiving, that it crushed her to the earth. She had received it the day before our little sketch opens; and when her aunt urged her to drive out and shake off her trouble, she only buried her head still deeper in the pillows, and prayed for death. The afternoon passed slowly enough to the poor sufferer. Then came the evening—the noisy, gay evening. As there was a ball in the saloon of the hotel, her thoughtless, butterfly aunt and uncle joined the merry crowd of triflers, after an earnest but unsuccessful persuasion of Edda to follow their example.

The merry music of the band sounded loudly in Edda's lonely bed-room; but the lively dancing melodies seemed to her ears like the voices of taunting demons. She restlessly rose from her bed and walked into her little parlour, which opened on a balcony that swept around the house. She stepped out on this balcony, and listened to the murmur of the ocean, which rolled unceasingly before her. Her agony increased, and a demon seemed to whisper in her ears:—

"What is life but a torment? Death is an endless, dreamless sleep. Why suffer when you can so easily find relief?"

Shudderingly she put her little hands to her ears, and, closing her eyes, hastened into the room, fearing that in another instant she might be induced, by despair, to plunge headlong over the railings on the cliff beneath. For a time she laid on the lounge, as if stunned; but at last tears came to her relief, and she felt calmer. To avoid danger she closed the Venetian shutters of the door and window, but drew up under them the lounge, and threw herself on it, that the damp night air might cool her fevered, burning head. She had not been long there when she heard the sound of voices and laughter, but she was too weak to arise, and remained quiet—remembering that she could not be seen from the outside.

It was a little group of young girls, who were promenading after a dance, and who had concluded that the upper balcony commanded a finer view of the ocean. As chance would have it they selected that part of the balcony just under Edda's window for their gossiping lounge. One, more sentimental than the others, pointed out the effect of the moonbeams, which made the edges of the rolling, dashing waves, shine like molten silver. But the beauty of the scene was quickly lost, even on this moon-struck damsel, for she, as well as the rest, were soon deeply interested in discussing a wedding that had lately taken place in the *beau-monde*.

"Oh, dear! there's Mrs. Jones," exclaimed one; "she just came from town to-day, and can tell us all about it."

The lady mentioned joined the group, and threw them into a state of perfect felicity by telling them she had actually been present at the wedding. Immediately she was called upon by a dozen eager voices to tell them "all about it." Poor Edda, she was doomed to listen to the whole senseless detail, commencing at the bride's Indian robe, and its heavy, elaborate embroidery, her "exquisite and graceful head-dress," with the costly Honiton veil, the "rich splendid gifts" of the relatives, and ending with the list of bridesmaids and their costume. How the whole description brought her own gorgeous wedding back to her thoughts! and she felt heart-sick.

"Poor things!" she murmured to herself, with a sigh, "I hope they will be happier than Ralph and I have been."

Some gentlemen joining the group, the conversation became too detached and confused to be heard, and there were so many little bursts of laughter as to make the whole affair quite a medley. Presently, the scraping of the violins, preceded by a loud crash of the whole united band, announced that a waltz was about to be danced.

"Oh!" they exclaimed, simultaneously, "that delicious *Schottische*!" and soon the balcony was empty—or at least so thought Edda; but she was mistaken, for she heard other voices. A lady and gentleman had seated themselves under her window, and were enjoying a sight of the waves and moonlight. She knew their voices well. One was Mrs. Howard, a gentle, lady-like woman, for whom her husband entertained the highest respect. Edda knew but little of her; she had met her in society after her marriage, but had always drawn back a little in awe when she had met with her, because she constantly heard Ralph holding her up as such a model of wifely dignity and propriety. The other was a Mr. Morrison—a cynical, fault-finding old bachelor—or, at least, Edda had always regarded him as such.

Mrs. Howard and Mr. Morrison had heard part of the conversation about the wedding, and the first remark which reached Edda's ears were Mr. Morrison's severe, caustic remarks.

"Silly, senseless fools!" he exclaimed. "They talk as if life had but one point to attain; to get married in an Indian robe, in such a style as to produce a fine theatrical effect. What right have such idiots to get married at all? What do they know of the realities of married life—the holy, sacred obligations of marriage?"

"Very little, it is true," answered his companion; "and this ignorance is only ordered; for I am afraid, Mr. Morrison, if these young, thoughtless

creatures, knew the one-half of life's stern realities, whether married or unmarried, they would sooner die than encounter them. Youth is as hopeless in trouble as it is thoughtless in prosperity."

"Very true, madam, very true," said the old gentleman; "but it seems to me that these frivolous creatures might be taught a little—enough to give them some ballast. What sort of wives will they make? Why, I declare it makes me shudder when I see these silly, thoughtless creatures entering into marriage as they would into a dance—not displaying half the anxiety that a man would on entering into a commercial engagement that can be dissolved at will after a certain season."

"Well," said the lady, with a sweet, low laugh, "from what we see on all sides, my dear sir, a great many of those who marry at the present day seem to regard it only as a mere partnership, to be dissolved at will."

"I would pretty soon put an end to that divorce business, madam," said Mr. Morrison, "if I had the power. Every couple that could not live happily together, and wished to be separated, should have their request granted, but on one condition—that both, particularly the woman, should go into some asylum, and spend the rest of their days in entire seclusion, employed constantly in the performance of strict religious duties and works of charity."

"Oh!" exclaimed the lady, laughing outright, "I am very sure any husband and wife would prefer the most inharmonious intercourse to such an alternative."

"Well, well," said Mr. Morrison, "they could have their choice; and it would teach others to be more careful how they married in haste to repent at leisure." This is becoming a curse to society; on all sides we see husbands and wives disagreeing. Now-a-days a wife must spend as much money as she pleases, lead a thoughtless life—entertain admirers, and her husband must not complain. He must not express a wish for a quiet home and a companion, after the toil of the day and the wear and tear of exciting, perilous business. Oh, no! If he does, madam will leave him in a huff, and he may whistle for a wife, and life is a wreck to him ever afterward."

"Do these unhappy marriages always result from the thoughtlessness and selfishness of the wives, my dear sir?" asked Mrs. Howard. "I think there are as many wives with domestic tastes, who have the same complaint to make against their husbands."

"Yes, yes," answered Mr. Morrison, a little hesitatingly; "I suppose there is blame to be found on both sides; but generally speaking, with the married people of what is called 'society,' especially the young, the fault lies with the wife. Yesterday I bade good-bye to as fine a fellow as was ever created, whose whole happiness for life has been wrecked by one of these silly, heartless fools. You know him, my dear madam, and are, I believe, one of his few friends; for the whole world unite in condemning him and upholding his baby wife in her disobedience."

"You are speaking of Ralph Murray, I am sure," said Mrs. Howard, in a sad tone.

Poor Edda writhed, but she had not power to move; she felt spell-bound and every word of the conversation fell on her ear with painful clearness.

"Yes, I mean Murray," replied Mr. Morrison. "Poor fellow! his haggard face haunts me like a ghost."

"But," said Mrs. Howard, "much as I love Ralph, much as I respect his high, honourable character, I cannot hold him blameless."

"What!" exclaimed Mr. Morrison, in a tone of surprise, "you cannot hold him blameless? Why, what can you see wrong in anything he has done?"

"He should not have married as he did," replied Mrs. Howard; "or if determined to gratify his fancy at the expense of his judgment, by yielding to an infatuation, he should have had more patience with his wife. If he felt willing to trust his happiness in the hands of a petted, spoiled child, he should have remembered what she was, in the hour of trial, and not exacted of her the ability and judgment which are possessed only by a sensible, well-trained woman."

"Yes, you are right," answered Mr. Morrison, after a short pause; "he was wrong in the first place—he never should have married such a child. But," he exclaimed, impatiently, "any woman who was lucky enough to get such a noble husband as Ralph Murray, should have been so proud of him as to have been willing to have made every sacrifice of whim and caprice for his comfort."

"That's true man's reasoning," said Mrs. Howard, good-naturedly. "But, Mr. Morrison, I think I am not mistaken when I say that if Ralph had managed his pretty, petted, capricious fairy of a wife patiently and properly, their happiness would not have been wrecked as it is."

"Their happiness!" repeated Mr. Morrison, sincerely. "Little she cares, while she has aunt to caress her and uncle's money to spend."

"Indeed, you do her great injustice," said Mrs. Howard. "To be sure, I do not know Mrs. Murray intimately, but I am certain if you were to see her pale, wretched face, and frail figure, as I do daily in the corridor, when they lead her in, half fainting, from the bath, you would think as I do—that let her husband's sufferings be ever so great, the wife suffers quite as much. Oh, my dear Mr. Morrison, how I wish I were Edda Murray's friend."

"What would you do, my dear madam? Add another to her host of sympathizers?" said the old gentleman.

"No," replied Mrs. Howard, mildly; "I would tell her to send for Ralph, to ask pardon for the past and patience for the future, and beg him to take me once more to his heart, and help me to be a good, faithful wife. Thus she must do, or never know peace in this life."

"Ha! ha!" laughed Mr. Morrison; "why, my dear Mrs. Howard, if she had sense and feeling enough to act thus, she would never have behaved as she has done."

"Edda Murray has acted wilfully and selfishly, I admit," said Mrs. Howard; "but we do not know what provocations she may have had. Ralph

## THE PHANTOM LIGHT.

is a fine, noble fellow, but arbitrary and impatient—the very kind of man that I should fancy it would not be easy to make happy in domestic life even if a judicious woman were to undertake the task. Think, then, how many excuses should be made for his impulsive, wayward little wife, who never in her life was subjected to control."

Just then, Mr. Howard and some others joined them, and after a little playful bantering about the flirtation of two such steady old persons, a remark or two on the fine night, and the beauty of the ocean scene, the party moved off, and Edda at last was alone.

That night, when Mr. and Mrs. Martin stopped at Edda's room door on their way to bed, they found her sitting at her desk writing. She kissed them, bade them good night, and thanked them for their affectionate inquiries in a more cheerful manner than she had shown for months, which gladdened their silly, warm old hearts; and they went off comforting themselves with the hope that all now would be well.

"Yes, my dear," said Mr. Martin, as he composed himself to sleep, "you were right—Edda is getting over it. She looked and talked more brightly than she has since poor little Martin's death."

And Edda really felt so; but for a reason her uncle little suspected. Mrs. Howard's words had given form and impulse to her thoughts; she no longer wasted time in mere actionless grief; she saw her duty before her and, hard as it was to perform, she nobly resolved to do it. A day or so afterward, as Ralph Murray was leaving town for his new home—sad, lonely and for the first time feeling that may be in the past he had not been entirely free from blame, he received a letter, directed in the delicate, lady-like hand-writing of his wife. With trembling hands he opened it, and thick, short sobs swelled up in his throat, and hot tears sprang to his eyes as he read her childish, frank, penitent appeal.

"I am your wife, Ralph," she wrote; "you must not leave me—you must take me with you. God joined us; and trouble—death, has bound us still closer. Pardon my waywardness, and take your patient, suffering Edda back to your heart. Think what reckless, thoughtless, uncontrolled child I was when you married me, and have patience with me. I cannot live without you, Ralph. I shall die broken-hearted if you treat my selfish, wayward conduct as it merits. Come to me, and let me hear from your lips once more, 'Dear Edda!' Do not tell me you are poor; I can live on anything, submit to any privation, if blessed with your presence, your forgiveness, your love. You shall not find me in the future a thoughtless extravagant child, but, with God's help, a faithful wife! Oh, Ralph, receive me once more, I pray you, and let me be again your, ever-loving little wife Edda!"

The fashionable world was thrown into a state of astonishment a few weeks afterwards, by hearing that Mrs. Murray had actually gone with her "cruel, good-for-nothing husband;" and a thousand different stories told about the matter, each one as far from the truth as the other.

Poor Mr. and Mrs. Martin made loud opposition when Edda told them her resolve; but she looked so bright and happy, and throwing her arms around her aunt and uncle, made them read the lover-like letter of her husband, in which he not only freely forgave the past, but took on himself all the blame.

"She's right, my dear," said Mr. Martin to his wife; "but we must not let them go—we must make them as comfortable as we can with us. Thank Providence, I have enough for us all!"

But Ralph Murray steadily refused all offers of assistance from Mr. Martin. He knew it would be better for them, for a little while, at least, to be away from all Edda's old connections.

Several years passed, and not until they had nearly reached mid-life did they return to their old home; then, at the urgent request of Mr. and Mrs. Martin, who had grown old, infirm, and tired of society, and really needed Edda, they moved back. Edda was a lovely-looking matron at the time of her return—she seemed so happy and contented. I well remember the pleasant effect it produced upon me when I saw her surrounded by her noble children, and leaning on her husband, who still retained his dignity; but blest with it was an air of loving softness that he had gained by intercourse with his gentle, "darling little wife."

Her married life, even after their reconciliation, however, was not exempt from trials. There were times when her husband's old moods of exaction and impatience would come over him, and her own wilful, rebellious spirit would stand in the way, and torment her with demands, such as "What right has he more than I?" and the like—as if the gratification of rights, merely for justice' sake, made up the happiness of home life, a happiness that is only gained, only insured, by love's sweet yieldings. They both tried to struggle against these dark influences; but at such times life would be very dreary to her, and it needed all the strict discipline of her faith—all her hope and trust in Heaven, to make her victorious over self.

Their children, however, proved angel-blessings to them. They softened and humanized Ralph, and soothed and occupied Edda. Dear Edda! her spring season had been a wild, frolicsome one, bringing a stormy, cloudy summer; but her autumn yielded a rich harvest of happiness, and her little throbbing heart thanked God hourly for His kindness and love to her, sustaining her through all her dark hours.

**HOW TO DECIPHER A RUNNING HAND.**—When a friend at Glasgow writes to you about what looks like the "Cluuluug Cuuuuum," you may safely conjecture that he means the "Chamber of Commerce." When he speaks of a pamphlet by "M. de Cuuuuul," you know something of the writer's drift, and of the person named, conjecture that it is "de Cormenin" of whom he writes; but how the deuce are you to guess that "Sunuuluuuuu" is "Scarcino," somewhere within a day's journey of Florence; or how even decipher, in the hand of some new correspondent, that "S. S. TIMMUNN" is Mr. "J. G. Williams?"—*Spectator.*

## THE PHANTOM LIGHT:

A CHRISTMAS STORY.—BY FITZ-JAMES O'BRIEN.

(used from Page 6.)

"AGATHA!" cried Uncle Tot—whose thoughts, by a transition natural to him, had reverted quickly from the serious matters on which he had been just conversing, to his favourite inventions—"Agatha, I have made a great improvement in my bellows."

Mrs. Tregar, roused from her reverie by this abrupt address, looked up and smiled at her simple-minded brother's announcement.

"It will be a perfect bellows, now," continued he, rubbing his hands pleasantly—"double action—sustaining power. I must explain it thoroughly to you, Agatha."

Mrs. Tregar still smiled; for the previous history of this bellows of Uncle Tot's was of rather a striking nature. It blew every fire out that it was applied to—it was such a wonderful bellows! On the first day of its completion, Uncle Tot made a grand entry into the kitchen, and installed it before the fire-place, in order to display its powers to the servants. Whether the bellows was at the bottom of it, or not; or whether the fire was incensed to being blown by such a new-fangled thing, instead of the sober, old-fashioned bellows it was accustomed to, and went out through mere spite, is uncertain; but one fact has been perfectly ascertained, that there was no dinner at the stage that day until five o'clock in the afternoon; and the cook was heard declare, in the most emphatic manner, that "no good could come of it." Ever after, when Uncle Tot would march in triumph to the kitchen, with the bellows under his arm, the cook would interpose her broad person between him and the fire, and distinctly forbid any scientific meddling with her territory. No vestal ever guarded her sacred flame more jealously; and Uncle Tot, in despair at the ignorance of a woman who could not be brought to recognise the advantages of progress, in the construction of bellows, would retire with his invention, and shut himself up in his workshop, in sheer disgust.

"Mamma! mamma! I hear wheels—it must be Arthur!"—a silver voice came ringing through the window, rousing Mrs. Tregar from her reveries, and Uncle Tot from his scientific dreams. There is no sound in nature so full of beauty, or of joy, as the voice of youth. However fine; no tone of art, however exquisitely wrought, human heart so deeply, or breathes such calmness over the tempest-troubled soul. There is something so pure, so fresh, so radiant in it.

## THE PHANTOM LIGHT.

laughing harmonies that ripple around the lips of the young, that one is reminded, irresistibly, of some mountain stream when, leaping from its rocky prison, it warbles in the sunlight and goes sparkling on its way, unsoftened by a single tinge of earth!

"Mamma, mamma, I hear wheels!" and as this announcement came ringing through the casement, a bright and beautiful face, beaming through a shower of chestnut curls, like the sun shining behind a misty veil, presented itself outside. "Do make haste, Uncle Tot, I am sure it is Arthur!"

"You don't mean to say so, Avisia!" exclaimed Uncle Tot, with a tragic start; "how very unfortunate that he should come so soon. I must hurry and fire off my electrical salute. Dear, dear! I shall never be in time, and I would not for the world that Arthur missed having this hearty greeting."

"Come along, then," cried Avisia, shaking her curls impatiently. "You have plenty of time, for Arthur has to cross the cliff yet, and you know he must drive slowly on that narrow path. Your wonderful electrical salute is all prepared, but for goodness sake, Uncle Tot, don't kill anybody, for you know that your inventions are not to be depended on."

"Vizzy, Vizzy, don't be disrespectful, Miss; you are talking about things that you don't understand: women never do understand scientific matters." And with a sort of half-angry smile upon his face, the old gentleman followed the joyous girl along the curved avenue that led to the cottage.

Mr. Arthur Bell, whose anticipated arrival had caused all this commotion, was Uncle Tot's only son, and since boyhood had been betrothed to his pretty cousin Avisia. He was now on his return from Trinity College, where he had just after having taken his degree; and the arrangements for the marriage of the young couple at the ensuing Christmas had been finally settled. Arthur was one of those handsome joyous-spirited young men who, with quick intellects and warm hearts, make their way in the world more by the animal force of their characters than by any intellectual predominance. His every action breathed of the poetry of life, rather than the impulses or workings of the soul. He lived—actively lived, every hour of his existence; but there was little of that inner life, which is the only thing that truly gives to man his guiding power, that specific lightness which irresistibly brings him into communion with things beyond this earth. Arthur was therefore of a physically joyous temperament, but, like all such dispositions, easily depressed by misfortune. He loved Avisia passionately, and with all the force of an energetic nature; but with all his joyousness of character and light-heartedness, a man who could read his species might at once see that the instant adversity wounded his buoyant spirit he would collapse like a rent balloon, and sink back rapidly to earth again.

"We left Uncle Tot and Avisia proceeding to the gates to welcome the young student. The former, however, could not be content with any common-place greeting for his beloved son, and accordingly had planned what we have heard him denominate his "electrical salute!" This was nothing less than a contrivance worked by some mysterious and invisible agency by which the avenue gates should spontaneously fly open to welcome the academical hero; while simultaneously, by the assistance of an electrical machine, a number of guns, cunningly planted in obscure spots of the shrubbery, were to discharge a *feu de joie*. The old saw has it, however, that "Man prop but God disposes," and Uncle Tot's little scheme was frustrated in the simplest manner possible. Everything had been arranged to perfect the electrical train was laid down, and the invisible machinery worked beautifully. All was ready, and Uncle Tot was ready, too, as he passed and down the little esplanade at the end of the avenue.

"The sounds are coming nearer," said Avisia, who was counting anxiously every roll of the wheels. "He must be close to the gate now—quite ready, Uncle Tot?"

"Oh! quite ready, Vizzy, quite. The moment the gate flies open I shall discharge the electrical vial, and then it will be such a salute! Hark! there go the gates. Now, Vizzy, stand by, girl! here goes!"

So saying, Uncle Tot discharged the machine, and a peal of musketry rang through the trees and died away in rumbling echoes amid the hills; high above the loud report of the guns arose the wail of a human voice, mingled with moans and piteous exclamations.

"Oh dear, I have shot him!" cried Uncle Tot, turning pale, and running up the avenue as fast as he could, followed by Avisia, who seemed wild with apprehension. Just inside the gate a lamentable object met their view: a large old-fashioned gig lay overturned in the middle of the road, while a small pale-faced man was kneeling with his head buried in one of the cushions, and uttering the most heart-rending ejaculations.

"Thank Heaven it is not Arthur!" exclaimed Avisia, sinking on the green bank that bordered the gravel path.

"Are you hurt?—are you killed? Why don't you answer me?" shouted Uncle Tot, to the kneeling figure.

"Don't, gentlemen, if you please; don't murder me outright—for sure I have a wife and six children at home, gentlemen; and what on earth would they do if I was gone? I won't look at you, gentlemen, I won't, indeed, only don't massacre me altogether!" and the small man nearly suffocated himself by endeavouring to dig his head farther into the cushions of the prostrate vehicle.

"Get up, you fool, and tell me whether you are injured," exclaimed Uncle Tot, still more angrily. "What are you kneeling whining there for? I'm not going to murder you; no one is going to murder you."

"I never done anything but I was bid to do it," continued the little individual, evidently so terrified as to be incapable of distinguishing what was said; "and if I shrug the Widow Boohane's pig for the rent, it was only because I had strict orders from the misthribs to do it—strict orders." He repeated two or three times, as if to impress it more forcibly on his audience.

"Deuce take you and the Widow Boohane," said Uncle Tot, going up to him and shaking him roughly by the shoulder. "You ought to be ashamed of yourself, Collins, for being such a coward."

By this time the little man's senses appeared to be returning, for he raised his head with a frightened air, and looked up into Uncle Tot's face with a bewildered stare. "May I nivir die," he repeated slowly, as the well-known features met his glance; "may I nivir die if it isn't Mister Tot?"

"You took time enough to find that out, Collins," said the old gentleman, smiling; "who did you think it was?"

"Bewor. your honour, I thought it must be some of the boys who were taking a snoot at me out of riving for my distraining two or three of the tinants for the cunt. An' so 'twas only a thriok, after all, Mister Tot. God be between us an' harm, but I was full sure I was fairly riddled."

By this time Mrs. Tregar and the servants had come up, attracted by the report of the guns, and the diminutive land bailiff, in whom a little terror was natural under the circumstances, considering that he lived in daily fear of being assassinated by some of Mrs. Tregar's refractory tenants, was quite reassured of his safety; and with some assistance his antiquated gig and equally ancient horse were once more placed upon their proper foundations.

In the midst of this confusion, and inquiries and wonderings as to what had detained the expected arrival, the boughs of a screen of evergreen oak were pushed suddenly aside, and a tall, handsome young man stepped suddenly out upon the group.

"Hallo! Arthur, my boy, how are you?—arrived at last!" this was Uncle Tot's exclamation, as he caught the young man's hand and shook it warmly.

"God bless you, father—and aunt, how are you?—Avisia, my own little pet, give me my greeting kiss. 'Here I am at last!'—and with a joyous voice and bright face Arthur Bell greeted all, and had some kindly word or hearty speech for each.

"What detained you, Arthur?" inquired Uncle Tot, looking the picture of happiness. "You were a minute too late for my electrical salute."

"What! another experiment, father?" and Arthur smiled as he stood with one arm twined round Avisia's waist, and the other clasping Mrs. Tregar's hand.

"It would have been a splendid thing, Arthur—it was a fine idea, but—" and Uncle Tot stopped suddenly, for his eye fell upon Mr. Collins's rueful countenance, and a slight twinge of remorse staved the recapitulation of the wonders of his electrical salute.

"What detained you so long, Arthur? and where is your vehicle?" asked Avisia.

"Why, the fact of the matter is, that I've had an adventure. Just imagine my being only an hour in the country and to have a most romantic adventure with a very beautiful young lady—don't be jealous, Avisia, but she really

"Indeed—do tell me about it, Arthur. Who was it? where did it happen? and is she so very charming?"

"One thing at a time, my pet, I'll only get one tongue, you know. Let you know Ardagh wood. I was driving along slowly, for my horse had lost a shoe, and just as I was passing the stile that leads to the Holy Well where all the madmen go to pray, I saw a lady walking quickly up the pathway, followed by a wild-looking ragged man, who was gesticulating violently, and flourishing a large stick above her head. She was very frightened, and appeared frightened, but did not address her persecutor; the moment, however, she caught sight of me, she quickened her pace to a run, and screamed for assistance. When the man saw this, he caught her by the skirt with a wild shout, and in the effort to escape she fell. The man was becoming every moment more excited, and she was now completely in his power. So, throwing the reins to the servant, I jumped off and ran up the path, and reached her just as the wretch had his hands upon her throat. I gave him a blow that completely stunned him, and before the fellow could recover I had placed the lady in my gig. Though not much alarmed she felt rather faint, and as I learned that she lived close to this I have made my servant drive her home. Indeed, I expect him back every moment."

"And the lady's name, you forgot that," said Mrs. Tregar.

"Miss Helen Saville, the daughter and heiress of the rich merchant who lived opposite, and who died a few months back."

"The woman who holds our fortune in her hands," murmured Mrs. Tregar to herself. "Heaven send that this incident may make her friendly towards us; but there is no trusting those new people, they are all harsh and money-getting."

"Why, aunt, you look sad over the matter; come, no presentiments or gloomy faces admitted here to-day. Let us go on to the house, there are lots of old friends there I am anxious to see. The poet's son, and Doual Bairrett, and old Neptune. I have work before me, aunt, come along."

"Go on, my boy, you must not mind your poor aunt's gloomy face. I am old, and life is behind me and does not light my brow; it is shining full upon you, Arthur, and it were a pity to intercept a single ray."

But as the group moved on towards the cottage there was sadness at the bottom of two hearts. One of those unaccountable presentiments of evil which we so often experience but cannot explain, weighed heavily upon the spirits of Avisia and her mother.

(Continued in No. 3.)

ARTISTS display queer taste, now and then. We saw a papier-mache tea-tray the other day, in which a mother-of-pearl palace was being consumed with silver-coloured flames; while a gut-edged fireman stood on a pink fence, endeavouring to extinguish the conflagration with a bucket of emerald dust. Queer jumble, wasn't it?—Dutchman.

## SHADOW AND SUNSHINE!

OR, WHO SHALL WIN?

BY CHARLES CRAYON.—(Continued from page 9.)

"DURING the day Morton called at a noted firm of brokers of real-estate in the city, and negotiated with them for the sale of a portion of his property which was situated in another part of the city. This done, in accordance with his resolution, he devoted his time and talents exclusively to professional duties; and, by unremitting labours, sought to win a high name among the practitioners of his native city. His high talents and close application could not fail to bring him into still more general notice, and his object seemed fast being accomplished, when an event occurred which changed materially the course of his life.

Late one evening, several months after his last conversation with Duval, he received a summons to visit an old man who had been suddenly attacked with a violent disease, and it was thought could not survive unless speedy assistance was obtained. Ever prompt in the discharge of his duties, the young physician determined to answer the summons with alacrity. Hastily preparing himself, he set out on his visit. As the evening was calm and pleasant he chose to walk, and he soon reached the home of his patient. He was an old man—he had reached the bounds of human existence. His limbs were feeble and weak, and his locks were white as the driven snow. For more than three score years and ten he had trod the earth, and those long passing years had all been devoted to the pursuit of gold. Long and eagerly he had toiled, in season and out of season, for his favourite object; and he had been successful. Mammon had been his idol; he had proved an obedient slave to all her commands, and she had rewarded him by pouring lavishly into his hand of all the good she had to bestow. Well-filled coffers and broad domains were his; but what availed they now? The death angel was flapping his broad wings over him, and all his glittering treasure could not for one moment delay his dread journey through the dark valley.

When the physician arrived, he found his patient so far gone that earthly aid could not restore him. In vain he pleads for more time—for a day, yes, for an hour; all that could be done was to administer a few cordials which might soothe some of his pains. But these could not stay the destroyer's hand; and when the appointed time came, the spirit fled for ever from its earthly habitation.

Slowly the young physician turned his steps homeward, reflecting on the event he had just witnessed.

"Of what use," said he, "is the gaudy tinsel of wealth with which we strive to surround ourselves? Will it soothe the ills of life, or render us stronger in the last conflict? No! The consciousness of having dealt honestly with our fellows, and mercifully with the distressed, will then be our richest consolation."

At this moment a form suddenly sprang from an alley our hero was passing; the light of the moon revealed a swarthy countenance—a bright blade glittered in the moonlight, swiftly it descended, and had not a sudden movement on his part arrested it, the next moment it had drank the very life-blood of Henry Morton. With one hand he wrenched the dagger from the assassin's grasp, and with the other dealt him a blow which dashed him to the earth, and had well-nigh deprived him of life. Then, reflecting on the strange occurrence, he hastily turned his steps homeward.—(See engraving, p. 8.)

## CHAPTER IV.

"A change came o'er the spirit of my dream."—BYRON.

"STRANGE, mysterious!" soliloquised Morton, the morning after the events related in the last chapter. "I should not have fancied that I had an enemy in the world, unless it were Duval, and I am sure he would not be so foolhardy as to attempt my life."

The speaker suddenly arose, and opening a drawer, drew from it a dagger, which he examined very minutely. It was mounted with silver; the handle was of polished ivory, and the bright steel glistened in the morning air, except a few faint spots where marks of blood were distinctly visible.

"So this is the weapon which was intended to end my existence. It is fortunate that I retained it, as it may prove a clue to the perpetrator of the deed. Marks of blood visible upon it, too!—so it has been used before. But one thing is certain, if it is ever drawn again, it shall be in self-defence."

At this moment the morning paper was brought in by the servant. Hastily restoring the dagger to its place, Morton seized it, and began to peruse it attentively. He had hardly glanced over it, when his eye fell upon the following paragraph—

"MYSTERIOUS OCCURRENCE.—It is with the feelings of the deepest sorrow we are compelled to announce that our hitherto quiet city was last night made the scene of one of the most revolting tragedies it has ever been our painful duty to record. And what renders the circumstance the more painful, is, that no possible motive can be assigned for the wicked deed. At daylight this morning, as the policeman of the —th division was performing his duty, he discovered, a short distance from his station, an object which attracted his attention. On examination, it was found to be the body of a man, and his garments were literally soaked in blood. A wound, apparently caused by a dagger, or some other pointed weapon, was found in the region of the heart. A large sum of money, and several valuable papers were found about the person; so it is evident that the hope of gain was not the motive that caused the deed. An inquest has been held upon the body, (which has not yet been recognised,) and the verdict found—'Came to his death by being violently assaulted, and wounded in the heart by some person or persons unknown.'"

"Singular, very singular!" ejaculated Morton, as he read the paragraph. "So it seems that mine was not the only murder committed last night; and had it not been for a simple circumstance, I should have been surprised to find it appearing in the paper this morning in the same connection. The deed was perpetrated with the same weapon as mine, and I was to have been sacrificed with; and as no plausible reason can be given for it, so I am utterly at a loss to imagine the motive which could prompt any one to assassinate me. It is all dark—all wrapped in mystery. But time, the great leveller, will explain it all; so I must wait patiently for it to do so. Would I had some confidential friend of whom to ask advice. Surely I must be circumspect and wary; for the hand which sought my blood is still unfettered."

At this moment our hero's soliloquy was suddenly interrupted by the appearance of a man, who entered quite unceremoniously, as if he knew his business, and intended to proceed to it immediately. There was a peculiar expression upon his countenance as he bowed low and inquired—

"Do I address Mr. Morton?"

"My name, sir," was the brief reply.

"Mr. Henry Morton?"

"The same, sir."

"You are a physician, I believe?"

"You seem rather curious, sir," said Morton, sharply.

"Perhaps so; but I assure you it is all in the way of business."

"Well, since you are so anxious to hear, I am a physician."

"Then, Dr. Morton, I am compelled to inform you that you are my prisoner."

"Sir!" exclaimed the young man, springing to his feet.

"Pardon me, doctor," said the other calmly, "but I am directed to arrest you."

"And pray, sir, who may you be?"

"I am the chief constable of this city."

"What crime is attributed to me, sir?" inquired Morton, sternly.

"That of murder, I believe," replied the officer, looking him steadily in the face.

"Murder!" he exclaimed, with unfeigned surprise.

"Yes, sir," replied the officer, almost convinced, from his manner, that he was an innocent man.

With a desperate effort Morton grew comparatively calm, and quietly remarked to his visitor—

"Of course, sir, you do not suppose that I shall accompany you without some further token of your authority."

"Oh, no; by no means. Here is the warrant—all correctly made out, I believe—which I was ordered to serve on you."

Morton glanced over the document, and in a moment he was satisfied of its identity.

"And are you now so far satisfied that you are in readiness to accompany me?" interrogated the officer.

"Wait a moment, sir; I wish for further information," said the young man who had found his situation so materially changed within a few moments. All his agitation had now vanished, and a stranger would not have imagined that they were transacting business of more than ordinary importance.

"Now, doctor, be as brief as possible, for I am hardly warranted in this delay," ejaculated his unwelcome visitor.

"Very well, sir, I will be brief, for you officials have certainly a summary mode of operation. In the first place, then, I wish to be informed of whose murder I am accused."

"The party is a stranger; I think you might have noticed the account of it in the morning paper, if you was informed of it in no other way," replied the man of the law, smiling significantly.

"True, I had just been perusing an account of it; but I assure you I had never thought of it in that connection."

"Do not stop to make protestations, if you please; but proceed as soon as possible."

"Then I would ask, on what evidence of guilt I am arrested?"

"An individual has presented himself at the police-office, who is ready to testify that he met you at a late hour last evening, in company with the murdered man."

"And who is he, who is ready to swear to such an untruth?"

"I am not at liberty to reveal the person's name."

"And upon this evidence I am arrested for murder?"

"Yes, sir; the evidence was deemed sufficient to warrant your being taken into custody."

"Very well, sir, if this is justice I am ready to submit to it," said Morton, haughtily. "But it is hard," he added, in an altered manner, a moment after, "hard to have one's hopes thus crushed and such a weight cast upon my soul. But my reputation is already stained, and what more have I to hope for? Sir, I am ready to follow you."

At a signal from the officer, two of his assistants, who had been waiting without during this colloquy, entered the room. As Morton was making preparations to depart, one of them approached the drawer spoken of in another part of this chapter.

"And pray, doctor, may I inquire the use to which this is assigned?"

"That is my instrument case," replied the prisoner, briefly.

"Then I think we must take a peep at your instruments," said the first speaker, with biting sarcasm.

He drew open the drawer, and the first objects that met his view, was the dagger stained with blood.

"Hieyday, Doctor Morton, so this is one of your professional instruments, is it? May I ask if you are in the habit of operating with it?"

"Thanks, many thanks for your kindness! for I find at this time that true friends are rare indeed. And there are no persons now, whose counsels and advice could be more welcome, than those of one so dear to my father as yourself, and one who stands so high in my esteem as your companion."—See p. 25.

The person addressed knew that to reply must be useless; so he maintained silence. The other officials eagerly examined the weapon.

"This does not argue strongly for your innocence," said the first.

"Drops of blood on it, too!" said the second; "that has been used."

"You know the paper stated that the wound was apparently made by a dagger," added the third. "Young man, your case looks dark."

"Gefahren," said Morton, calmly, "I would thank you to bear in mind that this is not a court-room, and if you have taunted me sufficiently, I am now ready to follow you."

"By all means," replied the officer, "but let that instrument be preserved. It may serve to throw some light on the affair. And now, doctor, if you are in readiness we will depart immediately."

The door of the office was secured,—a carriage was called,—in a few moments the jail was reached, and Henry Morton, the wealthy and the gifted young physician, occupied the cell of a felon. Who shall describe his feelings? Who shall tell of the high hopes that were crushed, and the noble aspirations that moment destroyed? The cold heartless world may philosophise on such a scene; but when it comes down to the stern, dark reality, where is the earthly power that can sustain the spirit in such an ordeal?

## CHAPTER V.

"Is it not monstrous that this player here,  
But in a fiction, a dream of passion,  
Could force his soul so to his own conceit?  
And all for nothing!"

In a well-furnished room, in a quiet part of the city, a young man was sitting. His features were regular, his hair was glossy and black as the raven, and his apparel, though of costly material, was unadorned by any of the ornaments then so much in vogue. He might have been twenty-five years of age; and the only feature calculated to attract attention was his eyes, which were dark and piercing, and which, he who had looked upon them, would not soon forget.

As we have said, he was seated in a well-furnished room; and from the impatient glances he ever and anon cast at the door, it was apparent that he was expecting some one. Nor was he compelled to wait long, for in a few moments a rap was heard upon the door.

"Come in," was the only answer; and the next moment Duval entered the room.

"So, Ned, you are here, are you?" ejaculated that worthy; "I trust I am not kept yet waiting."

"Only a short time," replied the other; "I believe nine was the hour."

"True, and it is now past by just fourteen minutes," replied Duval,

glancing at his elegant repeater. "Mr. Penning, you are a punctual man."

"I wish I could conscientiously return the compliment," replied the other, smiling. "But my love for the truth will not permit me to praise my friend at its expense."

"No, Ned, I presume not. I am aware that your love for veracity is very strong—but enough of this. Are you sure that we are alone?"

"Certainly I am."

"Very well. The fact is, Ned, I am in the best of spirits to-night."

"So I should think."

"And in fact I have reasons to be in good spirits now."

"Undoubtedly; I advise you to put me in possession of those reasons, for the sake of seeing whether they will have the same effect upon me."

"Just what I am about to do. Now, Ned, you know I have always made a confidant of you, and related events to you which no other person ever heard from my lips."

"Undoubtedly."

"And as our interests are mutual, and you are a friend in whom I can trust, I shall continue to do so."

"Proceed; I am all attention."

"A truce to your joking now. Do be serious once in your life."

"Who insinuates that I am not a serious man?" said the other, with a countenance somewhere between a smile and a frown.

"Well, well! Now, Ned, you know you are somewhat acquainted with my past history."

"Somewhat."

"And so you can well imagine that there are some pages of it which might not be agreeable to have universally known."

"Yes, I think that might prove unhealthy."

"Something more. You know it might prove dangerous."

"No, I was not speaking of the jokes; I was speaking of hanging altogether a different character."

"Hang your jokes, Ned."

"No, I was not speaking of the jokes; I was speaking of hanging altogether a different character."

"Well, well; do talk sense, man," said Duval, impatiently.

"Go on, now; I will be as solemn as you please."

"Then, as I was saying, you know it would not be agreeable to have all my history known."

"Very true."

"Well, Ned, there were two persons yesterday at this hour in possession of facts concerning me which I felt it dangerous for any one besides myself to know."

"Except your humble servant."

"Certainly. Well, congratulate me on the fact that one of them is where men tell no tales, and the other is in a fair way to follow him soon."

"Indeed. How did you arrange the matter?"

"Steel fixed the one, and if the affair is managed cautiously, hemp will quiet the other."

"But where is he now?"

"In the city jail, awaiting his trial for murder."

"Ah! I begin to understand. Young Morton is out."

"Very true."

"And the other—"

"Was the stranger who died last night."

"Now I apprehend your meaning. But if steel would silence the one, why did you not use it upon the other?"

"So I did attempt to; but either he was too wary, or the person I employed to do the job was too awkward."

"How so?"

"Why, the man was just ready to strike home, when Morton discovered him, and suddenly dashed him upon the sidewalk with so much force that it had nearly settled his business for him."

"That was unfortunate."

"Very, for he not only left him half dead but carried off his dagger. But as matters have turned out, it is all tending to my advantage."

"How did you manage to get him taken into custody?"

"Why, the man he came so near finishing was so vexed that he was ready to take his oath of anything. So he just testified that he met Morton, at a late hour last night, in company with the murdered man."

"Ha! that was well contrived."

"I think so. And what is still more favourable, when he was arrested the dagger was found in his possession, which was intended to rid him of the cares of life."

"And I should think it was now quite as likely to accomplish that object as ever."

"Yes, that is certain. Morton may thank his guardian angel if his days are not numbered."

"From present appearances, I think he will have no great reason to be thankful."

"No; I do not intend that he shall. All is now so arranged that with a little care on my part, his doom is certain."

"So I think."

"But there is one point on which I wish for your assistance."

"And what is that?"

"Testimony."

"Ah, yes! I understand."

"You see we must make a strong case of it, for I must settle his affairs this time. The man I employed is ready to do all he can, and as he is a shrewd fellow, he will aid me considerably."

"That seems favourable."

"So it does. And you will be in readiness to give your unbiased testimony."

"Certainly."

"Very well, then; I will meet you here again a week from to-night."

"All right."

"And, Ned, remember if I am prosperous in this affair, you can name your own reward."

"Pooh! Don't talk of reward now; we will speak of that when this business is settled."

"Well, Ned, you are a noble fellow, and years shall not fail to teach you my gratitude."

"That'll do, Lorenzo; don't, for the sake of my modesty, say any more."

"Well, then, good evening, Ned. Remember, a week from to-night, at eight, and don't fail to bear these matters in mind." And with this speech, Mr. Duval made one of his handsomest bows and left the room.

"Aye, I will not fail to bear them in mind!" exclaimed the other, in a deep, rich voice, the moment he was gone. "You never need caution me to remember, for when I forget you, and your dark deeds, my right hand shall forget her cunning, and my tongue cleave to the roof of my mouth. Ah, Duval, little do you know the cause of my seeming friendship. Little do you think of the foul wrong you once did to one dearer to me than life. But now a game is to be played, and we will see who shall eventually win."

To describe the sensation which the news of Morton's arrest produced among the circle where he was known, would be utterly impossible. The surprise it occasioned among the aristocracy of his native city was without a parallel. And when the report that a dagger, with stains of blood upon it, had been found in his possession, those who had most eagerly sought his society in days past, and had even made the loudest protestations of friendship towards him, shook their heads significantly, and mysteriously said that they were exceedingly sorry, but not at all surprised, for they never had a high opinion of his integrity. Others said that they knew nothing of his character, but they had never fancied him capable of such an enormity, and closed with some very solemn reflections on the wickedness of human hearts in general, and that of the young physician in particular. As is ever true under such circumstances, men did not wait to hear any evidence, or to think carefully upon the matter; consequently they forgot the high and honourable character he had ever sustained, and as a general thing, public opinion was decidedly against him.

But there were some honourable exceptions. There were a few who had known him from boyhood, and in whose view his character was still as fair and unalloyed as ever. These did not desert him in misfortune's dark and gloomy hour, but they visited him despite the taint which had been cast on

his name, and sought to console him by the assurance that he would be left unturned to break the meshes of the net which was cast for him. Among the most active of these were Montrose, the old friend of his youth, and Whitman, a young lawyer. The latter determined to accept of his professional services, as well as the sympathy and support of a friend. What success he did so we reserve for another chapter.

## CHAPTER VI.

"Ay, I had planned full many a sanguine scheme  
Of earthly happiness—romantic schemes,  
And fraught with loveliness;—and it is hard  
To feel the hand of death arrest one's steps,  
Throw a chill blight o'er all one's budding hopes,  
And hurl one's soul untimely to the shades,  
Lost in the gaping gulf of blank oblivion."—H. K. WATTS.

RETURN we now to the prisoner in his lonely cell. With folded arms he was pacing the gloomy apartment, and, as he gazed on the bare granite walls, and the grated window, those indices of his disgrace, the wonted light of his countenance was gone; his brow was dark and passionless as the cold stone at his side, for the warmth and vigour of hope had ceased to animate his soul. The energy and power which had rendered him so calm at his arrest, after the first shock had fallen upon him, was fled, and a dark and reckless despair seemed gathering around his spirit.

But, as he glanced over the dark picture hung before him, he could see one redeeming trait that served to lighten the gloomy scene, and that was the proud consciousness of his innocence.

"Yes," he murmured, "if I am to suffer for the crime of another—if the opprobrium of a murderer is to be cast upon my name, and my persecutors are to triumph in their fiendish purpose, thank God, if I am a sufferer, I suffer an innocent man. But am I in possession of my reason, or do I but dream? Where am I? Can it be true that the light of my life has so suddenly gone out, and that I, whose society was counted by the high and the wealthy, am the occupant of a felon's cell? Yes, it is too true. Would to Heaven that it might prove a dream; but the room, the furniture, and a memory fearfully vivid, all tell me that it is no phantom of a distorted imagination! But, where are now my former friends? Those who professed such regard as to be ready to undergo any sacrifice for my sake? How valuable were their assurances of fidelity! In such an hour as this they do not approach; and are doubtless exulting over my misfortune. Thus goes the world. Hollow and heartless are all its pretensions; false and meaningless as the idle wind. He who trusts it leans on a broken staff. What is there here worth living for? My name is disgraced, my reputation blasted; and even if I am not condemned, wherever I go the finger of scorn will be pointed at me, and men will ever whisper—'Murderer!' when I approach. Could I bear it? No; better far to die, and be free for ever from the wrongs and sufferings of this existence, than to live with my integrity suspected, and such a dark stain cast upon my name. If my character can be vindicated and my innocence proved, so let it be; but if not, I am ready to meet my fate like a man."

Then, throwing himself upon a seat, and burying his face in his hands, he was soon lost in deep thought. How long the reverie might have continued is uncertain, but ere an hour had elapsed it was broken by the entrance of the jailor.

The prisoner cast an impatient glance at him, as if he wished to be left alone. But that official stood regarding him curiously, as if he had no intention of leaving him at present. Morton stood for a moment with folded arms, gazing at him, and then sternly inquired—

"Why do you intrude upon me?"

"I bring you some good news, doctor."

"Don't talk of good news to me. But what is your errand?"

"There are two gentlemen below, who have called to see you. They had a permit to do so; but I thought I would come and inquire if you wished to see them."

"Who are they?"

"I do not know, sir. They merely said they were your friends."

"Friends?"

"Yes, sir."

"Who is my friend? I had enough of them once, but when trouble came, they all forsook me and fled, as the disciples did from their Master."

"They did not give their names; but the old gentleman said, 'Tell him two of his friends have called.'"

"Then one is an elderly man?"

"Yes, a large, portly old gentleman, with grey hair."

"Mr. Montrose, it must be. And the other?"

"Is a young man with dark hair and coal-black eyes."

"Whitman, surely! Show them up immediately."

"I will, sir;" and the obsequious officer withdrew.

In a moment, however, he re-entered. "This way, gentlemen," said he; and our hero's old friend, Montrose, and his young friend, Whitman, stood before him. The moment he saw the sympathy depicted on the countenance of each, he grasped them warmly by the hand, and all his apathy fled.

"My young friend, I cannot express the pain it gives me to meet you under these circumstances," said Montrose; "but I felt that if you ever needed the sympathy of those who esteem you as much as ever, for all the dark cloud which hangs over you, it would be at this hour."

"Thanks, many thanks for your kindness! for I find at this time that true friends are rare indeed. And there are no persons now, whose counsels and advice would be more welcome, than those of one so dear to my father as yourself, and one who stands so high in my esteem as your companion."—See engraving, p. 24.

(Continued in No. 2.)

## THE HOME COMPANION PORTFOLIO.

We strongly recommend to our Subscribers the adoption of the "HOME COMPANION PORTFOLIO," for the preservation of the Weekly Numbers or the Monthly Parts. These Portfolios are made with elastic cords at the back, to hold Fifty-two Numbers, or Twelve Parts, which comprise one Volume. At the end of each year they may be taken out and bound, and the Portfolio may be employed to preserve the Numbers or Parts of the succeeding Volume. The price is TWO SHILLINGS. The outlay will be saved by the preservation of the Numbers, which, hereafter, may be difficult to obtain. The Portfolio is beautifully

embossed, and illuminated with silver, by a new invention introduced by LEIGHTON, SON, & HODGE. It is an ornament for the drawing-room table.—Order of any Bookseller.

The Monthly Parts of the HOME COMPANION (price 5d. or 6d. each) will be issued with the Monthly Magazines. A number will appear weekly, price 1d.

THE HOME COMPANION:  
A WEEKLY MAGAZINE.

As our Second Number is to appear simultaneously with the First, we have scarcely an opportunity of "reporting progress" to those who have already become our friends. But, as the printing of the FIVE HUNDRED THOUSAND copies of our first number necessarily preceded the commencement to print its successor by several days, and as, in making arrangements for the distribution of the first, copies of it strayed about in friendly and commercial channels, we are already able to speak of the unanimous testimonies in our favour, from those who have been privileged by a "peep behind the curtain." Everybody admits the boldness of our experiment—Everybody believes in its success; but some there are who think that a portion of the public may look upon our statement of the gratuitous distribution of FIVE HUNDRED THOUSAND COPIES as a PULP, not as a FACT.

People who DOUBT us, do not KNOW us. And that we may gain the confidence of those who are yet strangers to us, we may state, in confirmation of our previous assertion, that ONE THOUSAND REAMS of paper were supplied for printing No. 1 of the Home Companion by MESSRS. SPALDING & HODGE, of Drury Lane; that MR. MACINTOSH, of Great New Street, machined THREE HUNDRED THOUSAND COPIES; and MR. SILVERLOCK, of 3, Wardrobe Terrace, Doctors' Commons, machined the other TWO HUNDRED THOUSAND COPIES. The names of these parties stand as a guarantee of the truth of the facts stated.

We venture to suggest to the reader, that the establishment of a highly popular Magazine, perfectly free from qualities which render many cheap modern works extremely objectionable, must have an important influence upon the People's welfare. We preach by the pen; and if it be our lot to secure an audience weekly of 250,000 of our country people, we shall use that influence as a sacred trust. We have adopted the *physique* of the most popular of our contemporaries, but have improved upon their *morale*. And, like a faithful Companion, we shall aim to lead on our trusting friends by gentle steps to better tastes.

Those whose friendship we have already gained—whose Companions we already are—may do us kind service by making our existence, our qualities, and our purposes, widely known. We simply want the introduction, we will maintain the acquaintance when once formed. Let therefore the friendly word be spoken now, that our course may be victorious from the FIRST.

Our correspondence with "The Trade" has already proved very encouraging. As a general rule, Booksellers take of No. 2 just one-half of their supply of No. 1. If this proportion prevails throughout, we shall circulate two hundred and fifty thousand of No. 2! This will be a triumphant result.

## THE PROGRESS OF PERIODICAL LITERATURE.

MARTIN LUTHER flung his ink bottle at the head of the Devil. At least we are told that, when tempted by the father of lies and the high priest of ignorance, he drove him from his presence in this manner: and to this day, in confirmation of the story, they show us the splash made by the ink on the walls of his study. This is not altogether a fable; there is a great truth shadowed forth in this dreamy reverie of the enthusiastic reformer. To drive away the mists of prejudice, to draw aside the veil from ignorance, to dispel falsehood and error, and to array truth in all its brightness, there has never yet been found any weapon so powerful as the ink bottle; and the invention of printing has furnished us with the means of flinging our ink bottle in every direction, wherever error shall rear its head. It is upon this vantage ground that the men of modern times take their stand; through this mighty engine, mountains of paper, and oceans of ink, carry truth into the homes of all. And we ourselves hope to be the cherished Companion of many a Home into which we shall endeavour to convey useful knowledge and pleasant recreation, and thus add to the comforts of many a domestic hearth.

The increase of literature in general, and of periodical literature in particular, is one of the most striking evidences of the progress of civilization. It is for the millions that men now write; to create a taste for reading among the comparatively uneducated; to place before them sound and valuable information in a pleasing form; to beguile the fancy while the intellect is roused and stimulated; to lead them away from sensual pursuits and amusements to the higher pleasures of intellectual enjoyment; to improve the moral and the intellectual man; are objects worthy of the highest talents that man can boast. And many are the labourers in this great work. It is true there are men now, as there always have been, who oppose this spread of information, who dread the enlightenment of the masses of the people, and would prevent any kind of instruction but such as may be suited to their own prejudices, and be based upon their own dogmas. But we say with Milton, "Though all the winds of doctrine were let loose to play upon the earth, so Truth be in the field, we do injuriously, by licensing and prohibiting, to misdoubt her strength. Let her and Falsehood grapple; and who ever knew Truth put to the worse in a free and open encounter?"

This free and open encounter of all kinds of opinions and doctrines is now in progress. Our press is free. The restrictions and prohibitions by which, in former days, it was sought to cabin and confine the workings of human thought, have long since been removed. We no longer think of limiting the number of printers in the nation, as was the case in the reign of Elizabeth, when, by an order of Council, it was directed that there should be no more than thirty printing-houses in the cities of London and Westminster; one at the University of Oxford, and one at the University of Cambridge. It would scarcely be thought a likely means of obtaining the favours of the Government of the present day to furnish them with "a complete and private list of all the printing-houses in and about the cities of London and Westminster, together with the printers' names, what newspapers they print, and where they are to be found; also an account of the printing-houses of the several corporation towns in England, most humbly laid before the Right Honourable the Lord Viscount Townshend." And yet this document, with its accompanying letter, procured Samuel Negus a letter-carrier's place in the post-office. This list was made in 1724; we learn from it that at that time there were 75 printing establishments in London and Westminster; they are divided according to their supposed political opinions, and we have 31 "known to be well affected to King George;" 3 "nonjurors;" 37 "said to be High Flyers;" and 4 "Roman Catholics." Mr. Negus, the compiler of the list, seems to think it excessively hard that a man of his loyalty should not be able to succeed in his business; he had been "a printer about twenty-three years, but have not been for myself above two years, in which time I have suffered very much for want of employ." And he regrets exceedingly "it is impossible to reduce the number of printers to what once they were; yet I would humbly inform your lordship, that there are many of them who give great offence and disturbance to the State, and who never have been brought up to that business, and ought to be put down." A different state of affairs now prevails; every appliance that capital, science, art, or mechanical ingenuity can bring into operation, is directed to the multiplication of copies; and these can scarcely keep pace with the demand. Efforts are making on all sides to remove the fiscal regulations which interfere with the spread of knowledge, such as the tax on paper, which upon our first number alone amounted to £125, a sum that we would have preferred employing in the increased reward of the literary and artistic talent displayed in our pages.

During the literary darkness of the feudal ages, knowledge, such as it existed in those days, was confined almost exclusively to the cloister. The wandering minstrels and troubadours sang deeds of love and war in the halls of the baronial lords; a weary pilgrim recited tales of distant lands; sometimes, in the hut of a lowly serf, but anything like general information was wanting. It was not until after the Crusades, in the time of Edward I., that paper was used, even in epistolary correspondence. We are indebted to our communication with the East for this most valuable article. At this time, all letters were written in Latin, or in Norman French. It was not until the reign of Henry V. that a letter, even to the most intimate friend, was written in the English language. It was in 1474, in the reign of Edward IV., that the first book issued from the English press; but it was not until nearly two centuries afterwards that any work of a periodical nature was published. Previous to the establishment of printed newspapers it would seem to have been the custom for great families to maintain a correspondent in London, who furnished them with the current news of the day. After a time the practice of

writing News-letters appears to have become a kind of profession, and we find them transmitted not only to people of rank, but to those of inferior condition also, and particularly to keepers of inns and coffee-houses. This practice continued long after the first introduction of printed newspapers, and sometimes the editors of these, in the intervals of their publication, forwarded letters of this kind to some of their correspondents. Several of these News-letters are to be found among the MSS. in the British Museum. Some, written to people of consideration, have been published by Sir Henry Ellis, in his three series of *Original Letters, Illustrative of English History*. We select one of these letters for publication: there is no date to it; and, in the volume in which it is contained, it is inserted between the letters of 1697 and 1699; but it appears from the contents to have been written in June, 1702, a few months after the death of William III. It is addressed to an innkeeper at Andover, and is a curious sample of the meagre kind of intelligence that was afforded to our ancestors in those days:—

For Mr. Robert Hancock, att y<sup>e</sup> Cross Keys, in Andover, in Hampshire. Prank Pa. Burward.

S<sup>r</sup>—The forces on board y<sup>e</sup> fleet, including cadetts and volunteers, are computed at 13,000 men, well appointed, besides which, upon y<sup>e</sup> attempt 8 or 10,000 seamen may be drawn out of y<sup>e</sup> several ships of war. 'Tis said now that a proclamation will be suddenly published for dissolving of the present parliament and calling a new one to meet in Aug. next.

The Parliament of Scotland continue still sitting, and have already, notwithstanding their divisions, past several Acts.

The E. of Rochester, Lord Lieut. of Ireland, will be going thither in Aug. in order to settle affairs there.

The Prince of Denmark is made Captain-general of y<sup>e</sup> Artillery men. Several noblemen are expected here from Edinburgh, being those that dissent from the present Parliament in their opinion, and commonly known to be favourers of the Church of England, amongst them Duke Hamilton y<sup>e</sup> Marquis of Athole, &c. Her Maty is regulating all affairs, in order to go on housekeeping as Queen, beginning of y<sup>e</sup> next month, at which time she will be going to Windsor to spend the long vacation. They continue to press seamen on the River of Thames, who are sent immediately down to the fleet in order to complement y<sup>e</sup> manning of y<sup>e</sup> sea. 'Tis said Admiral Fairborne is gone to reinforce Sir John Munden, who has still some enterprise in view, he being not come back as was reported, but continues still on the Coast of Galicia, which makes people presume he has a prospect of doing some service. This day a proclamation was published for giving 20s. Bounty money to all seamen and able landmen that shall list themselves by the 15th of July next. The term which should end to-morrow is put off till Thursday. S<sup>r</sup> Henry Furness and Gilbert Heathcote, Esq., are chosen and presented to y<sup>e</sup> Court of Aldermen, for them to elect one alderman in the room of Sir John Mow, deceased. The Honble. Philip Herbert, Esq., is made Governor of Sandgate Castle, in the room of Col. Henry Oxenden. This day Wm. Fuller, y<sup>e</sup> notorious impostor, was sentenced to stand in y<sup>e</sup> pillory 3 times, (viz.) next Fryday, at Charing Cross, 2 hours, between y<sup>e</sup> hour of 12 to 3; Saturday, at Chaverry Lane; and on Tuesday, at the Royal Exchange; to be whipt at Bridewell, and kept there to hard labour till the 2nd day of next term; to be fined 3,000 marks, and to be imprisoned till the same be paid. Thursday next he is to go to all the Courts at Westminster, and a paper fast upon him denoting his crimes. Robt. Pince, Esq., and Sir Thomas Power were made this day Sergeants-at-law. The Dutch Ambassadors made their publick entry this evening in great splendour.

[No signature.]

Printed sheets, communicating public intelligence, are said to have been issued in the reign of Elizabeth; but we have no copies of them remaining the authenticity of which can be relied on. In the next reign we have pamphlets published at irregular intervals containing news from different countries; the earliest of these, in the library of the British Museum, bears date in 1619, and is called, "*News from Holland*." In 1622, we have something like a regular weekly newspaper, called "*The News of the Present Week*," edited by Nathaniel Butler." In the time of civil war, home news superseded the news from abroad; and a number of these publications were issued. The court of Charles the First had its organ in the "*Mercurius Aulicus*, a Diurnall, communicating the intelligence and affairs of the court to the rest of the kingdom, beginning the first day of January. Oxford: printed by H. Hall, for W. Webb, bookseller, neere to Queen's Colledge, 1642." It is a small quarto, varying in the number of pages, in which the cause of the king is vehemently defended, and the Parliament attacked with acrimony. The Parliament had its organ also, called, "*A Perfect Diurnall of the Passages in Parliament*." This is also a small quarto copy of eight pages, which appears to have been published weekly. In addition to this, the printer issued a kind of supplementary publication, called "*Speciall Passages, and Certain Information from Several Places*, collected for the use of all that desire to be truly informed." Other titles were, "*England's Memorable Accidents*;" "*The Kingdome's Weekly Intelligencer*, sent abroad to prevent misinformation." And, as the war waxed hotter, and party spirit more violent, there were to be found papers of all kinds and shades, and from all sorts of places.

The subject is so fertile, so important in relation to popular improvement, and so interesting in reference to the commencement of *The Home Companion*, and its enormous issue of 600,000 copies, that we will resume it in our next number.

## HOW "HEZ" GOT EVEN WITH THE LANDLORD. A YANKEE TRICK.

In a quiet little Ohio village, many years ago, was a tavern where the stages always changed, and the passengers expected to get breakfast. The landlord of the said hotel was noted for his tricks upon travellers, who were allowed to get fairly seated at the table, when the driver would blow his horn, (after taking his "horns,") and sing out, "Stage ready, gentlemen!" whereupon the passengers were obliged to hurry out and take their seats, leaving a scarcely tasted breakfast behind them, for which, however, they had to fork over fifty cents! One day, when the stage was approaching the house of this obliging landlord, a passenger said that he had often heard of the landlord's trick, and he was afraid they would not be able to eat any breakfast.

"What!—how? No breakfast!" exclaimed the rest.

"Exactly so, gents, and you may as well keep your seats and tin!"

"Don't they expect passengers to breakfast?"

"Oh, yes! they expect you to it, but not to eat it. I am under the impression that there is an understanding between the landlord and the driver, that for sundry and various drinks, &c., the latter starts before you can scarcely commence eating."

"What on aith are you all talkin' about? Ef you calkelate I'm goin' to pay four-and-ninepence for my breakfast, and not get the valeo on't, yo'me mistakin'," said a voice from a back seat, the owner of which was one Hexekiah Spaulding—though "tew hum" they call him "Hez" for short. "I'm goin' to get my breakfast here, and not pay nary red cent till I do."

"Then you'll be left."

"Not as you knows on, I won't!"

"Well, we'll see," said the other, as the stage drove up to the door, and the landlord, ready "to do the hospitable," says:—

"Breakfast just ready, gents! Take a wash, gents? Here's water, basins, towels, and soap."

After performing their ablutions, they all proceeded to the dining-room, and commenced a fierce onslaught upon the edibles, though Hez took his time. Scarcely had they tasted their coffee, when they heard the unwelcome sound of the horn, and the driver exclaimed—"Stage ready!" Up rose eight grumbling passengers, pay their fifty cents, and take their seats.

"All on board, gents?" inquires the host.

"One missing," said they.

Proceeding to the dining-room, the host finds Hez very coolly he himself to an immense piece of steak, the size of a horse's hip.

"You'll be left, sir! Stage going to start!"

"Wall, I hain't got nothin' to say agin it," draws out Hez.

"Can't wait, sir—better take your seat."

"I'll be gall-darned, ef I dew, nother, till I've got my breakfast! I paid r it, and I am goin' to get the valeo on't; and ef you calkelate I ain't, you are mistakin'."

So the stage did start, and left Hez, who continued his attack upon the edibles. Biscuits, coffee, &c., disappeared before the eyes of the astonished landlord.

"Say, 'Squire, them there cakes is 'bout cat—fetch on another, 'rist on 'em. You," (to the waiter,) "'nother cup of that ef coffee. Pass them eggs. Raise your own pork, 'Squire? This is 'maxin' nice ham. Land 'bout here tolerable cheap, 'Squire? Hain't much maple timber in these parts, hev ye? Dew right smart trade, 'Squire, I calkelate? Don't lay your own eggs, dew ye?" and thus Hez kept quizzing the landlord until he made a hearty meal.

"Say, 'Squire, now I'm 'bout to conclude paying my devowers tew this ere table, but jest give us a bowl of bread and milk to top off with, I'd be much obliged tew ye."

So out goes the landlord and waiter for the bowl, milk, and bread, and sets them before him.

"Spoon, tew, ef you please."

But no spoon could be found. Landlord was sure he had plenty of silver ones lying on the table when the stage stopped.

"Say, dew ye! dew ye think them passengers is goin' to pay ye for a breakfast and not git no compensashun?"

"Ah! what? Do you think any of the passengers took them?"

"Dew I think? No, I don't think, but I'm sartin. Ef they are all as green as yew 'bout here, I'm going to locate immediately, and tew won't."

The landlord rushes out to the stable, and starts a man off after the stage, which had gone about three miles. The man overtakes the stage, and says something to the driver in a low tone. He immediately turns back, and on arriving at the hotel, Hez comes out, takes his seat, and says:—

"How are yew, gents? I'm rotted glad to see yew."

"Can you point out the man you think has the spoons?" asked the ord.

"Pint him out? Sartinly I ken. Say, 'Squire, I paid yew four-and-ninepence for a breakfast, and I calkelate I got the valeo on't! You'll find 'em spoons in the coffee-pot."

Go ahead! All aboard, driver."

LORD ALBEMARLE was the lover of M<sup>lle</sup> Guucher. As they were walking together one evening, he perceived her eyes fixed on a star, and said: "Do not look at it, my dear; I cannot give it you." "Never," said she, "did love express itself more delicately."

A GROUP OF BLOOMERS.—TAKE YOUR CHOICE.

## ONWARD!

**CAPITAL PUNISHMENTS.**—Of the 49 persons sentenced to death during the past year, only 6 were executed, and these were for murder. The decrease in the number of executions since the beginning of the present century is very remarkable. Taking the five decennial periods from 1800 to 1850, the numbers stand:—802, 897, 686, 250, and 107. The greatest number of executions in any one year, within the above fifty years, was in 1801,—when, suddenly doubling the average of the preceding years, the executions rose to 210. The last execution for a simple offence of theft was in 1834, when a convict was executed for stealing to the value of £5 in a dwelling-house. The last execution for any description of theft was in 1836, when 5 persons were executed for robbery and burglary. Since that year, with the exception of three executions for attempts to murder, the last of which was in 1841, murder has been the only offence for which the punishment of death has been inflicted.—*Criminal Statistics of 1850.*

**ELECTRIC CLOCKS.**—London might take a useful hint from the electrical clocks of Berlin. This new invention has given us a clock which, at the same time that it is simple, inexpensive, and readily repaired when out of order, is easily adapted for the conveyance of all sorts of useful signals. For example—it is used in that city as a messenger in case of fire. The communicating wires have been recently completed—and it is now possible to announce the outbreak of fire in any part of the Prussian capital at every engine-station within the walls in a few seconds. The watcher observes the red flame rising against the dark sky. In an instant his hand is on the wires, the message speeds along the electric line, the danger is made known to the proper officers, and in a few minutes all the means of resisting a conflagration at the disposal of a great capital can be brought efficiently to bear on the menaced point. Compare this with our own slow and cumbrous mode! A fire breaks out. No one is on the watch in any central position to give notice. It is discovered as it may chance. When the discovery is made, it is nobody's express duty to run to the fire station. The police, needed to maintain order and protect property on the spot, are content to make a signal of distress, which is rarely heard in the next street. The firemen have to trust to casual information, not only as to the fact of the accident, but as to its exact locality. Through all this improvidence delay is caused, the fire gains head, fears are wantonly created, and property is unnecessarily destroyed. The introduction of electrical clocks and a system of local telegraphs would tend very much to diminish the loss, the fear, and the excitement consequent on this—to some extent unavoidable—incident of great cities.—*Athenæum.*

**BEAUTIFUL THINGS.**—Beautiful things are suggestive of a pure and higher life, and fill us with a mingled love and fear. They have a graciousness that wins us, and an excellence to which we involuntarily do reverence. you are poor, yet pure and modestly aspiring, keep a vase of flowers on your table, and they will help to maintain your dignity, and secure for you consideration and delicacy of behaviour.—*T. T. Lynch.*

**THINGS TO BE FOUND OUT.**—Nature is not exhausted. Within her fertile bosom there may be thousands of substances, yet unknown, as precious as the only recently found gutta serena. To doubt this would be to repudiate the most logical inference afforded by the whole history of the earth. Corn and grapes excepted, nearly all our staples in vegetable food are of comparatively modern discovery. Society had a long existence without tea, cotton, sugar, and potatoes. Who shall say there is not a more nutritious plant than the sugar-cane—a finer root than the potato—a more useful tree than the cotton? Buried wealth lies everywhere in the bowels of the earth.

## BIRTHS, MARRIAGES, AND DEATHS.

On yesternorn, from Sunny-strean  
young a gemma new;  
It joy'd to meet the morning beam,  
And kiss'd the flowers that threw  
Then holed sweets upon a carpet spread—  
A rich repast on which the infant fed.

Same day, within a tiny nest,  
Two little birds  
After warmed them with her  
breast,  
Throughout the happy morn.  
Robin, their father, from a neighbouring tree,  
Proclaimed his welcome of their infancy.

**MARRIAGES.**  
A week ago in Leafy wood,  
Near by the Fairy Glen,  
A lively bud with plumage good,  
Won little Jenny Wren  
Full many suitors sought to gain the b'  
But Jenny gave her heart alone to this.  
A story none round about,  
Of most impassioned loves:  
We've found the pretty secret out—  
A pair of Turtle-doves

And built a nest in Farmer Hodges hay!

**DEATHS.**  
We've heard a most unwelcome tale:  
A Fly with wings of silk,  
Seeking his perched lips to regale,  
Fell in a vat of milk.  
—By a hand heated how evil he was found,  
And lifted out but oh! poor Fly was  
dun

A little Fish that sought the shore,  
Deserted by the tide,  
Was left, to meet it never more,  
And on the rock he died.  
One hour he sparkled in the noon-day sun,  
Another, and his little course was run

Oh, blame me not that I record,  
Such humble seeming things,  
For every moment as it speeds,  
A birth or wedding brings—  
Or some sweet creature, snatched from life  
away,  
Sheds its last tear, and ends its simple lay!

## THE FRETFUL CHILD.

MARY BENNETT.

DEAR, unhappy, fretful child,  
Come, and let us talk a while;  
Tears on your face have sadly spoilt,  
And I cannot see a smile

Brow is frowning, eyes are sad,  
Lips are swollen, words are sour;  
Ah! my darling, this is bad  
Thus to mar the fleeting hour.

Are your tender parents dead?  
Are you ill, in grievous pain?  
Are you destitute of bread?  
Of what woes do you complain?

Are you blind to sun and star—  
Doomed to life-long darkness dear?  
Or deaf and dumb, as many are,  
That no voice of love can hear?

Are you a poor crippled child,  
Such as we have often seen?  
The buttercups spring rich and wild,  
Not for him in pastures green.

He cannot ramble, leap, or run,  
Or chase the butterfly like you;  
Far sadder, my sad ungrateful one!  
Leave fretting, and your blessings view.

God hath given you every good,  
Home, kind friends who love you well,  
Light and clothing, health and food,  
— Blessings more than I can tell.

Oh! it is an evil thing  
For youth, upon its happy way,  
Thankless to be murmuring:  
God made you to be glad and gay.

**WHITE BLACKBERRIES.**—A few weeks since, when passing through the cultivated grounds of the Messrs. Needhams, in West Danvers, which have yielded such an abundance of delicious strawberries the present season, our attention was attracted to some luxuriant bushes, about four feet in height, which we were told yielded a berry—called the *white blackberry*. To-day we have been kindly favoured by the gentlemanly proprietors with a box of this fruit matured. It is not exactly white, but more *white* than *black*, resembling in appearance and taste the fruit of the *malberry* quite as much as the *blackberry*. The luxuriant growth and abundant produce of this shrub make it desirable to be cultivated by those who are ambitious of supplying a variety of the best fruits of the season.—*New England Farmer.*

# ANSWERS TO THE PASTIME OF LAST EVENING.

Page 13.

## ZOOLOGICAL REBUS.

The Hippopotamus first on the right we see.  
And next the Owl perched high upon a tree.  
A Monkey—just above the Elephant is he.

A Camel overlooks the varied group,  
An Ocelot there shows his crouching stoop;  
A Mastiff tamely lies, and looks toward  
The Peacock, of all lovely birds the lord;  
An Antelope doth o'er the Mastiff stand  
Beside a Nylghau—of the Antelope hand.  
The Ibas, goat-like, stands upon a stone,  
Before the Ostrich, swiftest runner known;  
And leaning on the Ibas' horn a Negro's shown.

(Mistake not, gentle Reader, no'er shall we  
Class Negroes with the lower beasts we see:  
But meeting such a man on any strand,  
Would gladly tender him a brother's hand.)

These letters, as we have already told,  
Will to your view quite easily unfold  
The name of that new work which now you hold.  
And as you pass life's varied changes through,  
Needing a guide intelligent and true,  
May we a HOME COMPANION be to you!

## CHARADE—Shake-spear.

### MUMBO JUMBO; OR, THE JUGGLER.

1. He took C from Chair, and it became hair;  
2. He put this C on ape, and it became cape;  
3. He took Cur, and by adding E made it cur;  
4. From Norfolk he took R and made it Norfolk;  
5. He transposed Cork and made it rock;  
6. He omitted E from plume and made plum.

## UNCLE O'S ENIGMA.

### Hydrogen Speaks.

1. Hydrogen, an invisible gas, yet very abundant.
2. The lightest is ever used for balloons.
3. Fire damp.
4. Gas can be easily managed, but if allowed to escape, and light brought in contact, fearful explosions are the result. E. S. explosions of common gas used as light and of fire damp.
5. Oxygen.—Sharp in name and in nature too; wherever the is a pour, are these, for water is composed of Hydrogen and Oxygen.
6. Oxygen, invisible as Hydrogen. Water, from their union, sparkles clearly in the sun.
7. Water changed into invisible vapour, which rises upwards in the atmosphere; the bright golden tint in the clouds at sunset, caused by the refraction of the rays of light on the vapour.
8. Mist or vapour, of the same composition as water, though in the form of vesicles instead of drops.
9. As water.
10. 11. The freezing of water does not change its chemical constituents.
12. As the dew-drop, water spiny.
13. Flame from the evolution of hydrogen burning with the oxygen of the atmosphere. Without hydrogen, and hydrogen would give no flame without a supporter of combustion, that supporter being in the common flame oxygen from the atmosphere.
14. Water—composed of hydrogen and oxygen—useful in putting out flame, which would not rise without it.
15. In pipes containing water, water rises to the level of the fountain.
16. As water—nothing can quench thirst like water. The feverish brow, bathed with water, is refreshed by the coolness caused by evaporation.
17. Plenty of water and its free application, would be the greatest aid to sanitary improvement.
18. Carbon.
19. Common gas used in lighting houses, shops, &c., is hydrogen with a little carbon in it, and the flame is supported by the oxygen of the atmosphere.

## TRANSPOSITION—CHINA ROSE & A SORE CHIN.

### THE CONUNDRUM—A horned Owl.

## ORNITHOLOGICAL REBUS.

Pretty bird, pretty bird, each that I see,  
What is your name? pray tell it to me.  
Then I'll take the initial of each pretty bird,  
And form a short sentence I often have heard.  
The words in that sentence shall only be two,  
Yet three will be heard when 'tis spoken by you.  
You may take one away, and yet two will remain,  
Unaltered in our speech—still meaning the same.  
Read from the second word leftward or right,  
The same shall these words appear to your sight.  
Each bird has my first, is my next, has my third,  
When from its nest its rich music is heard.  
Pretty bird, pretty bird, each that I see,  
What is your name? pray tell it to me.

[Answer in No. 7.]

## CHARADE.

If, in the midst of company,  
My first you chance to mention,  
You'll find that the effect will be  
At once to gain attention.

My second oft in Chaucery,  
Is kept with care paternal,  
My whole is one, whose god like acts  
Have made his name eternal.—E. D. C.

[Answer in No. 7.]

## THE REMARKABLE ADVENTURES OF BARON BRAG.—AN UNNATURAL HISTORY FOUNDED UPON NATURAL HISTORY.

(To be Continued by Us, until Discontinued by the Baron.)

After the first day's experience, the Baron is convinced that many novel ways of sporting may be devised. While looking at the kitchen cullender, a thought strikes him!

The Baron takes the cullender, and conceals himself behind a tree near a wood, waiting for the Woodcocks!

At the Woodcocks fly near, the Baron trusts out his cullender and secures two of them, in a most striking manner!

## OUR CORNER CUPBOARD!

WEET for love, but not for anger; a cold rain will never bring flowers.\*  
 GRACEFUL manners are the outward form of refinement in the mind, and good affections in the heart.

WE hope to grow old, and yet we fear old age; that is, we are willing to live, and afraid to die.

To discover how many idle men there are in a place, all that is necessary is to set two dogs fighting.

LOVE is of the nature of a burning glass, which, kept still in one place, fireth, but changed often, it doth nothing.

WHEN the winds of applause blow fresh and strong, then steer with a steady hand.

THE sweet light of friendship is, like the light of phosphorus, seen plainly when all around is dark.

YOUNG ladies educated to despise mankind, generally finish their studies by running away with footmen.

WHY will next year be the same as last?—Because last year was eighteen hundred and fifty, and the next will be eighteen hundred and fifty-two.

AN Irishman, at a temperance meeting the other night, referring to his standing in society, said that he had been a working-man ever since he was born.

A SMART waiting-woman, in giving an account of the twin children of her mistress, said very innocently, "The dear little things—one looks so much like both, you can't tell 't'other from which!"

WHEN the Persian poet Hafiz was asked by the philosopher Zenda what he was good for, he replied, "Of what use is a flower?"—"A flower is good to smell," said the philosopher—"And I am good to smell it," said the poet.

"ISN'T the world older than it used to be?" said a young hopeful to his senior. "Yes, my son." "Then what do folks mean by old times?" "Go to bed, sonny, that's a good boy, and we'll talk of these things on the morrow."

AT Gibraltar there was a great scarcity of water. An Irish officer said, "He was very easy about the matter, for he had nothing to do with water; if he only got his tea in the morning, and his punch at night, it was all he wanted."

To make money plenty and cheap has been the study of statesmen for the last ten centuries; and yet when a counterfeiter steps in and shows them how it's done, he is bundled off to prison, for a dozen years or more. What an ungrateful world!

FICTITIOUS are revelations not of truth, for they are most unreal, but of that which the soul longs to be true; they are mirrors not of actual human experience, but of human dreams and aspirations of the eternal desires of the heart.

"WHY do you wink at me, sir?" said a beautiful young lady, angrily, to a stranger at a party an evening or two since.—"I beg your pardon, madam," replied the wit, "I winked as men do when looking at the sun—your splendour dazzled my eyes."

"GENTLEMEN of the Jury," said a western lawyer, "I don't mean to insinuate that this man is a covetous person, but I will bet live to one that, if you should bait a steel trap with a new threepenny piece and place it within six inches of his mouth, you would catch his soul."

WIT, like every other power, has its boundaries. Its success depends on the aptitude of others to receive impressions; and that as some bodies, indissoluble by heat, can set the furnace and crucible at defiance, there are minds upon which the rays of fancy may be pointed without effect, and which no fire of sentiment can agitate or exalt.

A YOUNG lawyer who had long paid his court to a young lady, without much advancing his suit, accused her one day of being "insensible to the power of love." "It does not follow," she archely replied, "that I am so, because I am not to be won by the power of attorney." "Forgive me," cried the suitor, "but you should remember that all the votaries of Cupid are solicitors!"

THE sea is the integat of all cemeteries, and its slumberers sleep without monuments. All other grave-yards, in all other lands, show some symbol of distinction between the great and small, the rich and poor; but in that ocean-cemetery the king and the clown, the prince and the peasant, are alike distinguished. The same waves roll over all—the same requiem by the minstrelsy of the ocean is sung to their honour. Over their remains the same storm beats, and the same sun shines; and there, unmarked, the weak and the powerful, the plumed and the unadorned, will sleep on until awakened by the same trump when the sea shall give up its dead.

WHEN the committee of the French Academy were employed in preparing the well-known Academy Dictionary, Cuvier, the celebrated naturalist, came one day into the room where they were holding a session. "Glad to see you, M. Cuvier," said one of the forty; "we have just finished a definition which I think quite satisfactory, but upon which we would like to have your opinion. We have been defining the word Crab, and have explained it thus: Crab, a small red fish, which walks backward." "Perfect, gentlemen," said Cuvier; "only, if you will give me leave, I will make one small observation in Natural History. The crab is not a fish; it is not red, and it does not walk backward. With these exceptions, your definition is excellent."

## OUR MEMORANDUM BOOK!

MILK, so nutritious when taken as food, if injected into the veins acts as a deadly poison.

DEBORAH, from the Hebrew, means bee; Rachel, a sheep; Sarah, a princess; and Hannah, the gracious.

THERE is a plant growing in the springs of Iceland, which not only flowers, but bears seeds in water hot enough to boil an egg.

SOME patient curiosity-hunter has found that the number of grains in a bushel of wheat, weighing sixty-two pounds, is upwards of 699,600.

THE earth and those planets which, with their antellites, form what is called the solar system, move through space at the rate of thirty-five thousand miles an hour.

THE larvae of the "great goat-moth" increase their weight one hundred and forty times in an hour, and, when full grown, are 72,000 times heavier than when first-hatched.

## THE UNBELIEVER'S CREED.

I BELIEVE that there is no God—but that matter is God, and God is matter; and that it is no matter whether there be any God or no.

I believe also that the world was not made—that the world made itself—that it will last for ever, world without end.

I believe that man is a beast—that the soul is the body, and the body is the soul, and that after death there is neither body nor soul.

I believe that there is no religion; that natural religion is the only religion, and that all religion is unnatural.

I believe not in Moses—I believe in the first philosophy—I believe not the Evangelists.

I believe in Chubb, Collins, Tofand, Tindal, Morgan, Maudevilles, Woolston, Hobbe, and Shaftesbury. I believe in Lord Bolingbroke—I believe not in St. Paul.

I believe not in revelation—I believe in tradition—I believe in the Koran—I believe not the Bible—I believe in Socrates—I believe in Satchonathan—I believe in Mahomet—I believe not in Christ.

Lastly, I believe in all unbelief.—Bishop Hume.

much does enter  
 it, repent of sin;  
 only rest to win.

MONDAY—for you  
 Serve the Lord;  
 To the best of you.

what good you  
 with God and  
 is but a sp.

WEDNESDAY—give away and earn;  
 no truth, some good thing for  
 good for ill to turn.

THURSDAY—build your house upon  
 Christ, the mighty corner stone;  
 Whom God helps, his work is done

FRIDAY—for the truth be strong;  
 Own your fault, if in the wrong;  
 Put a bridle on your tongue

SATURDAY—thank God and sing;  
 Tribute to his treasure bring;  
 Be prepared for Terror's king!

Thus your hopes on Jesus cast—  
 Thus let all your weeks be past,  
 And you shall be saved at last.

RE is a shadow; wealth is vanity; and power a pageant; knowledge is ecstatic in enjoyment—perennial in frame—unlimited in space, and infinite in duration. In the performance of its sacred offices, it fears no danger—spares no expense, looks in the volcano, dives into the ocean—perforates the earth—wings its flight into the skies—enriches the globe—explores sea and land—contemplates the distance—examines the minute—comprehends the great—ascends to the sublime—no place too remote for its grasp—no heavens too exalted for its reach.—De Witt Clinton.

## RUNCIC MAXIMS.

A FAITHFUL friend is he who will give me one blow when he has but two. Whilst we live, let us live well; for he a man ever so rich when he lights his fire, death may, perhaps, enter his door before it be burnt out.

Flocks perish: relations die: friends are not immortal: you will die yourself: but I know one thing alone that is out of the reach of fate; and that is, the judgment which is passed upon the dead.

Praise the fineness of the day when it is ended; praise a woman when you have known her; a sword when you have proved it; a maiden after she is married; the ice when once you have crossed it; and the liquor after it is drunk.

Know, that if you have a friend, you ought to visit him often. The road is grown over with grass, the bushes quickly spread over it if it be not constantly travelled.

Be not the first to break with a friend. Sorrow gnaws the heart of him who hath no one to advise with but himself.

HINTS TO MOTHERS.—If you wish to cultivate a gossiping, meddling, censorious spirit in your children, be sure when they come home from church, a visit, or any other place where you do not accompany them, to ply them with questions concerning what everybody wore, how everybody looked, and what everybody said and did—and if you find anything in all this to censure, always do it in their hearing. You may rest assured, if you pursue a course of this kind, they will not return to you unladen with intelligence; and, rather than it should be uninteresting, they will by degrees learn to embellish in such a manner as shall not fail to call forth remarks and expressions of wonder from you. You will, by this course, render the spirit of curiosity—which is so early visible in children, and which, if rightly directed, may be made the instrument of enriching and enlarging their minds—a vehicle of mischief, which shall serve only to narrow them.

ORDERS RECEIVED BY  
MAXWELL & CO.,

## ADVERTISEMENTS.

21, NICHOLAS LANE, LOMBARD STREET, LONDON.

In Weekly Numbers, price 3d., each containing Twenty pages, despatched, and in Monthly Parts, at One Shilling.  
**THE PICTORIAL FAMILY BIBLE,**  
Illustrated with above Eight Hundred Engravings on Wood; to which are added copious Original Notes.  
London: Wm. S. Oake & Co., Amen Corner.

In Weekly Numbers, Price 3d.; Stamped, 3d.  
**THE COTTAGE GARDENER;** or a Practical Guide in every Department of Horticulture, and Rural and Domestic Economy. Conducted by George W. Johnson, Esq., Editor of the "Gardener's Almanac," "Cottage Gardener's Dictionary," &c.; and assisted by a staff of able Contributors.  
London: Wm. S. Oake & Co., Amen Corner.

**CHAMBERS'S EDINBURGH JOURNAL,** a Weekly and Monthly Miscellany; comprising Moral and Familiar Essays, Popular Information on Science, Social Statistics, Tours at Home and Abroad, Biographical Sketches, Tales, Poetry, Anecdotes, and other matters of Universal Interest. Conducted by W. and R. Chambers. Published Weekly, Price Thrice Halfpence. The Numbers stitched in a Neat Wrapper, Price One Penny in addition.

Forty-Third Edition, price 8d., post free for 10 Stamps.  
**ODELL'S SYSTEM OF SHORT-HAND,** by which the nature of taking down Sermons, Lectures, Trials, Speeches, &c., may be acquired in a few hours, without the aid of a master.

Also, price 8d., post free for 10 Stamps,  
**A SUPPLEMENT to ODELL'S SHORT-HAND,** containing further exercises and other useful information.  
London: GROOMBRIDGE & SONS, 5, PATERNOSTER ROW.

**THE FAMILY FRIEND,** an established Magazine, published upon the First and Fifteenth of every Month, price Two-pence. Thirty-two pages, beautifully printed, and neatly covered. The following is a type of the opinion formed of **THE FAMILY FRIEND**, and expressed by upwards of THREE HUNDRED NEWSPAPERS:

"The Boys and Girls will like it, for it contains good Stories; the Young Ladies will like it, for the sake of its pretty Poetry, and its Receipts for various kinds of Fancy-Work; Young Men will like it, for it attacks of Science; the Women will like it, for it abounds in useful Household Receipts; the Men will like it, for it treats of Gardening and Natural History, and advises wives to be kind to their husbands; those who love amusement will like it, for it swarms with Conundrums; everybody will like it, for it has a corner for everybody; and nobody need be afraid of finding any harm in it."—*Gateshead Observer.*

The Work may be had up to the end of December, 1851, in FIVE VOLUMES, price 2s. 6d. each.  
The Fourth Volume contains a QUADRUPLE INDEX to the First Four Volumes, embodying about THREE THOUSAND FIVE HUNDRED REFERENCES to matters of everyday usefulness. The Work forms a most perfect Encyclopedia of Domestic Economy.  
London: HOULSTON & STONEMAN, 65, PATERNOSTER ROW; and all Booksellers.

WORKS ORIGINALLY ISSUED BY MESSRS. CHARLES KNIGHT & CO.,  
Now offered at greatly reduced prices.  
In 16 vols. Imperial 8vo. (Supplement included), cloth lettered, price 9l. 12s.

**THE PENNY CYCLOPEDIA** of the Society for the Diffusion of Useful Knowledge. Edited by GEORGE LONG, A.M.

In 8 vols. Imperial 8vo., cloth lettered, price 5l. 12s.  
**THE PICTORIAL HISTORY OF ENGLAND;** being a History of the People as well as of the Kingdom. Illustrated with many hundred Woodcuts, and one hundred and four Portraits engraved on Steel. By GEORGE L. CRANE and CHARLES MACFARLANE.  
AN INDEX TO THE WORK, by H. C. HAMILTON, Esq., State Paper Office, has just been published, price 10s. cloth.

In 2 vols. Imperial 8vo., cloth lettered, price 2l. 2s.  
**THE HISTORY OF ENGLAND** during the THIRTY YEARS' PEACE: 1810—1840. By HARRIET MARTINEAU. With Portraits engraved on Steel.

In 4 vols. Imperial 8vo., cloth lettered, price 2l. 10s.  
**THE PICTORIAL BIBLE;** illustrated with Steel Engravings after celebrated Pictures, and many hundred Woodcuts, with original Notes. By JOHN KIRBY, D.D.

In 12 vols., price 1s. 6d. each, cloth lettered, Charles Knight's Cabinet Edition of the  
**WORKS OF WILLIAM SHAKESPEARE,** beautifully printed on fine paper, the Title-pages adorned by copies of the various Portraits of Shakespeare, and each Play embellished by an elegant illustrative Engraving.  
London: Wm. S. Oake & Co., Amen Corner.

Neatly printed in fcap. 8vo., each volume containing from 130 to 180 pages of Letter-press, with numerous Illustrative Engravings.

**RICHARDSON'S RURAL HANDBOOKS.** New editions, revised and enlarged, price One Shilling each:—1. Domestic Fowl; 2. The Pig; 3. Bee; 4. The Horse and the Honey Bee; 5. The Dog; 6. The Horse; 7. The Farm; 8. Land Drainage, Embankment, and Irrigation, by James Donald; 9. Soils and Manures, by John Donaldson; 10. The Cow—Dairy Husbandry and Cattle Breeding, by M. M. Milburn.

"Richardson's Rural Handbooks" are well-known and deservedly popular. The little work before us ("Domestic Fowl") is beautifully got up and very cheap; it is copiously illustrated, and full of information valuable to the keepers of poultry."—*Westminster Courier.*  
London: Wm. S. Oake & Co., Amen Corner.

New ready, price 1s., crown 8vo., cloth gilt.  
**FAMILY PASTIME, or, HOMES MADE HAPPY;** consisting of entirely Original Anagrams, Enigmas, Charades, Conundrums, Fire-side Games, Practical Puzzles, &c., &c., with their Solutions; for which Prizes to the amount of Fifty Guineas have been awarded by the Editor of the *Family Friend*.  
Upwards of Three Hundred Competitors have contributed to the Mass of Entertaining Literature, from which the contents of this Work have been selected.

Will be published in December, 1851,  
**FAMILY PASTIME, Vol. II.,** price 1s., containing a Christmas Tale, and a New Assortment of Enigmas, Charades, Rebuses, Conundrums, &c. In this Volume, the whole of the *Family Friend's* Prize Enigmas up to the end of 1851 will be inserted, with their Solutions.  
London: HOULSTON & STONEMAN, 65, PATERNOSTER ROW.

Messrs. ROBERT COCK'S New Musical Publications.  
**THE MUSICAL PUBLIC** visiting London for the purpose of inspecting the Exhibition are respectfully invited to call at Messrs. COCK'S and Co.'s, for their CATALOGUES OF MUSIC, which are presented gratuitously to all applicants. The stock of pianofortes, from 18 guineas upwards, violins, flutes, and every other musical instrument, will be found of a superior description, at the above warehouses.

**HAMILTON'S MODERN INSTRUCTIONS** for the PIANOFORTE. Twenty-second Edition, fingered by Clevary, Large music folio, 4s.—"The youngest child may learn from Hamilton's book. The instructions are more like the oral communication of a per on conversing with the learner than like the essays of bookmakers."—*Vide Bewick Warder.*

**CLARKE'S CATECHISM** of the RUDIMENTS OF MUSIC, Twenty-third Edition; Hamilton's Dictionary of Musical Terms, Thirty-eighth Edition. Price 1s. each.—"The extraordinary popularity of these two little works, makes it quite unnecessary to refer to the admirable character of the one, or the extensiveness and completeness of the other. Both are well worthy of the celebrity they have attained."—*Vide Caledonian Mercury, October 16.*  
London: R. COCK'S & Co., New Burlington Street.

**LIBRARY FOR THE TIMES.**  
Price 3s. cloth, and gilt top 5s. 6d., morocco elegant 8s.  
**FOOTSTEPS OF OUR FATHERS; WHAT THEY SOUGHT AND WHAT THEY SUFFERED.** By James G. Mill. With 36 Engravings, describing localities memorable in the struggles for religious freedom.

**SUBJECT OF CHAPTERS.**—The Light of a Dark Age. Writings of the down-trodden. Contests with despotism. Pioneers of Liberty. Aims at the Impossible. The Crownless Monarch. The Returning Tide. The Price of Religious Convictions. "Christ's Crown and Covenant." Appearing in *The Columns*, "High Church." The Will minus the Power.

**ILLUSTRATIONS.**  
Hampton Manor—The Seat of the Earl of Hampton.  
Lutterworth (Wicks) Church, Chair in which the Reformer died.  
Lutterworth Bridge—the stream into which his bones were thrown.  
Gateway of Hampton Court.  
Hampton Court Palace.  
Leicester's Hospital, Warwick—Residence of Cartwright.  
Whitehall in former times.  
Ancient Court of Star-Chamber.  
Hampton House—Residence of John Hampden.  
Hampton Church—Place of his interment.  
Kimbolton, Hunts—Rectory of Philip Nye.  
Jerusalem Chamber, Westminster—Scene of the Assembly of Divines.  
Huntingdon—Birth-place of Cromwell.  
Fac-simile of Cromwell's Royalist Registry.  
Hitchinbury—Seat of Cromwell's Ancestors.  
Cromwell's Barn—St. Ives.  
London: A. COCKSHAW, 41, Ludgate-hill; MESSRS. EDIMBURGH; and GILFILL, Dublin.

## READINGS IN POPULAR LIFE.

**NATURE.**—A series of Shilling Volumes.  
**IRISH SIXTY YEARS AGO.**  
**TEN YEARS IN AUSTRALIA.**  
**WILLIAM'S COUNTRY SCENES.**  
**FIGHTING FITZGERALD.**  
London: Wm. S. Oake & Co., Amen Corner.

**RIMMEL'S TOILET VINEGAR,** as exhibited in the fountain at the Crystal Palace, is far superior to Eau de Cologne, as a tonic and refreshing lotion for the face or bath, a pleasant dentifrice, a reviving agent, and a powerful disinfectant for apartments or sick rooms. Price 2s. 6d. and 5s. Sold by R. RIMMEL, 89, Oxford Street, Soho, London; and by all Perfumers and Chemists.

**DIATONIC FLUTE.**—By Royal Letters Patent. This instrument (which retains the old system of fingering) is used by Mr. Richardson, flutist to Her Majesty; Mr. Pratten, first flute at the Royal Italian Opera; and many other eminent professors in town and country; testimonials of whom, with description of the flute, are forwarded free.—Manufacture, 135, Fleet-street; A. SICCAMA, Patentee.

**JONES'S £4 1s. SILVER LEVER** WATCHES, and £10 10s. GOLD LEVERS, at the Manufacture, 338, Strand, opposite Somerset House, are warranted not to vary more than half-a-minute per week. The great Reduction of Price sets aside all rivalry, either of the Swiss manufactures or any other house; for those advertised at lower prices are foreign work. On receipt of a Post-office order, payable to JOHN JONES, for £4 1s., one will be sent free. "Jones's Sketch of Watch Work," free for 2d.

**EMPLOYMENT FOR ALL.** Industrious persons, of any age, and of either sex, need no longer sit at home thinking how they can advance their prospects, and maintain themselves and families respectably, but consult the undersigned, who will enclose particulars, whereby from one to two pounds weekly may be earned. Thousands are doing well in the world by these methods. Send Thirteen postage stamps and a directed envelope to William Thompson, Field House, Farm Lane, St. John's, Fulham.

**RUPTURES.**—The PATENT SELF-ADJUSTING GERMAN TRUSS, acting effectually without any complications, is recommended by the Faculty for the Cure and Relief of Hernia. The most eminent members of the Profession are of opinion that the necessary quality of a good Truss is an efficient resisting power, without unnecessary pressure on the part affected, which desirable object is alone obtained in a Truss unembarrassed with straps, spiral springs, or pad behind. J. EOE & Co., Established nearly Forty Years. Manufacture, 1, Piccadilly.

**NO MEDICINE FOR THE CURE** OF ASTHMA, Consumption and Coughs, was ever attended with such speedy and unfailing success as  
**DR. LOCOCK'S PULMONIC WAFERS.**  
In every newspaper and periodical in the kingdom may be seen testimonials of their wonderful efficacy. To singers and public speakers they are invaluable for clearing and strengthening the voice. They have a pleasant taste. Also, Dr. Locock's Female Wafers, the best medicine for females. Have a pleasant taste. Price 1s. 1/2d., 2s. 6d., and 11s. per box.

**PARLOUR LITERATURE OF ALL NATIONS** (being Vol. I. of THE PARLOUR MAGAZINE) price 1s. The ParLOUR Magazine was the only book printed in the Crystal Palace, and will remain as a handsome and appropriate memento of it. THE PARLOUR LITERATURE OF ALL NATIONS will be completed in two handsome Volumes, price Five Shillings each. Covers for Binding the Volumes, uniform with the above, may be had of all Booksellers, price 1s. 6d. each.  
London: HOULSTON & STONEMAN, 65, PATERNOSTER ROW.

**PRIZE ENIGMAS.**—The Editor of the *FAMILY FRIEND* announces his intention of offering, at Christmas (1851), a Prize of ONE HUNDRED GUINEAS, for the best Solution of an ENIGMA to be completed for by GENTLEMEN; FIFTY GUINEAS for the Solution of another ENIGMA, to be completed for by LADIES; and TWENTY-FIVE GUINEAS for an ENIGMA to be completed for by LADIES of both sexes. Further particulars will be given in the Numbers of THE FRIEND. There will be numerous Minor Prizes.  
The Number of THE FRIEND containing these Enigmas may be had of Booksellers everywhere (price 2d.), or before the 1st of JANUARY, 1852. The same number will contain the Rules of the Competition.

**NEW PARIAN SHIRT STUDS.**—HENRY TIMMIS, Manufacturer of every description of Parian Ornaments, respectfully announces the production of another of these beautiful yet delicate appendages for Ladies and Gentlemen, viz., SHIRT STUDS, sent post free to any address, on the receipt of 4s. in Penny Stamps. Parian Brooches 4s. each; Shawl Pins 2s. 6d. each; Bracelets, 12s. 6d. each; Earrings, 7s. 6d. per pair; and Black and White Porcelain Brooches, 4s. each; all sent post free on receipt of the amount.—Address Mr. HENRY TIMMIS, Manufacturer, Burslem, Staffordshire.

### Rules for Correspondents.

BECAUSE a few simple Rules are necessary for the guidance of our Companions, and not because we have "ruling passion," we add a few more instructions to those given in No. 1. We first repeat our address (69, Fleet Street, London), which is most essential, and will be constantly looked for by the thousands who will certainly be seized by the furor scribendi the moment they discover the nature of the *Companionship* we have offered them.

As *admirers* Readers will doubtless be "Constant Readers," and our Admirers "Admirers from the First," we hope that our Correspondents will avoid these too common and impersonal signatures. To distinguish one among the host, we must have some definite mark, and the initials of proper names are at once the most definite and simple. Long assumed names are highly objectionable; because they unduly encroach upon space in the Answers to Correspondents, and interfere with the plan we shall adopt of acknowledging the receipt of every communication, that the writers thereof may have the satisfaction of knowing that their epistles have reached our hands. Whenever, therefore, we meet with a sentimental "Miss Amelia Rosamond Philippa Marguerite Elfrida Jenkins," we shall, in acknowledging her letter, take the liberty of reducing her to the common-sense level of "Miss A. J."

As we necessarily print each number long before the time of its circulation, and still longer before its date, sufficient time must be allowed to elapse before a reply to any question be expected. If anybody should impatiently and impudently reprove us for neglecting a reply, which, at the very time of the reprint, might be "in the press," having given us abundant labour to get it there, we should almost be disposed to stop the press and take our answer out, even though we left a blank in its stead. Only one thing would prevent us, i.e. the extreme good temper which should ever grace the intercommunication of literary Companions.

**HOW TO MAKE A GOOD CUP OF TEA.**—M. Soyer recommends that, before pouring in any water, the teapot, with the tea in it, shall be placed by the oven till hot, or heated by means of a spirit lamp, in front of the fire (not too close, of course), and the pot then filled with boiling water. The result, he says, will be, in about a minute, a delicious cup of tea, much superior to that drawn in the ordinary way.

**TO PROTECT TREES FROM MICE.**—Mr. Editor,—"As I do not approve of the use of coal-tar to keep mice from destroying fruit-trees, during the winter season, I will give my method of protecting trees from mice. I take sheet, or tea-chest lead (which can be bought for a nominal price) and cut it into strips eight inches wide, and sufficient length the other way to round the tree once and a half or twice; then wrap it around the tree lightly, and it will stay without any further trouble. It can be taken off in the spring, and laid by for subsequent years. I have tried the above method with entire success.—L. W. STOW.

**THE BLACKBERRY.**—Very few regard this shrub of the slightest value—it does, however, possess some qualities which entitle them to the attention of others than the mere passer-by. For instance:—the blackberries have a desiccative and astringent virtue, and are a most appropriate remedy for the gums and inflammation of the tonsils. Boerhaave affirms that the roots taken out of the earth in February or March, and boiled in honey, are an excellent remedy against dropsy. Syrup of blackberries, picked when only red, is cooling and astringent, in common purgings or fluxes. The bruised leaves, stalks, and unripe fruit, applied outwardly, are said to cure ring-worm.

**SKIPPERS IN CHEESE.**—Mr. Editor,—"Much cheese is annually lost or rendered unsaleable, by being infested with skippers. To drive out these, when they have once obtained a lodgment in the cheese, cut a small circular hole on the outside near the centre; carefully remove the round ring or plug, and having excavated a portion of the inside, so as to leave a hole in the middle of the cheese, fill it with the best French brandy. As the liquor

is absorbed by the cheese, renew it; and repeat the operation several times—then fill up the hole and replace the plug, covering it carefully with a piece of paper pasted over, and the skippers will leave immediately.—Yours, &c. W. A. Y."

**GEORGE COMBE.**—George Combe, the physiologist, is a philosophical methodist. His bump of order is fully developed, and his "time" is "large," so that everything he does is done when it should be done, and it is well done, too. The initiated say that, in strict conformity with Dr. Andrew's rules of dietetics, George mastomies his food most thoroughly; reposes with his feet upon a high cushion during half-an-hour after every meal, until the gastric juice has got sufficient hold of the "alimentary deposits," and then he goes to take his airings. This is doubtless a most extraordinary process, and those dyspeptics who are as rich as George Combe is, have no excuse if they do not pursue it. How many poor men wish they had the chance to try it!

**STREET NUISANCES.**—Much as we like young people to "emulvour" to "turn an honest penny," we regret to see boys resorting to a form of mendicancy objectionable to the public, and certainly prejudicial to the future welfare of themselves. Thousands of people have visited London to witness the Exhibition of Industry of all Nations; but the first exhibition that struck the view of many of them was that of the twirling of a line of ragged urchins, upon their hands and feet on the pavements of the leading thoroughfares from the railways. At one time these gymnastic feats were only to be witnessed in the outskirts of London; but now the competition in this twirl-about profession has become so severe, that even the crowded pavements of Cheapside, Fleet Street, and the Strand, have been made more impassable by its introduction. Whether the foreign visitors this afforded a subject for the "envy of surrounding nations," or whether they mistook the ragged striplings as they wheeled about for some species of indignant radiated animal, we cannot tell. But there can be no doubt that the practice has become a great nuisance, and must be put down. A nuisance disgusting to the eye, interfering with the progress of the pedestrian, dangerous to old and to young people, and demoralising in its effects upon those who are tempted by it into an useless and vicious mode of life. We hope, therefore, that the public will cease to encourage, by their mistaken charity, that which will certainly, ere long, end for the interference of the police. To pay police-rates with one hand for the maintenance of public order, and, with the other, to fling gratuities to those who live by destroying that order, is a very false economy. Besides, it involves a moral responsibility, since the holding out of premiums to this kind of pursuit is giving to the industrial energies of youth

UNLUCKY TURN!

The *Times*, speaking of the late census, says—"It is now shown that during the last half century the population of Great Britain is, within a very little, double itself. The numbers being 8, at the beginning of the century, 10,567,893; and now, exclusive of the navy, and the transient seamen out of the country when the census was taken, 20,936,468. But for the demonstration which is now furnished, it would scarcely have been credible that this island should, during fifty years, have added to its numbers a population as large as has been obtained during the preceding two thousand years of its history. This is, indeed, remarkable.

"MAN IS A CHAMELEON AND BOTH FEED ON AIR."—Professor Liebig, in the following, demonstrates this poetical assertion to be a scientific truth—"Science has demonstrated that man, the being who performs all these wonders, is formed of condensed air, (or solidified and liquefied gases,) that he lives on condensed as well as uncondensed air, and clothes himself in condensed air; that he prepares his food by means of condensed air; and by means of the same agent moves the heaviest weights with the velocity of the wind. The strangest part of the matter is, that thousands of these tabernacles formed of condensed air, and going on two legs, occasionally, and on account of the production and supply of those forms of condensed air which they require for food and clothing, or on account of their honour and power, destroy each other in pitched battles by means of condensed air; and further, that many believe the peculiar powers of the bodiless, conscious, thinking, and sensitive being, housed in this tabernacle, to be the result simply of its internal structure, and the arrangement of its particles or atoms; while chemistry supplies the clearest proof that, as far as concerns this, the ultimate and most minute composition and structure, which is beyond the reach of our senses, man is, to appearance, identical with the ox, or with the animal lowest in the scale of creation."

**ECONOMY OF TIME, AND REGULARITY.**—There is, in many people, and particularly in youth, a strange aversion to regularity; a desire to delay what ought to be done immediately, in order to do something else, which might as well be done afterwards. Be assured it is of more consequence to you than you can conceive to get the better of this procrastinating spirit, and to acquire habits of constancy and steadiness, even in the most trifling matters. Without these there can be no regularity or

consistency of action or character; no dependence on your best intentions, which a sudden humour may tempt you to lay aside for a term, and which a thousand unforeseen accidents will afterwards render it more and more difficult to execute. No one can say what important consequences may follow a trivial neglect of this kind. For example, I have known one of these procrastinators dissolve and gradually lose very valuable friends by delaying to write to them so long, that, having no good excuse to offer, she could not muster courage at last to attempt it at all, and dropped their correspondence entirely. Never permit a letter to remain long unanswered; it is a mark of great disrespect, and may be treated as insulting.—*Magazine of Domestic Economy.*

**BIRDS' EGGS.**—B. Y. In selecting eggs for your cabinet, always choose those which are newly laid; make a medium-sized hole at the sharp end with a pointed instrument; having made the hole at the sharp end, make one at the blunt, and let this last hole be as small as possible; this done, apply your mouth to the blunt end, and blow the contents through the sharp end. If the yolk will not come freely, run a pin or wire up into the egg, and stir the yolk well about; now get a cupful of water, and immersing the sharp end of the shell into it, apply your mouth to the blunt end, and suck up some of the water into the empty shell; then put your finger and thumb upon the two holes, shake the water well within, and after this blow it out. The water will clear your egg of any remains of yolk, or of white, which may stay in after blowing. If one suck up of water will not suffice, make a second, or third. An egg, immediately after it is produced, is very clear and fine; but by staying in the nest, and coming in contact with the feet of the bird, it soon assumes a dirty appearance. To remedy this, wash it well in soap and water, and use a nail-brush to get the dirt off. Your egg-shell is now as it ought to be, and nothing remains to be done but to prevent the thin white membrane (which is still inside), from corrupting; take a wine glass and fill it with the solution of corrosive sublimate in alcohol, then immerse the sharp end of the egg-shell into it, keeping your finger and thumb, as you hold it, just clear of the solution; apply your mouth to the little hole at the blunt end, and suck up some of the solution into the shell; you need not be fearful of getting the liquor into your mouth, for, as soon as it rises in the shell, the cold will strike your finger and thumb, and then you cease sucking; shake the shell just as you did when the water was in it, and then blow the solution back into the glass. Your egg-shell is now beyond the reach of corruption; the membrane for ever retains its pristine whiteness, and no insect for the time to come will ever venture to prey upon it. If you wish your egg to appear extremely brilliant, give it a coat of mastic varnish, put on very sparingly with a camel-hair pencil; green or blue eggs must be done with gum-arabic; the mastic varnish is apt to injure the colour."

**LOOK AFTER YOUR OWN "RIGHTS" AND "WRONGS."**—With reference to answers sent into our various *Chambers*, *Kuignas*, *Rebuses*, &c., we do not intend to publish lists of those who may be respectively right or wrong. By publishing the correct Solutions we give everybody an opportunity of seeing for themselves how far they are accurate. This is the only sensible course. Any other would hold out a premium to indolence, and would defeat our object, which is to make our "Evenings at Home" conducive to the healthful exercise of the intellectual faculties. Communications will be acknowledged, but not in this manner.

**COMMUNICATIONS RECEIVED.**—It is our intention to publish weekly an alphabetical list, showing the principal communications that have reached us. If, however, our correspondence becomes exceedingly numerous, it may be impracticable to carry out this purpose. Under these circumstances, we hold ourselves free to depart from it, without any breach of faith. The following will be our plan—

Adele.	Francis.	Miss H.
A. B.	F. R. N.	Mary.
A. R.	Franklin.	M. W.
B. C.	F. R. A.	M. S.

# THE HOME COMPANION;

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 3.—Vol. I.]

SATURDAY, JANUARY 17, 1852.

[PRICE

## LOVE AND REASON.

'Twas in the summer time so sweet,  
When hearts and flowers are both in  
season,  
That—who, of all the world should meet,  
One early dawn, but Love and Reason!  
Love told his dream of yesternight,  
While Reason talked about the weather;  
The morn, in sooth, was fair and bright,  
And on they took their way together.

The boy in many a gambol flew,  
While Reason, like a Juno, stalked,  
And from her portly figure threw  
A lengthened shadow as she walked.

No wonder Love, as on they passed,  
Should find that sunny morning chill,  
For still the shadow Reason cast  
Fell o'er the boy, and cooled him still.

In vain he tried his wings to warm,  
Or find a pathway not so dim,  
For still the maid's gigantic form  
Would stalk between the sun and him.

"This must not be," said little Love—  
"The sun was made for more than you."  
So, turning through a myrtle grove,  
He bid the portly nymph adieu.

Now gaily roves the laughing boy  
O'er many a mead, by many a stream;

In every breeze inhaling joy,  
And drinking bliss in every beam.  
From all the gardens, all the bowers,  
He culled the many sweets they shaded,  
And ate the fruits and smelled the flowers,  
Till taste was gone, and odour faded.

But now the sun, in pomp of noon,  
Looked blazing o'er the sultry plains;  
Alas! the boy grew languid soon,  
And fever thrilled through all his veins.

The dew forsook his baby brow,  
No more with healthy bloom he smiled—  
Oh! where was tranquil Reason now,  
To cast her shadow o'er the child?

Beneath a green and aged palm,  
His foot at length for shelter turning,  
He saw the nymph reclining calm,  
With brow as cool as his was burning.

"Oh! take me to that bosom cold,"  
In murmurs at her feet he said;  
And Reason op'd her garment's fold,  
And flung it round his fevered head.

He felt her bosom's icy touch,  
And soon it lulled his pulses to rest;  
For, ah! the chill was quite too much,  
And Love expired on Reason's breast!

## BRIDGET KEREVAN.

BY ENNA DUVAL.

"I will tell you, scholar, I have heard a grave divine say that God has two dwellings, one in heaven, and the other in a weak and thankful heart; which Almighty God grant to me and to my honest scholar."—ISAAC WALTON.

"How did you find them all at home, Bridget?"

"Hearty, ma'am, thank ye;" and the girl moved busily about the room.

She was my chambermaid, and although she had only lived with me a little while, I felt very much attached to her, for she was so kind, industrious, and honest. Soon after she came to us I was seized with a painful illness, and during it, she nursed me with the tenderness of a sister; often, when the spasms of acute pain would shake my feeble body, I had seen large tears standing in her full, round eye.

As she assisted me in undressing, I observed that she was not in her usual spirits, and when she handed me my dressing-gown, I saw that her hands trembled. But she patiently went through every little duty, although I could well see that she was suffering from some hidden trouble. When I sat down to my reading, she left me to prepare for me some tea—for, dear reader, I am a true old maid, and love my cup of tea, as well as I love my existence almost.

Presently she re-entered, and rolling a little table beside my chair, she placed on it the waiter, and poured out my tea. Just then I heard the heavy breathing of my dear Aunt Mary, who was asleep in the adjoining room.

"Close the door of Aunt Mary's room, my good Bridget," I said; "and while I drink my tea and eat this nice piece of toast you have made me, come and tell me something about Ireland."

I knew this would please her; for often had she talked to me at night, when I would be undressing, about the glens and vales of beautiful, song-famed Coleraine; and the fairies, with their round rings in the grass. She had never seen a fairy her own self, but "Elsie the child" her sister had, and the "little body," as she called the fairy, had pinched the poor "wean Elsie."

Then again on Sunday, or holiday nights, she would tell me how, when a child, she had wished to be a nun, and that she would go out in the night, pitch dark, and kneel on the ground in the middle of their garden, and ask the good Virgin and the Saints to pray for her, for Bridget has always been a religious girl.

Then she had actually heard the Benshee cry. It came wailing around the house when her father died; and she had heard it a week before his death, when he was hale and hearty. She had heard it at night-fall one

evening when she was crossing the glen below their cottage, as she was coming from Coleraine, where she had been spending the day with her grandmother. It commenced "low and mournful like" in the bushes beside her, and then ranged around the hills, swelling out louder and louder, until it ceased behind the cottage. As she would dwell on this, my fancy would picture to me the enthusiastic, imaginative Irish girl, standing with lips apart, listening to this mournful wailing night-wind, which her after troubles shaped into the sad poetical Benshee; and if I had had the skill of an artist, I could have made a lovely sketch, I am sure; for so plainly did her descriptions bring before me her figure and the surrounding landscape, lightened with the warm hue of the lingering twilight so peculiar to Ireland.

Bridget sat down on the rug beside me, and when we went to bed that night, good reader, it was later than unsuspecting Aunt Mary imagined; but I had heard all Bridget's troubles, had soothed and comforted her, had read her lover's last letter to her—for she had a lover—what girl has not?—and sent her to bed with a heart considerably lighter than when, with aching head but patient fingers, she had prepared my nice night meal.

Bridget's father, Dermot Kerevan, was a Scotchman by birth, but of Irish parentage. His father had settled in Glasgow, and there did Dermot spend his early years, and obtain thriftiness and steadiness, qualities not often found in an Irishman. Dermot was early apprenticed to a gardener, and when he was out of his term of service, his master recommended him to an Irish gentleman, who wanted a gardener for his place, "The Forest," at Coleraine. There Dermot came, and it was not long before he brought home to his pretty gardener's cottage, the beauty of Coleraine, Grace Mullen, who he had persuaded to be his "bonnie wife," as he called her. They must have been very happy—for sweeter domestic pictures I have never heard described, either in tale or poem, than my good Bridget would sketch in her little stories of their home, during her father's life. But this blessed happiness could not last for ever. One fine spring day poor Dermot was brought home from the garden, up at "the great house," on a litter, nearly dead. He had fallen from a high tree while lopping off a branch. He lingered only a few hours, leaving the lonely widow with her "four children" to battle with life alone.

Bridget was the eldest, and she was only twelve. Then there was Grace, and Elsie, and little Jinny the baby, all to be cared for. Bridget was sent to her uncle's at Glasgow town, and the grandmother of Grace Kerevan gave the shelter of her poor roof to the rest of them. Widow Kerevan opened a little shop in her grandmother's front room, and did "bits of work" for the people all around Coleraine," as Bridget expressed it.

A year after the kind, loving father's death, home came Bridget from Glasgow town. Her uncle, the rich distiller, was enraged at her, for she had told his wife she had rather starve in Ireland than go to the meeting-house all day Sunday, and sit straight up at her sewing and knitting the rest of the week. Poor girl! the strict, rigid habits of her uncle's thrifty Scotch wife had driven her almost frantic. She, who had roamed at will over hill and glen, and had never been bound down to any duty! The domestic affairs of her own home had always been soon dispensed with, and she had spent most of her time in rambling through the forest, or by the stream-side, or playing with Gracey, Elsie, and the baby, chasing their shadows on the grassy hill-side; then how could she bear the strait-laced notions and rules of her notable Scotch aunt? Not at all, and she told her so; and they sent her home to the starvation her aunt had often taunted her with, holding it in perspective, when she would be rebellious.

The mother, grandmother, and children crowded around her. Grace Kerevan held her child, from whom she had been so long parted, close to her bosom, and sobbed with joy.

"And so," said the old grandmother, "the 'Scotch guran,' as poor Dermot used to say, told ye we starved here? Never mind, darlint, ye shall always have a p'raty, even if we all do without."

Poor Bridget worked early and late for the farmers' wives, but she only made a "small trifle," as she said; and sometimes they were so poor that they had scarcely a potato apiece in the house.

"And did you ever wish yourself back in Glasgow town, Bridget?" I inquired.

"Niver, ma'am," was the girl's energetic answer; and I do not believe she ever did, for the genial light of home-love shone in her poor, Irish heart for which her affectionate little heart had pined, under the wealthier but roof of her uncle.

"Thin I came to Ameriky."

"But, Bridget, how came you to think of America?"

"Och, the girls all around talked about Ameriky, and my aunt's cousin's husband's sister writ home a letter about her making such a power of money. Well, I talked to mother, about it, but she cried, and so did grandmother,

## BRIDGET KEREVAN.

and they asked me where I'd get the four pound to pay my passage with. That kept me quiet a bit, for I'd never seen so big a heap of money. But one day, when I was shaking up grandmother's bed, I felt a great big lump in it, that was sewed up in the straw, and I dragged it out, and it was an old stocking with money tied in it. I ran screaming with joy to mother. But oh! how she cried, and grandmother scolded! Then I cried, too, and grandmother came and hugged me, and told me to give over cryin', that there was the money if I wanted it. She said she'd hid it away in the bed, years ago, to keep off the dark day. Then I cried, 'Grandmother, let me go to Ameriky, and I will send ye so much gold that 'll keep the dark day away for ever.'

"Then, mother said, 'Let the girl go, for sure she's had light given her, and she knows better than us.'"

"Did you not feel a little sorry, Bridget, when they gave up at last?" I asked.

"No, ma'am, not a bit," she continued; "and I hurried around and got ready. The girl that had writ the letters home about Ameriky, sent out a ticket to her sister to come on the vessel that was just going; but she—Miss McManham it was—was very sick, and couldn't go; and so mother bought her ticket for me. But, oh! when mother bid me good-bye, and kissed me, and left me on the vessel, then I cried. I didn't cry a bit when I bid grandmother and the childer good-bye at the house, but it was when I saw mother going down the side of the vessel, and get into the tumbling little boat, that I cried. I felt so lonely-like, just as I did when father was buried; and I watched the little boat, and her red cloak, until she got ashore. Then there she stood, and shook her handkerchief until it grewed too dark to see her. Oh, Miss Enna, but then I cried!—all to myself though—for I was ashamed the people should see me, and I went off to my little bed and cried all night; for I thought, 'as furder away from them than father was, for he was in heaven, and I was out on wide water.' Then I thought of what father used to tell me about God bein' with us always, and I tried to stop my cryin' by prayin'."

"How old were you then, Bridget?"

"Not quite fifteen, ma'am."

"Were you not glad when you saw America, my poor child?"

"Indade and indade I was! for I'd been so sick all the way; and when the vessel came up the river to Philadelphia, I cried with joy. But when the vessel anchored, and people came from shore, and I heard them a greetin' one another, my heart fell like a great lump of lead, for I'd nobody in this wild, new country, to greet me. Then I cried again, but it was with the heart-ache. I sat there all alone, when one of the women, who had been very kind to me on the passage, came up to me, and she brought with her a man, who, she said, used to know my mother when she was a slip of a girl in Coleraine, and if I would go home with him he would try to find me a place. I bundled up my clothes, which were only a few pieces, and went with him. This was on a Saturday night like, Miss Enna, and on Monday they took me to a place."

"Was it a nice place, Bridget?"

"Yes, ma'am; but 'twas a plain, hard-working family; they kept only me, and they had a lot of childer, and a whole parcel of 'prentice boys; but Mrs. Hill—that was her name—was kind to me, and worked with me when she could, and took good care of my money, which she put all away, and I didn't spend a bit. She giv' me some of her old dresses and an old hood, so I saved up all my money for four months. Then I writ my first letter to mother, and sent her the sixteen dollars."

"Oh, Bridget!" I exclaimed, "why did you not write before?"

The girl laughed quietly, and replied—

"I wanted to send a big bit of money when I writ home; and I know'd the neighbours would stare, and grandmother would open her eyes, and mother would be so proud of her Bridget sendin' home three pound and over. Then came a letter from them at home, and it made me cry so. They were all well, and had got my money; but mother tried to scold me a bit because I hadn't writ before, but she was so plazed to hear I was doin' well, that she didn't scold much. Then I worked on, but I felt lonely like, and kept thinkin' how nice 'twould be to have Gracey with me. So I saved up twenty dollars, and sent it to Ireland; and soon Gracey came to me. Mother couldn't come, I know'd, for grandmother was so old as to stay in bed all the time. I'd been a year in Ameriky when Gracey came over; then after awhile I sent for Elsie, for the times were still harder in Ireland, and mother had had work to get on with her poor old sick granny to nurse. Elsie seemed so little when she came, that I didn't know what to do with her; but Mrs. Hill, the kind soul, said she might come and live with me; that she could play with the childer, and rock the cradle, and go errands, and she would give her her clothes the first year; then, if she was smart, she would give her a half dollar a week—for Mr. Hill was richer now. I took great pleasure in Elsie, she was good and minded me; but Gracey was headstrong like, and would have her own way. She gave me a dale of trouble, and many's the night I've laid awake and thought about her. She liked to tease me, and make me believe she was worse than she was."

"At last Mr. Hill and his wife made up their minds to buy a large farm clear up in the country, a great many miles off from Philadelphia, and Elsie and me went with them. This did Gracey good, and she was a better girl ever afterward, for when she was left alone in Philadelphia, she saw how cross she'd been to me, and this made her sorry; and she went to church reglar, and attended to her duties, and used to go and talk to my good old priest, Father Shane—for he was about it to me, unbeknownst to her—oh, but I was glad thin'!"

"After I'd been in the country—on the farm, I mane—a letter came from mother, telling us of poor grandmother's death, and the letter had all

tears over it, which made Elsie and me cry, for we know'd they were poor mother's tears. In this same letter she said she wished we could send her a ticket to come to Ameriky with; that if she could see her Bridget once more before she died, she would be happy. This was spring-time, so I takes up Elsie's money and mine, and goes off to Philadelphia to buy a ticket for mother, and show Gracey mother's letter. Gracey had no money to give me, for she was always extravagant; and no wonder, for she was pretty, like mother, and liked a bit of finery better than plain folks like myself. She cried about it, but I comforted her, and told her niver mind, I'd enough; but I couldn't buy myself a dress—that I didn't let her know, though, for fear she'd fret."

"So I bought the ticket, and got Father Shane to write a letter for me. I was going to stay in Philadelphia a week—so Mrs. Hill said I might; but the day after I bought the ticket a waggon came all the way from the farm to tell me Elsie was dying—that she had sickened the day I left, and had the measles. Then again, Miss Enna, I was in trouble, for Elsie was so good, and she looked like father. Oh, I cried all the way out to Mrs. Hill's! Sure enough, when I got there my poor baby was near gone. I nursed her night and day, poor child, but 'twas no use, God took my wean away from me."

"The night she died she opened her eyes and know'd me for the first time. I thought she was getting well, though the doctor said she couldn't."

"Bridget," said she, "we'd a nice play down in the glen, hadn't we?"

"I couldn't answer, my heart was so full, for I saw she thought she was home in Coleraine."

"Bridget!" she called, and held out her little hands to me. I took her in my arms, crying all the time.

"Let's go into the cottage," said she, "for father and grandmother have been callin' us a good many times. It's dark out here, Bridget, and cold—hold me, Bridget dear, for I can't see."

"Then she called 'mother!' and tryin' to put her little arms around my neck, said she wanted to go to sleep, and told me to sing to her. I hugged her close up to me, and, after a few words about the long grass under the hill by the cottage, where she and Jinny used to roll over playin', she drew a long breath, and as I kissed her, she died. Oh, but that was the darkest night I ever spent, Miss Enna! I was all alone, for Mrs. Hill had gone to sleep, tellin' me I must call her if Elsie was worse. There I sat all night holdin' my dead darlint close to my bosom, too heart-struck to cry. But when in the morning Mrs. Hill tried to take her from me, they say I screamed and held on to her like a mad person."

"I niver saw Elsie afterward, Miss Enna," said the poor girl, with tears streaming down her cheeks, "for when they buried her in the cold earth, I was raving sick, and they said I would die too. Part of the time I know'd them, and part of the time I was crazy, but when I'd my senses, I pray'd God would just keep me alive to see my mother. He heard my prayer," she continued, crossing herself devoutly, "and before mother came I was well again, though my heart was full of sorrow for Elsie."

"When I sent for mother, I told her not to come till fall, for I thought by that time I'd lay by a trifle of money to take a room in Philadelphia and buy some furniture. All summer I worked hard, and Mrs. Hill, the good soul, give me as much money in the fall as if Elsie had been workin' too. She know'd what I wanted with it, and she gave me some old chairs, and a bed, too. I was sorry to leave her, for her and her husband were so kind to us always; but I know'd mother would feel lonely like in town without me. So I packed up all my things, and came in Mr. Hill's market-waggon to town."

"Father Shane had writ to me that the vessel was expected in a week or so—and I came to town just in time to rent a nice room for mother. I'd enough of money to pay a month's rent ahead, and to buy some wood. Then I bought a carpet and a nice bedstead, and a table, and a good, warm stove—oh, yes, and a cushioned sofa, or sofa, as the people call it here, that looked like the one we had at home in Coleraine. Gracey gave me a little trifle, which was a great deal for her, seein' it had been summer-time, and she had to have a new bonnet, bein' in town."

"The night before mother came, Gracey ran round from her place to see mother's room—and how proud I felt, as we stood in the middle of it, and looked around at all the things—we felt so rich."

"Now, if we only had a bureau," said Gracey, "to put under that little glass of mine."

"Gracey had always finer notions than me. I'd niver thought of a bit of a bureau, for I know'd mother had a chest which would hold Jinny's clothes and hers—all they had, poor things! Father Shane came to see me that night, too. Oh, but we felt very happy! only very little bit, poor Elsie would come to my mind, and I'd think of how merry she'd been, if she'd been livin'; and grate tears would roll down in spite of me. Father Shane spoke very pretty about her, and made me feel better, and after he and Gracey went away, I sat down by the stove, and there I sat all night, for I didn't want to rumple the bed I'd made up for mother, for the sheets looked so white and smooth."

"The next afternoon the vessel came up the river, but it was ten o'clock at night before mother got off. There I stood on the wharf, talkin' to her, that was on the old vessel, all the evenin'." When she first see'd me, she cried,—

"Ooh, and it's my Bridget! God bless her!"

"She was so glad, she'd have tumbled overboard; but one of the sailors who caught her. We both cried and laughed, and some laughed at us; but the good sailor who had caught ahold of her when she was fallin', told her to cheer up, that she'd soon be on shore with her Bridget. He helped her down the side of the vessel, and when she hugged me and we both cried, I saw him wipe his eyes. He shook hands with us both, and asked where we lived, and said he'd come to see us."

## THE INFANT'S TEMPTATION.

"But, ooh, didn't mother stare when she see'd her nice room! Them sh-throw'd her upon over her head and oried like a baby. Janny had grow'd so tall I didn't know her. I was glad she was tall, for I'd hated to see her, for fear she'd make me cry about Elsie, bein' little like her; but she was near as tall as Gracey, and right pretty."

"Mother examined all the room, and kissed me, and hugged me; and then, when Gracey came, she looked very proud—for Gracey was so fine-lookin'. Gracey stayed all night, and we made her and Jinny a bed on the floor with the cushions of the form, for mother said she'd sleep with her Bridget. We talked nearly all night, and we all oried about Elsie, and I told 'em a great many pretty stories about her."

"Yes, mother," said Gracey, "Elsie, the darlin', was always a blessing to Bridget, but I was a trouble."

"I made her hush, and told her she wasn't as bad as she pretend'd to be. and then after a bit we all went to sleep. But after I'd been asleep awhile I wakened, and there was mother lanin' over me cryin' and kissin' me; I didn't ope my eyes, but laid so still; for oh, Miss Enna, it was so nice to have my own mother beside me! and then I was afraid I was dramin'."

"Well, Bridget," I said, as the girl wiped her eyes, "how did you support your little family?"

"Very azy, ma'am," she replied, "for we all took care of ourselves. Mrs. Hill came in and asked Jinny to go and live with her. Then I got a nice place at poor Mrs. Kenyon's mother. You know'd Mrs. Kenyon, Miss Enna, 'twas she who died?"

Indeed I did know her, for Mary Kenyon had been one of my dearest friends; and only a few short months before the grave had closed over her the beautiful and the good.

"Well," continued Bridget, "after a bit I got mother two nice first-floor rooms, at the corner of the street where she lived; and in the front one she opened a little store, which kept her nicely."

But now came the romance—the love-story of good, innocent Bridget's life. Her lover was the good, kind-hearted sailor who had been so interested in them when widow Kerevan landed. He came to see them as he had promised, and though Bridget and the widow thought that Gracey's pretty curls and bright eyes brought him so often "o' evenings," they soon found out it was the good Bridget he was after.

"It's three years now gone, since we were engaged," said Bridget, "and nearly that since I have seen or heard tell of him," and she sighed heavily.

"Where did he go to, Bridget?"

"Why, ma'am, he went in a States vessel to the Ingees, and he said he'd write to me; but I've never had a line from him since he sailed. He writ a letter to me at Norfolk town just before he went off, and told me to love him true 'til he came back, and then we'd be man and wife. Mother long since wanted me to take another beau, for she ses I'm gettin' old, and bein' plain like, nobody will have me, then I'll be an old maid that nobody likes or cares for; but I'd sooner be an old maid, than brake my vow to Patrick; and even Father Shane has scolded mother and Gracey about it, for they both taze—and he ses I'm right."

"How do you mean break your vow, Bridget?"

"Why, you see, Miss Enna, both Patrick and I loved old Ireland so much that we regularly ingaged ourselves, like the people used in the old country."

"How was that, my child?"

"Patrick takes a Prayer-book the night before he went away, and stood in the middle of mother's room, and swore on it by the holy cross, that he niver would marry any woman, but me, Bridget Kerevan; ooh, but his oath was so solemn and beautiful, it made me tremble all over! Then he puts the Prayer-book in my lap, and we took hold of each other's hands over it, and I made the same vow, and then we both kised the book. Mother and Gracey were by and heard it all. How can I, then, Miss Enna, even if I wanted to, take another beau? And I'm sure if anything happens to him I shall niver want another beau, for he was my first real one, and he seemed to come right in Elsie's place like in my heart."

As she sighed heavily, I comforted her, by telling her she was perfectly right in keeping good faith to the absent Patrick; that she need not mind if they did trouble her, it was better to suffer annoyances, than give up to do wrong.

"To-night," she continued, "they tazed me so bekaze I wouldn't have anything to say to one of the neighbour's boys from Coleraine, who know'd us when we were childer; and mother said it was her belafe that Patrick was safe and happy somewhere 'else, married to some other woman. This made me very mad, and I started up and went out of the house without sayin' a word; but mother ran after me down the street, and made me kiss her and say good-night, and we made up and parted friends."

"That was right, Bridget, for she is your mother, and though mistaken, she meant it for the best."

"I know that, Miss Enna; but they trouble me so much, I sometimes hate to go home."

Then she went softly up into her bed-room and brought down a poor, worn-looking letter, and a dilapidated book, with one cover off, and the leaves partly gone.

"This is his letter from Norfolk town, Miss Enna; read it, plaze, aloud, for I niver tire hearing it."

I read it, and found it to be a manly, affectionate, lover-like letter. He touchingly reminded her of her vow, in homely, plain language, it is true, but real heart-words were they that brought tears to my eyes.

"What is that book, Bridget?"

"Oh, Miss Enna," replied the girl, looking down, and her round face grew crimson, "it's a book of his'n. He used to be always readin' in it; and one day he throw'd it into my lap, and said, when I could read it he'd

give me a silk gownd fit for a quane to wear. I laughed and thought nothin' at all about it until after he'd been gone above a year, when I found it down at mother's one night in my old chest which mother had given me when I'd bought her the bureau poor Gracey wanted so bad. I've kept the book ever since; and I take it out of my drawer o' nights, and sit down and try to see somethin' in it, but even if I could rade, which I can't, I couldn't see nothin' in it, for it always makes me cry."

I took the book from her with great curiosity; I was anxious to see what was the nature of it, for I hoped to judge by it of the character of this author-lover. It was *Falconer's Shipwreck*. I was satisfied, and was a firmer friend than before to Patrick.

A few weeks afterwards, one night Bridget came home with a face perfectly radiant, or "bamin," as she would have said. 'I was reading in my bed-room all alone. She came in, closed Aunt Mary's door, and giving me a letter, said—

"Rade it, dear Miss Enna; rade it; he's alive, and is comin' home," and she sat down on the rug beside me, and laughed and oried at once as I read the letter aloud to her.

Sure enough, the lover was safe and true. He had written to her often, but the letters had been lost, he supposed, as he had never heard from her; but he felt sure, he said, that she was still his Bridget, even if he did not hear from her.

"There, you see, Miss Enna, how bad I'd been if I'd done as they wanted me to," she exclaimed; "and so Father Shane said to mother to-night, when he read the beautiful letter—for he brought it to me. Patrick writ to him, and sint him this letter to me inside of his'n, bekase he said he'd writ so often to me, and he thought a letter would sure rash me through Father Shane."

Patient reader, this is a true story; but I am the only one to be sympathised with in it, for I lost my jewel of a chambermaid. A few months afterward Patrick came home and claimed his faithful Bridget. We had a busy time when she was married—for the whole family took an interest in good Bridget's fortune. Patrick was a nice, healthy, bright-looking Irishman; and when on the Sunday after he arrived he came to take her to mass, I saw him, as they walked down the street together, look at her sturdy little figure with as much admiration as if it had possessed the fine proportions of a Venus. Love is such a beautifier!

Father Shane married them, and Patrick rented a nice little house in the suburbs of our town, and took Widow Kerevan home to live with them. Bridget was a happy wife; but she has one trouble, and that is, that her husband's calling takes him away from her, and places him in frequent danger; but when he returns from long voyages she is as bright and merry as a ark.

The other day I went to see her, and as her little girl Elsie came nestling close to me, Bridget said—

"Ever since that child was born, Miss Enna, I feel that my blessed darlint has come back to me. Ooh, but he's been kind to me," she said, "for he give me back both Patrick and Elsie."

Good girl! God had indeed been kind to her, for He had bestowed upon her those priceless gifts of the spirit—Faith and Truth.

## THE INFANT'S TEMPTATION

BY MARY BENNETT.

BEHIND the broad old apple-tree,  
Half hidden in the strawberry bed,  
On the ground sits Kate alone,  
Eating strawberries, ripe and red.

They grow beneath the spreading leaves  
The tempting fruit is fair to see;  
Kate heeds not how Mamma she grieve  
Such a joyful feast has she.

Yet little Kate has not forgot  
To touch the fruit she is forbid,  
And she promised she would not—  
Thanks she by the leaves she's hid!

Leaves cannot hide the child from God,  
Nor from conscience—hark! it tells,  
You've observed the chastening rod,  
Henceforth fear your bosom wells.

Love and conscience urge you now,  
Go and tell Mamma the truth;  
She will keep no frowning brow  
For the contrite heart of youth.

She will pardon; she will speak  
Mildly of temptation's power;  
Show thee how one sin may break  
The peace of many a future hour!

PRIVATE CHARACTER OF A LOCOMOTIVE.—People who may see a locomotive tearing up and down the land at a rate of forty miles to an hour—making the very earth groan beneath its giant tread, and the heavens themselves reverberate with its fearful clatter—scaring nature with its unearthly din, and frightening all creation from its propriety, almost—people who only see it in its terrible activity, have no idea what eminently social virtues it is endowed with. This is its public character. Their private one is another affair. Now and then one of these huge monsters, in whose iron bowels slumbers more than a thousand giant power, comes up and stands under our window, and smokes away as gently as the most exemplary cooking-stove, its huge steam-pipes singing a strain as soft and as dulcet as the most amiable tea-kettle, and its lungs of steel breathing as sweetly as an infant in its slumbers. But the demon of power is there. Let any one but pinch its ears, and no venerable spinster cat will spit more fiercely—let him grip those iron hands, and the pipes which were tuned to so soft a strain, send forth a yell as if heaven and earth were caving together, and those lungs which first breathed so quietly, cough like a volcano—and off it goes, darkening the heavens with its dense volume of smoke.

## ESCAPE OF MRS. KOSSUTH.

AN AUTHENTIC NARRATIVE.

DURING the month of August, 1848, the President-Governor of Hungary, Louis Kossuth, with the principal officers of his provisional government, were in the fortified town of Arad, on the river Marosch. Between that place and the town of Zegadin, on the Tisza, in the vicinity of Arad, Georgey, with the Hungarian troops under his command, lay encamped; while behind him, towards the Tisza, was the Russian army of reserve, under Paskiewitch. Dembinski, with his men, besieged Temeswar, and he had already carried its third wall. Between him and the Tisza lay the United Austro-Russian forces. The army of Bem had been defeated at Hermannstadt, by the Russian General, Lüders, and he had fled with a small band of faithful followers towards Temeswar.

With this position of the combatants, the plan of Dembinski was to unite with Georgey, near Arad, and then to attack the Russian forces. Before this was effected, news reached him of the capitulation of Georgey, and that the governor, M. Kossuth, had been compelled to forsake Arad, and retire to the town of Vilagos. Before leaving Arad, the governor separated from his wife and children, and their parting scene is said to have been one of the most touching nature. Under the circumstances of the moment, it was a subject of even more than doubt whether they would ever again meet on earth. It was only when a young Hungarian nobleman, named Ashbot, solemnly swore to his wife that he would never leave her husband, that Madame Kossuth consented to be separated from him, and seek safety in flight. The children were confided to the care of a private secretary of the governor, and this individual subsequently delivered them up to the tender mercies of Haynau, for the purpose of securing his own pardon and safety. The children set out before their mother, and the latter, in her flight, endeavoured to keep at least so near to them as to hear now and then of their safety.

Madame Kossuth sought out a brother of hers, residing in the town of Vilagos, and he is now imprisoned in the fortress of Comorn, with many others of the unfortunate Hungarian patriots, for eighteen years, on account of the succour which he then gave to his sister. Leaving him, she next went in search of her children, and wandered to a *pesta*, or farm-house, of Boekank, belonging to a relative. There she fell ill of a typhus fever, which nearly ended her life; and when so far recovered as to be able again to travel, she continued her journey in search of her children. She soon learned that they had been given up by their protector to the Austrian general, Haynau, and taken to Pesth. Her own safety depended wholly upon the fidelity of the Hungarian peasants, and on their attachment to her husband.

Now, having no other object in view than her own safety, without friends better off than herself, she soon became reduced to a state of complete destitution. In disguise, she wandered over the most miserable part of Hungary. She even, as a means of safety, as well as support, sought for service as a servant, and by saying that she was a poor woman, who had just been discharged from a public hospital—which, indeed, she very much resembled—was so fortunate as to find employment in the family of a humble carpenter, in the town of Orash Haya, who little thought he was served by the lady of Louis Kossuth, the late governor of Hungary. Everywhere notices were exposed in the streets, offering forty thousand florins for her capture, and proclaiming death as the punishment of the person who should dare to harbour or conceal her from the authorities.

Among the persons who fled with M. Kossuth before the overwhelming number of his enemies, was an elderly lady, whom it is necessary to designate as Madame L——, and who, from being unable to ride as fast and as long as those who were stronger and younger than herself, soon became exhausted, and was left behind. She had a son, a major in the Hungarian army, near the person of the governor, and both the son and mother were warmly attached to his interests. Madame L——, when unable to proceed longer with the fugitives, in order to reach a place of safety in the dominions of the Sultan of Turkey, determined to remain in Hungary, and devote herself to the finding of Madame Kossuth, and restoring her to her husband.

For this benevolent purpose Madame L—— disguised herself as a beggar; and after a long and weary journey, oftener on foot than in any conveyance, she crossed the vast sandy plains of Southern Hungary, and at length reached the place in which Kossuth's children were, but could hear nothing of their mother.

She learned that the children had been sent, soon after their mother had lost sight of them, to the house of General G——, now in the service of the Sultan in Syria, to be kept with his own three children, hoping that they would thus be screened from those who sought after them. The eldest, named Louis after his father, was seven years of age; and all were told that if they acknowledged they were the children of the governor, they would be imprisoned by the Austrians, and never see their parents again. So that when an Austrian officer traced them to the house of General G——, he was at a loss to know which of the children were those of General G——, and which those of M. Kossuth; and approaching the eldest of the latter, he said:—"So, my little man, you are the son of the governor?"

To which the youth replied, "I am not, sir!"

His firmness surprised and vexed the officer, who was certain, from the statement of their betrayer, that those before him were the long-lost treasures of his ambitious search. He now endeavoured to frighten the children, and, drawing a pistol, directed it to the breast of the boy, and said that if he did not at once acknowledge that he was the son of Kossuth, he would put a ball through his heart. Young Louis—who, it is said, shows much of the character of his father—replied in a tone equally firm:—

"I tell you, sir, I am not the son of Kossuth."

The officer, baffled by the child's simplicity of manner and apparent sincerity, was divested of his convictions, and led to believe that he had been imposed upon.

But before Madame L—— could get near them, other agents of the Austrian government had been more successful, and the three children had been carried off in secret to Pesth, near the clutches of Haynau. The mother and sister of M. Kossuth had also been captured, and placed in strict confinement. It may be here mentioned, in this little narrative, of the sufferings and deliverance of the relatives of Louis Kossuth, that Madame L——, on finding where and how his children were situated, found out her own maid-servant, and so succeeded, as to have her engaged at Pesth as their nurse. This person never left them until the moment of their final deliverance from their Austrian jailers had arrived. After thus having provided for the welfare of the children of M. Kossuth, Madame L—— renewed her search for their destitute suffering mother.

Finding no trace of her, Madame L—— determined to follow the fugitives, and if she reached Widdin, to ascertain from M. Kossuth himself where his poor wife had gone, and then return in search of her. Continuing in the disguise of a beggar, sometimes on foot, at others in a farmer's cart, this heroic woman reached the frontiers of Hungary, and crossed them, entered the fortified and walled town of Widdin, where the late governor of Hungary and his brave unfortunate companions then were, enjoying the protection and hospitality of the Sultan of Turkey. Madame L—— applied to M. Kossuth, but not being known to him personally, and the Austrian general having set so high a price on the capture of his wife, he at first regarded her in the light of an Austrian spy. Having, however, soon found her son, who had followed the governor into Turkey, he readily convinced M. Kossuth of the identity of his mother. All the information which M. Kossuth could give her was, that there was a lady in Hungary, in whose house he believed his wife would seek a refuge; and if she was not still there, this lady would most probably know where she was.

The governor now furnished Madame L—— with a letter to this lady, and another with his own signet-ring for his wife, which would be evidence of her fidelity. It is not here necessary to follow Madame L—— on her toilsome journey. Devoted to the philanthropic work which she had undertaken, she wandered over the sandy steppes of Hungary, until she succeeded in reaching the little town in which the lady resided, and delivered to her M. Kossuth's letter. This she read, and immediately burned it, not daring even to allow it to exist in her possession. This lady informed Madame L—— that the wife of Governor Kossuth had left her residence in the guise of a mendicant, and intended assuming the name of Maria F——; that she was to feign herself to be the widow of a soldier, who had fallen in battle, and that, if possible, she would go to the very centre of Hungary, in those vast pastures, where she hoped no one would seek after her.

With this information, Madame L—— again resumed her journey. She feigned to be an aged grandmother, whose grandson was missing, and that she was in search of him. She had many narrow escapes while passing guards, soldiers, and spies; until at length she reached the plains before mentioned. She went from house to house, as if in search of her grandson, but in reality to find one who would answer the description given her of poor Maria F——. At length, in a cabin, she heard that name mentioned, and on inquiry who and what that person was, learned that she was a widow of a Hungarian soldier who had fallen in battle, and that she had a child, who was with its grand-parents. They then described her person, but added, that she had suffered so much from illness and grief, that she was greatly changed.

"Before she came here," said the speaker, "she worked for her bread, even when ill; but after her arrival, she became too much indisposed to labour, on account of which they sent to the Sisters of Charity for a physician, who came, and bled and blistered her; and when she was able to go, she had been conveyed to the institution of the Sisters, where she then was." Madame L——, feeling convinced that the poor sufferer must be none other than the object of her search, expressed a desire to visit her.

At the Sisters of Charity, Madame L—— had much difficulty in procuring access to Maria, and the latter was as much opposed to receiving her. At length Madame L—— told the Sisters to inform her that she had a message for her from her husband, who was not dead, as she had supposed, and of that she would soon convince her, if she would permit her to enter. Poor Maria, between fear and hope, gave her consent, and Madame L—— was allowed to see her. Madame L—— handed her the letter of Governor Kossuth. She recognised, at once, the writing; kissed it, pressed it to her heart, devoured its contents, and then destroyed it immediately. Soon a story was made up between the two females; they told the Sisters of Charity that Maria's husband "still lived," and that she would rejoin him. A little waggon was procured; as many comforts were put in it as could be had without suspicion; and these two interesting women set out on their escape from the enemies of their country.

Madame L—— had a relative in Hungary who had not been compromised in the war; so this person arranged to meet the ladies at a given place, and, in the character of a merchant, travel with them. After they had left the pasture-grounds, he passed as the husband of "Maria," and the elder female as his aunt. At night they stopped at a village, and were suspected, on account of the females occupying the bed, while he slept at the door. They started early in the morning, and the "husband" remained behind to learn something more of the suspicions to which their conduct had given rise. He again overtook them, as they stopped to feed their horse, and bade them to be greatly on their guard.

In the evening, while the two ladies were sitting together in a miserably cold room, the face of poor Maria so muffled up as to conceal her features,

and induce the belief that she was suffering from her teeth, both appearing such as persons in great poverty, overcome by her afflictions, Maria had a nervous attack, and talked and laughed so loud that her voice was recognised by an Austrian officer who happened to be in the house. This person sent a servant to ask them to come into his room, where there was a fire. Madame L—— inquired the name of the "good gentleman" who had the kindness to invite them to his room, and when she heard it, Maria recognised in him a deadly enemy of her husband. While they were planning a means of evading him, the officer himself came into their apartment. Immediately arising, they made an humble courtesy, in so awkward a manner as to divest him of all suspicion. Madame L—— spoke, and thanked him again and again for his kindness, but added that such poor creatures as they were not fit to go into his room. So soon as the officer retired, Maria had another attack, which would certainly have betrayed them, had he been present. Madame L—— implored her to be composed, or they would be lost.

Starting again, they were not molested until the evening, when they were apprehended, and conducted by two policemen before a magistrate. There the former spoke of them as suspicious characters; but they were not told of what they were suspected. While the examination was going on, Madame L—— slipped a bank-note into the hand of the superior of the two policemen. This bribe quite changed the affair; the two men became their friends, excited the pity of the magistrate in their favour, and they were allowed to depart. Thus they went on from station to station, until they reached the frontiers of Hungary, near the Danube. They entered the little town of Saubin, and asked permission of the head of the police to pass over the river to Belgrade. This was refused, until they said they wished to go there for a certain medicine for a daughter who was ill, and that they would leave their passports as a security. He then gave his consent, and they crossed the Danube, and entered the dominions of the Sultan of Turkey.

It was night when they entered Belgrade. They knocked at the door of the Sardinian consul, who had recently been stationed in that frontier town by his king, whose whole heart sympathised in the Hungarian cause, and who had formed a friendly alliance with M. Kossuth for the freedom of Italy and Hungary. The consul had been advised by M. Kossuth that two females would probably seek his protection, but not knowing them, he inquired what they wished of him? Madame L—— replied, "Lodging and bread." He invited them in, and Madame L—— introduced him to Madame Kossuth, the lady of the late governor of Hungary.

It will readily be conceived that the consul could scarcely believe that these two miserable beings were the persons they represented themselves to be. Madame Kossuth convinced him by showing him the signet-ring of her husband. In his house Madame Kossuth fell ill, but received every possible kindness from her host. They learned that all the Hungarians and Poles had been removed from Widdin to Shumla; and notwithstanding that it was in the midst of a severe winter, they decided upon proceeding at once to the latter place. The Sardinian consul applied to the generous and very liberal Prince of Servia, in whose principality Belgrade is, for his assistance in behalf of the ladies, and in the most hospitable and fearless manner he provided them with his own carriage and four horses, and an escort; and in this way they started through the snow for Shumla. Their journey was without any apprehension of danger, for the British consul-general at Belgrade, Mr. F——, had provided the party with a passport as British subjects, under the assumed names of Mr., Mrs., and Miss Bloomfield; yet the severity of the weather was such that Madame Kossuth, in the ill state of her health, suffered very much. Often the snow was as deep as the breasts of the horses, and not unfrequently four oxen had to be attached to the carriage, in their places. A journey, which in summer would have required but a few days, now was made in twenty-eight.

On the twenty-eighth day a courier was sent in advance of them to apprise Governor Kossuth of their approach. He was ill; and, moreover, on account of the many plans of the Austrians to assassinate him, the Sultan's authorities could not allow him to leave Shumla, and go to meet his wife. The news of her deliverance, and approach, occasioned the liveliest satisfaction to all the refugees; and the Hungarians and Poles went as far as the gates of the city to meet this heroic martyr of the cause of Hungary. It was night when the carriage neared the city; as it entered the gates, she found the streets lighted up with hundreds of lights, green, white, and red, the colours of the Hungarian flag, and was welcomed with the most friendly shouts from the whole body of the refugees.

When Madame Kossuth descended from her carriage, she found herself in the presence of her husband, who had risen from his bed of illness to receive the poor "Maria F——" of the plains of Hungary. In place of receiving her in his arms, M. Kossuth, overcome by feelings of admiration for the sufferings which his wife had undergone, and by gratitude for her devotion to the cause of her country, threw himself at her feet and kissed them. She endeavoured to speak and offer her husband consolation and tranquillity, while her own poor feeble heart was ready to burst with emotion. Her voice failed her, and, amid the reiterated shouts of the Hungarians and Poles, this heroic woman was carried to her husband's apartments.

**EVERY-DAY ABSURDITIES.**—To make yourself generally disagreeable, and then wonder that nobody will visit you. To sit shivering in the cold because you won't have a fire till November. Not to go to bed when you are tired and sleepy, because it is not bed-time. To make your servants tell lies for you, and afterwards be angry because they tell lies for themselves. To tell your own secrets, and believe other people will keep them.

## THE PHANTOM LIGHT:

A CHRISTMAS STORY.—BY FITZ-JAMES O'BRIEN.

(Continued from Page 22)

THE morning after Arthur's arrival opened busily. The household was early astir, and the various "followers" that usually thronged the kitchen were all employed in providing some means of amusement for the young student, who was a singular favourite amongst the dependents of his aunt's establishment. Donald Barrett, the fisherman, was up since dawn preparing the long "seine," and baiting the "spillards," which, with its five hundred hooks, hung over the bulwarks of the large fishing-yawl that lay beached upon the strand. A carrotty-headed, mis-shapen boy, who went by the imperial name of "Bonaparte," was busily engaged in cleaning Mr. Arthur's double-barrel, and anticipating, with untold delight, sundry campaigns against the woodcocks and snipes in company with "the young master; while the "poet's son," Arthur's especial *protege*, was up with the first glimmer of the sun, and, shrimping-net in hand, was capturing some hundreds of the delicate shell-fish, of which his patron was particularly fond. The individual who bore the bardic title of "the poet's son" was a sort of self-constituted mentor to the young student, whose country education had superintended, and whose brilliant college career he believed to be entirely attributable to his own paternal teachings. He was, however, little calculated for the post of a college preceptor, unless, indeed, the arts of snaring mullet and robbing sea-gulls' nests would be looked on by the head of the University as qualifications. He was the son of one of those senachies, or story-tellers, whose number is fast diminishing in Ireland, and who usually attached themselves to some gentleman's family, where they had, whenever they chose to claim it, a warm corner by the kitchen fire, a seat at the servant's table; in return for which they chanted long metrical tales, dilating on the ancient prosperity of Erin, and generally, towards the end, glorifying the ancestors of the family whose hospitality they were enjoying. Coming from such a lazy and useless stock, the "Poet's Son" never had any other name that I knew of, could scarcely be anything but an idler; wandering over the hills, going out to sea with the fish-boats to lend a hand at drawing the spillards, and noting the den of a fox, and the form of every hare for miles around. Arthur was the espe-

object of his adoration; he had been his companion in boyhood, and he looked upon him as a sort of plant of his own rearing. It was an amusing sight to behold this tall, wild-looking being, with long tangled fair hair hanging about his pale face, skipping before the boy with the activity of a martin cat, and pointing out, with nervous gesticulations, a rock-pigeon's nest or a fox's haunt.

"Musha, then, but Mither Arthur is grown a fine young man altogether, God bless him!" said Oonagh, the nurse, a toothless, white-haired, affectionate old woman, upon whose bosom Uncle Tot and Mrs. Tregar had lain in their infancy, and who, in the shelter of their bedside, was going down to her grave happily. "He's as like his poor grandfather, rest his soul, as an egg is to another. Jist the same curly hair an' blue eyes, that look as if they were made for deludhering the girls. He's a great credit to the family intirely, that's what he is, and it will be long before his *onshagh* of a father will be like him; though I nursed him, an' oughtn't to say it, he'll never come to any good so long as he carries on them invintions of his, and all sich gladiathen." And as she thus delivered herself, she drew the stool on which she was squatted closer to the fire, and leisurely lit her pipe.

"I've heard my father tell of his family," said the poet's son; "they wor great people in their day, I believe."

"May you nivir tell a worse lie than that," replied the old nurse, sententiously; "they owned all the country round here, and lived like rale tips and queens as they wor. Shure, 'tis Donal Barrett there that could tell us about them as he pleased; his family lived on dher thim since there wor praties in Ireland."

"I well rimember the day ould Bell, Mither Arthur's grandfather, was killed, as well as if it was *only yesterday*," said the old fisherman, solemnly, and a dark shadow came to lower upon his bronzed and weather-beaten features.

"Didn't something quare happen to him before he died," asked the poet's son, after a short pause, steadfastly gazing as he spoke into the bright scintillating turf-fire. "I heard my father wance say he saw the Phantom Light."

"You may say that, Poet's Son," replied Donal, knocking the ashes from his pipe, and preparing himself to enact the part of story-teller. "You may say that. Something happened to him quare enough, in all conscience."

"Tell us about it, Donal," said Bonaparte, thrusting his red shaggy head among the group. "Mr. Arthur won't go out for an hour to come, an' you have lashings of time."

Oonagh drew closer to the fire, and raked the embers with a long flat piece of iron kept for the purpose, until whole showers of glowing sparks lew crackling up the wide chimney. The poet's son stretched out his long legs until his bare fin-like feet were as near to the fire as they well could be without being burned. Bonaparte curled himself up in a corner of the hearth where his red head and bright malicious eyes gleamed like a small opposition fire; while Donal, placing his broad horse hands one on each knee, commenced his recital with an air of considerable dignity.

"You all have heard," he began, "what a rale devil ould Mr. Bell was whin he was in a passion, though he was as good a man an' fine a gentleman as ever stepped in shoe-leather, an' how he didn't care what he did whin his blood was up. It was nothin then but 'Donal, you scoundrel, there, an' Donal, you ruffin, here; blazin' an' abusin' every man, right an' left, side n' cinthre; an' begor you wor lucky if you came off without a good hard iek of his hunting-whip. But when the fit was over, an' it never lasted long, it was another man intirely. Thin it was, 'Donal, my poor fellow, I am feared I said more than I ought to you to-day; here's a crown to drink my health in;' or 'Donal, my boy, they say that a bit of fat bacon is a good cure for a bruise, and as I powderher your jacket pretty well with my whip to-day, oil must go to the housekeeper an' get half a fitch to carry home with ou.' An thin he would ride off nodding his head an' smiling so pleasantly t me, until van couldn't help loving him—God be merciful to him! Well, t will be forty year come next Michaelmas, that the mather an' myself an' ould Oonagh there, who was thin a fine strapping girl, wor standing towards night-fall outside the hall-dore, 'specting the fishing boats in, for the mather, you must know, was very fond of going down to the beach an' seeing whether the men had made a good haul. Well, as I was sayin', we hree wor standin' outside the dore, whin the mather called out that besed 'm comin', an' pointed wid his finger to the rapids." We looked, an' there, onough, we saw a small weeshy bit of a light come sailin' across the lake.

At first it was no bigger than my hand, an' I thought it might be the of turf that the boys keep in the stirn of the boats to light their pipes id; but as it came on, we all at wance persaved that there war no sounds rowin', and the boats couldn't float in, for the tide was going out fast. Begor, sir," says I to the mather, 'I'm afeard there's no good in that light.' Wid that he laughed an' sed, 'I'll be bound, Donal, that you're for treying it's a sperit, or something shupernatural; wid that I up an' told im all about the Phantom Light that always folls the family, an' appears the lake whin anything misforthinat's goin' to happen. But he only ghed at me, an' sed that it was the wathergards goin' on some sacret pedibun, an' that they wor rowin wid muffled oars. Well, the light was lovin' on all this time to the cinthre of the lake, an' growin' bigger and jigger by degree. All at wance the mather commenced to hail it; he blooded, an' bawled, and tould me to do the same; but begor, I knew better an to have anything to do with it. Well, sorra a bit of an answer he got; or would he get wan if he was shoutin' there ontill the pristin moment. Id, ses he, at last, 'as it won't answer us we'll set up a light of our n, an' thry if we can't catch what the thing is med on.' So he med us bring t a huge of jogg, dale, and shavings, an' sot fire to thim. There was a ate blaze, intirely that stretched far an' away across the lake, but the devil of anything could we see only the light sailin' leisurely on like a wisp pating wid the tide."

"Glory be to God!" ejaculated the poet's son, piously, crossing himself with great fervour. "It was enough to skear a joyant."

"It didn't skear the mather, howsomever," pursued Donal, "for whin he found that he could nather hear or see anything, he got mad in himself wid vexation, and was for going afther the light immediately in the gig. But the gig was beached upon the strand in order to be fresh, wauled, an' he was oblegged to give that up; this med him worse than ever, and he turned to me an' sed, 'Donal, ses he, 'go this instant into the small parlour an' bring me my rifle that's hanging over the chimbley-piece. Man or ghost, I'll have a shot at it!'"

"Thim was the very words; the Lord stand betune us an' harm this blessed night, an' all the horrors of our lives," interrupted Oonagh, glancing fearfully at the door, as if she expected the supernatural flame to walk in that very inoment and make a bonfire of her.

"Man or ghost, I'll have a shot at it!" continued Donal. "For the mayer of Heaven, sur," says I, 'don't have anything to do wid it. No luck will ever come ov it if you do.' 'You chicken-hearted omadhawn,' ses he, 'how dare you preshume to bandy words with your mather. Go for the gun this instant, or you'll rue it.' He was in a terrible passion, an' there was no going agin him, so I wint an' brought him the rifle, and the powder-flask an' bullets. As soon as he got 'em, he commenced loadin' an' firin', an' may I niver live if he didn't keep shootin' at the light for a blessed quarther of an hour. We used to see the bullets skippin' on the wather, an' going through the light, an' over it, an' undher it, but sorra a taste it minded powder or ball, but kep movin' on afid on to the cinthre of the lake. All of a suddint it rose up like a plume of fiery feathers, and spread gradually out until it became like a broad sheet of yellow flame; and in the middle we could have all sworn that we saw a beautiful young woman, with a pale face, and clothes that looked for all the world as if they were med of sunbeams, crying and wringing her hands, as if she was very heart-sore. It sted for about three or four seconds this way, and thin turned quite red and wint down into the lake like a shot; while all through the hills there came a great sough of wind, and the ould ash-threes outside there thrimbled like cowards."

"The Virgin look down on us, but it was a terrible night!" said Oonagh, rocking her stool to and fro, and gazing into the fire as if she saw the scene re-enacted in its crimson embers.

"Well!" said Donal, drawing a long breath after this climax, and continuing his tale—"that wasn't all aither; the mather, you see, wasn't quite aseey in himself that evening, and was very silent and sayrious like, but that soon wint away, for it worn't aseey to cow him. The next day was the day of the grate hunt. Squire Beedlers and Captain O'Driscoll's hounds wor to meet and draw the Cunnacunna cover, and all the gentlemn for miles round wor to be there. Airly in the morning out came the mather to order ould Flurry to be saddled; and to look at him in his top-boots and white breeches, you'd say there wasn't a finer leg or a lighter step in all the country's side. Nivir since the world was a world, was there sich a hunt. I ought to rimember it well, for by the same token, I nearly wore the feet off of myself, wid thrying to cross-cut the hounds and see some of the sport. The fox they found that day was an ould grey-haired vagabone, that lived just under the Aigle's Crag, and was as well known to the hounds as their own kennel, for many is the day they wor on his tail, only the cunning ould villyan used always to bate them amongst the cliffs. Well, if he ran a yard that day, he ran twenty mile. Afther breaking cover at Cunnacunna wood, he ran straight up Bookan hill, and turfed sharp round there and cut across Lick bog for Tragomena; but some men working in a field frightened him there, so he changed his coorse, and med right for Tow Head, as dangerous ground as ever man and horse put fut in. I saw where he was bent for, and as I knew the short cuts, I was there near as soon as himself. I was standing on the brow of the cliff waiting for the gentlemn to come up, that I might tell thim were the varmint was aither, whin who should I see, coming full gallop down the hill, but the mather, mounted on ould Flurry. I thought he was mad, at first, to ride in sich a place, and I shouted at the top of my voice to him to pull in; but as he came on I saw by the way Flurry was pulling, that he'd got the bit between his teeth, and was running away like mad. I'll nivir forget to my dying day the look of the poor mather's face, as he came on to the cliff. His face was as white as a sheet, and his blue lips wor puckered up as if they wor tied wid a string. But for all that he nivir lost courage to the last, and he handled his reins and sat his horse as if he was going at a double ditch, instead of to his coffin. I tried to run and get before ould Flurry and turn him, but I was too far off, and he was going like wild-fire. Just as he neared the cliff, I saw the mather thrying to throw himself off, but something must have hindered him, for ould Flurry switched his tail—gave another stride, and they wint over together!"

"When we got to the foot of the cliff they wor both quite dead, but the mather kep his sate to the last, and we had to take his feet from the stirrups, and the reins from between his fingers, before we wor able to take him home. The Hunt all came to the funeral, and there wor more wet eyes in the parish the day he was buried than if the Liberator himself was dead. And that's the raisin, boys, that we're afeard of the Phantom Light."

"Blur an agers, but that was wandherful, shurely!" ejaculated the poet's son, wrought up to a high pitch of excitement by Donal's recital. "I often heered my father spake about that same light, and he had stories as long as yer arm about it, but they wor all about the ould ancient times."

"And fine times they wor, alannah," said Oonagh, "ould Ireland will nivir see their like again—holy father! what's that?"

"There was, indeed, cause for the ejaculation, for just as the last syllable left the old nurse's lips, a loud hissing report rang through the kitchen, and a large and very lively globe of flame came dancing merrily in through the

door, and made what seemed to be a premeditated rush at the fire-place. The honest folk who were quietly seated there, and full of the legend just related, took it for granted instantly that it was nothing more or less than the Phantom Light itself, which, leaving its native element, was coming to have a bit of a spree on shore. In a moment the circle was broken up, and all was confusion. Conagh, uttering a piercing shriek, precipitated herself on the nearest table, where she knelt pating, praying, crossing herself, and confessing her sins all at the same time with the most indefatigable energy. Donald was so completely paralysed that he did not even make an effort to stir, but sat following the evolutions of the terrible visitor as it danced and hissed around the room, with a sort of stupid terror. The poet's son at first seemed to have serious intentions of making his exit through the chimney; but missing his footing once or twice, he changed his tactics, and made a gullant rush for the door, where he came full tilt against Uncle Tot.

"Don't be frightened; I couldn't help it," cried Uncle Tot, running into the kitchen very much out of breath and very red in the face; "I couldn't help it, indeed I couldn't: the cursed thing got away from me, and I have been hunting it through every room in the house. Don't be frightened, it's only my new rocket."

With these words, Uncle Tot seized a bucket of water that lay near, and commenced the chase of his invention. It was, however, all in vain; the thing would not be subdued. It seemed bent on proving that it was not brought into the world for nothing; and the more it was soused, the more furious and eccentric its evolutions became. It danced here and there, and fizzed and crackled in a most independent fashion, utterly regardless of the torrent of prayers and litanies which Conagh was pouring forth on the top of the table, and which ought to have been quite sufficient to extinguish any conscientious firework. "It was not until Uncle Tot had laid down his bucket in sheer weariness and disgust, that his invention became at all reasonable. It then took up its station in a small pool of water on the floor, where, after delivering itself of a few defiant hisses, and getting up a feeble demonstration of some intention of setting off again upon its travels, it finally subsided into a miserable state of cinderhood, and allowed itself to be peaceably borne away by its owner; who, it must be said, was rather detected at the termination of his first experiment in pyrotechnics.

(Continued on No. 4.)

## SHADOW AND SUNSHINE!

OR, WHO SHALL WIN?

BY CHARLES CRAYON.—(Continued from page 25.)

As the two visitors were unacquainted with the facts which have been narrated to the reader, they made inquiries of the prisoner, who minutely detailed to them all the circumstances connected with his attempted assassination, the surprise he felt at the deed, and his subsequent arrest. They listened with the greatest attention, and uttered many exclamations of surprise, as the mysterious facts came to their ears.

"I knew it; I knew that the son of my old friend could never be guilty of such a deed," exclaimed Mr. Montrose. "Henry, my boy, be of good courage; keep up your spirits; all will surely come out right."

Morton shook his head despondingly.

"Come, come, my young friend, never despair; you know innocence must eventually triumph."

"It all looks dark—very dark to me."

"No, no; don't indulge such feelings. Be assured that this foul plot will be brought to light."

"Perhaps it may; but I think the chances are small. It is one thing to know the circumstances I am in, and another to realize them."

"Very true—very true. It must be hard for one with prospects so bright as yours, to see even a chance of having all his hopes destroyed."

"No, no, Mr. Montrose; it is not that—not that. I do not fear to die. I have no loved ones to leave with the cold, hollow-hearted world—none to mourn over my loss. But to die thus like a felon—to leave a name associated with dark and bloody deeds, and have no opportunity of proving my innocence, that would be indeed hard."

"Come, Henry, cease to look on the matter in this view; you regard it by a false light. I tell you this can't be; it *shan't* be," exclaimed the old merchant, emphatically; "but Alfred," said he, a moment after, to Whitman, who had been wrapped in deep thought since the narration of Morton, "what do you think of the matter?"

"Morton, you are the victim of a dark plot, and it was contrived by a subtle mind. We must be shrewd and cautious, or it will surely be successful. But who can be at the foundation of it?"

"I cannot imagine."

"Have you any enemies who would be base enough to do it?"

"I know not that I have an enemy on earth."

"But, be that as it may, it is certain that some person is plotting your ruin. We must foil them. Who is this man who is ready to testify that he met you in company with the murdered man?"

"I cannot tell; I asked, but no information was given me."

"What motive could induce any one to form such a fiendish plot?"

"I cannot conjecture."

"Neither can I. It is certainly deeply laid. The attempted assassination is all involved in mystery; but the wound which was found in the stranger's

body, and the dagger found in your possession—that will go far against you. To attempt to account for it in any way except the true one, would be fruitless; and if the truth were related, no one would credit the story. It would only be deemed a subterfuge, and a flimsy one at that."

"Very true. Then what had we better do?"

"If nothing is said in regard to it, that will certainly excite suspicion, for, with the world, silence gives consent, you know. But no exertions shall be spared to unravel this mystery, and something more will surely come to light."

"I have it!" cried Morton, eagerly; "I know whose head planned all this!"

"Whose?" inquired both his visitors in the same breath.

"Alonzo Duval's."

"Impossible!"

"No, I am certain that it must be he."

"I can hardly believe him capable of such an enormity."

"But I have been acquainted with him for years. I have been in possession of many of his secrets; I have marked well his motives and character, and Alfred Whitman, if you fancy that he would shrink from any deed, however base, to gain a cherished purpose, you know him not."

"Has he not been your friend?"

"I once fancied he was."

"And is he not still?"

"No; profess not the sacred name of friendship by applying it to him. Friend! why, man, he would sell the heart's blood of his own brother, to gratify his passions."

"But has he not been on good terms with you?"

"Latterly he has not crossed my path; but he has done it now, and he shall find his reward."

"Be calm, Henry," said his old friend, "think not of the deed in such a manner."

"I will not think of it thus.—There, I am calm now," said the unhappy man, passing his hand over his heated forehead. "I will throw aside these feelings, and be stoical to them all. I will forget that I am a man, and my wild ravings shall tellable you no more."

"Have you ever given Duval any cause for such a deadly enmity?" inquired Whitman.

"Perhaps so; but I had never thought of it before."

"How?"

"Several months since, after he had been pressing himself upon me for a long time, I told him in plain terms that I no longer desired his company."

"Did he seem much offended?"

"He did at the time, though I fancied he would soon forget it; but he is a reckless, unscrupulous man, and not easily soiled."

"At present, I must confess, your case looks dark," said Whitman, arising to depart; "but we will spare no pains to bring this iniquity to light."

"Keep up your spirits, my boy, do not despair, for justice must certainly triumph; and when you are tempted to despond, remember who is ever ready to pity and support the suffering and the wronged."

Morton silently wrung the hands of his two friends, and he was left alone.

## CHAPTER VII.

"I have known and felt how bitter  
Human coldness makes the world;  
Every bosom round me frozen,  
Not an eye in pity pained."—ARON.

For a long time after the sound of his visitors' footsteps had ceased to reverberate in the passage-way, the prisoner sat in his gloomy apartment, buried in the heaving abyss of thought; and as a full consciousness of his dark, almost hopeless situation came upon him, who shall wonder that he was almost tempted to despair? While the light of hope animates the soul, evil and sorrow may be patiently endured; for the ayen is ever ready to whisper of a bright to-morrow; but when her last flickering rays have fled away, and only the cold, sepulchral light of reason is left, the prospect is dark and gloomy as midnight upon the troubled sea.

Morton thought of the past—of the bright and sunny days of childhood, when his hopes were many, and his spirit was free. He thought of scenes that had been long buried in the sea of memory—of the halcyon days so soothing to recall, when the spirit is borne down with the sin and care with which it is surrounded; of the forms which had long rested in their last repose, that had been near him in childhood's bright unsullied hours. A mild, sweet countenance that had bent over him in infancy, that had taught him the first to breathe the accents of prayer; and had not the Father above taken it to his blessed abode, that would have still been near in the stern battle of life to comfort and to bless. The mild accent of a sister, whom memory faintly recalled, seemed once more to greet his ear, and their sweet tones came upon his heaving, tumultuous spirit, like oil upon the troubled waters.

Then the scene changed. Thought conveyed him again to the stern, unyielding present; he remembered his sorrow and his wrongs; he thought how cold and indifferent the world had proved, and he longed for the kind Father to take him home, where the wicked cease from troubling, and the weary are at rest. As he remembered his situation, how and why he was there, dark despair almost enshrouded his soul. He would have sought relief from the stern picture in the future; but that was wrapped in a mist that only the eye of Omniscience could penetrate.

Suddenly his reflections were interrupted by the opening of the door. He looked up impatiently, and saw the jailor again before him.

"Why am I again disturbed?" he asked, sharply. "Can I not be suffered to commune with my own thoughts, even here?"

"Do you see that form just beside yonder pillar?" "Who is she?" "That is no other than Ellen Gordon." "What, the daughter of the old fellow who owns the mansion?" "Yes; and, moreover, she is his only child"—See Chap. xi.

"Poor fellow," said the official to himself, "his trouble has nearly turned his head." A moment after, he replied aloud, "There is another visitor below, waiting to see you."

"Another visitor?"

"Yes, sir."

"That is singular. I fancied my friends had all forsaken me, but now they seem plenty," said Morton, smiling bitterly. "And who can this visitor be?"

"I do not know, sir. I asked what name I should bring you, but he only looked sharply at me, and bid me tell you that he was on an errand which deeply concerned you."

"Then it seems that he, too, feels an interest in me. Who can it be?"

"I'm sure I cannot tell, sir. He is a young man, and has the sharpest eye I ever saw. If he looks at you once, you can never forget it."

"I know of no such person; I will not see him. Leave me alone."

"And shall I say to him that you do not desire to see him?"

"Yes."

The jailor turned to leave the apartment.

"Stop a moment," mused the prisoner; "he may be a friend. If he is not, to see him can do no harm. Yes, I will see him."

"Very well, sir," and the jailor left the room.

In a moment he might have been heard returning, and heavy, measured footsteps followed him. The jailor merely remarked, "This is the apartment, sir," and returned to his duties.

The twilight which played in at the grated window, revealed to him the form of a young man, with black, curling locks, and an eye which he thought, as it met his gaze, that the jailor had aptly described. Could the reader have beheld him, he would instantly have recognised Fenning, whose name was mentioned in a former chapter. When he entered the room, the prisoner stood with folded arms, looking upon him, and in return his piercing eye fell upon the young physician. For several minutes neither spoke. Morton eyed the intruder sharply, almost fiercely, but he calmly returned the gaze. At length Morton broke the silence.

"Who are you, thus to force yourself on my solitude?"

"I am a friend."

"A friend!" repeated the prisoner, bitterly.

"Aye."

"The time has been when I thought I was blessed with friends; but here are they now? Who talks of friendship when misfortune comes?"

"They were false."

"So I have seen."

"They were hollow-hearted."

"So are all mankind."

"Nay, believe it not. There are yet some good and true left to comfort you."

"Thank heaven, there are! but they are few and far between."

"They are labouring for your welfare."

"But what know you of them?"

"Much."

"Come, sir, this is no time to play with words. Who are you, to know so much of my situation?"

"I am, as I said before, a friend."

"I know you not. I have never seen your countenance before."

"Very true." But if you will repose confidence in me, you shall have cause to be thankful for it."

"Confidence in a stranger! Why, man, are you a lunatic? I know not of three persons on the face of the earth in whom I would repose confidence now, and think you I would do it in a perfect stranger?"

"Because others have proved false, do not argue that those you have never tried will do so. What motive could I have in seeking to harm you now, even if I were your enemy?"

"What motive can you have in assisting me? How can my fate concern you?"

"Much. You are an innocent man; and think you I would see the innocent suffer, if I could do aught to prevent it?"

"If you are like your fellows, you would make no great exertions to prevent it."

"Nay, judge me not by others, in future; besides, I have a deeper interest in your destiny, and those who are seeking to destroy you, than you are aware of."

"How?"

"Are you not innocent of the foul deed laid to your charge?"

"God knows that I am."

"Then why are you here?"

"I am the victim of some foul plot."

"And who originated this plot?"

"A villain."

"Aye," replied the visitor, his eye flashing, and his countenance growing dark, "there you are right. He is a villain, and a villain of the deepest dye."

"But what know you of him?"

"Much—far more than he would desire to have me. He once did me a wrong—a foul, cruel wrong, and its impress is still on my memory. Had it been to me alone, I could have borne it; but it was to one dearer than life itself. I am often near him, he makes me the confidant of his guilty secrets, and little does he imagine that the dark deed he committed affected me."

But I have solemnly sworn that if it is not repaired, the stain shall be washed away in blood. Now can you understand why I wish to foil him?"

"Somewhat. But who are you?"

"It matters not; you shall know after you have seen that I am your friend."

"But how can you serve me now?"

"Time will soon reveal. First tell me if you have carefully examined your situation, and weighed all the chances of your escape by the law."

"I have."

"And what think you of them?"

"They are feeble—almost none at all."

"Very true. This plot has been deeply laid, and it is almost perfect in every part. But what do you design to do?"

"To make all possible attempts to prove my innocence."

"And what are the prospects for it?"

"Dark—almost hopeless."

"Indeed they are."

"But innocence may prevail. Truth may triumph over wickedness."

"Aye, it may; but does it usually in this world? Look back on the past and reflect."

"But what would you have me to do? You show me the fallacy of all my hopes—not hopes, for I have almost ceased to hope. But you show me that there is no room for escape."

"No; I only show you the fallacy of looking to the law to have your innocence vindicated."

"There is no other point where there is even a chance for justice."

"Say not so; there may be."

"Impossible."

"There is."

"Do not mock me. You profess to be my friend, and come here to delude me by a false hope."

"Judge me not until you have reason to do so."

"Then do not make my sufferings your jest. Trifle no more. What chance can there be?"

"Listen. Are you not here, confined in a felon's cell, on a false accusation?"

"Certainly; you professed to know that I was."

"So I did; but be calm. Have you not owned that your hopes of escape were almost entirely groundless and futile?"

"I have. But why will you harrow up my feelings?"

"To show you that there is a way in which your enemy may be overreached."

"How?"

"You may escape."

"Escape! what room is there for escape?"

"Ask not; be assured, however, that if you would be free from this place assigned to villains, before the sun has risen twice again, the means shall be provided."

"Speak you true?"

"Before the Ruler of all, I do."

"But where can I go?"

"The world is large. You can flee far from those who are seeking your life."

"And leave the stain of a murderer upon my name; never!"

"If you are convicted, will not the stain be indelibly fixed upon it?"

"It will."

"Then if you escape, it can be no worse. And at some future time, you may return and prove your innocence."

"True; I will go. But, for the love of heaven, mock me not!"

"If I do, may no mercy be shown me in the hour of sorrow. Now compose yourself; be calm; hint not a word of my visit to any one, and rest assured that I will meet you again." And the mysterious visitor turned and left the room.

## CHAPTER VIII.

"Life is a warfare—and alike  
Prepared to parley, and to strike,  
The practised foe draws nigh."—SPANISH POEM.

AT an early hour on the second morning subsequent to the events related in the last chapter, Alfred Whitman, the young attorney, sat in his office. His table was strewn with papers which he had been examining, and he seemed deeply engaged in the contents of a law book, which he was intently perusing. There was a shade of anxiety upon his brow, and it was evident that some important matter engrossed his attention. So deeply was his mind fixed on the subject, that he did not notice the opening of the door, and the entrance of another person.

"Good morning, Alfred," said a voice, which was the very personification of benevolence and warmth of heart.

"Ah! good morning, Mr. Montrose," said Whitman, starting up, and beholding that gentleman. "Excuse me for not noticing you. I was so busily engaged, that I did not hear you enter."

"Yes, I perceived you was wrapped up in study. I was out to take my morning walk, and seeing your office open, I thought I would call. But you are up early."

"The interest I feel in the case of our unfortunate friend will not allow me to be idle."

"I am glad to see you labouring for him; he is indeed in a sad situation."

"He is; I called upon him again yesterday."

"I should have visited him, but I thought that, perhaps, it might be better to leave him to commune with his own thoughts. How did he appear?"

"In much better spirits than I expected. I fear he is cherishing a hope of proving his innocence, more than the circumstances will warrant."

"I was busily engaged all the day in trying to bring new facts to light, but was unsuccessful. Have you thoroughly examined the case?"

"I have."

"And what are the prospects?"

"It cannot be disguised that they are indeed dark. I have examined it in every bearing, and consulted the most eminent advisers, but I must confess that unless something new turns up, his case looks hopeless."

"Poor fellow! If my old friend had lived to see this day, it would surely have been the death of him. But we must do something, Alfred; let us spare neither time nor expense; for as for his suffering like a felon, for the crime of another, he shall not." And the old gentleman struck his ivory-headed cane upon the floor very vigorously, to express the sense of his determination.

"Nothing shall be left undone; but I fear it will go hard with him, if we do not gain some new evidence, for—"

"Good morning, gentlemen," said a little, dapper attorney, poking his head in at the door, and interrupting Whitman in the midst of his sentence.

"Good morning, gentlemen. Have you heard the news?"

"No especial news," answered Montrose, indifferently.

"Then I bring you some," continued the little man. "Doctor Morton has escaped."

"Escaped!" exclaimed Whitman, springing from his seat, and making sad havoc among his law books.

"Escaped!" echoed his astonished old friend, dashing his favourite cane upon the floor, and stretching his lithe eyes so as almost to endanger their safety.

"Yes," replied their informant, mightily pleased to witness the surprise his tidings had occasioned.

"When?" eagerly inquired Whitman.

"How?" ejaculated Montrose.

"Sometime since last evening," replied the attorney; "but how, no one can imagine."

"Incredible!" said Whitman, musingly. "And have no tidings of him been heard?"

"None," replied the little attorney; "but I must hasten on, for I wish to spread the news. So, good morning, gentlemen." And that moment his head disappeared from the door.

"Strange!" said Whitman, musingly.

"Most mysterious!" exclaimed his companion. "Who would have thought it!"

"I had not dreamed that he contemplated such a deed, and I thought I possessed his full confidence. I can understand now why he seemed in so good spirits yesterday; but I wonder that he did not confide in me."

"It is incomprehensible. But one thing is certain; if he has fairly escaped he will be out of danger."

"Yes; and that is far more than we could have said if his case had come to trial. It is strange that he had not confided in me, though. He knew I was devoted to his interests."

"Undoubtedly; but from his recent experience, he has had reason to be suspicious of almost every one. Now, I hope he is out of harm's way, and if he is, it was certainly the best method he could have taken."

"And the surest one."

"Yes; I said he should not be punished as a criminal, and he will not," exclaimed Mr. Montrose, rubbing his hands briskly, and rapidly pacing the floor, as he always did when he was much pleased. Though he had nothing to do with the occurrence, he seemed to regard the prisoner's escape with the highest pleasure, and to dwell with much complacency on the fact, that his prophecy had been fulfilled. Whitman regarded the news with as much joy as did his kind-hearted old friend; but he was deeply engaged in endeavouring to penetrate the mystery. In vain he called up every remark of Morton at his last visit; he could not remember a word that intimated such an event. In vain he pondered by what means he had succeeded in making good his escape; he could think of none. More study for that morning was out of the question, for the grand object for which he had been labouring, was accomplished, though in a far more summary manner than he had looked to have it. So he restored his books to something like order, and closing his office, walked away, arm in arm with the father of his bride, lect, conversing on the strange occurrence that had just transpired.

(Continued in No. 4.)

MISS BREMER'S OPINION OF MARRIED MEN.—I confess, then, that I ever find, and never have found, a man more lovable, more captivating, than when he is a married man—that is to say, a good married man. A man is never so handsome, never so perfect, in my eyes, as when he is married—as when he is a husband, and the father of a family—supporting in his manly arms wife and children, and the whole domestic circle, which, in his entrance into the married state, closed around him, and constitute a part of his home and his world. He is not merely ennobled by his position, but he is actually beautified by it. Then he appears to me as the crown of creation; and it is only such a man as this who is dangerous to me, and with whom I am inclined to fall in love. But then propriety forbids it; and Moses, and all European legislatures declare it to be sinful.

## THE HOME COMPANION PORTFOLIO.

We strongly recommend to our Subscribers the adoption of the "HOME COMPANION PORTFOLIO," for the preservation of the Weekly Numbers or the Monthly Parts. These Portfolios are made with elastic cords at the back, to hold Fifty-two Numbers, or Twelve Parts, which comprise one Volume. At the end of each year they may be taken out and bound, and the Portfolio may be employed to preserve the Numbers or Parts of the succeeding Volume. The price is Two SHILLINGS. The outlay will be saved by the preservation of the Numbers, which, hereafter, may be difficult to obtain. The Portfolio is beautifully

embossed, and illuminated with silver, by a new invention introduced by LIGGITT, SON, & HODGE. It is an ornament for the drawing-room table.—Order of any Bookseller.

The Monthly Parts of the HOME COMPANION (price 6d. each) will be issued with the Monthly Magazines. A number will appear weekly, price 1d.

## THE HOME COMPANION

A WEEKLY MAGAZINE.

## PROGRESS OF PERIODICAL LITERATURE.

At the period to which we referred at the termination of our former remarks, there were other papers of various kinds. "News" from almost every town; *Mercuries* innumerable, and with all kinds of strange additions—*Mercurius Briticus*, *Britannicus*, *Mastix*, *Pragmaticus*; *Mercurius Melancholicus*, and *Mercurius Fungigosus*—(Melancholy *Mercuries*, and Smoking *Mercuries*)—"The Weekly Discoverer," and "The Discoverer Stript Naked;" "The Scots' Dove," and "The Parliament Kite;" "Packets and Porters;" "Spies, Scribes, and Scouts;" "Modest Narratives," and "Perfect Summaries." These, however, were mere ephemeral productions, born of commotion, and dying upon the return of order. In the catalogue of these newspapers contained in the British Museum, we find in 1640, at the commencement of the civil war, only one, "The Continuation of Foreign Occurrences for Five Weeks past." The other publications relating to that period are not newspapers, but reports of the speeches of eminent men—Pym, Harbottle Grimstone, &c., put out in the shape of pamphlets. In 1645, the height of the civil war, we have a collection of twenty newspapers. In 1650, just after the establishment of the Protectorate, there were sixteen; and in 1655, when the Protector was in the height of his power, they are reduced to seven. In 1660, the stirring time of the Restoration, they are again increased to twelve. In 1665, what is now known as the *London Gazette*, was first published at Oxford, by authority; from that time, down to the Revolution in 1688, scarce any other paper existed. This paper was first issued on the 16th of November, 1665; its title is as follows:—"The Oxford Gazette. No. I. Published by Authority. Oxon: Printed by Leonard Litchfield, and reprinted at London for the use of some merchants and gentlemen who desired them." It was published twice a week, on Mondays and Thursdays, and continued to be called the *Oxford Gazette* until the twenty-fourth number, when the court having left Oxford and returned to London, the name was changed, on the 5th of February, 1666, to the *London Gazette*, which it still holds. An analysis of the contents of the second number will give us some idea of the kind of news that was then thought by our rulers sufficient to satisfy the wants of the nation. We have chosen the second number, because nearly one column of the first is taken up with a list of the sheriffs appointed for the different counties. It consists of a single leaf of small folio, printed on both sides in double columns. The number of lines in the whole is 288, with an average of eleven words in a line. Of these, 213 lines are devoted to foreign affairs, leaving only 75 for all our Home Intelligence, at a time when the plague was raging in London, and the court had been obliged to remove to Oxford to escape its ravages. The 75 lines on Home affairs refer to the following places:—Bristol news consists of 11 lines, and tells us, that a Dutch man-of-war of 28 guns, with all her masts broken, was driven in there by the late storm, and surrendered herself with all her equipage. That 30 merchant vessels had sailed for the West Indies, and that some mariner reported having seen "great store of masts and tackle of ships at sea, which he supposed to be wrecks of Dutch ships; and the countrymen say, that many bodies are cast up by the sea upon the coast, which, by their habits, they conclude Dutchmen." From Plymouth we have 5 lines, informing us that two men-of-war convoyed three ships bound for Virginia to the Soundings; that another man-of-war had convoyed several colliers from Wales, and brought in a Dutch prize laden with provisions. From Falgouth, or rather from Pendennis, as it is there called, we have 3 lines telling us, that two French men-of-war are gone forward on their voyage. From Ipswich 4 lines, relating to the sailing of colliers. From Yarmouth 5 lines, also of the sailing of colliers. From Weymouth 4 lines,

about a French vessel laden with salt being driven in. From Newcastle we have something like Domestic Intelligence comprised in 6 lines, which we quote at length:—"Newcastle, Nov. 11. When the sickness first appeared here (which is but of young date), we were not without the sad apprehension of a severe mortality; but it hath pleased God already to put a stop to its progress, there not being one person sick in the whole town; and those that were sent in the fields being well recovered." Then from Oxford, the seat of the court, in Michaelmas term, during the sitting of the law courts, we have just 37 lines; and of these 19 refer to foreign affairs; 7 to official presentations at court; 3 to the appointment of a sheriff; 4 to the death of Dr. John Earls, bishop of Salisbury; and 4 to the intelligence, that "the several courts of justice sat in the schools at Oxon, according to an adjournment made at Westminster to that purpose, in pursuance of His Majesty's proclamation of the 26th of September last." This meagre affair is all that the authorities thought fitting to be communicated to the nation at a time when the plague was committing the most fearful havoc; when we were at war with the Dutch; when parliaments were suspended, and the crown was making rapid strides towards despotic power. One number of the *Times* contains about thirty-six times as much matter as is to be found in the only newspaper then allowed to be published in the kingdom.

At this time, nothing like a free press existed. It was held that, by the common law, no man, not authorised by the Crown, had a right to publish political news. And we had constant interference with this right, until, towards the end of the reign of Charles the Second, the *London Gazette* was the only paper allowed to be printed. During the Whig rule in 1680, at the time when great interest was created by the debates in parliament for the exclusion of the Duke of York from the throne, the strictness of this rule was withdrawn, and several papers had a brief existence; but, on the defeat of the Whig party, the restrictions were re-imposed with greater severity. In the reign of James the Second, these restrictions were carried further than ever. Not only were newspapers prohibited, except always the *London Gazette*, but we find, in a letter from one of the court-newsmen or intelligencers, to John Ellis, that, on the 8th of October, 1688, "the Lord Chancellor, by the king's command, directed the justices of the peace of Middlesex to suppress all coffee-houses, and other public houses, that deal in News-letters, or expose to the public any foreign or domestic newspapers besides the printed *Gazette*."

After the revolution in 1688 the number of newspapers began to increase, but it was not until the accession of Anne in 1702 that we had a daily paper. Indeed, it seems that the news-writers of those times were sometimes strangely puzzled to find matter to fill up their scanty pages, even when only published twice a week, and strange devices were adopted to supply the deficiency. They make a merit of leaving part of it blank paper for the convenience of parties writing their friends. "This letter will be done up on good writing-paper," says one, "and blank space left that any gentleman may write his own private business. It will be useful to improve the younger sort in writing a curious hand!" And one publisher filled up his blank spaces with extracts from the Bible, until he is said to have gone through the whole of the New Testament and the greater portion of the Psalms!

On the 11th of March, 1702, appeared the first daily paper, called *The Daily Courant*. It consists of 182 lines, divided into two columns, printed on one side of a small folio sheet. The design of the publication is stated in this brief notice: "This *Courant* (as the title shows) will be printed daily; being designed to give all the material news as soon as the post arrives; and is confined to half the compass, to save the public at least half the impertinencies of ordinary newspapers." The editor also tells us that he will not "take upon him to give any comments or conjectures of his own, but will relate only matter of fact supposing other people to have sense enough to make reflections for themselves." The news which he thinks material consists of extracts "From the *Haarlem Courant*, dated March 18, N.S.;" "The *Amsterdam Courant*, dated March 18;" and "The *Paris Gazette*, dated March 18, 1702." This discrepancy of dates is occasioned by the Continental States having long since adopted the Gregorian Calendar or New Style, while in England we adhered to the Julian Calendar, or Old Style. The date of the paper, according to the new style, would have been the 22nd of March instead of the 11th. Considering that King William III. died only three days before the publication of this paper, that Anne was then ascending the throne with a disputed title, and a strong party spirit was raging throughout the kingdom, it seems strange to us that not one word should be mentioned of these events in almost the very first paper that was published after their occurrence. What a difference from this age of freedom, when almost hourly there issues from the press more matter than in a whole year of those days of restriction! When every passing occurrence, every political act, and every public character is commented on with openness! When a flood of information on all subjects is spread over the kingdom, almost with the rapidity of thought itself, instead of the meagre accounts which, by long and slow stages, arrived in course of time at the provincial towns!

Soon after the publication of the first daily newspaper, a new class of publications sprung into existence, from which have been derived the whole series of magazines, reviews, and literary serials that now occupy so important a place in our literature. On the 23rd of April, 1709, appeared the first number of the *Tatler*, which was followed on the 1st of March, 1711, by the *Spectator*. These were not, strictly speaking, newspapers, although they were then so considered. The *Tatler* contained occasional scraps of news, mingled with lively banter on the follies of the day, and the social evils that disgraced polite society. The *Spectator* took a higher tone; and moral essays, imaginative tales corrective of some of the faults and vices of society, with high and acute criticism, written with a purity of style that to this day is unsurpassed, formed the staple of its contents. To the *Spectator* we are

indebted for that valuable criticism which first called public attention to Milton's noble poem of *Paradise Lost*. From these sprung a series of similar papers, which have not passed away from remembrance as soon as read, but have been thought worthy of being preserved in a united form under the title of the *British Essayists*, and are to be found on the shelves of many a library. These were originally sold at one penny each, but in 1712 a tax of a halfpenny was placed upon all periodical sheets and half sheets; the price of the *Spectator* was accordingly raised to twopence—one halfpenny for the tax, and another halfpenny to make up for the decrease in circulation. This tax is supposed to have been fatal to the *Spectator*, as well as to many other similar productions. The effect of this tax did not escape the keen irony of Swift, in his *Journal to Stella*; he writes, "Do you know that all Grub-street is dead and gone last week? No more ghosts or murders now, for love or money. I plied it close the last fortnight, and published at least seven papers of my own, besides some of other people's; but now every single half sheet pays a halfpenny to the queen. The *Observer* is fallen; the *Medley's* are jumbled together with the *Flying Post*; the *Examiner* is deadly sick; the *Spectator* keeps up and doubles its price; I know not how long it will hold." It did hold until the beginning of 1713. The state of literature generally in the kingdom may be easily guessed at from the fact that in 1724 there were, as we stated above, only 75 printing-houses in London and Westminster, and except at the two Universities, only 23 in the rest of the kingdom. Many counties, and amongst them Lancashire, were without a printer. In 1731 was commenced the *Gentleman's Magazine*, which has continued down to our own times. And since then the progress of periodical literature has been unintermitting. Slow, indeed, and almost painful in its first struggles; devoted to the tastes of a particular class—to the learned in antiquities, and the students of science; but at length, as the blessings of instruction were more widely spread among the people, assuming gradually a more popular form; until, in these, our days, the ink bottle is flung about in every direction; its splashes are to be seen on every wall, from the palace to the cottage; winged sheets convey light and information and pleasure into every abode; from the boudoir of the duchess to the hut of the peasant, the thoughts of the great and good are become common property, common COMPANIONS in every home.

### THE CHAPTER OF MISSES.

THE dear little Misses we meet with in life,  
What hopes and what fears they awaken!  
And when a man's taking a *Miss* for his wife,  
He is *Miss* led as well as *Miss*-taken.  
When I courted *Miss* Kidd, and obtained the first kiss,  
I thought, in the warmth of my passion,  
That I'd make a great hit in gaining a *Miss*,  
But 'twas only a *Miss*-calculation.

For so many *Misses* surrounded *Miss* Kid,  
With me and my love interlarding,  
A jealous *Miss*-rival put it into her head  
That she ought not to give me a hearing.  
There's a certain *Miss* chance that I met with one day,  
Who near sent my hopes to destruction,  
For she had a suspicion of all I might say—  
And all owing to one *Miss*-construction.

Deceived by a *Miss*-information, I wrote,  
The cause of her anger demanding;  
*Miss* direction prevented her getting the note,  
And introduced *Miss*-understanding.  
When to make her my wife I exultingly swore,  
*Miss*-belief made her doubt my intention;  
And I nearly got wed to *Miss*-fortune, before  
I could woo her from *Miss*-apprehension.

But when she no longer would yield to *Miss*-doubt,  
Not led by *Miss*-representation,  
She had with *Miss* like a serious fall out,  
And to wed felt no more hesitation.  
But when at the church to be married we went,  
*Miss*-take made the fat parson linger,  
And I was so annoyed by an awkward *Miss*-fit,  
I could not get the ring on her finger.

Having been so *Miss*-used, I kept a strict watch,  
Though I still lived in fear of *Miss*-carriage;  
I found out, too late, that an unlucky *Miss*-match  
Interfered with the joys of our marriage.  
*Miss*-rule in our dwelling made every thing wrong,  
*Miss*-management there took her station,  
Till my cash, like the time I take writing my song,  
Was all wasted by *Miss*-application.

**Fussy Men.**—Comic—to see a fussy man get himself ready for the steamboat. When he finds his razor, his lather-brush is gone—while his lather-brush is no sooner found stowed away in one of his "Sunday boots," than he goes into a fever because that ruffled shirt has been mislaid. When the shirt turns up, he discovers that his carpet-bag is already so crowded with brushes, boot-jacks, and coloured vests, that to make room for his life-preserver, he has got to put his foot in it, and pull it on like a boot—a feat which terminates in the discovery that he has caused a bottle of liquid blacking to burst a blood-vessel—"spilling every blessed rag he has got from the wash." Although the fussy man is an early riser, he is invariably too late for the train. Should he, however, by any chance be in time, he gets so bewildered about "the boy that ran away with his baggage," that it takes four policemen to keep him from getting under the locomotive.

### THE YANKEE AND THE DUTCHMAN'S DOG.

ABNER was a quiet, peaceable sort of a Yankee, who lived on the same farm on which his fathers had lived before him, and was generally considered a pretty cute sort of a fellow—always ready with a trick, whenever it was of the least utility; yet when he did play any of his tricks, 'twas done in such an innocent manner, that his victim could do no better than take it all in good part.

Now it happened that one of Abner's neighbours sold a farm to a tolerable green specimen of a Dutchman—one of the real unintelligent, stupid sort.

Von Vlom Schlopah had a dog, as Dutchmen often have, who was less unintelligent than his master, and who had, since leaving his "fatherland," become sufficiently civilised not only to appropriate the soil as common stock, but had progressed so far in the good work as to obtain his dinners from the neighbours' sheepfold on the same principle.

When Abner discovered this propensity in the canine department of the Dutchman's family, he called over to his now neighbour's to enter complaint, which mission he accomplished in the most natural method in the world.

"Wall, Von, your dog Blitzen's been killing my sheep."

"Ya! dat ish bate—bad—he ish von goot tog—ya! dat ish bad!"

"Sartain, it's bad, and you'll have to stop 'im."

"Ya! dat ish von goot—but Ich weis nicht?"

"What's that you say? he was nipped? Wall, now look here, old feller, nicken's no use—crop 'im—cut the tail off close—chock up to his trunk—that'll cure him."

"Vat ish dat?" exclaimed the Dutchman, while a faint ray of intelligence crept over his features, "Ya, dat ish goot—dat cure von sheep steal, eh?"

"Sartain it will, he'll never touch sheep-meat again in this world," said Abner, gravely.

"Den come mit me—he von mity goot tog; all the way from Yarmany; I not take one five dollar—but come mit me and hold his tail, eh? Ich chop him off."

"Sartain," said Abner, "I'll hold his tail if you want me tew, but you must cut it up close."

"Ya! dat ish right—Ich make 'im von goot tog—there, Blitzen, Blitzen, come right here, you von sheep steal rashcull—I chop your tail in von two pieces."

The dog obeyed the summons, and the master tied his feet fore and aft, for fear of accident, and placing the tail in the Yankee's hand, requested to lay it across a large block of wood.

"Chock up," said Abner, as he drew the butt of the tail close over the log.

"Ya, dat ish right—now you von tam tief sheep, I learns you better luck," said Von Vlom Schlopah, as he raised the axe.

It descended, and as it did so, Abner, with characteristic presence of mind, gave a sudden jerk, and brought Blitzen's neck over the log, and the head rolled over the other side.

"Wall I saw!" said Abner, with apparent astonishment, as he dropped the headless trunk of the dog, "that was a little too close!"

"Mine Cot!" exclaimed the Dutchman, "you shust cut 'im off de wrong end!"

### ANOTHER DOG STORY.

"PAT" is just one of the greatest dogs—strong as a lion, but gentle as a lamb. He leaves nothing alive upon which he is fairly "set," but he would not ruffle the feathers of the smallest chicken unforbidden, for his right paw. He will drag the children in a cart as long as he can drag himself, and never utter a word of complaint; but woe betide the being who comes within his reach when duty calls him to a sterner mood. A very useful dog is "Pat," too. He will "carry and fetch" anything entrusted to him, and make himself very generally useful in the way of errand-going. He divides his time between one of our neighbours and a farm a mile off, and saves many a journey back and forth by those who would make more fuss about it. The other day he was sent to the farm with a basket for eggs. It was observed that he did not come back as promptly as usual, but the circumstance excited no special attention. He came at last, looking as though nothing at all had happened. He was glad to see the folks, and appeared very much at ease and perfectly satisfied with himself, with no goadings of conscience to mar his happiness. In the midst of his happiness, however, he was interrupted with the inquiry—"Pat, where are your eggs?" His tail fell about six degrees instantly, and with a look perfectly intelligent, he turned and was off. Going to a pile of lumber not far away, he found the basket of eggs, and bringing them home, made the best apology a dog could make, and gave them into the hands of his mistress. On inquiry, it was ascertained that on his way home he met some other dogs, and feeling a little social, he put his eggs in a safe place and stopped for a social chat with his friends, and finally went home, forgetting to take his eggs along. We believe this the first instance in which a dog is shown to have forgotten anything.

AFTER a careful scrutiny of the Hibernian advertisements, we are compelled to confess, that we have not met with any blunders that more nearly resemble our notion of an Irish bull than one, which some years ago appeared in the English papers. It was the title to an advertisement of a washing-machine, in these words—"Every man his owl washerwoman!"

## ONWARD!

## STATISTICS.

**DIURNAL REFLECTOR.**—There are probably few of our readers who have not at one time or another made personal acquaintance with the gloom which haunts the mysterious passages and staircases of a London printing-office; rendering their exploration by unaccustomed feet a perilous enterprise—and giving a sort of propriety to the title commonly bestowed on a class of small officials who issue on their errands of prophandism from out its darkness. Those who have had no such experience would doubtless be greatly surprised to see out of what dark places the intellectual illumination of the world comes. As it is the habit of the *Athenæum* to share all its lights with its readers, we think it may be not a little useful to some of them, who may be in the same gloomy predicament which the printers appear to have hitherto so much affected, if we call their attention to a simple but ingenious contrivance by which light may be let into their dark places—the shadows being positively conjured away. This is to be effected, not by the introduction of artificial light, but by the arbitrary distribution of the natural lights which they have. As surely as the "bull's eye" of the policeman may be turned on any object he pleases, so may the stray ray that falls through any window in their corners or crevice in their roofs be caught in its passage and compelled to do service in what direction they will. Day-light may be "turned on" in their cellars, as water may. Sun-light may be carried about from one place to another, as a candle might. The ray may be drawn from heaven as the electric fluid is, and conducted into any corner whose darkness demands it. In our own offices, we write by white light in recesses where of old we used yellow—and glance up passages in the day-beam, of which we had hitherto no visual knowledge but what gas gave us. This is a method of economising our skylights which might have ingeniously baffled that minister of financial ingenuity, the window-tax gatherer. The mode is quite simple by which the beam is imprisoned wherever we can catch it and let out wherever we please. Under the title of the "Diurnal Reflector," a French optician, M. Troupeau, has taken out a patent for a plate of tin silvered over to have a highly reflective power. This plate is placed beneath any sky-light or window so as to receive on its face the natural light—and at such angles as will project that light forward into any particular corner or passage that may need it. The light thus obtained is, of course, not of that dazzling character which might be dangerous to tender eyes, but it will be found to serve for many useful purposes.—*Athenæum*.

**THE HYDRO-ELECTRIC CHAIN.**—The ingenious modification of Volta's pile, contrived by Dr. Pulvermacher, of Vienna, has attracted so much attention, that the following account of the value of the apparatus, as a source of electricity, may perhaps not be uninteresting, at least to those who may not have had time to devote much attention to the study of these subjects.

Everybody is aware that the apparatus contrived by Volta consisted of plates of metals, differing in their respective affinities for oxygen, alternated with pieces of cloth dipped in a saline solution. Thus, in the most common modification of this pile, a plate of copper is placed on the table, on this a plate of zinc, and then a piece of flannel or cloth, dipped in a solution of common salt; on this a second plate of copper, and so on. The theory of the apparatus is so well-known, that it is unnecessary to say more than that, under the chemical action of the saline fluid on the zinc, the combined electric fluids existing normally in both the two metals employed, are separated,—the positive electricity being found on the zinc, and the negative on the copper surface. Wollaston's and Cruikshank's troughs are but modifications of the same contrivance—cells filled with the saline fluid replacing the moistened cloth or flannel. The clamorous nature of these contrivances, the time required to excite them, the rapidity with which the intensity of the electric current diminishes, as well as the tact and management required to apply the current they evolve, have always presented most serious obstacles to their adoption into medical practice. On this account they have been almost completely replaced by the different machines for furnishing a current of induced electricity. These, it is true, possess many advantages, and become most important appliances in the treatment of disease, as has been repeatedly pointed out by myself and others. Still we have often felt the want of an apparatus by which an uniform and uninterrupted current of voltaic electricity could be at our command at a short notice, and without involving the necessity of any manipulative tact in its application. The hydro-electric chain completely fulfils these desiderata.

The apparatus I have used, was placed in my hands, during last winter, by Dr. Pulvermacher himself. He is a scientific man, and well-acquainted with physical science generally; nor is he, I presume, responsible for the manner in which his invention has been extolled, as a sort of universal panacea, by the London agent, in the public advertisements. Each element of this battery consists of a small piece of wood, around which are wound two wires, nearly but not quite in contact, one of these wires consisting of zinc, the other of gilded copper. These represent the plates in Volta's pile; each terminates in a ring, by which it is connected, with the wire of the next link or member of the chain, the zinc of one being united with the copper of the next, and so on. When one of these links is immersed in a fluid capable of exciting a chemical action on the zinc, enough is retained by capillary attraction between the folds of wire to disturb the electric equilibrium of the metals, and to throw the negative and positive fluids into a state of current. The exciting fluid recommended by Dr. Pulvermacher is common vinegar, and if one of his elements be immersed in that fluid for a minute, and then lifted out, so that all not retained by capillarity may drain off, it will be at once fit for use.—*Dr. Bird, in the Lancet*.

**BETWEEN** the 5th of January, 1849, and the 5th of January, 1851, there was found in dead letters the sum of £1,224,382 18s. 1d. in the shape of bills, checks, notes of hand, and money orders, and in hard cash or bank-notes £18,870 10s. 4d. more.

**ADELUNG**, in his *Mithridates*, enumerated 3064 languages and dialects; but M. Balbi reports a total of 860 distinct languages, and more than 8000 dialects. Of the 860 languages, 153 belong to Asia, 53 to Europe, 114 to Africa, 117 to Oceania, and 423 to America." And this number M. Balbi expects to see increased by more accurate researches in Africa and America.

**THE NEAREST STAR.**—Astronomers assert that Sirius, or the Dog Star, is the nearest to us of all the fixed ones; and they compute the distance from our earth at 2,200,000,000,000 of miles. They maintain that a sound would not reach our earth from Sirius in 50,000 years; and that a cannon ball, flying with its usual velocity of 480 miles an hour, would consume 523,211 years in its passage thence to our globe.

**ANCESTORS.**—The number of ancestors which a person may have is astonishing at first sight. At first, two parents; in the second, four, the parents of his father and mother; the third, eight, the parents of his two grandfathers and mothers; by the same rate of progression, 1,025 in the tenth, and at the twentieth degree, or at the distance of twenty generations, every person has above 1,000,000 ancestors, as common arithmetic will demonstrate.

**GOLD AND COAL CONSUMED IN THE MANUFACTURE OF EARTHENWARE.**—The value of the gold consumed annually at the Potteries in the ornamentation of porcelain is £36,400, and, since about half that amount is consumed in the other seats of the manufacture, it may be stated that the total value of the gold used annually in England in the manufacture, is about £54,600. The quantity of coal consumed annually at the Potteries is 468,000 tons, and about half of that amount being consumed in other factories, it may be stated at about 750,000 tons—an amount equal to what is consumed in working all the railways in the United Kingdom.

**CLEANSING BY STREET ORDERLIES.**—The report of the surveyor of the City Sewer's Commission, on the system of cleansing by street orderlies, has been published. From it we gather, that while the average cost of dusting and cleansing for the last ten years was, from Michaelmas 1841 to 1843, £3,436 2s. 6d. per annum; 1844 and 1845, £3,329 17s. 3d.; and 1846 to 1851 (all inclusive), £5,788 11s. 6d., the expense of cleansing the whole of the city carriage-way upon the street-orderly system, estimated according to the experiences of the experiment made in 1845-6, would have come to an annual sum of £52,052. From this report it appears that the total area of the carriage-way of the city of London was at that time 418,000 square yards; and the area of the footway, 316,000 square yards; making a total of 734,000 square yards.

**OMNIBUS STATISTICS.**—That no unnecessary fear of reducing the profits too low may stay this opportune call for reform, we will quote from an official source the outlay and receipts. It appears that the daily expense of working one omnibus is £2 0s. 9d., supposing it, with its ten horses, to travel sixty miles daily (fifteen journeys to and fro—a fair estimate when the distance does not exceed two miles per journey). If it be licensed to carry twenty-four passengers, and obtain one-half, or twelve passengers, at 2d. each per journey, the profit would be 19s. 3d. per diem; at two-thirds full, the profit would be £1 19s. 3d. per diem; at three-fourths full, £2 9s. 3d.; and at full, £3 19s. 3d. This estimate would yield a profit for the regular working of 100 omnibuses—on the first calculation £30,035 per annum; on the second, £66,435 per annum; on the third, £84,635 per annum; and on the fourth, £139,235.

**EGGS.**—Eggs of hens, ducks, and other poultry, commonly eaten as food in the kingdom, are in point of quantity, almost incredible. The aggregate number cannot be less than 1,500,000,000, or 75,000 tons; and the value, at the lowest prices, £3,000,000. Ireland produces nearly 500,000,000, and the continent of Europe supplies us with 100,000,000 annually. These facts are perfectly ascertainable. The London and North Western Railway Company frequently received at their stations at Liverpool, in one day, from Ireland alone, upwards of 1,000,000 eggs, and forward them into the manufacturing districts of Lancashire, Yorkshire, Staffordshire, and Warwickshire. They are packed between layers of straw, in strongly-made boxes, hampers, and crates, containing 1,000 to 8,000 eggs; each package weighing from two to ten cwt. Last year (1850) upwards of 90,000,000 were brought in: Liverpool. Duty, 10d. per 120.

**FLIES.**—A fly lays four times during the summer, each time eighty eggs, which make 320; half of these are supposed to be females, so that each of the four broods produces 40.—1. First eight, or the 40 females of the first brood, also lay four times in the course of the summer, which makes 12,800; the first eight of these, or 1600 females, three times, 384,000; the second eight twice, 250,000; the third and fourth eight, at least once each, 230,000.—2. The second eight, or the 40 females of the second brood, lay three times, the produce of which is 9600; one-sixth of these, or 1600 females, three times, 384,000; the second sixth twice, 556,000; the third six once, 123,000.—3. The third eight, or the 40 females of the third brood, lay twice, and produce 6400; one-fourth of these, or 1600 females, lay twice more, 256,000.—4. The fourth eight, or 40 females of the fourth brood, once, 2,200; half of these, or 1600 females, at least once, 128,000.—Total produce of a single fly in one summer, 2,080,320.

### THE MYSTERY.

B OLD this Closed Hand! Within it lies,  
A living tenant of ethereal skies;  
Which hath not reached the end for which 'twas born,  
But found an early grave one sunny morn.  
It is no more that which it used to be,  
And yet it is, that which it was, and still shall be.  
Its ancestors have often spread dismay,  
And driven the hopes of mourning ones away;  
Bold, but unarmed, with neither spear nor sword,  
They've put to flight full many an armed horde.  
Soon shall its coffin burst, and then,  
A death-like form shall meet the sight of men.  
And this the strange anomaly shall be,  
When it lives most, then most of death we see.  
Oh! who can dare to gaze on such a sight—  
A spectral object 'midst the gloom of night—  
But fear not mortal—God directs the whole,  
And offers triumph to thy trembling soul.  
All things obey his sovereign command,  
E'en the mysterious inmate of the Closed Hand.

[Answered in No. 4.]

### ENIGMA, AND CHARADES.

#### ENIGMA.

1. I **BARELY** perfect am in my rude birth,
2. And yet I'm scattered over all the earth;  
In every latitude and every zone,  
Through this wide world 'tis said that I am known,
3. I sweep resistless through the stormy deep,
4. Rush o'er the plain, (5) and scale the Alpine steep.
6. Within my giant arms I fold this land.
7. And yet I oft appear as small as sand.

8. I rouse the blaze that cheers the Christmas hearth,  
And shed a brighter radiance o'er the mirth  
Of that sweet season. (9) Large I am, and small,
10. I help to build, (11) and I destroy the wall,
12. At once man's greatest friend and direst foe,  
I still in peace (13) ensue misery and woe,
14. When weakness overcomes the wounded brave,  
I raise them from their bed, (15) or dig their grave.
16. Life I oft save, (17) I bridge the wide expanse,
18. Dive underground, (19) float thro' the mazy dance.
20. By me the farmer keeps his trees from barn,
21. By me averts the dread effect of storm.
22. When winter's showers deluge our streets with rain,  
I keep the feet from damp, the head from pain.  
Without me Britain had been Britain still,  
But not the Britain of these latter days;  
I form her greatest strength, for good or ill,  
Have been to her worth more than wreathed bays.  
Here must I pause—to give at large the tale  
Of all my changes—time and space would fail;  
When from what already has been told,  
My name and attributes in full unfold.—F. W. P.

#### CHARADES.

1. **THE** **BARON** my first, 'tis in your side,  
And is there hid from view,  
Though nearly half of what contains,  
Millions of such as you.  
**My next's** a small town in a shire,  
In Scotland's distant north;  
Transposed you see in Latin garb,  
Sons from my whole go forth.  
O'er the wide world I'm known as great,  
My power all kingdoms own;  
Though once among the nations small,  
The greater I have grown.
2. **My first's** a useful article,  
Which oft contains my all;  
An article my next is too,  
Indefinite and small.  
**My third,** though sprung itself from earth,  
One kind of corn does grow;  
'Tis of yourself a little part,  
That surely then you know.  
Under the table oft it lies,  
When my whole you do eat,  
And will be sure to stick to you,  
Though you should leave your seat.
3. Eight letters do compose my whole,  
Though one, two words I make—  
Of consonants and vowels each,  
A half these words do take.  
**My first** but few men seek to be,  
And none on earth attain;  
But all men ought to be—if not,  
They lost for aye remain.  
Upon my **last** a house you build,  
I measure, too, its wall;  
Reverse it next, 'tis but a part,  
Of either house or hall.  
**My whole** was once, in days of yore,  
By royal presence graced,  
And lawning courtiers near the throne,  
My halls on tiptoe paced.  
Lately to me tumultuous rushed,  
A crowd with eager pace,  
That once again brave Scotia's sons,  
Might see a royal face.—M. K.

### ANSWERS TO THE PASTIME OF LAST EVENING.

#### HOME, SWEET HOME!

Pretty birds, pretty birds, thus you may see,  
Each of your names discovered by me—  
And one word repeated makes two appear three.  
"Read from the second word leftward or right,  
The same shall these words appear to your sight!"  
So wheresoever in life I may roam,  
My thoughts will still dwell on the sweetness of **HOME**!

#### CHARADE—Ho-ward!

### THE REMARKABLE ADVENTURES OF BARON BRAG.—AN UNNATURAL HISTORY FOUNDED UPON NATURAL HISTORY.

(To be Continued by Us, until Discontinued by the Baron.)

Encouraged by his great successes, the Baron determines upon more striking adventures. A great idea seizes him!

He goes to the Exhibition, and is shown "The Patent Life-Protecting, Bone-Defending, Heat-Securing, Porcupine Hunting-Dress for all Nations!"

He gets into it, exercises himself before a mirror, and is delighted at the prospect of achieving a world-wide reputation!

## OUR CORNER CUPBOARD!

THE man who stammers at his name is in debt—a certain symptom.  
THE sweet breath of Spring should open hearts, as it uncloses myriads of buds and blossoms.

IN this world, purses are the arteries of life; as they are full or empty, we are men or carcases.

IT is a singular fact that when the Indian swears, he swears in English. There are no oaths in the Indian vernacular.

FEW people are wise enough to prefer the censure which is useful to them, to the praise which betrays them.

WORLDLY joy is a sundower, which shuts when the gleam of prosperity is over: spiritual joy is an evergreen—an unfading plant.

THE long morning of life is spent in making the weapons and the armour, which manhood and age are to polish and to prove.

THE testimony of those who doubt the least is not unusually that very testimony that ought most to be doubted.

WHEN a person wishes to salute another in Thibet, he uncovers his head, puts out his tongue, and scratches his right ear.

AN Irish student was once asked what was meant by *posthumous works*? "They are such works," said he, "as a man writes after he is dead."

IF we were only disliked for the real and voluntary offences we give, what a holiday world this would be!

A MILLION of blades of grass makes a meadow, and millions and millions of grains of sand make a mountain; the ocean is made up of drops of water, and life of minutes.

A COUNTRYMAN at the Exhibition stood for some time very attentively surveying a cane-seat chair; at length he said, "I wonder what chap took enough pains to find all them holes, and put that straw round them!"

LOVE one human being purely and warmly, and you will love all! The heart in this heaven, like the wandering sun, sees nothing, from the dew-drop to the ocean, but a mirror which it warms and fills.—*Jean Paul*.

"WELL, sir," said one person to another, to whom he had, in a matter of business, made a very absurd offer, "do you entertain my proposition?" "No, sir," replied the other, "but your proposition entertains me."

AN Irishman was brought up before a bailiff at Ipswich, on a charge of having six wives! The bailiff asked him how he could be so hardened a villain as to delude so many? "Please your worship," says Pat, "I was only trying to get a good one."

WE heard a good joke once of a party of young fellows who found fault with the butter on the boarding-house table. "What is the matter with it?" said the mistress. "Just you ask it," said one, "it is old enough to speak for itself."

A GENTLEMAN at an eating-house asked the person next to him if he would please to pass the mustard? "Sir," said the man, "do you mistake me for a waiter?" "Oh, no, sir," was the reply, "I mistook you for a gentleman."

"You saved my life on one occasion," said a beggar to a captain under whom he had served. "Saved your life!" replied the officer, "do you think that I am a doctor?" "No," answered the man; "but I served under you in the battle of —; and when you ran away, I followed."

NEVER nod to an acquaintance at an auction. We did so once, and when the sale closed we found four broken chairs, six cracked flower-pots, and a knock-kneed bedstead knocked down to us. What we intended as nods to a friend had been taken by the auctioneer as bids for the kitchen furniture.

A TESTY old gentleman was incessantly pestered by his neighbours with inquiries after his health: at last, losing all patience with the most assiduous of these inquirers, "Tell your master," said he to the servant, "with my compliments, that I am pretty well this morning, and shall continue so for twenty-one mornings to come."

A WEALTHY person asked the philosopher Sadi, in derision, how it happened that men of wit were so frequently seen at the doors of the rich; and that the rich were never seen at the doors of men of wit? "It is," replied Sadi, "because men of wit know the value of riches; but rich men do not know the value of wit."

A SCHOOLMASTER wrote to a lady—

"How comes it, this delightful weather,  
That U and I can't dine together?"

She answered—

"My worthy friend, it cannot be—  
U do not come till after T."

"LOW, sir, them as talks about hequality don't no nothing about it," said the driver. "We were all equal at this bare minute—why, we should be just like old Shadrach's cow's grazing; why we should all on us get a good feed; and jest as we'd done, some precious thief or other would quietly drop in and eat us!"

THE Hon. Edward Everett, when a young man just out of College, was invited to give an oration in the city of Salem. At the dinner, Judge Storey called up Mr. Everett by the following sentiment:—"Fame follows applause where *ever* it (Everett) goes!" Mr. Everett rose instantly, and gave the following:—"The members of the legal profession! However high may be their aspirations, they can never rise higher than one Storey."

## OUR MEMORANDUM BOOK!

TO-DAY AND TO-MORROW. *Mr. Cobden* said, "Turn to God one day before your death." His *answer* was, "How can a man know the day of his death?" He *answered* *Cobden*, "Therefore, you should turn to God to-day. Perhaps you may die to-morrow; thus, every day will be employed in turning."

POVERTY.—Poverty is, except where there is an actual want of food and raiment, a thing much more imaginary than *feeling the shame of poverty*, the shame of being thought poor; it is a great and *great* weakness, though arising in this country from the fashion of *the times*.—*Cobbett*.

EXAMPLE.—One watch set right, will do the work of *many*; but, on the other hand, one that goes wrong, may be the cause of *misleading* a whole neighbourhood; and the same may be said of *the change* we individually set to those around us.

WAYS TO HAPPINESS.—There are two ways of being happy. We may either diminish our  *wants* or augment our  *means*; either will do, the result is the same; and it is for each man to decide for himself, and to do that which may happen to be the easiest. If you are idle or stork, however hard it may be to diminish your wants, it will be easier than to augment your means. But if you are very wise you will do both in such a way as to augment the general happiness of society.

MR. MICAWBER ON ECONOMY.—"My advice is, never to do to-morrow what you can do to-day. Procrastination is the thief of time. My other piece of advice is, annual income of £20, annual expenditure £19 19s. 6d.; result, happiness. Annual income £20, annual expenditure £20 0s. 6d.; result, misery. The blossom is blighted, the leaf is withered, the god of day goes down upon the dreary scene, and in short, you are for ever floored, as I am now."

THE REWARD OF DILIGENCE.—"Sceat thou a man diligent in his business?" says Solomon, "he shall stand before kings." We have a striking illustration of this aphorism in the life of Dr. Franklin, who, quoting the sentence himself, adds, "This is true; I have stood in the presence of five kings, and once had the honour of dining with one." All in consequence of having been "diligent in business" from his earliest years. What a lesson is this for our youth, and for us all.

EARLY RISING.—The difference between rising every morning at six and at eight, in the course of forty years, amounts to 29,200 hours, or three years one hundred and twenty-one days and sixteen hours, which are equal to eight hours a day for exactly ten years. So that rising at six will be the same as if ten years of life (a weighty consideration), were added, wherein we may command eight hours every day for the cultivation of our minds and the despatch of business. This calculation is made without any regard to Bissextile.

DON'T STAND STILL.—If you do you will be run over. Motion, action, progress—these are the words which now fill the vaults of heaven with their stirring demands, and make humanity's heart pulsate with a stronger bound. Advance or stand aside; do not block up the way and hinder the career of others; there is too much to do now to allow of inaction anywhere, or in any one. There is something for all to do; the world is becoming more and more known;—wider in magnitude, closer in interest, more loving and more eventful than of old—not in deeds of daring—not in the ensanguined field—not in chains and terrors—not in blood, and tears, and gloom—but in the leaping, vivifying, exhilarating impulses of a better birth of the soul. Reader, are you doing your part in this work?

CHOOSE THE SUNNY SIDE OF THE STREET.—A free exposure to the light and to the sun's influence has a great effect in diminishing the tendency to disease. The sunny side of the street should always be chosen as a residence, from its superior healthiness. It has been found in public buildings, &c., that those are always the most healthy which are the lightest and sunniest. In some barracks in Russia, it was found that in a wing where no sun penetrated, there occurred three cases of sickness, for every single case which happened on that side of the building exposed to the sun's rays. All other circumstances were equal—such as ventilation, size of apartments, number of inmates, diet, &c.—so that no other cause for this disproportion seemed to exist. In the Italian cities, this practical hint is well known. Malaria seldom attacks the set of apartments or houses which are freely open to the sun, while on the opposite side of the street, the summer and autumn are very unhealthy, and even dangerous.

IMMORTALITY OF THE SOUL.—When I observe that there is great frugality as well as wisdom in the works of God, since he has been evidently sparing both of labour and materials; for by the various wonderful invention of propagation, he has provided for the continual peopling this world with plants and animals, without being at the trouble of repeated new creations; and by the natural reduction of compounded substances to their original elements, capable of being employed in new combinations, he has prevented the necessity of creating new matter; so that the air, water, earth, and perhaps fire, which being compounded from *nothing* do, when the wood is dissolved, return and again become earth, air, fire, and water. I say, that when I see nothing annihilated, and not a drop of water wasted, I cannot suspect the annihilation of souls, or believe that he will suffer the daily waste of millions of minds ready made that now exist; and put himself to the continual trouble of making new ones. Thus, finding myself to exist in the world, I believe I shall, in some shape or other, always exist; and with all the inconveniences human life is liable to, I shall not object to a new edition of mine, hoping, however, that the errors of the last may be corrected.—*Franklin*.

**LADIES' BONNETS**, of the most  
Fashionable kinds, the richest and best Materials, at  
moderate prices. Millinery Bonnets, 10s. 6d. to 31s. 6d.  
Mourning Bonnets, Patent Crape, 8s. 6d. to 18s. 6d. Dun  
stable, 1s. to 10s. 6d. Fancy Straws, 8s. 6d. to 18s. 6d.  
BETHEL WARE, manufacturer, 217, Tottenham Court Road.

**HOW TO EARN FROM £1 to £2  
WEEKLY.** Clear Instructions will be sent on  
receipt of 15 recent Postage Stamps and a directed Envelope.  
Thousands of industrious persons are doing well in  
the world by these means. Address—William Thompson,  
Field House, Farm Lane, St. John's, Fulham.

**EARLY  
ALARM.**—An invaluable assistant to all who are  
required to rise at early or uncertain hours. Post free,  
16s. each. Warranted of the best quality. RAIN & SONS,  
Chronometer Makers to the Admiralty, 14, Grey Street,  
Newcastle-upon-Tyne.

Will be published in December, 1851,  
**FAMILY PASTIME**, Vol. II., price  
1s., containing a Christmas Tale, and a New Assortment  
of Enigmas, Charades, Rebuses, Conundrums, &c.  
In this Volume, the whole of the *Family Friends* Prize  
Enigmas up to the end of 1851 will be inserted, with their  
Solutions.  
London: HOULSTON & STOWMAN, 65, Paternoster Row.

People's Edition.—Price 4d., by post 6d.  
**INDIGESTION, CONSTIPATION,**  
Nervousness, and Low Spirits: the Causes, Symptoms,  
and Rational Treatment. By T. H. YEOMAN, M.D.  
Under distinct heads, Dr. Yeoman explains the subject  
clearly, and suggests sound rules for the restoration and  
preservation of a healthy digestion. "*Cheltenham Journal*.  
London: EFFINGHAM WILKIN, 11, Royal Exchange;  
and by post direct from the Author, 25, Lloyd Square.

**PERFECTION IN STEEL PENS.**  
The best are KNIGHT & FOSTER'S celebrated  
**BANK OF ENGLAND PENS.**  
They have been used for years in the GENERAL POST  
OFFICE, BANK OF ENGLAND, and CUSTOM-HOUSE, London.

free for Fourteen Stamps. To these Pens was awarded  
the "Prize Medal of the Great Exhibition." Sold Wholesale,  
Retail, and for Exportation, by the Proprietors,  
KNIGHT & FOSTER, Stationers, 5, Eastcheap, London.

**EXQUISITE OIL PICTURES.**—Six-  
pence each. KNIGHT & FOSTER, agents for the sale  
of Baxter's Oil Pictures. They are perfect gems of art:  
no lady's scrap-book can be perfect without them. A few  
of the subjects are named below, but an enlarged list will  
be sent on application:— Windsor Castle—Prince of Wales  
—Lover's Seat, Hastings—Dripping Well, Ditch—Bouquet  
of Flowers—Ben Nevis—Tarentine Dance—Tintern Abbey  
—Welsh Drovers—Netley Abbey—Bala Lake—Brougham  
Castle—Water mill on the Wyre—Llangollen—Lake Cono  
—Warwick Castle—View on the Rhine. Two sent free  
by Post for 14 Stamps.

When the value of Five Shillings is taken, they will be  
sent post free.—The above are each neatly mounted on  
Drawing Paper, 7s. by 5s. KNIGHT & FOSTER, Stationers,  
No. 5, Eastcheap, London.

**LONDON INDISPUTA**  
**LIFE POLICY COMPANY**, incorporated by Act  
of Parliament, on the principle of MUTUAL Life Assu-  
rance, 72, Lombard Street, London.  
Trustees—J. Campbell Renton, Esq. M.P., Richard  
Malins, Esq. Q.C., Richard Spooner, Esq. M.P., James  
Fuller Madox, Esq., William Wilberforce, Esq.  
The Policies of this Company being Indisputable, form  
FAMILY PROVISIONS and NEGOTIABLE SECURITIES, for  
their validity is not dependent, as in the case of ordinary  
policies, upon the import of previous reports and other  
documents. Owing to this important improvement in the  
practice of life assurance, the progress of this Company  
has been rapid from the commencement of its business,  
and is steadily advancing.  
ALEXANDER ROBERTSON, Manager.

**50,000 CURES WITHOUT MED-**  
**ICINE**, by DU BARRY'S REVA-  
LENTA ARABICA FOOD. Cure 49,832.—"Fifty years'  
incredible agony from dyspepsia, nervousness, asthma,  
cough, constipation, flatulency, spasms, sickness at the  
stomach, and vomitings, have been removed by Du Barry's  
excellent food."—*Maria Jolly Wortham*, Ling, near Diss,  
Norfolk. Cure No. 71, of dyspepsia: from the Right Hon.  
the Lord Stuart de Decies:—"I have derived considerable  
benefit from your Food, and consider it due to yourselves  
and the public to authorise the publication of those lines."  
—*Stuart de Decies*. Cure No. 4,308:—"Eight years' dys-  
pepsia, nervousness, debility, with cramps, spasms, and  
nausea, have been effectually removed by Du Barry's deli-  
cious food in a very short time. I shall be happy to  
answer any inquiries." *Rev. John W. Flavell*, Rixington  
Rectory, Norfolk.—Sold in all cities, with full instructions,  
weighing 1lb. at 9s. 6d.; 5lb. at 4s. 6d.; 5lb. at 11s.;  
12lb. at 22s. Super-refined quality, 10lb. at 35s.; 5lb. at  
22s.; the 10lb. and 12lb. canisters are sent free of carriage  
on receipt of Post-office orders by DU BARRY & CO., 127,  
New Bond Street, London; also, Forsyth, Mason, & Co.,  
Purveyors to Her Majesty the Queen, Piccadilly; and at  
60, Gracechurch Street.

# NEW MEDICAL DICTIONARY FOR THE PEOPLE, In Monthly Parts, price Sixpence each, to be completed in Twelve Parts. Part I. is just published THE DICTIONARY OF DOMESTIC MEDICINE AND HOUSEHOLD SURGERY,

BY SPENCER THOMSON, M.D., L.R.C.S.,

ILLUSTRATED.

AUTHOR'S PREFATORY

THAT works professing to afford popular information on medical subjects, may thoroughly answer the purpose for which they are designed, one especial point requires ever to be kept in view—the information given must be safely usable by those who are put in possession of it. It is an objection frequently adduced against such works, that they place a little dangerous knowledge in the hands of the public, in a form so apparently simple, as to make it a source rather of evil than of benefit; and, undoubtedly, the allegation has in some respects been correct. But is it necessary, in preparing a work on domestic health, to incur this hazard? I think not. For without entering upon that difficult ground which correct professional knowledge, and educated judgment, can alone permit to be safely trodden, there is a wide and extensive field for exertion, and for usefulness, open to the unprofessional, in the kindly offices of a *True Domestic Medicine*; the timely help and advice of a simple Household Surgery, or better still, in the watchful care, more generally known as "Sanitary Precaution," which tends rather to preserve health than to cure disease. "The touch of a gentle hand" will not be less gentle, because guided by knowledge, nor will the *safe* domestic remedies be less anxiously or carefully administered. Inseparably connected with the intelligent use of these remedies, there must be correct general ideas respecting the anatomical arrangements and physiological requirements of the human frame. This also has been objected to. I hesitate not to say, that it is such knowledge as ought to be in the possession of every responsible man. Making apparent the importance and rational foundation of the means of preserving or of invigorating health, or of restoring it when impaired, it renders submission to the requirements of those means, a more sure and cheerful service, when rendered to the conviction of the understanding, rather than to the dictum of an adviser. Amid the humbler classes especially, the diffusion of such knowledge is highly requisite, as a counter-agent to the impudent quackery which preys upon the credulity and lamentable ignorance of the simplest principles of health, which pervade the mass of the people.

But health will fail, either in old or young, and accidents will happen, in spite of the most careful precaution; it then becomes a question, how far non-professional interference may go. In many of the emergencies and accidents of daily life, even in a settled country, but more especially in the thinly peopled colonies, ready information respecting what is best to be done, possessed by a neighbour or bystander, is often of the most essential service; indeed, every medical man must have witnessed, how much mischief may result, either actively or passively, and in a very short time from ignorance of even the most obvious and common-sense modes of treatment. The information upon these points, given in a popular work, can scarcely be too full or too accurate. In the requirements of Household Surgery, or of sudden emergency, such as poisoning, burning, &c., the question is, "What must be done?" Generally speaking, little or no skill is requisite to determine the nature of the case, or of the injury, which is often too apparent, the anxious question, "What must we do?" is that which calls for answer; and if sometimes it happens that the exact nature of the accident be not sufficiently evident, that is no reason why knowledge on the subject generally, aided by common sense, may not do much to relieve. Life may be saved, suffering may always be alleviated. Even to the resident in the midst of civilization, the "knowledge is power" to do good; to the settler and the emigrant, it is invaluable.

We come to a point more liable to cavil—the actual treatment of disease, properly so called by the unprofessional, and how far it is well to afford information, which may tempt the rash to use that which education only can safely employ. It may be trite, but it is true, that in order to treat a disease safely, and with benefit, we must learn its nature. Now, when it is remembered, how the nicest judgment that observation and experience can form, the most patient attention, aided by practised ear and eye, by microscope and test-tube, are frequently necessary, to enable the conscientious physician to judge of his case before he can apply the remedy, it is evident how great must be the responsibility of those who, in rashness or ignorance, venture upon the treatment of serious disease, either in their own persons or in those of others; incapable of judging of its nature, still less capable are they of selecting the appropriate treatment. There is, however, a vast difference between the management of real disease and of ordinary ailment,—between endeavouring to strike at the root, or only to relieve the symptoms. Any unprofessional man, or woman either, in this kingdom, who, with all facility that there is for procuring skilled advice, ventures to take the medical management of a case of real illness, acts most unwarrantably; but there are numbers of lesser ailments, many of the more painful incidents and symptoms, simply and easily removable by means which all may employ, and with which it is most important that all should be acquainted; which the parent may use to the child, or the pastor recommend to his parishioners, without fear.

One step further. If danger may result from rash treatment, none can arise from a general acquaintance with the most prominent symptoms which herald the approach of dangerous sickness; these, I think, should be made known, whilst all remarks upon the management, whether limited as for use in this country, or more extended for the sake of the dweller in remote or unsettled districts, I trust so to guard, as to make them safe and useful guides.

I know well what is said by a few, about injuring the medical profession, by making the public their own doctors. Nothing will be so likely to make "long cases" as for the public to attempt any such thing; but people of moderate means—who, as far as medical attendance is concerned, are worse off than the pauper—will not call in and fee their medical adviser for every slight matter, and in the absence of a little knowledge, will have recourse to the prescribing druggist, or to the patent quackery which flourishes upon ignorance, and upon the mystery with which some would invest their calling. And not patent quackery alone, but professional quackery also, is less likely to find footing under the roof of the intelligent man, who, to common sense and judgment, adds a little knowledge of the whys and wherefores of the treatment of himself and family. Against that knowledge which might aid the sufferer from accident, or in the emergency of sudden illness, no humane man could offer or receive an objection.

To resume. The information which it is proposed to offer in this Dictionary may be classed as Anatomical and Physiological, Sanitary or Hygienic, the Treatment of Accident and Emergency, and the Management of Illness. In some respects, perhaps, the adoption of this classification might be advantageous, but as a work of ready reference, the alphabetical arrangement of subjects will, it is thought, be found more convenient.

SPENCER THOMSON, *Author*, Burton-upon-Trent.

London: GROOMBRIDGE & SONS, Paternoster Row. Sold by all Booksellers.

**BEDDOME'S POWDERS for Worms,**  
Teething, Eruptions, and Bilious and Liver Com-  
plaints, strongly recommended by the Faculty as the best  
family remedies. Sold, 1s. 1d. a packet; also Beddome's  
Fever Powders, by Barclay & Sons, Farringdon Street;  
Sanger, 150, Oxford Street; Edwards, St. Paul's Church  
Yard; and Butler, 4, Chancery; or 13 postage heads, and  
address to Mr. Beddome, Canonbury Park.

**HOLLOWAY'S OINTMENT AND  
PILLS.**—A Person seventy-five years old cured of  
a Bad Leg by Holloway's Ointment and Pills.—*Mrs. La-*  
*reason*, of No. 2, Richardson's Buildings, Goswell Street,  
ever since giving birth to twins 34 years ago, had suffered  
with dreadful wounds in her leg, and which several medical  
men, both in France and England, had been unable to cure.  
Her sufferings were intense, and oftentimes she was, during  
long periods, wholly confined to her bed. Ultimately, she  
made trial of Holloway's Ointment and Pills, and these  
celebrated remedies have completely healed her wounds,  
and she can walk about with the greatest comfort.—Sold  
by all Druggists, and at Professor Holloway's Establish-  
ment, 84, Strand, London.

**THE NEW HAIR CLEANER.**—

**BUTLER'S ROSEMARY HAIR CLEANER** is  
the most elegant and effective Preparation for removing  
Scurf and Dandruff from the Head, and, by its invigorating  
qualities, increasing the strength and growth of the hair.  
Should be used in every Family. Sold in Sixpenny  
Packets (enough for half-a-pint of Hair Wash), 85, Far-  
rington Street; 10, Bow Churchyard; 67 & 73, St. Paul's  
Churchyard; 150 & 63, Oxford Street; 330, Strand; and by  
all Druggists; or of Butler, Wycomb, by enclosing Postage  
Stamps and Address.

**CERTAIN DEATH TO VERMIN.**

**BUTLER'S VERMIN AND INSECT KILLER**  
is proved by a host of Testimonials, and the sale of nearly  
half a million of Packets to be the best Annihilator of  
Rats, Mice, Bees, Bugs, &c., ever produced. Try it, if  
troubled with Vermin. Sold in Packets, at 8d., 6d., and  
1s. each; at 85, Farringdon Street; 10, Bow Churchyard;  
67 & 73, St. Paul's Churchyard; 63 & 150, Oxford Street;  
330, Strand; and by all Druggists; or send from Butler,  
Wycomb, by enclosing Postage Stamps and Address.

## Editor's Note-Book.

**THE NEW NOVEMBER PLOT.**—The following letter affords us much gratification. Our "literary plot" has been discovered by a shrewd observer. Yet we do not fear the guillotine. Anybody who marks our course may discover that we are no "Guy"; and that, therefore, our crusade against ignorance and vice—and especially the vice of the press—the corruption of literary power—will be successful.—"To the Editor of *The Home Companion*."—Sir,—"Having experienced much pleasure from the perusal of the first number of your *Home Companion*, I am induced to offer a few remarks upon the work, as I consider it a duty to encourage and support every undertaking tending to enlighten society. A remarkable feature in the present day is the abundance of cheap publications which meet the eye on every side; and among the ranks of those that are likely to accelerate the progress of intelligence, I would assign a distinguished place to the *Home Companion*. Your pioneering number has also made its appearance at an auspicious moment, about the eye of this 'Guy Faux' commemoration, and this new November Plot, tending to explode all false notions, all popular prejudices and ignorance, has no doubt been concocting for some time in your editorial store-room, ready to illuminate the world at the proper moment. I can only say that such a "Plot" would ever find me a willing conspirator. I would most cordially run tilt with you against all that professes good sense and morality. I would fearlessly apply the torch to perverse and encroaching doctrines, and consume them to ashes with the same lively satisfaction with which our loyal countrymen, at this season of faggots, consign their ferocious Guys to the flames.

"*Fax mantis incendium gloria*"

should be my motto, as it is, I have no doubt, the inspiration that directs your pen. Trusting that you will pardon these few officious remarks, which have been awakened by the deep interest which I feel in the mental improvement of the masses—I remain, Mr. Editor, your obedient servant, W. F. F."

**RULE OF COMPOSITION.**—If you would write to any purpose you must be perfectly free from without, in the first place, and yet more free from within. Give yourself the natural rule, think on no pattern, no patron, no paper, no press, no public; think on nothing, but follow your own impulses. Give yourself as you are, what you are, and how you see it. Every man sees with his own eyes, or does not see at all. This is incontrovertibly true. Bring out what you have, if you have nothing, be an honest beggar rather than a respectable thief.

**EARLY TO RISE.**—We remember one of the writers in the *Guardian*, in Addison's time, expresses his keen sense of the pleasure derivable from bright blimy weather, and says if he was endowed with the art of flying, he would use it to attend the sun round the world, and pursue the spring through every sign of the Zodiac. This is no singular feeling, and yet we suspect multitudes who sigh for bright skies and genial breezes and fresh air, and who grow poetical at the mere mention of green fields and bursting flowers, so far from pursuing the sun, and seeking companionship with the spring, keep out of the way of both as much as possible. Instead of rising with the sun, and improving the early hours of morning in taking a walk in the fields, or in paying attention to a garden, thousands prefer the bed and the enjoyment of a little more sleep. Nature is lavish of her beauties all around them, but they might as well be deaf, and blind, and dumb, for all the good they receive from her bounteous ministrations. Young people, awake! Think of the health, the buoyancy of animal spirits, the enjoyments of mind which you throw away by indolence and love of ease. Only think what a sacrifice is involved in lying a-bed, morning after morning, for hours after the sun has risen!

**DIFFERENCE BETWEEN ARTERIES AND VEINS.**—The knowledge of the distinction between arteries and veins is of the utmost practical importance, particularly to people residing in districts remote from surgical aid, where those who receive serious wounds may actually bleed to death for want of such easily acquired information. The arteries are composed of no less than four very firm, strong, elastic membranes or coats; and this, as well as their being generally deeper seated in the flesh, to guard them from injury, renders them less liable to be hurt by accident; but when cut or wounded, the firmness of these coats prevents their closing, and hence

arises the fatal tendency of wounds of large blood-vessels, which will remain open till they are tied, or till death ensues. Another distinctive character is, that the pulse of the heart is felt in the arteries only. The veins lie near the surface; and bleeding from them may readily be stopped, in common cases, by closing the orifice, and bandaging in the manner usually adopted by operators after having opened a vein in the arm or foot. When a person, or animal, is seriously wounded, and a surgeon cannot be immediately procured, ignorant bystanders will often content themselves with laying on a little lint, or cobweb, or some other trifling application, wholly inadequate to the case; they ought to know that when such remedies fail, and more especially when the blood flows from the wound by pulsatory leaps, it should be arrested by mechanical compression, until professional aid be obtained. This can easily be done by the most ignorant person present, by winding a string or a bandage tightly above the wound. Those more skilful, or better informed, may take up the severed artery, and twist, or tie it up.

**POOLISH EXHIBITIONS.**—Not long ago, there was a rage for witnessing the daring feats of a bather, who would leap from a lofty bridge, or from a mast head into the water. Then there was another "treat," afforded by the exploits of a mad who allowed himself to be suspended by the neck for several moments, and who accidentally got really hung at last. Next, were descents in parachutes, by which some three or four people got killed. And, latterly, balloon ascents, with men upon horseback, have carried off the palm. We always turn our backs upon such absurd and demoralizing sights. It can afford us no pleasure to see how near to death man may venture, and yet escape. Captain Gale paid the forfeit of his daring some months ago, in France. The absurdity of a man lashing himself and a horse to a balloon, and allowing himself to be floated up into the air, over the gaping mouths of excited spectators, is extreme. No good can come of such perilous adventures; and if we could have our will, we would order that, henceforth, everybody going up into the aerial regions in such an uncomfortable and unnecessary manner, should be doomed to remain there in

AN AWFUL STATE OF SUSPENSE.

**MECHANICS TAKING THE LEAD.**—"The Bar is fast losing its attractions to the young of this city. There are now thirty young gentlemen who have received liberal educations and are serving their "time" as shipwrights, architects, &c. In a few years the United States will have the most accomplished mechanics in the world. A new class is springing up who will put the present race of mechanics in the shade. The union of a substantial education with mechanical skill will effect this. Indeed, already we could name some mechanics who are excellent mathematicians, acquainted with French, German, and able to study the books in those languages connected with their vocations. Heretofore fond fathers were wont to educate their sons as doctors or lawyers, to ensure their respectability and success. The day is past. Mechanics will now take the lead, and will now supply the larger portion of the State and Federal Governments. We hope that parents and guardians will put aside this most obsolete idea, that none but professional men, such as physicians, divines, and lawyers, can ever arrive in this country to great distinction. Look any day and witness the self-taught, the once illiterate boy, now a superior mechanic, filled with the ardent thirst of becoming a valuable member of society. Look at our community—how many are there now, filling offices of honour and profit, who, but a few years ago, were apprentices to very respectable trades—and take the portion of mechanics to your very learned and distinguished men, and compare the ratio of their future eminence. Look at our debating societies, lyceums, &c., from whence emanates the ebullition of marked natural talent? From those who never had any other stimulant but their own ambition to become useful as well as ornamental; whose days are devoted to hard work, and every vacant hour passed in the proper study to render them respectable and well informed."—*New York Mirror*.

**THE BLOOMER COSTUME.**—The topic continues to be absorbing. Some fair correspondents ask us whether we think it likely to become general. We think it will become so, gradually, and with various modifications.

Some of the styles given at p. 28, No. 2, are exceedingly pretty and modest. The cause of reform in ladies' costume is, however, endangered by the indiscretions of its first advocates. A friend of ours, who is enthusiastic in everything by turns, came into our office the other day, proposing a "demonstration" in favour of Bloomerism—a procession through the streets of London, of ladies all dressed in the new style! We dissented. Processions, lectures, balls, &c. &c., make the thing notorious, and damage a good cause. The change affects ladies, and must be brought about by all that quiet grace which is evidenced in things lady-like and pure. This has been the case in America more than here. There, ladies appeared in the costume, and conducted themselves with delicacy. Here, the costume has been made an exhibition of; and a lady who assumes the garb now, is liable to be mistaken for Mrs. Somebody, who has been exhibiting to popular gaze for paltry charges.—"The Boston *Waverley Magazine*" thus speaks upon the subject:—"We have seen many representations of this new style of dress, but have not seen one that looked to suit our taste. Most of them appear more like opera-dancers, decked in mere tinsel, only for effect. But with us it is a more serious matter, a subject that deserves the attention of all classes and conditions. Some pretend to say that we men have no interest in the matter, and ought to have nothing to say about it. This looks plausible at first, but on a second thought it will appear of great importance to every man who wishes that his posterity may enjoy that health which is so necessary for their happiness. Is it of no interest to men, whether their wives and the mothers of their children are deformed, decrepid, and perhaps infirm? Is it of no interest to men, whether their beloved offspring early decay, inheriting the constitution of an enfeebled mother? The numerous consequent evils—as the loss of activity and cheerfulness in the wife, the greatly increased expenses of the family, and the long bills of doctors and apothecaries—tell him he has a compound interest in the matter. It is always difficult to introduce a change from a long-established custom, whether in religion, politics, habits, or dress; and it will be but by gradual steps that the new costume will become the rage. Those ladies who have laid aside their timidity, (not modesty, for the new dress is more modest than is the old,) and braved the battle, and seconded the voice of the entire press of the country, as well as the recommendations of eminent physicians, deserve much credit, and should be looked upon as of independent mind; and they are so estimated. What though boys, of a larger as well as smaller growth, do follow them, it is only to see the charming dignity which the dress gives to the female form; what though they excite a smile as they tremblingly pass along the street; let them not be afraid; it is only in admiration of their beautiful figure, and a joyous anticipation of the 'glorious times coming,' when our ladies will be more beautiful, more active, and more happy—imparting cheerfulness to all around—because unbound, unshackled, unstayed, they can skip like the deer, sing like the lark, and breathe with ease. The dress will take at least ten years, in appearance, from the age of every lady who adopts it. The young lady of twenty-five will appear fifteen; the awful age of thirty will go back to twenty; the old age of forty will do the youth of thirty; and an old maid will not be found of less than forty. Oh, what a blessing to many now hopeless spinsters; what a raking up of old affections, of long exhausted sighs, will there be, when age shall again resume its youth, and bright hopes still cherish their long neglected hearts! But we are getting too deep in the glorious theme, and will close by advising the ladies to adopt the dress at once."

**RECEIVED.**—*Flowers and Heraldry*, Houlston & Stoneman. (Reviewed in our next.)—*The Present of a Mistress*, Houlston & Stoneman.

No. 4.—VOL. I.]

SATURDAY, JANUARY 24, 1852.

[PRICE ONE PENNY.]

## DON'T RUN IN DEBT.

"Don't run in debt:"—never mind, never mind,  
If the clothes are faded and torn:  
Seam them up, make them do; it is better  
by far,  
Than to have the heart weary and worn.  
Who'll love you the more for the shape of  
your hat,  
Or your ruff, or the tie of your shoe,  
The cut of your vest, or your boots, or  
cravat,  
If they know you're in debt for the new.

There's no comfort, I tell you, in walking  
the street  
In fine clothes, if you know you are in  
debt:  
And feel that perchance you some trades-  
man may meet.  
Who will sneer—"They're not paid for  
yet."

Good friends, let me beg of you, don't run  
in debt,  
If the chairs and the sofas are old—  
They will fit your back better than any  
new set,  
Unless they're paid for—with gold;  
If the house is too small, draw the closer  
together,  
Keep it warm with a hearty good will;  
A big one unpaid for, in all kinds of  
weather,  
Will send to your warm heart a chill.

Don't run in debt—now, dear girls, take a  
hint,  
(If the fashions have changed since last  
season.)  
Old Nature is out in the very same tint,  
And old Nature, we think, has some  
reason.

But just say to your friend, that you can-  
not afford  
To spend time to keep up with the  
fashion;  
That your purse is too light, and your  
honour too bright,  
To be tarnished with such silly passion.

Gents, don't run in debt—let your friends,  
if they can,  
Have fine houses, feathers, and flowers,  
But, unless they are paid for, be more of a  
man  
To envy their sunny hours.  
If you've money to spare, I have nothing  
to say—  
Spend your silver and gold as you please;  
But, mind you, the man who has his bill has  
to pay,  
Is the man who is never at ease.

Kind husbands, don't run into debt any  
more;  
'Twill fill your wife's cup full of sorrow,  
To know that a neighbour may call at your  
door,  
With a claim you must settle to-morrow.  
Oh! take my advice—it is good, it is true!  
(But, lest you may some of you doubt it.)  
I'll whisper a secret, now seeing 'tis you—  
I have tried it and know all about it.

The chain of a debtor is heavy and cold,  
Its links all corrosion and rust,  
Gild it o'er as you will—it is never of gold,  
Then spurn it aside with disgust.  
The man who's in debt is too often a slave,  
Though his heart may be honest and true;  
Can he hold up his head, and look lively  
and brave,  
When a bill he can't pay becomes due?

## THE RUSSIAN'S DAUGHTER; AN INCIDENT OF THE GRAND ARMY.

BY CHAMPION BISMELL.

THE rattling of drums, the sharp discharge of musketry, and the indescribable confusion incident to the movement of vast bodies of men, announced the departure of Napoleon from Wilna. Far out on the plain, so distant, that the music at its head scarcely disturbed the listening ear, marched the vanguard of the Grand Army; and through the thronged streets of the Russian town endless columns poured forth in dark and bristling lines. At intervals came troops of horsemen, their steeds impatiently pawing the ground, and neighing in response to their comrades on the open plain. And now more frequently rumbled the artillery and baggage waggons, startling the gazer by their number and equipments, and filling him with awe at the genius of the mighty conqueror, at whose bidding this host of men and array of warlike munitions had been suddenly evoked as from some world, unknown or forbidden, to all other men.

They formed a study of no common interest—the faces of these iron soldiers—engaged in an expedition, in splendour, magnitude, and prospective result, the greatest which the world has ever seen. Here was realized the utmost of ambition. Here was seen the culmination of the intensest desires of skilful despotism—a despotism so symmetrical and perfect, that those who shuddered most at its awful spirit, yielded the most ready acquiescence to the fascinations of its godlike power. Never before had the genius of the Corsican been so completely in the ascendant. For the time no man dared call himself his own.

And as the Grand Army passed on, in the face of each soldier might be read the spirit working beneath. The French conscript, fresh from his ancestral acres, which he had ever longed to leave for the bivouac and the field, wore upon his countenance only the expression of exultation and joy. The veteran, on whose breast you might perceive the medal of Austerlitz or Marengo, mirrored with the mien of a Roman legionary, confident and secure in the genius of his commander as when he heard his clear voice ring amid the perils of Wagram, or saw him push out his frail skirt to the raft of Tilait, to dictate terms of peace to two fallen emperors. The aged soldier renewed his youth; the boy's sinews were stiffened like steel, at the sound of

the constant watchword, "To Moscow—to Moscow!" It was only in the muttered execrations of the conquered Austrian or Prussian, whom the vicissitudes of fortune had forced into an ungrateful service against their hereditary ally, that you might read the omen which cast its black and growing shadow over the campaign.

The welcome command of halt had been given to the army, and each soldier was busily engaged in preparing his noon-day meal, when a young officer detached himself from his company, and rode swiftly to the waggons at the rear of the column. Arriving at one distinguished from the rest by its superior elegance and finish, and showing by its equipments its peculiar use, he gently lifted the curtain, and said in a low tone—"And how is Paul, now that we are once more on the road to fame and Moscow!"

"Alas!" answered the sick man, wearily raising himself on his elbow, "I feel as yet none of that strength which my good doctor promised me when you begged me away from the hospital at Wilna. It is dreadful to lie here, and hear the moving life without, and to feel one's self cut off from it all; to catch the joyful shout of the soldiers, and to reflect that it must be long before one's own voice can be raised in the cry for La Belle France. But, courage, Paul—and don't make your comrades melancholy! How well you look, Pierre, and that cross, too—ah, don't try to hide it; Paul will earn one also if he ever escapes from this waggon. And do you know that the Emperor looked in on me to-day, and was delighted with my stubborn determination to go on with the Grand Army. And as he passed on I heard him humming—

'*Marlborough s'en va à la guerre,  
Ne sait quand il reviendra.*'"

That last line—your Paul has had it running in his head ever since. I hope we may not return till we have finished our work."

"Bravo, Paul!" replied the officer, "dying men don't talk like this! The Lancers will see their favourite lieutenant at their head again in a month, and meantime, perhaps, you are as well off here as we, who labour so hard to get over these everlasting deserts. As for the Legion of Honour, Paul, you deserve a cross much more than I, for your heroic patience in this tedious sickness. And see, I am going to share my dinner with you to-day. Here is an omelet which I prepared last night, for I knew how fond you used to be of omelet, and how much better it is for you than thin soups, now that you ought to be growing strong again. Why, you eat like a veteran already. Let it be a sweetener to every morsel that in a few months we shall be entering Paris with the spoils of that heathenish old Kremlin, and our gay city dames will no longer be cruel, for will we not be heroes of the Grand Army! Adieu, expect me again at evening, and keep your courage up." And the warm-hearted Pierre galloped off.

Left to himself, Paul attempted to sleep, but his feelings had become somewhat excited, and this, with the motion of the waggon, which had once more began its rude joltings, baffled his efforts.

"It is a long time," he soliloquized, "since I have had an opportunity to review these mementos of my past life." And he carefully opened a small casket which reposed at the head of his couch. "Pierre talks of women; but how shall I forget that one who was only dear to me the moment she was snatched away, but whom I loved in a moment sufficiently for a life-time: now these silent tokens shall bring up to me the dead Past, and I will live those days over again. I have not written my thoughts since I entered the army. Sometimes I think I dare not. I am more ambitious than I was then, when I stained the white leaves of this little book with words like these."

He turned over a few leaves of the journal and read to himself, in a low tone—"Pierre has just left us—our play-ground is deserted. The fields look mournful. The birds do not sing as sweetly as they did. I have lost a friend."

"Pierre has gone to the military school. It is a great way off, and he is to be allowed very little liberty. He says they will make a great general of him if he obeys well, and that in a few years he will be able to serve the Emperor. For my part, I am sorry that he ever thought of going to war. I don't see what there is in war to make it so popular. Very many of the young farmers and tradesmen of the village have gone to serve on the conscription, and but few of them have come back. And father, who does not see any reason to hate the Austrians and Prussians, says, that the Emperor is too ambitious. But then he adds, 'he loves the people.'

"For my part, though I should love very much to be with Pierre, I intend to be a good citizen and stay at home. If the conscription takes me, and it is coming down more and more among the young men every year—I shall hire Baptiste, the gardener, to go in my stead. I am afraid he is a coward,

"*Malbrook is going to the war,  
And knows not when he'll return.*"

though he often talks of setting out for the wars, and is for ever shouting 'Vive l'Empereur!'

"Ah," said Paul, "I was a mere boy then. I will turn a ~~few~~ more leaves."

"I never thought I should like parties and ~~fetes~~ so well. But a year or two ago, when mother made a *fete* for my sister, I refused to come into the rooms, or to dance on the lawn; and I remember how mortified I was when a group of misses ran out into the garden, and surprised me in my working dress, reading about Prince Cherry, under the apple-tree. But now, I feel at my ease among the ladies; I have grown as tall as a man; and the other evening, at a dance, I heard Madame D—, from Lyons, inquire of her partner who that graceful young man by the sofa was. I think she meant me. And my moustache is certainly promising."

"I am puzzled to account for the interest Mlle. F— has recently taken in me. She is, I know, a little older than myself, and her disposition is not calculated to harmonize with mine—for she is bold and ambitious beyond most women, and I am so void of ambition that Pierre says I am good for nothing but a country curé, or at best a quiet scholar. Nor can I imagine why my conversation should please her, for I know nothing of the great world, and she has spent half her life in Paris. I shall see her again this evening."

"So soon! Is it possible she loves me—that her love is returned—that we are henceforth all the world to each other! How little could a prophet ever have foreseen all this. And how little could he have read in those gay scenes and brilliant saloons the secrets of our destiny. I do not blame myself, for I am proud of the affections of a woman so beautiful and gifted, yet she has a haughty and imperious nature, and I know not how it will accommodate itself to the quiet of a philosopher."

"Daily I feel that something is wanting to that perfect love which I ought to cherish toward dear Victorine. It may be useless in me to indulge the thought, but I doubt if more than my pride and feelings are interested. She loves me deeply, I am conscious, although I am unworthy of such affection. Our characters are so opposite that I must make sacrifices to ensure lasting harmony. I must soar to her views, she must not descend to mine. I will go into the army. I will win honours under the Emperor—I will return, and she shall meet me with a proud and delighted heart, for she shall find her early confidence not misplaced."

"All is settled. To-morrow I start for Brienne. I have written my determination to Pierre. I have resisted the enticements of my parents. I have bid adieu to Victorine. She weeps, but I can see she is proud of the resolution I have taken. We are to correspond by every post. The rascal Baptiste pretends to be sorry that he cannot go to the wars with me. The Abbé merely says, 'My son, prove yourself worthy your country and Victorine.' The last injunction would make a hero of a coward."

"Alas!" sighed the young man, covering his face for a moment. "I scarcely dare to read more. Those dreadful days are too fresh in my memory. Why did I narrate them with such minuteness?" And he impatiently turned over a handful of pages.

"No letters for a week! And I have written daily. In a few months more I shall join the army, and then for glory and Victorine! How glowingly she paints our future destiny—myself the successful soldier—she the proud wife. Dear girl, she shall shine in courts, for she first opened my eyes to ambition and fame."

"They write that she is unwell—their letters are filled with strange hints, hints that I cannot understand, and can only interpret unfavourably. Her illness is but trifling, and the physician angers well—if so, why send to Paris for advice, and why conceal it from me so long that she was ill? And why urge it on me not to be alarmed, and not to distress Pierre with my sorrow, if there is no need for alarm and anxiety? I must hold myself in instant readiness to start at any moment. I must apply for permission to go when necessary."

"She is dying! I have only seen her once, and then she did not know me, who would die for her! They were holding her in their rude grasp, and when I bid them cease, they told me she would deliver herself if her hands were free! They commanded me from the room, but I would not go. I resolved to wait till she returned to her mind. I wished to be the first one whom her reviving consciousness would recognise."

"After days of gloom and sorrow, and nights of dreary watching, I was at length addressed by my right name. Alas, how feeble were the lips that pronounced it! How mournful in their paleness, and yet how serene and lovely in their expression! I stood at her bedside, her hand in mine, the unseen hand of the grim angel over us both. 'Paul!' she whispered, 'Paul!' I knelt by her, and her last words flowed into my heart, as the last drops of a summer cloud melt into the earth, while the cloud vanishes for ever. 'I have loved you, Paul, deeply and truly—how truly you can never know. I am going to leave you. I will not ask you to remember me. If you forget Victorine, she will not forget to watch over you. You will find some other Victorine, less proud and more loving than the first. Over her, too, I will watch, and will love her for your sake. Fear God—serve your country. Be your ambition ever noble as now. And when in a few days you go to the camp and the field, bear with you a resolve worthy yourself—to do nothing but what is virtuous and good. And here I have prepared you a

little packet. Open it when—when I am gone, and cherish its contents for her sake who loved you so well. Kiss me, Paul! there—let me lean on you, for I am growing very weak—"

"Quick!" exclaimed the curé, "she is dying—"  
"Merciful Heaven!" I cried, "she is falling from my arms! Her eyes—Oh, God! is this death?"

And, as the sick man closed the book, he took from the casket a curiously fashioned bracelet, on which was engraved the simple legend, "Love, the child of Sympathy.—V. F." He gazed at it long and earnestly, at times burying his face in his hands, and giving way to passionate grief. At length the excitement passed away, and with the jewel firmly locked in his grasp he sank to sleep.

A few months after the events narrated in these brief notes, Paul Dubois and Pierre Chatelet entered the army—the former a prey to a seemingly incurable melancholy. In every engagement they attracted attention by their courage and their singular attachment—ever fighting side by side, each intent upon the safety of the other. By degrees Paul recovered his spirits, and began to mix among the ordinary pleasures of young men. Still, it was observable that his actions were regulated by principles higher, and more sublime in result, than those of most of his fellows. He was wont sternly to reprove all deviations from the laws of honour and morality, all indications of a downward tendency in desire. As his brother officers saw that his character as a soldier became more eminent and admirable by reason of his stern virtue, they unconsciously imitated him. His influence was widely felt. All who knew him loved him. And thus it happened, that when in the flush of awakening hopes, and at the very outset of the expedition wherein he had expected to reap a rich harvest of honour, he was prostrated by a painful disease, his fellow-soldiers felt for him so deep a sympathy, and entreated with so much earnestness that he might still accompany them. And though he daily lost strength, his enthusiasm seemed but to kindle the more. His physician shook his head, but the sick man cared not for the uncomfortable pallet, the unwholesome food, nor the harsh motion of the waggon, so long as the ride soldier who marched by his side chanted the warlike chorus—"To Moscow—to Moscow!"

## CHAPTER II.

"I AM afraid, Monsieur le General," said the surgeon to the chief of division, "that we shall be obliged to leave our friend, Paul Dubois, as an invalid in some wayside cottage, for he cannot hold out to Smolensk."

"Nay," interposed Pierre, who had just ridden up, "I have been with him constantly on the march, and he is as eager as ever to go on. To leave him here would be even worse than death."

"Ah, my good friend!" answered the surgeon, "in that waggon he cannot live twenty-four hours longer. I repeat it, General, our only hope is in leaving him. It is a great loss to the division, and a melancholy fate to so brave and enthusiastic an officer. But we have no alternative."

The General consulted a moment with his staff. "Go, then," he said, to Pierre and the surgeon, "go to Lieutenant Paul Dubois, and inform him, that in the opinion of the medical staff and his brother officers, it is unsafe and impossible for him to proceed with us. Express my sincere regret at the circumstances which separate us, and my ardent hope that ere the campaign is over we may meet again under better omens, and see that he is put in comfortable quarters. As for you, Captain Pierre Chatelet, you have full permission to use all time and camp equipage necessary for this purpose; and may you have a favourable report to give me when I next see you. And now, gentlemen, to your patient."

Paul received the intelligence of his destination with less grief than Pierre and the surgeon had anticipated. In truth, his illness had, in the last few days, gone far toward weakening the energies of life and passion, and a languid sigh was all the resistance he offered. The horses were turned into a bye-road; the murmur of the great army gradually died away; and, at last, the eyes of the sick man, as he gazed through the parted curtains, rested only on his attendant and the devoted Pierre. On each side, the broad fields lay basking in the bright sunlight, and in the distance a white cottage appeared, solitary amid a grove of tall pines, and at the meeting of roads which branched out in every direction over the cultivated plain. "And there," sighed Pierre, coming to his side, "there is, without doubt, your prison-house, on your road to Fane. Now, Paul, you have indeed an opportunity to show the strength of your philosophy and your religion. You know that I cannot be spared from the army. God give us a joyful meeting at a not distant day."

"We ask permission, may it please you," said Pierre, bowing very low to a comely Russian, who came forward from the house to view the unwonted spectacle of a military equipage at his very door, "to leave with you an invalid officer of the French army. Of necessity his life is in your hands, and I am not miscalculating on the generosity of a subject of Alexander, when I say that I feel he is safe with you. And if, sir, at a future time, a ransom shall be required, your demands cannot exceed our willingness."

"A Russian's duty is ever to his fellow-men," replied the farmer, "lifting the curtain of the waggon, and therefore the sick man shall be to me as a brother. For your Emperor, and his wars—I detest them. But this is needless now. Catherine," he continued, returning to the door, "bid the servants hither."

In a moment there appeared a fair, slight girl, followed by two or three of the household.

"Take carefully now the cough from the waggon," said the Russian, "and lay the stranger in the shaded room. "Go, girl," he added, to his daughter, "see that all is ready above."

"Ah, sir!" sighed Paul, as, supported by the arm of the faithful Pierre, he gazed from his couch at the simple but tasteful apartment in which he had been laid, and at the earnest face of the Russian bending over him, "how can I thank you for so unlooked-for a kindness from one whom men would call my enemy?"

"God is all wise," answered the host, "and I have a son in the army of Alexander. It may be that he will yet have cause to bless a Frenchman."

The rays of the sun slanted through the narrow window, and fell higher and higher on the wall. The regular breathings of Paul told of more healthful sleep than had visited him for weeks. "I will leave him now," said Pierre, "and avoid the sorrows of leave taking. Put away that casket quietly, Baptiste. There, let us go."

"And," answered the Russian, brushing a tear from his cheek, "he shall awake and find a friend. Poor fellow! but he is very like my Ivan, and him I shall not see for many weary months, for Russia needs him."

That night, Pierre, within the tent of the general, told of his finding a Russian who had almost persuaded him to break his sword. His officer sealed a despatch to the Emperor, in which it was announced, that a vacancy had occurred in a corps of his division, formerly under the command of Lieutenant Paul Dubois. And at the same hour, Paul, opening his languid eyes from a dream, in which phantasies of dense scented mellowed and changed to angelic visions, gazed upon the half-averted and shaded face of a young girl, who, by the softening light of a dim taper, and from the low, sweet melody issuing from her scarce moving lips, might have been mistaken by a sounder judgment than his, for an inhabitant of another sphere.

### CHAPTER III.

AWAKING from a long and refreshing sleep, with a confused recollection of the beautiful vision of the preceding night, Paul composed himself for a survey of the abode in which, for the present, he was domesticated. The room where he lay was small, and tastefully furnished, exhibiting in a thousand particulars the tokens of graceful and feminine care. His couch, albeit, somewhat coarse, was of the whitest linen; upon the low mantel, the humble chairs, and the frames of the simple pictures, not a stain, or speck of dust was visible. One window was open, looking out on green and dewy fields; the song of birds floated cheerfully in; the din of the marching army was no longer heard; the jolting of the sick-waggon was forgotten. The invalid had already begun to retrace his steps to the portals of life.

A light step in the passage, and the Russian maiden came softly in, lingering modestly for an instant on the threshold.

"And how has Monsieur slept?" she inquired in the purest French. "We much feared to disturb you last night. Monsieur is very sick, but we can give you rest and quiet, and we can prepare you food, such as is good for the sick; and we have a physician—oh, he is a wonderful man! and he lives but a short way off."

"Ah," replied Paul, "perhaps my nurse of last night is the better physician. At least," continued he, in the natural language of compliment, "one kind look from you does me more good than a whole packet of the doctor's drugs. Your air is wonderfully refreshing, too; and, really, I fancy I begin to have an appetite."

"Monsieur shall not complain of hunger," said Catherine; and gliding from the room, she soon returned with a small salver, on which were displayed the materials of a meal, which, to the eyes of the invalid accustomed for months to the rude food of the camp, appeared tempting beyond all description. There might have been nothing alluring to the epicure in that snowy bread and plain broth; but their very simplicity, together with the grace of the fair girl by whom they were offered, made them more delicious to Paul than the most costly feast. And Paul's situation caused him to depend upon his nurse for those little attentions which invalids ever exact. Those blue eyes looked only sympathy; those fresh lips opened only in pleasant smiles and pleasant words.

"Ah," said he, "might I not with reason forbid the man of drugs, with you for a nurse?"

"Nay, sir, if you flatter me, I cannot stay with you. You must remain very quiet, Monsieur, and I will read to you; and when you grow a little stronger, you shall tell me of the war, and the Grand Army, and of France. My mother was from France. Why do men so love to kill one another, when our Master bids us live in peace? Yet my own brother must leave us to fight for Russia."

So day by day the hours passed away in that still chamber. As Paul gathered strength he loved to tell the simple maiden of France, of the broad lands through which he had passed in his marchings, of the many scenes in which his soldier-life had been spent. He grew more fond of watching Catherine's light form as she moved about the apartment, arranging its exquisite order; or when, in the still twilight, her golden hair streaming over her shoulders, she sat by his bed-side singing him to sleep with her ancestral ballads. By degrees her image formed itself on his heart, and lent form and colouring to his deepest reveries.

The Russian, too, was a frequent visitor in the chamber of the sick man. But his talk was of realities, of truths, which could not fail to urge themselves with great weight upon men interested in the mighty struggle then going on almost within hearing. "Let us," Lossmin would say, "view these things as friends, and from a common ground."

"It is now August, and the frosts of autumn are already beginning to be felt. Your Emperor has not yet arrived within sight of Moscow—the last courier announced to me that he had but just left Smolensk. Your army is already suffering famine. You will reach Moscow in September, and you will have left one quarter of your army on the road."

"Russia will not then be conquered. You will be as far as ever from the realization of your ambition. Would you proceed further, winter would shut you in from behind. Would you remain at Moscow—where would you get your supplies? You cannot buy them of us, you cannot convey them from beyond the Niemen in winter—you cannot sow your seed and reap your harvest on the snow."

"Let your Emperor make peace if he can, now that the sword is in sight of the scabbard. As for conquering Russia, it were impossible, though there were no such thing as winter. The moment you retreat, you will find yourselves beset on every side by our light troops and Cossacks. Your Emperor is playing a fearful game—let him look well to his pieces."

"Stay," replied Paul, "you know not our strength—nor our Emperor. He will make peace in your capital. He will pledge Alexander under the shadow of the great Cross of St. Ivan. He will receive your ambassadors at Paris before the Cossacks shall have found their way back to their native deserts. Fate has kept us from the contest, but it gives you an object of pride and hope in a warlike son—me, in a friend dearer than a brother. May God render them safe home from the conflict!"

"Amen!" ejaculated Lossmin. "Are you strong enough to walk to day? Would you do good to venture into my wheat-fields. They shall yet feed our brave soldiers at Moscow."

Days rolled on. August passed away, and September came, bringing golden twilights and sharpening air, reddening the broad fields, and lending a richer shade to the dark pine and hemlock. Paul had escaped from the confinement of his chamber. Although a prisoner, no one could have been more at liberty. And Catherine—whom he used laughingly to call his jailer—never was minister of justice more lenient! Those long walks—how inexpressibly delicious in the fresh, sunny air. And the eloquence of the young man—how captivating to a susceptible mind, which had hitherto never opened itself to the rude influences around. Her feelings for the young man, while he lay on his couch of pain, she had easily excused to herself as the offspring of compassion—how was it, that, as he hourly became less an object of pity, those feelings hourly increased in intensity? The minutes began to seem long when he was absent. Paul, too, was attracted to the gentle girl by stronger inclinations than could lay to the charge of gratitude, or alleviated loneliness. Her character, so pure, so confiding, so sympathetic, seemed the full realization of all he had imagined in his Utopia of love. So, while he cherished the memory of Victorine, he allowed his thoughts to dwell at liberty upon the Russian maiden. As for Lossmin—his sagacity was somewhat blunted by time—he had outlived romance. If Catherine had had a mother, she might have been warned of her indiscretion—for so a prudent mother would infallibly have termed it—and the good Lossmin might have awaked to the manifest danger of sheltering a handsome French officer under his roof: but the worthy woman had been dead some years; and so Catherine went on nursing the young and growing love, and Lossmin filled his barns, and bid his servants drink to the success of the army of Alexander.

The visits of the courier began to be more frequent, as the needs of the Empire demanded that its inhabitants, and especially those near its great roads, should be acquainted with the progress of the war. The carnage of Borodino, the desertion of Moscow, had been communicated in fearfully rapid succession to the startled inmates of the house of Lossmin; and one evening, as Lossmin himself was sitting moodily at his door, a breathless courier placed in his hands a letter from his son, at the same time loudly demanding an extra reward for the danger he had incurred in passing the hostile lines.

"My honoured father," for so the letter ran, "our trust is in that God who watches over the destinies of righteous men, and also in our father-sovereign, Alexander, and our own good words. Moscow is in ruins; our rear-guard have finished their mournful work of desolation, and the French conqueror lords it only over a heap of ashes. He has sought peace; but our brave Alexander has vowed not to sheath the sword while the enemy remains on Russian ground."

"I cannot write more now. We have fallen on fearful times. Our capital is deserted—our hereafter is uncertain. I hope to revisit you soon, when we have chased the Frenchmen over the Niemen; but God is all-knowing. It is said the enemy will endeavour to remain at Moscow. If he attempt it, he will perish of famine. We are already closing in on the return roads. Your devoted son, IVAN."

"Thus far," exclaimed Lossmin, hastening to read the letter to Paul—"I have spoken truly. Let your Emperor look to his gods, if he acknowledge any, for the God whom we worship will not serve him. And behold," he continued, as a few scattered snow-flakes brought by the chill north wind slanted through the air, "behold the winding-sheet of the Grand Army."

### CHAPTER IV.

THE winter had set in with unheard of rigour. The roads were well-nigh impassable, and intelligence from the army, although intently looked for, came less often. But enough was gathered from couriers, and the occasional traveller, to convince the calm Lossmin and the anxious Paul, that the retreating forces of the French were meeting only with disaster and ruin, and

## THE RUSSIAN'S DAUGHTER.

that the final success of the Russians was inevitable. An increasing gloom settled upon the countenance of Paul, which not even the tender sympathies of Catherine could drive away. The prospect of remaining a prisoner, awaiting a distant and perhaps impossible peace, and perhaps a banishment to a country whose very name froze his heart with horror, unmanned him. The love he felt towards Catherine only served to increase his melancholy, for he saw how hopeless it would be, so long as he was but a prisoner of war, and that, too, among a people so fearfully exasperated as were the Russians.

It chanced upon a wild and stormy night, that Lossmin, Catherine, and Paul, were sitting by the huge fire in the dining department. The tables had long been cleared, and the remainder of the family had dispersed for the night. The moaning of the wind, and the noise of the drifting snow, naturally turned their thoughts to the two armies engaged in their deadly struggle amid such adverse circumstances. Catherine was the first to break the silence.

"Father, as we sit here by this cheerful blaze, think how many poor soldiers are perishing with cold. The courier, too, says that our people are suffering nearly as much as those against whom they fight. And Ivan—perhaps at this very moment he is lying, wounded and dying; perhaps a prisoner, and in hands scarcely able to preserve themselves."

"God help the soldier!" answered Lossmin. "God will protect those who fight for their country and the right. I have little fear for Ivan, so long as he remembers the lessons I have taught him. As for our enemies, God help them also! Already have they been sufficiently punished for their sins."

"Amen!" exclaimed Paul. "Hark!—a knocking at the great door. And some one shouting, 'Help!'—Quick! a light!"

The party instantly rushed to the door at which the noise was made. They unfastened and opened it amid the entreaties of the voice to lose no time.

"It is—it is Pierre's voice!" cried Paul, as he eagerly darted forth into the gloom and grasped his friend by the hand.

"And," exclaimed the latter, "I bring you one Ivan Lossmin, whom I made prisoner near here, who is dangerously wounded, and wished only to die under his father's roof. Quick, for the love of God, or he will perish with cold!"

There was no need of his passionate exclamation. Ere he had finished speaking, Lossmin had gained the rude sleigh, and lifting thence the helpless form of a wounded soldier, bore him across the threshold, crying, "My son! my son! now has the curse of war come home to my own hearth!"

It is observable that amid circumstances of the most critical and trying nature, the delicate woman often displays more fortitude and presence of mind than the sterner man. And so it was that while the father was sinking under the agony of the moment, and Paul, hardly recovered from his severe illness, was unnerved by the terrible excitement of the scene; and Pierre, bewildered by the sudden apparition of so many strange faces—for by this time the whole household was gathered around in wild disorder—stood by, forgetful of his strength: Catherine alone took those steps which could insure the safety of the wounded Ivan. Ordering a couch to be brought to the warm and prepared room, she caused the stiffened limbs of the soldier to be laid upon it, and divesting him of his gory uniform, bound up his wounds with that tenderness and skill which a sister's love could only confer. Then, while the scarcely recovered father knelt by the bedside of his son, and sought to obtain a word or look of recognition, she prepared such food as was best suited to the soldier famished by hunger and cold, and placing it to his lips, had the ineffable satisfaction of seeing his eyes slowly open, and of hearing him whisper, "Home—home, once more!"

The wounds of Ivan proved of a less severe character than Pierre had at first feared. Added to the combined influence of cold and hunger they would soon have proved fatal; but warmth and food are powerful aids to the system, and after a night of sound sleep, in which the eyes of the devoted Catherine were never once closed, he declared himself out of danger, and almost entirely free from pain. And with the two officers at his side, Catherine holding his hand in her own, and Lossmin leaning over the head of the couch, he proceeded, at the earnest request of the latter, to relate the circumstances which had led to this unlooked-for and strange reunion.

"We had," said Ivan, "steadily followed the French Army on their retreat from the capital. Never was there greater bravery displayed than by the Grand Army in their perilous march across a wasted and hostile country. Daily we drew in more and more closely on their flying columns, and daily our combats became more fierce and bloody.

"At length, after weeks of the closest fighting, those whom we pursued found themselves on the banks of the Beresina, spanned in this place by a single bridge. It was then for the first time that our corps—for hitherto we had kept much in the rear—saw to what a miserable remnant that army was reduced, which had so lately entered our capital. We had yet to learn how much stronger they were in all the energies of despair—those men who looked so haggard and famished.

"It was our design to cut the enemy off from crossing the bridge, and had we kept somewhat nearer them in the pursuit, we might have succeeded; but in our attempts we met with a most determined resistance, and a bloody struggle ensued, in which you had well-nigh lost a son.

"I found myself surrounded by three French horsemen, and separated from my ranks. I saw that escape was hopeless, and by a strange fatality, aimed a blow at the very one who was to preserve me. He is by my side. It was Pierre! My stroke glanced, and a quick, sharp pain in my breast is all that I remember after. When I awoke to consciousness, after the lapse of a few hours, I was in the tent of my captor, and I found my wounds

dressed with as much care as could have been expected; but I heard the surgeon declare, as he left the tent, that I was in great danger.

"Then I wished to see you once more before I died; I implored Pierre to send me to you. He replied that it was impossible. I then gave into his hands my farewell message to you. He gazed at the name, 'Lossmin!' at length he exclaimed; and asked if you were my father. I replied yes. In a moment he had left the tent.

"He returned almost immediately, and enveloping me in the best robes he could procure, removed me to his sleigh. We had scarcely set out, before we were overtaken by that fearful storm in which I had well-nigh perished before we found you last night. And now, my father, do we not owe eternal gratitude to the brave man who has restored me to you and to life?"

"Ah," said Pierre, "who would not have done as I did?"

"Say no more," exclaimed Lossmin, "we shall part from you with sadness, when you return to your army, taking away your brother Paul, whom you have made free, were he ten times a prisoner. So long as you will bless the house of the Russian, remain; and when you would depart, it shall not be without a fitting equipage for the brave soldier."

At the mention of departure, the face of Catherine was instantly shaded; a half-checked exclamation burst from her lips; and before she could recover herself, the watchful eyes of Paul were gazing into her own with more than ordinary meaning. She hastily rose, and without uttering a word, retired from the room. She was passing through the great hall to her own apartment, when she felt herself detained by a gentle but firm grasp, to which, for the instant, she could not but yield.

"Catherine—my dear Catherine!" said Paul, in a low tone, "forgive me for thus addressing you—my love is my only plea—it is a strong one if you will acknowledge it. Am I presumptuous in imagining that I am not without place in your thoughts? I would have the preserver of my life its constant guardian. Oh, Catherine, do not frown on one who loves you, and fancies your sympathy looks kindly on him!"

"Nay, sir," exclaimed the frightened girl, "so noble, so ambitious, you would not wed the simple Russian maiden. Be content to forget me—or think of me only as one who aided to restore you to your country, and the world. Gladly would I hear of your success hereafter. I will promise more—that I will never forget you, though our destinies are so widely different —"

"No more—no more!" interrupted Paul. "I will yet earn your love. For your sake, I will renounce all ambition for that glory which most men prize, but which you in your pure wisdom look on as empty. Then you will love me —"

"Catherine!" exclaimed the deep voice of Lossmin—for the precipitate flight of the lovers had aroused him to a sudden perception of the truth, and had brought him in quest of them—"Catherine, do you love the young French soldier?"

There was no reply, but the soft eyes were directed upward for a moment, and Paul fancied the small hand in his own ceased to struggle.

"It is enough," said Lossmin, fervently. "God, I thank thee, that in one day thou hast given me two noble sons. Lean more firmly on him, my daughter, and may Paul Dubois never do aught but bless this hour! My children, I leave your young hearts to their own fulness."

### CHAPTER V.

In a stately park near Paris, stand two large mansions, which, by their resemblance and noble appearance, elicit frequent remarks from those who extend their search after pleasure beyond the gay city. They are tenanted by citizens Paul Dubois and Pierre Chatelet.

Returning from the disastrous—yet in some respects, the joyful—campaign of the Grand Army, each hastened to throw up his commission. Pierre became a distinguished advocate, and forming alliance with a noble family, entered upon high dignities of the state. His sons are known as rising men, and his daughters take the brilliant rank among the brilliant stars of Paris.

Paul returned to Russia, nor did he leave the home of his adopted father till it had echoed for years with the laugh of children, and a white tomb-stone stood to the memory of Lossmin. Then he left those broad plains which to him spoke so eventful a history, for his native country. Yet he sends, and at not long intervals, friendly and brotherly messages to Ivan, now a favoured minister of the Emperor, and one of the greatest landed proprietors of Russia.

Two anniversaries are kept with peculiar care in these mansions of Proprietor Paul Dubois, and Advocate Pierre Chatelet—the day when the former was taken from his waggon to the chamber in the house of Lossmin, and the day of Ivan's restoration to his home, by the friendly Pierre. On these occasions there is no stint in hall or kitchen; and the poor of the neighbourhood are remarkable for the attention with which they watch for the anniversaries.

On these days, too, Madame Dubois is observed to wear an unpretending bracelet, whose plainness contrasts strangely with her otherwise magnificent attire: I much doubt if the eyes of her husband do not value that bracelet more than many costlier ornaments she has worn, for on it you may read the meaning motto, "*Love, the child of Symon*."

Pompeous funerals and sumptuous monuments are made more out of design to gratify the vanity of the living, than to do honour to the dead. Greatness may build the tomb, but it is goodness must make the epitaph.

## THE PHANTOM LIGHT:

A CHRISTMAS STORY.—BY FITZ-JAMES O'BRIEN.

"WHAT say you, Avisia, to a sail upon the lake to-day? The *Water Lily* has been newly painted, and looks as fresh as a butterfly just born."

"With all my heart, Arthur; the day seems charming, nor do I think that we need fear that horrid old mountain up there sending down any of those terrible squalls with which he sometimes favours us. I will just run and get my shawl and bonnet, and then I am yours."

The bonnet and shawl did not take long to put on; there were no wriggings or twistings before a cheval-glass, or vain endeavours to catch views of imaginary wrinkles, or rebellious ribbons at the back; the shawl was not twitched first over one shoulder and then the other, in order to give it a *negligé* appearance, nor was the bonnet tortured by any attempt to make it stylish. Avisia was in all things a child of nature, and did not trouble herself very much about fashions, and she was always well-dressed, more from a graceful instinct, than from any care or study. Her taste was simple and correct; but she would have made a poor figure in Kensington Gardens—quite as poor an exhibition, as that of a fine London lady with her crinoline and flounces, among the sublime and savage hills of Carbery.

The day was wondrously beautiful, as the *Water Lily*, under a lug-sail, sped rapidly across the lake. In the deep blue heavens, long rents of white, fleecy clouds were visible, like the glimpses of some maiden's snowy bosom peeping through her azure robe. There was a slight ripple curling the water, but barely sufficient to make the sunlight that fell there quiver, till each beam seemed to be a golden spirit, though it was the season for leafless trees and withered herbage—around the shores of the lake there was scarce a token of the year's decay. The tufted firs that clothed the steep sides of the mountain, the thick gorse and holly that flourished on the cliffs, the luxuriant ivy that clung lovingly around the bare trees, like some faithful friend who cleaves to our bosom when all else have deserted us, the vivid green turf on the bright and sunny island, where it seemed to be always summer—all formed a beautiful picture, of which the sullen lineaments of winter formed no part, and which one might gaze on and worship for ever.

"I have heard somewhere, or read it, perhaps," said Avisia, leaning listlessly over the gunwale, until her small white hand trailed in the blue

waves that went bubbling by—"I have read somewhere that misfortune is necessary to happiness—that it is the salt which gives the cup of life its flavour, and that strange as it may sound, we could not be permanently happy, without some temporary misery. Now, we never have had anything like misfortune, and yet, Arthur, we contrive to be very happy."

"Why should we not, dearest?" Arthur answered, evidently thinking more of the speaker than the management of his little craft, which fortunately was scudding before the wind; "does not everything around us seem brimming over with happiness; the waves are sparkling with joy—see the mountain behind, how clear his brow is—even the grim old castle has put on a smile, and looks as if it was wishing it were young again."

"I wonder if misfortune could make us happier than we are now," pursued Avisia, meditatively.

"It may make us love one another better, and thus cling closer together, Avisia; under the influence of heat all particles of matter expand and separate; while, on the other hand, cold contracts and binds them into union. It is thus with many a couple like ourselves. While the sun of life is shining on them, they are heedless and apart; but let adversity chill them, they seek each other's arms, and find that the true happiness consists in being loving and united."

"Very elegantly illustrated. Your reply has an agreeable mixture of philosophy and love, but savours slightly of the academical student fresh from lectures upon the nature of calorific," and Avisia smiled wickedly at her lover.

"Well, if the student will stick to me, I cannot help it; but I shall have other studies soon that will rub off the academic rust; I intend to study the world, Avisia, and learn it by heart."

"Take care, Arthur, that this knowledge, like the worm in the bud, does not eat that heart, in which you cherish it, away, or what would be worse, corrupt it. I have read of such things in books ere now."

"Fear not, my wise little counsellor," laughed Arthur, leaning over, and kissing her forehead; "I have a talisman here, before whose might all bad spirits must vanish—a spell-word more potent than the famous 'Open sesame.'"

"And that is?"

"Your name, dearest!"

"Oh! what a pretty compliment. I declare the student is vanishing already, and a smooth-tongued man of gallantry taking his place. But see, Arthur, you are all this time running in straight upon the rocks."

"Where shall we steer for?" inquired Arthur, putting the helm up sharp, and just grazing a pile of sharp black rocks that lay ahead. "Where shall we steer to? shall we cross to the western shore?"

"Oh, yes! by all means; and let us visit St. Bridget's grave; that place has a peculiar charm for me—it is so solemn and solitary."

The boat was soon about, and in a few minutes Arthur rounded a long-side a natural pier of rock, which jutted out into the lake. After mounting her safely to a stunted and gnarled ash that sprang from the crevices of the overhanging cliffs, he took Avisia's arm in his, and mounted the steep hill that led to St. Bridget's grave.

The saint's resting-place was indeed a rude sepulchre. On one side of the narrow rocky channel, through which the sea ebbed and flowed as it filled or deserted the lake, a tall white stone was visible, and immediately attracted attention, both from the singularity of its aspect, and the isolation of its position. As was usual, the imaginative people of the land had woven round it a legendary wreath, and invested it with the mysterious attributes of the supernatural. Whoever, according to the popular tale, was hardy or impious enough to disturb this spectral stone that guarded the hallowed bones of the saint, met with a terrible and untimely end.

One legend connected with it was as follows:—Many years ago, an officer of the preventing service, residing near the spot, unwisely took it into his head to trample upon the harmless prejudices of the people, and to brave the vengeance of the insulted saint. Regardless of the warnings and entreaties of the peasantry, he, with the aid of his men, rooted up the sacred tombstone from its bed, and flung it into the deepest portion of the lake. The same night, while celebrating this exploit by a carousal, one of his men, heated with the spirits which had been liberally served out, was guilty of some slight disrespect. His chief reproved him somewhat harshly, and the man, under the influence of a gust of excitement, suddenly took up his gun, and presenting it at the unhappy laborer, shot him through the head. This fearful judgment on the reckless man, however, was not the only proof of the terrible powers of the saint. The next morning, a number of the more pious of the peasantry wended their way towards the rifled grave, to perform their orisons at the miraculous spot, and weep over its desecration. What was their amazement on reaching the place, to find the stone which they had seen the previous day flung so sacrilegiously into an almost unfathomable portion of the lake, standing in its accustomed place erect and immovable, with not a trace of disturbance visible upon the mossy turf that grew around its foot! Of course, after such an event, Saint Bridget rose in the calendar, and an addition was made to her usual prerogatives; for it was ever after currently believed, that whoever, prayed with a fervent heart at the foot of the hallowed stone, would infallibly attain the next wish that their lips uttered.

Avisia and Arthur had reached the moss-grown sepulchre, and stood gazing upon the restless waters that foamed in the rapids beneath. Their arms were mutually entwined; her head rested on his shoulder; her peachy cheek was pressed close to his lips; the sunny ringlets that rippled around her brow danced in the light breeze, and swept across his face; the war-pulses of her heart sent their every throb through him. It was a reverie of love. Neither spoke, at least with tongue or lip; but there was much said in the deep and mysterious dialect of the soul, the entrancing and ineffable phrases of sympathy which vibrate and respond in secret, and discourse most eloquently in solitude and silence.

A slight noise, like the falling of a small stone, disturbed this charming picture. Both turned at the sound, and at the same instant a tall dark figure rose up from behind the spectral headstone, and confronted the pair. The movement was so sudden, and the apparition so unexpected, that Avisia was for a moment startled, and uttered a low scream; but an ejaculation from Arthur of "What a surprisingly lovely creature!" allayed her terror, and she found courage to scrutinize the intruder. It was a tall, gracefully-moulded woman, about twenty-four or twenty-eight, with rich black hair sweeping around her forehead like billows of jet, and splendid deep blue eyes fringed with long dark lashes. She had a large heavy blue cloth cloak folded about her, with a peaked hood hanging half over her classical head. Within, one could catch a glimpse of a scarlet silk handkerchief, pinned modestly across her bosom, and adding much to the effect of a costume picturesque enough before. This woman was beautiful; her attitude was very graceful; her features faultless; and although her attire indicated that she belonged to the peasant class, there was an air of savage pride in her tangleless eyes, that could not fail to command attention if not respect. She stood with head erect, leaning against the rude stone, and gazing boldly on the pair, like a tigress, who, disturbed by some intrusive foot, stands proudly on the forest's edge, calm and disdainful.

"Is she not lovely?" whispered Arthur, whose eye had wandered over her form, and noticed every beauty with all an artist's admiration.

"Do you not know her?" inquired Avisia, with a surprised look. "That is Peggy Dawn. She is the 'wise woman' of the neighbourhood; and although young, and in appearance very far removed from the popular idea of a witch, she has attained a vast influence over the peasantry, of which she is not a little proud. Poor thing, her history has been a sad one! You shall hear it, some day. Good morning, Peggy!" she added, advancing to the girl, and saluting her with the courteous familiarity common to Irish ladies when addressing their inferiors. "I hope we have not disturbed your devotions. Have you been consulting with the saint?"

A wild gleam flashed from the woman's luminous eyes, and without returning Avisia's greeting, she addressed her in a sonorous bell-like voice:—

"I have seen things," she said, "things that it were better I had never seen. Seen 'em wid my eyes shut; seen 'em in bed, asleep and awake, at home and abroad, and now they have pushed me here."

"Oh! do not heed these fancies, Peggy," said Avisia, kindly, "you are ill and feverish; when you get better the unpleasant visions will pass away."

"Fancies! Miss Avisia fancies! Oh! no, they are no fancies. They are too terrible and real; they come whispering over my shoulder, and cloudin' my eyes until I'm fairly bewildered. I saw wan av 'em last night."

"Indeed," said Arthur, whose curiosity was awakened by the manner of the woman, and the beauty of her gestures, though he regarded her as little better than a lunatic. "What was this thing like, Peggy? I should wish to hear, above all things."

"It was the Light," said Peggy, in a low, mysterious tone.

"What Light? I know of none."

"The Phantom Light. I saw it; it came from there," pointing to the base of the cliff where they stood, "an' kep movin' across the lake; an' this didn't I see the beautiful young woman in it, wringing her hands, an' lookin', poor thing, as if her heart was bruk. I saw it, an' there's more nor me will see it afore long."

"Poor thing!" said Arthur, gently. "She is wandering."

Low as the tones were in which this was uttered, Peggy Dawn caught its meaning. "You think I'm crazed, don't you?" she said, drawing herself proudly up. "I was crazy wanst, but I'm not now. Ill treatment, an' wrongs, an' the treachery of a villain driv me mad, but the cloud is gone from me, an' I see clear again. Misfortune makes wan's eyes sharp, Miss Avisia."

"Peggy, you mustn't make us melancholy, by predicting all sorts of horrible things; you will make me feel quite miserable and unhappy."

"Keep a bould heart up, Miss," said Peggy, fixing her eyes earnestly upon Avisia. "You will want all your courage afore long. As she uttered these words solemnly, she flung her cloak around her till its diaphy fell in picturesque folds, and with a slight inclination of the head, she passed rapidly by the lovers, and disappeared almost immediately among the rocky furrows of the hill.

"What a pity that so fair a temple should be defaced," said Arthur, gazing after the retreating form. "She is a masterpiece of nature."

"She has suffered much," answered Avisia. "She was deceived and betrayed by some faithless village rake, who soon deserted her. Her own accusing conscience, and the scorn and slights of her companions, unsettled her mind for a time; and ever since, she has wandered about the country, talking and prophesying in the wild manner you heard to-day; and the peasantry, always eager to believe anything supernatural, have begun to look upon her as inspired."

"She appears to be in rather an ominous mood to-day. What light was that which she fancies she has seen? Have you ever heard of it, Avisia?"

"I have an indistinct recollection of hearing some legend connected with a phantom flame which is said to haunt the lake, but do not remember enough to satisfy your curiosity. We will get old Donal, dearest, to tell us about this evening. He is as full of legends as that old castle is of cracks and rents; and we will bring him out into the hut in the orchard, and have a log-wood fire, and listen to him singing his Irish songs about the ancient owners of the castle."

"What glorious days they must have been—the days of that old ruin's youth!" cried Arthur, enthusiastically. "When, after a successful capture some rich bark, the banquet was held in the banqueting hall, and the fol-

lowers of the lawless chieftain lay down to rest in mailed shirts, with their right hands grasping the pommels of their swords. There must have been a wild fascination in such a life, that would be worth all a student's peaceful triumphs."

"And if you were the chieftain, of course I would expect to be the *châtelaine*. I would sit in my turret chamber, with my maidens embroidering around me, gazing across the lake with an anxious heart for the return of my lord and master from some piratical expedition; or I would order my barge, and float across the calm waters on summer nights, with the blood-thirsty pirate-chief transformed into a gentle minstrel, who, lying at my feet, would sing our own dear, impassioned, Irish music."

"What a very luxurious little *châtelaine* you would make," replied Arthur, laughing. "What shall I do with you when we are married, dearest? I am much too poor to afford you beautiful maidens to wait upon you; neither can I offer you a golden barge for your moonlight rambles. *The Water-Lily, there, I am afraid, is all that I can give you!* As to the minstrel, I do not intend that any one shall sing to you but myself."

"And who ever sang so sweetly?" cried Avisia, winding her arms around his neck, and pressing her fair peachy cheek against his. "Those beautiful old melodies of our native land never sounded more deliciously than coming from your dear lips. Do you not remember the night in the old orchard, when you sang me that plaintive air, the 'Pastheey Fion'?"

"I do, well; it was the first night that we knew each other's love. It is graven on my memory for ever. But see," he continued, gazing intently towards the cottage, "what can they be doing at home? There is a large crowd of people by the shore, and boats; and as I live, there is Uncle Tot in the punt. What can they be about?"

"Had we not better go back and see, Arthur? I trust that nothing has happened."

"Don't alarm yourself, dearest, nothing can have occurred; but I should not be at all surprised if Uncle Tot is not about trying some new invention. Heaven only knows what! but if he is some to suffer."

"His inventions generally terminate in so unexpected a manner," answered Avisia, "that it is worth while superintending his operations. us return."

Arthur acquiesced, and in a few moments the *Water Lily* was unmolested, and they were speeding swiftly in the direction of the cottage. When they had got half way across the lake, a strange commotion was observable amongst the crowd of people that lined the shore, and a low wail of lamentation fell upon Arthur's ear. Uncle Tot was in the punt, and could be observed gesticulating in a most frantic manner, while Donal Barrett and two or three other fishermen, who were in a fishing-yawl, were rushing over the thwarts in every direction, apparently doing nothing, nor knowing what to do.

"For Heaven's sake! what is the matter?" called out Arthur, as soon as he got near enough to make himself heard.

"He won't come up," cried Uncle Tot, piteously, in reply, and pointing as he spoke to some invisible object, apparently located in the depths of the lake. "I saw such a fellow. I don't know what ails him, but he won't come up!"

"Who—what—where is he?" asked Arthur, running his boat alongside, and jumping into the punt. "What the devil are you talking about, Uncle Tot?"

"Look at him!" cried the old gentleman, with a ludicrously terrified air, and still indicating with his finger some unknown horror beneath the waves, "only look at him, Arthur; I'd rather have broken my best plane than that such a thing should happen. I sent him down, sir, and what do you think? He's sticking there like a wedge in new timber."

Arthur leaned over the gunwale and looked down into the clear amber-green water, where the smallest shell on the bottom was visible, and there beheld, in about three fathoms of water, the Poet's Son, standing on his head in a queer-looking black basin at the bottom, and performing the most frantic evolutions with his feet.

"My God, Uncle Tot, he's drowning!" he cried, pulling off his coat rapidly, and proceeding to divest himself of his boots.

"I know it," whined Uncle Tot, "but what can I do? he won't come up if I call him ever so often. I sent him down with my new diving helmet, and the moment he got to the bottom he commenced standing on his head, like a fool."

"Because you forgot to put weights to his feet," shouted Arthur, angrily, jumping over the side the next moment, and cleaving his way through the waves like a slate falling edge-ways.

"Oh!" groaned Uncle Tot, falling back in despair as the conviction of his fatal omission flashed upon him. "Oh! what a precious ass I was to forget that. He will be drowned and I will be hung. Oh!"—and the poor old mechanic rocked to and fro distractedly. In a few seconds the water again parted, and Arthur appeared, clinging with one hand to the gunwale of the boat, while with the other he held the Poet's Son, in a grasp that nearly completed the suffocation of that luckless victim to the interests of science. When they were hauled in, and it was discovered that the Poet's Son was not altogether lifeless, though in that state that another few seconds would have rendered him like Pliny—a martyr in the cause of acquiring knowledge—when, by a few kicks and gasps, this fact was rendered evident, Uncle Tot's delight knew no bounds. He hung over the poor fellow's pale and dripping countenance with intense interest, watching every shadow that flitted across his cheek with the same look of sympathy that a mother would bestow upon her ailing child; and raising his head every now and then to

declare with a face across which tears and smiles were struggling for supremacy, that "he was better pleased to see the poor fellow safe, than if his patent candle—which he was then engaged on—had been successfully completed."

Arthur, too, came in for his share of applause; and the whole of that evening, after the poet's son had been tucked in between hot blankets, and imbibed unlimited quantities of mulled port wine and burnt whiskey, Uncle Tot shook hands with him every five minutes, called him "his brave boy," and assured him that he loved him better than his favourite chisel, a compliment which Arthur felt keenly; further declaring, that he, Arthur Bell, "should never want a friend while Uncle Tot could turn a box-wood peg-top." Arthur was fatigued with these attentions, and to escape them, wandered out upon the esplanade.

It was a calm and peaceful night. The autumn season had faded into winter, yet the sea-breeze that swept faintly across the lake felt warm on the cheek, and the starlight was so soft and mild that it fell upon the vision like dews upon the herbage. It was a night for reverie, and Arthur, when he had opened the wicket-gate, and wandered into the shadowy, dark old orchard, was soon deep in thought. Some time, he knew not how long, he passed away, and he was leaning over the twisted branch of a gnarled apple-tree, gazing out upon the dark surface of the lake that shone in the twilight like a mirror of polished jet, when a heavy footstep on the turf behind aroused him from his dreams. He turned and beheld old Donal.

"Wisha, but it's a fine night, Mither Arthur," said the old fisherman, touching his "sou-wester" respectfully. "I'll be bound there's fine weather settling about the old hill, yonder."

"I hope so, Donal," said Arthur, in an affectionate tone, for he loved the old man, who returned it with a feeling amounting almost to worship. "I hope so, Donal, for I am anxious for a good day's fishing. I long to be at the spillards and the seine again —"

"The fish was nivr so plentiful since I can rimember," answered Donal. "But Barney Mc'Carthy told me to-day that he caught a devil-fish on his spillards, an' you know that's always unlucky, sur."

"Pooh! Donal. You are superstitious."

"Is it to be wondered at, yer honour? Shure there nivr was a man see more quare sights than myself. Besides, shure, shure, it's counted very unlucky to laugh at anything the good people does. God be hetune us an' harin," and Donal crossed himself. "Wisha, thin, Mr. Arthur," he continued, after a short pause, "may be you don't know who was at the cottage to-day?"

"No, Donal, who was it? Father Clancy?"

"Arrah, thin! who shud it be but that ould nagur Saville's daughter? Bad skewer to the breed."

"Donal, you should not speak ill of people you know nothing about."

"Don't I know, yer honour, that ould Saville hooked the most of the poor master's forthin, an' that even now his daughter has some claim or other on the estate? and isn't that enough to make me hate the whole of 'em, root and branch, stock an' gineration?"

Arthur smiled at the indiscriminating animosity of the old man, who admitted no right by which his master could be injured.

"How long did Miss Saville remain, Donal?" he inquired.

"Wisha a good spell, sur. She seemed mighty kind like, and very plau-maushe \* to the misthiss; but she didn't cotton to her at all."

"How strange that she should have called here," mused Arthur, "after my rescuing her from that madman, and never have called before. Something seems to whisper to me that she is linked with my fate in some mysterious manner; but whether for good or evil I know not. I must ask my aunt about this visit."

He was about returning to the house, when an ejaculation from Donal arrested his attention. "Look, Mither Arthur—look at that. God be merciful to us!" cried the old man, pointing to the lake. Arthur obeyed. A pale, livid flame was issuing from a narrow creek at the western shore of the lake, and moving slowly on towards the centre. It was not a bright flickering light, such as a torch floating on the water would have produced, but it was pale, unwavering, and ghastly. It cast no gleam upon the dark waves on which it rode, and the few isolated rocks which it passed in its course, were nonilluminated by a single token of its presence. The two men watched it earnestly. On it came, across the deep, shadowy water, with a solemn, predetermined motion. There was no wind that could waft it thus, for the leaves hung listlessly upon the festoons of ivy that wreathed the silent old trees, and the tide was setting straight against it. Yet on it came, a terrible, solitary, unearthly thing, like the light that wanders over graves. In a short time, it reached the centre of the lake. Here it suddenly enlarged, until it became a broad faint light of pale flame, in the heart of which Arthur could have sworn he saw the form of a beautiful girl, traced in shadowy and trembling lines of light, wringing her hands and weeping bitterly. This vision did not last a second; the flame suddenly crimsoned, and sank into the deep waters, which for a moment seemed illumined to the bottom. A low whispering sound stole down the mountain side, and rustled among the trees. A few small birds flew wildly out from the ivied nooks where they had been slumbering, and whirled blindly through the twilight. The waves lashed the shore with a sudden impulse, as if some mighty vessel had passed, and in another instant died away into calmness, when all was dark and silent as before.

Arthur drew a long breath, and turned to Donal.

"It is the Phantom Light," said the old man, sadly, "there will be misfortune or death among us soon!"

## SHADOW AND SUNSHINE!

OR, WHO SHALL WIN?

BY CHARLES CRAYON.—(Continued from page 41.)

The same morning, an hour later, Lorenzo Duval was in his richly furnished apartment. It was surrounded with the luxuries which only wealth could procure, and its magnificence was all that heart could desire. He had just finished his morning meal, and, wrapped in his dressing-gown, was reposing at full length upon the sofa, carelessly puffing a cigar, and watching the smoke as it curled round his head.

A rap was heard at the door.

"Walk in," said he, without changing his position.

"The morning paper, sir," said a servant, handing him a sheet fresh from the press, and then retiring.

He took it negligently and glanced over its columns.

"Nothing new, I believe," said he, leisurely examining it.

"What!" he shouted a moment after, bounding from his easy position to a window, and eagerly gazing at a paragraph that met his eye in the news column.

"What!—impossible!"

The item which had roused him so suddenly from his apathy, read as follows:—

"**AROUNDING NEWS.**—Our readers will be surprised to learn that Dr. Henry Morton, who was confined in the city jail, awaiting his trial for murder, has escaped in the most mysterious and sudden manner. Last evening, he was in his cell at a late hour, but early this morning, on visiting it, the jailer found it empty, and no traces were left to give any intimation of the manner in which the escape was effected. His trial was to have taken place in about two weeks, and the evidence against him is so overwhelming, that but one opinion can be entertained in regard to his guilt. Measures have been promptly taken to ascertain where he has fled; and, as the most efficient officers are in pursuit of him, there is every reason to hope that he will be brought to justice. Our readers may be assured that if any new developments are made, they shall be promptly informed of them."

With a darkened brow, and a countenance expressing the most unfeigned surprise, Duval perused the account of a fact, which was, it will readily be perceived, frustrating all his favourite projects. The moment he had read it, he crushed the sheet to the smallest compass, in his hands, and casting it from him, nervously paced the apartment, uttering deep curses on everything connected with what he called the unlucky affair. In a few moments he suddenly ceased, and hastily exchanging his apparel, he gave the boy a vigorous pull. It was promptly answered by the attendant who had brought him the paper which had affected him so much.

"John," said he, as that individual appeared, "if Fenning calls while I am out, request him to wait. I shall be in within an hour."

"Yes, sir."

"And if any one else calls, remember that I am not at home, and not expected to-day."

"Yes, sir."

With these instructions, Duval seized his hat, and after depositing in his pocket the paper which had so sadly disturbed his equanimity, hastily left the apartment. He directed his steps to a far less aristocratic part of the city than that where he resided, but ere he had proceeded many squares, he was met by a man, who grasped him suddenly by the arm. The person who had so familiarly arrested his progress, might have been about forty years of age, and the habiliments in which he was arrayed were anything but those of fashion. He had a rough, sinister-looking countenance, which was disfigured by a heavy scar that extended across one of his cheeks, and gave him a fierce expression. This character has not been yet introduced to our readers, but could Morton have seen it, he would instantly have pronounced it that of the ruffian who had made such an assault upon his life, on the memorable night which had so materially changed his prospects.

"Mr. Duval!" said the man, "you are just the person I was in search of."

"And you," replied that person, "are just the individual I was looking for. Have you heard the story?"

"Yes; I know all."

"This will frustrate our business unless we can devise something new."

"That is certain. I never was so surprised in my life; but by all that's holy, we will not be overreached in this manner."

"Come into this hotel," said Duval, "we shall attract attention here."

So the two worthies crossed the street, and entering an hotel which stood there, ordered a private room. They were shown to it, and then the rough villain and his fashionable brother in crime held a long consultation on the matter nearest their hearts.

## CHAPTER IX.

"Rest now!—his journeying is done,  
Your feet are on his sod;  
Death's chain is on your claspion,  
He waiteth here his God."

Ay—turn and weep—'tis manliness  
To be heart broken here,  
For the grave of earth's best nobleness  
Is watered by the tear."—WILLIS.

To attempt to describe the surprise and excitement caused by the escape of Morton, would be a work of supererogation. That singular body, composed of such a heterogeneous mass of character, for whom everybody is interested, and nobody is responsible, commonly styled the public, were thrown into the most interesting state of excitement imaginable. From the fact that the prisoner had escaped, rigid moralists deduced the logical conclusion that he

—The simple but impressive ceremony is going on; the tones of the clergyman's voice greet the ear in those words of Holy Writ, 'What God hath joined together, let not man put asunder';—then they ascend to seek the blessing of Him who directs all events,—and the tie is finished that is to connect two hearts firmly, inseparably, in life's journey."—See Chap. xii.

was surely guilty, or he would not have fled from a fair and impartial trial; and some others with about an equal degree of wisdom, shook their heads gravely, and proceeded to expatiate on the weak and imbecile state of government, which could allow its prisoners to step out so unceremoniously.

But the time they had, in which to exercise their morbid feelings, was limited; for on the very evening of the day which had witnessed the strange occurrence, information was received, which, in a great measure, cleared up the mystery. The first intimation of this was found in the following announcement of the evening paper:—

"**STARTLING NEWS!**—Information has just reached us that an event has occurred which serves to lighten the mysterious affair which we noticed in our first edition of to day. As the express mail train from this city had just passed the ——— station, this afternoon, and was going at full speed, a stranger was observed standing on the platform of the second car. As he attempted to step from that to the next one, he missed his foothold, and fell directly upon the track. The last car passed over him, mangleing his body in the most horrible and shocking manner, so that it was literally but a heap of mutilated gore. From papers found about his person, it was discovered that the unfortunate man was no other than Dr. Morton, the prisoner who has caused so much excitement, and who escaped so mysteriously this morning. We understand that the body is to be returned to the city immediately."

Whitman sat in his office, still pondering on the event of the morning, which had engrossed so much of his attention, when the evening paper was brought in by the servant. He eagerly seized it, hoping to gain some new information in regard to the fate of his friend. The article just recorded instantly met his eye. Every faculty of his soul was rivetted to it; he strained his vision as it passed over it, while a faint suspicion of the horrible truth flashed upon him, and he was faint at heart; but when the solemn details, and the fatal truth all came upon him, in stern reality, all his hopes and anticipations for the welfare of his unfortunate friend were so suddenly and unexpectedly crushed, the shock fell from his hand, he grew deadly pale, and the frame of the strong man shook with emotion. He sat listlessly gazing into the air before him, and as all the recollections of his friend came vividly to mind, the many scenes where they had been together, in the bright days of the past, and then, as the full conviction of his dark, melancholy end came upon him, a cloud of sadness and sorrow came over his soul. Not many minutes had elapsed before Mr. Montrose entered.

"Then you have heard it," said Whitman, as he noted the expression of his countenance.

"Yes, I have heard it all."

"It is a dark event."

"True; it is dark indeed."

"How suddenly his hopes were blasted. 'Tis not long since they were fair as the cloudless sky, but now they are broken for ever."

"Nay, say not so. Perhaps, when all his earthly prospects were blasted, it was kind in the Ruler of all to take him home."

"But for him to die thus—with such a dark stain upon his name—for men to speak of him only as a felon, and to remember him only as associated with a cruel and bloody deed—I can hardly bear the thought."

"It is hard, hard indeed! There were none more upright than he, none more honourable; and sooner would he have sacrificed his own life than to have thus imbrued his hands in the blood of another. Ah! I little thought when I promised my friend on his death-bed, that I would watch over and protect his son, that it would ever come to this."

"It is a bitter thought that such a dark plot should ever be successful."

"Yes, it is bitter indeed."

"But his enemies have triumphed at last. While he lies in a dishonoured grave, they will walk the earth as proudly as ever. Their society will be sought by the wealthy and the proud, and they will laugh as free, and be as gay as ever, while the life-blood of a fellow is on their souls. Where is justice, that such a wrong is not punished?"

"Nay, remember who orders it all, and let us not repine at His dispensations. Guilt and oppression may triumph for a while—they may rear high their heads, and be seen of men, but a dark and terrible retribution will surely overtake them at last."

"It must; for if justice is slow, it is certain; and we may at least joy that our friend has gone beyond the reach of persecution and violence now."

"True; and the infancy which may be attached to his name cannot affect him there."

"No; and his enemies must soon follow him. Life is short at the longest, and what matters it that he had not lived a few more years? At best they would have been years of mixed happiness, they would have been full of sorrow and of care; and perhaps, after what had taken place, they would have been filled with misery, too. Let us not, then, mourn over his fate; but remember that it was all wisely ordered, and will finally result in good."

"There is at least one thing we must do."

"And that?"

"Is to perform the last office of respect to his remains. We were his only friends in misfortune's hour; let us do the last that friends can do."

"Yes, Alfred; we will not neglect that. It is all I can do now, to redeem the promise I made his dying father, but that shall be done. I am growing old, and I know it is weakness, but still I have not the heart to do what friendship would prompt me to do. You are young and vigorous, will you perform the melancholy duties that are first to be done?"

"I will."

"And make all the necessary arrangements?"

"Yes; it will calm my feelings to do it."

"Thanks for your kindness. If you need any assistance, call on me at once. At all events, I will see you to-morrow."

"Nothing shall be left undone. Give yourself no uneasiness on that account. To-night I will start to return with the body to the city, and I will complete all the sad arrangements."

The two friends separated—the one to go on his mournful errand, the other to carry the melancholy tidings to his family, and both to mourn over the untimely end of one they loved.

At the proud mansion once occupied by the young physician, a large assembly had gathered. His acquaintances among the rich and the proud were there; they had come to witness the last act in the fearful drama, and then to return to their homes, to think of it indifferently, and without one tear of pity for his unhappy fate, or one charitable thought, that he might have been innocent, to talk coldly of what they called his crime and its retribution.

Strangers were there, attracted by a morbid curiosity, and a desire to learn all that could be known of the event that had caused such a sensation in the busy world around them, and in regard to him whose name was on every lip; they had come to learn a fresh lesson of the feeble nature of that tie which binds us to earth—a lesson to be forgotten in the busy excitement and care of the morrow.

Enemies were there. They had come to see the consummation of their fiendish schemes, to gaze with exultation on the mangled body of one they had hated on earth, to feel that their dark plot had been successful, and to see the dust returned to its kindred element.

And friends were there. Few was their number, but they had come with bleeding and lacerated hearts, to perform the last sad offices of affection to the ashes of one they had loved on earth, and had never deserted in the hour of affliction. Deep and unfeigned was the sorrow that wrung their hearts, and the tears they dropped over the memory of the departed one, came from spirits overflowing with sadness.

There was a movement among the crowd. Room was made, and the grey-haired disciple of the Cross entered to perform his duty. There was silence among the assembled, save a few stifled sobs that would not be restrained, and a spirit of solemnity and awe seemed to prevail even among the worldly, heartless throng, as his voice rose in supplication to his Master above, who first formed the soul, and breathed into it a spark of His own immortality. Then, perchance, some pondered on the frailty of human existence, and wondered when their time would come. But how they strove to forget that they, too, were mortal, and that their forms must ere long be shrouded in the grim embrace of the death angel.

And then, as the calm, clear tones of the servant of God rang out upon the ear, in those beautiful words of inspiration, "I am the resurrection and the life," they came like a heavenly balm to the aching souls of the few sorrowing friends, and they thought no more of him who was gone, as sleeping in the cold earth, but only as one who walked the golden streets of the city of life.

When the sad service was over, the multitude turned a moment to glance at the lifeless dust before them—then there was a solemn procession—a cemetery was reached, and the remains of Henry Morton were committed to their last, their silent home.

## CHAPTER X.

"Du is in his grave!  
Life's fitful fever ended, he sleeps well;  
Trenson has done its worst; nor steel, nor poison,  
Malice, domestic, foreign bery, nothing  
Can touch him further."—SHAKESPEARE.

In the same apartment where we introduced him to the reader, sat the mysterious stranger who had visited the prisoner in his cell, and held before him the hope of escape. He now seemed buried in deep thought, as he sat with folded arms, and his piercing eyes were lit up with more than their wonted brilliancy.

"To-night," he soliloquized, "to-night he was to meet me here. I must throw off this deep, stern feeling that pervades my spirit. I must hush all my tumultuous reflections, and command them to be still, or Heaven knows that the moment I beheld him, I should be tempted to separate his body from his dark, recreant soul. When the memory of the foul wrong for which I have sworn to be revenged has come up before me, how often have I been tempted to meet him that vengeance he so richly deserves. But let me be patient; his time is not yet come. When it does, let him beware. Ah! little does he suspect, as he reveals to me the secrets of his dark heart, the deadly hate I bear towards him. Little does he think how I have warily dogged his steps, and spent hours and days in unravelling his guilty plans, and then in preparing to frustrate them. But all goes on well. I have foiled him in one favourite project; but he knows it not. When the truth does break upon him it will come so suddenly and unexpectedly that he will deem it a visitation of Heaven upon his guilty soul.

"I have a desperate enemy to deal with. His heart is base enough to devise anything that might cause demons to blush, and his head is deep enough to carry it out. It is indeed a fearful game that we are playing; but, villain, you have your equal! You will find, ere it is over, that I, too, can assume, as well as you; and that the countenance and the tongue are not with me, more than yourself, indexes of the feelings of the heart. You had nearly triumphed in your base attempt on Morton, and you fancy that his tongue is hushed for ever. But you may find that the grave will not always hold the victims of such fiendish wickedness. Go on; we will play out the game, and see who shall be successful. Exult not now too much over your fancied security, but let him laugh who shall win."

(Continued in No. 2.)

## SELF-CULTURE.

THE mind of man is eminently progressive. This is evinced by comparing man in his intellectual worth and greatness at the present time, and with man in his primeval days. Had he been brought forth like the fabled Minerva from the brain of Jupiter, in full possession of his moral and mental powers, the direct opposite would have been the result.

The mind is like an exotic, which thrives only by care and cultivation, and which naturally grows and expands until it arrives at maturity. It is also governed by the same progressive development from infancy, through all the mental activity, sprightliness, and elasticity of youth, to all clearness and power of intellectual and moral maturity.

To an uncultivated mind, what is this vast universe—with all its beauty, grandeur, and sublimity—but an Arabian desert, overhung "with the sable curtains of moral darkness?" but as practical knowledge is instilled into the mind, a change is wrought: the world is arrayed in beauty and loveliness. But many a young aspirant, as he pursues the uneven path of knowledge, encounters so many opposing difficulties, and sees so much to be accomplished, such great and arduous labours to be performed, that he is content to forego all rewards; he is like some wayworn traveller, who stands with folded arms gazing upon the towering ice-capped summits of the Alps, as "mountain piled on mountain" rises before his gaze, and who prefers remaining in the vale beneath, rather than attempt the difficult ascent.

Perhaps some will say, that nature has not endowed them with genius, and without it they can make no proficiency; but success is not owing so much to genius as self-application: yes, self-culture is one great secret of success. Ask those who have become most eminent in character—the most learned and influential, how they attained the honoured position they occupy—and they will respond, that it was by indomitable perseverance and application they accomplished the grand result.

Most truly are we indebted to self-educated men for many of the most important discoveries, inventions, and improvements in the arts and sciences. What has encircled the name of Elihu Burritt with a halo of glory, and inscribed it in indelible characters on the scroll of fame? Most emphatically it was—self-culture! Who but the persevering and self-instructed Franklin first discovered and demonstrated that lightning and electricity were one and the same thing? What sensations of enjoyment must he have experienced, when he beheld with ineffable delight his long-cherished expectations fully realized, in drawing the lightning harmlessly from the clouds!

There are thousands of records of those who have risen to eminence and distinction, by their own unaided exertions; and every one may, by his own efforts, accomplish a vast amount of good. The Supreme Being designed the mind of man to increase, not only in worldly knowledge, but in that of infinitely more importance—in the knowledge of Him who is perfect in holiness, goodness, and truth.

## THE VOTER.

TEN years ago,  
Or so,  
In old Connecticut there lived,  
And thrived,  
A lean apothecary, with a shop in which  
He and his father both got rich.  
This establishment, besides the cases,  
Contained a boy to deal out pills,  
Prescriptive cures for all the "ills  
That flesh is heir to;"  
Oil from the bear, too,  
To beautify the hair, too;  
And up from the centre of the shop  
Did pop  
In sultry summer days, the soda,  
Which ceased to flow on no day.  
Attached to this old druggery was a black  
Man, sort of hack,  
Whose duty 'twas to carry prescriptions  
To the sick, with verbal descriptions;  
For Sambo could not read,  
Though he could bleed;  
Nor write, forsooth,  
Though he could pull a tooth;  
But Sambo was a voter; he had money,  
That made him a voter in the land of honey.  
On one election day, a vote,  
That some one wrote,  
Sambo secreted, and, for a safer place  
To keep it, laid it in a big glass case,

So that, when the time came  
To name  
His choice of officers to reign that year,  
No fear!

He'd haul oppressing tyrants o'er the coals!  
Now the boy,  
Whose right employ  
Was to administer the pills  
And squilla,  
Took from a sort of druggist's Babel,  
A written label,  
And placed it where  
Sambo had laid his vote with so much care.

Town meeting day arrived—that day so  
noted  
Through Yankee land—and Sambo early  
voted.

The inspectors made their count,  
To this amount,  
And thus they did declare  
It there;  
For the whig candidate there doth appear  
A clear  
Majority of ten;  
(A pause)—and then  
One scattering vote for William Rettick,  
(A pause)—and one for—Tartar Emetic!

LOVE OF LIGHT IN DENMARK.—I was exceedingly struck, as I walked through the streets, by the prodigious number of windows every house contained: the lower part in some instances actually seemed all glass. Even the "stud and mud" cottages in the outskirts had their rows of windows in some instances not eighteen inches apart. Nothing in the appearance of this, and the other towns I visited on my journey towards the capital, struck me so much as this peculiar and pleasant feature: for surely the light of heaven is a priceless boon and a blessing, and I would rather anything in my own land were taxed than light. Many a little cot in Denmark has more glazier's work about it than a substantial three or four-stories in Great Britain.—Horton's Voyage from Leith to Lapland.

## THE HOME COMPANION PORTFOLIO.

We strongly recommend to our Subscribers the adoption of the "HOME COMPANION PORTFOLIO," for the preservation of the Weekly Numbers or the Monthly Parts. These Portfolios are made with elastic cords at the back, to hold Fifty-two Numbers, or Twelve Parts, which comprise one Volume. At the end of each year they may be taken out and bound, and the Portfolio may be employed to preserve the Numbers or Parts of the succeeding Volume. The price is TWO SHILLINGS. The outlay will be saved by the preservation of the Numbers, which, hereafter, may be difficult to obtain. The Portfolio is beautifully embossed, and illuminated with silver, by a new invention introduced by LEIGHTON, SON, & HOBUE. It

is an ornament for the drawing-room table.—Order of any Bookseller.

The Monthly Parts of the HOME COMPANION (price 5d. or 6d. each) will be issued with the Monthly Magazines. A number will appear weekly, price 1d.

TRADE NOTICE.—A Number of the HOME COMPANION is issued at 69, Fleet Street, Every MONDAY at Nine o'Clock.

## THE HOME COMPANION:

A WEEKLY MAGAZINE.

## THE USE AND ABUSE OF FICTION.

If we remember rightly, it is Sir John Herschel who tells us the story of a number of villagers, who, in the winter's evenings, collected round the blacksmith's forge to listen to Richardson's *Pamela*, or *Virtue Rewarded*, which was read to them by one of the villagers. Night after night was spent by them in the most intense interest; and, at the close, when Pamela had overcome all her difficulties, and was happily married, the enthusiasm of the hearers broke out, and they rushed off in a body to the village church to give vent to their joy in a merry peal of the bells. Fiction had here produced a good effect; it had elevated their minds; had preserved them, for a time, from more sensual indulgences; and opened to them new ideas and thoughts, which, if extended and enlarged, could not fail to be of the highest use to them. But then, here steps in the great practical man of this pre-eminently practical age, and asks, "What is the use of all this? Did I listen to *Pamela* teach the blacksmith how to shoe a horse better, or the ploughman how to get better wages?" This narrow-minded manner of testing all things by their money value, is the great evil of this practical age, and, carried out to its full extent, would bring us into the danger of becoming mere automata, and of growing mechanical in head and in heart, as well as

A modern poet has beautifully said—

"To feel  
A deep and constant love for human kind  
A sense of Beauty's presence, not alone  
In lofty shows, but in its latent haunts,  
Which few acknowledge—the humble hut,  
And bosom meekly clad; worship of Jove  
The warm emotions of an unchast'd maid  
Which rise, as by instinct, against wrong  
These are elements of Poetry."

And not only are the elements of poetry, but they are so the effect of which good poetry produces. Nor is their effect confined to poetry; the best prose fictions have the same object in view, and their value is measured precisely to the extent to which they raise these emotions in our mind. These prose fictions possess all the elements of poetry except that of versification. The best of them have the same elevating tendencies as the best poetry; they seek to paint the ever-varying passions of humanity—to inculcate the love of virtue—to describe its moral grandeur and beauty—and to enlist the fancy on the side of the noble, the good, and the true. And yet we have continually the most indiscriminate censure cast on works of the highest genius, because they are dressed in the garb of fiction; because they have chosen to teach great truths by living examples instead of by dry precepts; because they address the fancy and the imagination, as well as the understanding. Some men must have the thoughts and feelings of others pared down to their own notions of utility, and make every one square his intellect to the exact proportions which this dictator chooses to impose. They forget that the minds of men are differently constituted; that while some revel with delight over a problem of Euclid, or abstruse calculations in algebra, others would be able to see nothing in these but uncouth lines, and unintelligible signs and figures. Others, again, have no pleasure in any kind of thought but polemical discussions, they would keep the whole world employed in endless argumentation on this subject, and think every moment an idle waste of time that is not so devoted. And worst of all are those who have no sympathy with any kind of intellectual exercise, save only thoughts that may be turned into the current coin of the realm; to whom neither art nor science, philosophy or history, have any charms. The works of the greatest poets, the thoughts of the most earnest divines, are to them equally idle, since they do not "put money in their purse." Every high thought and

noble sentiment is, to them, romantic trash; every scientific discovery is mere balderdash, unless it proves gainful in the way of their own trade. All these, in their own way—and many others, each in his different fashion—combine to cry down some of the highest works of genius, merely because they are not in accordance with some of their own preconceived opinions. They think it necessary that some of the reasoning faculties should be cultivated; but they do not comprehend that an equal necessity exists for cultivating the imaginative faculties also. But in some men, the only way in which we can really cultivate the intellect, is through the imagination; the only way in which we can ever induce them to open a book, by which we can hope to create in them a taste for reading, is by rendering that reading, in the first place, amusing, and so leading them on to higher thoughts and more useful studies. As far as our own experience goes, the most loud in their condemnation of works of fiction, are precisely those who never read at all. They as carefully avoid our great moralists, historians, and philosophers, whom they are afraid to denounce, as they do the poets, novelists, and imaginative writers, on whom they so lavishly cast their censure; while the greatest men the world has ever produced—we say the greatest, not the wealthiest—have made the poets of all ages and all lands their Home Companions; have revelled in their pure and truthful thoughts; and have found their own nature exalted by the deep impression made thereon by the generous, and the high, and the noble sentiments which are there to be found.

It is unfortunate, that too many causes and circumstances in life have a tendency to check the culture of the imagination; we need not add to these, by placing an undeserved stigma on works of genius and fancy. There are but few professions or occupations that we may follow, that have not the effect of narrowing the sensibility of the mind, and limiting our ideas of the beautiful. It is the object and the use of fiction, in poetry and in prose, to increase our taste for the beautiful; not only the beautiful in nature, and in art, in form and in colour—but the beautiful in its highest moral sense, in truth and in virtue, in noble thoughts and in generous actions, in purity of life, and in the holiest aspirations. As our minds become filled with the glowing truthful thoughts of the writer, we are filled with the desire to imitate that from which we have derived so much pleasure; a higher and more benevolent tone of thought and feeling is awakened within us; and the æsthetic, as it is called, the perception of the beautiful, becomes a great moral agent; and thus, one of the highest pleasures of which we are susceptible, becomes finally subservient to our moral improvement. We are told continually, and truly, that the beautiful works of nature elevate our souls to holiness, and that we are led from "Nature up to Nature's God." As in the outward or material world, so in the inward or moral world, the principle of beauty seems to have been given to direct our thoughts to higher objects. When He who fashioned the whole creation, clothed the hills of the field with glory, gave colour to the rose, and perfume to the violet; when He filled the woods with the melody of birds, and covered the earth with beauty as with a glorious mantle—think you that He intended the mind of man alone should be dreary and desolate, for ever plodding on in the rugged path of mere utility? He endowed us with imagination to interpret and enjoy the material signs of beauty that are spread around us, and with that higher and loveliness of innocence,

of beauty, to lead us to the source of all virtue, and to the fountain of all wisdom. To neglect the culture of the imagination is to throw away on gifts of God. It mars the way to intellect, and becomes the precursor to all advancement; it is the spur to exertion when young ambition starts in the race for distinction; it watches by the lamp of the sage as he ponders over the tomes of wisdom; it stands by the glowing crucible of the alchemist, and follows the astronomer beyond the regions of the stars. Its creations may, and do elevate the mind and ennoble the heart; but alas! with all their beauty, they may betray us into error, unless we temper their flights by the guidance of reason. Reason, without imagination, is a plodding slave; with it, it becomes the master-spirit of the universe.

The combination of reason with imagination is the result of an advanced state of civilisation and knowledge. In the young days of the world, imagination revelled in its most extravagant forms; and exaggeration, either of real events or of feelings and sentiments, was the consequence. If, for instance, we look into the life of man during the middle ages, we shall find that it was composed of exaggerated thoughts and sentiments. The spirit of chivalry itself was an exaggeration of the feeling of honour, of personal bravery, of love of adventure, of devotion to the fairer sex—nay, even of religious feeling. We must not then be surprised, that writers of fiction should, in those early ages, have gone beyond reality; and, in all the wild play of an exaggerated fancy and an excited memory, have given us enchanters and wizards, ogres and fairies, giants and dwarfs—all that is monstrous, and strange, and terrible, mingled together with the beautiful, in wild confusion. We wander through their pages as in a dream, wherein the most incongruous images are brought into close connection—

"Wedges of gold, great anchors, heaps of pearl,  
Unsifted jewels—  
Mingled with dead men's skulls, and all the slimy,  
Loathsome, and monstrous productions of the deep."

At a later period, fictions made an approach to the probable and natural, instead of the magnificence of former times; still, much of exaggeration remains, although it assumed a different form; the imagination no longer revelled in supernatural creations, or at the utmost these were confined to the appearance of some ghost of a departed friend, which, having frightened the heroine, disappeared in perfumed mists "with a melodious twang;" but

improbable events were imagined, and every sentiment and feeling was exaggerated beyond the bounds of nature. The virtuous characters were so outrageously virtuous that they were more like angels than human beings, and vice and crime were so magnified, that men lost their human character, and appeared to be demons. The effect was such that we had no sympathy with such transcendent virtues, and lost our antipathy to vice by looking at it through characters in whom we could trace no likeness of humanity.

It was not until we had arrived at a much more advanced state of civilization that the romance of real life was dressed in a garb of fictitious biography, in which the characters, sentiments, and incidents, are true to nature; in which we have displayed to us, under given circumstances, a comprehensive view of human nature, and are furnished with many rules of practical wisdom. In the best of their works the writers look to nature; they do not indulge the untaught promptings of a wild imagination, but set down only that which is in accordance with general truth. To write a work of fiction in these days which shall command public attention, requires a thorough knowledge of human nature, accurate information regarding the places and countries described, and a power of concentrating, in a dramatic form, this knowledge and information around the fictitious characters they portray. From some of the best of these we have gained more knowledge of the modes of life, of the customs and habits of foreign lands, than books of travel have ever told us.

Others, again, open up to us correct views of history, for which we may seek our historians in vain; for instance, take Sir Walter Scott's *Juanhoe*, and we find there the first correct view of the effects produced in this country by the Norman conquest over our Saxon ancestors. With our historians all this is nothing more than a change of dynasty—the Norman monarch succeeds the Saxon king, and the people appear not on the stage. But in the pages of the historic novelist we have a vivid picture of the struggles of the people, of their sufferings, and their endurance in the dreary period that elapsed before the amalgamation of the races was completed. In these, our days, men of the highest genius, and full of real information, have raised the character of prose fictions, and given them a position by the side of the highest efforts of poetry. It is when pretenders to knowledge attempt the same path that these works lose all value, and their perusal becomes an idle waste of time.

The true province of fiction is a high and holy one; it is to elevate and ennoble our nature. But, alas! there are some writers to be found who prostitute their talents to degrading purposes, who strive to make their writings the vehicle of false philosophy, and who play the pander to the most purblind imaginations. This sad abuse of the powers of fiction can only be corrected by the aid of the press, by giving a higher and purer tone to general thought and feeling. We believe this great work is now in progress, that the pretensions with sound and useful literature of all kinds, in fiction, as well as useful branches of science, philosophy, and history, which, by raising the standard of public taste, will more effectually put down all that is base and rotten in literature, than can be effected by any legislative proscription. This is the one great abuse of fiction as committed by the writers; but there is another abuse of fiction committed by the readers that must also be guarded against—and that is, in suffering it so to fill and enervate their minds, as to render them incapable of severer studies, and more arduous train of thought. To devote one's whole time to works of fiction, to neglect other branches of education and literature, to have no pleasure save in fictitious adventures, even in fiction itself, to neglect the high thoughts and pure sentiments for the mere story, this is to abuse fiction, and to deprive it of all possibility of conferring benefit or advantage.

In what we have said of the use of fiction we must have it fully understood, that we are not recommending the indiscriminate perusal of all that comes out under this garb. It is not mere indiscriminate praise of this species of literature that we seek to enforce, but to prevent you from falling into indiscriminate censure and condemnation. We wish to open to all a source of pure and permanent enjoyment; to hold out an inducement to the cultivation of the understanding and of the taste; to show that while pursuing our search for the beautiful we are certain to meet with the moral and the true. However humble may be a man's occupations, however hard he may toil, if he can only associate with these occupations a high thought, it will not only sweeten the toil, but prevent him from feeling degraded. True nobility can be given neither by title nor by wealth—its birth is in the mind of man alone; but that mind can never be truly noble that is for ever grovelling among the earth-born passions. It is when elevated to a perception of the truly beautiful that the kindly sympathies of our nature are shed around us, that a dishonourable action becomes hateful, and virtue is loved for its own inherent beauty. As our taste is raised to understand and value the true sublime, so do we learn to hate the false and meretricious strains that too often captivate the ignorant. Shakespeare and Jack Sheppard have nothing in common. He who can appreciate the truth, the beauty, and the sublimity of one, will not be led astray by the morbid sentiment and false morality of the other. The bustling world in which we live too often deems the poet a trifler; we forget that the wealth of thought which he has given to the world will endure an inheritance for future generations, long after the dross for which we labour, and struggle, and sin, has passed away.

"This our true curse,  
That under worship of the selfish idol  
We designate the practical; we scoff  
At the sweet lore taught in the poet's page,  
And deem the pictures of heroic men,  
The generous, the high-hearted, and the pure,  
The idle deluge of a dreamy brain:  
And yet, what art so practical as that,  
Which, showing what men should be, nourishing  
Feelings of goodness, beauty, bravery,  
By portraiture of those possessing them,  
Describes the mental moral of a world,  
After which it were well that ours were fashioned!"

## AN ANGLER'S ENTHUSIASM.

A *RELATÉ* angler appeared on the margin, drawing his line impatiently across the water, as if to worry some dozing fish into a bite, before it finally settled itself for the night. Absorbed in his occupation, the angler did not observe the young persons on the sward under the tree, and he halted there, close upon them.

"Curse that perch!" said he aloud.

"Take care, sir," cried Leonard; for the man, in stepping back, nearly trod upon Ellen.

The angler turned. "What's the matter? Hist! you have frightened my perch. Keep still, can't you?"

Helen drew herself out of the way, and Leonard remained motionless. He remembered Jackeyno, and felt a sympathy for the angler.

"It is the most extraordinary perch, that!" muttered the stranger, soliloquizing. "It has the devil's own luck. It must have been born with a silver spoon in its mouth, that d—d perch! I shall never catch it—never! Ha!—no—only a weed. I give it up." With this, he indignantly jerked his rod from the water, and began to disjoin it. While leisurely engaged in this occupation, he turned to Leonard.

"Humph! are you intimately acquainted with this stream, sir?"

"No," answered Leonard. "I never saw it before."

Angler, (solemnly).—"Then, young man, take my advice, and do not give way to its fascinations. Sir, I am a martyr to this stream; it has been the Dalilah of my existence."

Leonard, (interested, the last sentence seemed to him poetical.) "The Dalilah! sir, the Dalilah!"

Angler.—"The Dalilah. Young man, listen, and be warned by example. When I was about your age, I first came to this stream to fish. Sir, on that fatal day, about 3 p.m., I hooked up a fish—such a big one, it must have weighed a pound and a half. Sir, it was that length;" and the angler put finger to wrist; "and just when I had got it nearly ashore, by the very place where you are sitting on that shelving bank, young man, the line broke, and the perch twisted itself among those roots, and—caco demon that he was—ran off; hook and all. Well, that fish haunted me; never before had I seen such a fish. Minnows I had caught in the Thames and elsewhere; also gudgeons, and occasionally a dace. But a fish like that—a PERCH—all his fins up like the sails of a man-of-war—a monster perch—a whale of a perch!—No, never till then had I known what leviathans lie hid within the deep. I could not sleep till I had returned; and again, sir, I caught that perch. And this time I pulled him fairly out of the water. He escaped; and how did he escape? Sir, he left his eye behind him on the hook. Years, long years, have passed since then; but never shall I forget the agony of that moment."

Leonard.—"To the perch, sir?"

Angler.—"Perch! agony to him! He enjoyed it:—agony to me. I gazed on that eye, and the eye looked as sly and as wicked as if it was laughing in my face. Well, sir, I had heard that there is no better bait for a perch than a perch's eye. I adjusted that eye on the hook, and dropped in the line gently. The water was unusually clear; in two minutes I saw that perch return. He approached the hook; he recognized his eye—frisked his tail—made a plunge—and, as I live, carried off the eye, safe and sound; and I saw him digesting it by the side of that water-lily. The mocking fiend! Seven times since that day, in the course of a varied and eventful life, have I caught that perch, and seven times has that perch escaped!"

Leonard, (astonished).—"It can't be the same perch; perches are very tender fish—a hook inside of it, and an eye hooked out of it—no perch could withstand such havoc in its constitution."

Angler, (with an appearance of awe).—"It does seem supernatural. But it is that perch; for, harkye, sir, there is ONLY ONE perch in the whole brook! All the years I have fished here, I have never caught another perch here; and this solitary inmate of the watery element I know by sight better than I know my own lost father. For each time that I have raised it out of the water, its profile has been turned to me, and I have seen, with a shudder, that it has had only—One Eye! It is a most mysterious and a most diabolical phenomenon, that perch! It has been the ruin of my prospects in life. I was offered a situation in Jamaica; I could not go, with that perch left here in triumph. I might afterwards have had an appointment in India, but I could not put the ocean between myself and that perch; thus have I frittered away my existence in the fatal metropolis of my native land. And once a-week, from February to December, I come hither—Good Heavens! if I should catch the perch at last, the occupation of my existence will be gone."

Leonard gazed curiously at the angler, as the last thus mournfully concluded. The ornate turn of his periods did not suit with his costume. He looked woefully threadbare and shabby—a genteel sort of shabbiness, too—shabbiness in black. There was humour in the corners of his lip; and his hands, though they did not seem very clean—indeed his occupation was not friendly to such niceties—were those of a man who had not known manual labour. His face was pale and puffed, but the tip of his nose was red. He did not seem as if the watery element was as familiar to himself as to his Dalilah—the perch.

Such is life!" recommenced the angler in a morbid tone, as he slid his rod into its canvas case. "If a man knew what it was to fish all one's life in a stream that has only one perch!—to catch that one perch nine times in all, and nine times to see it fall back into the water, plump!—if man knew what it was—why, then?" Here the angler looked over his shoulder full at Leonard—"why, then, young sir, he would know what human life is to vain ambition. Good evening."—From Bulwer's "*My Novel*."

## A STORY OF AN OLD BACHELOR.

## HOW TO BE MISERABLE.

THERE was a fine old General once, who, having spent most of his life in the field of Mars, knew very little about the camp of Cupid. He was one of those rough and honest spirits often met with in his gallant profession, innocent as an infant of almost every thing save high integrity and indomitable bravery. He was nearly fifty years old, and his toils were over, when Master Don Cupid brought him acquainted with a widow Wadman, in whose eye he began to detect something that made him uneasy. Here was the result of leisure!

During his service he had never seen anything worthy of notice in a woman's eye. In fact, he would scarcely have observed whether a woman had three eyes in her head, or only one; for no matter where his own eyes were, his thoughts were ever among "guns, and drums, and wounds," and love was a thing that lived in his memory just as he remembered once reading a visionary story-book, called the *Arabian Nights' Entertainments*, when a boy.

Well, the General had settled down into an amiable, gentlemanly old fellow, living alone with comfortable wealth around him, and having little to do, save now and then to entertain an old comrade in arms, which companionship afforded opportunity for him to "fight his battles o'er again." But, alas! o'er this calm evening of the old General's day, a deal of perplexity was doomed to fall, and he soon found himself in troubled waters, the depths of which he could by no means understand. He floundered about like a caged rat under a pump, and such another melancholy fish out of water never before swallowed the bait, hook and all, of the angling god of Love. The poor General! We must give him a name, or we can't tell the story; and the best name for such a story is Uncle Toby. The poor General debated abstractedly about his new position, and never had siege campaign given him such perplexity before.

At length, however, the blunt honesty of his disposition rose uppermost among his conflicting plans, and his course was chosen. At school he once studied *Othello's Defence*, to recite at an exhibition, but made a great failure; and he now recollected there was something in this *Defence* very much like what he wanted to say. He got the book immediately, found the passage, clapped on his hat with a determined air, and posted off to the widow Wadman's with Shakespeare under his arm.

"Madam," said General Uncle Toby, opening his book at the marked place, with the solemnity of a special pleader at the bar, "Madam—

"Rude am I,"—  
And little of the plot of pe  
For since those arms of mine had seven years' pith,  
Till now, some nine moons wasted, they have used  
Their dearest action in the tented field,  
And little of this great world can I speak,  
More than pertains to feats of broil and battle;  
And therefore thus I speak, to one who'll see the  
And little of the plot of pe

Here the General closed the book, wiped his forehead, looked up at the ceiling, and said, with a spasmodic gasp—

"I want to get married!"

The widow laughed for ten minutes by the watch, before she could utter a syllable, and then she said, with precious tears of humour rolling down her good-natured cheeks—

"And who is it you want to marry, General?"

"You," said Uncle Toby, flourishing his sword-arm in the air, and assuming a military attitude of defiance, as if he expected an assault from the widow immediately.

"Will you kill me if I marry you?" said the widow, with a merry twinkle in her eye.

"No, madam," replied Uncle Toby, in a most serious and deprecating tone, as if to assure her that such an idea had never entered his head.

"Well, then, I think I'll marry you," said the widow.

"Thank you, ma'am," said Uncle Toby; "but one thing I am bound to tell you of, madam—I wear a wig!"

The widow started, remained silent a moment, and then went into a longer, louder, and merrier laugh than she had indulged in before, at the end of which she drew her seat nearer the General, gravely laid her hand on his head, gently lifted his wig off, and placed it on the table.

General Uncle Toby had never known fear in hot battle, but he now felt a most decisive inclination to run away. The widow laughed again, as though she never would stop, and the General was about to lay his hat upon his denuded head and bolt, when the facetious lady placed her hand upon his arm and detained him. She then deliberately raised her other hand to her own head, with a sort of military precision, executed a rapid manoeuvre with her five fingers, pulled off her whole head of fine glossy hair, and placing it upon the table by the side of the General's, remained seated with ludicrous gravity in front of her accepted lover—quite bald!

As may be expected, Uncle Toby now laughed along with the widow, and they soon grew so merry over the affair, that the maid-servant peeped through the keyhole at the noise, and saw the old couple dancing a jig, and hobbing their bald pates at each other like a pair of Chinese Mandarins. So the two were united.

Abstracts, abridgments, summaries, &c., have the same use with burning glasses, to collect the diffused rays of wit and learning in authors, and make them point with warmth and quickness upon the reader's imagination.

"How to be happy," is a very common heading to an article addressed to the young. I have seen it in the papers so often, that I should not think of writing upon it. But I believe that I have never seen anything in print to tell young people how to be miserable.

"How to be miserable! Well, we don't want to be miserable."

Don't want to be miserable! How so? Then why do you take so much pains to be miserable? I cannot think how a child or a youth who is free from care or trouble, and full of buoyant spirits, can be miserable, without trying very hard to be so. But as I have seen a great many young persons, who not only seem determined to make themselves miserable, but everybody around them also, I thought perhaps they would thank me for telling them how they may do it easier.

In the first place, if you want to be miserable, be selfish. Think all the time of yourself, and of your own things. Don't care about anybody else. Have no feeling for any one but yourself. Never think of enjoying the satisfaction of seeing others happy; but the rather, if you see a smiling face, be jealous, lest another should enjoy what you have not. Envy every one who is better off in any respect than yourself, think unkindly towards them, and speak slightly of them. Be constantly afraid, lest some one should encroach upon your rights; be watchful against it, and if any one comes near your things, snap at him like a mad dog. Contend earnestly for everything that is your own, though it may not be worth a pin; for your "rights" are just as much concerned as if it were a pound of gold. Never yield a point.

Be very sensitive, and take everything that is said to you in playfulness, in the most serious manner. Be jealous of your friends, lest they should not think enough of you. And if at any time they should seem to neglect you, put the worst construction upon it you can, and conclude that they wish to avoid your acquaintance; and so the next time you meet them, put on a sour look and show a proper resentment. You will soon get rid of them, and cease to be troubled with friends. You will have the pleasure of being shut up in yourself.

Be very touchy and irritable. Cultivate a sour, cross, snappish disposition. Never speak in good-nature if you can help it. Never be satisfied with anything, but always be fretting. Pout at your father and mother; get angry with your brothers and sisters; or, if you are alone, fret at your books, or your work, or your play. Never look at, or admire anything that is beautiful or good; but fix your eye on the dark side of everything; complain of defects in the best of things, and be always on the look-out for whatever is deformed or ugly, or offensive in any way, and turn up your nose at it. If you will do half of these things you will become miserable enough.

## LITTLE BIRD, GOOD NIGHT!

BY MARY BENNETT.

MAMMA, I'll kneel upon your knee  
And say my evening prayers to  
Evening shadow dim the tree,  
Little birds be n to nod

Fly up to bed, [w  
With feathers wrappe  
Shut your head  
Sleep, and t  
t at the stern.

One at the window peepeth in—  
Little bird, good night—good nig  
You need not pray—you never sin,  
God will keep you till 't's light.

I'll pray, and all keep me too,  
He will wa till 't's light—  
Wake me th will you  
Wake me w "O? Good night.

THE IMPORTANCE OF WRITTEN MEDICAL PRESCRIPTIONS.—Some few years ago, a well-known botanical doctor was called in to prescribe for a man who kept for sale all kinds of dogs. The patient was a great believer in herbs and botanical productions, and was indeed very ill. The doctor felt his pulse, and as he was leaving the room, said, "O, cheer up! Mr. Jones; I'll send you some herb medicine that will put you all right again. I want to find your wife." To the latter, who met him on the stairs, he said, "Mrs. Jones, I'll be back here again very shortly, and meanwhile make your husband a large bowl of poppy-head tea."

The wife of the sick man was a German woman, and didn't exactly understand what was ordered. In the evening, when the doctor returned he asked—

"Well, Mrs. Jones, have you done as I ordered you to do?"

"To be sure I have, doctor."

"Well, and how does it operate?"

"Operate, sir? I can't tell; but I'm sure Sam will kill me when he gets well."

"How, kill you? What should he kill you for, good woman?"

"Because, doctor, he's been offered two guineas a-piece for them puppies, and I know he wants the money."

"Puppies, woman," replied the astonished doctor; "what have you been giving your husband?"

"Puppy-head tea," replied the woman.

"Puppy-head tea? I told you poppy-head tea," and the doctor rushed from his patient, who by the way got well, and after a while forgave his wife, but never the doctor.

## THE MYSTERY REVEALED.

THE Hand is open, and we clearly see  
The revelation of "The Mystery."  
There, wrapped in many a shroud-like fold,  
May we the shapeless *chrysalis* behold.  
Down in the earth of broken sand and clay,  
The *caterpillar* crept one sunny day;  
And resting there from light and freedom  
pent,  
Into its coffin like enclosure went.  
No more as *caterpillar* is it known—  
And yet an *insect's* name 'twill ever own.  
The "Death's head *Moths*" its bold an-  
cestors were:  
They fill'd the minds of timid ones with  
fear. [drive  
The terror of the Bee-tribe—oft they'd  
The busy workers from their honied hive.  
Mark! on its back a death-like head  
appears, [their fears.  
'Twas this that gave to darkened minds

Thus when the insect lives and moves most free,  
'Tis then alone this type of death we see.  
It flies by night—but who shall dread its wing?  
What troubles can a fluttering insect bring?  
Rather let hope its visitation give,  
For that which seemed to die, slept but to live!  
So shall the soul from earth pass up to bliss,  
In future worlds, when borne away from this!

\* Acheron's Atropos.

## CHARADES; AND PUZZLE.

1.  
In almost every habitable part,  
Explored, through ingenuity and art,  
My *first* is found  
Buried beneath the surface of the ground.  
Within the torrid, temperate, frigid zones,  
Amid the choicest, costliest of stones,  
My *next* so rare  
Is found, to deck duke, lord, or lady fair.  
Should direful war our peaceful land invade  
To injure persons, property and trade,  
My *whole*, believe,  
Would then be used to cheat and to deceive.

2.  
My *first* appears in sable mantle dress'd  
When the bright sun hath sunk in yon far  
west.  
My *second* surely you will ne'er find out,  
Though you should traverse Europe round  
about;  
And when you hear the wind's wild mur-  
muring breeze,  
There is my *third*, waving the forest trees.  
My *whole* 's a bird, whose sweet and silvery  
note  
I've often heard through airy regions float.

3.  
My *first* may be reckon'd  
A piece of my *second*,  
There really can be no denying.

My *first* is of wood,  
And my *second* is wood;  
My *whole*, too, is wood used in dyeing

4.  
If in an oven you should bake  
A kind of pea or eaten cake,  
My *first* will be completed.  
First in that oven would meet the fate,  
My *second* name, if left too late,  
And such was overheated.  
My *whole* in Scotland may be found,  
A once disputed, far-famed ground  
Where EDWARD was defeated.

5.  
'Twas eve, and silence reigned around,  
The white snow glittered on the ground,  
And not a cloud was seen on high  
Beneath the blue ethereal sky,  
When, like a gem, more pure than gold,  
My lovely *first* I did behold.  
The silvery moon, calm and serene,  
Illumed the waters bright and green;  
A distant bark now meets the view,  
Mann'd by a gallant hardy crew,  
Who, as they stem the rushing tide,  
Unmindful o'er my *second* glide.  
'Tis morn, and oft the sun peeps through  
Yon fleeting clouds of azure hue;  
The labourer to his daily toil  
Is tugging o'er the snow-clad soil;  
When, looking up, I then and there,  
Behold my *whole* high poisd in air.—J. W.

[Answered in No. 5.]

## MATRIMONIAL PUZZLE.

MAIDEN! behold the wedding ring—  
A potent yet a simple thing!  
Say, can you pass a little pin  
Through the blank space it circles in,  
And yet not cross the golden bound  
That forms the magic circle round.  
Nor downward thrust into the space,  
The point into the charmed place?  
If you cannot find out the mystic way,  
Long must you wait to see your bridal day  
[Answered in No. 5.]

## ANSWERS TO THE PASTIME OF LAST EVENING.

Page 45.

## ENIGMA—IRON.

1. Is rarely found in its pure state, but generally mixed with ore.
2. Is scattered in every clime, and in almost every geological formation.
3. Steam-packets.
4. Locomotives.
5. The Iron shed Staves of the guides in the Alpine mountains.
6. Railway lines.
7. Iron filings.
8. Pikes.
9. Used in manufacturing articles of all sizes—from fish-hooks to anchors.
10. Mason's trowels.
11. In peace, with pickaxes—in war, by cannon.
12. His friend in peace—foe in war.
13. War has entailed endless misery upon thousands.
14. Used as a tonic medicine.
15. Pickaxes, shovels, and other imple-ments used for that purpose.
16. By the anchors holding ships in a storm, and in other ways.
17. The Menai tubular bridges, suspen-sion bridges, &c.
18. In the excavations of miners.
19. Steel ladies' ornaments, buttons, &c.
20. Wire fencing, to keep off hares.
21. Lightning conductors.
22. In the Crystal Palace a patent shoe was exhibited, in which a plate of finely-tempered steel is introduced into the sole, rendering the feet secure from wet, and its common result—a cold in the head.

CHARADES.—1. Bri-(rib) tain.

2. Pot-a-toe.

3. Holy-rood.

## THE REMARKABLE ADVENTURES OF BARON BRAG.—AN UNNATURAL HISTORY FOUNDED UPON NATURAL HISTORY

(To be Continued by Us, until Discontinued by the Baron.)

The Baron, having packed up his Hunting-Dress, embarks for the Arctic Regions!

Arrived near the North Pole, he meets with a Bear, which mistakes him for one of its own species!

And after some fear and excitement on the Baron's part they become very sociable!

## OUR CORNER CUPBOARD!

AN epitaph on a *Negro* baby at Savannah, commences, "sweet blighted lily!" There is no grief like the grief which does not speak.

TO WIDOWS.—Never encourage weeds when flowers look so much better.

WITHOUT economy none can be rich, and with it few can be poor.—Dr. Johnson.

TRUTH, they say, lies in a well. "For my part," said a wit, "I thought it the property of truth to lie nowhere."

TIME, with all its celerity, moves slowly on to him whose whole employment is to watch its flight.

"Is your watch a lever?" "Lover! yes. I have to leave her once a week at the watchmaker's for repairs."

It is the nature of ambition to make men liars and cheaters; to hide the truth in their breasts, and show, like jugglers, nothing in their mouths.

SIR THOMAS OVERBURY said of a man who boasted of his ancestry, that he was like a potatoe—"the best thing belonging to him was underground."

"AN independent man," said Pitt, "is a man not to be depended upon."

MANY a man's thoughts are like the omnibuses,—there's hardly one of them that doesn't run to the Bank.

A SKULL without a tongue often preaches better than a skull that has one.

AN American paper, in announcing the opening of a new cemetery, says—"Mr. — had the pleasure of being first buried there."

It is a heaven upon earth to have a man's mind move in charity, rest in Providence, and turn upon the poles of truth.

WISE men are instructed by reason; men of less understanding by experience; the most ignorant by necessity; and beasts by nature.

MRS. SPICKLES says the best vegetable pill yet invented is an apple dumpling; for destroying a gnawing at the stomach, it is a pill which may always be relied on.

WHEN Milton was blind he married a shrew. The Duke of Buckingham called her a rose. "I am no judge of colour," said Milton, "but it may be so, for I feel the thorns daily."

FORMERLY women were prohibited from marrying till they had spun a regular set of bed furniture, and, till their marriages, were consequently called *Spinsters*, which continues to this day in all legal proceedings.

A WAG has truly said, that if some men could come out of their coffins, and read the inscriptions on their tombstones, they would think they had got into the wrong grave.

LACONICALLY PROVOKING.—A man having published another as a liar, a scoundrel, and a *polltrou*, the latter complains that he does not spell *polltrou* correctly.

IT is calculated by a sporting writer, that in Yorkshire there are 1,000 hunters, which cause to be employed 2,000 men; and eat 40,000 quarters of oats, 2,000 quarters of beans, and 8,000 tons of hay per annum.

A COTEMPORARY has the following meteorological remark:—"The great luminary, Jenny Lind, seems to be slowly retiring from the public gaze, and the atmosphere of the musical world is becoming decidedly *Hazy*."

DECISIVE.—"Upon your oath, sir," said a barrister fiercely, "will you swear that this is not your handwriting?" "I will," said the witness, coolly, "for I can't write."

ONE great distinction between a well-informed man and a fool is, that the former examines both sides of every question, while the latter is afraid to look upon more than one.

"I HAVE learnt this profound truth," says Alderman Johnson, "from eating turtle, that it shows a most depraved taste to mock anything for its greatness."

A MERCHANT of a certain city, who died suddenly, left in his desk a letter written to one of his correspondents. His sagacious clerk, a son of Erin, seeing it necessary to send the letter, wrote at the bottom:—"Since writing the above I have died."

A MISSIONARY writing home from China, says, that the Chinese use little fire, and measure cold by the thickness of jackets. Three jackets cold is moderately cool; six jackets cold is keen; and from ten to fifteen jackets cold is extremely severe.

AN ignorant Dutchman, passing a number of railroad tracks in the course of a day's journey, and never having seen any before, was surprised to account for their use. At length, after examining one of them for about twenty-five minutes, and scratching his head quite bald, he ejaculated—"Tey must be iron clamps, to keep der earthquakes from precking up der road."

As two urehins were trotting along together, one of them fell and broke a pitter which he was carrying. He then commenced crying, when the other boy asked him why he "took on so?" "Cause," says he, "when I get home, nupther'll lick me for breaking the mug." "What," said the other, "haint you got no grandmother living at your house?" "No," was the reply. "Well, I have, and I might break two mugs, and they daren't lick me."

## OUR MEMORANDUM BOOK!

By proper attention and good management, persons in general might not only live longer, but might enjoy life with more relish than is commonly the case. Human nature is still on the threshold of acquirement.

KNOWLEDGE is not mental power. The mind is not formed in schools, but in free, social action with affairs, interests, and temptations which call forth the exercise of judgment, prudence, reflection, moral restraint, and right principle.

DR. FRANKLIN recommends a young man, in the choice of a wife to select her from a *bunch*, giving as his reason, that ~~when~~ *when* there are many daughters, they improve each other—and from emulation acquire more accomplishments, and know more, and do more, than a single child spoiled by paternal fondness.

ACTIONS, looks, words, steps, form the alphabet by which you may spell characters. Some are mere letters; some contain entire words, lines, whole pages, which at once despatch the life of a man. One such genuine uninterrupted page may be your key to all the rest; but first be certain that he wrote it all alone, and without thinking of publisher or reader.

IN one year a ton of sand, at least, which is baked with the flour, is rubbed off from a pair of millstones. If a mill grinds only 4,385 bushels annually, and no more than twelve bushels allowed to one man, a person swallows in the year about six pounds, and in a month about half a pound of pulverised stone, which, in the course of a long life, will amount to upwards of three hundred-weight.

THE Roman censors frequently imposed fines on unmarried men, and men of full age were obliged to marry. The Spartan women, at certain games, laid hold of old bachelors, dragged them around their altars, and inflicted on them various marks of infamy and disgrace. After twenty-five years of age, a tax was laid upon bachelors in England, £2 10s. for a duke, and for a common person, 1s. (7 William III., 1695.) Bachelors were subject to a double tax on their male and female servants in 1785.

CHOICE TEXTS. *A Text for Bachelors*—Whoso findeth a wife, findeth a good thing, and obtaineth favour of the Lord. *A Text for Aristocrats*—"The rich and poor meet together; the Lord is maker of them all." "He hath made of one blood all nations of men." *A Text for Idlers*—"Seest thou a man diligent in his business? he shall not stand before mean men!" *A Text for the Timorous*—"The wicked flee when no man pursueth; but the righteous are bold as a lion."

TRUE courage has so little to do with anger, that there lies always the strongest suspicion against it where this passion is highest. The true courage is cool and calm. The bravest of men have the least of a brutal, bullying insolence; and, in the very time of danger, are found the most serene, pleasant, and free. Rage, we know, can make a coward forget himself and fight. But what is done in fury or anger can never be placed to the account of courage. Were it otherwise, womankind might claim to be the stoutest sex; for their hatred and anger have ever been allowed the strongest and most lasting.

AFLECTION.—If anything will sicken and disgust a man, it is the affected mincing way in which some people choose to talk. It is perfectly nauseous. If these young jackarapes who screw their words into all manner of diabolical shapes could only feel how perfectly disgusting they were, it might induce them to drop it. With many, it soon becomes such a confirmed habit, that they cannot again be taught to talk in a plain, straightforward, manly way. In the lower order of ladies' boarding-schools, and, indeed, too much everywhere, the same sickening, mincing tone is too often found. Do, pray, good people, do talk in your natural tone, if you don't wish to be utterly ridiculous and contemptible.

THE great end of prudence is to give cheerfulness to those hours which splendour cannot gild, and exclamation cannot exaltate. Those soft intervals of unembellished amusement, in which a man shrinks to his natural dimensions, and throws aside the ornaments or disguises which he feels, in privacy, to be useless encumbrances, and to lose all effect when they become familiar. To be happy at home is the ultimate result of all ambition, the end to which every enterprise and labour tends, and of which every desire prompts the prosecution. It is indeed at home that every man must be known by those who would make a just estimate either of his virtue, or felicity for smiles and embroidery are alike occasional, and the mind is often seduced for show in painted honour and fictitious benevolence.

THE paths of virtue are plain and straight, so that the blind—person of the meanest capacity—shall not err. Dishonesty requires skill to conduct it, and as great art to conceal, what it is every one's interest to detect. And I think I need not remind you how oft it happens in attempts of this kind—where worldly men, in haste to be rich, have overrun the only means to it—and, for want of laying their contrivances with proper cunning, or managing them with proper secrecy and advantage, have lost for ever what they might have certainly secured with honesty and plain dealing. The general causes of the disappointments in their business, or of the unhappiness in their lives, lying but too manifestly in their own disorderly passions, which, by attempting to carry them a shorter way to riches and honour, disappoint them of both for ever, and make plain their ruin is from themselves, and that they eat the fruits which their own hands have watered and ripened.

**TUTOR'S ENGLISH GRAMMAR** is illustrated by numerous spirited Wood Engravings, by which a dry and tedious study is made peculiarly easy and interesting. Price 2s. 6d.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

When the value of Five Shillings is taken, they will be sent post free.—The above are each neatly mounted on Drawing Paper, 7½ by 5½. KNIGHT & FOSTER, Stationers, &c., 5, Eastcheap, London.

Just published, beautifully bound, with an Interior View of the CRYSTAL PALACE gilt upon the Cover, Vol. I. of the

**PARLOUR LITERATURE OF ALL NATIONS**, (being Vol. I. of THE PARLOUR MAGAZINE) price 6s. The ParLOUR Magazine was the only book printed in the Crystal Palace, and will remain as a handsome and appropriate memento of it. THE PARLOUR LITERATURE OF ALL NATIONS will be completed in two handsome Volumes, price Five Shillings each. Copies for Binding the Volumes, uniform with the above, may be had of all Booksellers, price 1s. 6d. each. London: HOULSTON & STONEMAN, 65, Paternoster Row.

**PRIZE ENIGMAS.**—The Editor of the FAMILY FRIEND announces his intention of offering, at Christmas (1851), a Prize of ONE HUNDRED GUINEAS, for the best Solution of an ENIGMA to be completed for by GENTLEMEN; FIFTY GUINEAS for the Solution of another ENIGMA, to be completed for by LADIES; and TWENTY FIVE GUINEAS for an ENIGMA to be completed for by JUVENILES of both sexes. Further particulars will be given in the Number of THE FRIEND. There will be numerous Minor Prizes.  
The Number of THE FRIEND containing these Enigmas may be had of Booksellers everywhere, (price 2d.), on or before the 1st of JANUARY, 1852. The same Number will contain the Rules of the Competition.

**THE LONDON INDISPUTABLE LIFE POLICY COMPANY**, incorporated by Act of Parliament, on the principle of MUTUAL Life Assurance, 72, Lombard Street, London.

Trustees—J. Campbell Renton, Esq. M.P., Richard Malins, Esq., Q.C., Richard Spooner, Esq., M.P., James Fuller Maddox, Esq., William Wilberforce, Esq.  
The Policies of this Company being indisputable, form FAMILY PROVISIONS and NEGOCIABLE SECURITIES, for their validity is not dependent, as in the case of ordinary policies, upon the import of previous reports and other documents. Owing to this important improvement in the practice of Life Assurance, the progress of this Company has been rapid from the commencement of its business, and is steadily advancing.  
ALEXANDER ROBERTSON, Manager.

In the Press, and shortly will be published, **GRANDFATHER WHITEHEAD'S CATECHISMS**, designed to make the Acquisition of Useful Knowledge by the Young, and by Beginners of all Ages, easy and pleasing. The Catechisms will be published Monthly, each containing 32 pages, crown 8vo., illustrated by numerous Diagrams. The price of each Catechism will be 2d., stitched in a neat Wrapper. The whole Series, bound in cloth, 2s. 6d.

**BARLOW'S POWDERS**—cure Tic Doloroux or Pain in the Teeth, Face, Head, &c. Sent Post Paid for 2s. 9d. in Stamps, by SAMUEL BARLOW, Chemist, Dartington. Reference as to their efficacy—Joseph Pease (late M.P.) Dartington; Lady Monson, Graftonham; and hundreds of the Nobility, Ministers, and others, whose bona fide Testimonials may be had of S. Barlow.

Grand Parade, St. Leonards on the Sea, Sussex, Feb. 12th, 1847.

Mr. S. Barlow.  
Sir,—Under the favourable recommendation of Mr. Pease, of North Lodge, in regard to your Powders for the Tic Doloroux, I wish to try a packet of them. He assures me there is not anything mercurial in them, nor any drug that can possibly injure the constitution. From what Mr. Pease says, I think they are quite innocuous, and of a character to give tone to the nerves, stomachic and general.  
I am, Sir, your obedient servant,  
(REV.) W. JACKSON.

Will be published in December, 1851,

**THE FAMILY FRIEND**, an established Magazine, published upon the First and Fifteenth of every Month, price Two pence. Thirty-two pages, beautifully printed, and neatly covered. The following is a type of the ORIGIN formed of THE FAMILY FRIEND, and expressed by upwards of THREE HUNDRED NEWSPAPERS:—"The Boys and Girls will like it, for it contains good Stories; the Young Ladies will like it, for the sake of its pretty Poetry, and its Receipts for various kinds of Fancy Work; Young Men will like it, for it smacks of Science; the Women will like it, for it abounds in useful Household Receipts; the Men will like it, for it treats of Gardening and Natural History, and advises wives to be kind to their husbands; those who love amusement will like it, for it swarms with Conundrums; everybody will like it, for it has a corner for everybody; and nobody need be afraid of finding any harm in it."—*Gateshead Observer*.

The Work may be had upon the end of December, 1851, in FIVE VOLUMES, price 2s. 6d. each.  
The Fourth Volume contains a QUADRUPLE INDEX to the First Four Volumes, embodying about THREE THOUSAND FIVE HUNDRED REFERENCES to matters of everyday usefulness. The Work forms a most perfect Encyclopedia of Domestic Economy.  
London: HOULSTON & STONEMAN, 65, Paternoster Row; and all Booksellers.

GREAT EXHIBITION.—Prize Medal awarded to, and Honorable Mention made of, the

**GLENFIELD PATENT STARCH.**  
See pages 37 and 63, Class III., Jury IV., of "List of Awards," printed by authority of the Royal Commissioners.  
Being thus doubly noticed for its "general superiority," (a mark of distinction conferred on no other) by the Royal Commissioners and Jury, from amongst Thirty or Forty Exhibitors, sets it far above every other of its competitors. The Ladies are therefore respectfully requested to make a trial of the GLENFIELD PATENT DOUBLE-REFINED POWDER STARCH, which, for Domestic Use, now stands unrivalled, AND IS NOW USED IN THE ROYAL LAUNDRY.  
See Testimonials from the Laundress to Her Majesty; the Lady Mayores of London; Laundresses of the Countess of Eglington, Marchioness of Breadalbane, &c.  
Sold Wholesale, in London, by Messrs. Pantin and Turner; Hooper, Brothers; Batty & Vaux; Steery, Barry, & Co.; John Hyman; Croft and Innocent; Petty, Wood, & Co.; Twelvesons, Brothers; C. B. Williams & Co.; R. Letchford & Co.; John Yule & Co.; "The Graden"; John Brewer; Field, Roberts, & Barber; "The Braden & Co."; Yates, Walton, & Turner; William Clayton & Co.; and R. Wakenfield, 35, Crown Street; and Retail, by all Shopkeepers.  
Agents wanted: apply to Mr. R. WOTHERSPOON, 40, Dunlop Street, Glasgow.

## Editor's Note-Book.

### ADVICE TO WRITERS FOR THE PRESS.

In the first place, all names—of county, town, place or thing, and especially of individuals—should be written distinctly, with dots over the i's, crosses over t's, and a plain distinction between the u's and n's, as a compositor has no connecting sense of grammar to guide him in deciphering a name when it is obscurely written. Secondly—When the capital letters I or J occur in a name (as Henry I. Jones), make it with the pen to represent it in print, and then no mistake can occur, and, where a list of names, or more than one, is written, a comma should be made after each—thus Thomas Smith Walker Johnston might be made to signify one, two, or four names. Any one who writes names may easily know how to punctuate them; and, if he does not understand the punctuation of any other part of his manuscript he need not fear that the printer will neglect it. Writers for the press should understand that compositors, as a general rule, are paid by the piece for their work, and that, if their manuscript is badly written, it is a downright robbery of their labour, as they are compelled to waste hour upon hour to put in an intelligible shape what the author has hurriedly or carelessly neglected to do.

**TO TAKE INK OUT OF LINEN.**—Take a piece of tallow, melt it, and dip the spotted part of the linen into the melted tallow; the linen may be washed, and the spots will disappear, without injuring the linen.

**TO PREVENT THE SMOKING OF A LAMP.** S. W.—Soak the wick in strong vinegar, and dry it well before you use it; it will then burn clearly, and give much satisfaction for the trifling trouble in preparing it.

**GLOVES.** S. G.—This word is derived from the Anglo-Saxon *Glof*, a cover for the hand. The etymology of the English word shows an early use of gloves in this country. In the middle ages they formed a rich and costly article of the dress of important personages.

**SUMPTUARY LAWS.** W. S. S.—These are laws, which, in extreme cases, have occasionally been made to restrain or limit the expenses of citizens in apparel, food, furniture, &c. Sumptuary laws are abridgments of liberty, and of very difficult execution. Those of England were repealed by Stat. 1. Ja. 1. c. 25.

**DOMESTIC PEACE.**—The less of physical force or menacing language we use—the less, to take an expressive word, we scold our children—the more order and quiet we shall commonly secure. We have seen families where a single word or look even would allay a rising storm. The gentle but firm method is the best security for domestic peace.

**MESMERISM.** Anne.—Animal magnetism, or as it is also called, mesmerism, was first introduced to the world by Frederick Anthony Mesmer, a German Physician, who was born at Mesemburg, in Silesia, in 1734. In 1766 he published *A Thesis on Planetary Influences*, in which he contended that the heavenly bodies diffused through the universe a subtle fluid, which acts on the nervous system of animated beings.

**THE ELASTIC EGG.**—Take a good and sound egg, place it in strong vinegar, and allow it to remain for twelve hours; it will then become quite soft and elastic. In this state it can be squeezed into a tolerably wide-mouthed bottle; when in, it must be covered with water, having some soda dissolved in it. In a few hours this preparation will restore the egg nearly to its original solidity; after which the liquid should be poured off, and the bottle dried, keeping it as a curiosity to puzzle one's friends for an explanation how the egg was laid in it.

**TO CLEAN SILKS.**—Dresses cleaned by the following method have not the appearance of being cleaned.—Quarter of a pound of honey, quarter of a pound of soft soap, two wine-glasses of gin, three gills of boiling water. Mix and let stand until blood-warm. Spread the silk on a clean table, with a cloth under it—there must be no gathers. Dip a nail-brush into the mixture, and rub the silk well, especially where there are stains, or the most dirt or spots, and with a sponge wet the whole breadth generally, and rub gently. Then rinse the silk in cold soft water; hang it up to drain, and iron it damp. The quantity stated is for a plain dress.

**WIVES FOR WEDDING.**—Do not run much from home. One's own hearth is of more worth than gold. Many a marriage begins like a rosy morning, and then falls away like a snow-wreath. And why, my friends? Because

the married pair neglect to be as well-pleasing to each other after marriage as before. Endeavour always to please one another, but at the same time keep God in your thoughts. Lash not all your love on to-day, and remember that marriage has its to-morrow likewise, and its day after to-morrow, too. Consider what the word wife expresses. The married woman is the husband's domestic faith; in her hand he must be able to entrust the key of his heart, as well as the key of his eating room. His honour and his home are under her safe keeping—his well-being in her hand. Think of this! And you, sons, be faithful husbands, and good fathers of families. Act so that your wives shall esteem and love you.

**PRESERVING EGGS.**—The several modes recommended for preserving eggs any length of time are not always successful. The egg, to be preserved well, should be kept at a temperature so low, that the air and fluids within its shell shall not be brought into a decomposing condition; and at the same time the air outside of its shell should be excluded in order to prevent its action in any way upon the egg. The following mixture was patented several years ago by Mr. Jayne, of Sheffield. He alleged that by means of it he could keep eggs two years. A part of his composition is often made use of—perhaps the whole of it would be better. Put into a tub or vessel one bushel of quick-lime, and mix the same together, with as much water as will reduce the composition or mixture to that consistency that it will cause an egg put into it to swim with its top just above the liquid; then put and keep the eggs therein.

**USEFUL OCCUPATIONS.**—In our "Note-Book," p. 32, we made a few remarks upon "Street Nuisances," in which we condemned the encouragement of boys in habits of mendicancy. It occurs to us now to say, in continuation of the subject, that the system of employing "Street Orders," and of giving an occasional gratuity to those who sweep muddy crossings, is far preferable to the practice we have already adverted to. Of late, the "Show-boys" have been restored to the streets of London, in considerable numbers. Boys may be seen at many a corner, industriously cleaning the boots and shoes of pedestrians, adding thus to the cleanliness and respectability of the community, and providing bread and cheese for themselves, by really commendable efforts. We quite approve of this. To teach youth to rely upon its own efforts for its daily food—to impart to it sentiments of real independence, and so to lift it above the servility and disgrace of beggary, is one of the best ways of

POLISHING THE UNDERSTANDING.

**WORK IF YOU WOULD RISE.**—Richard Burke being found in a reverie, shortly after an extraordinary display of powers in Parliament, by his brother Edmund Burke, and questioned by a friend as to the cause, replied, "I have been wondering how Ned has contrived to monopolize all the talents of the family; but then again, I remember, when we were at play he was always at work." The force of this anecdote is increased by the fact, that Richard Burke was considered not inferior, in natural talents, to his brother. Yet the one rose to greatness, while the other died comparatively obscure. Don't trust to your genius, young men, if you would rise, but work! work!

**A CORRESPONDENT** of the *Gentleman's Magazine* says, that the following judicious recommendations appear on the fly-leaf at the end of the volume of music, M.S., No. 43, in the University Library, Cambridge:—

"Mark this lesson—  
Sinner God ever.

Credit	} not all } at thou	Hearst.
Say		Thinkst.
Desire		Seest.
Spend		Hast.
Due		Maist.

But of all things take heed of the beginnings;  
See the middle and praise the endings;  
Doe that which is good, say what is true;  
Cherish old friends, chiding for no new."

**TO PRESERVE MILK.** T. H.—Provide bottles, which must be perfectly clean, sweet, and dry; draw the milk from the cow into the bottles, and as they are filled, immediately cork them well up, and fasten the corks with packthread or wire. Then spread a little straw in the bottom of a boiler, on which place bottles with straw between them, until the boiler contains a sufficient quantity. Fill it up with cold water; heat the water, and as soon as it begins to boil, draw the fire, and let the whole gradually cool. When quite cold, take out the bottles and pack them in saw dust, in hampers, and stow them in the coolest part of the house. Milk preserved in this manner, and allowed to remain even eighteen months in the bottles, will be as sweet as when first milked from the cow.

**PLEASANT, AGREEABLE, PLEASANT.**—"Pleasing" is generally applied to manners and personal appearance. "Agreeable" is used in a more extended sense; when applied to manners and conversation, it differs from "pleasing," and means rather clever and entertaining, than winning and attractive. Many persons are "agreeable" who are not "pleasing," and a "pleasing" person may not have sufficient spirit or variety of conversation to constitute him "agreeable." "Pleasing" refers more to the person himself; "agreeable" to the impression made on others. "Pleasant" was formerly used to describe merry and playful conversation, or a jocose and lively person; now it is, in a great measure, withdrawn from persons and applied to things—to weather, scenery, situations, &c. "Pleasant" is a relic of the old meaning. The French *plaisant* has changed all in a reverse way. Formerly, it meant what we now call pleasant, as may be seen from the *Lament of Mary, Queen of Scots*—

"Adieu, plaisant pays de France!"

Now, it has come to mean, as it did formerly with us "funny" or "jocose."

**HINTS TO ECONOMISTS.**—If you have a strip of land, do not throw away soap suds. Both ashes and soap-suds are good manure for bushes and young plants.—Cream of tartar, rubbed upon soiled white kid gloves, cleanses them very much.—Woolen clothes should be washed in very hot suds, and not rinsed. Lukewarm water shrinks them.—Do not let coffee and tea stand in tin.—Scald your wooden ware often, and keep your tin ware dry.—Preserve the backs of old letters to write upon. If you have children who are learning to write, buy coarse white paper by the quantity, and keep it locked up, ready to be made into writing books. It does not cost half so much as it does to buy them at the stationers.—See that nothing is thrown away which might have served to nourish your own family, or a poorer one.—As far as it is possible, have bits of bread eaten up before they become hard; spread those that are not eaten, and let them dry, to be pounded for puddings, or soaked for brewis. Brewis is made of crusts and dry pieces of bread, soaked a good while in hot milk, mashed up and eaten with salt. Above all, do not let crusts accumulate in such quantities that they cannot be used. With proper care, there is no need of losing a particle of bread.—Attend to all the mending in the house once a week if possible.—Never put out sewing. If it be not possible to do it in your own family, hire some one into the house, and work with them.—A warming-pan full of coals, or a shovel of coals, held over varnished furniture, will take out white spots. Care should be taken not to hold the clothes near enough to scorch; and the place should be rubbed with flannel while warm.—Sal-volatile or hartshorn will restore colours taken out by acid. It may be dropped upon any garment without doing harm.—New iron should be very gradually heated at first. After it has become inured to the heat, it is not so likely to crack.—Clean a brass kettle, before using it for cooking, with salt and vinegar.—The oftener carpets are shaken, the longer they wear; the dirt that collects under them grinds out the threads.—Linen rags should be carefully saved, for they are extremely useful in sickness. If they have become dirty and worn by cleaning silver, &c., wash them and scrape them into lint.—If you are troubled to get soft water for washing, fill a tub or barrel half full of wood ashes, and fill it up with water, so that you may have ley whenever you want it. A gallon of strong ley, put into a great kettle of hard water, will make it as soft as rain water. Some people use pearlash, or potash; but this costs something, and is very apt to injure the texture of the cloth.—Do not let knives be dropped into hot dish-water. It is a good plan to have a large tin pot to wash them in, just high enough to wash the blades without wetting the handles.—Mrs. Child.

# THE HOME COMPANION:

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 5.—Vol. I.]

SATURDAY, JANUARY 31, 1852.

[PRICE ONE PENNY.]

## THE BROKEN MERCHANT

BY MRS. S. J. HALE.

### THE DISCLOSURE.

"Here's a sudden change."

"ARE you ill, Charles?" said Mrs. Carlton, laying down her pencil: she had been sketching.

Her husband did not answer; but seating himself heavily on the sofa, he pressed his right hand on his forehead.

His young wife arose gently, there was a slight suffusion on her cheek, but it was not wounded pride because her question had been unheeded. She leaned over the arm of the sofa, and tenderly laid her hand on his forehead—

"Is there much pain in your head, my love?"

"Yes; deep, terrible. Emily, you cannot relieve it."

"Let me try my skill at Mesmerism," said she, as she playfully ran her fingers through the clusters of his hair, and, lifting the dark locks from his temple, pressed her rosy lips on the swollen and throbbing veins. Her kiss was so soft and still, that, had a jealous lover been watching beside her, he would not have heard a sound. Real and pure affection is always quiet and delicate in its attentions; and no man of refinement can long love a wife whose demonstrations of attachment are obtrusive and importunate.

Charles Carlton scarcely heard the kiss of his wife, but he felt its thrill through every pulse and nerve. It was the pledged affection of a loving and true heart. His hand trembled, fell, and his eyes, as they met hers, filled with tears. Emily's heart sank within her, as the fear of some terrible calamity rushed upon her mind; but she strove to sustain herself, and, taking her husband's hand in both hers, she sat down by his side.

"Charles, dear Charles?" said she, inquiringly

"Emily—"

"My dear husband, what can I do for you?"

"Nothing," said he, calmly.

"Nothing! Oh, do not say so! Let me comfort you, at least. Tell me—tell me, what has happened?"

"I will tell you, Emily; for you must know. I am ruined!"

"Ruined! How? Why?"

"I am a bankrupt, Emily. I have failed—lost all my property—all!" and he again covered his face.

"Well, my dear husband, if it be lost, let it go. There are a thousand ways to live by industry; and I can do a good many things."

"But, Emily, you do not comprehend this at all. I am a broken merchant. I shall not be trusted with business. I owe thousands that I cannot pay. I have nothing—nothing left!"

"Yes, my love, you have what you have often called your dearest treasures—your wife and little Henry. We will be your treasures still." And she twined her arm around the neck of her husband, and tenderly drew his head upon her shoulder.

"Bless you! bless you, my own Emily—my wife! You have comforted me!"

### FRIENDS.

"Ebbing men, indeed.  
Most often do so near the bottom run  
By their own fear."

"ANY news this morning, Mr. Halford?" said John Folsom to the gentleman who entered his counting-house. He was a tall, pale man, with a commercial-looking face; that is, bilious and rather care-worn; but the keen glance of his eye was tempered by a benevolent smile, and when he raised his hat, the high, broad, smooth forehead bore the unequivocal stamp of a warm heart and a good conscience.

"The only news of the morning is, that Carlton has failed," said Mr. Halford.

"Yes, I knew that last evening," replied John Folsom.

"Is it a total failure, or will he be doing business again in six months?"

"Radical: a thorough failure. Given up all."

"That is rather an unusual course," remarked Mr. Halford. "Most of our broken merchants contrive to secure a share for themselves. You are his friend: why did you not advise him better?"

"Your pardon, sir: I never advise my friends; it only offends them. Throw physics to the dogs as soon."

"I heard that the failure was caused by signing for Cogswell & Co. Was that true?"

"Partly so. Carlton lost about twenty thousand pounds by that firm; but

then he might have gone on in business for some months, and perhaps have got over his embarrassments entirely, if he had not been so very squeamish."

"Squeamish! How do you mean?"

"Why, he applied to old Colonel Dillis, to whom he was owing a considerable debt, and told him how matters stood, and the reasons he had for believing he might retrieve his affairs, if he could obtain a loan of ten thousand pounds for a few months; and he offered Dillis good security for the money; but the old Colonel knows how to manage. He would not loan the cash, unless he could have his debt likewise provided for in the security. This, Carlton thought, would not be doing the honourable by his other creditors, and he refused; and Dillis immediately levied an attachment."

"Carlton should have applied to his other friends: he ought to have many, for he has been a very obliging man. I think there must have been some who would have remembered his loans. Did he not once assist you, Mr. Folsom, materially?"

"Yes, yes; his name was of some service at the time my creditors run me so hard; but I have paid him."

"There are benefits which the mere value received never pays," remarked Mr. Halford, dryly, as he left the warehouse of the dashing merchant. He walked hastily up Cheapside. "I will call on Carlton," said he to himself, as he went on. "Perhaps I can hit on some plan to put him again in business. He has a lovely young wife, and it must sorely try the spirit of a man who loves his family to see them destitute. He owes me money; but it is no matter. I find he has been honest, even under the hard temptation of bankruptcy. He has acted honourably, and he shall be sustained."

### THE PARTING.

"—Partings, such as press  
The life from out young hearts."

It was June, the "bright and leafy June," and such a glorious day! There are mornings when it seems as though the angel at Heaven's portal had purposely left the "adamantine gates" ajar, that our cold earth and callous hearts might be revived and purified with the hallowed tide of light, and life, and love. We idly talk of Nature as of a goddess, and say she renews her youth and beauty, and puts on the green robe of Spring, and the flowery mantle of Summer, and Autumn's rich sheafy crown; but the energy of Nature is only the breath of the Almighty, the Creator; her beauty is but the reflection of His benevolence; and her bounty the overflowing of His ever-during love for the creatures He hath made. Rely on Him, and thou wilt never be forsaken, never destitute, never in despair.

"We will trust in God, my dear husband," said Mrs. Carlton, as she wiped the tears which, all unconsciously to herself had, for minutes, been raining from her eyes on the fair forehead of her babe, as he stood at her knee looking up with an earnest gaze at his mother. He had never before seen her face in sorrow: it seemed to astonish, almost petrify him. "Dear Henry," she continued, clasping him to her bosom, "how I wish you could speak! You should tell papa that we will think of him, and love him every hour he is gone. But you will soon learn to talk. Charles, I shall have, nothing to do but teach Henry and write to you; and Paris is not quite to the end of the world."

Charles Carlton kept his station by the open window. A stranger, who had only remarked the rapid glance of his eye, as it wandered from earth to heaven, might have fancied him a poet in the ecstasies of inspiration. Alas! his musings were of a sterner quality than poets' dreams. He felt the reality of struggling with himself. There are few occasions that more deeply try the soul of a man than parting with the only being he feels sure loves him. He is Adam going from his paradise alone.

Emily suddenly started up, with her infant in her arms, and stood by her husband's side. She had caught the sound of coming wheels, and she knew he must go. There is no indulging in sentiment when a railway-carriage or steam-boat is waiting. But love—ay, real affection, is as deeply expressed in one word as in twenty.

There was such a look of love—of unutterable affection, in the tender smile which dimpled her pale cheek, as she held the babe to her husband for his farewell kiss, that it quite overcame the heart it was intended to encourage. Had she wept or complained, Charles Carlton would have rallied his manly fortitude to comfort and sustain her; but now he only felt that he was obliged to leave all he held dearest on earth—he was the sufferer; and, clasping his dear ones to his bosom, his kisses were the only farewells his lip could frame.

"And is he gone! On sudden solitude,  
How oft that fearful question will intrude!  
'Twas but an instant passed, and here he stood;  
And now without the portal's front she rushed,  
And then, at length, her tears in freedom gushed."

## GOSSIP.

"The love of show, adds that it should warp  
Our kindest feelings by its selfish pride!"

"So your beautiful friend, Mrs. Carlton, the brightest star in the galaxy of fashion, has been shorn of her beams, they tell me, and has left London, and buried herself somewhere in the shades of Richmond," said Mrs. Mears.

"Say, rather, she is ruralizing in Richmond. I cannot endure to think of such a total eclipse for poor Emily," said Miss Arabella Folsom, affectedly sighing, as she clasped her jewelled fingers in a manner to display all the most costly and sparkling rings.

"Have you visited her since her retirement?" inquired Mrs. Mears.

"Oh, no! It would pain me so excessively to meet poor Emily under a sense of her altered fortune. Indeed, I fear my emotion would be uncontrollable, and thus afflict her. I would not spare myself," said the young lady, again sighing deeply.

"Bell is so devotedly attached to Mrs. Carlton, that this misfortune has nearly broken her heart," said Mrs. Folsom, the mother. "I wish she had not so much sensibility."

"Why, it is rather an unpleasant affair to fail in business," remarked Mr. Mears; "but it is not very uncommon; and I don't see that it is likely to do Carlton any serious injury. He has gone over to Paris, agent for Halford & Co., a good firm; and I hear he is allowed to do something besides for his own benefit. Perhaps, in a few years, he will return rich enough to flourish as gay as ever."

"I think, 'Bell, you had better ride out to Richmond, one of these fine mornings, and call on Mrs. Carlton," said Mrs. Folsom.

"I would, mamma, with all my heart, only she lives with her odd old aunt, the Mrs. Eaton whom I used to detest so much. What made Emily endure her I never could imagine; perhaps it was that she might have a friend in time of need."

"Mrs. Carlton was incapable of such calculating selfishness, I am sure, said Mr. Mears, warmly, forgetting, in his zeal for the injured absent lady, that he was dissenting from the opinion of her particular friend.

"Oh, I dare say you are right, Mr. Mears," said Miss Folsom, with an air of *pique*. "Emily had a most sweet and winning manner, and really, she was very amiable, and always appeared to love her aunt; but that was no good reason why others should also adore the old lady. Really to me she was disagreeable. Why, she was always prying about the influence of woman, and her duties, and moral improvement, and all such obsolete stuff. She is a walking lecture; and I wonder how Emily can endure to live with her."

"You would not, 'Bell, I am very sure," said John Folsom, as he entered the parlour.

"No, indeed, brother; I could not submit to such a humdrum life. Out of fashion, out of existence, for me."

"'Bell, how wildly you talk!" said the mother. "I am feally astonished. I never heard you so unsentimental before. Reverses sometimes happen to the very rich; and you are not certain of always being among the fortunate. To be sure, I do not know what I could do if John should fail!" and she elevated her large lace handkerchief with a swell of importance.

"I know; I would die at once!" cried the young lady, vehemently.

Her brother bit his lip, and Mr. Mears, politely bowing, bade the ladies good morning.

## MATRIMONIAL CORRESPONDENCE.

"From the wreck of the past, which hath perished,  
Thus much I at least may recall,  
It hath taught me that what I most cherished  
Deserved to be dearest of all."

FROM Mr. Carlton to his wife:—

Paris, Sept. 13th, 1832.

"You see, then, dearest, that my business, or rather that of Halford & Co., goes on bravely here; and all that disquiets me is my separation from you. I often compare my former ideas of 'gay and sunny France' with the desert-like feelings that now oppress me, whenever I visit, as I do occasionally, its scenes of fame and its places of amusement. I feel little interest in these things, except as I can combine the new objects presented, with your image in my heart. 'I will describe this to Emily; I will tell this to Emily; I will keep this for Emily,' is the language of my soul when I see, hear, or obtain anything that pleases and interests me. In the hurry of business your idea is constantly present, encouraging me to exertion, and I really enjoy my toil; but when I go to the solitude of my own chamber, and find no Emily to welcome me with a smile and a kind word, I am desolate and sad.

"I wonder how any man can endure life who only lives for himself! Dearest Emily, do write often, and tell me everything about yourself and little Henry. God bless the boy!"

FROM Mrs. Carlton to her husband:—

Richmond, Sept. 25th, 1832.

"I have a precious piece of news for you, my dear husband. Henry can speak a whole sentence. What do you think it is?—but don't guess. I want to tell you the whole story. Every morning, after breakfast, I have taken him to my chamber, and there shown him your miniature; and I say to him, as he kneels to it, 'It is papa. Henry loves papa!' I wanted he should be in the constant habit of remembering and loving you, and this morning, he said it himself of his own accord, 'Henry loves papa!' Oh, I never was so happy! I laughed and wept, and caressed and kissed him, and he was

wild, with joy, because he found he had delighted me so; and he said, fifty times over, 'Henry loves papa!' How I wish you could hear him!"

"This incident, my dear Charles, has awakened a train of serious and happy reflections in my mind. I am quite a convert to my good aunt's theory, 'that happiness is always found in the path of duty'; and then she has another apothegm, which I hope I shall find as true, 'that adversity has deeper and purer pleasures than prosperity.'"

"Had we, my husband, continued in our prosperity, I should probably have lost this dear and precious pleasure of hearing my child's first sentence. Perhaps, too, instead of having his first accents imbued with filial love, and his heart strengthened in its pure feelings by his mother's caresses, he might have given expression to some angry passion or selfish appetite, that would have defiled his sweet lisplings, and might have given an evil impulse to his feelings which could never have been corrected. Oh, it is strange that woman can think so much of jewels from the mines of earth, when she holds the key of the heart's treasures! I ask myself, what amount of wealth would have given me the unutterable transport which my babe's first simple sentence has done? I can answer before God, that no amount could have made me so happy."

FROM Mrs. Carlton to her husband:—

Richmond, July, 4th, 1833.

"How do I pass my time this summer?' is your question. Well, as you seem to rely so confidently on my confession, it shall be frank and full; though somewhat abridged, for patience over a long letter is not, I am told, the virtue of man.

"First on my list of doings, I rank my maternal duties—pleasures I call them; and if you could see little Henry—he is not little now—and hear him talk—his voice is sweet as a bird's—you would think I was a good mother. And is not that something in my favour, Charles?"

"Then I assist my kind aunt in her housekeeping, and in her charities, too; for, though she has no great store of worldly goods, she is rich in good works. Do you wish to know what I contribute? My sympathies, my attentions, kind words, and encouraging smiles; and really, Charles, I never received so expressive, and, as I think, such sincere gratitude for all my bounteous gifts (you know we did give largely in London), as I now have showered upon me for my good-will merely. Charity of spirit towards the poor is more popular with them, and more beneficial, too, than charities in money.

"But amusements; ah, I have them in plenty: I walk, ride, read, and botanize. If you could see Henry and me out gathering flowers, and hear his glad laugh when he finds one—and I laugh as loud as he—you would think it was amusing to botanize. Then my music is a delightful pleasure; because then, Charles, I feel as if my spirit was communing with yours. Thank you a thousand times for your last collection, the pieces are all charming, and I can perform that 'divine air,' as you style it, charmingly; at least, so says Monsieur D—; and you used to think him the standard of taste in music. Seriously, I do think I have made great proficiency in music this last year: send me the songs you prefer, and when you return you will hear me sing like a *Prima Donna*."

Mrs. Carlton to her husband:—

Richmond, July 13th, 1833.

"You can hardly imagine, my dear Charles, how happy your last letter made me! And you think that, in one year more, you will be able to return with sufficient to pay your creditors. And then we will celebrate our independence, Charles. What a happy day it will be! and how different, too, the sources of our happiness from those which I once foolishly thought were the basis of enjoyment!"

"I will tell you why I write with such warmth; you will, I know, be glad to learn that one debt is paid. About three months ago, a poor woman came from London to our neighbourhood in search of employment. She called at our house; and aunt being out, I went down to see the woman. She looked wretched; and when she saw I pitied her, she went on to tell me a long story of troubles—how she had lived in the city, kept a confectioner's shop, and been unfortunate in her customers, till finally she had to give up her trade; and her husband, for her debts, had been sent to jail.

"I asked her why she was unfortunate in her customers? 'Oh,' said she, 'they did not pay me;' and she went on to name a number of ladies, who were foremost among the fashionables, when I was in town, as delinquents. And then, Charles, she named my name among the rest. 'There was that pretty Mrs. Carlton,' (I give her own words) 'she owed me twenty-five pounds when her husband failed.'"

"My face was crimson, I believe: the woman started to see my agitation, and then she recollected me. I do not think she had any idea before who I was. Don't think, Charles, that I am wofully altered. She had never seen me dressed so plainly; and shall I tell you the compliment? She said she had never seen me look so handsome—so very handsome; 'for,' said she, 'I never saw you have such healthy, rosy cheeks before.'"

"I remembered purchasing confectionery of her, the last winter we were in town; but I had never thought of it since. Twenty-five pounds! and the articles were nearly all furnished, she said, for our last grand party. Of the 'dear five hundred friends' I then invited, only five have ever shown a wish to continue the friendship since our failure.

"Twenty-five pounds! The poor woman said it would release her husband from jail. I sold my pearls, Charles, and paid her. And the pride

and pleasure I felt that first evening I wrote them, when you whispered they became me, was nothing to my exultation when I had sent the poor creature to release her husband."

From Mrs. Carlton to her husband:—

Richmond, January 8rd, 1834.

"MY DEAR CHARLES,—I have sad news. Poor John Folsom is dead; shot himself last Friday night! He left a note, stating that his property was gone; and that he trusted God would have more mercy for his sin than the world would have for his poverty. Mistaken man, to fear the world's contumely more than the law of his God!

"Oh, how I do pity his mother and sister! Poor 'Bell! I once loved her like a sister; she has entirely neglected me since my retirement, and so I thought but little of her; but now I feel all my affection revive. Poor girl, how I wish I could comfort her! If they had only lost their property, it would have been nothing. I could have told them that there are a thousand sources of happiness independent of wealth and fashion; pleasures which may be enjoyed without money; but what can I say now? What should I have done? How would it have been, if you, oh, my beloved husband—how thankful I feel that God has sustained us in our reverses!"

From Mr. Carlton to his wife:—

Paris, January 9th, 1834.

"What shall I say, love, respecting the sad news? I am greatly distressed. Poor Folsom! he was much to be pitied. You do not, cannot know his temptations to the rash and wicked act; but my acquaintance with his character, and with the mania of his mother and sister to be among the fashionables, has led me to most painful reflections on his unhappy fate. He was ambitious, but naturally generous and enthusiastic; and, had his pride been rightly directed towards useful and noble objects, he would have made a noble-minded and useful man.

"But his mother and sister thought only of show and *éclat*; and they bound down his spirit to the circle of the world of fashion. In their esteem, he was the greatest man who could keep the most expensive establishment, and afford the ladies of his family the most costly array. It was their reproaches and complaints which poor John dared not meet. He could have braved the world; but there was for him no rest at home.

"Do not think I am placing all the sins of my sex to the account of yours. We have a long and dark catalogue of our own; but I do think that, in our country, it is in woman's power, if she would rightfully exert her moral influence, to call forth our virtues, and even to make our more impetuous passions subservient to great and glorious purposes. But if women worship wealth, the men will sacrifice their souls to gain it.

"A thousand, thousand blessings on you, my love! You have sustained my spirit by your cheerful affection, and your example and counsel are every day strengthening in me the determination to be worthy of such a wife. Pray for me, that my heart may be purified from all sinful and worldly affections, and kept from those fierce temptations which only heavenly grace can enable us to overcome.—Your husband, CHARLES CARLTON."

## NEWS.

"Ill-favoured is the bearer of ill news."

"THERE is a gentleman below who has a letter for Mrs. Carlton," said the domestic.

"Why did he not send it up?"

"He said it was not to you, madam; but he had brought it for you to read, and he wished to make some explanations."

"Did he give his name?"

"Yes, madam. Mr. Cole."

"Cole—Cole—I do not recollect any person of that name. It is not a very elegant name,—Cole;" and Mrs. Carlton, as she hurried to finish her toilet, endeavoured by dwelling on the name to keep from her heart the agitating dread of some impending evil. What evil could she fear, except as connected with the fate of her husband? She had not heard from him for several months."

"Mrs. Carlton, sir."

Mr. Cole started at the announcement. He had not anticipated seeing a solitary wife looking so like an angel. She was arrayed in a pure white robe, no ornaments; angels never wear them.

"I have received a letter from my French correspondent, making kind inquiries respecting Mr. Carlton, supposing him in London, madam."

"Well, sir?"

"Mr. Halford wished me to ascertain if you had heard from your husband of late."

"It is some time since, about—about"—and a burning blush rushed over her cheek, and then as suddenly ebbing, left her face white as new-fallen snow."

"How long did you say, madam?"

"Nearly six months," and her voice sank with the suffocating sensation at her heart as she thought, "how long!"

"Mr. Carlton, it seems, left Paris about four months since."

"Just the time he named in his last letter that he should depart for home. Oh, what has happened! Where is he? Can you not tell me? The letter!"

"Be calm, madam; pray be calm," said Mr. Cole, in a most soothing tone. "Nothing has happened that we can ascertain. Mr. Carlton was highly respected at Paris, and this letter—you may see it—only speaks in

general terms of his departure. Be calm, Mrs. Carlton; pray do not afflict yourself. What! ho! help! the lady has fainted!"

"Strange she should faint! I never thought a wife cared so much for her husband. I wonder who would grieve if I should be lost? I'll marry, that's settled; I'll marry." So thought Mr. Cole, the bachelor, as he rode homewards.

## THE DENOUEMENT.

"Hope is brightest when it dawns from fears."

"DOCTOR, how do you find my poor little niece, Mrs. Carlton, this morning?" said Mrs. Eaton.

"No better, no better; heart sick, Mrs. Eaton. Medicines do little good in such cases."

"You still recommend travelling?"

"Yes, madam."

"A sea voyage?"

"I should say it promised to be beneficial."

"To France?"

"Yes, take her to Paris; let her see the friends of her late husband, and hear their praises of his character. Such things awaken the current of life and its thoughts; if you can arouse these, the mother will triumph in her heart, and she will strive to become reconciled to the dispensation of Providence, and to live for her child's sake."

"A Christian should always be reconciled," remarked Mrs. Eaton.

"True; but Christians need motives to obedience; and in cases of severe affliction, these motives should be placed in the most touching light. Pardon me, madam; I know I am only repeating your sentiments; those, indeed, which I have learned from your own lips and life."

"Oh, doctor, you have probed me to the quick! I am the selfish one, the unreconciled. I did not repine that the affections of my niece were given to Mr. Carlton. I felt that she ought to love her husband better than any other earthly friend. But I cannot bear that the whole heart of my precious child should be buried in the grave of her husband. I want her to turn to me."

"And so she will, madam, as soon as this torpor of grief is, in some measure, removed."

"Dear Emily!" said Mrs. Eaton, greatly moved, "She shall go to Paris. I will conquer myself. I will talk to her of her husband; he was an excellent man, and worthy her love. There! there! Is not that he? Merciful Heaven, my prayers are heard! It is Charles!"

"I sent you a long letter the day before I left Paris, detailing all the reasons which induced me to go to Constantinople; and stating also the probability that you might not receive another letter or hear from me, till I had the blessed privilege of thus assuring you of my health and happiness;" and Charles Carlton alternately kissed the pale lips of his wife and the rosy cheeks of his boy, as they were both encircled in his arms.

"The letter never reached me; and, Charles, you cannot know how this silence distressed me."

"I see it, I feel it too well, my own love. If I had anticipated your affliction, not all the bright prospects held out by Mr. Dupin would have weighed a feather. I would have come to you."

"Oh, never think of it, Charles. It is over; you are here, and I shall soon be well; and then how happy we will be! You will never leave me again."

"Never, never! I have money enough, besides paying all my creditors (except Mr. Halford, who has voluntarily relinquished his claim,) to begin business again for myself. We shall know how to estimate our blessings, how to enjoy them. We will live for domestic happiness, for social improvement, for religious duties."

"But never again, my husband, for fashionable display."

"Never, Emily."

CONTENTMENT.—Is that animal better that hath two or three mountains to graze on, than a little bee that feeds on dew or manna, and lives upon what falls every morning from the storehouse of heaven, clouds and Providence? Can a man quench his thirst better out of a river than a full urn, or drink better from the fountain which is finely paved with marble than when it wells over the green turf?—*Jeremy Taylor*.

THOUGHTFUL KINDNESS.—It is very easy, oftentimes, to do an act of kindness impulsively, and on the spur of an occasion. And, as so done, it may be often both useful and gratifying to the recipient; may confer a real favour, and merit thanks and the feeling of gratitude. But how much more beautiful and noble than this, and how much sweeter and happier in its total influence on life and character, is that kindness which is thoughtful, considerate, anticipatory; which busies itself with contributing to the good of others, which thinks beforehand what their wants are to be, and how they may be met most pleasantly and efficiently; which thus sows the seeds of happiness and progress along the commonest waysides of life, and sheds an influence of refreshment and peace on all the circle. To such a friend, the affections turn with an attachment which is full, overflowing, most intimate. Around such, grow up inevitably all beautiful associations, and grateful memories. For such friends there is nothing we would not bear, or attempt to accomplish. They are enshrined in our warmest and sweetest affections; and heaven itself takes a new charm from the hope of there meeting and communing with them for ever.

## THE PHANTOM LIGHT:

A CHRISTMAS STORY.—BY FITZ-JAMES O'BRIEN.

"So you had a visitor, aunt," said Arthur, as he entered the breakfast-room the next morning. "And you never told us anything about it."

A slight flush passed over Mrs. Tregar's pale countenance.

"If I had any suspicion that you were interested in Miss Saville's movements," she replied, coldly, "I would have been careful to gratify your curiosity; but as I thought that no member of my family could have had anxiety about such an occurrence, and as Miss Saville herself has never had the politeness to call before, although residing so close, I did not think it was necessary to mention it at all." And the old lady, having thus delivered herself, took up her work and proceeded to occupy herself very industriously.

"Come, aunt," said Arthur, taking her by the hand; "why all this animosity against the Savilles? They are no enemies of ours. It is true, they have bought nearly all our family property; but whose fault is that? It certainly cannot be theirs; they paid for it honestly, and now they have a right to it. As to Miss Saville's not having visited you, it is you who are in the wrong there. As the oldest resident; and the lady of the manor, you should have visited them. I think, if you look at the matter calmly, they are not very much to blame."

"I don't want to know Miss Saville," replied Mrs. Tregar, pettishly. "I do not see, either, why she should force her acquaintance upon me in this manner. Perhaps, knowing that she holds a mortgage upon our little estate, she feels a pleasure in patronising us. But I tell her"—and the old lady's cheek crimsoned, and her eye dilated—"that if we were without a penny to purchase food to-morrow, and that she held everything we had on earth, I would starve before she should see a Tregar or a Bell dependent on her bounty, or supplicating at her feet."

"Shame on you, aunt," cried Arthur, warmly. "Shame—to attribute such unworthy motives to one in whom you have never seen anything but that which denoted the lady. Shame—to hate an innocent person simply because she enjoys, honestly, that which once was yours. Depend upon it, aunt, that a new state of things is arising in society; depend upon it, that a time is coming, when the empty pride of birth will quail before the well-founded pride of genius, industry, and honour. Pride is becoming in a gen-

them only so long as it keeps him honest. But there is an aristocracy of labour and of intellect, and the men who have nothing to boast of but their armorial bearings, must go down before it."

"I did not think, Arthur, that I should live to hear such doctrines from your lips. You ought to be ashamed of them; they are unbecoming in one of your name. I am grieved to see that your University education has so little improved your morals. I say morals, because you appear to be a democrat; and democrats are all immoral men."

Poor Mrs. Tregar's political and social belief was limited to this one article of faith. A democrat was, in her mind, a combination of all that was horrible; a sort of indistinct compound of Robespierre, and Oliver Cromwell, with Burke and Here. Arthur could not help smiling at the old lady's final speech.

"My dear aunt," he replied, "I will not argue the matter with you. It would take more time than I can spare to convince you that a true democrat—for there are false ones as well—must be a good and honourable man; that he cannot hold pure Republican doctrines unless he be a sincere and earnest votary of virtue. The time may, perhaps, come, when you will think differently. But enough," he added, turning to the window, "there's a smart breeze getting up. I think I will get the *Water Lily* out, and take a run in her as far as Tragomena."

"Is Avis going with you?" inquired Mrs. Tregar.

"No! she is engaged on some millinery work, I believe. I dare not attempt to disturb her."

"You had better take Donal with you, Arthur. I am always nervous when you go out in that boat by yourself."

"You need not fear, aunt. The *Water Lily* rides the waves like a swan. Besides, I like sometimes to be alone upon the sea."

In a few minutes, Arthur was steering for the rapids, with his little boat bending beneath her sail all her gunwale cut the waves. With an unskilful hand at the helm, these rapids were a dangerous spot, for the tide went foaming and whirling through the labyrinth of black and jagged rocks, any one of which threatened destruction to the bark which was unlucky enough to be dashed against their sharp edges. But Arthur knew every pebble around the shores of that lake, and he dashed gallantly through the seething surf, swept like an arrow into the still waters of Barlagh Bay, which lay immediately outside. Here, as he was rounding a rocky corner, and close to the mouth of one of those magnificent caves with which the coast abounds, he beheld a small boat shoot rapidly into the cavern, and instantly disappear. A solitary female was its only occupant, and she managed her oars with such dexterity and address, that Arthur's curiosity was excited, and he determined to follow and ascertain her identity. He lowered his sail, accordingly, and taking a pair of sculls that lay at the bottom of the boat, he pulled into the cave.

It was a gloomy, but a splendid palace; huge ribs of dark glistening rock swept up the giant walls, and meeting on the dusky roof, wove themselves into massive groinings of surpassing beauty and grandeur. Many-coloured mosses and weeds hung from those pillared sides, mantling the moist stone with rich and heavy draperies. The liquid floor seemed a mass of polished heaving jet; while from the mysterious chambers which seemed to stretch within the endless darkness, sonorous and hollow music came, filling the ear with the rich murmurs of its ocean song. Anon, as some giant billow came swelling in, and swept majestically into the shadowy interior, sounds of wild, unearthly laughter would catch the ear, and discordant echoes through the fretted arches of the roof. It was no wonder that the fisherman at night, when tempted to wander into this gloomy place, should hasten away from its terrible portals, and relate to his wondering children, how he had heard the revelry and laughter of the ocean-spirits echoing within. It was no wonder that the lover of nature in her grand and sublimer moods, should seek this primeval temple, to worship and adore.

As Arthur's boat shot into the cave upon one of those long, seething swells which went booming along the grot, he thought he could discern, amid the hollow echoes of the place, the light sound of oars. This made him urge his bark faster, and in a few moments he came in sight of the object of his curiosity. The little skiff was floating idly on the wave, rising and falling on the gentle surge. Its lady occupant was lying in the prow, with a large cloak picturesquely draped around her, apparently wrapt in deep meditation. The fall of Arthur's oar, however, suddenly struck on her ear. She started and rose up; and, as the dark folds of the garment fell away one by one, Arthur beheld the stern, yet beautiful countenance of Helen Saville. Both were unprepared for the meeting, and a slight flush passed across the face of the former as he bowed respectfully to the lady.

"I am happy, Mr. Bell," commenced Miss Saville, in slow, measured tones, and with an unmoved countenance—"I am very happy to have succeeded at last in meeting you, in order that I may thank you sufficiently for the protection you afforded me the other day. I called yesterday at the cottage for this purpose, but you were out; in your absence, however, I was very agreeably entertained by your aunt;" and, as she uttered these last words, a slight sneer flitted across her mouth. Arthur felt his cheek grow warm, for he knew well the cold and chilling reception with which Mrs. Tregar had greeted her visitor.

"I am afraid, Miss Saville," he said, deprecatingly, "that my aunt's foolish prejudices must have impressed you unfavourably towards her; but I assure you, that when once you know her she is a very different person to what she appears to a stranger."

"I can easily fathom her prejudice against me, Mr. Bell," replied Helen, rather sadly; "and after all, she is not, perhaps, much to blame. But it is hard that she should hate so innocent a person as myself. Heaven knows it affords me little pleasure to be mistress of those broad acres of which she was

once the possessor. I trust that you do not hate me also for this; because though I am rich, believe me, I am also very miserable."

There was a profound melancholy in her accents, and she turned upon Arthur her large lustrous eyes, which seemed, for an instant, to have lost all their sternness of expression, and to speak only of the humility of grief.

"She does not—we do not hate you, Miss Saville," cried Arthur, earnestly; "these absurd prejudices will pass away, and my aunt will be, must be your friend."

"Thanks for the assurance," said Helen, extending her hand to Arthur—for the latter had tied the boats together. "Thanks for that kind and friendly speech. I will endeavour to show your aunt that some nobleness may lurk in the veins of even a merchant's daughter."

Arthur took the proffered hand, and as he held it in his for an instant, he thought that he could feel a slight pressure, which sent the blood tingling through his veins. It might have been only fancy, but as he looked up he met a pair of large dark eyes bent upon him with so strange and meaning an expression, that he drew back his hand involuntarily, and turned his glance another way. Helen saw, and interpreted the movement.

"Let us change the discourse," she cried, in a more animated tone; "we have had quite a family discussion. Is not this cave very fine, Mr. Bell?"

"A grand temple, indeed," answered Arthur, solemnly. "It is impossible for any man to enter here and not be penetrated with a sublime, a holy fervour. I cannot wonder now that the ancient Brahmins should have chosen to hew their temples out of the solid rock. The cavern-temples at Elora, would, in my eyes, be far more sublime than all the decorated grandeur of St. Peter's."

"My own feelings completely!" replied Helen. "I feel, when wandering among those huge arches of rock, as if I were face to face with the Great Spirit, and could in a measure comprehend him. I wonder," she added, after a short pause, "that the peasantry have not, with their accustomed fertility of imagination, invested this cave with some wild legend. I never beheld a place more suited for the footsteps of Tradition."

"Methinks it would not be difficult to weave some wondrous tale around this solemn place," said Arthur. "Everything about us is food for inspiration. The whole scene—rock, water, and twilight—is poetry imbued with shape."

"I used once to improvise a little, Mr. Bell; shall I try now and frame some wild story to suit the spot?"

"By all means; and perhaps you may have a larger audience than you dream of. The ocean spirits that haunt the place will come and hide themselves behind those green draperies of sea-weed, and listen to your tale."

Helen's eyes flashed with a sudden fire, as she seated herself in the prow of the boat, and turning to Arthur, commenced—

#### A LEGEND OF BARLAGH CAVE.

Some hundred years ago there lived upon the shores of this lake a young maiden named Aileen. She was beautiful, and of noble and generous disposition. Nigh to her father's home resided a youth called Connor, handsome as Apollo, and brave as Achilles. Aileen loved this youth, but was not loved in return; his affections were cast upon another maiden, worthy of love certainly, but not possessing one-half the charms of Aileen. The latter pined on in secret grief. Each day that she saw Connor go down to his boat and sail out to sea, a tide of blood would rush from her heart, and leave her almost fainting with excess of passion. She watched him when he sought the hills with his gun upon his shoulder, and her eyes traced him up the steep mountain paths with a sick yet loving gaze. But, oh! what untold agony that maiden suffered when, in the glorious summer evenings, as the sun was sinking in a golden sea, and the grey twilight was creeping like a fox from the hills, she beheld Connor and his betrothed wandering along the fragrant beach, with twining arms and touching cheeks. Then the gorgeous clouds that floated in the western sky, those airy unsubstantial shapes of splendour, seemed to her distempered fancy to change into faces that stared at her with fierce mockery, while the azure heavens glowered upon her with myriads of sneering eyes. The low wind, as it wandered along the beach, sounded in her ear like derisive laughter. The very sea-birds that whirled above the calm surface of the lake, seemed to shriek wildly to her tales of anguish and despair. As time wore on, so much the deeper did her vain love eat into her soul and inflame her brain. Connor knew not this. He knew not that the hollow eyes and pale cheek which now never deserted Aileen, were all the fruits of love for him. When he met her, he was kind and gentle to the suffering girl—never dreaming that each soft word he uttered planted a fresh arrow in her torn bosom. Nay, once even he saved her from an imminent danger, and bore her in his arms to her father's cottage, when, if he had but known the despair that racked her heart, he would have left her to perish rather than restore her to a life which was nothing but one long calendar of anguish. At last, the passion that burned within her became too great to be concealed. She determined to make known to Connor her devouring secret. Before doing so, however, she thought she would consult the Spirit of the Hill, who dwelt in a vast breezy cave, on the summit of Cunnah Comma, and endeavoured to discover from him some means of winning Connor to her side. One starry night, when the summer dews were falling like a gentle rain, and nought living was on foot save the fox and the wild cat, Aileen left her restless bed, and stealing softly from the house, took the wild and rugged path that led to the summit of the mountain. As she trod that broken and uncertain footway, strange fancies haunted her. The tall dark pines that fringed the narrow path seemed instinct with a sombre life, and nodded and whispered to each other gloomily. Indistinct and shadowy shapes rushed wildly through the thick brushwood, and chuckling laughter echoed through the trees. There was not an old grey stone that raised itself from out the coppice, which

did not take the form and aspect of some terrible and unearthly thing. Aileen walked, surrounded by a mist of horrors. At length she reached the summit of the mountain, and wended her steps to the cave where dwelt the Spirit of the Hill. Large grey clouds continually veiled the entrance of this solemn place, and within, the plaintive winds chanted all night and day their mountain hymns. Aileen stood upon the rocky threshold, and with a bold and fearless voice, called upon the Spirit. A long, hollow moan, that sounded like the voice of some vanished year, replied to her summons.

"Spirit of the Hill!" she cried, "I summon thee to answer me. How shall I attain either happiness or death? Tell me, thou unseen being, how to win Connor or to die!"

A moment's pause, and then the answer came from the depths of the cave in tones like those of the tempest in a forest.

"Seek the cave of Barlagh to-morrow eve," said the hollow voice of the Spirit, "and there wilt thou find rest."

"Thanks, thanks!" cried Aileen, as the murmurs died away along the hill. "To-morrow, then, I shall perhaps rest in Connor's arms."

She trod the downward path that night with a lighter step than she had known for months; and, happy in the belief that Heaven had at last taken pity on her hopeless love, she sought her bed, and sank lightly into

The evening sun was sinking into an amber sea, when Aileen, sought this cave of Barlagh. As she urged her little boat through the sea with a steady hand, her heart beat wildly in her bosom, and delightful visions of bliss and love floated between her and the gorgeous sky. That destiny would lead Connor to the cave, and that there, through the intervention of the Spirit of the Hill, he would reward her attachment by a return

passion, Aileen felt quite assured. No shadow of misfortune clouded her soul. No forbidding angel stood between her and the paradise of her imagination. The foaming waves of the rapids soon brought her little skiff abreast of the cavern's mouth, and sweeping round the rocky corner, she was about to enter, when a blue pigeon flew wildly out and almost skimmed her face. She started, and had scarcely time to utter an ejaculation of surprise, when a loud report rang through the echoing chambers of the cavern,

she fell back in the stern-sheets, with her life-blood welling from her bosom. Another second, and a boat shot out rapidly from the dusky cave, and Connor, who stood in the prow with his gun still smoking in his hand, beheld with horror the form of the bleeding girl. He jumped wildly into her boat, and lifting her in his arms, tried in vain to arrest the flight of her ebbing soul. Then there, with that solemn cave-temple rising grandly above her head, and none to look upon her agony save Him and the golden sun—there, in that hour of mortal trial, with the last energies of life quivering and flickering upon her lips, did Aileen pour into Connor's ear the history of her despairing love. She told him of her long days of misery and sorrow, of her sleepless nights, of her sick and wretched soul. She told him how deep, how ungovernable, was her love for him, and how she strove in vain to conquer it, but could not. She related how she had sought the Spirit of the Hill, and what reply he had given.

"He was right!" she said faintly, for her voice was growing weaker each moment, and the shades of death were creeping across her pale face. "The Spirit was right. I am dying in your arms, Connor; and is not that finding rest?"

Sadly and sorrowfully did Connor hang over the dying girl. Pained by her sad history, wrung with despair at having been the innocent cause of her death, nought but the remembrance that he had some one to live for prevented him from terminating his existence with his own hand. But he knew that there were longing eyes and anxious hearts which awaited his return, and he refrained. Aileen was now speechless, and the coldness of death was chilling her frame. Yet still her dying-eyes sought his, and her white lips moved and told him, though he heard no sound, that her heart was uttering a fond farewell. This lasted but a few moments. When the last sunbeam had ceased to cast its golden shadow on the heavens and the ocean, her spirit fled.

"A sad tale," said Arthur, as Helen ceased, "a sad tale, but eloquently told. You improvise well, Miss Saville."

"It requires but little talent to speak, when the heart feels what the lips utter," replied Helen, with a strange and meaning emphasis.

Arthur looked at her involuntarily. A change seemed to have come over her countenance. The usually stern expression of her features had fled, and a deep and inward fire shot from her large, dark eyes, and crimsoned her pale cheek.

"You think my speech singular one," she continued, hurriedly, as if anxious to bring forth something that was struggling within her, and yet half-unwilling, half-afraid to risk its utterance; "but change the characters of the tale, and some of the incidents, and I have told my own story."

"Miss Saville," stammered Arthur, colouring, "I do not—that is, I have no wish to penetrate into your confidence, I assure you."

"No one has a stronger claim upon my confidence than you have," interrupted Helen, in tones that grew more excited every instant. "To you I will unfold a secret that none but you must hear. View what I am about to utter in whatever light you please, you shall listen."

A chill came over Arthur's frame; he guessed what was coming, and feared it.

Helen bent her eyes upon him with a fixed gaze that almost penetrated his soul. After a short pause, she spoke:—

Arthur Bell, I see by your countenance that you guess what I am about to say. You are, perhaps, astonished at my boldness; if so, I cannot help it. If you know aught of woman's heart, you must be aware that there are moments when she might as well strive to bridle the waters of the winter torrent, as check the utterance of the passion that riots in her bosom. I am under

such an influence now. We met by accident, Arthur. Perhaps it had been better that we had never met; but it was so, and now regret is vain. We met under peculiar circumstances: you saved my life, and this invested that meeting with a hue of romance, which branded its memory more deeply on my heart. We were both young, and you were handsome and attractive. My life, since childhood, had been solitary; spent, for the most part, in wandering over those hills with no other companions than my thoughts. Was it strange, then, that when you crossed my path, I should feel towards you as I never felt to human being before? that in short, I should love with my whole strength, with my whole soul?"

"My God!" cried Arthur, bitterly, burying his face in his hands, "this is indeed a great misery!"

"It is not!" Helen exclaimed, with a passionate eagerness, "it should not, need not be a misery. I am young, rich—they tell me I am beautiful. Arthur, you need not blush to own me as your bride!"

She leaned over, and laid her burning head upon his brow. The touch, light as it was, aroused him from his apparent apathy, and, with a sudden motion, he flung her arm from him, as if it were some unwelcome thing.

"Woman," he cried, with intense scorn, flashing from his eyes, "there is no crime greater than that of one who strives to tear down the altar of sacred love, and set up an impure idol in its place. You tempt me in vain. I do not covet your wealth; your fair face charms me not, for the wicked have no beauty."

"Do you scorn my love, then," she said; "take care what you are about, think of what you are doing, Arthur Bell. The fate of those you love lies in your hands, do not cast their happiness to the winds."

"I know not what you mean, Miss Saville," replied Arthur, haughtily. "My conduct in such a matter as this can have no influence over the destinies of those I am interested in. They are above being affected by such trifles."

"Let us not speak thus, Arthur," cried Helen in an altered tone, while tears glittered upon her cheeks; "do not repulse the warm and true love which I offer you. It is a bitter pang for me to have thus, as it were, forsaken my sex, and entreat you to love; do not heighten that agony by telling me that I have degraded myself in vain."

"Miss Saville," replied, Arthur in a grave tone; "it were, perhaps, an insult if I said that I pitied you, yet I cannot help saying it—I do pity you. I feel for you because the painful position in which you have placed yourself, admits of no alleviation on my part; the only one I could offer you, that is my heart, is irrevocably another's."

He ceased to speak, and looked sadly upon the beautiful but misguided creature before him. She had seated herself in the stern of the boat, and was looking fixedly into the dark water before her, apparently heedless of his words. Suddenly, she rose, and casting upon him a glance of intense feeling, addressed him in accents which, by a great effort, she endeavoured to render calm and steady.

"You have repulsed and scorned me," she said. "the love which I offered you you fling away as the tree casts off a withered leaf. You have witnessed my degradation, but you shall feel my vengeance. Before many days pass over, she for whom I am rejected shall be without a home."

As she ceased she suddenly took up the light oars, and giving a few energetic strokes, shot rapidly out of the cavern. Arthur gazed after her astounded. The nature of the vengeance to which she alluded was, as yet, a mystery to him, and he turned his boat homewards with a heavy premonition of evil weighing upon his heart.

(Continued in No. 6.)

## SHADOW AND SUNSHINE!

OR, WHO SHALL WIN?

BY CHARLES CRAYON.—(Continued from page 37.)

A RATTAPAP at the door put an end to Fenning's soliloquy. In an instant the dark cloud passed from his brow, and his countenance was calm and untroubled as the sea on a summer eve.

"Come in," said he, in a voice which afforded a striking contrast to the deep, stern tones that had fallen from his lips.

Obedient to his invitation, the door opened, and Duval stood before him.

"Good evening, my boy," he ejaculated merrily, as he entered the room.

"Ah, good evening, Duval! good evening. You are just punctual to the hour."

"I believe so. The fact is, I am learning a lesson from your model character, and am determined to imitate it in future."

"Ha, ha! you are inclined to flatter me. But be seated."

"Oh, certainly; I never wait for ceremony;" and Duval drew a chair to the side of his companion, and threw himself into it.

"A pleasant day this has been," he remarked, carelessly.

"Yes; decidedly so."

"And I have enjoyed it, too."

"So I should think, for you seem remarkably happy this evening."

"Happy! why certainly, my dear fellow, I am always happy. The fact is, I enjoy life."

"I am inclined to believe you, there," replied his companion; but if Duval could have marked a bitter look that passed over his countenance at the time, it would have given him an uncomfortable feeling. But he did not perceive it, and he went on.

"Why, certainly, my boy; what is the use in being miserable when we have all we could desire to render us comfortable?"

"Sure enough!"

"Isn't that sound doctrine?"

"Very likely; but mankind do not usually receive it."

"No; and if they did, they would not live up to it. I am different."

"Undoubtedly."

"And the grand distinction lies in this fact: I am a philosopher."

"I believe that."

"But they are not. If I have any object to accomplish, I proceed directly to it; but they go round a long journey to do it. They labour a life-time to accomplish what I should do in a week."

"Often they do."

"And then, you know, they waste time in lamenting imaginary ills, while I am overcoming real ones if there are any in my way. If I have an end to attain I jump straight at the result, and am not troubled with silly scruples."

"Yes. You remind me of the characters in *The Pilgrim's Progress*, who were so anxious to reach the road that they climbed over the wall instead of entering at the gate."

"Ha, ha! not bad, I must confess."

"But I suppose you know how they came out at last, eh?"

"Oh, stop, Ned; stop where you are. I am ready to surrender at discretion. You are altogether too witty for me to cope with."

"Really, you are inclined to flatter me."

"Oh, not at all, not at all."

"Duval, I am almost tempted to envy you, you seem to live so easy."

"Well, my condition is not as bad as it might be, certainly."

"No, I think not. You are taking your good things in this life with a vengeance."

"Ha, ha! I believe you are not far from the truth. But the fact is, I am always comfortable if my prospects are dark; and now that my heartiest wishes are accomplished, and my darling plans are being consummated, I am in the best of humours."

"I congratulate you on your success. Where have you been to-day?"

"Where you would not have guessed, from my jollity, that I had."

"And where, pray!"

"At a funeral."

"You are jesting."

"By no means."

"Then at whose?"

"Morton's."

"Morton's?"

"Certainly; did you not know it was to-day?"

"I did. But I did not suppose you would be there."

"And why not?"

"Did you not seek his life?"

"Nay, Fenning, do not speak of it in such terms. He was in my path, and I sought to remove him out of the way."

"I appreciate the difference. But do you not think this is carrying matters too far?" said the villain's companion, casting a piercing glance at his countenance.

"Yes—that is, I must confess it is rather unpleasant business."

"And hazardous, too, sometimes," added Fenning, in a deep tone.

Duval started. He cast a look at the countenance of his wary rival; but it was calm and passionless as the evening sky.

"True," he replied; "but then it is necessary, you know."

"How?"

"In this case, for instance. Was not the knowledge Morton possessed placing me in danger?"

"If he revealed it."

"And he might have done so at any time."

"But think you he would?"

"I wished to prevent all possibility of it."

"And you would, if your plan had succeeded."

"Yes; but fate did the business for me."

"It was rather singular."

"However, I was not sorry. In fact, I had rather he perished as he has, than that he had fallen by my instrumentality. But, as you say, it was singular, that just at the moment he seemed to have escaped, destiny interfered, and all his plans were frustrated."

"That was mysterious, indeed," replied Duval's confidant, with a look that expressed more than, with all his knowledge of the world, he could understand.

"But," added he, a moment after, "while Morton lived I could never have been at peace."

"But he is gone now."

"Yes; and so is another."

"Of whom do you speak?"

"The stranger he was accused of murdering."

"Ah, yes! I had almost forgotten him. So you are free from two dangerous persons."

"Thus perish all my enemies."

"And still this seems rather like a hazardous proceeding. Most men would risk the chance before they took such a course."

"I like to be on the side of security. Live men may not tell tales, you know, but dead ones cannot."

"You make practical philosophy of this."

"Certainly; what is theory without practice? Now, you perceive these voices are hushed for ever. They will never trouble me more."

"No; that is, unless they come up from the grave to visit you at some future time." These words were uttered in a peculiar manner, and the speaker cast another glance of his piercing eye at the dark-hearted man beside him.

"Come, come, Ned," said Duval, with a slight shudder; "I am not superstitious, you know, and of course I reject all such nonsense; but I must own that your suggestions make me feel vastly uncomfortable. Do change your tone; you hardly seem like yourself to-day."

"At all events, I have no difficulty in recognising myself."

"No, I presume not. But come, take a stroll with me."

"Not to-night, I thank you. I have a particular engagement. Any other time."

"Very well, then. Let it be to-morrow evening. My hopes are becoming realized so fast, that I am easy to please."

"So I perceive. To-morrow night, then."

"Yes; at eight o'clock. I will be punctual."

"And I will be in readiness."

"Well, keep cool; and may you be as successful as I have been. And now, good evening."

"Good evening, Duval," and that worthy left the room.

"Ah, villain!" muttered Fenning, the moment he was gone, "if I am as successful as you imagine you have been, your doom is sealed. But I had almost suffered the warmth of my feelings to expose me before you to-night. In future, I will be more careful. The game progresses; who shall win?"

## CHAPTER XI.

"There was a sound of revelry by night,"

The lamps shone o'er fair women and brave men  
A thousand hearts beat happily; and when  
Music arose, with its voluptuous swell,  
Soft eyes looked love, to eyes that spake again,  
And all went merry as a marriage bell.  
—BYRON.

IN a pleasant village, about fifty miles from the city, a large assembly was gathered. It was a proud, aristocratic looking residence, and friends from far and near had assembled to the fête given by a rich, haughty man, who had retired from the city to spend his days in that quiet village. And on this evening, beauty and fashion had congregated there; the spacious halls were crowded to their utmost capacity, and as rich strains of music fell upon the ear, and fair forms flitted by in the mazy dance, many would have been ready to envy those who had fallen down to worship the idol of gold, and, in return, had received liberally of the gifts of mammon.

While the hilarity was at its highest point, and the wild excitement caused the blood to dance merrily through young hearts, the cheek to flush, and the eye to sparkle, two new spectators entered. Their names were announced as Mr. Raymond and Mr. Wallace; and many flocked around the former, who, it seemed, was generally known among the guests. He merely passed a few words with them, presented his companion, and, in a few moments, the two sought a retired spot, where they could observe all that was going on, without taking part in the festivities. Here we have opportunity—let us scrutinize them more closely.

The one introduced as Raymond, is a well-formed, young-looking man, with light brown hair and blue eyes. His features are regular, and well-formed; in short, he is a good-looking man. But wait, there is an expression we do not like; as we observe him closely, and mark the lines of his countenance more narrowly, we notice a loose air and look, and must come to the conclusion that he is a man who is governed by no strong principle within, and who would not be put to any great inconvenience by taking a course diametrically opposite to the promptings of his conscience, always allowing that he was possessed of that oft-mentioned but seldom found companion of humanity. But it is evident that in the world, where men look only at the surface, he would pass as a general favourite; and from his costly apparel and the suavity of his manner, we deduce that he has been accustomed to associate in high—we mean fashionable society.

And his companion—turn we to him. What a contrast between them in feature. How his dark, curling locks contrast with the light brown ringlets of the first, and his piercing eye renders more light the blue orbs beside him. And then that moustache—but surely we have seen that before: who can the stranger be? As he turns his head and a smile flits over his countenance, suddenly we remember it is Duval. But then he is introduced as Mr. Wallace: how can that be? Perchance his real name has become so far dishonoured that he chooses to adopt a fictitious one, even here among strangers. Then why is he here? Can he not find enough to attract his attention among the wealthy and proud of his own city, without roaming to this quiet village? Let us listen to the conversation, that it may enlighten us.

"Well, Duval," said the one introduced as Raymond, "do you now regret that I brought you here?"

"Do not call me Duval—remember my *alias*," replied he, in a low tone.

"O, yes, I shall be sure to remember it among the crowd, I assure you. But here, you know, it makes no difference."

"It may; there are so many present, that some of the company are liable to be in hearing at any time, even if they do not observe us in this quiet retreat."

"There may be some danger of that, so let us talk lower."

"Indeed, I am thankful we came; I had no idea of meeting such a large assembly here."

"Is it not rich?"

"Magnificent! I had no idea of finding such a palace. Why, I have seen few residences at home that equal it."

"I presume not. And if you could walk out in the day-time, and view the prospect; the garden, the lake, over the brow of the hill, there—all of which are fit for a prince—you would indeed think you had beheld few situations that could equal it."

"Look out at this window. What a garden! and then what a glorious prospect! But how the deuce did the old boy who owns it—Gordon, I think you called him—happen to find this spot?"

"Yes, his name is Gordon. He is an eccentric old nabob, and some time when he was travelling, he stumbled on this place. He was instantly taken with it, for it was strikingly beautiful and romantic then, though not to be compared with its present situation. He determined to purchase it at any price, rather than not become its possessor, and he did so. Since then he has lavished time and money most profusely, in making it what it is."

"And he spends all his time here?"

"Yes; that is, he visits the city occasionally; but he will never take up his residence there again."

"I should think not. A man who owns such a paradise as this, ought to keep out of society and enjoy it."

"So he seems to think. At all events, he does remain here and enjoy it."

"But he must be wealthy."

"Wealthy! why, my friend, he has property enough to purchase a dozen such residences—that is, if they were to be found; which, by the way, I very much doubt."

"He ought to be a happy man. If I were the possessor of such a residence as this, I would never leave it for the city—not I. But I would seek out some fair companion, and spend my life here with her."

"Really, you would become an exemplary man, at once, wouldn't you? I think, then, it is a sad pity that you have not done so before now, and I should advise you to do so as soon as possible, for I think it will take you the remainder of your life to repent of your past sins."

"Ha! ha! Then how long do you think it would take you to perform the same work?"

"I give it up. But, joking aside, you would not be obliged to go far to find such a companion as you spoke of."

"How?"

"Do you see that form just beside yonder pillar?"

"Where?"

"Come a little further this way, and you can see. There, surrounded by so many spruce young gentlemen."

"Ah! yes; I see now. What a creature!"

"You may well think so."

"What a glorious form! Raymond, I have looked on beauty in almost every clime; I have associated with the fair, till I was wearied with satiety, but my eyes never rested on a being so fair as that. But who is she?"

"You would never guess."

"Then do not keep me in suspense."

"Well, if you are so anxious to be informed, know that the fair creature, as you call her, is no other than Ellen Gordon."

"What! the daughter of the old fellow who owns this mansion?"

"Yes; and moreover, she is his only child." [See Engraving, p. 40, No. 3.]

"I do not wonder that this residence seems so beautiful, with such a being here. She ought to make the veriest cot on earth a paradise."

"You are in raptures; but I do not wonder at it. Many have been so before you; and some have even had the temerity to sue for her hand."

"And were they all unsuccessful?"

"Every man of them."

"She is an heiress?"

"Certainly; when the old gentleman drops off, as you know he must some time, she will come into possession of all his property?"

"And you are a personal acquaintance?"

"O, yes; I have been on familiar terms with the family almost since my recollection. When Gordon lived in the city, his residence was only a few doors from my father's."

"You have maintained the acquaintance ever since?"

"Yes; and so I flatter myself that I am pretty well posted up in regard to the character of Miss Ellen. The truth is, she cares not a fig for those who have sought to win her. They have endeavoured to flatter her so much, that she despises them all for a set of fools, as they are. She really has more sense than I should have supposed a person in her circumstances could have; been blessed with. But she has a high, haughty spirit, though I know her to be warm-hearted and affectionate."

"Raymond."

"Your servant."

"Present me to her."

"You?"

"Certainly, man; why do you look so struck with wonder?"

"I am trying to imagine what new project you have conceived so suddenly."

"What do you fancy it is?"

"That is what puzzles me. I cannot imagine, unless you think of attempting to win her; and that, of course, you would not, after so many have proved unsuccessful."

"Of course not," was the reply; while a significant smile illumined the face of the speaker.

"I really believe you contemplate attempting it. Well, I must say that your epontery is most surprisingly large. However, I will introduce you with the greatest pleasure, and may much success attend you."

"You sneer now; but let me ask, if you ever knew me to abandon a project after my mind was once formed?"

"The new comer leisurely laid his hat upon the table, and threw back the garment which enveloped him. Mr. Gordon saw in a moment that the man was none other than the one who had paid him such a troublesome visit on the evening previous to his daughter's wedding."—See Chap. xv.

"I never did."

"Then, think you I shall do so in this case?"

"Because you have kicked men of straw out of your path, it does not necessarily follow that you will be able to demolish a marble statue. But, come, I am all impatient to witness this new farce."

So the two friends, of whose characters the reader may form something of an idea from the conversation we have just recorded, wended their way through the gay assembly, arm in arm, to the spot where the daughter of wealth, in whose honour the magnificent *fête* had been given, stood, surrounded by a circle of friends. Raymond presented his companion as Mr. Wallace, an old acquaintance of his; and that gentleman, with all the self-possession imaginable, commenced the task of making himself agreeable to the fair being who now occupied his thoughts. The impression he made was evidently favourable, for the most bewitching smiles rewarded his efforts; and when he had monopolised her attention as long as he thought propriety would allow, and turned to another part of the room, the dark, lustrous eyes of the heiress still followed him. Ah, Ellen Gordon, have a care, or your heart will be taken prisoner ere you are conscious of it!

## CHAPTER XII.

"Oh! a heart so rich in holy  
Love, and sweet devotion; lowly  
As a little child; that met  
My spirit's eyes; could I forget  
Its gentle charms?"—Miss M. A. DENNISON.

A FEW months had elapsed since the scenes last related. It was evening. The business and turmoil of the day was over; the hurried tramping of feet, the confused hum of voices had ceased, and the Queen of Night was casting her silver rays on the comparatively quiet streets of the city. A brilliantly illuminated mansion is before us; let us enter. A select, but not large company of friends is gathered here. It cannot be a mournful event which has congregated them, for their faces are radiant with smiles; and they are chatting as merrily as school-girls after vacation.

And who is that portly, corpulent old gentleman, quietly sitting in his velvet stuffed arm-chair, with round, plump, merry-looking cheeks, and a countenance which, notwithstanding the extra quantity of unsullied linen, that might produce fatal consequences, by severing his ears, if he turned his head too suddenly, is the very personification of peace and content. Surely we cannot fail to recognise the countenance: it must be that of our old friend, Mr. Montrose. He looks as hale and hearty as ever, and from some cause unknown to us, he is evidently much pleased this evening.

An elderly matron is by his side, and the manner in which her tongue

runs, as she converses, one question following another with unheard of rapidity, would be a caution to any young lady; though we wish to have it distinctly understood that we do not intend to intimate any idea derogatory to the volubility of that interesting class.

Mr. Montrose, however, bore the inflictions of the old lady like a martyr, and by considerable effort succeeded in answering about one in every seven of her interrogatories. At the same time he was very busily engaged in watching the acts, and listening to the merry laugh of a group of fun-loving, mischievous-looking girls, who were standing in another corner of the room.

But suddenly all the noise is hushed: the door opens, and an elderly gentleman, clad in sable garments, and with hair as white as the driven snow, enters. He is warmly greeted by Mr. Montrose, and after going through the ceremony of shaking hands with every person present, he then seats himself beside that gentleman, and is soon engaged in a friendly conversation with him.

Now that we have had time to scrutinise the new comer more closely, we conclude that he must be a clergyman. Yes, there is no doubt in regard to that; but what can he be here, for it is very evident that he is an expected guest. While we are perplexing ourselves with the question, an end is suddenly put to our cogitations by another interruption.

The door opens again, and we hear a rustle of silks and the sound of steps. Another moment and we behold two of our characters, whom we have lost sight of for some time. That erect, manly form can belong to no other than Whitman, and the fair being by his side must be Lillian Montrose, the young lady introduced in our first chapter. Ah, now we comprehend the cause of our old friend's complacency—there is to be a wedding! Now they are standing—their hands are united—the simple but impressive ceremony is going on; the tones of the clergyman's voice first greets the ear, in those words of holy writ, "What God hath joined together, let not man put asunder;"—then they ascend to seek the blessing of Him who directs all events—and the tie is finished that is to connect two hearts firmly, inseparably, in life's journey. [See Engraving, p. 56.] Then all present salute the bride; the playful girls, who have restrained their merriment while the ceremony has been going on, now resume their fun, and their laughter is again heard.

The clergyman congratulates the happy father on the addition to his family, and trusts that the new relation may prove a happy one. Mr. Montrose thanks him for his kind wishes, hopes that Heaven may bless his dear boy, as he calls him; and is sure, if Lillian proves affectionate as a wife, as she has been kind as a daughter, they will have no cause to regret the new relation. At the same time the happy man is obliged to cough slightly; and, despite all his efforts to conceal them, a tear or two is visible on his cheek.

The clergyman remains awhile, conversing with all the assembly; forgetting his usual reserve, and even going so far as to be guilty of a few jokes, at

which, of course, everybody is exceedingly pleased. Then he remembers that his duties are so arduous, that he cannot allow himself to remain longer; and, after bidding every one a hearty farewell, he takes his leave, not forgetting, by any means, to pocket a bank-note, which the new made bridegroom slips into his hand as he bids him adieu.

Then the solemn faces of the friends begin to relax, in some measure; the merry laugh is heard; the girls keep up their chatter, and the old lady is still determined to do her part of the conversation. So with hilarity and mirth, with music intermingled, by way of variety, the evening swiftly passes away, and every one is astonished when they learn how late it is. Then they bid each other a hearty farewell; soon they are all gone, and the young lawyer and his companion for life, accompanied by a few friends, start on their bridal tour.

Turn we now to a picture by no means so agreeable to our feelings, but which must be seen, to maintain the thread of our narrative.

In his apartment, which we have before mentioned, Fenning was quietly sitting, with a new publication in his hand. The trace of anxiety, sometimes visible in his countenance, had disappeared; and any one would readily have concluded, from its expression, that he experienced no anxiety in regard to the success of the fearful game he was playing.

"I wonder where Duval is," he exclaimed at last, throwing aside his paper, "I have not seen him for a long time. I have known of his leaving the city several times within the last two or three months, and being absent a few days. He has surely some new project in view, and I must ascertain what it is. I can do so easily, though from the attention he directs to it, I think it must be an important one. However, be that as it may, he shall be foiled in it. He little fancies that he, who has so often spread nets for others, stands on the brink of a precipice himself, from which a single blow would dash him. However, let me be patient; I must wait till the proper time before I take any powerful measures, and then my revenge will be complete. Meanwhile, let me ascertain what new aim is attracting him"—just at this point the soliloquy was interrupted by the sudden entrance of its subject in *propria persona*.

"Ah! good evening, Duval," said Fenning, merrily; "you are quite a stranger of late. Pray be seated."

"O, certainly; by all means. As you say, I have been somewhat of a stranger. How have you prospered, this long time?"

"As well as usual; though I have been wondering what had become of you."

"I have been busy, I assure you."

"So I supposed."

"And on rather important business, too."

"It should have been, to demand your attention so long."

"There you are right; but it is not yet completed."

"Really, it occupies considerable time."

"Yes; but I can afford time for the consummation of such an object."

"Then pray, sir knight, sit down and recount your adventures to me."

"Just what I was coming at. My dear fellow, congratulate me; I am the most fortunate man in the world."

"O, I do congratulate with all pleasure, I assure you."

"The fact is, Dame Fortune is smiling upon me in the kindest manner."

"You were always a favourite with that respectable old lady."

"But never so much as at present. I am about to take a step that I hardly ever have dreamed of before."

"Do enlighten me."

"I will: I am about to be married."

"Married?"

"Why, certainly, man; how surprised you look."

"Then all I can say is, I look very much as I feel."

"Is there anything so singular in a man's getting married?"

"Not in most people's; but there is in your case. And when is the happy event to take place?"

"In just one week."

"So soon? and is your bride elect worthy of you?"

"Certainly."

"Is she intelligent?"

"Decidedly so."

"Spirited?"

"You would think she was."

"Accomplished?"

"Perfectly."

"Amiable?"

"A perfect model, if treated aright."

"Young?"

"Only eighteen."

"Beautiful?"

"Yes; superbly, gloriously beautiful."

"And wealthy?"

"In anticipation of a small fortune."

"How small?"

"Why, something like a matter of a hundred and twenty-five thousand."

"You jest."

"I was never more serious."

"Where did you find her?"

"In a village about half a hundred miles from this."

"And what village? Excuse my curiosity."

"Certainly. She resides in L——."

"But how did you find her?"

"Raymond introduced me."

"And are you sure of her?"

"O, yes; as I told you, the time is fixed."

"And have you her father's consent?"

"By all means; you cannot imagine how I walked into the old affections."

"Then you are indeed fortunate."

"So I think. She had refused several offers before I saw her."

"Then how did you chance to be successful?"

"I studied her character thoroughly, before I made any advances."

"And studied it pretty deeply, too, if I may judge from your success."

"Well, I believe I did. Now you can see why I have been so busy for the last few weeks. By the way, is her name Duval?"

"Who then?"

"I am Mr. Wallace. You understand, I thought it expedient to have a *nom de plume*."

"Well thought of."

"So I believe. But come, let us take a walk this evening."

Fenning assented, and the two strolled away.

## CHAPTER XIII.

"Retire, or taste thy folly!"—MILTON.

"CAN you direct me to the residence of Mr. Gordon, sir?"

The person who made this inquiry was a tall, well-formed man, who was so completely enveloped in the folds of a black cloak, that it was impossible for the villager he addressed to form any conjecture in regard to his character or business. However, after regarding the inquirer with considerable curiosity for a while, he replied: "Take the second street on the left, and it will lead you directly there."

"Thank you, sir," and in a moment the stranger was hurrying on his way.

It was a dark, dreary evening; not a star was to be seen, and threatening masses of clouds obscured the heavens above. But the stranger strode onward, turning neither to the right nor to the left, for he had evidently a purpose to accomplish, and so he heeded not the gathering of the clouds, or the moaning of the wind. The clock of the village church rang out in clear tones upon the air, as it tolled the hour of ten; and at that moment the stranger ascended the marble steps of a gorgeous mansion that stood at the head of the street to which he had been directed. He cast a single glance at the door plate, and, by the light of a neighbouring lamp, he was enabled to read, in bold letters, the name—Gordon. This seemed satisfactory, for he gave the bell a sudden ring. He waited impatiently a moment, but it was not answered, and he seized it again, causing it to ring so loud that he could hear it distinctly. In a moment he heard footsteps; the door opened, and a man stood before him, apparently regarding with curiosity the individual who had given him such a peremptory summons.

"Does Mr. Gordon reside here?" inquired the strange visitor.

"He does, sir."

"Is he in?"

"Yes, sir."

"I wish to see him."

"He is engaged, sir."

"That makes no difference; my business is too urgent to be delayed."

"He cannot see you this evening."

"Tell him a person who has important business with him, is waiting."

"I am sure he will not see you to-night, sir."

"Deliver your message," said the stranger, imperiously.

"It will be useless; but I will do so. What name did you say, sir?"

"I gave you no name, sir. Be as brief as possible."

The attendant turned away, and left the persevering visitor on the steps. Some moments elapsed ere he returned, during which considerable impatience was manifested by the *outsider*. At length the servant returned.

"Just as I expected, sir; he will not see you this evening."

"What message did he send?"

"That if your business was of importance, you might call on the morrow; but that he was not in the habit of seeing visitors at such an hour as this."

"Never mind that; I must see him."

"He will receive you to-morrow, then."

"But I must see him to-night."

"I have twice said that you cannot, sir."

"Nonsense, man. I tell you I must and will see him before I sleep."

Then, sir, if you will not be refused, come in. But remember that you are answerable to my master for this, and not to me."

"O, yes; I understand. Meanwhile, be as expeditious as possible."

Accordingly the servant ushered the man, who would not be refused, into the presence of his master.

(Continued in No. 6.)

**CHEAP HYDROGENOUS LIGHT.**—We some time ago noticed a French invention whereby an abundance of hydrogen gas, nearly pure, was said to be got by decomposing steam in retorts charged with wood charcoal intensely heated, and made fit for illumination, after the absorption of its carbonic acid in lime, by merely passing it through platinum wire gauze over the ordinary argand burner, the platinum being scarcely, if at all, oxidizable, and therefore said to be subject to little or no waste, though used for some years. It is said that the patent for this invention is in successful operation in Paris, and that gas is thus produced at 1-16th the average cost of coal gas. Any ordinary gas work, it is said, may be easily made to produce in the platinum cages of coarse being applied to every burner. The purity and the heat thus attainable would render such an invention, if otherwise of practical importance, useful for other purposes besides mere illumination. It is said to be in use by silverplate-workers at Paris.—*Builder*.

## THE HOME COMPANION PORTFOLIO.

We strongly recommend to our Subscribers the adoption of the "HOME COMPANION PORTFOLIO," for the preservation of the Weekly Numbers or the Monthly Parts. These Portfolios are made with elastic cords at the back, to hold Fifty-two Numbers, or Twelve Parts, which comprise one Volume. At the end of each year they may be taken out and bound, and the Portfolio may be employed to preserve the Numbers or Parts of the succeeding Volume. The price is TWO SHILLINGS. The outlay will be saved by the preservation of the Numbers, which, hereafter, may be difficult to obtain. The Portfolio is beautifully embossed, and illuminated with silver, by a new invention introduced by LEIGHTON, SON, & HODGE. It

is an ornament for the drawing-room table.—Order of any Bookseller.

The Monthly Parts of the HOME COMPANION (price 5d. or 6d. each) will be issued with the Monthly Magazines. A number will appear weekly, price 1d.

TRADE NOTICE.—A Number of the HOME COMPANION is issued at 69, Fleet Street, every MONDAY at Nine o'Clock.

The FIRST MONTHLY PART will be ready with the Magazines for December price 6d.

## THE HOME COMPANION:

A WEEKLY MAGAZINE.

## INVECTIVE.

WHEN John Wesley was labouring among the people, the changes that he effected, even when beneficial, were not always palatable. There is a story told of some country people who were so excessively shocked at the proceedings of his followers, that they arrested a whole batch of them, and brought them before a magistrate. The worthy justice, on inquiring into the nature of the offence committed by them, was told that they set themselves up as being better than other people, and were doing nothing but praying from morning until night. "This did not seem exactly a charge requiring punishment, so the magistrate inquired further if there was nothing else against them. "Yes, sir," said a jolly white-headed old man, "an't please your worship, they have courted my wife; before she went among them she had such a tongue! but now, your honour, she is as quiet as a lamb." "Carry them back," said the magistrate, "let them go and convert all the scolds in the parish."

Does any one sympathise with the complaint of this white-headed old man, and look upon the absence of the accustomed oburgatory style of conversation as a loss to be deplored? We know not. But to judge from the very prodigality of offensive terms and expressions with which our language is enriched, and the fluent use of them—the more fluent as we descend in the scale of intelligence—there seems to be an inherent love of strong terms and coarse expressions in our nature, which it requires a most strongly disciplined mind to resist. Exaggeration and protestation, big, bounding adjectives, and thundering denunciations, seem to flow from the bulk of the world upon all occasions, with almost the same unconsciousness as from the inimitable Mr. Chucks, in Captain Marryat's *Peter Simple*, who usually addressed his victims in this style:—"Sir, I would beg to observe, in the most delicate and gentlemanly style possible, that you are a d—d, infernal, lubberly, blackguardly son of a sea-cook," and a whack from his—accompanied every loud-sounding epithet. Lord Campbell also tells a story of a legal friend of his, who had a most ludicrous conception of the power of hard words; for, being enraged that his client should persist in refusing to settle his cause by arbitration, burst out upon him in open court, with this stunning remark:—"You d—d infernal scoundrel, if you don't settle this matter as his honour proposes, and as I and my learned brother wish, I shall be compelled to use strong language to you."

It is rather a curious speculation to inquire whence arises the gratification which almost all men derive from applying these hard terms to other people, or in hearing them applied by others. From the benches of the ale-house to the benches of the House of Commons, the same feeling prevails; vituperation, invective, personalities, have charms for all ranks, for every grade of intellect. The colouring may be different, but the emotion raised is the same. If we witness the contest of two rustic wits, reeking with the fumes of beer and tobacco, we shall see the countenances of those around them beaming with glee as one hard word follows another, as abusive expressions multiply, and improbable lies are bandied about, as one coarse profanity is succeeded by another still coarser. Clumsy, obscure, profane, and ferocious as these attacks too often are, they seem, nevertheless, to strike an answering chord in the minds of the hearers, who depart after such an encounter filled with the notion that they have been enjoying good fun. And if we visit the Senate we shall find something similar prevailing there; the incontinent member rises to speak who is known for his sarcastic powers, for his reckless attacks on those opposed to him, for the strength of his vituperative epithets, or the withering power of his scorn; nay, even when his reckless boldness is

redeemed neither by wit nor sense, we see the listless members instantly roused into attention, the libraries and lobbies are vacated, the empty benches are filled, and cheers and laughter re-echo through the senatorial halls. Men who could not be tempted for a moment to listen to a grave argument on the welfare of the nation, sit enchained to hear vituperative invective poured forth on those who, by their intellect and wisdom, are infinitely superior both to their detractors and the applauding listeners to the detraction. It is true the invective here is not generally of the same coarse style as that of the ale-house bench; for here, most commonly, they have learned

"To rail by precept, or detract by rule;"

but similar emotions are raised, and the nature of the pleasure is the same, although it may differ in degree. What, then, is the source of this general feeling of enjoyment in invective when employed against others? There is a paragraph in the *Leviathan* of Thomas Hobbes, the philosopher of Malnesbury, which seems to afford us the clue to it. It is thus: "Sudden glory is the passion which maketh those grimaces called LAUGHTER; and is caused either by some sudden act of their own, that pleaseth them; or by the apprehension of some deformed thing in another, by comparison whereof they suddenly applaud themselves. And it is incident mostly to them that are conscious of the fewest abilities in themselves; who are forced to keep themselves in their own favour, by observing the imperfections of other men. And therefore, much laughter at the defects of others is a sign of pusillanimity. For of great minds, one of the proper works is, to help and free others from scorn; and compare themselves only with the most able." It gives us a degrading view of human nature when we look at the general enjoyment of invective, to think that so large a portion of the human species should be sunk so low in their own estimation that they "are forced to keep themselves in their own favour by observing the imperfections of others." Among the coarse-minded of all classes, and in the lowest grades of society especially, the vulgar abuse of all around them is a great and crying evil, and prevails to an extent that is most fatally injurious to their progress in life, and their advance in civilisation. The continued indulgence in coarse language is certain to foster and increase coarseness of thought, and this, carried into the daily intercourse of domestic life, is the constant source of domestic feuds, bringing unhappiness to all around, ruining the temper and the disposition, and finally degrading all that come within its influence. "Soft words butter no parsnips," is one of those time-honoured sayings which, like so many others of the same class, is true only to the letter but most false in the spirit. "A soft answer turneth away wrath," is the safer and better lesson to be inculcated; and if acted upon, will be found most effectually to butter our parsnips, to give a zest to every meal, to spread the light of cheerfulness over every countenance, and ultimately to give a higher tone and feeling to our thoughts.

We have seen the philosopher attributing our pleasure at invective to feelings rather derogatory to human nature. We have seen a worthy magistrate dismissing with praise the disciples of John Wesley, and recommending them to go and convert all the scolds in the parish. Religious feeling had in this latter case superseded the duties of the magistrate. Formerly, a woman convicted of being a public scold, was liable to punishment at the hands of the legal authorities, and her punishment was of a nature to cool her ire and paralysed her tongue. She was to be placed in a certain engine of correction, called the *trebucket castigatory*, or *cucking-stool*, and when there, to be plunged into the water and well ducked. In the *History of the City of Norwich*, we find that the Guild of St. George were obliged to keep a "cuke-stool" at Eyebidge; and in the records of the Court-book are entries of its use for the punishment "of scolds," and other women who committed offences of a different kind. "Margaret Grove, a common Scold, to be carried with a Bason rung before her to the Cucke-Stool at Eyebidge, and there to be three times ducked." We do not hear that male scolds were subjected to any similar punishment, however greatly they may have deserved it. But now, in these our days, the cucking-stool has disappeared; we look to the softening effects of moral agents for controlling this pestilent plague—to a wider intelligence, a higher sense of propriety, a more extended benevolence, and not to legal punishment.

But do occasions never arise in which the language of invective is legitimate in which it may be used with propriety; in which it is almost the only mode wherein we can explain our feelings? Invective and rebuke cannot always be silent. No generous heart can witness mean actions without being roused into indignation, or behold oppression without inveighing against it. Even members of the Peace Society think it no wrong to "speak daggers," albeit "they use none." In condemnation of vice, in defence of the oppressed, the strong feelings of an energetic mind will find vent in strong language; not in vague and personal abuse, but in earnest thoughts clothed in earnest words. When insolence, "dressed in a little brief authority," takes advantage of its position to crush humble merit; or mean spirits, priding themselves on the nobility of birth, sneer at the qualifications of men arriving at eminence by their own talents, the retort to their insolence and sneers demands our admiration and not our censure. No one can help applauding the noble invective of Lord Thurlow, when taunted by the Duke of Grafton with the want of noble birth—that Duke of Grafton whose ancestor owed his existence to the fact that Charles the Second had a mistress as well as a wife. "The noble duke," said Thurlow, "cannot look before him, or behind him, or on either side of him, without seeing some noble peer who owes his seat in this house to his successful exertions in the profession to which I belong. Does he not feel that it is as honourable to owe it to these as to being the accident of an accident? No man venerates the peerage more than I do; but, my lords, I must say that the peerage solicited me, not I the peerage. Nay, more, I can say, and will say, that as a Peer of Parliament, as Speaker of this Right Honourable House, as Keeper of the

Great Seal, as Lord High Chancellor of England—nay, even in that alone, in which the noble duke would think it an affront to be considered, but which character none can deny me, as a MAN, I am at this time as much respected as the proudest peer I now look down upon." This magnificent specimen of personal invective, combined with noble self-assertion, must have electrified the aristocratic and supercilious assembly in which it was delivered; but while it fell with crushing force upon his puny assailant, it elevated Lord Thurlow himself into a benefactor of his race—the assertor of the rights of man. Again, when Curran was taunted with his poverty by Judge Robinson, we entirely sympathise with the spirited reply and bitter scorn of the young advocate struggling for fame and reputation. Judge Robinson was one of those men who owed his elevation to the bench more to sycophancy, to power, than to his talents, and whose chief merit with the government of the day consisted in having written numerous political pamphlets, notorious for their venomous personality, but destitute of any approach to literary merit. Before this judge, Curran, then a young man and struggling with poverty, had to argue a case. In controverting some proposition of the opposing counsel, he remarked, that he had "studied all his law-books, and could not find a single case where the principle contended for was established." "I suspect, sir," interrupted the judge, "that your law-library is rather contracted." Curran, feeling that this was an attack upon his poverty, looked the judge steadily in the face, and said—"It is true, my lord, that I am poor, and the circumstance has rather curtailed my library; my books are not numerous, but they are select, and, I hope, have been perused with proper dispositions. I have prepared myself for this high profession rather by the study of a few good books than by the composition of a great many bad ones. I am not ashamed of my poverty; but I should be of my wealth could I stoop to acquire it by servility and corruption. If I rise not to rank, I shall at least be honest; and should I ever cease to be so, many an example shows me that an ill-acquired elevation, by making me the more conspicuous, would only make me the more universally and the more notoriously contemptible." The bully who called forth this invective was stunned, and never more ventured to provoke the wrath of the young barrister.

The oratory of the Irish senate and the Irish bar was replete with invective; not always, indeed, in its highest form, but always delivered with the certainty that the answer to it would come in the form of a pistol bullet. We see Henry Grattan, the greatest of Ireland's orators, preparing for a debate in the Irish House of Commons by loading his pistols, and placing them in his pocket. The myrmidons of the Government assail him—their agent, a Mr. Corry. The feeble and sick man rises, his eyes flashing with scorn, and wrath, and pride, as he pours out his withering invective:—"Many honourable gentlemen thought differently from me; I respect their opinions, but I keep my own; and I think now, as I thought then, that the treason of the minister against the liberties of the people, was infinitely worse than the rebellion of the people against the minister. I have returned, not, as the right honourable member has said, to raise another storm. I have returned to discharge an honourable debt of gratitude to my country that conferred a reward for past services, which, I am proud to say, was not greater than my desert. I have returned to protect that Constitution, of which I was the parent and the founder, from the assassination of such men as the honourable gentleman and his unworthy associates. They are corrupt—they are seditious—and, at this very moment, are in a conspiracy against their country. I have returned to refute a libel, as false as it is malicious, given to the public under the appellation of a Report of a Committee of the Lords. Here I stand, ready for impeachment, or for trial. I dare accusation. I defy the honourable gentleman; I defy the Government; I defy their whole phalanx: let them come forth. I tell the ministers I will neither give them quarter, nor take it. I am here to lay the shattered remains of my constitution on the floor of this House, in defence of the liberties of my country." This was bold, vehement, and appropriate to the occasion; but when Mr. J. O'Connell tried to revive the same image, and talked of dying on the floor of the House, he only succeeded in covering himself with ridicule. The sequel of this invective of Grattan's is so truly characteristic of Ireland, that we cannot refrain from giving it. The next morning, a crowd assembled on "by the Dodder bank," the green sward of the classic "Brook;" in the midst were Grattan and Corry, pistol in hand. An alarm was given that the sheriff was coming. General Craddock, Corry's second, threw the sheriff into a ditch, and kept him there. The duellists were placed: they fired. Corry was wounded; Grattan unhurt. Another shot was demanded, and the pistols were again loaded: Grattan fired in the air; Corry discharged his weapon, and fell bleeding to the earth.

We have not left ourselves room to pursue this subject further, or to give many more examples of the use of invective. They are to be found in writers of every class; among controversial writers; and in polemical controversies, in particular, they abound. The fiery spirit of Luther blazed out as prodigies of invective; popes and kings trembled at the denunciations of mingled religion and rage which he heaped upon them. The spirit-sighted countenance of Milton lit up into divine fury as he pictured to himself the indignant form of Religion assailing the degenerate priests, who made excommunication and indulgence a matter of merchandise. "As for the fogging proctorage of money with such an eye as struck Gehazi with leprosy, and Simon Magus with a curse, so does the look, and so threaten her fiery whip against that barking den of thieves, that dare thus baffle, and buy and sell, the awful and majestic wrinkles of her brow." No more personal attacks, nothing that can be construed into vulgar abuse, but a magnificent vision of insulted religion, threatening those who defile her name. We commend this mode of invective to all those modern religious controversialists who love to fret and tease, and stab, and hack their opponents with all sorts of moral stilettoes and spiritual tomahawks.

We reserve for our closing extract the magnificent peroration of Burke, in his renowned speech on the impeachment of Warren Hastings. No man was ever a greater master of invective in all its varied forms, whether of stinging sarcasm, vituperative epigram, or lofty denunciation. They had all been used in their turn in this memorable speech, but in the conclusion there is a calm majesty of denunciation, as he condemns with deep and stern earnestness, the various offences of Hastings into a climax of crime which makes the hearer tremble. After having kept the audience wrapt in admiration for three days, as with his vivid eloquence he painted the wrongs of India, and the crimes of her rulers, he thus concludes: "Therefore, it is with confidence that, ordered by the Commons, I impeach Warren Hastings of high crimes and misdemeanors. I impeach him in the name of the Commons of Great Britain, in Parliament assembled, whose Parliamentary trust he has betrayed. I impeach him in the name of all the Commons of Great Britain, whose national character he has dishonoured. I impeach him in the name of the people of India, whose laws, rights, and liberties, he has subverted, whose prosperity he has destroyed, whose country he has laid waste and desolate. I impeach him in the name, and by virtue of those eternal laws of justice which he has violated. I impeach him in the name of human nature itself, which he has cruelly outraged, injured, and oppressed, in both sexes, in every age, rank, and condition of life."

## THE CONTRADICTION COUPLE.

"I do believe," said the husband, taking his spoon out of his glass, and tossing it on the table, "that of all the obstinate wrong-headed creatures that ever were born, you are the most so, Charlotte."

"Certainly, certainly, have your own way, pray. You see how much I contradict you," rejoined the lady.

"Of course you didn't contradict me at the dinner-table; oh no! not you!" says the gentleman.

"Yes I did," says the lady.

"Oh! you did!" cries the gentleman. "You admit that?"

"If you call that contradiction, I do," the lady answers; "and I say again, Edward, that when I know you are wrong, I will contradict you. I am not your slave."

"Not my slave!" repeats the gentleman, bitterly; "and you still mean to say that in Blackburn's new house there are no more than fourteen doors, including the wine-cellar."

"I mean to say," retorts the lady, beating time with her hair-brush on the palm of her hand, "that in that house there are just fourteen doors, and no more."

"Well, then," says the gentleman, rising and pacing the room with rapid strides; "this is enough to destroy a man's intellect, and drive him mad."

By and by the gentleman comes too a little, and reseats himself in his former chair. There is a long silence, and this time the lady begins.

"I appeal to Mr. Jenkins, who sat next to me on the sofa, in the drawing-room, during tea."

"Morgan, you surely mean," interrupts the gentleman.

"I do not mean anything of the kind," answers the lady.

"Now, by all that is aggravating and impossible to bear," cries the gentleman, clenching his hands, and looking up in agony, "she is going to insist upon that Morgan is Jenkins."

"Do you take me for a perfect fool?" exclaims the lady. "Do you suppose I don't know the one from the other? Do you suppose I don't know that the man in the blue coat was Mr. Jenkins?"

"Jenkins with a blue coat!" cries the gentleman with a groan. "Jenkins in a blue coat?—a man who would suffer death rather than wear anything but brown!"

"Do you dare charge me with telling an untruth?" demands the lady, bursting into tears.

"I charge you, ma'am," retorts the gentleman, starting up, "with being a monster of contradiction—a monster of aggravation—a—a—Jenkins in a blue coat! what have I done that I should be doomed to hear such statements!"

## THE CHILD'S GARDEN.

BY MARY BENNETT.

A LITTLE garden I have got;  
It is a small, but pretty plot;  
I had it from papa.  
And he has given me seeds to sow,  
And roots of flowers that soon will blow;  
And they will yield me—that I know,  
A posy for mamma.

I love to dig with my small spade,  
And weed the beds that I have made;  
And in hot weather, I  
Must water all the roots around,  
Or else my flowers will soon be found  
All drooping to the thirsty ground,  
And very soon would die.

My Heavenly Father loves to see,  
His children prize the gardens. He  
Is all for our delight.

I rest garden o'er was seen,  
Of sweetest flowers and purest green,  
And shady trees o'er all to lean,  
Was Eden, heavenly bright.

I'm told the good may often meet  
Within the garden's still retreat,  
Our God, although unseen;  
I'm told that love still brings Him nigh,  
And though a little child am I,  
Oh, make me good that I may fly,  
O! Thy kind arms to lean!

THERE is a legend that a merchant once determined to ruin himself by squandering his money in advertising; but he found that the more he advertised the richer he grew, until at last he was obliged to give up in despair of ever effecting his purpose in that way.

## REVIEW.

*Flowers and Heraldry, or Floral Emblems and Heraldic Figures.* By T. T. T. London: Houlston & Stoneman. 1851.

Of the many beautiful and instructive objects that illustrate the expansive volume of Nature, flowers, the joy of the shrubs which bear them," as Pliny observes, may certainly be classed among the most interesting. In all ages and countries they have ever been regarded with peculiar veneration and attachment. The inspired Volume contains frequent allusions to their sweetness and fragility, while—

"Flowers, sole luxury which Nature knew,  
In Eden's pure and guiltless garden grew."

The hieroglyphics of the ancient Egyptians abound in floral symbols, and the fabulous creed of the Greeks consisted, in part, of the metamorphosis of their deities into plants. They also scattered flowers in the porticos of their temples, and with them adorned their altars, and decorated the statues of their gods. They strewed them in the path of their triumphant generals, and wore floral wreaths in their holy ceremonies. Lady Mary W. Montague states, that in the East there is no flower without a verse belonging to it. The Chinese have an alphabet composed entirely of flowers and roots. In the days of chivalry, the influence of flowers was universally acknowledged; and there is scarcely a poet of any age who has not celebrated their glory and beauty, and made them subservient to his own fanciful creations. In our own times the study of floriculture has become an indispensable accomplishment, and the wonders of this science have been unfolded and brought within the capacity of a child.

Among the writers who have chiefly contributed to this diffusion of intelligence, Mr. Robert Tyas claims an eminent position, and his works on this subject have become deservedly popular.

In the volume before us, the author has allied in a very pleasing and peculiar manner, the science of flowers to heraldry; and all the difficult terms and mysticisms, which have daunted numbers from a familiar acquaintance with the latter, are explained and simplified to suit the comprehension of all. To facilitate reference, tabular forms are also annexed, and the arrangement of the entire work, on this easy method, is calculated to introduce the reader, step by step, to an excellent understanding of the subjects treated upon.

The following are specimens of the manner in which heraldic terms are explained:—

"The whole surface of the shield is, in Heraldry, supposed to be covered with some metal, colour, or fur, which surface is then called the *Field*.

"A *Charge* is that which is placed upon the shield. Any terrestrial or celestial object constitutes a charge.

"*Blazon* is a term derived from the custom of winding a horn at tournaments, when a knight intended to enter the lists. The announcement of his intention being thus made, a herald recorded his arms; whence, to blazon a coat, means to describe the things borne upon a banner or shield, in their proper tinctures, positions, and gestures.

"There are certain forms of charges, peculiar to Heraldry, which, from their common use, are called *Ordinaries*, and from being especially appropriated to this science, are termed *Proper*. When the science was in its infancy, the field, with one of these Ordinaries upon it, very frequently constituted a coat of arms; and different persons used armorial bearings, closely resembling each other in form and charges, but varying only in colour. Hence it is invariably found that the simplest coats of arms are the most ancient. As time passed away, and a great number of persons assumed, or had granted to them armorial bearings, it became necessary to add to these ordinary charges, when they were found to be capable of receiving upon them, beneath them, and on either side of them, sundry natural and artificial objects; and thus their use facilitates the multiplication of coats of arms in an almost endless diversity."

Mr. Tyas is a true student of Nature, and he does not omit to "point a moral" from most of the subjects that come under his notice, and it cannot be denied there are sermons in flowers that both the wise and the thoughtless would do well to ponder.

Thus, when describing the *Amaryllis*, one of the most beautiful of our greenhouse plants, and which figures on the shield as "*Folly*," he observes:—

"We are led by the aspect of the flower to think upon some fair votress of fashion, glowing with all the vigour of youth, and in the full pride of her strength, moving in stately grandeur among her ball-room contemporaries, as if fearlessly asserting the superiority of her appearance. Her object seems to be to win admiration from all, and to cast the rest of her sex into the shade. And yet, how vain; for, like the frail flower by which her pride is represented, her beauty will fade; the admiration which it commands will cease to be offered, and the honours which it wins will be withheld. Vain and worthless is the license offered to beauty. They who covet beauty in its prime, despise it in its decay. They who seek her who possess it when in its full pride, too often forget the attractions with which it once decked her, when it has faded from her person, when unsupported by sterling qualities of heart and mind which alone constitute the substantial beauty of woman. The conquest which personal charms achieve is no lasting victory. They win no permanent influence, but the present conquest is followed by cold neglect or heartless indifference, which is felt in bitter contrast with the flattery and adoration which once fell upon the deluded ear."

Again, in describing the heraldic term *Lozange*, upon which Mr. Tyas has emblazoned the "*daisy*" with the appropriate motto *Innocence*, there are the following pleasing reflections:—

"It is not needful that I should tell the reader what charms are possessed by its very name summons up sweet recollections of childhood, and compels many of us to compare ourselves with what we were then, and to mourn the loss of that innocence and simplicity which were then ours. It is, indeed, the child's own flower. It was well, indeed, if those early days when we were ignorant of evil, were more frequently revived in

our memories, and we were thus led to a comparison of the two beings. It could not but be attended with profit to contemplate the changes which had passed over us, and to review the various steps by which we had turned aside from the path of innocence, the extent to which we had diverged, and the influences which had caused us to err. Such reviews as these would surely make us more cautious for the time to come, and would put us on our guard when temptation drew near; and though they cannot remove the stains which errors have left, they would exert no small power in restraining our steps for the time to come, and keep us more firmly in the path of innocence."

Sir Walter Scott has connected the "*daisy*" with childhood in his introduction to *Marmion*:—

"My impa, though hardy, bold, and wild,  
As best befits the mountain child,  
Feel the sad influences of the hour,  
And wail the daisy's vanish'd flow'r;  
Their summer gambols tell and mourn,  
And anxious ask—'Will Spring return?  
And birds and lambs again be gay,  
And blossoms clothe the hawthorn spray?"

"Yes, prattlers, yes. The daisy's flow'r,  
Again shall paint your summer bow'r;  
Again the hawthorn shall supply  
The garlands you delight to tie;  
The lambs upon the lea shall bound,  
The wild birds carol to the sound,  
And while you frolic, light as they,  
Too short shall seem the summer day."

The neat and tasteful manner in which the work has been produced will, no doubt, assist its introduction to the drawing-room. There are twenty-four emblazoned plates, drawn and coloured with great care from the author's instructions. The book of *Flowers and Heraldry*, "combined," as its title explains, "to express pure sentiments, kind feelings, and excellent principles," has our most cordial recommendation.

## ONWARD!

**INCREASED PRODUCE OF GAS FROM COAL.**—The Metropolitan Chartered Gas Company have arranged with Messrs. Barlow & Gore, the patentees of a new invention, whereby 15,000 cubic feet of gas will be produced from a ton of Newcastle coal, in place of 8,000 or 9,000; and 75,000 from the same quantity of Cannel coal!

**LIGHTHOUSES.**—In order to give a telegraphic character to our various lighthouses, Mr. George Wells of the Admiralty, proposes to cut four or more circular apertures in all the present structures, just below the lantern, and fit the openings with glazed sashes of ground plate-glass, painted so as to leave the initial of the particular lighthouse bold and distinct. The length of the letter being three times the size of the light of the lantern, it is considered that it would be more clearly visible, and leave no doubt as to what the lighthouse is, and where situate. New lighthouses, it is thought, should not be carried to the present altitude, as the nearer the light is level to the eye the less probability would exist as to any mistake in the distance of it.

**INDUSTRIAL EDUCATION.**—As a proof of the strong feeling which exists of the necessity of an enlarged system of industrial education, we may mention the fact that the gifts made by the exhibitors of minerals, metallurgical processes, mining and other models, to the Museum of Practical Geology, have been most extensive. Messrs. Naylor, Vickers & Co., have presented their models of steel works and specimens of steel; Mr. Bird, his collection of manufactured iron; Mr. Blackwell, his extensive series of iron ores; Mr. Morris Stirling, his metallic alloys; Messrs. Solly & Co., specimens of their steel manufacture; Mr. Nicholas Wood, models of coal working; Mr. Foudrinier, his safety apparatus for raising or lowering miners; the proprietors of the Devon Great Consols, their beautiful water-wheels; Messrs. Hartly & Co., of Newcastle, their model of glass-house, and specimens of the manufacture of sheet-glass. Numerous other presents, of the minerals exhibited, &c., have been made to this national establishment. Foreign States have not been behind in liberality. The Zollverein States, Austria, Russia, and Spain, have presented complete series of their minerals and metals; thus rendering important service to an institution so essentially practical as the one in Jernyn-street.—*Athenaeum*.

**WONDERS OF THE DAGUERRETYPE.**—Viewed through an ordinary magnifying glass, the resemblance of the portrait is perfectly staggering; the features stand forth as though moulded in wax—not a blemish escapes, nor is a beauty lost. Accustomed as we are to see most things in perfection now-a-days, the eye glances on and off in an instant, and the correctness of the imitation, or the common-place nature of the copy, is instantly decided upon; but if we devote a few minutes to a careful inspection, we behold in every lineament the original. Few persons can recognise their own portrait, except it be taken as seen in a mirror; and although the direct look is the most easily remembered, as being the one we are most accustomed to see, still the half or three-quarter face of our friends, which we are familiar with, strikes us as being inimitably like, and thereby permits and entices us to gaze upon objects who, seemingly, are (unconscious how much they occupy our thoughts. All hail to the fertile genius of man! Independently of the wonders of Daguerreotyping, there is something very benign and gratifying in its application—the memory of the absent or the dead is faithfully treasured in the possession of one of these beautiful little specimens.—*L. Culverwell's Leisure Moments*.

## TALLY HO!

Oh! I am a steed of the highest breed,  
Perchance you have been on my back!  
I never bear my rider anywhere,  
But I safely bring him back.  
I see not, I feel not, I drink not, nor eat,  
For my veins are all withered and dried;  
Yet when pleasure is rife, I often give life,  
To those who exult in a ride.  
Born on the green, where my form was never seen,  
My limbs were swept by the wind;  
My mane and my tail have oft leapt gate and rail,  
While my body stood heedless behind.  
Deep in the earth, ere the time of my birth,  
Lay my coat till it came to my side!  
You'll be startled when told that I took life's mould,  
Long after the time when I died.  
Then oh! for the chase, you oft see my race,  
And surely to you I am known:

Let your wits take a stride, and my name soon decide,  
Or confess that by me you are thrown!  
*(Answered in No. 6.)*

## ENIGMAS.

1.  
I CLIMB the Alpine peaks; I dwell in mountain glen;  
Spread my carpet in the silent woods, nor desert the lonely fen;  
Rocks, rivers, lordly forest-trees—all are witness to my birth;  
Nor shrink I from the halls of men, when time hath proved their worth.  
There's not a soil yet trod by man, that yields me not a home;  
I live, alike, in frigid climes, or the burning torrid zone.

In a lifeless, bleaching skull, I was once in vigour found;  
And in famed St. Bernard's mountain long my mantle I  
The fast-decaying garment of the perished  
When monk and dog had failed, alike, to reach the plunderer.  
In that cold dreary solitude, I wove a garland for his tomb,  
Fresh and verdant as the grass and flowers that in the churchyard bloom.  
Beneath a veil from Nature's loom, my features I concealed;  
In urn, with vase and lid complete, by Nature's hand annealed.  
Remove the lid with care, and lo! I revealed to clearest view,  
A lovely mouth, with gums and teeth—even, and perfect too;  
Nor motionless are these; but 'neath the evening shower,  
Fast closed, they hold a treasure safe, till sunny noontide hour;  
When, opening wide, and peering forth, their gems of golden grain,  
They fertilise the barren rock, and clothe the sandy plain;  
Give shelter to a countless host of beings that have life,  
And help to build the walls of homes, where melody is rife.  
*(Answered in No. 2.)*

2.  
THEY tea-things were gone, and round Grandpapa's chair  
The young people tumultuously came;  
"Now, give us a puzzle, dear Grandpa," they cried;  
"An enigma, or some pretty game."

"You shall have an enigma, a puzzling one, too,"  
Said the old man, with fun in his eye;  
"You all know it well; it is found in this room.  
Now, see who'll be the first to reply."

1. "In a bright sunny clime was the place of my birth,  
Where I flourished and grew on my own native earth,
  2. And my parents' dear side I ne'er left for an hour,  
Until gain-seeking man got me into his power—
  3. When he bore me away o'er the wide ocean wave;  
And, now, daily and hourly, to serve him I slave;
  4. I am used by the weakly to keep them from cold,  
5. And the nervous and timid I tend to make bold;
  6. To destruction I sometimes the heedless betray,  
7. Or may shelter the head from the heat of the day.
  8. I am placed in the mouth to make matters secure;  
9. But that none wish to eat me, I feel pretty sure.
  10. The mind of the young I oft serve to amuse,  
While the blood through their systems I freely diffuse;
  11. And in me may the representation be seen,  
Of the old ruined castle, or church on the green;
- the old ruined will acknowledge the debt that they  
To the aid I have given to lessen their woe;  
And the lifeless are often supported by me,  
Where Nature's productions collected we see."

Now, how hushed are their voices—how silent they sit,  
Each revolving these words in his mind;  
While some look at the ceiling, and some on the floor,  
In the hopes the right answer to find.  
*(Answered in No. 6.)*

## ANSWERS TO THE PASTIME OF LAST EVENING.

Page 61.

## CHARADES.

1.—BENEATH the surface of the ground,  
All kinds of *Strata* may be found;  
While many a rich and costly *Gem*  
Adorns each princely diadem.  
And victory, it is believed,  
Through *Stratagem* is oft achieved.

2.—Night-in-gale.  
4.—Bannock-burn.

3.—Log-wood.  
5.—Star-ling.

## MATRIMONIAL PUZZLE.

PASS the pin upward from the other side,  
And you have still a chance to be a bride.  
So now, proud maiden, let not your spirit droop,  
But learn to conquer, even though you stoop.

## THE REMARKABLE ADVENTURES OF BARON BRAG.—AN UNNATURAL HISTORY FOUNDED UPON NATURAL HISTORY

(To be Continued by Us, until Discontinued by the Baron.)

Some sailors, on a shooting party, come down to attack  
the Bear, but are terrified to hear one of them shout out  
"Bear—and forbear!"

The Bear recognising his deliverer, gives the Baron a  
most affectionate hug, which materially damages the  
Patent Hunting-Dress!

And the Baron stands revealed to the Bear, to the infinite  
terror of both!

## OUR CORNER CUPBOARD!

BISHOP HACKETT'S motto: "Serve God, and be cheerful."

LOVE AT FIRST SIGHT.—A mother's for her new-born infant.

MY son, eat the bread of industry.—*Bickersteth's Mother.*

DR. JOHNSON, once speaking of a quarrelsome fellow, said, "If he had two ideas in his head they would fall out with each other."

THAT writer does the most who gives his reader the most knowledge, and takes from him the least time.

"WHICH can travel the fastest—heat or cold?" "Why, heat, you dunce! Can't anybody catch cold?"

SUPERFICIAL writers and talkers, like the mole, may think themselves deep, when they are exceedingly near the surface.

"It is a curious fact," say some entomologists, "that it is only the female mosquito that torments us." A bachelor says it is not at all "curious."

THE idle, who are neither wise for this world nor the next, are emphatically called by Archbishop Tillotson, "fools at large."

THE wedding-ring is worn on the fourth finger of the left hand, because it was anciently believed that a small artery ran from this finger to the heart.

WHERE the heart has no occupation to give, it is impossible that imagination can rest idle.

"THEY pass best over the world," said Queen Elizabeth, "who trip over it quickly; for it is but a hog—if we stop, we sink."

THOSE who respect themselves will be honourable; but he who thinks lightly of himself will be held cheap by the world.

THERE is only one objection to people who "mean well," and that is, they never find time to carry out their meaning.

NEVER retire at night without being wiser than when you rose in the morning, by having learned something useful during the day.

A MAN too busy to take care of his health, is like a mechanic, too busy to take care of his tools.

WHEN worthy men fall out, only one of them may be faulty at first; but if strife continues long, commonly both become guilty.

MISERY and ignorance are always the cause of great evils. Misery is easily excited to anger, and ignorance soon yields to perfidious counsels.

MONK hearts pine away in secret anguish from unkindness from those who should be their comforters, than from any other calamity in life.

AN Irish postboy having driven a gentleman a long stage during torrents of rain, the gentleman said to him, "Paddy, are you not very wet?" "Ara! I don't care about being very wet; but, please your honour, I'm very dry."

DR. JOHNSON compared plaintiff and defendant in an action of law, to two men ducking their heads in a bucket, and daring each other to remain the longest under water.

SEVEN large casks at Messrs. Barclay's brewhouse, known as the "Seven Sisters," hold each 3,600 barrels, or 126,600 gallons, making in all 907,200 gallons, and these are frequently emptied in three days.

A SCOTTICAL young man one day conversing with the celebrated Dr. Parr, said he would believe nothing which he could not understand. "Then, young man," said the Doctor, "your creed will be the shortest of any man I know."

THERE never did, and never will exist, any thing permanently noble and excellent in a character which was a stranger to the exercise of resolute self-denial.—*Sir Walter Scott.*

"A JOURNALIST," said the great Napoleon, "is a grumbler, a censurer, a giver of advice, a regent of sovereigns, a tutor of nations. Four hostile newspapers are more to be feared than a thousand bayonets."

A MAN of quick and active wit  
For drudgery is more unfit,  
Compared to those of duller parts,  
Than running-nags to draw in carts.—*Butler.*

A NUMBER of physicians were once disputing as to what would be the best to sharpen the sight. Some recommended one thing, and some another, till at last one said there was nothing would do it like *envy*, for it magnifies and multiplies all the errors of man.

"If you ask me," says Zimmerman, "which is the real hereditary sin of human nature, do you imagine I shall answer pride, or luxury, or ambition, or egotism? No; I shall say indolence. Who conquers indolence will conquer all the rest. Indeed, all good principles must stagnate without mental activity."

ON NOTHING.—The solution turns on the word *cypher*:

You sigh for a cypher, but I sigh for you:  
O sigh for no cypher, but O sigh for me;  
O let not my sigh for a cypher go,  
But give sigh for sigh, for I sigh for you too!

"PRECIOUS clever birds, then cuckoos, eh? They're what I call birds of quality. They've no trouble of hatching, they haven't no trouble of going about in the fields picking up worms and grubs for their nestlings; they place 'em out to wet-nurses, makes other birds bring 'em up, while they do nothing but sit up in a tree and cry cuckoo all day long. Now that's what I call being a bird of quality."

## OUR MEMORANDUM BOOK!

MAN may err, and be forgiven; but poor woman, with all his temptation, and but half his strength, is placed beyond the hope of earthly salvation, if she but once be tempted into crime.

## THE YOUNG LADY'S TOILETTE.

## Self-Knowledge—The Enchanting Mirror.

THIS curious glass will bring your faults to light,  
And make your virtues shine both strong and bright.

## Contentment—Wash to smooth Wrinkles.

A daily portion of this essence use,  
'Twill smooth the brow, and tranquillity infuse.

## Truth—Fine Lip-salves.

Use daily for your lips this precious dye,  
They'll redden, and breathe sweeter melody.

## Prayer—Mixture-giving Sweetness to the Voice.

At morning, noon, and night, this mixture take  
Your tones improved, will richer music make.

## Compassion—Best Eye-water.

These drops will add great lustre to the eye;  
When more you need, the poor will you supply.

## Wisdom—Solutions to Prevent Eruptions.

It calms the temper, beautifies the face,  
And gives to woman dignity and grace.

## Attention and Obedience—Matchless Pair of Ear-rings.

With these clear drops appended to the ear,  
Attentive lessons you will gladly hear.

## Neatness and Industry—Indispensable Pair of Bracelets.

Clasp them on carefully each day you live,  
To good designs they efficacy give.

## Patience—An Elastic Girdle.

The more you use the brighter it will grow,  
Though its least merit is external show.

## Principle—Ring of Tried Gold.

Yield not this golden bracelet while you live,  
'Twill sin restrain, and peace of conscience give.

## Resignation—Necklace of Purest Pearl.

This ornament embellishes the fair,  
And teaches all the ills of life to bear.

## Love—Diamond Breast-pins.

Adorn your bosom with this precious pin,  
It shines without, and warms the heart within.

## Politeness—A Graceful Bandeau.

The forehead neatly circled with this band,  
Will admiration and respect command.

## Piety—A Precious Diadem.

Who'er this precious diadem shall own,  
Secures herself an everlasting crown.

## Good Temper—Universal Beautifier.

With this choice liquid gently touch the mouth,  
It spreads o'er all the face the charms of youth.

EXCUSES FOR NOT GOING TO CHURCH.—Overslept myself; could not dress in time; too cold; too hot; don't feel disposed; no other time to myself; put my papers to rights; letters to write; tied to business six days in the week, no fresh air but on Sundays, mean to take a little necessary exercise; new bonnet not come home; don't like a liturgy always praying for the same thing; don't like extemporary prayer; don't like an organ, it is too noisy; don't like singing without instrumental music, makes me nervous; can't bear a written sermon, too prosy; dislike an extemporary sermon, too frothy; nobody to-day but our own dull minister; don't like a strange one; can't keep awake when at church, fell asleep last time I was there, shan't risk it again; and so on *ad infinitum*.

## GOLDEN RULES.

man complains of his memory, but no man complains of his judgment.

We must not deck virtue or learning in false colours, in order to render them attractive to the youthful eye.

To all men the best friend is virtue, the best companions are high endeavours and honourable sentiments.

Every man ought to aim at eminence, not by pulling others down, but by being himself.

If every man had a window in his breast, blinds would be in very great demand.

He that communes with himself in private, will learn truths that the multitude will not tell him.

The seeds of repentance are sown in youth by pleasure, but the harvest is reaped in age by pain.

**TUTOR'S ENGLISH GRAMMAR** is illustrated by numerous spirited Wood Engravings, by which a dry and tedious study is made peculiarly easy and interesting. Price 3s. 6d.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

**WORTH TEN GUINEAS A BOTTLE.**—Two or Three Drops of MRS. DEMAIN'S LIQUID produce such a wonderfully Beautiful Change upon the Skin as can be produced by no other Article in the World. One application renders the Skin, in Seven Days, White, Spotless, Youthfully Fair, and Delicately Transparent, like that of the Infant; and the complexion is restored to that clear and bright purity of expression from which the countenance in childhood derives its loveliness and charm. Requires using only once a year, by which the complexion is preserved, even to old age, in its youthful and unblemished appearance. The change produced is natural and permanent. In all cases the Skin becomes perfectly new. All Readers are invited to test its extraordinary properties. In Bottles, for One Year's Use, 1s. 1d.

Sold by Messrs. HICK, Chemists, &c., 44, Drury Lane, London. Sent Free to any Address for 15 Stamps. Address, Mr. M. HICK, Chemist, Wakefield; Mr. JOSEPH HICK, Chemist, Bradford; or Mr. JOSEPH LUND, Bookseller, Westgate, Bradford.

**EXQUISITE OIL PICTURES.**—Sixpence each. KNIGHT & FOSTER, agents for the sale of Baxter's Oil Pictures. They are perfect gems of art: no lady's scrap-book can be perfect without them. A few of the subjects are named below, but an enlarged list will be sent on application.—Windogr Castle—Prince of Wales—Lover's Seat, Hastings—Dripping Well, Ditto—Bouquet of Flowers—Ben Nevis—Tarentella Dance—Tintern Abbey—Welsh Drover—Netley Abbey—Bala Lake—Brougham Castle—Water-mill on the Wye—Llangollen—Lake Como—Warwick Castle—View on the Rhine. Two sent free by Post for 14 Stamps.

When the value of Five Shillings is taken, they will be sent post free.—The above are each neatly mounted on Drawing Paper, 7½ by 5½. KNIGHT & FOSTER, Stationers, &c., 5, Eastcheap, London.

**PRIZE MEDAL FOR STEEL PENS.**—This was given to KNIGHT & FOSTER, the celebrated Pen Manufacturers, of Eastcheap. Their Pens have been for several years extensively used in the Bank of England, Post Office, and Custom House, London, and in addition to the already brilliant success that has rewarded the Proprietors, for the pens bestowed on the Manufacturers of these Pens, they have the gratification to announce that to them was awarded the

**PRIZE MEDAL OF THE GREAT EXHIBITION**, for their great Excellence, Superior Merit, Utility and Cheapness.—See Class 22—689, and 694; also Lord Cunningham's Report.

Sold by most stationers and booksellers. 1s. per box of 3 dozen and holder, or direct for 15 stamps from the Proprietors, KNIGHT & FOSTER, Stationers, 5, Eastcheap, London.

Now ready, and may be had of all Booksellers, neatly bound in Cloth, price 2s. 6d.,

**THE FAMILY TUTOR, AND SCHOOL COMPANION**, was published on the 1st of January, 1851, and subsequently on the 1st and 15th of each Month, in Part price 2d. each.

THE FAMILY TUTOR, as its name implies, is a Work of a highly instructive character, and realises, as far as can be accomplished in print, the advantages of a PRIVATE TUTOR to every reader—a Tutor whose teachings are lively, kind, and comprehensible, making the acquirement of knowledge a PLEASURE, not a TASK.

The First Volume contains—A COMPLETE ENGLISH GRAMMAR, Improved and Simplified; FAMILIAR LECTURES ON CHEMISTRY; TALES OF HISTORY AND OF TRAVEL; ZOOLOGY; THE PHYSICAL HISTORY OF MAN; THE PHYSIOLOGY OF HEALTH AND DISEASE; CELESTIAL AND TERRESTRIAL PHENOMENA OF THE MONTHS; MATHEMATICAL, GEOMETRICAL, ARITHMETICAL, AND OTHER PROBLEMS; LECTURARY EXERCISES; "THE TUTOR AND HIS PUPIL," being Answers to Educational Questions; and A VARIOUS MISCELLANY.

THE SECOND VOLUME contains a Complete System of NATURAL GEOGRAPHY, with Pictorial Illustrations, displaying the Costume and the Architectural and Natural Features of the various Peoples and Countries of the world.

THE FAMILY TUTOR may be had complete up to the end of 1851, in Two Volumes, price 2s. 6d. each.

London: HOULSTON & STONEMAN, 65, Paternoster Row; and all Booksellers.

Now ready, price 1s., crown 8vo., cloth gilt.  
**FAMILY PASTIME; OR, HOME MADE HAPPY**, consisting of entirely Original Anagrams, Enigmas, Charades, Conundrums, Fire-side Games, Recreational Puzzles, &c. &c., with their Solutions; for which Prizes to the amount of Fifty Guineas have been awarded by the Editor of the *Family Friend*. Upwards of Three Hundred Competitors have contributed to the Mass of Entertaining Literature from which the contents of this Work have been selected.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

**ILLUSTRATED HISTORY OF HUNGARY.**—In commemoration of the visit of M. KOSSUTH to this country, the readers of the *WORKING MAN'S FRIEND* and *FAMILY INSTRUCTOR* will have presented in the pages of that journal a complete and concise History of Hungary, derived from the most authentic sources, superbly embellished with upwards of 100 magnificent Engravings, which have been got up at a considerable expense. These illustrations will include all the principal incidents in its eventful history, portraits of all the chief actors in the war, with sketches of their lives, together with the costume of the various tribes—Croats, Serbes, Magyars, and Germans, with pictorial representations of celebrated battle scenes. The first chapter will appear in the number for Saturday, Nov. 23, Price 1d. J. Cassell, 335, Strand, and all booksellers.

**BARLOW'S POWDERS**—cure Tic Doloureux or Pain in the Teeth, Face, Head, &c. Sent Post Paid for 2s. 9d. in Stamps, by SAMUEL BARLOW, Chemist, Darlington. Reference as to their efficacy—Joseph Pease (late M.P.), Darlington; Lady Monson, Grantham; and hundreds of the Nobility, Ministers, and others, whose bona fide Testimonials may be had of S. Barlow.

Grand Parade, St. Leonard's on the Sea, Sussex, Feb. 12th, 1847.

Mr. S. Barlow.  
Sir,—Under the favourable recommendation of Mr. Pease, of North Lodge, in regard to your Powders for the Tic Doloureux, I wish to try a packet of them. He assures me there is not anything mercurial in them, nor any drug that can possibly injure the constitution. From what Mr. Pease says, I think they are quite innocuous, and of a character to give tone to the nerves, stomachic and general.  
I am, Sir, your obedient servant,  
(Rev.) W. JACKSON.

**THE FAMILY FRIEND**, an established Magazine, published upon the First and Fifteenth of every Month, price Two pence. Thirty-two pages, beautifully printed, and neatly covered. The following is a type of the opinion formed of *THE FAMILY FRIEND*, and expressed by upwards of THREE HUNDRED NEWSMEN:—

"The Boys and Girls will like it, for it contains good Stories; the Young Ladies will like it, for the sake of its pretty Poetry, and its Receipts for various kinds of Fancy-Work; Young Men will like it, for it smacks of Science; the Women will like it, for it abounds in useful Household Receipts; the Men will like it, for it treats of Gardening and Natural History, and advises wives to be kind to their husbands; those who love amusement will like it, for it swarms with Conundrums; everybody will like it, for it has a corner for everybody; and nobody need be afraid of finding any harm in it."—*Gateshead Observer*.

The Work may be had up to the end of December, 1851, in FIVE VOLUMES, price 2s. 6d. each.

The Fourth Volume contains a QUADRUPLE INDEX to the First Four Volumes, embodying about THREE THOUSAND FIVE HUNDRED REFERENCES to matters of every-day usefulness. The Work forms a most perfect Encyclopedia of Domestic Economy.

London: HOULSTON & STONEMAN, 65, Paternoster Row; and all Booksellers.

Prize Medal Awarded to, and Honourable Mention made of, the

**GLENFIELD PATENT STARCH**, at the Great Exhibition. See pages 57 and 63, Class III, July IV., of "List of Awards," printed by authority of the Royal Commissioners.

Being thus doubly noticed for its "general superiority," (a mark of distinction conferred on no other) by the Royal Commissioners and Jury, from amongst Thirty or Forty Exhibitors, sets it far above every other of its competitors. The Ladies are therefore respectfully requested to make a trial of the GLENFIELD PATENT DOUBLE-REFINED POWDER STARCH, which, for Domestic Use, now stands unrivalled.

AND IS NOW USED IN THE ROYAL LAUNDRY.

See Testimonials from the Laundress to Her Majesty; the Lady Mayores of London; Laundresses of the Countess of Kelington, Marchioness of Breadalbane, &c.

Sold Wholesale, in London, by Messrs. Pantin & Turner; Hooper, Brothers; Batty & Feast; Storey, Storey, & Co.; John Hyman; Croft and Innocent; Petty, Wood & Co.; Twelvemages, Brothers; C. B. Williams & Co.; B. Letchford & Co.; John Yates & Co.; Thos. Snelling; John Brewer; Field, Roberts, & Barber; A. Braden & Co.; Yates, Walton, & Turner; William Clayton & Co.; and R. Wakefield, 35, Crown Street; and Retail, by all Shopkeepers.

Agents wanted: apply to Mr. R. WOTTEWORTH, 40, Dunlop Street, Glasgow.

## Editor's Note-Book.

**HINTS TO LETTER-WRITERS.**—Great care and attention should be devoted to epistolary correspondence, as nothing exhibits want of taste and judgment so much as a slovenly letter. Since the establishment of the penny postage it is recognised as a rule that all letters should be prepaid; indeed, many persons make a point of never taking in an unpaid letter. The following hints may be worthy of attention:—Always put a stamp on your envelope at the top of the right hand corner. Let the direction be written very plain; this will save the postman trouble, and facilitate business by preventing mistakes. At the head of your letter, in the right-hand corner, put your address in full, with the day of the month underneath; do not omit this, though you may be writing to your most intimate friend three or four times a day. What you have to say in your letter, say as plainly as possible, as if you were speaking; this is the best rule; do not revert three or four times to one circumstance, but finish up as you go on. Let your signature be written as plainly as possible, (many mistakes will be avoided, especially in writing to strangers) and without any flourishes, as they tend not to add in any way to the harmony of your letter. We have seen signatures that have been almost impossible to decipher, being a mere mass of strokes, without any form to indicate letters. This is done chiefly by the ignorant, and would lead one to suppose that they were ashamed of signing what they had written. Do not cross your letters; surely paper is cheap enough now to admit of your using an extra half-sheet, in case of necessity. (This practice is chiefly prevalent amongst young ladies.) If you write to a stranger for information, or on your own business, fall not to send a stamped envelope with your address plainly written; this will not fail to procure you an answer. If you are not a very good writer, it is advisable to use the best ink, the best paper, and the best pen, as, though they may not alter the character of your handwriting, yet they will assist to make your writing look better. The paper on which you write should be clean, and neatly folded. There should not be the slightest stains on the envelope; if otherwise, it is only an indication of your own slovenliness. Care must be taken in giving titled persons, to whom you write, their proper directions. These rules may generally be found in all Letter Writers.

**ASTRONOMER ROYAL.**—The first Astronomer Royal was John Flamsteed, who was born at Denby, near Derby, in 1646. He was appointed to this office on the foundation of the observatory at Greenwich.

**SHORT-HAND.**—E. W.—The Phonographic system is very widely approved, and is fast superseding the old and arbitrary systems. Books, from 1d. upwards, may be obtained through Pitman, Paternoster Row.

**BLOOMERISM.**—G. A.—An admirer of Bloomerism, but his rhyme is likely to do no service to the cause. Here is his seventh stanza:—

"The pantalettes such flash louds,  
The pantalettes all must commend;  
To inconvenience, then, no longer down her,  
But let every woman be a Bloomer!"

If our correspondent had not written from Bath, we should have told him to go there!

**CONTRIBUTIONS TO "THE COMPANION."**—Having an appointed staff of writers, we cannot offer much encouragement to the many persons who seek connection with our pages as paid co-operatives. Really good matter will be paid for at a really good price. But trifles rising no higher than mediocrity only embarrass our attention, and had better be withheld from us.

**THE COMPANION PORTFOLIO.**—H. R. H.—We cannot issue a cheaper Portfolio than the one we have advertised. It is really not dear, because there is considerable labour and material employed in it. Moreover, it will preserve the numbers of the succeeding volumes for an almost unlimited number of years, and in a little while will repay the first cost, by keeping the numbers secure and clean. We recommend those who cannot afford to buy our Portfolio to manufacture a simpler and cheaper article for themselves.

**EMIGRATION.**—N. D.—We confess we have too little knowledge of the subject to advise upon the matter. Books written by practical men, and inquiries made of really experienced persons, will be our correspondent's best guide. We should not like, by a few careless words from our desk, to send a young man upon a wild-goose chase over some thousands of miles. Editors who undertake

to answer questions, too often trifle with the claims of their querists. Experienced parties, having reliable knowledge upon the subject, may assist the inquirer through our pages.

**PAPER.**—T. Y.—The invention of paper took place in China, long before the birth of Christ. During more than seven centuries the knowledge and use of this important article was confined to the Chinese, who, whilst every modern civilised nation had been advancing in wisdom and practical knowledge, have remained stationary. In the eighth century, when, in wealth, knowledge, commerce, and civilisation, the Arabs were the greatest people on earth—the Chinese paper was brought to Mecca, whence its use was successively introduced into those countries that afterwards, in their career of conquest and colonisation, fell under the dominion of the Arabs. About the beginning of the tenth century of the Christian era, they made known the use of paper in Spain, whence the knowledge of that article progressively extended through Europe, then in the dawn of civilisation.

**YULE CAKE.**—S. W. S.—Take one pound of fresh butter, one pound of sugar, one pound and a half of flour, two pounds of currants, a glass of brandy, one pound of sweetmeats, two ounces of sweet almonds, ten eggs, a quarter of an ounce of allspice, and a quarter of an ounce of cinnamon. Melt the butter to a cream, and put in the sugar. Stir it till quite light, adding the allspice and pounded cinnamon; in a quarter of an hour, take the yolks of the eggs, and work them two or three at a time; and the whites of the same must by this time be beaten into a strong snow, quite ready to work in. As the paste must not stand to chill the butter, or it will be heavy, work in the whites gradually, then add the orange-peel, lemon, and citron, cut in fine strips, and the currants, which must be mixed in well with the sweet almonds; then add the sifted flour and glass of brandy. Bake this cake in a tin hoop, in a hot oven, for three hours, and put twelve sheets of paper under it to keep it from burning.

**FASHIONS.**—T. H.—We have little more to say upon the Bloomer Costume, and are compelled to disregard the many communications addressed to us upon the subject. We entirely dislike that abuse of the Bloomer style which appears in pink pantalettes, green pantalettes, a blue scarf, and a hat trimmed with crimson ribbons. Such a blaze of inharmonious colouring would destroy the best fashion. Quiet colours are essential to good taste in the Bloomer styles, the pioneers of which have already gone to very absurd extremes. But even in the old styles we see constantly errors to deprecate. Scarcely a month passes but we find some new absurdity.

COMING OUT!

**DATES OF PERIODICALS.**—The dates of unstamped periodicals are usually nominal, and have no reference to the interest of the contents. With newspapers the case is different, the dates show the period about which the contained matter may be regarded as news. But all publications are dated somewhat in advance. The daily papers ante-date a few hours; the weekly papers one or two days; the weekly magazines from a few days to a few weeks. Almanacks and Annuals sometimes appear months before their proper date. This is to give them the chance of getting into wide circulation before their proper time has arrived. With regard to the *Home Companion*, we commenced dating January the 3rd, because we wish the first fifty-two numbers to comprise the first volume, and to keep the size and price of our volumes uniform. Moreover, we gain the advantage of getting into circulation everywhere before our nominal date passes. Readers generally, looking at a magazine dated five days past, look upon it as old and uninteresting, though they may never have seen it before. This arises from the knowledge they have of the connection between the dates and the contents of newspapers. The *Home Companion* will be found as fresh and interesting to a stranger after ten years, as it had just come from the press. The trade and the public should order our work by the numbers it bears, making no reference whatever to dates.

**TURKISH MANNER OF MAKING COFFEE.**—The Turkish way of making coffee produces a very different result from that to which we are accustomed. A small conical saucepan, with a long handle, and calculated to hold about two table-spoonfuls of water, is the instrument used; the fresh roasted berry is pounded, not ground, and about a dessert-spoonful is put into the minute boiler; it is then nearly filled with water, and thrust among the embers; a few seconds suffice to make it boil, and the decoction, grounds and all, is poured out into a small cup, which fits into a brass socket much like the

cup of an acorn, and holding the china cup as that does the acorn itself. The Turks seem to drink this decoction boiling, and swallow the grounds with the liquid. We allow it to remain a minute, in order to leave the sediment at the bottom. It is always taken plain; sugar or cream would be thought to spoil it, and Europeans, after a little practice (longer, however, than we had)—are said to prefer it to the clear infusion drunk in France. In every hut you will see these coffee-boilers suspended, and the means for pounding the roasted berry will be found at hand.

**CURING BACON WITHOUT SMOKING.**—The hair should be burnt off the hog after it has been killed, by singeing it with kindled straw laid over it. The skin should not be scalded, or wetted with water. A large wooden trough or tray being provided for the salting, the flitches are to be sprinkled over with salt, and left for twenty-four hours in the trough. They are then to be taken out and wiped dry, and both sides of the flitch—particularly the inside or fleshy side—to be well rubbed with salt, or, as some prefer, with a mixture of three or four pounds of common salt, half a pound of saltpetre, and one pound of coarse sugar or treacle. The salt should be previously well dried in a frying-pan over the fire. When the rubbing is finished, the flitches are placed in the trough upon each other, the skin side lowermost, and next day they should be salted again. They are then to be left in the trough for a month or six weeks, according to the size of the flitches and the state of the weather; rubbing them over with salt four or five times in the interval. After this, they are dried by hanging them up over the fire, but not in the smoke; and afterwards laying them upon a rack hung up to the ceiling in the kitchen, or in some very dry but not too warm a place, nor in the sun.

**PANDERING TO THE PASSIONS.**—C. B. M. will find his query answered in the following:—Two or three servant girls had gathered in a bye corner, and were revelling in the advantages of cheap literature. Sally had addressed a love question to the Editor; Peggy wanted to obtain a sweetheart; and Maggy, at the age of twenty, felt half inclined to run away with a beau whom she met a few nights before, but she anxiously wanted to know whether marrying at such an age, despite the objections of her old father, would be secure in the eye of the law. And so they eagerly scanned the Correspondents' page of a very cheap magazine, where they found most delicious bits, suited exactly not only their own cases, but their own wishes, and they all pronounced it a "love of a book," the cheapest they had ever read, and they thought that the Editor must be a fine handsome fellow, with nothing but the good of the fair sex at heart. Now, while Sally was devouring these delicious morsels, she quite forgot a large pot of preserves which her mistress had told her to mind, and which was then upon the fire; so the preserves were dreadfully charred, and her mistress deducted seven shillings from her wages for the loss. Peggy, a nursemaid, lost her place, for the first boy of Mrs. Clementina Smith fell over the side of his cot, and nearly lost his life. And Maggy ran away with her flattering beau, who proved a regular rascal, and deserted her after having spent all her accumulated wages. So much for the "love of a book," the cheapest of all periodicals! Now, we say to the Sallys, Peggys, and Maggys of our acquaintance, that the Editor of *The Home Companion* seeks not to gain their favour by pandering to their passions; but that he will endeavour to suggest ways to permanent happiness by the inculcation of those principles which ever make the fulfilment of duty essential to peace of mind.

# THE HOME COMPANION.

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 6.—Vol. I.]

SATURDAY, FEBRUARY 7, 1852.

[PRICE ONE PENNY.]

## A HOME PICTURE.

BY F. D. GAGE.

BEN FRANKLIN had finished his hard day's work,  
And he sat at his cottage door,  
His good wife, Kate, sat by his side,  
And the moon-light danced on the floor—  
The moonlight danced on the cottage floor,  
Her beams were clear and bright  
As when he and Kate, twelve years before,  
Talk'd love in her mellow light.

Ben Fisher had never a pipe of clay,  
And never a dram drank he;  
So he loved at home with his wife to stay,  
And they chatted right merrily;  
Right merrily chatted they on, the while  
Her babe slept on her breast;  
Whilst a chubby youth, with rosy smile,  
On his father's knee found rest.

Ben told her how fast the potatoes grew,  
And the corn in the lower field;  
And the wheat on the hill was grown to seed,  
And promised a glorious yield;—  
A glorious yield in the harvest time,  
And his orchard was doing fair;  
His sheep and his stock were in their prime,  
His farm was in good repair.

Kate said that her garden looked beautiful,  
Her fowls and her calves were fat;  
That the butter that Tommy that morning  
churn'd  
Would buy him a Sunday hat;

That Jenny for Pa a new shirt had made,  
And 'twas done by the neatest rule;  
That Noddy the garden could nicely spade;  
And Ann stood well at school.

Ben slowly raised his toil-worn head  
Thro' his locks of greyish brown—  
"I tell you, Kate, what I think," said he—  
"We're the happiest folk in town."  
"I know," said Kate, "that we all work  
hard—

Work and health go together, I've found;  
For there's some I know don't work at all,  
And they're sick the whole year round.

"Though worth their thousands—so people  
say—  
I ne'er saw them happy yet;  
'Twould not be me that would take their  
gold,

And live in a constant fret;  
My humble home has a light within,  
That gold could never buy,—  
Six healthy children, a merry heart,  
And a husband's love-lit eye."

I fancied a tear was in Ben's eye—  
The moon shone even clearer,  
I could not tell why the man should cry,  
But he drew up to Kate still nearer;  
He lean'd his head on her shoulder there,  
And he seemed o'ercome with bliss—  
I guess—(tho' I look'd at the moon just  
then.)  
That he left on her lips a kiss!

## THE DANGERS OF FLIRTATION.

BY J. T. TROWBRIDGE.

"THE world would be hardly worth living in if it were not for flirtations," exclaimed the gay and thoughtless Isabel Lee, as she laughingly entered her aunt's room.

Her aunt, a sober, beautiful, middle-aged lady, raised her large eyes, with a sorrowful expression, to the young girl's glowing face—

"I hope you are not serious," she said.

"There's nothing like flirtations!" cried the merry Isabel. "But you look reproachful—angry—"

"Oh, I am not angry," replied Mrs. Berford, with a melancholy smile.

"But you are displeased?"

"Your words awaken recollections which cause me to feel sad, Isabel; that is all. Sit down here by my side; and you shall hear a story of one of my flirtations, which may change your mind."

Isabel sat down, looking thoughtful, and her aunt continued—

"When I was young like you, dear child, I was called a coquette, and I, shame to confess it, gloried in the name—until the occurrence of the painful events I am about to relate.

"Half a dozen times a year, I used to visit C——, and spend a week or two in the pleasant society of our friends in that place. There I frequently met a pale, handsome, sensitive young man, named Gilborne, who paid me flattering attentions, making me the theme of numerous poetic effusions, and with whose partiality I was very well pleased.

"I was warned by many well-meaning friends against encouraging the addresses of so impulsive a person as Gilborne, who, they said, was more serious than I, and who might end by falling more deeply in love with me than I expected or desired. I laughed at the idea; and finding the attentions of the young poet still agreeable, I continued to receive them until it was too late."

"Too late! how so, aunt?"

"Why, to my astonishment, he one day made a passionate declaration of love, and offered me his hand."

"And you did not love him?"

"No, child. I was merely pleased with him. But even then I did not suppose that his love was more than the result of a sudden impulse, which would pass away with my visit to C——. So I respectfully declined his offer, laughed at the idea of my marrying at that age, and begged him to dismiss the subject from his mind. On the following day I left C——, and returned home.

"Letters and poetry followed me, breathing the most passionate devotion, and burning with the eloquence of love. They bore no name, but I knew they came from Henry Gilborne, and I was beginning to be very much annoyed. I took counsel with my friends, and resolved to send all future epistles back to him, unopened. I returned two letters in this manner, and received no more; but three or four weeks after I received a newspaper, in which there was a sonnet, addressed to me under a fictitious name, and signed with his initials. He had discovered a new mode of reaching me with his passionate effusions; and from that time a sonnet or a song signed by 'H. G——' came to me in the C—— Gazette nearly every week.

"At this time Mr. Berford was paying his addresses. He was one of Nature's nobleman—frank, generous, firm in what he considered right, and a gentleman in his manners. Having learned a lesson from the unhappy termination of my last flirtation, I received Mr. Berford's attentions in a different manner from what I had been accustomed to do, and in a short time we were married.

"The ceremony took place in church. I loved Mr. Berford; Gilborne was at the moment quite forgotten, and I was perfectly happy. I had not thought to disturb my peace of mind—the calm repose of my heart, which I had so willingly, gladly given away—until, as we were passing from the church, my eyes fell upon a wild, haggard figure, standing near the door.

"It was Gilborne! His face was deathly pale, his lips ashy, his eyes gleamed with an unnatural brightness, and he trembled in every limb.

"I started, uttered a suppressed cry, and shuddering, clung to my husband's arm. A pang went through my heart—a pang of remorse and dread, which I shall never forget.

"What is the matter?" Edward asked.

"I could not reply. But he saw my eyes fixed upon the haggard object in the doorway, and knew why I shuddered, for I had told him something of my unfortunate flirtation.

"Is that Gilborne?" he asked.

"Yes," I murmured.

"By this time all eyes were fixed upon the wretched man. It was not his pale face and wild eyes alone that attracted attention: his dress was disarranged, his long dark hair fell in disordered locks about his cheeks, and his garments were covered with the dust of travel. But while all eyes were fixed on him, his were fixed on me alone; and in my alarm and confusion, I felt the blood at first forsake my cheeks, then burn in them like fire.

"Gilborne fell back as we approached the door, and bowed solemnly with his hand upon his heart, while we passed out. I was glad to lose sight of him; and I ardently hoped that his passion would now be cured.

"But his image, as he stood there in the doorway, haunted my brain, and it was many hours before I could compose myself.

"I was beginning, however, to feel at ease again in the midst of our wedding guests, when a domestic came to me to say that a person wished to see me in the hall. Thinking it was some invited friend who had arrived at a late hour, I hastened to the door alone. Imagine my consternation when I saw the wild figure of Gilborne standing before me!

"How do you do?" he asked, addressing me by my maiden name. "Won't you shake hands with me?"

"I gave him my hand.

"You tremble," said he, fixing his wild eyes upon my face. "You are not afraid of me, I hope?"

"Oh, no," I replied, in an agitated voice—for his strange manner frightened me. "Why should I be afraid? Come in."

"No, thank you; you have company, I see—and I may make one guest too many. And you see I am not dressed for a party," said he, glancing at his disordered attire; "so you will excuse me. Ha! ha! wouldn't I cut a pretty figure!"

"But I cannot talk with you here," said I.

"Oh, I will not detain you a minute! I have—ha! ha!—I have a question to ask which is really so absurd, wher I think of it, that I can't help laughing! They told me," he said, in a pleasant, confidential tone—"they told me—ha! ha! I think of the absurdity of the thing—they told me that you were married!"

"And he burst into a wild laugh.

"I knew better," he continued; "but they said it was so, and to satisfy them I determined to come and ask you; for I suppose you ought to know if anybody does. You are ~~not~~ married! Ha! ha! ha! I had such a queer dream! I thought I was standing in the church door, and saw you coming out with your husband; and you would not speak to me. Wasn't it queer?—and I knew all the time you would never marry anybody but me. And we are not married yet, are we? But who is here to-night? I never saw you dressed so beautiful before! Ah!" he added, striking his forehead, "I dreamed you were dressed so at your wedding!"

"Thus the wretched man went on, sometimes laughing, and sometimes shedding tears. I knew he was insane; I tried to stop him, but was too much frightened to speak. In my agitation I took hold of the bell-wire, and rang. A domestic came, and I sent her in haste for Mr. Berford."

"Berford! who is he?" cried Gilborne, grasping my arm. "They told me that was the name of your husband! Say—you are—you are not married, are you?"

"Yes, Mr. Gilborne," I replied, trembling, so that I could hardly speak. "I am married—and here is my husband!"

"To my great relief I saw Mr. Berford advance into the hall. Gilborne started back, and fixed his eyes upon my husband with a wild and fierce expression, which caused me to fear for him."

"But Edward was undaunted. Returning Gilborne's gaze with a calm, steady, commanding look, he advanced toward him, and demanded what he wanted."

"The dangerous spirit of the insane man was completely subdued. He hung his head, and burst into tears."

"Nothing," he murmured—"I want nothing now! I have been dreaming. I will not trouble you again. May you be happy!"

"He turned and staggered out of the door; and I heard his unsteady footsteps die away in the distance."

"Poor wretch!" muttered Edward, as he kindly took my hand; "he is to be pitied! But you are agitated: I hope," he added, in an anxious tone, "I hope you have nothing to blame yourself for in this matter."

"I wish I had not!" I exclaimed, fervently. "But oh, Edward! I feel that I have acted wrong—although heaven knows I never intended he should love me."

"Well, do not reproach yourself too severely," he replied, in a mournful voice. "Let us go back to the parlour, and forget what has taken place."

"We returned together, and Edward's presence alone sustained me for the remainder of the evening. Fear, pity, and remorse made my heart faint and my cheek pale, and I was wretched."

"I think I understand your feelings," said Isabel, who had listened with deep interest. "I know how I should have felt under a conviction that any thoughtlessness of mine had ruined a fellow-creature's happiness—perhaps shattered his intellect! But you heard from Gilborne again?"

"Listen. He disappeared. For more than a year he was absent, and nobody knew what had become of him. At length his friends heard of a thin, haggard youth, who wandered about the country, begging his bread from door to door, and giving in return for charity the touching songs which he sung in a soft, melancholy voice, and the musical tones of an accordeon, he carried about with him, and which he played with peculiar feeling and skill. Everybody treated him kindly, for although he was evidently of insane mind, there was a mildness—a melancholy enthusiasm about him, which won all hearts."

"Search was made for him. His friends were not mistaken in their suspicions. He was the wandering Gilborne!"

"Oh, aunt!" exclaimed Isabel, tears filling her eyes.

"They carried him back to C——. For several weeks he seemed contented to remain at home; but at length his disposition to wander returned, and he disappeared again."

"One chilly, rainy day, I was sitting alone in my room, amusing myself with my first child—then a beautiful creature some six months old—when there was a ring at the door. Our domestic had gone out, and there being nobody in the house but me, I left little Ella playing on the floor, and went to open the door."

"I started back with an exclamation of alarm. Gilborne, drenched with the cold rain, was standing on the steps. My first impulse was fear, and I would have shut the door in his face, had he not looked up at me and said, in a melancholy voice—

"It rains. May I come in?"

"I was touched. I held the door open while he entered. There was a fire in the sitting-room, and I made him sit down before it to dry his clothes. For ten minutes not a word was spoken by either of us; but his wild eyes followed me about the room wherever I went. I trembled with indefinable dread; and oh, how ardently I longed to hear the footsteps of Edward in the hall! I tried to speak to the wretched man, but for some reason I could not; and his eyes still followed me in silence."

"At length, to my dismay, I heard Ella crying in the next room. Gilborne started."

"Is that your child?" he asked.

"I trembled as I replied that it was. Turning deadly pale, he started from his seat, and approached the room whence the cry proceeded. Much as I feared him I caught his arm. The thought, that in a moment of frenzy he might do violence to my child, made me desperate."

"You must not go there!" I said.

"I can hardly tell what followed. I remember that his eyes glared upon me with a momentary blaze of maniac passion—that he pushed me from him—that a dizzy sickness came over me, and that I fell upon the floor."

"When I recovered my senses, I saw him bending over my darling Ella, as she lay on the rug, gazing up with baby wonder into his face. With a cry of terror I sprang forward. But my fear vanished in an instant. He raised his head. There was no frenzy in his eyes; but tears gushed from them, and rolling down his hollow cheeks, fell like rain upon the face of my child."

"He kissed her, and rising from his knees, begged my pardon in a soft, melancholy voice, and in words so delicate and touching that I burst into tears. Before I could speak he was gone."

"How singular!" exclaimed Isabel.

"But what is more singular still. From that day Gilborne's insanity disappeared. He is now a minister in C——."

"Is that the man—the pious, benevolent, kind preacher, whom everybody loves so well?"

"The same. He turned to heaven the affections which were thrown away upon my unworthy self. I believe he is happy; but even now when I hear of thoughtless flirtations, I am pained by the reflections they call up."

"But they seldom have such a melancholy termination, dear aunt," timidly suggested Isabel.

"True. Disappointments in love generally leave sorrow in the heart without shattering the brain. But there are beings of such fine and sensitive natures, that the health of both mind and body depend upon the soundness of their affections."

Isabel bowed her fine head to hide a blush and a tear; and from that day she was never known to indulge in thoughtless flirtations.

## GOOD-MORNING.

"Oh, I am so happy!" the little girl said  
As she sprang, like a lark, from her low trundle-bed;  
"This morning, bright morning!—Good-morning, Papa!  
Oh, give me one kiss for good-morning, Mamma!  
Only just look at my pretty Canary,  
Chirping his sweet good-morning to Mary!  
The sunshine is peeping straight into my eyes,  
Good-morning to you, Mister Sun—for you rise  
Early, to wake up my Birdie and me,  
And make us as happy as happy can be!"

"Happy as you may be, my dear little girl!"  
And the Mother stroked softly a clustering curl—  
"Happy can be—but think of the One  
Who wakened, this morning, both you and the sun!"  
The little girl turned her bright eyes with a nod—  
"Mamma, may I say, then, Good-morning to God?"  
"Yes, little darling one, surely you may,—  
Kneel as you kneel every morning to pray!"

Mary knelt solemnly down, with her eyes  
Looking up earnestly into the skies;  
The two little hands that were folded together,  
Softly she laid on the lap of her Mother.—  
"Good-morning, dear Father in Heaven," she said;  
"I thank thee for watching my snug little bed;  
For taking good care of me all the dark night,  
And waking me up with the beautiful light!  
Oh, keep me from naughtiness all the long day,  
Blest Jesus, who taught little children to pray!"  
An Angel looked down in the sunshine, and smiled,  
But she saw not the Angel, that beautiful Child!

## ON ANIMAL OILS.

OTHER animal oils beside those obtained from fish have enjoyed a popular reputation for the cure of diseases of the chest. In South America remedial efficacy is attributed to the oil of the condor, and in the backwoods of the United States to that of the rattlesnake; and it may not be inappropriate to mention that I have been favoured with a present of oil of scorpions, as it is termed, obtained by infusing scorpions in olive oil, and employed with much confidence by the Spanish physicians, as an embrocation to the back in the treatment of ague.

The great naturalist Pliny, speaks in terms of commendation of the virtues of the broth of soddin turtle in king's evil and swelled spleen. This broth, he says, has a power "Strumas discutere ac lienes tollere."

Other cold-blooded animals were, for many centuries, supposed to possess remedial efficacy. The flesh of the viper, for example, was employed from the very commencement of the Christian era. It was administered by the physician of Julius Cæsar. Galen believed it to be efficacious in elephantiasis, and our distinguished countryman Roger Bacon describes the case of a young German lady whose constitution was so impaired that her hair and nails came off, but who, by a persevering diet of viper's flesh, became in appearance younger and more beautiful than before. Dampier, in his *Voyages* (vol. II. part 1, p. 53) mentions that the people of Tonquin use, as a cordial, vipers and scorpions infused in wine. The learned Mead (*Med. Works*, London, 1762) observes that the physicians of Italy and France commonly prescribed the broth and jelly of viper's flesh to invigorate and purify the mass of blood; and he adds, that it has an efficacy to scour and cleanse the glands of those stagnating juices which, turning to acidity, are the origin of many of those troublesome diseases called scrofulous, leprosy, &c.; and that British physicians were too sparing of its use. Dr. Mead's recommendations were apparently disregarded, for not long afterwards viper's flesh ceased to have a place in our Pharmacopœia; but even if this long-popular remedy was superstitiously introduced, it is quite possible that it may have possessed useful properties, and have been somewhat capriciously dismissed.—Dr. Thompson in the "Lancet."

"DEAR sir," lisped a great lady in a watered silk at the Exhibition, "have the goodness to inform me if there are any noblemen in the United States?" "Yes, marm," answered a full-fed Jonathan, who was showing off the beauties of a cream freezer, "and I'm one o' them."

## DOMESTIC EDUCATION.

THE character of most individuals is almost wholly to be traced to domestic education. Our first sensations necessarily produce the greatest effects; and the power with which they act upon the susceptibility of the tender mind, is evidenced in the charm of domestic ties, local attachments, and patriotic feelings. The earliest succession of ideas to which we are accustomed, form our primary habits, whether for good or evil; and these are seldom or never eradicated. But what can be learned at the house of a drunkard and a slut, whose improvident union was hastened by sin, who are degraded in body and mind; where disorder, poverty, and strife, are ever in the ascendant? Or, how can dirty and neglected children, associated with none superior to themselves, acquire a single beneficial habit, or experience a single train of wholesome ideas, in the absence of parental care, in their desolate homes? What domestic, what local attachments, what patriotic, what generous or virtuous sentiments can be expected in such quarters?

Everything which disconnects our minds and being from our parental hearth, must needs have a debasing and pestilential influence; but what can be done to ameliorate the condition of such helpless ones? Even amongst the higher classes, children are left too much to themselves, or with servants; but here the evil seems to be unmingled with a single redeeming feature. "The beaten track of customary vice" is followed without scruple. "Parents, be virtuous," said the heathen satirist; "if, on no other account, at least for the sake of your children." Our infant schools may effect some good; but at best they are imperfect substitutes for what parents ought to be zealously accomplishing for themselves, and none but parents can accomplish. Home should be rendered the happiest of all the scenes of our childhood, endeared to us by a thousand lovely associations, cherished in fond memory on account of the noble and generous feelings there excited. Then, its remembrance would hang like an enchanted spell upon the tempted youth; and if he fell, ever whisper in the ear of the wayward prodigal a loving invitation to return and be blessed again.

"The child is father of the man;  
And I could wish my days to be  
Bound each to each by natural piety

"The thought of our past years in me both breed  
Perpetual benediction: not indeed  
For that which is most worthy to be blest—  
Delight, and liberty, the simple creed  
Of childhood, whether busy or at rest,  
With new-fledged hope still fluttering in his breast—

"But for those first affections,  
Those shadowy recollections,  
Which, be they what they may,  
Are yet the fountain-light of all our day,  
Are yet a master-light of all our seeing,  
Uphold us, cherish, and have power to make  
Our noisy years seem moments in the being  
Of the eternal silence; truths that wake,  
To perish never;  
Which neither lust nor loss nor man nor boy  
Nor man nor boy  
Nor all that is in enmity with joy  
Can utterly abolish or destroy!

"Hence, in a season of calm weather,  
Though inland far we be,  
Our souls have sight of that immortal sea,  
Which brought us hither;  
Can in a moment travel thither,  
And see the children sport upon the shore,  
And hear the mighty waters rolling evermore."—WORDSWORTH.

But a painful illustration of the influence of early association is afforded by the history of Lord Bacon. The royal presence and favour, which he attracted as a quick and interesting child, seem to have raised ambitious hopes in his aspiring mind before his judgment could control them. The love of state, and pomp, and worldly grandeur, or the service of royalty, thus became, as he calls it, his "first love,"—his strongest passion, which all his delight in philosophical meditation and studious retirement, and all the natural impulse of his powerful genius could not subdue. He was trained to be a courtier almost from his cradle; and hence arose all those mean and shuffling arts and evasions, which have so fearfully sullied his glory, as they corrupted his noble disposition, and even dimmed the lustre of his eye.

It is obvious that correctness and elegance of language will be most easily acquired, when those with whom we have most constantly associated in early years have possessed these accomplishments, and thus formed our ear and sharpened our tongue. The Roman orator strikingly illustrates this, by the case of Curius. He was very illiterate, and even ignorant: he thought slowly; his arrangement was bad; his memory most defective; and his action so awkward, as he rolled himself violently about, as to excite general ridicule. His education, as a neglected ward, had been of the most wretched character; and yet, so great was the force of domestic association, that his language was fine, and his fluency of expression admirable.—(Cic. de Brut., sec. 59.) If such a happy talent was thus acquired without effort, what might not have been accomplished by well-directed labour? We have been recently informed that Sir Robert Peel derived his fluency and eloquence from the manner in which his father had trained him up from early boyhood, to speak from a table on any subject suggested to him. Applause stimulated his efforts, however imperfect at first, and the habit was acquired, which was afterwards so admirably matured. Such an anecdote is, at least, strikingly illustrative of the success which might be reasonably expected to crown similar persevering efforts.

Cicero beautifully says: "We have read the letters of Cornelia, the mother of the Gracchi. It is evident that her sons were nursed (educati) in her arms more than in her lap." Women, indeed, of energy, piety, or talent, have exercised a prodigious influence over their children. It is said that these commonly resemble their mothers in their intellectual qualities; and that this fact accounts for the notorious deficiency in the sons of Tully and Lord Chesterfield. Cleobulus vainly urged his countrymen to educate their females; the few who followed his advice witnessed the beneficial result. We cannot be surprised at the love of pleasure, frivolity, and external embellishment which distinguishes the mass; it is the vacancy of untutored minds, which is thus manifested; they feed upon husks, because no solid nourishment has been ever provided for them. In order to arrest the evil, we must direct them to higher and nobler objects; we must educate them thoroughly, and with earnest diligence. They will subsequently mould the character of their sons, and impart to genius and to virtue, a softness and delicacy which can be found nowhere else. Their love and tenderness will render their influence permanent and paramount, as "in sweet and kindly tones and words, they direct the opening mind to nature, to beauty, to acts of benevolence, to seeds of virtue, and to the source of all good, to God Himself."

The great defect of domestic training in general is the habit of cherishing pride and vanity in children, and of allowing them to have their own way in everything. It is forgotten that a spoilt child must grow into a selfish and opposing world, and that the contradictions and trials, to which he must then be exposed so unexpectedly, may render his existence a sore burthen to himself. The hot-house plant sickens and dies in our harsh climate when protection is withdrawn.

If our early trains of ideas create a habit of over-valuing any pleasure or pain, too much will be sacrificed during life to obtain the one or avoid the other. We shall be in prodigious haste to realize a pleasure as soon as desired, or to extinguish a pain as soon as felt. But these results can only be attained by a series of steps, frequently numerous ones; and, if impatience hurry us to overlook these, we may sacrifice more than we gain. It is desirable that parents should follow the order of nature, and never thwart it, and thus contribute to form correct associations in the minds of their children, as to the connection between pain and sin on the one hand, and pleasure and good conduct on the other, and as to the importance of the constant exercise of patience and self-control.

## RESULTS OF THE EXHIBITION YEAR.

BY H. G. ADAMS.

Closer union, and communion,  
'Tis the families of man;  
Wiser growing, better knowing  
How to work and how to plan.

Seeing farther, seeking rather  
Good of all than good of one;  
None despising, higher prizing  
All that work beneath the sun.

Courteous greetings, friendly meetings;  
Strifes and jealousies no more  
Now shall harass, nor embarrass,  
Those who never loved before.

Interchanging, thoughts far-ranging  
O'er the world in search of good;  
Fetters breaking, tyrants' shaking;  
Weapons bathed no more in blood.

Friendly strivings, and revivings  
Of the old primeval law;  
Hopeful being, gladly seeing  
Visions like the prophet saw.

Each to other, like a brother,  
Offering sympathy and aid;  
Plenty reigning, none complaining,  
Nought to make the weak afraid.

THE SUBMARINE TELEGRAPH.—The achievement, at length, by Messrs. Brett and their coadjutors, of the submarine telegraph across the British Channel, induces me to step forward to claim for myself the merit (if any be attached to it) of being the first originator of the idea of a submarine (electromagnetic) telegraph—an idea which flashed across my mind on reading the account of Professor Wheatstone's success, in his first experiments on the electric wires between Paddington and Slough; and after digesting and mentally maturing a project, which had for its object the like effect by submarine agency, I submitted it for the consideration of the Lords of the Admiralty, and for which I had the honour to receive their lordships' thanks; "but their lordships declined entertaining the idea, as ineligible." Indeed, such "a fanciful, absurd, idea," as it was then designated, was ridiculed by many as being altogether Utopian, but I am thankful to Providence that I have lived long enough to see my "Utopian absurd project" partially carried out, and, to a certain extent, actually realized;—I say to a certain extent, for my project embraced the probability of its eventual extension to India through the Mediterranean and Isthmus of Suez, down the Red Sea, across to Bombay, and, after circumscribing the Indian Peninsula, extending the wires on to China, which I made the terminus of my "Utopian project," leaving it to a future generation to carry the wires down to Australia, and from Ceylon across to the Cape of Good Hope; trusting, however, to the possibility of the wires being ultimately taken across the Atlantic to America, though with but slight expectation that any one of them *in esse* would live to see this latter effected. Still, however, such an achievement was not utterly improbable. But certainly, as regarded a telegraphic communication with India, I considered that as coming within the range of rational probabilities; for although the expense of such a gigantic undertaking must of necessity be vast in the extreme, yet what is there which cannot be achieved by the united means of Government and the East Indian Company, both mutually and reciprocally interested in its accomplishment, and as affording, too, a return of a small per-centage on the outlay produced by an interchange of communication in a manner which I then pointed out, somewhat similar to the plan since adopted by the present Electric Telegraph Company.—Correspondent of the Builder.

S. Mayson

## THE PHANTOM LIGHT:

A CHRISTMAS STORY.—BY FITZ-JAMES O'BRIEN.

(Continued from Page 79.)

Nothing to his aunt or Avisia of the interview he had with Helen in the cavern. He knew it would only pain them; and, with the former, would serve to confirm the previous hatred she entertained for the plebeian heiress. Nevertheless, he felt strangely troubled at the mysterious threat which she held out against him, and would gladly have gained some information regarding it, had he not been restrained by the before-mentioned reasons.

One evening the family at the cottage were assembled in the little parlour, which glowed merrily with the crimson flame of the large logs of firewood that blazed on the wide hearth. Mrs. Tregar, as usual, was knitting away furiously at the endless coverlid. Arthur and Avisia were seated in a corner, whispering to each other those mysterious and secret sentences in which lovers' dialogues are usually conducted. Uncle Tot sat staring fixedly into the scarlet embers, as if he saw there the nucleus of some new, and surpassingly complicated and useful invention.

"Do you know, Arthur," said Mrs. Tregar, arresting for a moment the sharp clicking of her needles, "do you know, that the servants have lately been talking a great deal about the Phantom Light. Several of them say they have seen it."

Arthur shuddered slightly, for he remembered the night in the orchard.

"I have no doubt, aunt, that they saw a light; but as to the supernatural attributes which report gives it, I am no believer in them."

"I don't know what to say about it," said the old lady, thoughtfully. "I have seen strange things happen in my time; and though once as incredulous as you, my scepticism has been shaken. There was your poor grandfather, Arthur."

"I remember," said Arthur, in a low voice. "They say it appeared the night before he was killed; but it was mere coincidence, depend on it. This light is probably nothing more than some inflammable vapour which, arising from natural causes, floats across the lake in a state of ignition at irregular intervals; and the peasantry, glad of an opportunity of adding to their collection of supernatural lore, invest it with more importance than it merits. This is the only explanation which my reason can offer: my heart, I am ashamed to say, leans to the popular legend."

"It is not well," said Avisia, earnestly, "to despise popular superstitions. Legends frequently clothe the unsubstantial phantoms of history with an air

of reality, which otherwise they would not possess; and there is a wild romance about the lore of our own old hills and lakes that fascinates and attracts the mind, let it be never so incredulous. For my part, I should like dearly to see this wonderful light."

"Do not say so, dear," said Mrs. Tregar, reprovingly; "its appearance always forebodes misfortune, and heaven knows we have had quite enough of that already!"

"I have no fear of any," replied Avisia, turning and nestling her small head upon Arthur's breast. "With such a talisman as this, I bid defiance to the Phantom Light."

"So do I!" exclaimed Uncle Tot, suddenly arousing from a deep reverie; "so do I! Phantom Light, indeed! Pooh! its nothing to my patent candle—that's a light indeed; when that comes out, I'd like to know where your Phantom Light will be."

"But you know, Uncle Tot," said Avisia, with a wicked smile, "you have not yet given us an opportunity of judging of the merits of this wonderful candle—we are quite in the dark about it, which, considering its brilliancy, is decidedly unfair. You should let us see it, and test its powers of illumination."

"Of course, of course, Vizzy—you shall see it. It is ready for inspection—stands upon its own merits. No fear of a failure this time; I have provided against everything—everything," he added, in an authoritative tone.

"Go and fetch it, there's a dear good man," cried Avisia. "I'm all anxiety to see it. Will it be like your patent ricket, Uncle Tot, and nearly burn the house down?"

Uncle Tot was about to look offended; but a sweet smile disarmed him, and with a shake of the head he trotted off to his sanctum. In a few moments he returned, bearing in his hand (with as much care as if it had been an infant) a large and very showy candle, furnished with a most formidable wick.

"There!" said he, depositing it proudly on the table; "there! look at it! There's a candle for you! not such a one to be found in the world—I repeat it, in—the-world! It will burn for a week, and give the light of six ordinary candles. That candle, Mrs. Tregar, will make our fortunes."

"I'm sure I hope so, Tot," replied his sister, smiling at his enthusiasm; "our fortunes stand much in need of some repair."

Uncle Tot, having delivered himself of this striking prophecy, proceeded to illustrate and verify it by lighting the candle. The reader will be pleased to observe here with what self-denial I have abstained from any allusion to the venerable *witticism* about "throwing a light upon the subject;" and will, I trust, give me some credit for this act of literary martyrdom. The candle was, most certainly, a brilliant one. It threw Mrs. Tregar's best moulds into the shade, and may be said fairly to have "taken the shine out of them." Uncle Tot was in ecstasies—Mrs. Tregar amazed; all were taken completely by surprise. Every one had fully expected that, like all the rest of Uncle Tot's inventions, it would have ended in some most eccentric failure. Such, however, was not the case. The candle seemed determined to rescue the waning reputation of its inventor from any previous aspersions, and, accordingly, flamed away with a most overpowering brilliancy and splendour. After a sufficient time had elapsed for all its perfections to be observed and commented on, Uncle Tot announced his intention of putting it out. This, as it proved, was easier said than done. First, Uncle Tot gave a careless puff at it, and the clear white flame flickered a little, and then blazed up as brightly as ever. "He did not blow strong enough, that was it." Accordingly, he puffed out his cheeks until he was like the wood-cut of the north wind in *Æsop's Fables*, and sent a furious blast at the refractory candle. Was there ever anything more odd? The candle did not take the slightest notice of it. Again and again did he renew his efforts, until his round cheeks ached from distension, but in vain. The candle seemed to be a distant relation of the undying fire of the Gebira, and, do what they would, it was evidently determined not to go out. Arthur, Mrs. Tregar, Donal, the whole household, exercised their lungs upon it, but with the same result: it only blazed the more fiercely, and guttered with indignation. At last, Avisia, more in joke than earnest, suggested a trial of Uncle Tot's wonderful bellows, which having put everything out that it had ever been applied to, might, in this instance, be supposed capable of rendering peculiar service.

Uncle Tot caught eagerly at the idea; it was the very thing! The bellows would do it, most undoubtedly; it could not fail!

The bellows was accordingly produced forthwith, and set to work upon the candle. It was a great sight to see these two rival inventions combating so fiercely. The bellows whizzed, and rumbled, and groaned; the candle flickered, and flared, and guttered. Now the former, now the latter would appear certain of the victory. Sometimes the candle would dwindle down to a half-extinguished flame, and look as if it was going to give up the ghost, and

then, like Antæus when he touched the earth, burst out with renewed force; then again, the bellows, as if exhausted by its efforts, would be apparently at the last gasp, with a sort of death-rattle in its wind-pipe, when Uncle Tot's touch would set it blowing away like a white squall. It was a great combat, and, in its way, quite as grand as the Eglinton tournament, or the final scrimmage at the Victoria Theatre, when the hereditary English mariner, with a broadsword in each hand, and a pair of pistols between his teeth, rescues a distressed, but innocent heroine from the fangs of an artful and designing villain, who finally expires in a considerable quantity of blue fire. In the end, however, the candle had the best of it, and the bellows had to retire discomfited from the field. The former had but a brief triumph of it; for, at the cook's suggestion, it was ignominiously immersed in a tub of cold water, and, like many another obstinate inflammation, yielded at last to the hydropathic treatment.

Uncle Tot was rather disconcerted, poor man! at the failure of this his

last and greatest offspring. He received some consolation, however, for all deplored that it would have been a most excellent candle, if it would only go out.

"Who can that be?" exclaimed Mrs. Tregar, at some time after the exhibition of the candle, a loud knock at the cottage door reached their ears; "who can that be, I wonder—it is rather late for the night post; ring the bell, Avisia, dear, and order the servants to answer it."

In a few moments Oonagh entered the room, with a letter in her hand for Mrs. Tregar.

"The Cork post-mark," exclaimed the old lady, examining the letter carefully before she opened it, "who can it be from? it has an office seal, too; it can't be from lawyer Dartnell, for I had a letter from him yesterday; still it is very like a lawyer's epistle. I hope it contains no bad news."

"The best way to ascertain that, aunt, would be to open it," said Arthur, smiling at the old lady's conjectures.

"I have a peculiar dislike to any letter that smells of law," replied Mrs. Tregar, breaking the large seal, methodically, "they are generally freighted with bad news; and even if by chance the intelligence they bring you is good, one has to pay so heavily for its communication, that the triumph is nearly as bad as a defeat."

So saying, she opened the portentous epistle, and proceeded to gather its contents. She had scarcely time, however, to read more than a few lines, than she uttered a loud cry of pain, and sank back in her chair insensible. Arthur and Avisia rushed to her side, chafing her temples, and endeavouring to restore her to consciousness. In a few moments she unclosed her eyes, and uttered a faint sigh; then, seeing Arthur leaning over her with an anxious look, she pointed to the letter, which still lay in her lap, and motioned to him to read it. He took it up, in obedience to her wish, and glanced over it; as he read on, his face changed, and he became deadly pale.

"She has executed her threat but too well," he muttered to himself, as he laid it down; "Avisia and her mother will be indeed houseless."

(Continued in No. 7.)

## THE ANGEL "LOVE."

SOFT and clear, and very gentle were the blue eyes of little Anne, as she looked up to the face of her dear mother, and heard her say words that her childish thoughts could scarcely grasp, yet which made her young heart seem to stand still in her bosom. Because her mother's face was so fair and pale, and her eyes so strangely bright, and her smile so beautiful and holy, the little one felt as if it were an angel who talked to her, and the words came like echoes of all the child had ever heard of goodness and of Heaven; and she felt something like awe even at the caress of that dear, dear hand, that had been so often laid on her bosom—laid in love and in blessing; but if anything of sadness crept in with the strange feelings, it was shown in her calm stillness, and not by tears.

"Because I am going away from you, my child," said the beautiful pale lips; "and because I would meet you again, I tell you these things. You are so very young, that much of what I say will be a strange sound, without meaning to you; but I know that you love me, and will treasure up all I say in your little, loving heart, till the time when light from above shall fall in among the words I leave you, and then they will arrange themselves into beautiful forms, and come up out of the dimness—and, like angels, teach you pure and lovely things, that you could not understand now."

"But," murmured the child, with clasped hands, and eyes that would not turn from those that looked down so fondly on her, "I would always learn from you, my mother. No one, nothing can teach me so well as you, because I love you best of all."

"You think so now," said the mother; "once I thought so, too; but I have learned to know better: and a time will come when you will know it is not so. When I was well, and full of life, I thought that I would be strong for your sake, and would lead you, with a firm arm and steady heart, away from danger and pain. But it was not a true spirit that whispered so to me, and our Father in heaven sent a better spirit to teach me that I was very, very weak, and unfit to guide and lead. But though the spirit wore a dark mantle of shadows, and had tears, instead of stars, glittering in its crown, and spoke in sorrowful tones, so that at first I shuddered at its presence, yet, the good Father who sent it to me, opened my eyes to its true nature, and lifted the dark mantle, that I might see how white, and pure, and lovely a robe it wore beneath; and I know now that tears, if pure and full of love, are more precious than stars of light, and the tones of sorrow are now soft and sweet as music; and the spirit I feared is become a bright angel to me, and stands beside me to soothe and bless me; when, if it were not there, all else would be dark."

"And its name, my mother; what is the spirit's name?" asked the child.

"I called it 'Affliction,' while its radiant face was hidden from me," replied the mother; "but when the dark veil was lifted, I saw its true name—'Love,' written on its white forehead in brightness; and now I love it so that I would not lose its presence and its teachings for all the wide world could offer me."

"Mother," breathed the child, softly, while her hand clasped more closely the arm of the pale lady, "you said you would go away from me. Will this spirit leave me too?"

"No, no; it will not leave you, my dear one, so long as you will only follow its guidance, and love to obey it. But you must love it above all things; must feel in your very heart that it is wiser, truer, purer, and more

mighty than any other thing. Alas! dear child, when you shall feel how great and good this glorious spirit is, then you will know, indeed, how frail and feeble a guide your mother could have been to you. See, love! how my heavy limbs droop, and my voice grows faint even now; ere long it will be silent for ever; and, then, if your trust were only in me, you would be lonely indeed. But this true guide never fails, never falters; it is strong, as bright, as full of love as of wisdom; it will never, for one moment, leave you—sleeping and waking, will the lovely one be near to bless you."

"But, mother, you did not know it at first, and I am so young, so apt to be mistaken, how shall I know it if it veils its face from me?"

"A trusting, loving, innocent heart will be sure to know that spirit, even in disguise, my child," answered the mother. "It was because I feared it that I doubted it at first; but if you are willing to give up your own way, to do right in all things, even when it seems hard to do so, this angel's face will beam so brightly with joy on you, that it will shine through the veil." But, it may be long before you learn so to give up your own will, and this spirit may wear many forms to you. It may appear all- clad in sunny brightness and rainbow colours, or it may wear even a darker form than I did for me. Perhaps you will hear it called 'Death' by those who are around you, and the tears in its crown may be more bitter than those I saw. But if you are constantly looking for this bright 'Love,' you may still know it: Look for it, my child, in every event of life; remember that it may be in every p in many forms; and when you hear those who are near you speak of 'pain,' of 'sorrow,' of 'trial,' or of 'sickness,' think that all these may be but other names for the heavenly one, and do not murmur that it seems to change; but be patient and humble; and, in the end, it will raise its veil, and you will see that in reality it never changes, but is still the same beautiful Love, and only its dress is different; and MAY, my dear one, that you may always be true to its teachings: pray always—pray now, my child. I am very faint and weary, but it will warm my heart to see you pray."

The child looked up, and saw that the pale face was paler still, and that the languid head hung wearily down, and she felt that her mother's hand was chill; but still there was so soft a smile on her lips, that it made the wondering, little heart, stronger to do their bidding. And she knelt down, and laid her face in her mother's lap, and said the prayer her mother had taught her long ago—"Our Father, which art in heaven," and when she said in her low, earnest, childish voice, "Thy will be done," she felt her mother's hand press her own, very, very closely in its cold grasp; but still the child went on till she had finished the prayer, and then she saw that the loving eyes which watched her were strangely changed, and looked still and glassy; and a whisper, so low that she could scarcely hear it, said—"I am dying; but do not tremble nor shrink, dearest: even this is the angel, Love." And the faint breath passed away from the pallid lips, and the child saw that her mother was no longer among the living ones of earth. Then, again, she bent her head, and prayed that she might feel the angel's presence, even in its darkest dress; and peace stole in among the half-formed fears in her heart, and on her mother's lips still seemed to live their last word, the name of the angel, and it comforted the child, and still again she prayed, "Thy will, O Father, be done."

For many days, the form of the gentle mother was laid away in the earth; but Anne felt that the pure and loving spirit, which had stood beside her, dying, was still near; and she did pray often, and strive earnestly to see it everywhere; and very often it lifted from its radiant face all that hid its glory, and it spoke sweet words of cheer and hope: when she yearned for the old, kind tones of her mother, and when the child read in the holy book her mother had so loved, then the face of the good angel glowed with a perfect radiance, and it taught her to understand what she read there; and then the child learned great and pure lessons, that made her strong to love, and ready to suffer.

Many, who spoke to her, talked of pity, and said how lonely she must feel now that her mother was dead, but the child said—

"My mother is alive again, and I am not alone." And the angel smiled at her words. But, after a time, the child grew weak, and her steps were faltering; and very often she pressed her little hand on her heart to allay its pain, and the friends about her whispered that she had the same look that had been in her mother's eyes, and spoke of "trial" and "sickness." And, with a gentle smile, the child said—

"But still I know the holy, good 'Love' will show itself!"

And it did, indeed, with sweeter words than ever; for it said, "Now that the child had well obeyed her mother's words, and walked her short path on earth with a true heart; and that now the Great Father of all had prepared a place for her in heaven; and, after it, (the angel,) should yet, for a little time, wear dark robes, and appear in sterner shapes, even to that of 'death.' Yet it was afterwards to carry her up to the ready home—the angel's own birth-place, and she would live for ever there, with all she loved; and her mother would welcome her, and then the angel would always wear its white robes and stars in its crown: and they would never doubt it any more."

And so the child kept on smiling peacefully at all the sad names they called the heavenly friend she loved; till, at last, it bore her up to heaven, with its face unveiled, and its beauty all revealed.

COMPARISON OF SPEED.—A French scientific journal states, that the ordinary rate is, per second—of a man walking 4 feet, of a good horse in harness 12, of a reindeer in a sledge on the ice 26, of an English racehorse 48, of a hare 88, of a good sailing ship 14, of the wind 82, of sound 1,038, of a 24-pounder cannon-ball 1,300, of the air, which, so divided, returns into space 1,300 feet.

## SHADOW AND SUNSHINE!

OR, WHO SHALL WIN?

BY CHARLES CRAYON.—(Continued from page 75.)

MR. GORDON was sitting with his wife and daughter in his comfortable parlour, when they entered. He looked hard at the new comer, but that individual seemed inclined to bear the scrutiny very calmly, merely inquiring—

"Is this Mr. Gordon?"

"It is, sir," was the brief reply.

"Then, Mr. Gordon, I have business with you."

"You will oblige me by stating it forthwith."

"But not here, if you please."

"And why not, sir?"

"My message is intended for you alone."

"I have no business which I wish to keep secret from my family, sir."

"Very well; after you are acquainted with my errand, you can judge whether it is expedient to share this with them."

All looked completely mystified at the audacity of their guest. Mr. Gordon, however, beckoned him to follow, and left the room. He led the way to the library; both entered: he closed the door, and, glancing at his visitor, pointed to a chair.

It was taken.

"And now, sir," said the millionaire, looking his visitor calmly in the face, "will you oblige me by stating, as directly as possible, the object of this call?"

"Certainly, sir," was the reply; while the man who excited his curiosity so strongly, cast the glance of a pair of eyes upon him that almost alarmed him, such was their piercing brilliancy.

"In the first place then, you have a daughter, I believe?"

"I led you here to receive information, not to answer questions, sir."

"Indulge me a moment; you will soon ascertain my meaning."

"I will humour you, then. I have a daughter."

"An only daughter, I think?"

"Yes, sir, an only daughter."

"And to-morrow evening she is to be married?"

"This is insufferable; you are intruding where you have no business, sir."

"Nay, you mistake my motives; I will soon explain."

"You will oblige me by so doing. Then, as you seem anxious to know, she is to be married to-morrow evening."

"Well; are you thoroughly acquainted with the man so soon to become your son-in-law?"

"I am, sir."

"Have you studied his character?"

"I have, sir."

"And what conclusion have you arrived at, in regard to it?"

"That he is an honourable and honest man. But be careful, sir; if you cannot give me proof of good reason for such inquiries, they shall cost you dearly."

"If I do not, they may. But allow me to inquire if you have endeavoured to ascertain his motives?"

"I have, sir."

"Then, Mr. Gordon, if you have come to the conclusion you state, I am sorry to say that you have been deceived."

"What?"

"Deceived, sir; basely deceived."

"What mean you?"

"That this man is not what he professes to be!"

"Then what is he?"

"An impostor!"

"A what?" fairly screamed the old man, springing from his seat.

"A villain!"

"By Heaven, this is beyond endurance. Begone, sir, or I will lay violent hands on you."

"Sir!"

"I say, begone, or I will chastise you on the spot."

But the stranger sat, casting his dark, flashing eye on the excited man, and he showed no intentions of evading his threat.

"Do you hear?" he shouted, wildly.

"I do," was the calm reply.

"And do you intend to obey my command?"

"I wish to wait a moment, till you grow calmer."

"Calmer! who would listen to insult from a stranger, and be calm?"

"Mr. Gordon, you misapprehend my motive; if I have insulted you, I would ask your pardon. I assure you I had no motives in view, except a regard for your daughter's happiness, and a desire that it should not be basely trampled on."

"You are a scoundrel!"

"Sir!"

"Yes, a scoundrel; a hypocrite!"

"What, sir?" exclaimed the stranger, rising.

"All that I have said; and if you do not leave my house within three minutes, I will kick you out as I would a puppy."

"Mr. Gordon," said the stranger, calmly, "did I understand you aright?"

"If you did not, I can repeat what I have said."

"Did I hear you order me from your house?"

"You did, sir."

"And am I to understand that you are in earnest?"

"I am not a man to trifle."

"Very well, then, Mr. Gordon, very well, you shall be obeyed."

"As soon as possible, sir."

"Then I have done what I could to prevent this, and you will regret, when too late, that you had not regarded my advice."

"I shall regret that I had not kicked you out of doors, sir."

"You are inexorable; I have no more to say. But we shall meet again."

"Never in this house," said the excited man, as his visitor took his hat, and, bowing coldly, strode proudly from the room.

Gordon paced the floor earnestly, after he was gone: he was labouring under the greatest excitement.

"Impostor!" he exclaimed; "I wonder that I suffered him to remain in my house so long. But what could the villain have meant in making such a charge against Wallace? He must have some ulterior object in view, but what it is I cannot imagine. True, I have not been acquainted with him who is to be my son-in-law, long; but I am sure, if an honourable and honest man ever drew breath, he is one. Besides, did he not bring credentials from my old friends in the city? Pshaw! I will not let this idle story trouble me more. But shall I mention this to Ellen? No; it must distress her, for this fellow is surely an enemy to her intended, and it could do no good, so I will keep the matter to myself. But if that audacious villain ever approaches me again, I will have him arrested, that is certain."

## CHAPTER XIV.

"Of all the freaks that life can play,  
While sailing o'er the sea of Time,  
There's nothing holds more potent sway,  
Than dark, suspicious, hateful crime."

"The poor—the rich—the great—the wise,  
Are often, through temptations, led  
To do those things they but despise,  
And bring confusion on their heads."

"Tis better far to shape our ways  
According to that gnome's bright;  
That every noble heart repays,  
With blessings, if they act aright."—ANON.

"ALFRED," said Mrs. Whitman to her husband, one morning, a few months after their marriage, "do you remember Ellen Gordon?"

"The old merchant's daughter, who moved out of the city several years since?"

"Yes, the same."

"I have some recollection of her, but I do not fancy I should recognise her now. She was one of your old friends, I believe?"

"Yes; and I received a letter from her last evening. She is about to be married."

"Indeed! to whom?"

"To a gentleman by the name of Wallace. He resides in town, I believe."

"Wallace!" said Whitman, musingly, "I do not know of any such person. He must be out of my circle of acquaintance."

"She did not give me any particulars, but merely said that she was to be married next week, and was then going to start immediately for Europe, to spend a few months."

"Then you will not see her before she returns?"

"No, I suppose not. I should like to; but I must content myself with waiting. I am glad she is to live in town, for we were very intimate when we were at school together, and I presume we shall be as good friends again."

"I hope so," replied her husband; and the conversation was dropped.

And Ellen Gordon was married. The scheme was so artfully contrived, and so skillfully executed, that no suspicions were excited. Duval was in ecstasies, now that his villany had proved successful; but he desired to put off, as far as possible, the time when the secret should be made known. He knew that a storm would burst upon him then, and he had some fear of the consequences. But the same reckless, daring spirit, that had ever characterised him, rendered him able to forget all fears for the future, and all recollections of the past, while he was in a situation where many envied him, and his society was courted by all.

Immediately after his marriage, as has been intimated, he started for an excursion with his young bride; and among the many interesting objects that attracted her attention there, he succeeded in prolonging their visit to the Continent to several months. They visited the principal cities, and as his fair bride attracted attention by her intelligence and her queenly beauty wherever they went, so he, by that effrontery which was a part of his very nature, assimilated himself to the company he was in, and their society was sought in the first circles. The pride of Duval was pampered, and he was happy as it was possible for a person of his character to be; and his conscience was now so thoroughly soothed by years of crime, that he experienced few compunctions for the dark deeds he had committed, and no sentiments of pity for the victims of his insatiate thirst for revenge.

But the time when they must return, at length drew near; and while they prepared to do so, he experienced unpleasant forebodings at times, fearing that his real character might have been discovered by the friends of his bride. But as he had taken many precautions, and Mr. Gordon had perfect confidence that he was all he represented himself to be, the vile impostor had not been discovered. But had the pure being he had sworn to love and watch over while life should last—had she no warnings, no suspicion of the dark and black heart that she had once believed so true? Would it be for a person possessing so much penetration as she did, to have the over her vision so long? That she had some fear that all was not right, some unconfessed dread, is true; but she hardly dared confess it even

to her own heart. It was like the desire of one who was in a dangerous, though pleasing dream, to wish not to be awakened and have the pleasing illusion destroyed.

At length Duval and his bride arrived in the city of her birth. He soon discovered that his secret had not been revealed; and desiring to keep on the mask as long as possible, he hired a house in a distant part of the city from that where he had been wont to be, and, under the name of his fictitious name, he was enabled to keep up appearances for some time to come.

One day, after he had been in the city several weeks, he was suddenly surprised by feeling some one grasp his hand as he walked the street. He hastily looked up, almost expecting to meet the eye of an officer, but, to his great joy, Fenning stood before him.

"Why, my dear fellow," he exclaimed, shaking him heartily by the hand, "where have you kept yourself this long time? how are you coming now?"

"Oh! well, as usual," was the reply. "But, I think, instead of your asking where I have been, the other should be *vice versa*."

"How so?"

"Why, man, I have not cast my eyes on you before, these six months, while I have been in London, where I am ever to be found. But where have you been?"

"Oh! across the sea, of course; but, my friend, I have much to say to you."

"And I have much to tell."

"Undoubtedly; but we cannot converse here."

"Very true; so come home with me."

"I will: we shall be free there."

And so the two made the best of their way to the place where the previous interviews we have described between them had taken place.

Arrived there, the door was made fast, and they threw themselves upon seats.

"How natural," said Duval, glancing around the room. "Nothing has changed with you. But what was I here last?"

"Do you not remember?"

"No; I cannot recollect the time."

"It was a week previous to your marriage."

"Ah! yes; I remember. You knew that I was married, then?"

"I supposed so; for you know the papers announced that Miss Ellen Gordon was united to Mr. William Wallace, of this city."

"Ha, ha, ha! That was not bad. But had you not heard from me since?"

"Not a syllable."

"I did not intend my friends should hear from me, though I fancied you would know how I was situated."

"I had not the slightest idea of your whereabouts. Rumour, indeed, said that you had gone to Europe, but I knew not whether it was a fact, or a subterfuge for some other purpose."

"Oh, no! That was a true report; I have been luxuriating in the old country for the past six months, having a glorious time, I assure you."

"Undoubtedly. And how do matters stand now?"

"Just at present all is well; but how long it will be so I know not."

"Any particular danger?"

"Rather particular, it strikes me. But I shall remove it soon."

"Particularise more."

"I will; in the first place, you know how my scheme succeeded, I suppose?"

"Certainly. And I must say that it was much better than I had anticipated."

"Yes; it was better than I had dared to expect. I hoodwinked the family, and humbugged the dear public magnificently."

"So I should think."

"Well, if I had carried off an heiress and made her my lawful wife, you know it was done in an assumed character."

"Very true."

"And you can easily see that it was for my interest to keep up that character as long as possible."

"Of course."

"And when it does come out, you know I have good reason to look for a storm."

"When it does come out! You do not mean that you have kept it up until now?"

"Indeed, I do."

"But your wife?"

"She has no suspicion that I am other except what I appear to be."

"Are you in earnest?"

"I never was more so."

"Then all I can say is, that I never was more surprised."

"Well; I must think that I have succeeded famously. But, you know as I had wedded an heiress, of course I must support her as an heiress should be."

"Certainly."

"That I have done. I have been generous enough, I assure you. But it has made sad inroads on my purse."

"I can readily believe that."

"And I find, now, that I am growing sadly short of funds."

"That is not singular."

"Not at all. And when my dear father-in-law finds how magnificently I have humbugged him, you know it is but just to suppose that he will wax wrathful."

"That would certainly be the natural consequence."

"And being a stern sort of an old fellow, you know he might see fit to disown me, and swear that I never should touch a crown of his property."

"He might."

"And that proceeding would be particularly uncomfortable."

"So I should think. But what do you propose to do?"

"Oh! I have a project in view which will obviate all difficulties."

"And what may this project be?"

"Do you not apprehend?"

"I am sure I do not."

"Why, you know he is the only obstacle in the way."

"Certainly."

"And all I have to do is just to put him out of the way."

Fenning started. As much command as he possessed over his nerves, he could hardly appear composed to hear such a deed so coolly spoken of. In a moment he asked—

"But how can you do it?"

"I shall do it as I think no marks will be left."

"Politeness?"

"Ay! you have guessed. But I must leave now. I will see you again to-morrow."

"So be it. Good night, then."

"Good evening."

## CHAPTER XV.

"I could a tale unfold, whose lightest word  
Would harrow up thy soul;  
Make thy two eyes, like stars, begin to burn,  
Till heated and combled from the pores,  
And each particular hair to stand on end,  
Like quills upon the fretful porcupine."—SHAKESPEARE.

MR. GORDON sat in his library. It was evening, and he was deeply engaged in thought. If there was one thing nearer his heart—one dearer to him than aught else on earth, that was his daughter's happiness. In her, all his hopes were centered; she was his only child—the light and solace of his age. And, rather than that a cloud should pass between her and peace, he would be ready to make any sacrifice, however great. This was now the subject that occupied his mind. As yet he knew nothing of the truth; but that day tidings had reached him which made him fear that all was not right, and caused a feeling of solicitude to arise in his bosom. Suddenly his thoughts were interrupted by a rap on his door.

"Walk in," he answered.

A servant entered.

"There is a gentleman at the door, waiting to see you, sir."

"Who is he?"

"I do not know, sir."

"Did he not send his name?"

"No, sir. He simply said he wished to see you."

"Is he a young man?"

"It was impossible for me to tell. His face is muffled so I could only see his eyes."

"Show him in. I wonder who it can be," he mused, after the attendant departed. He was not long kept in suspense, however, for in a moment he returned, ushering in a gentleman. He then departed, closing the door.

As he had said, the visitor was completely muffled, so that only his eyes were visible. But the moment Mr. Gordon beheld them, he started involuntarily. The new comer leisurely laid his hat upon the table and threw back the garment which enveloped him. [See engraving, p. 72.]

Mr. Gordon started again; and this time he fairly sprang from his chair, for he saw in a moment, that the man before him was none other than the one, who had paid him such a troublesome visit, on the evening previous to his daughter's wedding.

"You recognise me, then, Mr. Gordon," said the stranger, who had been narrowly watching the countenance of his host.

"I do, sir, as you shall find to your cost," replied the old man, moving towards the bell tassel.

"What are you about to do?"

"To call my servants and order them to expel you from the house. You shall learn that my words, when you were last here, meant something."

"Wait a moment, Mr. Gordon. Forgetting your conduct towards me, when I was here once before, I have called again to inform you of a matter that nearly interests you. You look incredulous; but listen to me. I only ask your attention for five minutes, and if before the end of that time I have not convinced you that my end is what I profess it is, I promise you, on my honour as a gentleman, that I will instantly leave your house, and never trouble you more. Is not this reasonable?"

"It certainly appears to be."

"And you consent to it?"

"I do. So please to come to the point as soon as possible."

"I will. Mr. Gordon, if you stood on the edge of a precipice which was imperceptible to you, and which, the next step you took, would prove your ruin; if some one came to warn you of it, but you only laughed at him as endeavouring to impose on your credulity, and never even looked to see if what he said was true or not;—if you scorned his advice and turned him away, would not men have good reason to call you mad?"

"Certainly. But what has that to do with your visit?"

"Much, every way. You do stand on the very brink of a precipice, and if no precautions are taken, you will most certainly be dashed down its steep. I am come to warn you. Deem me not, I pray you, a base deceiver or a designing hypocrite; but listen to me carefully, and then judge of what I have said. Will you do so?"

*A light, colourless powder, descended into the wine. All this was performed in a much less time than has been occupied in the reading of it, and while Mr. Gordon was, apparently, gazing at some object out of the window. But a careful observer might have seen that he cast a piercing glance under his brows at the proceedings of his visitor."*—See Chap. xvi.

"I will. Go on."  
 "Then I suppose you remember the charges I made against the person who is now your son-in-law?"  
 "I certainly do."  
 "And you then regarded them as only an idle tale?"  
 "Very true."  
 "Have you since had any occasion to form a different opinion on the subject?"  
 "I have not."  
 "Then you will certainly have occasion to do so, ere long."  
 "Please to be definite, sir. I wish for no information except that which is given in a plain, straightforward manner."  
 "Your wishes shall be complied with. In the first place, I must repeat what I have said before—your son-in-law is an impostor."  
 "Be cautious, sir."  
 "Nay, do not start thus; it is even so."  
 "Do you know that if you trifle with me, it will cost you dear?"  
 "I do; and I say nothing but that which I am ready to substantiate."  
 "Then go on."  
 "I am ready to give you proof of all that I say. You have been deceived by a base and designing hypocrite."  
 "How?"  
 "He is no more what he professes to be, than he is an angel."  
 "What then?"  
 "He is a villain: aye, a villain of the blackest dye! By false representations he has succeeded in winning your confidence and that of your daughter; but you do not even know his real name."  
 "And what is it?"  
 "Duval; Lorenzo Duval."  
 "And what do you know of him?"  
 "Much: more than any other being on earth. I know him for a false, dark-souled villain!—one whose words may be smooth as glass, and his smile light as the sunshine, while the most malignant of passions are lurking at his heart."  
 "Go on."  
 "I know him, too, as one of the most unscrupulous characters, who is ready to take any means to accomplish his object. As one who is ready, without any hesitation, to rob a brother of his heart's blood; aye, and has done it, too."  
 "Sir," said Mr. Gordon, "I have heard you thus far attentively—calmly. But I must say, that my first opinion is only confirmed, and I look upon you as one who, for some object unknown, is endeavouring to impose on me. However, go on now: I will hear you through."

"Mr. Gordon, I am well aware of the opinion you entertain in regard to me; but you will soon have an opportunity to see if it is correct. I came here to-night on an important errand, and I have only told you this, that you might discover how you had been deceived, and flee the fate that hangs over you."  
 "Over me?"  
 "Aye, over you. There is a dark plot laid for your life."  
 "Mine! Who can seek my life?"  
 "The same villain of whom we have been speaking."  
 "This is unreasonable."  
 "Is it? Reflect for a moment. He has been united to your daughter under a false character, and when the mask falls, as inevitably it must, he knows that your anger will be excited by such base treatment, and he fears that he shall lose the grand object he has in view."  
 "Which is—what?"  
 "Your property!"  
 "That sounds more like reason," said Gordon, in a calm tone; but his face was colourless as marble. In a moment he asked—  
 "And what does he purpose to do?"  
 "To make himself sure of his object."  
 "How?"  
 "By taking your life!"  
 The old merchant sprang from his chair. For a few moments he paced the floor, and then he seemed to have grown calmer.  
 "Sir," said he, "how happens it that you have so much knowledge of this man you denounce as a villain, and are so anxious to thwart his schemes? Men do not act without an object."  
 "Certainly not. Years ago, I was poor and friendless, and as I was an orphan, I was left to seek out my own path in the world. But by persevering industry and close attention to whatever I laid my hand to, I soon succeeded in winning the esteem and friendship of those around me. The person with whom I lived was a merchant, and he employed me as supercargo for him, several years. My diligence and integrity seemed to please him, and in his family I received all the kindness of a son."  
 "He had a daughter—a bright-eyed, merry girl, when first I saw her; and she was my companion during the time I spent on the land, for several years. As time passed on, and she grew to womanhood, the feelings I had ever entertained for her began to change—no; not to change, but to be more fully developed. I had no relations, few friends to whom my heart clung, and it naturally turned to her. I loved her—loved her with all the fervour of which my nature was capable; loved her better than all else on earth—better than life itself, and, I almost fear, better than my Creator, to whom I owe so many blessings."

GROUP OF FIGURES IN THE "BLOOMER COSTUME," ADDED TO TUSSAUD'S WAX-WORK EXHIBITION.

"My love was returned; we were betrothed, and after my next voyage were to have been united. I bid her adieu with a happy heart, for I expected soon to call her mine. But while I was away, a fiend in human shape crossed my path. With the most insinuating arts he carried on his purpose, and finally, just before I returned, he suddenly disappeared with her. The most powerful exertions failed to detect her, and whether she died a victim of his passion, or still lives an outcast and a wanderer, I know not. She was an only child, and her loss sadly affected her father. A few months after the event, he died, leaving me his property, and charging me with his latest breath, to seek her if she was still in the land of the living, and restore her to happiness. All search proved unsuccessful; but I found the villain who had ruined my peace. He knew me not; but being pleased with my appearance, he made me his companion and confidant. Since that time I have often been tempted to take vengeance upon him, but I have restrained that feeling until its time shall come; and the only object of my life has been to foil him in his dark deeds. And I have been successful. Often have I crossed his path when he knew it not, and I shall never fail to do it, until he is brought to justice. Now can you understand my motive?"

"And that villain was——?"

"Lorenzo Duval!"

"Young man, your story seems plausible, though strange; whether to believe you I know not."

"I have told you all,"

"Now answer me, I adjure you, if it were to be your last word. Speak you the truth?"

"Before Him at whose bar we must all be judged, I do."

"Enough; I receive it. Call on me again, your aid may be needed; but now I must be alone, to reflect. Rest assured, that if you are what you profess to be, you shall be rewarded."

"Talk not of reward—you know my motive. To-morrow Duval will be with you. Be wary; watch him carefully."

"I will."

"If I am needed I will see you again;" and the visitor bowed and left the room.

(No. 7.)

**TRUTH.**—The temple of truth is, indeed, built of stones of crystal, but inasmuch as men have been concerned in rearing it, it has been consolidated by a cement composed of baser materials. It is deeply to be lamented that truth herself will attract little attention, and less esteem, until it be amalgamated with some particular party, persuasion, or sect; unmixed and undiluted, it too often proves as unfit for currency as pure gold for circulation. Sir Walter Raleigh has observed, that he who follows truth too closely must take care that she does not strike out his teeth; but he that follows truth too closely, has little to fear from truth, but he has much to fear from the pretended friend of it. He, therefore, that is dead to all the smiles and to all the frowns of the living, alone is equal to the hazardous task of writing a history of his own times, worthy of being transmitted to times that are to come.

**THE DEATH OF A WIFE.**—"The death of a man's wife," says Lamartine, "is like cutting down an ancient oak that has long shaded the family mansion. Henceforth the glare of the world, with its cares and vicissitudes, falls upon the old widower's heart, and there is nothing to break their force, or shield him from the full weight of misfortune. It is as if his right hand were withered; as if one wing of his angel was broken, and every movement that he made brought him to the ground. His eyes are dimmed and glassy, and when the film of death falls over him, he misses those accustomed tones which have smoothed his passage to the grave."

## THE BLUE-BOTTLE FLY.

BY MARY BENNETT.

LAVINIA, lost in discontent,  
Frowning, beside the casement leant,  
And looked upon the gloomy sky  
With an impatient, restless eye.

"Oh, what a dreary summer day,  
No butterfly is out to play;  
The daisies are half drowned in rain,  
The dull grey clouds unmoved remain;  
I see not, hear not one fair thing,  
But hidden ligkets chirruping."

Upon the window-pane, there moved  
A large blue-bottle fly, that loved  
To talk as elder folk will talk,  
Still moralising in his walk—

"O foolish girl, that pines in vain  
For beauties vanished by the rain;  
Sees not the woops of flies that dance  
Around, and court her roving glance.  
Our heads so brown, our eyes so black,  
Our fine waxed legs and shining back;

Our wings transparent, that displays  
Reflected gold and purple rays.  
My flies, she notes not, for our dress  
Is but a household loveliness.  
In us go dazzling charms are spread,  
We are but staidly perfected;  
Yet we are fair unto the sight  
Of those who learn to view aright."

The neatness that around them dwell,  
In airy hall or secret cell—  
For all is fair that God hath made,  
Dwelling in sunshine or in shade;  
The forms that shallow thoughts despise  
Prove the Creator good and wise.

The heart that is with sunshine bright,  
Sees all things lovely to the sight,  
And the wise spirit doth not deat  
Only on good that is remote,  
But looketh for the blessings near,  
Nor ever fails to find them here.

**HOW SCHOLARS ARE MADE.**—Costly apparatus and splendid cabins have no magical power to make scholars. As a man is in all circumstances under God the master of his own fortune, so he is the maker of his mind. The Creator has so constituted the human intellect, that it can grow by its own action; it will certainly and necessarily grow. Every man must therefore educate himself. His books and teacher are but helps; work is his. A man is not educated until he has the ability to summon, in an emergency, his mental powers in vigorous exercise to effect its proper object. It is not the man who has seen the most, or read the most, who do this; such a one is in danger of being borne down like a beast of burden by an overloaded mass of other men's thoughts. Nor is it the man who boast merely of native vigour and capacity. The greatest of all warriors went to the siege of Troy, had not the pre-eminence because nature given him strength, and he carried the largest bow; but because discipline had taught him how to bend it.—Daniel Webster.

## THE HOME COMPANION PORTFOLIO.

We strongly recommend to our Subscribers 'the option of the "HOME COMPANION PORTFOLIO," for the preservation of the Weekly Numbers or the Monthly Parts. These Portfolios are made with elastic cords at the back, to hold Fifty-two Numbers, or Twelve Parts, which comprise one Volume. At the end of each year they may be taken out and used, and the Portfolio may be employed to preserve Numbers or Parts of the succeeding Volume. The Two SHILLINGS. The quality will be equal to the preservation of the Numbers, which, difficult to obtain. The Portfolio is printed and illuminated with silver, by a new

is an ornament for the drawing room of any age. The Monthly Parts of the Home Companion (price 6d. or 6d. each) issued with the Monthly Magazine. A number will appear weekly, price 6d.

TRADE MARK: 60, Fleet Street, every

of the HOME COMPANION is at 6 o'clock.

## HOME COMPANION:

A WEEKLY MAGAZINE.

## PUBLIC LIBRARIES.

In the report of the Select Committee on Public Libraries, ordered by the House of Commons to be printed in 1849, there is given an outline map of Europe, with the different countries shaded into different degrees of blackness, according to their deficiency in public libraries, freely accessible to the population. The blackest spot in the map, to our regret, we find to be the British Isles. A kind of Cimmerian darkness, as we might have reasonably expected, spreads over Russia, with its myriads of serfs and slaves, and over Portugal and its monks; but the deepest gloom is over the free and commercial states of Holland and the British Isles. In the smaller states of Germany the number of books contained in the public libraries is the largest, with reference to their population, and the state of Brunswick stands at the head of them. In the Prussian states, there are 95 towns having among them 53 libraries, with 2,040,450 volumes of books. In the Austrian states, 87 towns have among them 49 libraries, with 2,408,000 volumes. In France, 169 towns have 168 libraries, with 4,510,295 volumes. In the United States there are above 100 libraries, of which the largest part are entirely open to the public; indeed, almost every state has its public library, supported by a vote of the State legislature. In Great Britain and Ireland, we have ten towns possessing 32 libraries that are called public, with the aggregate number of 1,726,993 volumes: an infinitely small proportion, compared with our wealth and our intelligence; and of still infinitely smaller advantage when we take into consideration the restrictions with which they are surrounded, and the impediments to the free use of their contents.

In this country there were formerly eleven libraries which were entitled to receive a copy of every new work on its publication. By an act of the 6 & 7 W. 4, c. 110 (A.D. 1836), libraries entitled to this privilege were reduced to six—viz.—the British Museum; the Bodleian Library, Oxford; the University Library, Cambridge; the Advocates' Library, Edinburgh; and the Library of Trinity College, Dublin. The other six are the Library of St. John's College, London; the University Libraries of Edinburgh, Glasgow, Aberdeen, and St. Andrew's; and the Libraries of the Queen's Inns, Dublin: these six received a compensation for the loss of their privilege by having an annual sum voted them by Parliament, which amounts to £2,800 a year. The whole of these libraries, although perhaps originally founded by the munificence of private individuals, and enriched by donations and legacies, nevertheless, as being mainly supported by the State, may be properly called 'Public Libraries, and should be freely open to the public, subject only to such restrictions as are absolutely necessary for the safe preservation of the books. But instead of this, our University Libraries are not only closed against the public, but, for the most part, against the students of the University itself, who have not yet taken their degree. The library of Trinity College, Dublin, is open to the public, on a proper introduction and recommendation; but, singular to say, the students are not admitted. The library at Edinburgh, seems to be the most liberal towards the strictly speaking, an order is required to obtain admission to it, but it has fallen into desuetude, and every person of respectable rank applying for books or manuscripts is supplied with them; and they go even further than this, for all the publications received under the act of Parliament from Stationers' Hall are lent out, and used as a circulating library.

In London, besides the library of the British Museum, there are two or three public libraries of some importance that are but little known. The library of St. John's College, which originally had the privilege of receiving a copy of every work published in the United Kingdom, but which now receives grant of £500 15s. 2d. as compensation, is one of them. St. John's

College is situated in London Wall, and was founded in 1680 by a Doctor White, the rector of St. Dunstan's in the West. The primary object of the library was for the use of the clergymen of the established church within the city. Any incumbent within the city is a fellow of this college, and has a right to introduce any person as a reader for twelve months. The librarian has also a discretionary power to allow persons to consult the library whom he may consider properly qualified. The library consists of from 35,000 to 40,000 volumes, principally theological works, but with a considerable portion of general literature, and many rare and curious works. This is a lending library among the fellows, upon whose written order books are sent out; and the librarian tells us, that many of them are taken by the fellows for the use of other persons; but the fellows are responsible for them. The number of volumes thus circulated amounts to between 5,000 and 6,000 in the course of a year. The number of readers attending the reading-room is between 300 and 400 a year; of these the principal part are clergymen; none of the working classes, and very few of the middle classes. There are rarely more than six or seven readers in a day, but they could easily accommodate 200 or more. This library is open from ten to four, but not at all in the evenings.

In Red-cross Street, Cripplegate without, is Dr. Williams's Library, which was founded in 1716, and is, to a great extent, under the control of the Court of Chancery. The librarian has power to admit any person as a reader who applies; so that, practically, it is open to the public free of expense. There are out 20,000 volumes in the library, principally in theology, science

and literature. Dr. Williams was an ardent dissenting of the Presbyterian persuasion. There is a recommendation from 50 to 60 readers; but very few attend, and these are principally dissenting divines. The books are lent out by written order from a trustee, the trustee being the responsible person; and more use is made of the library in this way than in the reading-room. Very few persons in the neighbourhood use the library, and it has been suggested to the trustees to remove the site of it to some place in the neighbourhood of University College, where it might be rendered more useful.

At the back of the National Gallery, and directly opposite the barrack wall, is situated the library founded by Archbishop Tennison in 1685, now consisting of some 4,000 volumes of general literature, with about 70 manuscripts, in as bad a state as books can be, because they are never read, never taken down to be cleaned—never used in any way. At the time of its foundation, it appears that, in the precinct and city of Westminster, there were "great numbers of ministers and other studious persons," who could not gain access to any noted library, "as also that there is not in the said precinct (as in London) any one shop of a stationer fully furnished with books of various learning;" and therefore the good Archbishop erected a fabric for a public library for the use of the students of the precinct, at his own proper costs and charges, and made a settlement for the support of the same, and the maintenance of a librarian. The parochial authorities of St. Martin's have construed them to mean, that only the parishioners of the ancient parish of St. Martin, which then comprehended the parishes of St. Martin's, St. Anne's, St. James's, and St. George's, Westminster, were entitled to the use of the library. Since the middle of the last century, scarcely any donations have been made to the library; for the last sixty years there has been no addition whatever. The "ministers" do not use it; and as for "other studious persons," the librarian tells us that, for the eighteen months which he has held the office, "one studious person only has applied to come regularly to read the books; he did so for two or three days, and left it in despair. Nor is this to be wondered at, for the parishioners of St. Martin's have converted this library into a kind of club for playing chess and reading newspapers. The venerable volumes, valuable in themselves, and capable of becoming the nucleus of an extensive library, lying idle on the shelves, covered with dust, and devoured by worms, because no one could profitably use them in the presence of the magnates of St. Martin's, who are not "studious persons."

The library of the British Museum, with its immense collection of printed volumes and manuscripts, of maps, plates, and music, stands unrivalled in this country for value. From the time of its foundation by the bequest of Sir Hans Sloane, which took effect in 1757, it has received continual donations, from that of the Cotton library to the munificent bequest of the King's library; and, besides the right of receiving a copy of every publication, which it derives from the Copyright Act, it also receives grants from the public money to a greater amount than any other library in Europe. At the present moment the contents of the library fill upwards of twelve miles of book-shelves. Admission to the full use of all the contents of this library, both printed and manuscript, is by no means difficult of attainment; it merely requires a recommendation to the chief librarian through some known person of respectability. The principal foreign libraries do not require even this kind of introduction, but are open unreservedly to every one who wishes to go and read, rich or poor, stranger or native. M. Guizot says, "the libraries of France are accessible in every way; they are accessible for the purpose of reading, and accessible, too, for the purpose of borrowing books." The following questions and answers, from M. Guizot's evidence, shew the extent to which this is carried in France:—"462. Any person, be he a workman or whatever his class or condition in society may be, going into a library in France, would have the book he asked for given him to read without any obstruction?" "Yes, that is the general practice; but they would not lend books to every person without limitation." "463. Suppose a workman brought a certificate from his employer as to his being a respectable and industrious man, would books be lent to him?" "Yes, I am sure they would; upon a certificate of his employer that he was an honest and industrious man, books would be lent to him."

The libraries of Belgium, of Italy, of Germany, of America, are all more accessible to the public than the library of the British Museum to the general public here; in almost all foreign countries free admission to the public libraries is looked upon as a public right. It is not found practically to be in any way dangerous thus freely to admit the public to the use of the library. In some of the public libraries of France the experiment has been tried of opening them at an evening, and with the greatest success: it is found that many workmen avail themselves of the privileges thus afforded them. From what has been effected in other countries with advantage, we naturally turn to what may be done for the improvement of our libraries here. To giving free admission to all persons who are not offensive in their dress or conduct to the use of the reading-room of the British Museum, there appears to be no tenable objection whatever. To keeping it open at an evening, the two main objections are the necessity of largely increasing the staff, and the danger of fire from the gas which would be necessary for lighting. The first objection is easily obviated; it is a mere matter of pounds, shillings, and pence, that scarcely requires a second thought when put in comparison with the advantages that would be derived by so large a class of the community, whose avocations throughout the day prevent them from in any way using the library. The second objection is a grave one, but not altogether insurmountable. The danger from fire is certainly one to be strictly guarded against. Books themselves are not very inflammable materials; and if the building be fire-proof, and the fittings, the shelves, tables, &c., be made of incombustible materials, there would be little danger from this source. It is found in the continental libraries, and those of America, which are open at an evening, that no damage accrues to the books in consequence of the use of gas; and if a better system of purifying the gas were adopted, all apprehensions on this score would disappear. But it does not follow that gas would be necessary. The committee state, in their report, that they are of opinion ("not only that a powerful light, and a light not requiring to be moved about (like gas), is the fittest and the safest kind of light for a public library." We know not whether the committee had any particular light in view when they made this statement; but as we understand the patents of the electric light have surmounted the mechanical difficulties which rendered their light unequal in its first trials, and can adapt it to the lighting of rooms, we cannot imagine a better or less dangerous mode of lighting such a building as the British Museum than by this scientific invention.

We have a strong proof given us, in the evidence of Mr. Murray, of the desire manifested by the very poorest classes of the community, to avail themselves of the facilities for reading, which a public library affords. He says, in answer to question 3194:—"I have taken lately, the superintendence of a Ragged school in the Marylebone district, and in connection with that school we have established a small library and reading-room: and those who have attended, have done so with great regularity, and read the books with the greatest quietness and attention. The room is open every evening but one, in the week." And the effect of their reading has been, that many who came there with habits of disorder, and were noisy and rude in their conduct, have been softened down and reclaimed. "I have known men of from twenty to thirty, who, when they came, smoked their pipes in the school-room, overturned the forms, and did all kinds of mischief, and now they are perfectly quiet and orderly, and they dress better; instead of rags, they come with whole clothes (though of the poorest kind still), and they sit down in the library with the greatest quietness and decorum, and read the books. At first they were very rude and unmanners; but now they behave with the greatest courtesy, politeness, and quietness." The very lowest grades of society thus become civilized and humanized through admission to libraries, through the thoughts there engendered; the grades just immediately above the very poorest are making vigorous struggles to provide libraries for themselves, where they may carry on their self-education. These efforts have already done much to relieve these from the reality of the disgraceful blackness which the map of the Commissioners indicates; they have scattered libraries, of more or less importance, over the greater part of the kingdom. But much more yet required to be done. We seek not to have such a library as that of the British Museum, converted into a place of amusement like that of Archbishop Tennyson's, or to be made a circulating library among all who choose to come and borrow its volumes. It is, and ought to be, emphatically, a library of deposit and research; it should contain all that has been published; it should be extended, and enlarged in its contents, rendered more generally accessible, and more widely useful. A parliamentary economy on such a question is miserable parsimony. But, besides this great depository of the recorded wisdom of past ages, and of the active thought and practical science of present times, we ought to have many large establishments throughout this metropolis, opening their doors freely to all comers, and affording the means of instruction to all, in a manner more complete and effective than any private fortune can accomplish, or private subscription effect. And not only in the metropolis, but throughout the country, similar establishments be formed. Already, an act has been passed, known as the Museum's Act, by which power was given to Town to levy a rate not exceeding a halfpenny in the pound, for the purchasing and maintaining museums in the different towns; if this act were extended to libraries also, it would be an immense advantage. In town alone, that of Warrington, Lancashire, the provisions of this act by consent of the inhabitants, been extended to the formation of a library, and with the best effects. A general measure of the sort, as well as towns, would be of the greatest benefit to all of society. Such libraries, once formed, donations of books, in money, would soon flow into them, and render them very efficient. What is the use of educating the people, and teaching

them to read, unless we place the means of acquiring the taste for reading in their hands—say, of improving their taste and judgment, by placing good works within their reach. The cheap publications of the present day are doing much in the right way. The higher tone which they are taking, and of which we trust the *Home Companion* will be found a bright example, is doing much to drive the worthless and mischievous trash of former days into the back-ground. But these publications cannot do all that is required; the means of extensive inquiry and research must be placed within the reach of all, and this can only be effected by the establishment of numerous public libraries, and the removal of all fiscal restrictions that impede the free circulation of knowledge.

## MR. TWOMBLEY'S

MR. THOMAS TWOMBLEY had drunk but six glasses of brandy and water, and being a man of discretion, he returned home at the seasonable hour of 10, and went soberly to bed. Mrs. Thomas Twombley was too well accustomed to the comings and goings of the said Thomas, to be much disturbed by the trifling noise he made on retiring; but when she discovered that he had his boots on, she requested him to remove them, or keep his feet out of the bed.

"My dear," said Mr. Twombley, in an apologetic tone, "skipped me! How I come to forget the boots, I can't conceive, for I'm just as sober as I ever was in my life!"

Mr. Twombley sat on the side of his bed, and made an effort to pull off his right boot. The attempt was successful, though it brought him to the floor. On regaining his feet, Mr. Twombley thought he saw the door open. As he was sure he shut the door, on coming in, he was astonished; and dark as it was in the room, he couldn't be mistaken, he felt certain. Mr. Twombley staggered towards the door, to close it when, to his still greater surprise, he saw a figure approach from beyond. Twombley stopped; the figure stopped. Twombley advanced again, and the figure did the same. Twombley raised his right hand—the figure raised its left.

"Who's there!" roared Twombley, beginning to be frightened. The object made no reply. Twombley raised his boot in a menacing attitude—the figure defied him by shaking a similar object.

Cried Twombley, "I'll find out who you be—you sneak!" He hurled the boot full at the head of his mysterious object, when—crash! went the big looking-glass, which Twombley had mistaken for the door!

## HE IS SO AMIABLE.

A BEAUTIFUL girl, gay, lively, and agreeable, was wedded to a man of clumsy figure, coarse features, and a stupid physiognomy. A kind friend said to her one day—"My dear Julia, how came you to marry that man?"

"The question is a natural one. My husband, I confess, is not graceful in his appearance, nor attractive in his conversation. But he is so amiable! And goodness, although less fascinating than beauty or wit, will please equally, at least, and it is certainly more durable. We often see objects, which appear repulsive at first, but if we see them every day, we become accustomed to them, and at length not only view them without aversion, but with feelings of attachment. The impression which goodness makes on the heart is gradual; but it remains for ever. Listen, and I will tell you how I came to marry my husband.

"I was quite young when he was introduced for the first time into the house of my parents. He was awkward in his manner, uncouth in his appearance, and my companions used often to ridicule him, and I confess I was frequently tempted to join them, but was restrained by my mother, who used to say to me in a low voice, 'He is so amiable!' And then, it occurred to me that he was always kind and obliging; and whenever our villagers assembled together at our fêtes and dances, he was always at the disposal of the mistress of the house, and was profuse in his attentions to those whose age or ugliness caused them to be neglected. Others laughed at his singularity in this respect, but I whispered to myself, 'He is so amiable.'

"One morning my mother called me to her boudoir, and told me that the young man who is now my husband had made application for my hand. I was not surprised at this, for I already suspected that he regarded me with an eye of affection. I was now placed in a dilemma, and hardly knew how to act. When I recollected his ill-favoured looks and his awkwardness, I was on the point of saying, 'I will not wed him,' and I blushed for him, which is strong proof that I even then felt interested in him; but when I recalled the many excellent traits in his character, and dwelt on his benevolent and good actions, I dismissed the idea of banishing him from my presence. I could not resolve to afflict him, and I whispered to myself, 'He is so amiable!'

"He continued to visit me, encouraged by my parents, and cheered by my smiles. My other admirers one by one left me, but I did not regret their absence. I repeated the expression, 'He is so amiable,' so often, that it seemed to me to carry the same meaning as 'He is so handsome.' I loved him, and took him as my husband.

"Since then, I have not only been resigned to my fate, but happy. My husband loves me devotedly, and how can I help loving him, 'He is so amiable.'"

There is something exceedingly touching in this love which beauty enters for goodness, and there is no longer a doubt that some women love for a feeling of benevolence, or tender compassion, regulated by reason. Such an affection will know no change. It has a firm basis, and will endure through life.

## ONWARD!

**ECONOMIZATION OF FUEL, &c.**—A patent has been obtained by some gentlemen in Exeter, for an invention by which a new motive power is produced. It will operate so as to reduce the consumption of fuel in railway engines one-half or more, and with other important improvements will effect a large saving in the construction of the engines.

**ENAMELLING DAGUERREOTYPES.**—A new and successful method of enamelling daguerreotypes has just been discovered by Mr. R. Beard, which will no doubt eventually prove the most important of the many improvements that have been made to this simple yet wonderful art. Some of the earliest specimens of the process, it is well known, had a ghastly appearance, positively repulsive to the beholder. By degrees, however, improvements have been added, colouring, &c., introduced, until the invention began to raise in the public estimation, as it merited. The steadiest pencil of the most gifted artist cannot approach, much less rival, the daguerreotype in point of accuracy and truthfulness, and some improvement was only required to give the pictures that richness of tone and life-like appearance hitherto peculiar to an oil-painting. It appears that this desirable end has at length been attained by the process of enamelling. Scarcely the eighth part of a minute is occupied in taking a likeness by the process; it therefore follows, that every expression, look, or momentary smile, must be caught with a fidelity otherwise unattainable, and by enamelling with an effect at once pleasing and startling. The effect of the new process has excited the admiration of many thousands of individuals who have visited the daguerreotype establishments of Mr. Beard.

**ELECTRO-TELEGRAPHIC PROGRESS.**—A telegraphic congress lately assembled at Vienna to draw up measures for facilitating telegraphic communications between different countries. It proposes to establish a union between different states; to have translators employed, so as to transmit all despatches without delay; to have a uniform tariff; to pay their receipts into a common fund, and to divide them afterwards between the states, in proportion to the length of their telegraphic lines, &c. The new arrangements are, it is said, to come into operation on the 1st of January next; and, if France shall accede to them, it will be possible to send a despatch in a very few minutes from Trieste to Calais or Ostend. Already (says the *Athenæum*) we have chronicled the completion of the line from Ostend to Trieste, a line of more than 2,000 miles, crossing rivers, wastes, lakes, and Alps in its way, and, we believe, only twice interrupted—by the Rhine at Cologne, and by the Elbe at Dresden—in the whole distance. The foreign journals now inform us that the system is spreading rapidly in the east of Europe. By the close of this year there will be three great lines of telegraph in operation in the interior of Hungary: one from Pesth to Szolnok, along the new railway; one from Tzeglod to Szegedin; the third from Czongrad to Arad. These wires will connect together more than twenty towns of more or less manufacturing importance. The Turkish Government, we learn, has determined to introduce the telegraph system into that country. The electric wire becomes every day a more absolute social necessity in Europe.

**MARVELS OF THE SUBMARINE TELEGRAPH.**—Fate and Professor Wheatstone have, for some time past, been at odds as to the future fortunes of the human race, but now the professor has got the best of it. "A man can't be in two places at once," said the old proverb, but by the aid of electricity any one of us may be in all the capitals of Europe at the same moment of time. We do not, of course, refer to the gross physical presentation of a man—to that portion of him which weighs fourteen stone and has the gout—but to his immortal essence, to his intellect, to his will. What matters it in what nook the *eidolon* may be thrust out of the way while the immortal spirit dabbles in shares on the Parisian Bourse, countermands the march of an armed host in Hesse, or gives its opinion of a painted window in the studio of a Munich artist? All these things a man can accomplish without moving from the Electric Telegraph-office in Charing Cross. The sea is no longer an obstacle to the instantaneous transmission of information. The deep waters have been reduced by scientific skill to be the highway of human thought—not, as heretofore, painfully conveyed in lumbering packages, and freighted upon large argosies which required half-a-year to put a girdle round the globe. Swift as thought, on its first conception in a single human mind, can thought now be flashed from one capital of Europe to another, and beget, at the distance of a thousand miles, the same sequence of ideas which plays at that very moment round the fret work of the patent brain. We know not why, in strictness, the transmission of the electric spark "full of glory," or five times fifty fathoms, beneath the troubled surface of the ocean, should affect the mind with greater awe than its instantaneous passage across the solid earth. Still this conquest gained by science over the waves must ever remain recorded as amid the greatest of human achievements since record has existed of the mighty feats accomplished by man. It is wonderful to reflect that while the great ships "reel to and fro, and stagger like drunken men," far, far beneath their keels, amid the wrecks of former days, the current of human thought is evenly flowing on without disturbance or interruption. Let the ship begin to weigh her anchor in an English port, and before three turns of the chain have been taken on the windlass, the announcement of her departure may now be flashed beneath the waters to the coast of France. The next moment another spark will convey the intelligence to the cities on the banks of the Seine, the Rhine, the distant Danube, and far within the inhospitable dominions of the Russian Czar.—*The Times*.

## STATISTICS.

In Chaucer's works there are at least thirty thousand verses which may be said to be dedicated to love!

The earth and those planets which, with their satellites, form what is called the solar system, move through space at the rate of thirty-five thousand miles an hour.

**INTemperance in AMERICA.**—President Everett computes that the use of alcoholic drinks costs the United States directly, in ten years, 1,200,000 dols.; has burned or otherwise destroyed 5,000,000 dols. more of property; has destroyed 300,000 lives; sent 160,000 persons to prison, and 100,000 children to the poor-house; caused 1,500 murders, 2,000 suicides, and has bequeathed to the country 1,000,000 orphan children.

**POPULATION OF ANCIENT ROME.**—The population of ancient Rome has been calculated by Lipsius at 4,000,000; Burton, on the other hand, makes it to have been 1,104,000.—The former computation appears, says Anthon, to be as much too high as the latter is too low. The whole number of inhabitants in "the most high and palmy state of Rome," may with some probability be estimated at from 2,000,000, to 2,500,000; though the learned Isaac Vossius, from a comparison of the population of London and Paris, makes that of Rome, in its most flourishing period, to have been 14,000,000!

**STATISTICS OF THE "INVINCIBLE ARMADA."**—The following curious statistics have appeared in the Spanish papers purporting to come from Ferrol (perhaps from some archives there). Return of the Armada, called Invincible, with which Philip II. of Spain attempted to invade England:—Ships of the division of Portugal 12, guns 434; from Biscay 14, guns 302; from Guipuscoa 14, guns 308; Castile 14, guns 474; Andalusia 11, guns 318; Levante 10, guns 324; Urcas 23, guns 480; galleys and small vessels 32, guns 592; total—ships 132, guns 3,232. It is much to be regretted the number of men is not given.

**POPULATION OF LONDON.**—Some idea of the immense population of London may be formed by the following:—It exceeds that of the Grand Duchy of Tuscany by 300,000, that of the Grand Duchy of Baden by upwards of 500,000, and is about five times the amount of the population of Nassau. London is within 400,000 or 500,000 of half the population of Havana; exceeds by upwards of 100,000 half the population of Belgium, and by 400,000 half the population of Holland; is equal to the whole population of Hanover; exceeds the whole population of Westphalia by 460,000; and is considerably more than the whole population of Greece. It is about equal to the population of the State of Pennsylvania.

**PROGRESS IN THE UNITED STATES.**—The following table exhibits a comparative statement, derived from official sources, which indicate the social and commercial condition of a people through a period which forms but a small stage in the life of a nation:—

	1793.	1851.
Population . . . . .	3,939,225	24,267,468
Imports . . . . .	£6,739,130	£38,723,515
Exports . . . . .	£5,675,869	£32,367,000
Tonnage . . . . .	520,704	3,535,451
Lighthouses, beacons, and lightships . . . . .	7	373
Cost of their maintenance . . . . .	£2,600	£115,000
Revenue . . . . .	£1,230,000	£9,516,000
National expenditure . . . . .	£1,637,000	£8,555,090
Post-offices . . . . .	209	21,551
Post-roads (miles) . . . . .	5,642	178,670
Revenue of Post-office . . . . .	£22,800	£1,207,000
Mileage of mails . . . . .	—	46,541,423
Canals (miles) . . . . .	—	5,000
Railways, (miles) . . . . .	—	10,287
Electric telegraphs, (miles) . . . . .	—	15,000
Public libraries, (volumes) . . . . .	75,000	2,201,623
School libraries, (volumes) . . . . .	—	2,000,000

**BRITISH COLONIES.**—England's transmarine possessions are thus stated by Mr. Montgomery Martin:—The colonies of the British empire have an area of 2,200,000 square miles, and a sea-coast of 20,000 nautical miles. Population 105,000,000, with an average of 50 mouths to the square mile; of Lutherans and Calvinists there are 800,000; of Dissenters 700,000; of Roman Catholics, Greeks, Syrians, &c., 1,500,000; of Mahomedans 26,000,000; of Hindoos 75,000,000. The military strength employed is 56,000 European regulars; 166,000 colonial (coloured) regulars; and 250,000 colonial militia (whites). The colonial revenues amount to £23,000,000 sterling; the civil and convict expenses defrayed by Great Britain to £225,000; the military to £1,800,000, and the total expenditure of the colonies is therefore £25,000,000 sterling per annum. The taxation averages 6s. 6d. per head. The metallic money circulating in the colonies is about £4,000,000, and the paper-money about £8,000,000. — *Maritime Commerce of the Colonies.*—Exports £30,000,000; imports £28,000,000. To Great Britain, exports £15,000,000; imports £10,000,000. Total shipping annually in and out of colonial ports 8,000,000 tons, of which there are 4, and from Great Britain 3,000,000 tons. Vessels built in the colonies from 1814 to 1857—Number 3,976; tonnage 1,022,947.—The property annually created in the colonies is estimated at £400,000,000, and the value of the property, moveable and immoveable, in the transmarine possessions of the empire, in land, houses, stock, &c., at £2,500,000 sterling.

## EVENINGS AT HOME.

### BIOGRAPHICAL MELANGE

If you will give me my quill, I will tell you of a duck which I am about to cook for dinner, together with a piece of pork. When I have eaten of them I shall be less empty, and shall feel that I do not need any addition, unless it is in the shape of wine, which I will request my servant to bring me. He is a hearty man, incapable of paltry actions; but were you to offend him, you would wonder at the severity of his blows.

Having written this, I leave you to substitute, for the words printed in *italic*, the names of various distinguished men; and if you do so correctly, you will find that the Enigma will still read the same in meaning. All the celebrated characters are figured in the vignette, thus offering you at once an acquaintance with their names and persons.

### AN EVENING GAME.

We were much amused, a few evenings since, by the following game of Questions and Answers, which, when played upon one as yet uninitiated into the mysteries, is well calculated to afford "endless laughter." A lady may be supposed to request a gentleman to write down this list:—

- Set down a lady's name.
- Set down some time past.
- Write the name of a place.
- Write either yes or no.
- Yes or no again.
- A lady's name.
- Some time to come.
- Yes or no.
- Yes or no again.
10. Name of a city.

11. Some colour.
12. Any number not exceeding six.
13. Name of a colour.
14. Yes or no.
15. A lady's name.
16. A gentleman's name.
17. Name of a clergyman.
18. A sum of money.
19. Name of a place.
20. Any number at all.

When these conditions have been complied with, the gentleman is requested to read off the list thus prepared, as answers to the following series of questions:—

- |   |   |

### CHARADE.

My first and my second  
Swims in the salt sea,

And my whole may be pluck'd  
From an old Apple-tree.

(Answered in No. 7.)

## ANSWERS TO THE PASTIME OF LAST EVENING.

Page 77.

### TALLY-HO!

I AM a *Rocking horse*! fashioned by man,  
(Of the *high breed of trees* when my life first began!  
The veins of my wood are all withered and dried,  
Yet how lively I make those who mount me and ride.  
My *mane* and my *tail* from the living horse came,  
And were leaping about ere I bore my new name.  
Of *paint* is my coat—it once lay in the earth,  
And I died as a *tree* ere I took my new birth.  
Then ho! tally ho! be it everywhere known—  
That you've not found me out, but were mentally thrown!

### ENIGMAS.

1. *Moss*, which has been found growing in every part of this world—rocks, trees, stones, tops of old houses or thatch; in the skull of a musk ox it was found by Captain Parry in Melville Island; and, by a gentleman on Mount St. Bernard, on the hat of a traveller who had perished in the snow. The process of the fructification of moss is, that first a veil or calyptra is formed, which rises upon a pedicel or fruit-stalk; underneath is then formed the capsule, with an operculum or lid, containing the seeds or spores. The lid removed, the mouth of the capsule is seen to be furnished with a beautiful and curious apparatus of teeth-like processes, sometimes one row, sometimes two; but always an even number of teeth, either four or multiple of four. These teeth can be extracted from their sockets with nicety, the gums, as it were, being called the peristome. Such is the nature of this apparatus, that when the weather is moist, the teeth close over the mouth of the capsule, and prevent the seeds escaping. In a dry season, the teeth spread out in a radiating manner, and lift out the seeds, scattering them far and wide to the winds. Moss is the first vegetable production that springs up in barren places. Birds build their nests with moss partially. Moss shelters innumerable tribes of insects almost unknown save among its verdure.

1. Cork which grows in Spain, Italy, &c.
2. It is the bark of the tree, and of course clings to it until removed.
3. It is conveyed to various countries, and applied to sundry uses.
4. As cork soles to boots and shoes.
5. In the corks used in swimming.
6. The cork float which betrays the bite of the fish.
7. Cork hats.
8. Cork stoppers in the mouths of bottles.
9. It is not eatable.
10. The cork shuttlecock.
11. Cork models.
12. Cork legs and hands.
13. Insects are pinned on cork in entomological cabinets and boxes.

## THE REMARKABLE ADVENTURES OF BARON BRAG.—AN UNNATURAL HISTORY FOUNDED UPON NATURAL HISTORY.

(To be Continued by Us, until Discontinued by the Baron.)

While the Baron is repairing his Hunting-Dress, he is attacked by Walruses!

In this terrible extremity, he bethinks him of his snuff box!

Which he is delighted to find serves his purpose admirably!

## OUR CORNER CUPBOARD!

VERY few persons have sense enough to despise the praise of a fool.

THE surest way to hit a woman's heart is to take aim kneeling.

SOME hearts, like evening primroses, open most beautifully in the evening of life.

AN epitaph on a Negro baby at Savannah commences with "Sweet blighted lily!"

A NOBLE nature aims its attention breast-high; a mean mind levels its paltry assiduities at the pocket.

A SHOPKEEPER said to a lady, in recommendation of his goods, "Ma'am, it will wear for ever, and make you a petticoat afterwards."

ENTHUSIASM, like the lightning, is but a flash; we raise our eyes and it is gone.

WHY is a person approaching a candle like a man getting off his horse? Because he's going to a-light.

BE wise; for in gaining wisdom you also gain an eminence from which no shaft of malice can hurl you.

IT is as meritorious to attempt sharing in a good man's heart, as it is contemptible to have a design upon a rich man's money.

IT is singular that the descendants of Charles I. and Cromwell intermarried in the fourth degree.

MANY men treat others as though they were demons, and then express surprise that they do not act like angels.

IT is a remarkable peculiarity with debts, that their expanding power continues to increase as you contract them.

QUEEN ELIZABETH once remarked how singular it was that every person taller than her looked too tall, and every person shorter than her looked too short.

MOST of the trades, professions, and ways of living among mankind, take their origin either from the love of pleasure or the fear of want. The former degenerates into luxury, the latter into avarice.

IN the State of Maine the sale of spirituous liquors is "prohibited;" and in another State, if a man got drunk, his wife could sue for damages the publican who supplied the liquor.

THE wiser mind  
Mourns less for what Time takes away,  
Than what it leaves behind.

A COUNTRY schoolmaster thus describes a money-lender—"He serves you in the present tense; he lends you in the conditional mood; keeps you in the subjunctive; and ruins you in the future!"

NEVER consider that vanity an offence which limits itself to wishing for the praise of good men for good actions; next to our own esteem, it is a virtue to desire the esteem of others.

CATHERINE DE MEDICIS being told of an author who had written a violent philippic against her, exclaimed with momentary regret, "Ah! if he did but know of me all that I know against myself."

THE man who will take a paper a length of time, and then send it back "refused" and "unpaid for," would swallow a blind dog's dinner, and then beat the dog for being blind.

KNOWLEDGE makes humble—ignorance proud;  
Knowledge talks lowly—ignorance loud.  
Knowledge is modest, distrustful, and pure—  
Ignorance boastful, conceited, and sure.

"Do you retail things here?" asked a green-looking specimen of humanity, as he poked his head into a shop in Fleet Street the other day. "Yes," was the laconic reply. "Well, I wish you would re-tail my dog; he had it bit off about a week ago."

WHICH are the most industrious letters?—The Bee's. Which are the most extensive letters?—The Sea's. Which are the most masculine letters?—The He's. Which are the egotistical letters?—The I's. Which are the eguminous letters?—The Pea's. Which are the sensible letters?—The Wise.

There is an old story which explains the way in which a certain fox reeked himself of floss. Taking a feather in his mouth Reynard walked backward into the water, immersing first legs and tail, then body, nose, and head to the nose; and thus compelling the floss to escape from the swimming element, to pass over the nose on to the feather, which was then committed to the stream!

A COUNTRYMAN once brought a piece of board to an artist, with the request that he would paint upon it St. Christopher, as large as life. "But," returned the artist, "that board is much too small for that purpose." The countryman looked perplexed at this unexpected discovery. "That's a bad job," said he, "but looks, sir, ye can let his feet hang down over the edge of the board!"

"Is your horse perfectly gentle, Mr. Trotter?" "Perfectly gentle, sir—the only fault he has got—if that be a fault—is a playful habit of extending his hinder hoofs arow and then." "By extending the hinder hoofs, you mean kicking, I hope." "Some people call it kicking, Mr. Green. 'Tis only a slight reaction of the muscles—a disease rather than a vice."—Mr. Green, whistling.

## OUR MEMORANDUM BOOK!

THE TRUE USE OF KNOWLEDGE.—I make not my head a grave, but a treasury of knowledge; I intend no monopoly, but a community in learning; I study not for my own sake only, but for theirs that study not for themselves; I envy no man that knows more than myself, but pity them that know less. I instruct no man as an exercise of my knowledge, or with an intent rather to cherish and keep it alive in mine own head, than to beget and propagate it in his; and in the midst of all my endeavours there is but one thought that dejects me—that my acquired parts must perish with myself, nor can be legaced among my honoured friends.—*St. T. Browne.*

HOW TO FIX ATTENTION.—We should accustom ourselves to make attention entirely the instrument of volition. Let the will be determined by the conclusions of reason—by deliberate conclusions, and then let attention be wielded by both. Think what is self-government—what is fittest to be done ought to be now done—and let will be subordinate to reason, and attention to will. In this way you will be always disengaged for present duty. Pleasures, amusements, inferior objects, will be easily sacrificed to the most important. You may have likings to inferior or trifling occupations; but if, to use the strong language of Scripture, you *crucify* these, oppose them, carry your intention beyond them, their power to molest and mislead you will decline.—*Memoir of Dr. Ferrier.*

THE WILL AND THE DEED.—*The Will to the Deed:* The inward principle to the outward act, is as the kernel to the shell; but yet, in the first place, the shell is necessary for the kernel, and that by which it is commonly known; and in the next place, as the shell comes first, and the kernel grows gradually and hardens within it, so it is with the moral principle in man. Legality precedes morality in every individual, even as the Jewish dispensation preceded the Christian in the education of the world at large.—*The Will for the Deed.* When may the will be taken for the deed? When the will is the obedience of the whole man; when the will is, in fact, the deed—that is, all the deed in our power. In every other case, it is bending the bow without shooting the arrow. The bird of paradise gleams on the lofty branch, and the hawk takes aim and draws the tough yew into a crescent with might and main, and lo! there is never an arrow on the string!—*Coleridge.*

WARNING TO DRUNKARDS.—Take especial care that thou delight not in wine, for there was not any man that came to honour and preperment that loved it; for it transformeth a man into a beast, decayeth health, poisoneth the breath, destroyeth natural heat, brings a man's stomach to an artificial heat, deformeth the face, rotteth the teeth, and, to conclude, maketh a man contemptible, soon old, and despised of all wise and worthy men; hated in thy servants, in thyself, and companion; for it is a bewitching and infectious vice. A drunkard will never shake off the delight of beastliness, for the longer it possesses a man, the more he will delight in it; and the older he groweth, the more he will be subject to it; for it dultheth the spirits, and destroyeth the body, as ivy doth the old tree, or as the worm that engendereth in the kernel of the nut. Take heed, therefore, that such a careless canker pass not thy youth, nor such a beastly infection thy old age, for then shall all thy life be but as the life of a beast, and after thy death thou shalt only leave a shameful infamy to thy posterity, who shall study to forget that such a one was their father.—*St. Walter Raligh.*

SPEAK THE TRUTH.—The worthy Sir Henry Wotton incurred the displeasure of King James, by a facetious sentence of innocent meaning, that was capable of being interpreted in favour of falsehood. "An ambassador is an honest man sent to lie abroad for the good of his country." Besides, it is an argument of a cowardly, poor spirit, and though it may chance to serve a present turn, yet it enhances the guilt of the crime, and when it is detected, makes a man look like a pitiful baffled fellow; whereas, the brave and magnanimous person does not sneak, but speaks truth, and is bold as a lion; and this is oppositely expressed in the counsel of the divine poet:—

"Dare to be true, nothing can I want a lie;  
A fault that wants it most, grows two thereby."

Spartaniondas and Aristides were so tender in this respect, that they would not tell an untruth even in merriment. Equivocal speeches and mental reservations become none, much less great men. Egyptian princes were wont to wear a golden chain, beset with precious stones, which they styled truth, intimating that to be the most illustrious and royal ornament.

PLAN OF STUDYING A LANGUAGE.—In my French and Latin translations, I adopted an excellent method, which, from my own success, I would recommend to the imitation of students. I chose some classic writer, such as Cicero and Vertot, the most approved for purity and elegance of style. I translated, for instance, an epistle of Cicero into French, and after throwing it aside till the words and phrases were obliterated from my memory, I retranslated my French into such Latin as I could find, and then compared each sentence of my imperfect version with the ease, the grace, and propriety of the Roman orator. A similar experiment was made on several pages of *The Republics of Vertot*. I turned them into Latin, retained them in my mind for a short interval, into my own French, and again retranslated the same, blazes, or dissimilitude of the copy and the original. By this means I was ashamed, and became more satisfied with myself; and I persevered in the practice of these double translations, which filled several books, till I had acquired the knowledge of both idioms, and the command at least of a correct style. This useful exercise of writing was accompanied and succeeded by the more pleasing occupations of reading the best authors. The perusal of the Roman classics was at once my exercise and reward.—*Gibbon.*

**TUTOR'S ENGLISH GRAMMAR** is illustrated by numerous spirited Wood Engravings, by which a dry and tedious study is made peculiarly easy and interesting. Price 2s. 6d.  
Houlston & Stoneman, 65, Paternoster Row.

Price One Penny.

Also, price One Penny,  
**THE KITCHEN ALMANACK**, (Sheet) containing a tabular arrangement showing the Food in Season for each Month in the Year; Domestic Hints; Rules for Marketing; Calendar, Stamp, Bill, and other Tables; with numerous Maxims for the Kitchen, and a full-sized fac-simile of The Willow-Pattern Plate printed in blue ink.  
London: 69, Fleet Street.

**NATIONAL LOAN COMPANY.**  
(Registered pursuant to 58 sect. 7 & 8 Vict. cap. 110.)  
Offices: 43, Tooty-Street, Borough; and 38, Princess-street, Leicester-square.

**LOANS ADVANCED FOR TWO YEARS**, One Year, or Six Months—Sums from £5 to £200 may be obtained upon the security of one or more responsible Housekeepers, repayable by weekly instalments of 2s. or 4s. per £25; and sums of £25 or upwards at 1s. per £.

No delay beyond the necessary time for ascertaining the responsibility of the proposed sureties.—Forms of application may be had at any hour of the day.

**A LARGE AMOUNT OF KNOWLEDGE FOR A SMALL AMOUNT OF MONEY.**

Now ready, price 2s. 6d. (gilt 3s.) admirably adapted for Christmas Presents, the **SECOND VOLUME** of the **LITERARY AND SCIENTIFIC LECTURER**, Dedicated (by permission) to the Rt. Hon. the EARL OF CARLISLE.—Vol. 1. (2s. 6d.) may still be had.

London: T. W. GRATTAN, Amen Corner; and all Booksellers.

**EMPLOYMENT GIVEN.**—Ladies and gentlemen may profitably occupy leisure time by acquiring the elegant ART of ORNAMENTING PAPIER MACHIE, in pearl, gold, &c., as practically imparted on an improved system, by which £2 a week can be realized. Primum quo quiescit. As the number is limited, those desirous of engagements should make early application to Mr. Wright, 20, Tavistock-street, Covent Garden.

**RUPTURES.**—THE PATENT SELF-ADJUSTING GERMAN TRUSS, acting effectually without any complications, is recommended by the Faculty for the Cure and Relief of Hernia. The most eminent members of the Profession are of opinion that the necessary quality of a good Truss is an efficient resisting power, without unnecessary pressure on the part affected, which desirable object is alone obtained in a Truss unencumbered with straps, spiral springs, or pad behind. J. Ego & Co., Established nearly Forty Years. Manufactory, 1, Piccadilly.

**PRIZE ENIGMAS.**—The Editor of the **FAMILY FRIEND** announces his intention of offering, at Christmas (1851), a Prize of ONE HUNDRED GUINEAS, for the best Solution of an ENIGMA to be competed for by GENTLEMEN; FIFTY GUINEAS for the Solution of another Enigma. To be competed for by LADIES; and TWENTY FIVE GUINEAS for an Enigma to be competed for by JUVENILES of both sexes. Further particulars will be given in the Numbers of THE FRIEND. There will be numerous Minor Prizes.

The Number of THE FRIEND containing these Enigmas may be had of Booksellers everywhere, (price 2d.), on or before the 1st of JANUARY, 1852. The same Number will contain the Rules of the Competition.

**BARLOW'S POWDERS**—cure Tic Dolorous or Pain in the Teeth, Face, Head, &c. Post Paid for 3s. 6d. in Stamps, by SAMUEL BARLOW, Chemist, Dalington. References as to their efficacy in France (late M.P.) Dalington; Lady Mouson, Grantham; 1 hundred of the Nobility, Ministers, and others; two bona fide Testimonials may be had of S. Barlow.

Grand Parade, St. Leonard's on the Sea, Sussex, Feb. 12th, 1847.

Mr. Barlow, Sir,—Under the favourable recommendation of Mr. Pease, of North Lodge, in regard to your Powders for the Tic Dolorous, I wish to try a packet of them. He assures me there is not anything mercurial in them, nor any drug that can possibly injure the constitution. From what Mr. Pease says, I think they are quite innocuous, and of a character to give tone to the nerves, stomachic and general.  
I am, Sir, your obedient servant,  
(Rev.) W. JACKSON.

**LADIES' BONNETS**, of the most Fashionable kind, THE RICHEST & BEST MATERIALS, At moderate Prices.

**MILLINERY BONNETS**, 10s. 6d. to 31s. 6d.

Now ready, price 1s. crown 8vo, cloth gilt,  
**FAMILY PASTIME; or, HOMES MADE HAPPY:**—consisting of entirely Original Anagrams, Enigmas, Charades, Conundrums, Fire-side Games, Practical Puzzles, &c. &c., with their Solutions; for which Prizes to the amount of Fifty Guineas have been awarded by the Editor of the *Family Friend*.

Upwards of Three Hundred Competitors have contributed to the Mass of Entertaining Literature from which the contents of this Work have been selected.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

**THE FAMILY FRIEND**, an

Magazine, published upon the First and Fifteenth of every Month, price Two-pence. Thirty-two pages, beautifully printed, and neatly covered. The following is a type of the opinion formed of THE FAMILY FRIEND, and expressed by upwards of THREE HUNDRED NEWSPAPERS:—

"The Boys and Girls will like it, for it contains good Stories; the Young Ladies will like it, for the sake of its pretty Poetry, and its Receipts for various kinds of Fancy-Work; Young Men will like it, for it abounds in useful Household Receipts; the Men will like it, for it treats of Gardening and Natural History, and advises wives to be kind to their husbands; those who love amusement will like it, for it swarms with Conundrums; everybody will like it, for it has a corner for everybody; and nobody need be afraid of finding any harm in it."—*Quintessence Observer*.

The Work may be had up to the end of December, 1851, in FIVE VOLUMES, price 2s. 6d. each.

The Fourth Volume contains a **QUADRUPLE INDEX** to the First Four Volumes, embodying about THREE THOUSAND FIVE HUNDRED REFERENCES to matters of everyday usefulness. The Work forms a most perfect Encyclopedia of Domestic Economy.

London: HOULSTON & STONEMAN, 65, Paternoster Row; and all Booksellers.

Now ready, and may be had of all Booksellers, neatly bound in Cloth, price 9s. 6d.

**THE FAMILY TUTOR, AND SCHOOL COMPANION.**

Was published on the 1st of January, 1851, and subsequently on the 1st and 15th of each Month, in Parts price 2d. each.

THE FAMILY TUTOR, as its name implies, is a Work of a highly instructive character, and, as far as can be accomplished in print, the advantages of a PRIVATE Tutor to every reader—a Tutor whose teachings are lively, kind, and comprehensible, making the acquirement of knowledge a PLEASURE, not a TASK.

The First Volume contains:—A COMPLETE ENGLISH GRAMMAR, improved and simplified; FAMILIAR LECTURES ON CHEMISTRY, THE HISTORY AND ART OF TRAVEL, ZOOLOGY; THE PHYSICAL HISTORY OF MAN; THE PHYSIOLOGY OF HEALTH AND DISEASE; CELESTIAL AND TERRESTRIAL PHENOMENA OF THE MONTH; MATHEMATICAL, GEOMETRICAL, ARITHMETICAL, AND OTHER PROBLEMS; EDUCATIONARY EXERCISES, "THE TUTOR AND HIS PUPILS," being Answers to Educational Questions; and A VALUABLE MISCELLANY.

THE SECOND VOLUME contains a Complete System of NATURAL GEOGRAPHY, with Pictorial Illustrations, displaying the Costume and the Architectural and Natural Features of the various Peoples and Countries of the world.

THE FAMILY TUTOR may be had complete up to the end of 1851, in Ten Volumes, price 2s. 6d. each.

London: HOULSTON & STONEMAN, 65, Paternoster Row; and all Booksellers.

INVALUABLE TO MOTHERS.

'S POWDERS for CHILDREN.

DREN, which for more than Twenty Years have been prescribed by the leading Medical Men, with the greatest success and advantage to Children suffering from difficult Teething. The value of these powders depends upon their power in controlling the fever, which from time to time arises during the process of Teething, but they are of equal service in every other description of fever to which Children are liable—namely, in Scarlatina, Measles, Small-pox, Chicken-pox, Nettle-rash, and other eruptions of the skin; in which disorders, the timely use of these powders will prevent inflammation, and other ill effects. The inflammation of the throat in Scarlatina, of the eyes and lungs in Measles, of the eyes and skin in Small-pox, &c., is the effect of the fever in these disorders, and if the fever is kept subdued, inflammation will not take place, and thus the evil consequences resulting to the child's constitution, may with certainty be prevented. These powders may also be given with great advantage in Croup and Influenza, and also in the feverishness and sore throat which follow catching a cold. With these powders at her command, the mother, or intelligent nurse, has the health of infants and children fully under her control; and may relieve herself at the same time, from much of the anxiety which attends the care of infancy and childhood. Mr. Dixon will forward, post free, a packet on receipt of fourpenny stamps. Prepared and Sold by J. DIXON, Surgeon, Apothecary, and Accoucher, 25, Bedford-row, corner of Theobalds-row, Bloomsbury, London, in Packets, containing nine powders, 1s. 1d., and to be obtained from any Patent Medicine Vendor throughout the Kingdom.

Wholesale Agents, Messrs. Barclay & Sons, Farringdon Street, London.

### Editor's Note-Book.

**TAKE EXERCISE.**—The venerable author of the *Muscle of Nature*, Mr. William Gardiner, has written a paper, recommending "exercise." "My father (he says) was remarkable for his lightness of step at the age of ninety-four. He was regular in taking his walking exercises every day, sometimes twice a day. In approaching a similar age, I look back upon many of his actions as a guide, and have scrupulously adopted his habits. In summer time I walk before breakfast, as I dine in the middle of the day; and, after tea, I enjoy a ramble in the evening. In the winter, I avail myself of the prime of the day. A little rain never stops me; if I am caught, I accelerate my pace, and return with a slight perspiration, instantly changing my dress for dinner; hence, I never take cold. The best pace is that which accords with the motion of the pulse—if you hurry beyond that you are sooner fatigued. My pulse seldom varies from sixty to sixty-four. What Handel terms *Tempo Ordinario*, or Common Time—that is my natural pace. If you walk slowly, you may walk all day. I never walk with a stick. Anything carried in the hands destroys the erect position of the body, and interrupts the swing of the arms. The arms are pendulums, which act like the fly-wheel in machinery, to steady the motion. In my walks I prefer undulating fields to a plain road. If windy I meet it, and return home with the wind at my back. Walk once a day, and you will never have occasion for a doctor and his calomel."

**HERALDRY.** A. C.—Newlands (of Edinburgh) Ar. three covered caps sa. Newlands (Scotland) Ar. on a chevron, three lions ramp. As many crescents of the first. Crest, a demi-lion rampant. Motto, pro patria.

**LEGAL QUESTIONS.** Justice.—Our correspondent, who proposes to us a series of legal questions for solution, should address himself to a practitioner in the law, who alone can answer them in a safe and satisfactory manner.

**MILK.** S. C. C.—Milk may be preserved from turning sour by adding to it a very small quantity of carbonate of soda. A quarter of a small teaspoonful is sufficient for a quart of milk.

**TO CLEAN GILT FRAMES.** A Subscriber.—Beat up three ounces of the white of eggs with one ounce of soda. Blow the dust from the frames with a bellows; then rub them over with a soft brush dipped in the mixture, and they will become bright and fresh.

**METROPOLITAN ECONOMIC CARRIAGE COMPANY.**—There can be no question as to the advantages the public will derive from the formation of such a company, and the speculation is likely to be encouraged by a mass of individuals, who have long experienced the evils of the old system.

**PATENTS.** Y. R.—There are writings sealed with the Great Seal, granting a privilege to some person, or authorising a man to do or enjoy that which he could not of himself. They are called *patents* on account of their form being open, ready to be exhibited for the confirmation of the authority delegated by them.

**ETIQUETTE.** R. S. V. P.—Our correspondent inquires whether, on receiving wedding-cards from newly-married friends, he is to call upon them or send a written acknowledgment. A personal presentation of compliments and kind wishes is always expected among friends, unless the parties should live at too great a distance from each other, when a written communication must suffice.

**POPPING THE QUESTION.**—Mr. Editor.—I would feel very much obliged to you if you would be so kind as to publish these few lines, which are as follows:—

A CURIOUS WAY FOR POPPING THE QUESTION.

Most worthy of adoration,  
And highly in estimation,  
After long consideration  
And serious meditation,  
I feel an inclination  
To become your relation.—S. D.

**AMBER VARNISH.** J. B.—The amber should be dissolved in drying linseed oil. For this purpose, however, the amber must be previously heated in an iron pot, over a clear red fire, till it softens and becomes liquid. The oil previously heated, is to be now poured in, with much stirring, in the proportion of ten ounces to the pound of amber; and after the incorporation is complete, and the liquid somewhat cooled, a pound of oil of turpentine must be added.

**TO PRESERVE STEEL GOODS FROM RUST.** W. S. S.—After bright grates have been thoroughly cleaned, they should be dusted over with unslaked lime, and thus left until wanted. All the coils of piano wires are thus sprinkled, and will keep from rust for many years. Table-knives, which are not in constant use, ought to be put in a case in which sifted quicklime is placed, about eight inches deep. They should be plunged to the top of the blades, but the lime should not touch the handles.

**COFFEE.** V. C.—In purchasing coffee, always prefer the Mocha; next to this, the Bourbon and Mauritius coffee; and lastly, the West India coffee. *Never buy it roasted*; you can procure a coffee roaster at a very reasonable price, and the trouble of roasting it at home cannot be very great. Let it be kept in a plain tin canister, and when roasted transfer it to a smaller one. Let the latter, especially, be air-tight, as nothing deteriorates coffee so much as exposure to the air after it has been roasted.

**CARPETS.** P. S.—The wear of carpets greatly depends upon the manner in which they are kept clean; if the dust is suffered to accumulate too long, they require to be beat with much force, which breaks the threads. In some cases they are scoured; but this is very apt to injure their texture. 'It is important to the preservation of carpets, that the boards of the floor be well laid. As soon as a carpet begins to wear, its position in the room should be altered, that every part may be worn alike.

**SPIRIT OF THE AGE.**—Many amusing contrasts have been made between the "good old times" and those of the wonder-working days in which we live; and certainly there is ample food for comparison. Our ancestors could no more dream of the gigantic strides of progress in this, our age, than we, their highly favoured descendants, can grasp the fulness of discoveries as yet immature. Fast coaches, in former days, that would make adepts people shake their heads and augur misfortune from such reckless driving against time, are now thought of with a species of wonder, that such things could have been tolerated. Old Aubrey, the gossiping chronicler of men's sayings and doings in a past age, mentions exultingly, as a marvellous feat of speed in his days, the journey of a stage-coach, between Oxford and London, performed in a few days! Now, steam is racing over earth and ocean; and electricity, that greater marvel still, is communicating the thoughts and wishes of man with lightning rapidity, from one country to another, beneath the heaving waters of the sea. We can conceive the astonishment of a patriarch of fourscore, to whom these wonders are narrated, and who has survived to see the reverend Utopians, in his youth, brought into waking realities in his old age; but when we add the project of submerging the communicating wires throughout the ocean, and bringing American-Indian, and even Chinese, into instant thought with ourselves, it must infallibly tell with all the effect of

AN ELECTRIC SHOCK.

**PORTABLE MEATS, FRUITS, OR VEGETABLES.** W. J.—By a proper preparation, these may be preserved for several years in bottles or tin cases carefully corked or soldered. The whole process consists in exposing them to the action of boiling water in the sand-bath, and driving off the vapour. The time requisite varies, according to the article, from rather less than an hour to two hours. Peas require two hours, French beans an hour and a half, fruits about three quarters of an hour, and meat about an hour; but, in some cases, the article is to be put into cold water, and taken out when the water boils. Where a sand-bath is not practicable, all that is necessary is, to put a saucepan filled with water into a larger saucepan also containing water, and to place the bottle or can in the smaller saucepan.

**TO DETECT ALUM IN BREAD.** W. M.—This requires some knowledge of chemistry, and we must recollect that alum consists of sulphuric acid, alumina, and potash. Crumble about two pinches of the bread suspected, in half a pint of distilled water; boil the mixture a few minutes, and filter the liquor through unsized paper. Evaporate the fluid to about one-fourth of its original bulk; divide it into two parts. Into one of these, let fall a solution of muriate of barytes, if a copious white precipitate ensues, which does not disappear by the addition of pure nitric acid, the presence of alum may be suspected, as this precipitate indicates sulphuric acid. Into the other half drop a little aqua-ammonia; if alumina be present, the other constituent of alum, a light precipitate will appear, which will be re-dissolved by a few drops of a solution of caustic potash.

**TEETH SET ON EDGE.**—All acid foods, drinks, medicines, and tooth-washes and powders, are very injurious to the teeth. If a tooth is put in acid, vinegar, lemon-juice, or tartaric acid, in a few hours the enamel will be completely destroyed, so that it can be removed by the finger-nail as if it were chalk. Most have experienced what is commonly called teeth set on edge. The explanation of it is, the acid of the fruit that has been eaten has so softened the enamel of the tooth, that the least

pressure is felt by the exceedingly small nerves which pervade the thin membrane which connects the enamel and the bony part of the tooth. Such an effect cannot be produced without injuring the enamel. True, it will become hard again, when the acid has been removed by the fluids of the mouth, just as an egg-shell that has been softened in this way, becomes hard again by being put in the water. When the effect of sour fruit on the teeth subsides, they feel as well as ever, but they are not as well. And the oftener it is repeated, the sooner the disastrous consequences are manifested.

**ADULTERATION OF MILK.** G. R. C.—We have complaints from various correspondents, on this subject, which is a grievance of old date. Since chemistry has supplied the means of detection, it has been, however, less frequent. Water gives to milk a bluish colour, and to conceal this, it is said that chalk, and also wheat flour, have been added. Chalk is easily found out, because it settles to the bottom after a couple of hours, and then the bluish colour returns, and the altered taste of the milk is easily distinguished. The existence of flour or meal in the milk may be detected by employing iodine, which strikes a blue colour with the starch of the flour. For this purpose, add to the milk or cream suspected, some iodine in alcohol; and if there be any flour, arrow-root, starch, or rice, it will be shown by a beautiful blue tinging its appearance.

**PRECAUTIONS IN CASE OF FIRE.**—The following precautions should be impressed upon the memories of all our readers: 1. Should a fire break out, send off to the nearest engine or police station. 2. Fill buckets with water, carry them as near the fire as possible, dip a mop into the water, and throw it in showers on the fire, until assistance arrives. 3. If a fire is violent, wet a blanket, and throw it on the part in flames. 4. Should a fire break out in the kitchen chimney, or any other, a blanket wetted should be nailed to the upper ends of the mantel-piece, so as to cover the opening entirely, the fire will then go out of itself; for this purpose two knobs should be permanently fixed in the upper ends of the mantel-piece on which the blanket may be hitched. 5. Should the bed or window-curtains be on fire, lay hold of any woollen garment, and beat it on the flames until extinguished. 6. Avoid as much as possible leaving any door or window open in the room where the fire has broken out, as the current of air increases the force of the fire. 7. Should the staircase be burning so as to cut off all communications, endeavour to escape by means of a trap-door in the roof, a ladder leading to which should always be at hand. 8. Avoid hurry and confusion; no person, except a fire policeman, friend, or neighbour, should be admitted. 9. In case a lady's dress takes fire, she should endeavour to roll herself in a rug, carpet, or the first woollen garment she meets with. 10. It is a good precaution to have always at hand a large piece of balm, to throw over a female whose dress is burning, or to be wetted and thrown on a fire that is recently broken out. 11. A solution of pearl-ash in water, thrown upon a fire, extinguishes it instantly. The proportion is a quarter of a pound, dissolved in some hot water, and then poured into a bucket of common water. 12. It is recommended to householders to have two or three fire-buckets, and a carriage mop with a long handle near at hand; they will be found essentially useful in case of fire. 13. All householders, but particularly hotel, tavern, and inn-keepers, should exercise a wise precaution, by directing that the last person up should perambulate the premises previous to going to rest, to ascertain that all fires are safe and lights extinguished.

# THE HOME COMPANION:

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL

No. 7.—Vol. I.]

SATURDAY, FEBRUARY 14, 1852.

[PRICE ONE PENNY.]

## THE LITTLE GIRL'S LAMENT.

Is heaven a long way off, Mother?  
I watch through all the day,  
To see my Father coming back  
And meet him on the way.  
And when the night comes on, I stand  
Where once I used to wait,  
To see him coming from the fields  
And meet him at the gate.  
Then I used to put my hand in his,  
And cared no more to play;  
But I never meet him coming now,  
However long I stay.  
You tell me he's in heaven, and far,  
Far happier than we;  
And loves us still the same—but how,  
Dear Mother, can that be?  
For he never left us for a day  
To market or to fair,  
But the best of all that Father saw,  
He brought for us to share.  
He cared for nothing then but us—  
I have heard my Father say,  
That coming back made worth his while  
Sometimes to go away.  
And if where he is now, Mother,  
All is good and fair,  
He would have come back long ago,  
To take us with him there.  
He never would be missed from heaven:  
I have heard my Father say  
How many angels God has there,  
To praise Him night and day.  
He never would be missed in heaven,  
From all that blessed throng;

And we—oh! we have missed him here,  
So sadly and so long.  
But if he comes to fetch us, then  
I would hold his hand so fast,  
I would not let it go again  
Till all the way was past;  
He'd tell me all that he has seen,  
But I would never say,  
How dull and lonely we have been,  
Since he went far away.  
When you raised me to the bed, Mother,  
I kissed him on the cheek.  
His cheek was pale and very cold,  
And his voice was low and weak.  
And yet I can remember well,  
Each word that he spoke then,  
For he said I must be a dear, good girl,  
And we should meet again!  
And oh! but I have tried since then  
To be good through all the day;  
I have done what'er you bid me, Mother,  
Yet Father stays away!  
Is it because God loves him so—  
I know that in His love,  
He takes the good away from earth,  
To live with Him above?  
Oh! that God had not loved him so!  
For then he might have stayed,  
And kissed me as he used at nights,  
When by his knee I played.  
Oh! that he had not been so good,  
So patient, or so kind!  
Or, had we but been more like him,  
And not been left behind!

## FIRST IMPRESSIONS.

BY ELLA RODMAN.

"EVERYTHING," said somebody, with a positive air, "depends upon a first impression."

"I am not so sure of that," observed Mr. Darnidge, a gentlemanly-looking man of middle age, "indeed, I can afford most indisputable evidence to the contrary; that is," he continued, "if you are chattering away, as usual, upon the subjects of love and marriage."

The knot of young girls whom he had approached, vehemently denied the imputation, but the rather disconcerted appearance of the animated speaker rendered the supposition more probable than otherwise. However, they were a pleasant and numerous family party of relatives to the fiftieth degree removed; and comforting themselves with the knowledge that "nobody minded Cousin Darnidge," they defended their own theory in the most energetic manner, until having at length exhausted their own powers of eloquence, they laughingly challenged him to bring forward his proofs to the contrary.

"Well, then," said he, with a mischievous glance at his wife, an elegant-looking woman, considerably his junior, "I will give you, for an illustration, the melancholy history of my own courtship."

"Do I do!" they all exclaimed, "the idea of Cousin Darnidge in love is perfectly delightful!"

"Really, Mr. Darnidge," observed his lady, with something of a frown on her pleasant face, "I beg that you will not manufacture any nonsense for the sake of a story."

"No, madam," he replied, with a profound bow, "there is, unfortunately, in what I am about to relate, nonsense enough already manufactured, which quite precludes the necessity of drawing on the imagination for a fresh supply."

They all stood somewhat in awe of the elegant Mrs. Darnidge, and were now on the *qui vive* for the promised story.

"To begin, then," said he, "at the beginning—which is, I suppose, as convenient a place as any—you must know that after I had been 'crossed in love' some dozen times or so, by various fickle charms, and had accumulated piles of love-letters—which, to tell the truth, were chiefly copies of my own—and hair enough, of different shades, to fill a moderate-sized pincushion, I began to get over my youthful folly; and regarding these successive attacks as a sort of ordeal incidental to youth, and of the same nature as the scarlet-

fever, hooping-cough, and other troubles of childhood, I resolved to give up a foolish kind of theory I had indulged in, about there being a something called a heart, somewhere beneath my waistcoat, and make a goose of myself no longer. By-and-bye I began to get what you satisfy 'just-come-outs' term 'elderly,' and was set down as a regularly confirmed old bachelor. Young ladies were my particular aversion; and when any friend came to be congratulated upon his approaching marriage, I always wished him happiness with a kind of sardonic smile—the wish seemed equivalent to seeing a man walking through red-hot coals, and 'hoping that he wouldn't hurt himself.'

"At length, however, when I thought that there was no longer a possible chance of a second edition of my former folly; when I had quite worked myself up to the idea that I was one of the most sensible men who had ever illuminated a darkened age, I began to deliberate upon the advantages and disadvantages of matrimony. You need not smile, young ladies, and look so very much delighted; I had not the most distant idea of 'falling in love.' No, I began to think that perhaps it might be pleasant to have some one to sit at the table and talk to me when I came home, get my slippers ready, and nurse me when I was sick. But I intended to look for some steady, elderly kind of a lady, who would not expect any of these attentions herself."

Here he was interrupted by the indignation of the younger members of the company; but his wife was perfectly calm and placid, wearing a look which seemed to say, "you may talk as you please, but I can act." When they allowed him to proceed, he continued mournfully:—

"Alas! in spite of this fortification of excellent good sense, never was an unfortunate man so taken in and done for. I was completely deceived; and this will show you the value of first impressions. It was a bleak, unpromising kind of a day in the early part of autumn, and rather out of humour with myself and the rest of the world, and wearied with a long journey, I took my seat in a railway carriage—looking forward with no great pleasure to going home. I amused myself, as I glanced at those about me, by picturing their return, welcomed by voices that gladdened at their approach; I looked rather angrily towards them as two ladies, who appeared to be mother and daughter, seated themselves just opposite; but my eyes, I suppose from having nothing else to employ them, seemed constantly drawn in that direction—though when the younger lady happened to glance back, I assumed an angry scowl, and pretended to be occupied with my paper. But, nevertheless, I fell to musing on the possibility of having at length met with my *beau idéal*. Although rather younger and better-looking than I could have wished, she looked serious and steady; and her whole appearance was so lady-like, and yet just what I wanted, that I felt half inclined to write a proposal on the margin of the newspaper and fling it over to her.

"At the hotel where I stopped both mother and daughter stopped too; and as I had been troubled all through the night by a vision of the unknown lady presiding over my establishment, I resolved to procure an introduction through a mutual friend. 'It must have been Mrs. Somers and her daughter,' said he, when I had described them, 'but I should think, from your description, that you had fallen in love with the *old* lady instead of the young one.' They were not visible at the tea-table, nor did I see them until the next morning, fatigue having caused them to keep their apartments.

"There was quite a large party at the hotel, given in honour of some illustrious stranger; and as an elegant-looking young lady rose from the piano, my friend led me up and presented me to Miss Somers. I was perfectly astonished; I could scarcely recognise my fellow-traveller of the preceding day—she appeared at least ten years younger; her eyes were sparkling with excitement, and, in short, instead of the sober wife-elect I had pictured, I beheld a beautiful young lady, who looked perfectly competent to torment any old bachelor's life out. I scarcely knew what to say—I had not conversed with a young lady for twenty years; but notwithstanding all my prejudices, there was something about Miss Somers that attracted me in spite of myself. I tried in vain to arm myself with all my strength of mind—a single look or tone put all to flight; in one week I was her devoted slave—in a month I had laid myself, my fortune, and my prejudices at the feet of Augusta Somers—and in the course of a year I beheld that lady transformed into Mrs. Darnidge. In less than a week after our marriage, I was running up stairs for my wife's shawl, and she has played the tyrant ever since."

All agreed that he had been served exactly right; and Mrs. Darnidge said, with a smile:—

"Since he has been foolish enough to publish this silly story, I may as well solve the mystery of my wonderful transformation. I had been travelling for a week with scarcely any rest; I had a violent headache and cold in my head, which is by no means a beautifier; and, added to this, I felt cross, which is very apt to show itself in my countenance. I had never seen Mr. Darnidge before, although I had often heard him spoken of as a very wealthy, eccentric old bachelor—but generous and noble-hearted, always ready to relieve the distressed—until I had worked up quite a little romance about

him in my own mind, and felt very anxious to see him. His age was rather a recommendation: I had always wanted some one to look up to—some noble, dignified character, whom I could reverence as well as love; and I doubt if he ever had a warmer admirer than I was before I knew him. The cross-looking, elderly gentleman in the railway carriage amused me very much, and had any one then said to me, 'behold your future husband,' I should have laughed the idea to scorn. When the introduction took place, my surprise and disappointment quite equalled his; the old ogre, then, who had been frowning at me during the whole journey, was Mr. Darmidge—my ideal of perfection! I was so provoked that I resolved to make a conquest of him, just to punish him for being so different from what I had expected; but, when he began to talk, I found him so pleasant, that I became interested in spite of myself; and then he was so constantly doing something good and generous, which always came to my ears, that I began to thaw by degrees—and when I really had made the projected conquest, I found that I had by no means come off unscathed."

"Just like the ballad of *Johnny Sands*," said Mr. Darmidge, "you wanted to push me into the water, and fell in yourself—or rather, we both fell in together."

"Pooh!" said Mr. Brettlehouse, an eminent lawyer, always ready for a frolic, "as the boys say, 'I can beat that.' Now, in my case—"

"Now, Mr. Brettlehouse," remonstrated his wife, a pretty, lively little creature, who seemed to have scarcely emerged from girlhood, "do not tell that nonsense, I beseech of you; only think how I shall blush!"

"I shall tell it on purpose to expose you," replied her husband; "a most villainous plot was concocted against me, and I was fairly carried off and married by force. I had the pleasure of overhearing the whole scheme beforehand, and like a great fool, I rushed into the snare with my eyes open. My story may serve as a warning to others."

"Remember, though, that it is *only* a story," interrupted his wife, "a shameful fabrication, entirely of his own manufacture."

Little Mrs. Brettlehouse laughingly concealed herself behind the substantial figure of a portly aunt, in pretended modesty; and her husband proceeded with his narration:—

"You remember," said he, "the favourite question of the fortune-tellers 'Where will you meet your intended?' there appears now to be a decided majority in favour of railway carriages and stage-coaches, for it was in one of the latter vehicles that I first beheld my evil genius."

Here Mrs. Brettlehouse, looking out from her screen, shook her hand in a threatening manner; but the gentleman proceeded with unmoved dignity:—

"I was travelling in the stage from — to —, having remained all night at the former place, where I had been very much interested in the case of a poor family, for whom I had endeavoured to procure a pension; but as I succeeded, I did not regret the night's rest of which it had deprived me—although a glance in the mirror previous to starting would have been sufficient to eradicate any amount of personal vanity. It was pretty cold weather; and muffling myself in a large cloak, and pulling my hat well over my ears, I threw myself back in the solitary vehicle, and entered upon my homeward journey."

"For some miles I enjoyed the charms of solitude; but before I had quite decided whether a fellow-traveller would be agreeable or otherwise, the stage drew up at a white house, and from the quantity of hand-boxes and other baggage, among which my one little valise seemed in danger of being smothered, I concluded that a lady would soon be forthcoming. Now was I mistaken; a young lady, who appeared to have been wrapped in everything that was handy, came down the walk, accompanied by an elderly lady, who was evidently her maiden aunt."

"Now take good care of yourself, my dear," said the aunt, "and keep the brick to your feet, and do not have the windows open. Driver," she continued, "are there any other passengers?"

"Only one gentleman, ma'am."

"Then you must come with me, aunt," exclaimed the young lady, laughing, "for I positively cannot think of travelling alone with a gentleman."

"Oh, he's an oddish kind of a one, miss," said the man, "he seems very quiet."

"Well," thought I, "this is pleasant;" for when a man verges on forty he is apt to be rather touchy about his age; so vacating the back seat for the benefit of the lady, I placed myself on the further one opposite, and pulling my hat still further over my eyes, resolved to perform the grave elderly gentleman to perfection. My fellow-traveller entered the vehicle with a spring in spite of her muffings; and having settled herself to her satisfaction, the stage proceeded at its usual pace, and I had leisure to examine the face of my *vis-à-vis*. A more mischievous-looking monkey I never beheld—see frontispiece, as the picture-books say—her round, gipsy face beamed with merriment, and her eyes seemed ready to dance themselves out of her head. I could see, even at the first glance, that she was a complete flirt; and having looked toward the corner where I sat, probably in the forlorn hope of seeing something in a hat and coat worth practising upon, she gave a desponding sigh, and undutifully discarding the warm brick provided by her careful aunt, she drew forth a letter from her pocket, and was soon buried in its contents. The closely-written pages, erased and re-erased, proclaimed it to be a confidential epistle from some female friend; I watched her with rapidly kindling ire, while she complacently perused each line. That finished, she began to bite her nails for further occupation, which raised in me a most ardent desire to box her ears. "Not much like falling in love," you will say; but, nevertheless, I began to feel certain twinges about the region of the heart, as I gazed on the bright face before me, while she, saucy minx! appeared to regard me as part of the vehicle. But my time was coming."

At a hotel where the stage stopped for a few moments, the young lady and a whole waggon full of girl-acquaintances, whose surprise at seeing her was unbounded."

"Why, Marion Connor," they exclaimed, "what are you doing here? Has brought you in this direction?"

"I have business here," she replied, with a laughing attempt at importunance. "I suppose you could not guess it?"

"The only business I ever knew you to be engaged in was an attack upon the heart of some poor unfortunate man," rejoined one of the bevy.

"That is just it exactly," said Marion, with a merry laugh.

"So, then," thought I, "she makes a regular business of it, does she?"

"You must know, girls," she continued, with an appearance of great solemnity, "that I have concluded to settle down soberly at last. I am going to —, on purpose to set my cap for the rich old lawyer, Sam Brettlehouse, and I give you all an invitation to come and see me when I am married."

"Do hear her," said one of them, "she speaks as though she was quite sure of him—how do you know that he will have you?"

"Have me, indeed!" she repeated, "of course he will be perfectly delighted at the idea. No fear of his not having me—the only thing is, he may be too bashful to imagine that so much happiness can be intended for him. But one thing I know—I am determined to have him at any rate."

"Well," thought I, "if this impudence isn't really too much? Here I am, actually disposed of before my very face, without being allowed to have a voice in the matter!" I had a great mind to come out from my obscurity and say, "the old lawyer thanks you for your flattering intentions, madam, but begs to decline the honour you would confer upon him;" but then, as I glanced at the young witch, I wondered if I did wish to decline it? So I wisely concluded to say nothing, and listened to their chattering as unmoved as though I had never heard of such a person as Sam Brettlehouse.

"We drove on; and determined to get up some sort of conversation, I asked my companion if she found an open window near her too cold. The inquiry was made in such a gruff voice that at first she gave a visible start; but this was succeeded by such a sweet smile that I felt almost conquered. During the remainder of the ride I was under the uneasy conviction that some kind of a spell was woven around me—mysterious toils from which I could not escape. Favoured by the obscurity of my corner, I sat gazing at my companion, trying in vain to persuade myself that this girlish nonsense was bold and unbecoming. Then, as I remembered the visage I had encountered in the mirror, I began to fear that when she beheld the object of these laughing designs, she would change her mind. That she should see me after her arrival, and that very soon, I had fully determined, for I felt interested to know how she would proceed; but in what manner I should appear before her puzzled me considerably. At length I had hit upon a scheme. I thought it most probable that she would not recognise me upon a second meeting, as she had scarcely taken the trouble to look at me; besides, brushed up and improved, I should be quite a different individual, and I determined to feign entire ignorance, just to see how the adventure would turn out."

Miss Connor was deposited at the house of a relative with whom I was acquainted; and keeping my journey in the stage-coach a profound secret, I waited for the *finale*. I heard that the young lady spoke of having travelled with an old bear, who growled at her once, and then relapsed into silence. I tried in vain to feel angry at this uncomplimentary speech; and on receiving an invitation for an evening party, where I knew that I should meet Miss Connor, I was so fidgety about my dress, that I almost blushed for the dignity of my office. I endeavoured to persuade myself that grey hairs were honourable, and called to mind all the instances I had heard of persons turning grey at a very early age; but people, I knew, could not be thus deluded in my case; and notwithstanding all my philosophy, I continued mercilessly pulling out hair after hair, until my eyes being suddenly opened to the alarming scantiness of my head-covering, I found that, unless I preferred being bald, it would be wiser to desist from my employment."

I saw Miss Connor looking more beautiful and mischievous than ever; and when we were introduced, I armed myself with a look in which were mingled pleasure at the acquaintance, and the most stubborn conviction of never having seen her before. When my name was mentioned she started and coloured violently, and seemed anxious to escape somewhere; but I stood smiling in the most perfect unconsciousness; and glancing at me half-suspiciously with a somewhat puzzled air, she seemed quite at a loss what to do. A deep blush, probably called up by the remembrance of that conversation in the stage, burned constantly on her cheek, making her look so perfectly lovely that I would not for worlds have discovered myself. I could not help smiling, when, determined not to rest without being quite certain, she said, with an extremely penetrating look—

"I cannot divest myself of the idea that I have seen you somewhere before, Mr. Brettlehouse—the resemblance is very strong."

"It must be a mistake," I replied, "for I should certainly remember you. But I am the most unfortunate man in that respect," I continued, "for I have such an accommodating face that I am allowed no identity of my own; being constantly mistaken for some other person. Even in childhood, I offended all our aristocratic relations by looking so provokingly like every one else; and since my arrival at the years of discretion, I do assure you that I was very near being implicated in a breach of promise, on account of my unlucky phiz."

— was scrupulously true, for I really have been tormented in that way as never man was tormented before; and Miss Connor, seeming very much relieved, listened in great amusement to a long account of my calamities, which I told on purpose to drive away her suspicions. But I noticed that notwithstanding my endeavours, she seemed to be on her guard; and there

least appearance of setting her cap. 'Perhaps,' thought I, 'she may consider me an old dandy,' as I glanced uneasily at my diamond pin and blue cravat, and wished that I had not discarded my usual black one.

"Miss Connor persisted in treating me with the greatest coolness; she never appeared to see me if I walked beside her, and turned all my complimentary speeches into ridicule. She almost plagued my life out, and I believe that this was the very reason why I thought so much of her. At length I could stand this no longer; and when I had mustered up courage to tell her so, she pretended to be very much surprised, said something about considering me as a friend, and acted like such a witch that I was half wild. Didn't I have my revenge afterward, when I let out my secret?"

"Then you really love me," said she, "no matter how I act!"

"I said something rather extravagant about being supremely happy, and finding me so accommodating, she at length relented.

"My dear," said I, the morning after we were married, 'have you any recollection of an old bear with whom you once rode in the stage!'

"The spring with which the ci-devant Miss Connor started from the sofa was only equalled by the look that accompanied it. She seemed almost ready to eat me.

"Don't you think he looked very much like me?" I continued, tantalizingly, 'you told me so once.'

"You good-for-nothing, horrid fellow!" she exclaimed, 'how could I have been so taken in! I have done the very thing which I thought nothing could have tempted me to do. As I looked at that old fellow in the stage, I wondered if he ever could be foolish enough to have any thoughts of getting married—I was persuaded that not even the wealth of Cræsus could tempt me to have him!'

"Taken in, indeed!" said I, laughing, 'I think I am the one who has been taken in.'

"There was now a perfect explosion of grief, wounded modesty, and alarming hysterics."

"Ladies and gentlemen," said little Mrs. Brettlehouse, "all that he has been telling you is a complete story, and he knows it; but even were it true he needn't brag of what he is so very thankful for. He is the most troublesome man that ever lived; he follows me about so that I am tired of the very sight of him."

Mr. Brettlehouse, to show his independence, began playing the agreeable to a young lady; but a general laugh was raised against him, when, from the force of habit, he gradually advanced to the sofa, and seated himself in his usual place beside his wife.

"Come, Mr. Groveswood," exclaimed several merry voices, as a pale, intellectual-looking man entered, "we are all telling our 'experience,' and as we have already had 'two old men's tales,' we expect you to furnish something quite romantic."

The new comer was very handsome and elegant in appearance; and in spite of ill-health, which had cast an air of languor and suffering over his expressive features, a sweet smile played around his mouth, and all the young ladies candidly acknowledged themselves in love with him—they pronounced him "so very interesting."

"As to romance," he replied, "I am afraid that I have done with that now, thirty-five is such a very matter-of-fact age. I believe, though, that this lady still confesses to that weakness; if I am not mistaken, she fell in love with me because she chose to imagine that my name was 'Ernest'—but when she found that I was really plain, unromantic 'Daniel,' she had serious thoughts of changing her mind. It is quite wonderful now how she contrives to avoid calling me by my right name; generally, it is 'Mr. Groveswood,' sometimes 'you,' and when very amiably disposed, 'my love;' but I do not think she has ever called me 'Daniel.'"

"You were always 'Ernest' to me," said his wife, to whom a three years' marriage had only unfolded fresh traits for love and respect in the husband of her choice, "but must I tell that very silly story? The folly, you know, was all on my side."

Mrs. Groveswood, although not generally called even pretty, had a slight, elegant figure, and a face that lighted up at times into an expression of intense beauty. It was an enthusiastic face—there was nothing tame or quiet about it; and while an over-sensitiveness of feeling called the tears to her eyes on the slightest occasion, a keen perception of the ludicrous often dimpled her mouth with irrepressible merriment. All were determined to have the story, and after vain entreaties to be excused, Mrs. Groveswood resigned herself to her fate.

"I think," said she, "that from the time when I began to think at all, I have lived in a kind of dream with my eyes open. I have been all my life deceived and undeceived, but to have the same thing repeated over again. I never enjoyed realities, because I lived in an ideal world; and not even ridicule, that damper of all sentiment, has quite cured me of my unfortunate predilection. I always identified myself with the heroine of any favourite book, and as such was supremely happy. I knew very well that I was not beautiful, and but little of my time was spent before the glass, for that destroyed the illusion; but lulled into forgetfulness of realities by some exciting novel, what a blissful life I lived! What noble, elevated love was mine! Never lady of the olden time had such devotees at her shrine as those whom my fancy conjured up; never were noble deeds so abundant, and every-day characters so uncommon as in the Utopia where I reigned supreme.

"But not satisfied with this, I generally embellished persons whom I met with those qualities, which alone, as I imagined, constituted perfection.

"On one occasion, a gentleman whom I had hitherto considered rather common-place, happening to say in answer to a question, 'I am too romantic to do so and so,' my ever ready fancy converted it into—'I am too romantic;' and conquering my natural bashfulness, I exclaimed without a

moment's thought, 'Oh, I am so glad to find some one who confesses to a little romance!' I began to despair of ever meeting with such a person. My new subject was certainly as matter-of-fact an individual as I could have selected; for after gazing at me as though he somewhat doubted my sanity, in the most business-like manner he requested a definition of romantic. 'Do you mean,' said he, 'some one who spends his nights in star-gazing, and his days in writing poetry? If so, you have very much mistaken me.' I warmly denied such an imputation, and endeavoured to define my meaning as something noble and lofty; but during my rather unsatisfactory explanation, I became painfully conscious that the term 'romantic' was something to be imagined rather than described. I sat with burning cheeks after this ridiculous *exposé*, with the pleasant conviction that the others were enjoying a laugh at my expense.

"At sixteen I was most hopelessly in love with an ideally manufactured after the following receipt:—equal quantities of William Wallace, Sir Walter Scott, General Washington, and Lafayette, with half an ounce of Byron, and an immense quantity of imaginary qualities supplied by myself. And yet even this constellation of virtues alone would not have been sufficient; the unknown idol must also possess a claim on my sympathy. I felt that I could not love one who was in full possession of all his faculties, like the common herd; he must be unfortunate in some way—delicate in health—just sufficiently ill, perhaps, to require some one to bathe his forehead with cologne, and sit and hold his hand, or read to him. I never reflected how ill calculated I was for the office of nurse.

"At length I seemed destined to meet with my *beau idéal*. A matter-of-fact relative, who had often ridiculed my fancies, told me that she had discovered a hero, every way worthy to fill the vacant place in my visions of romance. 'He is an old bachelor,' said she, 'over thirty, delicate in health, fastidious in his taste, and, in short, everything that you admire, except that he is wealthy.' This was to me a very great objection—he must be unfortunate in every way; but I made the minutest inquiries respecting him, until Mr. Groveswood, as he ought to have been, stood exactly pictured in my mind. My uncle, who, being a complete Tom Thumb himself, imagined every one a giant who towered even an inch above him, represented the newly-discovered hero, tall enough even to suit my extended views; and this, with a pair of dark, deep, earnest eyes, lofty brow, and raven locks, with perhaps here and there a silver thread, formed a picture that exactly realized my *beau idéal*. I was not vain, and I did not think of a return; I poured forth the whole treasure of my love upon the idol whom I had created, and thought of nothing farther. I half dreaded to behold the original, fearful of seeing my dreams dispelled; but then, too, I wished to see one whom I had endowed with all the virtues which should have been distributed among the rest of the human race. But time passed on, and I saw him not; the Fates seemed to have interfered to prevent a meeting. Whenever I went here, Mr. Groveswood had just gone, and I could not even obtain a glimpse of him.

"It was a warm day in July; and at my uncle's country seat, where I was on a visit, we scarcely knew what to do with ourselves. The 'we' in this case, means my aunt, and a fashionable widow, who appeared to be established here as a guest for a considerable indefinite time; as for me, with a book within reach, I never felt ennui. I disliked any visitors, but this Mrs. Medway was my particular dread: for she did not cease to laugh at me from morning till night. She christened me 'Miss Innocence,' because, to tell the truth, I was often shocked at the style of conversation which took place between fashionable ladies, half of which I could not understand, but what I did, often sent me ashamed from the room. Although verging on forty, she by no means resigned all claims to admiration; and by dressing in a youthful manner, she appeared much younger than she really was.

"On the day in question, she had retired to her apartment for a siesta—I was seated in a shady corner of the front piazza, buried in a book—and my aunt lay upon the settee, on which she had reclined at full length. There was a set of carriage-wheels, and a vehicle stopping at the gate. I looked up with a sigh, but seeing only a cross-looking gentleman, and two strange adies, who refused to come in, I resumed my book. My aunt, after talking to them for some time, turned to me, and asked me to go and call Mrs. Medway. I entered the darkened apartment, whose occupant was enjoying a comfortable nap, (her chief enjoyment, by the way, in the absence of visitors) and roused her from her slumbers, with the information that somebody wished to see her. But feeling cross at being disturbed, and not hearing any voices, he concluded that they had gone, and pulled me down beside her, to the imminent hazard of my muslin dress. But before long, a messenger appeared, with the intelligence that Mr. Groveswood was in the parlour.

"Mr. Groveswood! How we both started! I, with acute disappointment, or the face I had seen was not at all the one I had pictured; and Mrs. Medway with the laudable intention of dressing herself to the best advantage, stood in silent consternation, with my dress tumbled, and my hair disordered, while the widow proceeded with her toilet. At length, having sufficiently adorned herself, she had time to be generous, and shaking out my umpled dress, she threw an ornament over my neck, and drawing my arm through hers, we proceeded to the parlour.

"I scarcely ventured to look up, but when I did, I found myself close beside the formidable Mr. Groveswood. All my visions were dispelled at the first glance; my hero was not an inch above the middle height—not near as rare and melancholy-looking as I could wish, for he had a very hearty laugh; and besides, he was entirely too youthful in appearance to inspire the least bit of reverence. Were he not listening so attentively, I should say that, disappointed as I felt, I could not help acknowledging to myself that he was very handsome; but men are so notoriously conceited, that I withhold the compliment to some other time. I remember that he spoke to me, but I

am not sure that I made a reply at all to the purpose, I felt so foolish and bashful—embarrassed by the consciousness of my disordered dress. As I glanced at a young lady near me, a cousin of Mr. Groveswood's, who was properly be-muslined, be-laced, and be-ribboned, and who seemed to feel very comfortable in consequence, as she sat, perfectly at her ease, playing with a handsome fan, I could not help wishing that I had paid a little more attention to my dress and a little less to my novel. Nature could not have intended me for a heroine; I never could throw on my clothes at random, like the divinities you read of, and yet look perfectly proper and suitable; and my hair, instead of falling around me like a graceful veil, if loosed by exercise, was sure to assume a Madge Wildfire style unless put up with care. 'Well,' thought I, 'Mr. Groveswood thinks me an awkward, ill-dressed, plain-looking girl;' and as I appeared rather mature for sixteen years, I was half-persuaded that he considered me an old maid.

"Before I had quite recovered from my surprise and embarrassment, he was gone; but at parting he made a most gentlemanly bow, intended particularly for me, and quite distinct from the rest—one of those attentions which is carefully treasured by a girl 'not yet come out.' Mrs. Medway had scarcely been honoured with a word; and perhaps it was this circumstance which led her rather to censure, than praise the unexpected visitor. I was disappointed, yet interested too; I scarcely knew which predominated. My aunt told us that the carriage had been very nearly upset; and that, when advised to get out, Mr. Groveswood refused to stir until the ladies, a sister and cousin, had been safely deposited on *terra firma*. It only needed this, and a little bit of Mrs. Medway's ridicule to decide the matter.

"Noble, lofty conduct!" I exclaimed, in a burst of enthusiasm, 'if I had been there to stop the horses, and drag him from the carriage!'

"And been laughed at for your pains," observed the widow.

"But I heeded her not; my imagination was riding off full chase; I created Mr. Groveswood anew, and bowed to the object of my own creation. He had accepted an early invitation to dinner; and during the intervening time I actually tried on all my dresses to select the most becoming—discarded a habit of running out in the sun, and let an interesting novel lie unnoticed with a book-mark in it.

"The eventful day arrived; and my eyes were opened to the fact that Mrs. Medway was arraying herself with particular care for Mr. Groveswood. I was impressed with a hopeless conviction that unformed sixteen would have but little chance against well-matured forty; but not being quite a fool, I endeavoured to persuade the widow to don a cap with pink bows, which was, as I assured her, very becoming. This, thought I, will give her a matronly appearance, and I shall have the advantage of youth at least. But Mrs. Medway smiled pleasantly at my disinterested entreaties, and left the cap in its box. My aunt seemed provokingly determined to assist her with all the aid of her taste and skill; and when, feeling rather jealous, I reproached her for neglecting me, to adorn the widow, (for there had been a kind of laughing wager between us to see which would win the day) she replied:—

"But I really believe Mrs. Medway to be in earnest."

"How do you know," said I, with averted face, 'but that I, too, am in earnest?'

"Pooh! child," was the reply, as she clasped my bracelet, 'you would scarcely be such a fool—you are too young for that yet. Mrs. Medway is just the very person for him; she can nurse and take care of him.'

"I could not avoid asking myself if Mr. Groveswood were the person to marry for a nurse! And as to Mrs. Medway's care, I called to mind various observations which she had made respecting her married life. 'I had so much philosophy,' said she, 'that after my husband failed, I went to a dinner-party the very day that there was an auction in the house. Mr. Medway, not being very well, remained at home.' 'Is it possible?' I exclaimed, indignantly, 'and do you call this philosophy? A wife's place, at such a time, was at her husband's bedside, with her hand clasped in his, listening to his slightest breath.' 'There was nothing of the kind to listen to,' said she, laughing, 'Mr. Medway did not go to bed—he paced up and down the room.' I left the room in disgust at such unfeeling heartlessness, and Mrs. Medway considered me more crazy than ever.

"Mr. Groveswood came; but as I scarcely found courage to answer his questions, he turned to the brilliant widow, while I sat in a quiet corner, watching every word he uttered, and wishing in vain for Mrs. Medway's fluency. 'This,' thought I, 'is my reward; I have defended him constantly against that woman's ridicule; I have endowed him with the virtues of a god; while she considers him, to use her own term, but as a good speculation—I am wasting my youth in a hopeless dream.'

"Here, to conceal the tears which started to my eyes at this moving picture of my own griefs, I was obliged to bend down low over a book, and thus lost several sentences which, from the widow's pleased appearance, were, I felt convinced, something very complimentary. She was evidently in the full tide of success; and jealous and angry I sat twisting my bracelet, and wishing her a journey to the North Pole.

"The dinner passed off, the guest departed, and there was nothing left but retrospection. Strange to say, Mrs. Medway married a wealthy linen-draper; and years passed on, but I saw no more of Mr. Groveswood. He had been travelling for some time, and I looked back on my youthful dream with a smile.

"At twenty, I felt that I was no longer a child; and as I had not been troubled with a second love-attack, I deceived myself into the belief that I had become quite a sensible kind of person. I had changed my character, too; instead of the novel-reading child, I was transformed into a laughing-loving girl, whose passion for the ludicrous was perfectly incurable. Every trace of bashfulness, too, had quite disappeared; and I could now laugh at my former tremors in the presence of visitors.

"One day, upon entering the drawing-room of an acquaintance, I saw a slight, elegant-looking man, whose *tout ensemble* seemed familiar; and when he turned fully around, I beheld Mr. Groveswood. At first I was rather embarrassed at the idea of meeting him again, and felt the colour mounting to my cheeks, while I wondered what would be said and done on both sides. But I might have saved myself the trouble of any such emotion, for the gentleman, with the most perfect unconsciousness of having seen me before, honoured me with a courtly bow on being presented, and resumed his seat. I was half disposed to laugh at the total failure of my projected scheme, while, at the same time, I did not see what right I had to expect more. Mr. Groveswood was handsomer and more elegant-looking than ever; but I noticed that he was paler, and had an air of languor which suffering alone could give. I saw, too, that his hair was now streaked with the silver threads, whose absence I had regretted three years before; in short, he was now the exact *beau idéal* of my youth.

"You do not seem to remember me," said I, at length, to see what he would say; 'I believe I met you three years ago at —.'

"He seemed surprised at first. 'The name,' said he, 'struck me as being familiar; but you are very much changed since then.' He looked as though he considered this change for the better; at least, so my vanity interpreted it.

"You, too, are changed," said I.

"Yes," replied he, sadly, 'sickness and suffering leave their marks.'

"We seemed to have changed characters entirely; his pensive, half-melancholy tone almost brought the tears to my eyes, but I endeavoured to make him forget such feelings, and soon elicited a smile—for the laugh which had offended my girlish taste for melancholy and concealed griefs was now gone.

"I really do not remember how it came about—even now I can scarcely realize it—but one day I found myself saying, 'love, honour, and obey,' and now they call me 'Mrs. Groveswood.'

"I will tell you how it came about," said Mr. Groveswood—"a lonely, broken-down old bachelor, with no home which he could call his, met with a warm-hearted, enthusiastic girl, who seemed to pity his misfortunes and tolerate his faults, and asked her to take him 'for better or for worse.' She must tell you which it has proved, I do not like to bear witness against myself."

A single look was turned upon him, but that was all-sufficient. They all admired the attachment of Mr. and Mrs. Groveswood.

"Well," observed Mr. Dauridge, "the case has now been tried, and clearly proved, and 'first impressions' are as worthless as a lover's vow. Moral—always remember, young ladies, that when you would captivate any gentleman in particular, and take extraordinary pains for your first *début*, that very individual will be sure to catch you in curl-papers and a morning wrapper. The count will now adjourn."

## FRIEND.

BY PHOEBE CAREY.

We tried to win her from her grief,  
To soothe her great despair;  
We showed her how the starry flowers  
Were growing everywhere—  
The starry flowers she used to brand  
At evening in her hair.

We told her how our hearts, for her,  
Beat mournfully and low;  
How lines were deepening, day by day,  
Across her father's brow;  
And how her little brother drooped—  
He had no playmate now.

And then she spoke of weary nights  
Of dull and sleepless pain,  
And how she grieved that loving friend  
Should lead with her in vain;

And hoped that when the summer came  
She should be well again

Still softly singing to herself  
Sad words of plaintive rhyme  
And watching the sun

Faded off at eventime,  
As one who nursed a pleasant dream  
Of some delicious clime.

Thus, sweetly as the flowers that once  
She wore at eventide,  
Faded and dropped the gentle girl,  
A blossom by our side,  
And her young light of life went out  
With sunset, when she died!

## WHY SHOULD ANY MAN SWEAR?

I CAN conceive of no reason why he should, but ten reasons why he should not.

1. It is *mean*. A man of high moral standing would almost as soon steal a sheep as swear.
2. It is *vulgar*: altogether too low for a decent man.
3. It is *cowardly*: implying a fear either of not being believed or obeyed.
4. It is *ungentlemanly*. A gentleman, according to Webster, is a *gentle man*—well-bred, refined. Such an one will no more swear than go into the street to throw mud with a chimney-sweep.
5. It is *indecent*: offensive to delicacy, and extremely unfit for human ears.
6. It is *foolish*. "Want of decency is want of sense."
7. It is *abusive*—to the mind which conceives the oath, to the tongue which utters it, and to the person at whom it is aimed.
8. It is *venomous*, showing a man's heart to be a nest of vipers; and every time he swears, one of them sticks out from his head.
9. It is *contemptible*—forfeiting the respect of all the wise and good.
10. It is *wicked*: violating the Divine law, and provoking the displeasure of Him who will not hold him guiltless who takes His name in vain.—*American Paper*.

## THE PHANTOM LIGHT:

A CHRISTMAS STORY.—BY FITZ-JAMES O'BRIEN.

(Continued from Page 94.)

Time wore on, and with its flight came many changes. The autumnal tints had passed away; the leaves had fallen from the trees and were being whirled about by winds which seemed to deride them in the hour of misfortune, even as the cold world trifles with the sufferings, and disregards the tears, of the unfortunate. The trees spread out their bare arms to the blighting blast, and many a morning had seen them white with the sparkling gems of hoar-frost, which disappeared before the struggling beams of the clouded sun, but which returned again at sunset, and mocked the genial rays that in the morning dispelled their icy forms. The flowers had died—not even a pale snowdrop might be seen. The ivy and the mistletoe were green, but were often mantled in a cloak of snow which made them look as cold and deathly as the more delicate of their kindred that had let their green banners fall at the first approach of winter. The songs of the blackbird and the thrush were hushed; and the sound of the sportsman's gun, and the barking of his dogs, had become the new music of the fields and woods. The robin drew near to cottage homes and chirped his mellow notes, like some sorrow-stricken bard, driven from his country and from home by despotic power, telling of joys past, and of hopes yet to be fulfilled! Along the borders of the lake, as the early eve set in, pale and flickering lights gleamed through the narrow panes of many a cot and cabin, and tales of love and bravery were told by the clear peat fires over which half-dried logs crackled furiously, their flames casting fantastic shadows upon the walls to help the fancy of those who rejoiced to listen to wild traditions, believing the most implicitly when they were most deeply wrought with mystery and romance.

The letter which had reached Mrs. Tregar, and of which mention was made at the close of our last narrative, fully confirmed the worst anticipations of its receiver. It intimated the intention of Miss Saville to close the mortgage upon the little property—the last remnant of the princely estates once owned by the Bell family. And the time was now fast drawing near, when the mortgage must be paid, or the property be yielded up to its legal owner.

In the warm and cosy room of Mrs. Tregar's cottage, the same comfortable arrangement prevailed as before. And yet, through some unexplainable influence, all comfort appeared to have fled. Chairs which before seemed to invite the visitors to luxurious repose, now wore a cold and forbidding aspect; they looked as things belonging to the past, not to the present. And in the mind of Mrs. Tregar, who sat within this room alone, there arose painful memories of departed joys, of faded grandeur, of forgotten hospitalities, of half-blighted love. Yes—of love, half-blighted! For Mrs. Tregar had, in her time, loved as wildly and as truly as the most passionate heart which now beats with the ardour of unquenchable devotion. She had married, giving her hand, heart, and fortune, to one upon whom her every hope of bliss became thenceforth centred. And never was the marriage tie consummated under more auspicious stars. The whole district for miles around was the scene of festivity. For the bountiful hand of the "young vargin at the Castle," as the peasantry used to call her, had dispensed comforts far and wide, and many a blessing from the "Saints" was invoked for the happy pair. But Tregar had scattered with a reckless hand the wealth intrusted to him by the loving confidence of the rich heiress, and in a few years she was compelled to leave the home of her fathers, and to reside in the small cottage, her present occupation. And thus Tregar had proved that he loved not truly: for true love ever seeks to shield the object of its affection from the storms of adversity; it loveth not for the bliss it may receive, but for that which it may impart, and finds its own happiness alone in blessing the object of its attachment. Memories, therefore, painful memories, of blighted hopes never more to be revived, stole upon the agonised mind of Mrs. Tregar as, setting aside the needle-work which she had for some time vainly attempted to pursue, she buried her face in her hands and wept with heart-felt bitterness.

A knock was heard at the door. Mrs. Tregar trembled, for her heart was already weak with fears; and dreading that every fresh communication would bring some unwelcome mystery of the dread event, she could neither speak or rise to answer the call. Her excitement, however, was soon allayed by the unceremonious opening of the door, and the entry of the old nurse, Oonagh.

"Marciful Vargin!" cried she, "tell me it's not thrue—tell me it's not thrue—for I'll hear nothing else at all, at all!" and she threw herself at Mrs. Tregar's feet, her hood falling back over her shoulders, and in its fall raising up her white hairs into fearful disorder. "Tell poor ould Oonagh," she continued, "that its not yourself, and Miss Avisia, and Mither Bell, and my own somy, the beauthifull Mither Arthur, my own dear chield, that's goin' to be druv out of their own cottage, like so many sheep, nivir to come back agin at all, at all! Sure, if its thrue, tell me; but don't let me know it, for what'll become of poor Oonagh. Didn't she 'most break her heart, which was stronger then than nivir it was, when you were driven from the Castle, and shut up in this cabin to make way for the Savilles, the same that now is going to drive you away from the cottage, jist as ould Oonagh was gittin' a bit of pace agin. And shan't I brake my poor old heart inthirely!"

"Alas! Oonagh," replied Mrs. Tregar, "the news you have heard is too true. In a few days we must leave this home for ever, and then we shall be homeless and friendless in the world!"

"The Holy Vargin deny it!" said Oonagh. "Sure, it's not the great good God that will see our blessed mistress a beggar; she that used to send male and praties to half the poor of Ould Ireland, and that risked the catechin' of the devil to take wine and physie into the cabins of Biddy Flanagan and Patrick Donovan, and fifty more, when the plague was so bad, that Father Bryant was already in the hands of the angels, and not a docther could be got all the country round for love or for money!"

"We must be assigned to our fate, Oonagh, and rely upon His mercy. But how did you get the sad intelligence?"

"Sure, ma'am, it's that baste in breeches, Collins, the rint and tithes collector, that was a-coming up the glen a rubbin' his hands, and scemed mighty grate glee, and he said he had jist been to the castle, and that he liked Mrs. Tregar mighty well, and it wasn't the likes o' him that would feel pleased to do her any harm. But as the mistress of the grate house, and the owner of the lands all about, had sint for him, and showed him a letter from Cork, from the mighty grate lawyer, he should be obleeged to obey their commands; though it went sore against his heart to aim anything by acting unpliantly to such a nice set of people! And didn't Donal Harrett, and Bonaparte, and half-a-dozen of the boys set about him there, and threaten that they'd see every bone of his body made into a knife-handle to murder his own childer with, if he dared to put a hand snit any one o' them that lives unther this roof. And didn't he stand there with his head hard agin a tree, a-tremblin' and hawlin' until one of the boys pitched a snow-ball into his mouth, which mighty soon stopped his noise, and cooled his determination!"

"I hope they did no further violence," said Mrs. Tregar.

"Och! not at all, my lady, except that one of the boys knocked his hat over his eyes, and anither filled his pockets full of snaw, and thin took him into the smithy and held him agin the fire till it milted—no, no! my lady, they did nothin' to the spalpeen, nothin' at all, at all!"

At this moment Arthur and Avisia entered. Their aspect was extremely sad; they had been out wandering over the deep snow, making a vain effort to drown their griefs. But a momentary glance was sufficient to show that they had been weeping.

"My own darlin' chield!" exclaimed Oonagh, rushing to Arthur, and clasping him in her arms. "Sure the blessed God will never see you separated from the lovely Miss Avisia—the dear darlin' crittur—the Holy Vargin protect her!"

"Separated we never shall be!" said Arthur; "but our fate is sorrowful, and our hearts will long be sad."

"Musha! bethier luck!" cried Oonagh; "didn't all the boys declare that they'd all work for ye? Didn't Donal Barrett say he'd catch all the fish in the say—Och, but he's a pink of a lad, is Donal!—an' sell 'em to buy the house for his young mauther? and didn't Bonaparte say as how you'd saved his life, when Uncle Tot put his head into a great iron pot, and sent him down to the very bottom of the lake to thry some botherin' invention? and didn't he say he'd work for ye, too? and a mighty strong lad is Bony. And wash't it your old nurse Oonagh, that tended ye until ye reached your teens? and won't she knit and trudge for ye, and sell nick-nacks to the gentry all round to keep ye from sufferin'. Och, bad luck to the Savilles! the likes o' 'em will niver do good, for it's not in their Protestant blood!"

Such a torrent of kind feeling coming from the rude old nurse affected the hearts of all the sufferers, and they seemed wholly sad.

"But where is Uncle Tot?" cried Avisia, arousing herself. "The night draws on apace, and the snow begins to fall fast; the evening is already dim."

"Maybe," said Mrs. Tregar, "he is in his laboratory; for since our distresses he has become doubly enthusiastic about his inventions, and has done nothing but talk of selling patents to monied speculators, and thereby realising an ample fortune. Poor Tot! the consolation he offers me, like his wonderful bellows, extinguishes the little flame of hope that remains."

At this moment the shouting of boys was heard in the front of the cottage, which stood but a little way from the margin of the lake; and, looking out of the window, Arthur espied Uncle Tot floundering about upon the ice. He had gone down to try what he called a pair of "patent perpendicular skates," which were warranted to keep the wearer in a fair vertical position; but having slipped repeatedly, he became so desperate at the failure that he determined to succeed, in spite of the awful thumps that he met with every few seconds. Arthur ran down, and luckily caught him in his arms just in time to avert what threatened to be a fearful fall; and, having liberated the old man from his "patent perpendicular skates," they soon rejoined the party in the cottage.

(Continued)

## HINTS ON THE PRESERVATION OF SIGHT.

*Take care of your Eyes.*—Most people may preserve good sight through their whole lives by taking care of it; and yet most people forfeit it by neglecting it. Among the rules for keeping the eyes sound and healthy the following are some of the most important:—

Avoid glaring lights; avoid abrupt, violent transitions from light to darkness, and from heat to cold, and *vice versa*; keep the eyes clean; wash them with lukewarm water. According to the old English proverb, "fasting spittle is good for sore eyes." Most animals heal their wounds by licking them with their tongues, for the saliva has great healing virtues; therefore, if you suffer from irritation of the eyes, moisten your finger with your saliva and apply it gently to the eyes. But do not rub or press your eyes at all roughly unless you wish to injure them. Never allow dust or hairs to remain in your eyes; but if they get in, fill the eyes with lukewarm water, so as to set the encumbrance afloat, and gently draw your fingers across the eyes in the direction of the nose, until the offending substances slip out at the corners. Don't put poultices over your eyes, lest in attempting thus to draw out the inflammatory diseases, you draw out eyes and all. In order to preserve your eyesight preserve your general health by air, exercise, and temperance, and medicine when you require it. Accustom your eyes to moderate and varied exercise, but never strain them by too long persevering over a work which they are weary of. Weak eyes are more benefited by a green shade, or blue or green spectacles, or railway goggles (made of wire gauze) than by thick bandages. Avoid reading small print after dinner, especially if your dinner has been rather of the epicurean order. And do not read much by candle-light, nor sew black clothes, &c. As candles are apt to flare and produce an undulating glare, use a ground glass or oiled paper lamp instead. Avoid exposing your eyes to an artificial draught of air. Don't roast your eyes by sitting too much before a bright fire. If your usual position exposes one eye more than another to a glare of light, protect the exposed eye by a green shade. Use double eye-glasses when you require them, rather than single eye-glasses, or even spectacles, and take care that their focus precisely suits your own. Choose apartments that are well and evenly lighted. Accustom your eyes to the natural influence of the atmosphere and solar light; those who live in dark and close rooms will produce a morbid weakness of the optic nerves. Beware of strong reflected lights, especially those from white walls, chalk rocks, &c., for white hardly absorbs any ray, whereas the other colours absorb many. Accustom your eyes to view varied objects at near and remote distances, as by this means you will preserve their free play and flexibility; whereas if you direct your sight too exclusively to near objects you will become near-sighted, and *vice versa*. Let the coloured papers of your rooms be rather mild and soft than brilliant or garish. View objects in oblique lights so as to avoid their direct reflections, which often dazzle the eyes. The best colour for spectacles is pale blue. Do not let a glaring light fall on the paper while you read or write. Keep the eyes cool by temperance, and the feet warm by exercise. When the eyes are simply weak, a tonic wash, such as alum-water, or green tea and brandy-water, is beneficial. When irritable, use weak goulard water, and produce defluxion from the nose by taking snuffs.

## SHADOW AND SUNSHINE!

OR, WHO SHALL WIN?

BY CHARLES CRAYON.—(Continued from page 89.)

### CHAPTER XVI.

"You have beguiled me with a counterfeit  
which being touched and tried,  
Proves valueless; you are foresworn—foresworn.—SHAKESPEARE.

NOT many days had elapsed after the scene related in our last chapter, before Mr. Gordon received a visit from his son-in-law. By this time the old man's nerves had become fairly calmed, and though Duval knew it not, he had an adversary to cope with, who was wary and cautious, and could dissimulate as easily as himself. He was received with all the affability which characterised the man who had dwelt so long in the world, and seen so much of mankind.

"Will you walk into the library, to spend an hour?" inquired Mr. Gordon, after tea, on the evening of the arrival.

"Thank you." And the villain and the merchant were soon there.

"Take a seat, Mr. Wallace," said the other, pointing to a chair.

He did so.

"You have had a pleasant day for travelling."

"Very."

"You have been quite a stranger with us lately."

"Somewhat. The truth is, my business has been so urgent for the last few weeks, that I have little time for recreation."

"That is the point. Business before pleasure."

"My affairs suffered from neglect while I was on the Continent, and I have been engaged in arranging them, since."

"Speaking of the Continent, how did you enjoy your tour there?"

"Oh, capitally."

"And Ellen?"

"She was in ecstasies at the many novelties we beheld."

"Then she was pleased with it."

"Yes, finely. And wherever we went she attracted much attention."

"Indeed!"

"I assure you so. Her beauty and intelligence won the hearts of all."

"Do not play upon a father's feelings."

"By no means; her society was courted by all classes."

"By this time you have found ample opportunity to become more acquainted with her character."

"Certainly."

"And are your anticipations realised?"

"They are more than realised; far outdone."

"You have studied her character attentively?"

"Very."

"And you have no fears now, that you were deceived?"

"None."

"I am glad of that—very glad of that; it would have been a sad misfortune if you had been cheated," said Mr. Gordon, in a significant tone.

Duval started involuntarily. He cast a searching glance on the man beside him; but his face was calm and untroubled as polished marble.

"Come, William," he added, a moment after, "will you have a convivial glass with me? You have been absent so long, that I feel like making merry on your arrival."

"Thank you," replied the person addressed; while a strange light suddenly flashed from his eye. "I should be pleased to do so."

His companion marked well the expression of his countenance as he ordered the wine. It was brought; Gordon poured out two glasses of the sparkling liquid; but just as they were ready to drink, a shout in front of the mansion attracted his attention, for he put down the glass, and suddenly went to the window. A glance of satisfaction stole over the countenance of the young man. He dexterously drew a neat package from his vest pocket, tore open the paper, and shook it over the glass which the old man had just set down. A light, colourless powder descended into the wine. All this was performed in much less time than it has been read, and while Mr. Gordon was apparently gazing at some object out of the window. But a careful observer might have seen that he cast a piercing glance under his brows, at the proceedings of his visitor. [See Engraving, p. 88.] Duval arose and walked to the window, where his father-in-law was standing.

"What do you observe, that interests you so much?" he asked, carelessly.

"I was looking at that cloud," he replied as calmly. "There is a party of young people out on the lake, and I fear we are about to have a squall. But come, let us resume our wine; I think there is not much danger."

So Mr. Gordon returned to the table, and took up one of the glasses. It was the one which his companion had appropriated to himself.

A deadly paleness came over Duval's countenance, but he spoke not.

"Come, William, propose a toast."

But the other stood gazing at him with cheeks pale as the grave.

"Come, come, William, why don't you take your wine? Why, you stand there, for all the world as if you were frightened out of your wits."

The other with a strong effort seemed to calm himself, and he gasped—

"You have changed the glasses."

"What?"

"You—you—have changed the glasses."

"Well, what of that? Is there anything so very remarkable in that occurrence?"

"Why, the fact is—I am—rather particular in regard to my wine." "Very likely, very likely; but there is not the slightest difference, I assure you. Fine old Madeira—has been in my cellar these dozen years. It makes my mouth water to look at it; so make haste—propose a toast."

"I must own I do not feel that I like drinking."

"Pshaw! it will do you good."

"I am sick—suddenly taken—very sick," gasped the young man, falling into a chair.

A sudden expression of satisfaction seemed to come over the face of Gordon. He set down his glass energetically, and, going to the door, looked it, and placed the key in his pocket. Next he closed and fastened the window—there was but one in the room—and then opening a drawer, he drew from it a polished revolver. He took a seat on the side opposite his surprised visitor, and coolly deposited the pistol on the table, before him.

Duval was thunderstruck. His wonted self-possession and effrontery had fled, so completely had he been taken by astonishment. He looked at his father-in-law. There were marks of determination on his countenance, that with all his penetration he had never noticed before. He almost believed that his hour had come, and that his dark deeds were about to be rewarded.

"Now, William," said his companion, in a calm, deep tone, "I have a story to relate to you."

"Sir!"

"I have a story to relate to you, and you will find it expedient to listen to it quietly. Are you paying attention?"

"I am."

"Very well, then; hear me. I am an old man; I have lived long in the world. I have toiled unrelentingly, and wealth has come in to reward my labours. I had come to this quiet spot to spend the remnant of my days. Do you hear?"

"I do."

"Then I will go on. I had a daughter. She was the only child God had given to me; she was a fair girl—the light and solace of my age. Think you I loved her? Aye; I loved her as you love—yourself; as you love your own life; and sooner than that she should have been deceived, and her trusting nature imposed upon, I would rather have seen her in her grave. Many sought her hand, but she gave no encouragement to them; but finally—do you mark me?"

"I hear."

"But finally a villain came——"

"A what?"

"Why, man, how you start! As I said—a villain came; his countenance was fair and his words were smooth, but his heart was dark—black as the ruins left by fire. He won her heart. In its trusting faith, she believed him the model of all that was upright—all that was honourable. So skillfully did he carry on the dissimulation, that all her friends—even I was deceived. The veil did not fall from my eyes, and he married her. How think you I felt, when I learned that she had wedded an impostor—a villain? Do you give your attention?"

Duval nodded.

"Then, as I was saying, I learned she had been imposed upon. I learned that the one who had sworn and cherished her until death, was not what he professed to be. He came to me under an assumed name; but I soon learned his real one—would you hear it?"

"I would."

"It was Lorenzo Duval!"

The listener started.

"This narrative seems to interest you deeply; I will go on. He had brought me letters from some of my old and trusty friends in the city, but they were forged!"

The old man watched his visitor narrowly, as by another involuntary movement he betrayed his surprise. He went on—

"More than this—I know much of his past life. He is a desperate unscrupulous character, and twice have his hands been stained with blood."

Duval started again. His face was pale, as if he had heard the summons to go on his last journey, and his whole frame shook with emotion.

"I will tell you more," continued his unyielding companion. "He knew that I was a proud, stern man; that when I heard how basely my honour had been trampled on, he never would be forgiven; and he feared that I should not leave him my property—gold was the object he sought."

The listener gazed intently at the narrator.

"And so he contrived a dark plot—a plot which might have caused a fend to blush; but it was worthy of him. He determined to take means which would insure his success—in short, he determined to murder me!"

Duval leaped from his chair, and cast a fearful look at the man before him; in a moment he would have sprang upon him; but his adversary was too wary; instantly the pistol was in his hand;—"Nay, be seated; I have not done."

The young man dropped sullenly into his chair once more.

"And now," continued Mr. Gordon, in a tone deeper and sterner than ever, "I have little more to say. You dark-hearted villain that you are, you know who has done all this. My hospitality has been disregarded, my honour has been trampled on, my trust has been betrayed, and my peace has been destroyed. Heaven knows that I am sorely tempted to visit upon you now the vengeance you so richly deserve; but on one condition I will spare your life. Swear to me that you will relinquish all claim to my daughter—that you will never cross my path again, and that you will offer no opposition to the course that will set her from you. Do this, and I will leave you to follow your own course—refuse, and you never leave my house alive!"

"Mr. Gordon," replied Duval, "I never yet yielded to man, and I am not

to be frightened into such a course now. Pause, or I will show you that I am indeed the desperate character you profess to believe."

"I am not a man to waste words with one like you. Swear that you will do as I have said, or, Lorenzo Duval, the next moment shall be your last."

was the pause of an instant. Duval could hear the ticking of a saw the cold steel barrel of a pistol close to his temple. For a moment he hesitated, and then he faintly ejaculated—"I swear it."

Gordon was satisfied; and the shadow of his son-in-law darkened his threshold for the last time.

## CHAPTER XVII.

"The closing of a day in June,  
Mild, beautiful and bright;  
The setting sun, the crescent moon,  
Mingling their doubtful light.  
The west wind brings the odours sweet,  
Of flowers and new-mown hay;  
While murmuring billows at our feet,  
Breathe of the salt sea spray—SARACANT."

"LILLIAN," said Whitman to his wife, one evening as he returned from his office, "I have a letter for you."

"Indeed; then you bring me good tidings, I suppose."

"That you know is uncertain. However, here is the epistle, and you can judge for yourself."

So he handed her a letter which he had received by post that day, and while she broke open the seal and perused it, he threw aside his overcoat, and taking his dressing-gown and slippers, seated himself in his arm-chair.

"This is rather comfortable," he said to himself, as he glanced around over the snug, tidy little parlour, which the light from the grate rendered so cheerful and pleasant, and then as he cast a glance at the companion by his side, he thought of somebody—we will not venture to say who—whose presence, perhaps, had very much to do with rendering his situation agreeable. But his pleasing cogitations were interrupted by Lillian, who had finished the perusal of the letter.

"Who do you suppose it is from?" she inquired.

"From my old school-mate, Ellen."

"Ellen Gordon?"

"Yes; and it contains sad tidings. Her father is dead."

"Dead?"

"He is; and she is an only child."

"How unfortunate! Was it not her who was married to some one in town, several months since?"

"Yes. Do you remember the circumstances?"

"I have some recollection of them."

"You know how she was deceived?"

"Oh, I remember now. My mind has been so much absorbed in business of late, that I have thought of little else. The villain who married her turned out to be Duval, did he not?"

"He did. The same one who was the persecutor of poor Morton."

"It all comes into my mind, now. A baser man never trod the earth. But it was singular how he was able to deceive Mr. Gordon. He was always a shrewd, penetrating man."

"Very true. But the representations of Duval were so fair, and his plans so artful, that he finally succeeded."

"And after it was discovered, they were divorced, were they not?"

"Yes."

"I wonder what has become of Duval, now. I have not heard from him since that time. Has Ellen lived with her father since the unfortunate event?"

"She has. Her mother, you know, died several months since."

"Yes; I recollect it. And now her father is gone."

"Yes."

"Poor girl! I wonder if she has any relations?"

"I think not; that is, none who are near to her."

"She must be sadly off, with so many mournful events following in such rapid succession. Indeed she must; I wish I could see her now."

"That connection with Duval must have been a most unhappy affair."

"It was. She loved him—almost idolised him."

"Then he had fully succeeded in deceiving her?"

"Entirely. She believed him all that was noble and manly."

"He was always ready to dissimulate, and he did it so readily that no one could detect him. But was not the effect almost dangerous, when she first discovered his real character?"

"It was; it had nearly overturned her reason. It was after he had been detected in the attempt to poison her father."

"Horrible! I should certainly have feared the result."

"At first, the effect it had on her was great; but her strength of mind finally triumphed. She has resided with her father since, and devoted herself to the task of ministering to his wants. He ever doted on her, and she has been a rich treasure to him."

"But I wonder how it was that Duval was suffered to flee. Such villainy should not be allowed to go unpunished."

"Certainly not."

"I shall ever believe that the blood of Morton is on Duval. He may escape punishment now, but he will one day find his reward, as true as there is a just Being above."

"I believe it."

And the young attorney fell into a train of deep thought. The scenes that in the busy and exciting places where he frequented, had almost been forgotten, or at least suffered to remain in quiet, among those that were past, once more came vividly before him. He remembered the prisoner who

"A traveller on horseback approached. It was evident that he had been riding far, for his clothes were dusty and soiled, and the stout, spirited animal that carried him, seemed weary and exhausted. The traveller threw the reins over the neck of his noble steed, and suffered him to walk leisurely along while he viewed the scenery around."

had fallen a victim to the dark plots of his enemies; he remembered the exertions he had made for him, though they had proved fruitless; the joy and surprise he had felt, when he had learned of his escape; the sad reaction which had taken place, when he learned of his unfortunate fate, and the dark and poignant sorrow that had filled his heart, as he was committed to his long, last resting-place. An involuntary sigh escaped him as these recollections came over his mind; but his thoughts were interrupted by the conversation of his companion.

"Alfred."

"Well."

"I have a project in my mind."

"Repeat it, and then I shall have it in my mind."

"Very likely; but I am afraid it will not strike you as favourable as it does me."

"I do not see that it is likely to strike me at all, at present."

"Then I will tell you. You know Ellen's parents are both dead?"

"Yes."

"And that she has no friends—that is, no connections living?"

"Yes."

"And now, probably, many profess to be her friends; for you know property always brings plenty of them; but I do not fancy they are any of them among whom she would desire to take up her residence."

"Probably not."

"I have been thinking that it would be pleasant if she could come and reside with us."

"So that is the project! You are as long coming to the point as some witnesses I have to cross-examine."

"Now you have heard the project, you do not give your opinion of it."

"Oh, I think that is entirely unnecessary."

"How so?"

"If I approve of it, my opinion will not add to the force of yours."

"But you may not approve of it."

"Perhaps not; and then mine would only be an argument to show the fallibility of yours."

"Pray do give us yours, then."

"Well, I must say, that I am decidedly in favour of it."

"I am truly glad, for I shall delight to have Ellen for my companion."

"And Ellen Gordon did go to the home of her early friend, and by her kindness of heart, she won the affections of those who knew her; and from that hour it became her home."

It was near the close of a summer's day. The air, which had been warm and sultry, began to grow cool and refreshing at the approach of evening. It was not in the busy city; no, it was far from it, among the green fields and rustic

simplicity of the country. Just as the sun was sinking to rest in the western horizon, a traveller on horseback approached. It was evident that he had been riding far, for his clothes were dusty and soiled, and the stout, spirited animal that carried him, seemed weary and exhausted. The traveller threw the reins over the neck of his noble steed, and suffered him to walk leisurely along, while he viewed the scenery around. He was a young, well-formed man, with hair black and glossy, and an eye bright and fearfully piercing; such an eye seldom meets the gaze, and after a moment's observation, we shall recognise in the traveller one whom we have often seen before—Edward Fenning.

The tract of land he was now passing was one of the most quiet, yet beautiful and picturesque, he had ever seen. Tall, spreading oaks overhung the road on either side; at his right, a little streamlet dashed carelessly along among the rocks and banks, while far on the left were broad, level fields, covered with waving grass. For a long time the traveller gazed, entranced by the beauty of the rural scene; but suddenly he drew up the reins with—

"Come, Hero, it will not do to loiter; we have yet a full dozen miles to make good, ere our journey's end is reached."

At the sound of his master's voice, the steed pricked up his ears, and, seeming to forget all fatigue, quickened his speed to a brisk trot. A sudden turn in the road soon brought them in sight of a neat, picturesque farmhouse, almost hid among the trees that overhung it. Riding up to it, the traveller dismounted, and rapped lightly on the door. The summons was answered by a lady, of about twenty-two years of age, whose countenance, though beautiful, was the very personification of quiet and content.

Her appearance seemed to affect the traveller strangely, for he started involuntarily, as his eye fell upon her countenance. From the look of surprise she cast upon him, it was evident that the surprise was mutual. But he was not a man given to the exhibition of emotion, so he merely nodded to the lady, and made the request that she would bring him a glass of water.

She disappeared, and as he marked her retreating form, he involuntarily exclaimed, "What a resemblance; but no, no—it cannot be. That were impossible!"

His fair waiter returned, and as her eye met his, as he was receiving the glass, the hand which presented it trembled sadly. He took it, casting a piercing glance upon her. The next moment the glass fell from his hand, and he earnestly exclaimed—

"Ellen!"

"Edward!"

And the next moment she was locked in his embrace. The one so near to his heart, who, he had believed, slept in the cold embrace of death, was indeed found. All further thoughts of his journey were discontinued. She related all her sad tale—how she had been basely deceived by him who had

won her love, and when she learned his character, how she had fled from him, as she would from a viper; how she had feared to return to her home, knowing that the finger of scorn would be pointed at her, and after wandering far, had finally reached this quiet spot. To the rustic, yet kind-hearted family, she had related her sad story, and they had treated her with much kindness.

Fenning heard her through, and then he clasped her to his heart once more. The lost was found. He cared not for the rigid punctilious rules of the cold world; but true to his first love, he was united to the bride of his heart, and peace and happiness came once more to comfort and to bless.

### CHAPTER XVIII.

"Blood hath been shed, by men in the olden time,  
Ere human statue purged the gentle weal.  
Aye, and since, too, murders have been performed,  
Too terrible for the ear; the times have been  
That, when the brains were out, the man would die,  
And there an end; but now they rise again,  
With twenty mortal murders on their crowns,  
And push us from our stools.—SHAKESPEARE.

Eight years had passed—with their joys and their sorrows, their happiness and their woes, their peace and their suffering—all—all were gone. Numbered with the scenes buried in the oblivion of the past, the dark curtain that divides us from eternity had fallen over them for ever. Eight years! Short time, it is true, and quickly passed over; but it had brought many into the world—carried many out, and hurried those who still remained, onward—swiftly onward, to the grave.

It was a calm, lovely evening; not a cloud obscured the firmament above, no breeze moved the leaves; but after the sultry and oppressive heat of the day, the cool, and refreshing night air came, sweet and soothing to the aching brow. The clocks had struck the hour of midnight, and mankind were hushed in the sweet embrace of sleep. Over a quiet, beautiful road, a few miles from the city of Philadelphia, a traveller was passing. His face was turned toward the sleeping city; and the steed which carried him—a noble, powerful animal, was walking leisurely along. His master was evidently engaged in deep thought, for he heeded neither the beauty of the scene around him, nor the waning hours of the night. He was a powerfully-built man; his limbs were well-formed and muscular, and expression of his countenance, at least the part of it that was visible, showed marks of firm determination, and unyielding energy.

He was habited in sable garments; his coat was buttoned firmly to his chin; a glossy fur hat covered his head, and the steed that carried him was black as the raven's wing. Such a preponderance of black gave the rider and his horse a singular and most striking appearance.

Slowly they proceeded on—he, still deeply buried in thought, apparently hardly noticing his progress. They had passed a beautiful village—it was now left far behind, and a small but dark piece of woodland was before them. They entered it; the traveller looked neither to the right-hand nor the left, when suddenly, as he had just reached the grove, two men sprang from the wood beside him. Before he had hardly noticed them, one seized his horse by the bridle, and the other presented a pistol to his face. The traveller moved not, but he gazed at the highwayman who held the pistol, as if he would read his very soul. The intense glance he cast upon him, was more like an attempt to recognise a countenance almost forgotten, than to read the motives that prompted the daring deed.

Suddenly the traveller started. Some powerful emotion had seized him, as if it would claim the mastery of his spirit. Was it fear? No; there was nought of fear in the flashing of his eye, or the unmoved manner in which he kept his seat. But his reflections, be they what they might, were no longer suffered to be indulged in.

"Deliver or die!" exclaimed the assailant, in the deep, stern tone that told it was no simple farce he was acting. As the sound of that voice fell upon his ear, the rider started again. It was evident that its tones brought to mind vivid recollections that had long been suffered to sleep undisturbed in the memory of the past. Hardly had the robber uttered these words, that fell so fearfully on the ear, when the hand of the stranger deliberately moved to his breast-pocket. The assailant's eye was fixed; he was apparently watching every movement, and the glance was calmly returned. With the speed of lightning the traveller's hand arose; some heavy, short object was grasped by it—then as swiftly it descended, and ere the midnight assassin had guessed the purpose of his chosen victim, he had received a blow upon his temple that must surely, it would seem, strike the last spark of life from his body. With a deep groan, he fell heavily to the earth. His companion saw his fate, and with a look of undisguised fear upon his countenance, loosed the steed whose bridle he grasped, and sprang away into the wood beside him.

The rider cast a glance at the prostrate form on the earth, then drew up his reins, and spoke in a familiar tone to the noble animal he rode. Evidently the language was understood, for he dashed off at a swift gallop. A few moments' ride left the grove behind, and after several country seats had been passed, they drew near a hotel. They dashed swiftly up before it—the rider sprang from his horse, and ascending the steps, rang the bell violently. At that hour, all the inmates were evidently buried in sleep, for no one seemed ready to answer the summons. The traveller waited impatiently for a moment, then he rang again so powerfully, that the tones of the bell echoed through the mansion. He soon heard steps in the entry; in a moment the door was opened, and the landlord stood before him.

"Sir," exclaimed the stranger, "a man has been wounded, and I fear dangerously so. His body lies by the road-side, just at the edge of the grove a mile or two back. Send out two of your men to procure it: prepare a room for him, for I think he has not long to live."

"How I wounded, did you say?" inquired the host, rubbing his eyes.

"Yes; dangerously wounded."

"But how was it done?"

"Do not stop for inquiries; all shall be satisfactorily explained. Send two of your men for the body."

"I will, immediately," replied the landlord, now fairly aroused.

"And how far is it to the nearest physician's residence?"

"Two miles. Keep straight on until you come to a house painted white, with heavy pillars, situated back from the street, and entirely overhung with trees. Dr. Francis resides there."

"I will bring him without delay; see that your men are expeditious, or it may be too late."

The landlord hurried away to arouse his men; and the stranger sprang upon his steed, and was soon on the way to the physician's house. Arrived there, he soon aroused him, and briefly stated to him the same facts that he had told to the landlord.

The physician, like the majority of his profession, was ever ready to attend to the calls of duty; and after a few moments' preparation, was ready to accompany one who had summoned him. A short ride sufficed to bring him to the hotel. By this time all the household were stirring. It was evident that the stranger's commands of haste had been obeyed, for the wounded man had just been brought in. The physician and the traveller entered the room where he was laid, with his bedside surrounded by the people of the house. With an imperative motion, the stranger pointed to the door, and the signal was obeyed. All left the room, casting wondering and curious glances behind.

"Now, sir," said the man who was ordering all the movements so coolly, "tell me what you think of the case."

The physician bent over the inanimate form; he felt the pulse; looked at the frightful wound upon the temple, and shook his head.

"It is probable, almost certain, that he cannot recover."

"Can consciousness be restored?"

"Yes; I think so."

"Then do it at once. If he regains it, tell him that his time is short, and mark well his words."

"I will do so."

"I must not be here when reason resumes its mastery. If you think he is going soon, send for me."

"I will."

The stranger left the room, and the physician directed his attention to the wounded man. By some powerful restoratives, consciousness seemed about to dawn. He moved feverishly, slowly opened his eyes, pressed his hand over his brow, and then starting, and gazing earnestly around, suddenly inquired:—

"Where am I?"

"You are among strangers—wounded."

"How? Oh! now I remember it all. Have you examined the wound?"

"I have."

"And is it dangerous?"

"Man, you have not an hour to live!"

"What?" exclaimed the other, almost springing from his couch. In a moment he calmed himself, and earnestly inquired:—

"Is there a justice near this place?"

"There is: not half a dozen doors below."

"Then send for him; and for the love of Heaven be quick."

The physician left the room to comply with the request of the dying man. The justice soon came, but it was evident that the tide of life was flowing fast.

"I have a revelation to make, ere I can die," said he; "and while I do so, commit it to paper. Do it rapidly, for I feel that my time is short. The revelation may do little good now; but it will at least wipe a stain from the memory of one who is gone, and that is all the reparation I can make, for the dark, foul wrong I committed against him."

Writing implements were instantly brought, and the justice seated himself by the bed-side, to transcribe the confession of the dying man. In a clear tone, as if he had been in the vigour of manhood, he began:—

"Eight—no, nine years ago, in the city at hand, there was a young physician. He was noble, talented, and generous, and was fast rising in the confidence of all. Suddenly he was arrested for murder. All were astounded, but the evidence seemed so strong against him, that he was believed to be guilty. At length, just before the time of his trial, he mysteriously escaped. All traces of the manner in which it was effected, were invisible; but while the news was still fresh, tidings came that he had been found, with his body fearfully mangled and mutilated by an accident on the railroad. His remains were returned home—he was buried, and all believed him a murderer. But he was not;—I was the guilty man—I did the deed."

The speaker's voice grew faint, and moting the justice to haste, he fell back upon his pillow. The confession was soon written; it was read to the wounded man—he signified his assent—the pen was handed him, and with wonderful calmness, he signed, in a full, free hand, the name—Lorenzo Duval, to the document. The justice spoke:—

"You do solemnly swear, before that God, who is so soon to be your Judge, that the confession you have just made, is the truth, the whole truth, and nothing but the truth."

"I do," and weak and exhausted, he again fell back upon his couch.

At this moment the stranger entered the room. He proceeded to the bed-side, directly in view of the wretched being. When the dying man saw him, he sprang up, cast a long, piercing look upon his features, and an expression of the deepest horror came over him. He fell back, uttered a deep groan, and then, the spirit of Lorenzo Duval, laden as it was with vice and crime, had fled for ever from its tenement of clay!

(Continued in No. 8.)

## GREAT PRIZE ENIGMA COMPETITION.

The Editor of "The Family Friend," in announcing his intention of offering One Hundred and Seventy-five Guineas in Prizes for the best Solutions of Enigmas to be published in No. 61 of "The Friend," January 1, 1852, begs to intimate that at the urgent request of numerous Friends, he has been induced to divide the above amount into the following Prizes:—

Five Prizes of £10 10s... } For the best Correct Solutions of an Enigma  
Ten Prizes of £5 5s... } submitted to Gentlemen.  
Two Prizes of £10 10s... } For the best Correct Solutions of an Enigma  
Six Prizes of £5 5s... } submitted to Ladies.  
One Prize of £5 5s... } For the best Correct Solutions of an Enigma  
Ten Prizes of £2 2s... } submitted to youths of both sexes.

The Number containing the Three Prize Enigmas, and the Conditions of the Award, will be ready on the 1st of January, 1852, and may be had of all Booksellers everywhere, price 2d.

Intending Competitors are informed that various Prize Enigmas, Solutions, and Awards, have appeared in the following Numbers of the "Family Friend," which may be obtained to order, price 2d. each:—Nos. 9, 10, 13, 15, 18, 21, 22, 23, 24, 25, 26, 27, 37, and 56. Competitors may derive many useful suggestions by consulting the Enigmas, &c., contained in these Numbers. Volume II., price 2s. 6d., contains the larger proportion of them.

TRADE NOTICE.—A Number of the HOME COMPANION is issued at 69, Fleet Street, every MONDAY at Nine o'clock.

PART I. of the HOME COMPANION, price 6d. is now ready.

## THE HOME COMPANION: A WEEKLY MAGAZINE.

### PRACTICAL ILLUSTRATIONS OF POPULAR FALLACIES.

#### No. I.—THE WISDOM OF OUR ANCESTORS.

SIR THOMAS BROWNE, in his *Pseudodoxia Epidemica*, or, *Enquiries into very many received Tenets and commonly presumed Truths*, speaks thus of our immoderate respect for "venerable antiquity":—"But the mortallest enemy unto knowledge, and that which hath done the greatest execution upon truth, hath been a peremptory adhesion unto authority, and more especially the establishing of our belief upon the dictates of antiquity. For (as every capacity may observe) most men of ages present, so superstitiously do look on ages past, that the authorities of the one do exceed the reasons of the other. Those persons indeed being farre removed from our times, their works, which seldome with us passe uncontrold, either by contemporaries or immediate successors, are now become out of the distance of envious; and the farther removed from present times, are conceived to approach the nearer unto truth itself. Now, hereby, methinks we manifestly delude ourselves, and widely walk out of the track of truth."

One of the most mischievous forms which this reverence for authority assumes is, when what we are pleased to call "the wisdom of our ancestors," "the wisdom of ages," "venerable antiquity," is thrown in our teeth to prevent any discovery in science or in art, in philosophy or in legislation, from being adopted by us in modern times. This phrase, "the wisdom of our ancestors," and the prejudices it fosters, has sent some men to the stake, and others to the dungeon: it brought on Galileo the vengeance of the Inquisition; it called Harvey a dreamer, and Jenner an innovator; it mocked at Adam Smith, and sneered at Bentham; but the very phrase itself contains a fallacy as false as it is mischievous. To speak of the early days of the world as its old days, is the same as if in speaking of an individual man we were to dilate on the venerable antiquity of his babyhood, and yield with deference to his wisdom while yet in long-clothes and the full enjoyment of the pap-spoon. What is called "venerable antiquity" was, in truth, the young days of the world; the days of its inexperience and ignorance, full of error and credulity. We, in this present age, are far older than they; more experienced, less credulous. We possess not only such knowledge and experience as our ancestors possessed, but also the accumulated knowledge and experience of all thinkers from the very earliest ages of the world. Whatever advance in human thought or in human knowledge any individual man of past times has made, has come down to us. What over errors the ignorance or credulity of past times has fostered, are gradually disappearing before an older experience. The facts of the past times are valuable, the more valuable often, as teaching us what to avoid. The opinions of the past ages are frequently worthless, from the insufficiency of the facts upon which those opinions were founded. To apply those opinions, to events of the present time, would be like pronouncing judgment without evidence for the circumstances under which the opinion was formed, the habits of life; the wants and requirements of the age, are totally different and distinct from what they are when the opinion is to be acted on; and to prefer "the wisdom of our ancestors" to the knowledge of the present day, is

willfully to close our eyes against evidence, to shut out that which is complete and efficient, and to adopt that which is vague, imperfect, and null.

If the "wisdom of our ancestors" is implicitly to be relied on, to what age of the world would they refer us for perfect wisdom? Would it be enough, or too far, to go back to the times of the Ancient Britons? Would they wish us to dwell in wattled huts, and walk about with painted bodies and skin coats? Would they have us change our steam-boats for coracles, and our locomotives for war-chariots? Would they convert our Bishops into Druids,—and send out the Archbishop of Canterbury, with a golden knife, to cut the sacred mistletoe; and the Bishop of Exeter to preside over the human sacrifice? Yet such was the "wisdom of our ancestors" in those days.—But, perhaps, as the "laudatores temporis acti," the great upholders of the "wisdom of our ancestors," are deeply enamoured of feudalism and its accompaniments, they may wish to stop at that period, ignore all its antecedents, and find true wisdom in the mail-clad knights whose pen was the pommel of their sword, who were innocent of all learning; when every house was a fortress, where "power dwelt amidst its passions," when force was the sole guarantee for safety; when superstition, credulity, and ignorance, filled the land; when the nobles were highwaymen and the people were slaves. This period seems to have been thought, by many of our writers, the golden age of England, venerable from its antiquity, wise beyond all comparison, and not only wise, but merry; for to those days we are constantly sent back when they would impress us with a notion of "metric England." But let us look for a minute at the means of acquiring wisdom which existed even long after the time of the knights, when feudalism was drawing to its close, and printing was beginning to scatter the seeds of information about the world. A few meagre chronicles, the songs and romances of the troubadours, comprised almost entirely the literary food of the people. The *Nuremberg Chronicle* contains all that was then known of the history and geography of the world; and there we are told of sundry races of men then inhabiting the world, some with the horns and hoofs of goats; others with the heads of dogs, whose language is a perpetual bark; some with four eyes, others with but one, and that, like the Cyclops, in the middle of their forehead; others again with no heads, or rather, as Shakespeare has it, "men whose heads do grow beneath their shoulders," the eyes being in the shoulders, and the nose and mouth in the breast; others again have necks as long as swans, with the beak of an eagle in the place of a mouth, and a nose, like Lord Brougham's, above it. Then some have a mouth so small that they are obliged to suck in all their nutriment through a reed; while others have the upper lip so large that it covers all their face like a screen. Others again have only one leg, and a foot so enormous in size, that they stick it up in the air like an umbrella and go to sleep under its shade, and are withal so swift with this one foot, that they easily run down the fleetest animal of the forest. Others wrap themselves up in their own ears, which are drawn in shape like those of a lop-eared rabbit, only large enough to cover the whole body of a man. Some had six hands, others six fingers, and others eight toes: all kinds of monstrosities are figured as representing the inhabitants of different parts of the earth; centaurs and pigmies are about the least outrageous of these conceptions, while the battle of the Pigmies and the Cranes is accepted as true history. And in the earliest travels that we have, the travellers confirm all these stories; there is not one of the monstrosities of the *Nuremberg Chronicle* that is not confirmed by Sir John Mandeville, a learned knight and physician, who spent thirty-four years in travelling through foreign lands. In fact, they all of them take the old stories of Pliny, and repeat them without examination.

The description of the hippopotamus, from Sir J. Mandeville, will give us some idea of the manner in which the "wisdom of our ancestors" looked at nature. "In that contree ben many *Ipotaques*, that dwellen sometyne in the Watre, and sometyne on the Lond; and thei ben half Man and half Hore, as I have sed before; and thei eten men whan thei may take hem." But it is not to the human and the animal creation alone that these wonders are confined: Sir John Mandeville on his own experience gives us an account of the Well of Youth, which he tells us he visited and drank of its waters. "And at the foot of that Mount, is a fayr Welle and a gret that hathe he odour and savour of alle Spices; and at every hour of the day, he chaunge the his odour and savour dyversely. And whoso drynke the three tymes fasting of that Watre of that Welle, he is hool of all manner of Sycknesse that he hathe. And thei that dwellen there and drynken often of that Welle, thei never hav Sickness, and thei semen alle weys zonge. I have dronken there of three or four sithes (times); and zit methinketh, I fare the better. Sum men clepen (call) it the Welle of Zouthe (youth); for thei that often drinken there of, semen alle weys zongly and lyven without Sycknesse. And men seyn that that Welle cometh out of Parady, and therefore it is so vertuous." Sir J. Mandeville set out on his travels in 1322, not long after the close of the Crusades, when the gallant knights of chivalry were in their full vigour. From the nature of the stories which one of the most learned of their body, who had received all the advantages of foreign travel, has handed down to us, we may form a tolerably accurate opinion on the "wisdom of our ancestors" in those days, to which we are now so continually called upon to do homage.

If they will not go back quite so far as the feudal times, perhaps they might find their days of perfect wisdom in the stirring times of "bluff King Hal"—the glorious days of fire and faggot, when Protestant and Catholic were burnt at the same stake for deviating on one side or the other from the king's rule of faith; when queens' heads were not adhesive, but sat uneasily upon their shoulders; and princesses refused to become queens because they

\* We have preserved the original spelling as an example of the manner in which our ancestors of the 14th century wrote, and spoke, before the orthography of the language became fixed.

had only one neck, which they did not like to trust within the reach of the most anatory of kings. Or, perhaps, they might deem the awakening light of the reign of "good Queen Bess" the finest sample of the "wisdom of our ancestors," when many bright spirits shed a lustre around which has descended undiminished to our days, but which was unable to penetrate the dense blackness of those times,—when Shakespeare was looked upon as a deer-stealer, and Speuser condemned "in suing long, to bide,"—when bear-baiting was held in higher estimation than the noblest poetry, and hobby-horses and tomfoolery were not confined to the Lord Mayor's day,—when queens rode in state upon a pillion, and maids-of-honour breakfasted upon salt beef and strong beer. Or, let us come down to the next reign, after Bacon had propounded the foundations of modern philosophy, and see the learned monarch of those times—the Solomon of his age—disputing on his two favourite themes of kingcraft and witchcraft; one moment laying down maxims for despotic rule, and the next teaching us how to discover a witch: one moment mauling over the divine right of kings, and the next, drivelling over the eternal rule of demons. Under his sway old women by scores and hundreds were hanged, and burned, and drowned for riding through the air on broomsticks, whisking up chimneys, tormenting cattle, and giving fits to children. And even so lately as the reign of Charles the Second we find that very learned judge Sir Matthew Hale, giving as a reason for believing in the existence of witches, the very fallacy that we have placed at the head of this article. "The wisdom of all nations had provided laws against all such persons, which is an argument of their confidence of such a crime." Laws and punishments, judges and juries, priests and exorcists, could not banish witchcraft from the thoughts and opinions of our wise ancestors; but in these modern times a few drops of printer's ink have sunk the whole brood into the Red Sea, never to rise again until an ignorance as dark as the "wisdom of our ancestors" shall spread itself over the earth.

By the "wisdom of our ancestors" credit was given to the existence of witchcraft, sorcerers, and ghosts, and judicial decisions were grounded on evidence attesting or supposing the existence of such facts. We have many stories relating the appearance of ghosts in courts of justice, which of course no one believes; but we have many trials in which the witnesses depose to facts which they allege they have received from apparitions. In 1734 Duncan Terig, alias Clerk, and Alexander Bane Macdonald were tried the murder of Arthur Davis, serjeant in General Guise's regiment, principal witness against the prisoners was a Highlander, who gave a distinct narrative of the appearance of the serjeant's ghost, which gave a very lucid account of the murder, and described the spot where the body was concealed. The jury did not convict on this testimony, for although they might have believed in the ghost, they could not reconcile themselves to this discrepancy, that the ghost of the serjeant, who had known no Gaelic in his lifetime, was obliged to use that language to be intelligible to the witness! Even so lately as 1832, we have evidence given in a trial, in the Highlands of Scotland, founded on a dream. A peillar had been murdered, and his pack concealed. An individual took the officers of justice to a spot where he said a voice had told him in a dream, in Gaelic, that the pack would be found; and it was there discovered accordingly. Suspicion was naturally roused against the witness, but all attempts to discover the real ground of his knowledge were baffled. The accused was found guilty and executed. The last two examples of this kind of evidence is found in the most remote and ignorant part of Scotland. To use the language of Mr. Bentham, we may say, "In effect, remote times are virtually present to us in remote places. The different generations of mankind, at their different stages of civilisation, are at once present to our eyes. We may view our ancestors in our antipodes. In Japan sorcerers are still seen riding in the clouds. In Negroland witchcraft is even now the most common of all crimes. Half a century is scarce past since Hungary has been cleared of vampires. Wherever the ignorance is deepest there we may see the reflex of the "wisdom of our ancestors."

Sir Thomas Browne, in the folio volume which we quoted at the beginning of this paper, published in the time of the Commonwealth, brought an immense mass of learning to bear on many vulgar errors which had passed for truth in the "wisdom of his ancestors;" and he gravely combats the opinion "that the sun danceth on Easter-day," that "crystal is nothing else but ice strongly congealed," that "a diamond is made soft or broke by the blood of a goat;" together with many others of like nature. The errors which Sir Thomas Browne exposed were for the most part physical and superstitious. The whole tribe of these might have been greatly increased, but these have long since disappeared: observation and science have so fully disclosed that the "wisdom of our ancestors" on these points was mere folly, that no one now-a-days sends us back to that wisdom for instruction. Authority and antiquity have yielded to reason and experience. "By no gentleman, honourable or right honourable, are we sent at this time of day to the 'wisdom of our ancestors' for the best mode of marshalling armies, navigating ships, or attacking or defending towns; for the best modes of cultivating and improving land, and prepaing and preserving its products for the purposes of food, clothing, artificial light and heat; for the promptest and most commodious means of conveyance of ourselves and goods from one portion of the earth's surface to another; for the best modes of curing, alleviating, or preventing disorders in our own bodies, and those of the animals which we contrive to apply to our use."

In all matters of physical science the fallacy has been exploded. It is only when we come to matters of legislation that we find grave men gravely affirming that such and such an improvement must not be made because "the wisdom of our ancestors" had decided against it,—because it was unknown to "venerable antiquity,"—because "the authority of the past" was opposed to it. They cast aside the unquestionable maxim, that reason and not authority should decide the judgment; and would prevent the pro-

gress of the human race by chaining us down to the practices and institutions of our ancestors, hallowed by antiquity and illuminated by the light of ages. And why is this? Why does no one now venture to insinuate that in mechanics, in astronomy, in mathematics, in chemistry, we ought to rely on the wisdom of our ancestors instead of direct and specific evidence; when, in questions of morals and legislation, of the well-being of the community, they would confine us to that narrow limit? It is because in these the sinister interests of men are allowed their full weight. All who are interested in the support of abuses,—all who are desirous of keeping up institutions that are found to be pernicious,—strive to put down reason by the voice of authority,—to make the authority of ages past exceed the reasons of times present. They find that argument is failing them, that they cannot from their own stores successfully combat the reasons opposed to them, that their propositions are in themselves untenable, and they seek to gain support through the opinions of some by-gone age, and imagine that we are bound to surrender up our understanding to some venerable authority of olden times. They continually exalt the past for the express purpose of depressing and discouraging the present generation. They depreciate and condemn the great body of the people of the present day, while they idolize the ignorance of untaught, inexperienced generations, under the lofty title of "the wisdom of our ancestors."

## SELFISH GENEVIEVE.

BY MARY BENNETT.

It is far better, dear, believe,  
To give in love than to receive:  
Oh, try to think so, Genevieve!

Which was the happier to-day,  
You, who wiled Ellen's toys away,  
Or she who gave them—can you say?

She let you and your prize alone,  
You sat down with them, all your own;  
But soon afar off they were thrwn.

Charmed they no more? Come, tell me why—

Ah! tears at last in that proud eye,  
Lift it, my child, to yon fair sky,

And let the heavenly sunshine win  
Free way to the dark thoughts within:  
Dark, sad, with this one childish sin.

Peace, Genevieve, will never bless  
A life replete with selfishness,  
That makes the world a wilderness,

And leads to darkness, Genevieve!  
—It is more blessed, dear, believe,  
To give in love than to receive.

## HOME.

"Home, thy joys are passing lovely—  
Joys no stranger heart can tell!"

WHAT a charm rests upon the endearing name—my home! consecrated by domestic love, that golden key of human happiness. Without this, home would be like a temple stripped of its garlands: there a father welcomes with fond affection; a brother's kind sympathies comfort in the hour of distress, and assist in every trial; there a pious mother first taught the infant lips to lisp the name of Jesus; and there a loved sister dwells, the companion of early days.

Truly, if there is aught that is lovely here below, it is home—sweet home! It is like the oasis of the desert. The passing of our days may be painful; our path may be chequered by sorrow and care; unkindness and frowns may wither the joyousness of the heart, efface the happy smiles from the brow, and bedew life's way with tears; yet, when the memory hovers over the past, there is no place in which it so delights to linger, as the loved scene of childhood's home! It is the polar star of existence. What cheers the mariner, far away from his native land in a foreign port, or tossed upon the bounding billows, as he paces the deck at midnight alone—what thoughts fill his breast? He is thinking of the loved ones far away at his own happy cottage; in his mind's eye he sees the smiling group seated around the cheerful fireside. In imagination he hears them uniting their voices in singing the sweet songs which he loves. He is anticipating the hour when he shall return to his native land, to greet those absent ones so dear to his heart.

Why rests that deep shade of sadness upon the stranger's brow as he seats himself amid the family circle? He is surrounded by all the luxuries that wealth can afford; happy faces gather around him, and strive in vain to win a smile! Ah! he is thinking of his own sweet home; of the loved ones assembled within his own cheerful cot.

Why those tears which steal down the cheeks of that young and lovely girl, as she mingles in the social circle? Ah! she is an orphan; she, too, had a happy home; its loved ones are now sleeping in the cold and silent tomb. The gentle mother who watched over her infancy, and hushed her to sleep with a lullaby which a mother only can sing,—who in girlhood days taught her of the Saviour, and tuned her youthful voice to sing praises to His name, has gone to the mansions of joy above, and is ringing her songs, and tuning her golden harp, with bright angels in heaven. Poor one! She is now left to thread the weary path of life, a lonely, homeless wanderer.

Thus it is in this changing world. The objects most dear are snatched away. We are deprived of the friends whom we most love, and our cherished home is rendered desolate. "Passing away" is engraved on all things earthly. But there is a home that knows no change, where separation never takes place, where the sorrowing ones of this world may obtain relief for all their griefs, and where the sighs and tears of earth are exchanged for unending songs of joy. This home is found in heaven!

In the shadowy past there is one sweet reminiscence which the storms of life can never wither: it is the recollection of home. In the visioned future there is one bright star, whose lustre never fades: it is the hope of a heavenly home!

## BRITISH WORTHIES.

THE goodly cluster of men of genius whose portraits are engraved in the vignette of the Biographical Enigma, in the "Evenings at Home" of our former number of the *Home Companion*, cannot be passed over with merely the bare mention of their names; although, in all probability, most of our readers are familiar with the conspicuous events of their remarkable lives. There may be some, however, whose memories are not so tenacious, and who may be glad to enshrine on their mental tablets the following brief sketches:—

**WILLIAM PENN**, the founder and legislator of Pennsylvania, and the only son of Admiral Sir William Penn, a meritorious naval officer, was born in London, in 1644. He received his education at Oxford, and imbibed there the principles of Quakerism, the advocacy of which afterwards entailed upon him the persecution of government and an incarceration in Newgate. In 1681, he received, in compensation of a debt due from the crown to his father, a cession of lands in America, which have since retained his name. The year following he embarked for his new colony, and in 1683 founded Philadelphia. Penn died in 1718.

**SIR FRANCIS DRAKE**, one of our most illustrious admirals, was born at Tavistock, Devon, in 1545. In early life he entered the royal navy, and rose to the highest rank by his undaunted bravery and enterprising disposition. The Spaniards, at that time the most formidable enemies to England, were constantly defeated by him, and the dispersion of the Grand Armada in 1588, was in a great measure owing to his seamanship and determination. Drake sailed round the world in 1577-80; and died at sea in 1595.

**ROBERT BOYLE**, a philosopher, whose attainments in chemistry and medicine have rendered his name greatly distinguished, was the son of Richard Boyle, Earl of Cork, an eminent statesman in the reign of James the First. He was born at Lismore, Ireland, in 1627, and passed a laborious and useful life in the pursuit of science. He made improvements in the air-pump, and exhibited a variety of experiments in public, which awakened the zeal of others. Boyle, who died in 1691, was an active member of the Royal Society, and instituted by will the Boylean Lectures, to prove the truth of the Christian religion against infidels. His complete works were published in 1744, in five folio volumes.

**ROGER BACON**, a celebrated philosopher, was born at Ilchester, in Somersetshire, in 1214, and received his education at Oxford and Paris. His great scientific attainments rendered him an object of persecution by his ignorant contemporaries, who imputed them to magic. Roger Bacon was a friar, and he was nearly approximate to the discovery of the telescope, the camera obscura, and gunpowder. He also detected the error of the calendar, and suggested the improvement made in it afterwards by Pope Gregory the Thirteenth. He died in 1292.

**THOMAS FULLER**, an eminent historian and divine, was born at Aldwinkle, Northamptonshire, in 1608, and received his education at Cambridge. His talents being of a high order, speedily rendered him popular as a preacher. Throughout the reverses of the Stuarts he remained faithful to the royal cause, and suffered many privations in consequence. He was the author of several works, among which we may particularly mention the *Worthies of England*, still deservedly popular. Fuller was learned, quaint, and humorous, and possessed a wonderfully retentive memory. He died in 1661.

**SIR THOMAS MORE**, Chancellor of England, was born in London, in 1480. Attaching himself to the bar, his abilities and perseverance secured his promotion, and he was knighted on the recommendation of Cardinal Wolsey, whom he succeeded in 1530 as Lord Chancellor. Opposing the tyrannical humours of Henry the Eighth, he lost his dignities, but gained a name for integrity and virtue, immortal as time itself. He was committed to the Tower, and brought from thence for trial on an absurd charge of high treason. The rare courage and eloquence with which Sir Thomas More defended himself were of no avail. He was condemned to death, and this iniquitous sentence was carried into effect on the sixth of July, 1535. Sir Thomas More was the author of the political romance, *Utopia*. The warmth of his friendship for Erasmus is well known.

**SAMUEL BUTLER**, the author of *Hudibras*, one of the most strikingly original poems in our language, was born at Streatham in Worcestershire, in 1612, and died in 1680. Few particulars remain of his life, which appears, towards the close, to have been passed in seclusion, and in familiar intercourse with the chief literary characters of the day.

**SIR MATTHEW HALE**, the judge, whose very valuable writings on history and jurisprudence have rendered his name so celebrated, was born in 1600, at Aldersley, in Gloucestershire, and after his studies at Oxford, applied himself with great assiduity to the practice of law at Lincoln's Inn. He attained distinguished honours, and died in 1676. Sir Matthew Hale acted as counsel for Strafford, Laud, Hamilton, and even for Charles himself. He was a learned man, an upright judge, and an exemplary Christian.

**SIR WILLIAM PETTY**, a physician, and the founder of the noble House of Lansdowne, was born at Romsey in Hampshire, in 1623. In 1652, he was appointed Chief Medical Officer to the Army in Ireland, and Secretary to Henry Cromwell, by whom he was employed in surveying the forfeited lands, for which charges were alleged against him in the House of Commons, and he was dismissed from his places. At the Restoration he was knighted, and made Surveyor-General of Ireland. Sir William Petty was one of the first Fellows of the Royal Society, to which he presented the model of a double-bottomed ship to sail against wind and tide. He suffered

much by the Great Fire of London, but eventually became very rich and died in 1687. Of his works, the *Political Arithmetic* is the most important.

**ANDREW MARVELL**, a witty political writer, was born at Kingston-upon-Hull, in 1620, and received his education at Cambridge. In 1637, he became assistant to Milton, as Latin secretary, and at the Restoration he was elected into parliament for his native place, and greatly esteemed for his diligence, ability, and integrity. He had the character of being the wittiest man of his time, and wrote a number of poetical effusions, both humorous and satirical. Marvell died in 1678.

**JOHN KNOX**, the great champion of the Scottish Reformation, was born in 1505, at Gifford, in East Lothian. Having been converted from the Romish faith, he became a zealous and eloquent preacher of the new doctrines. The murder of Cardinal Beaton had created great excitement throughout Scotland. The conspirators had fortified St. Andrew's, but the French fleet, which came to the assistance of Arran, in June 1547, compelled them to capitulate. Knox, among many others, was taken prisoner, and conveyed to Rouen, where he was confined on board the galleys. He was liberated in 1549, and engaged himself perseveringly and undauntedly, to further the cause of the Reformation in England and Scotland. In Perth, a civil commotion took place, in consequence of his pulpit orations against idolatry. At the instigation of Queen Mary, he was, in 1563, accused of treason, and tried, but pronounced guiltless. Knox died in 1572, from the consequences of an apoplectic attack brought on some time before by his unremitting exertions.—See "Biographical Mélange," p. 93.

## ONWARD!

**ELECTRIC LIGHT.**—The electric light, so long the amusement of dreamers and speculators, is at length to be brought into practical operation. The *Mining Journal* announces that the directors of the Lancashire and Yorkshire Railway intend almost immediately to light the tunnels on their line by this new method.

**LABOURERS' COTTAGES.**—The Duke of Northumberland, says the *Market Express*, has given orders for the construction of no less than 1,000 new labourers' dwellings; and due attention "it is no doubt, he paid to the sanitary principles of their construction, in which builders have hitherto shown themselves grossly ignorant.

**NEW CAB COMPANY.**—A new cab company, which is about to commence business in London, proposes to affix an "indicator" to each cab, so that the person hiring the cab will only have to look at the "indicator" on entering and leaving the carriage, in order to see how far he has travelled, the miles being marked on the face of the "indicator."

**ALLEGED DISCOVERY OF THE PERPETUAL MOTION.**—The *Courier de la Gironde* states, that a civil engineer of Bordeaux, named De Viguernon, has discovered the perpetual motion. His theory is said to be to find in a mass of water, at rest, and contained within a certain space, a continual force, able to replace all other moving powers. The above journal declares that this has been effected, and that the machine invented by M. de Viguernon works admirably. A model of the machine was to be exposed at Bordeaux for three days, previous to the inventor's departure with it for London.

**IRON PAVEMENT.**—According to the *Glasgow Mail*, an experiment is proceeding in that city to test the possibility of paving it with iron. "At the top," says our contemporary, "of Montrose-street, where it joins with Stirling's Road, a space in the middle of the thoroughfare has been laid with the new iron pavement. In appearance, there is not much difference between it and the granite that forms the causeway in Argyle-street and other principal thoroughfares. The base of iron of which the pavement is composed are about three inches broad, and nearly the same depth. They are laid parallel to, and about one inch apart from each other—the object of the last named provision being, we presume, to afford more secure footing to the horses as they pass along the street. Yesterday we chanced to be in the neighbourhood, and, so far as we could judge, the new invention seems a decided improvement. There is comparatively little noise, and the horses appear to find a firm and secure footing. The invention is characteristic of the age, and will possibly become of great importance in many quarters."

**MUSEUM OF ECONOMIC BOTANY.**—A museum of this kind is in course of collection at the Kew Gardens. The object is, to bring together such products from all parts of the world as cannot be shown in the living plants of a garden, nor in the preserved ones of a herbarium. In this way it is intended to collect and arrange in the new museum such fruits and seeds as are deserving of notice, especially those which are of large size, or possess any peculiarity of form or structure. All flowers and plants which, from their make, are unsuited to the *Florus Siccus*, and which may require preservation in spirits or acids, specimens of woods used in commerce, or which would appear to be deserving of notice from their beauty, hardness, &c., will come within the range of the collection. In the same way will be added gums and resins—especially those employed in the arts or in domestic economy; also dye-stuffs, of which very few are as yet known to science; also the medicinal substances which, in the various shapes of seeds, leaves, gums, oils, roots, &c., exist in unknown extent throughout the East. Active steps are being taken by the Colonial authorities to secure the co-operation of governors of colonies, managers of botanic gardens abroad, travellers, merchants, and others. Parcels or packages will be brought from abroad free of charge by any of Her Majesty's ships, or by the royal mail vessels, or Peninsular and Oriental Company's steamers.—*Athenæum*.

## CHARADE.

SEEK for my *first* where mountains meet—

Tread well the rugged way;  
I've borne the tramp of warriors' feet,  
And heard their wild dismay;  
When from my dark and rugged sides,  
The deadly bullet flew,  
And struck deep in the soldier's heart—  
To love and valour true.

My *second* every one can own,  
In large or small degree;  
And when its better time has fled,  
How changed and frail are we.  
All seek it—but too few see;  
They little heed the way;  
But find temptations that allure,  
And fall to sin a prey.

When out upon the stormy main  
The weary bird is seen,  
Seeking a distant home to gain,  
Where woods and fields are green;  
While cheering rays and blooming flowers  
Shall for a season be,  
And music wake the leafy bowers—  
That bird is one of me.

(Answered in No. 8.)

I was with Adam and with Eve,  
With Noah in the ark;  
And that I still am seen with you,  
Is worthy of remark.

And then I am most useful too,  
And this I cannot doubt,  
For if I ever went from you,  
You'd grieve to be without.

I am about your house as well,  
Your sofa, table, chair;

And I've been told a heavy weight  
I often have to bear.

Your garden oft' I visit too,  
And keep your flowers so neat;  
I help in all your forcing frames,  
And in your garden seat.

I also am of silk and lace—  
With tailors long remain;  
In richest fabrics I appear,  
Now tell me, pray, my name.

[Answered in No. 8.]

He talked of daggers and of darts,  
Of passions and of pains,  
Of weeping eyes and wounded hearts,  
Of kisses and of chains;  
He said, though Love was kin to Grief,  
She was not born to grieve;  
He said, though many ruod belief,  
Shy safely might believe,  
But still the lady shook her head,  
And swore by yea and nay,  
My *whole* was all that he had said,  
And all that he could say.

He said my *first*, whose silent car  
Was slowly wandering by,  
Veiled in a vapour faint and far,  
Through the unfathomed sky,  
Was like the smile, whose rosy light  
Across her young lips passed,

Yet oh! it was not half so bright,  
It changed not half so fast,  
But still the lady shook her head,  
And swore by yea and nay,  
My *whole* was all that he had said,  
And all that he could say.

And then he set a cypress wreath  
Upon his raven hair,  
And drew his rapier from its sheath,  
Which made the lady stare;  
And said, his life-blood's purple flow  
My *second* there should dim,  
If she he served and worshipped so  
Would weep one tear for him,  
But still the lady shook her head,  
And swore by yea and nay,  
My *whole* was all that he had said,  
And all that he could say.

[Answered in No. 8.]

On the casement frame the wind beat high,  
Never a star was in the sky;  
All Kenneth Hold was wrapt in gloom,  
And Sir Everard slept in the Haunted Room.

I sat and sang beside his bed;—  
Never a single word I said,  
Yet did I scare his slumber;

And a fitful light in his eye-ball glisten'd,  
And his cheek grew pale as he lay and listen'd,  
For he thought, or he dreamed, that fiends  
and fays  
Were reckoning o'er his fleeting days,  
And telling out their number.

Was it my *second's* ceaseless tone?  
On my *second's* hand he laid his own:  
The hand that trembled in his grasp,  
Was crushed by his convulsive clasp.

Sir Everard did not fear my *first*,  
He had seen it in shapes that men deem worst

In many a field and flood;  
Yet, in the darkness of his dread,  
His tongue was parched, and his reason fled;

And he watched, as the lamp burned low  
and dim,  
To see some Phantom, gaunt and grim,  
Come, dabbled o'er with blood.

Sir Everard kneel'd, and strove to pray,  
He pray'd for light, and he prayed for day,  
Till terror check'd his prayer;  
And ever I muttered, clear and well,  
"Click, click," like a tolling bell,  
Till, bound in fancy's magic spell,  
Sir Everard fainted there.

## ENIGMAS AND CHARADES.

1.

BRING my *first* you can become,  
You must—in fact, you must be dumb;  
And with my *second* you will find  
Both skill and cunning are combined;  
While go my *third* you may with speed,  
Whenever onward you proceed,  
My *whole*, if rightly enter'd down,  
Will name an ancient Scottish town.—J. W.

(Answered in No. 8.)

## ANSWERS TO THE PASTIME OF LAST EVENING.

Page 93.

BOGGRAPHICAL MELANGE.—If you will give me my *Penn* (1), I will tell you of a *Drake* (2), which I am about to *Boyle* (3) for dinner, together with a piece of *Bacon* (4). When I have eaten of them I shall be *Feller* (5), and shall feel that I do not need any *More* (6), unless it is in the shape of wine, which I will request my *Butler* (7) to bring me. He is a *Hale* (8) man, incapable of *Petty* (9) actions; but were you to offend him, you would *Marry* (10) the severity of his *Knox* (11).—See "British Worthies," p. 105.

CHARADE—Cod-ling.

THE REMARKABLE ADVENTURES OF BARON BRAG.—AN UNNATURAL HISTORY FOUNDED UPON NATURAL HISTORY  
(To be Continued by Us, until Discontinued by the Baron.)

The Baron, having repaired his Hunting-dress, brandishes his sword, and resolves upon new adventures!

He is somewhat awed at the distant roar of lions, but soon sets off in pursuit!

And rapidly overtaking the enemy, commences attack, the success of which remains to be shown!

## OUR CORNER CUPBOARD!

THE inertness of the mind is often taken for its peace.

If you would look "spruce" in your old age, don't "pine" in your youth.

When is a clock on the stairs dangerous?—When it runs down.

As charity covers, so modesty prevents, a multitude of sins.

Why is the letter A like a honeysuckle?—Because a B follows it.

He submits to be seen through a microscope who suffers himself to be caught in a passion.

True quietness of heart is got by resisting our passions, not by obeying them.

Man's nature runs either to herbs or weeds: let him seasonably water the one, and destroy the other.

There are men, who, by long consulting only their own inclination, have forgotten that others have a claim to the same deference.

Neither the evil nor the good that men do is ever interred with their bones, but lives after them.

To be happy, the passions must be cheerful and gay, not gloomy and melancholy.

Propensity to hope and joy is real riches: one to fear and sorrow, real poverty.

Those that dare lose a day are dangerously prodigal; those that dare mispend it, desperate.

Pursue what you know to be attainable, make truth your object, and your studies will make you a wise man.

Many of the Parisian workmen employ a person daily to read the newspapers to them while at work.

The best dowry to advance the marriage of a young lady is, to have in her countenance mildness, in her speech wisdom, and in her behaviour modesty.

They have got a great aristocrat in Troy. He won't even smile, for fear people should think he was getting too familiar with himself.

It never was a wise thing yet to make men desperate, for one who hath no hope of good hath no fear of evil.

He who defers his charities till his death, is rather liberal of another man's goods than of his own.

The poet who knows how to express and paint the affections and passions of the soul, will always be read with greater delight than the most exact observer of inanimate nature.

A SHREW old gentleman once said to his daughter, "Be sure, my dear, that you never marry a poor man; but remember, the poorest man in the world is one who has money, and nothing else."

A FELLOW who wrote a wretched hand, and made almost as bad a fist at spelling and grammar, gave as an excuse for the deficiencies of his education that "he never went to school but *quo* afternoon, and then the master wasn't there."

At a late trial, somewhere in Texas, the defendant, who was not familiar with the multitude of words which the law employs to make a very trifling charge, after listening awhile to the reading of the indictment, jumped up and said, "Them 'ere allegations is false, and that 'ere allegator knows it."

"You charge me fifty sequins," said a Venetian nobleman to a sculptor, "for a bust that only cost you ten days' labour." "You forget," replied the artist, "that I had been thirty years learning to make that bust in ten days."

A SHIP from Port Glasgow was recently lying in the harbour at New Orleans, when an Irish emigrant came on board, and thus addressed the cook, who was also Irish:—"Are you the mate?" "No," said he; "but I'm the man as boils the mate!"

Riches, like insects, while concealed they lie,  
Wait but for wings, and in their season fly;  
To whom can riches give repute and trust,  
Content or pleasure, but the good and just?  
Judges and senates have been bought for gold;  
Esteem and love were never to be sold.—*Pope*.

A new journal, with peculiar recommendations, is about to be established in Circleville, Ohio. The editor, in his prospectus, says:—"Our terms are two dollars a year. Gentlemen who pay in advance will receive a first-rate obituary notice in case of death."

EASY.—The attendant of Matthews in his last illness impatient some medicines; but a few moments afterwards it [that the medicine was nothing but ink, which had been taken from the phial by mistake, and his friend exclaimed, "Good heavens, Matthew I have given you ink!" "Never mind, my boy—never mind," said Matthews, faintly, "I'll swallow a bit of blotting-paper."

A GOOD REASON.—Blitz had a bright little fellow on the stand to assist him in the "experiments." "Sir," said the signor, "do you think I could put the twenty shillings which the lady holds, into your coat pocket?" "No," said the boy, confidently. "Think not?" "I know you couldn't," said the little fellow with great firmness. "Why not?" "'Cause the pocket is all torn out!"

## OUR MEMORANDUM BOOK!

PEACE is the evening star of the soul, as virtue is its sun, and the two are never far apart.

POPULAR FALLACIES.—There is a wonderful vigour of constitution in a popular fallacy. When the world has once got hold of a lie it is astonishing how hard it is to get it out of the world. You beat it about the head till it seems to have given up the ghost; and, lo! the next day it is as healthy as ever again. The best example of the vitality of a fine saying, which has the advantage of being a fallacy, is in the over-hacknied piece of nonsense attributed to Archimedes—viz, "that he could move the earth, if he had any place at a distance from it, to fix a prop for his lever." This is one of the standard illusions—one of the necessary stock-in-trade, for all orators, poets, and newspaper writers; and parsons, whenever they meet with it, take Archimedes for an extraordinary great man, and cry, "How wonderful!" Now, if Archimedes had found his place, his prop, and lever, and if he could have moved it with the swiftness of a cannon ball, 485 miles every hour, it would have taken him just 44,063,540,000,000 years to have raised the earth one inch! And yet people will go on quoting absurdity as gospel, wondering at the wisdom of Archimedes.

A SMALL CALCULATION.—Suppose a man drinks four glasses of liquor a day, at five cents a glass;—in a week he spends one dollar and forty cents, and in a year seventy-two dollars and eighty cents. This will buy the following articles:—

4 Barrels of flour, say . . .	Dol. 24.00
4 Pairs boots, say . . .	15.00
40 Pounds of butter . . .	10.00
400 Pounds of beef . . .	8.00
A new hat . . .	4.00
A new satin vest . . .	5.00
A bonnet for wife . . .	5.00
Sugar-plums for children . . .	1.00

Total Dol. 72.00.—*American*.

EFFECTS OF WORLDLY SUCCESS.—We almost always find, however, that long course of success gives a sort of confidence very different from that which arises in a reliance on accurate and extensive views and prudent calculations. Many a man sets out in life with a daring and powerful genius, which, trusting implicitly to the precautions which it has previously taken, and the resources which it feels within itself for the future, grapples with enterprise and risks consequences, and succeeds in efforts that would daunt the timid, and be lost by the slow and calculating; but, after a long course of success, the basis of confidence becomes changed to the same man; he trusts to his fortune, not to his genius; grows rash instead of bold; and falls by events for which he is neither prepared nor adequate.

## MINOR MORALS FOR MARRIED PEOPLE.

THE last word is the most dangerous of infernal machines. Husband and wife should no more strive to get it than they would struggle for the possession of a lighted bomb-shell.

Married people should study each other's weak points, as skaters look out for the weak parts of the ice, in order to keep off them.

Ladies who marry for love, should remember that the union of angels with women has been forbidden since the flood.

The wife is the sun of the social system. Unless she attracts, there is nothing to keep heavy bodies, like husbands, from flying off into space.

The wife who would properly discharge her duties, must never have a soul "above buttons."

Don't trust too much to good-temper when you get into an argument. Sugar is the substance most universally diffused through all natural products! Let married people take a hint from this provision of nature.

WHAT SHALL BE THE LIMIT OF DISCOVERY?—Who shall assign a limit to the discoveries of future ages? Who can prescribe to science her boundaries, or restrain the active and insatiable curiosity of man within the circle of his present acquirements? We may guess with plausibility what we cannot anticipate with confidence. The day may yet be coming when our instruments of observation shall be inconceivably more powerful. They may ascertain still more decisive points of resemblance between the planets and the earth. They may resolve the same question by the evidence of sense, which is now so abundantly convincing by the evidence of analogy. They may lay open to us the unquestionable vestiges of art, and industry, and intelligence. We may see summer throwing its green mantle over these mighty tracts, and we may see them left naked and odourless after the flush of vegetation has disappeared. In the progress of years, or of centuries, we may trace the hand of cultivation spreading a new aspect over some portion of a planetary surface. Perhaps some large city, the metropolis of a mighty empire, may expand into a visible spot by the powers of some future telescope. Perhaps the glass of some observer, in a distant age, may enable him to construct the map of another world, and to lay down the surface of it in all its minute and tropical variations. But there is no need of conjecture; and to the men of other times we leave the full assurance of what we can assert with the highest probability,—that yon planetary orbs are so many worlds; that they teem with life; and that the mighty Being who presides in high authority over this scene of grandeur and astonishment, has there planted the worshippers of His glory.—*Dr. Chalmers*.

ORDERS RECEIVED BY  
MAXWELL & CO.,

## ADVERTISEMENTS,

[31, NICHOLAS LANE, LOMBARD  
STREET, LONDON.

Will be published in December,  
**FAMILY PASTIME, Vol. II.**, price  
1s., containing a Christmas Tale, and a New Assortment  
of Enigmas, Charades, Rebuses, Conundrums, &c.  
In this Volume, the whole of the *Family Friend* Prize  
Enigmas up to the end of 1851 will be inserted, with their  
Solutions.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

**EAR-ACHE, TOOTH-ACHE, TIC  
DOLOUREX**, Pains in the Face and Gums, cured  
by One Application of HICK'S ANTIDOLIC ESSENCE.  
Sent free to any Address for Nine Stamps. Apply to  
JOHN. HICK, Chemist, Bradford, Yorkshire.

**THE QUADRUPLE INDEX.**—The  
Fourth Volume of the *Family Friend* contains a  
Quadruple Index, embodying upwards of Three Thousand  
Five Hundred References to the Contents of the Work.  
Persons wishing to judge of *The Friend*, may receive  
copies of this Index Gratis, by applying, post-paid, to  
Mr. J. BENNETT, 69, Fleet Street, London.

Price One Penny,  
**THE KITCHEN ALMANACK.**  
(Sheet) containing a tabular arrangement showing the  
Food in Season for each Month in the Year; Domestic  
Hints; Rules for Marketing; Calendar, Stamp, Bill, and  
other Tables; with numerous Maxims for the Kitchen, and  
a full-sized fac-simile of The Willow-Pattern Plate printed  
in blue ink.  
London: 69, Fleet Street.

This day is Published, Second Edition, Price 2s.,  
**LIFE OF KOSSUTH.** Compiled from  
authentic sources, with a beautiful Portrait of the  
illustrious exile.  
Edinburgh: Published by J. M. Miller, 4, Leith  
Street. London: R. Wils, Holywell Street. Manchester:  
A. Heywood. Glasgow: W. Love; and all Booksellers.

**THE FIFTH VOLUME OF  
THE FAMILY FRIEND** will be  
ready on the 20th of December, 1851, Price 2s. 6d.,  
elegantly bound.  
Covers for Binding the Volumes, uniformly with the  
above, Price 6d. each.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

**THE SECOND VOLUME OF  
THE FAMILY TUTOR**, containing a  
Complete PHYSICAL GEOGRAPHY, and a Useful and  
Interesting Miscellany, will be ready on the 20th of Decem-  
ber, 1851, Price 2s. 6d.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

Now ready, price 1s., crown 8vo, cloth gilt,  
**FAMILY PASTIME; or, HOMES  
MADE HAPPY:** consisting of entirely Original  
Anagrams, Enigmas, Charades, Conundrums, Fire-  
and Games, Practical Puzzles, &c. &c., with their Solutions;  
for which Prizes to the amount of Fifty guineas have been  
awarded by the Editor of the *Family Friend*.  
Upwards of Three Hundred Competitors have con-  
tributed to the Mass of Entertaining Literature from which  
the contents of this Work have been selected.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

**HANDSOME CHRISTMAS PRESENT, OR  
NEW YEAR'S GIFT.  
THE FIRST FOUR VOLUMES OF  
THE FAMILY FRIEND.** Price 2s. 6d. each, elegantly  
bound, form a Complete First Series, with a general  
Index to the Contents of the Four Volumes, arranged in  
one alphabetical order, and comprising about Three  
Thousand Five Hundred references to matters of every-  
day interest and utility.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

**EMPLOYMENT GIVEN.**—Ladies and  
gentlemen may profitably occupy leisure time by ac-  
quiring the elegant ART OF ORNAMENTING PAPIER  
MACHE, in pearl, gold, &c., as practically imparted on  
an improved system, by which \$2 a week can be realized.  
Premium one guinea. As the number is limited, those  
desirous of engagements should make early application to  
Mr. Wright, 30, Tavistock-street, Covent Garden.

**RUPTURES.**—The PATENT SELF-  
ADJUSTING GERMAN TRUSS, acting effec-  
tually without any complications, is recommended by the  
Faculty for the Cure and Relief of Hernia. The most  
eminent members of the Profession are of opinion that the  
necessary quality of a good Truss is an efficient resisting  
power, without unnecessary pressure on the part affected,  
which desirable object is alone obtained in a Truss unen-  
cumbered with straps, spiral springs, or pad behind. J.  
EEO & Co., Established nearly Forty Years, Manufactory,  
1, Piccadilly.

Price One Penny,  
**THE NEEDLEWORK ALMANACK,**  
containing Crochet and Knitted Collars, D'Oyleys,  
and Patterns for Embroidered D'Oyleys, Toilette Mats,  
Handkerchiefs, Gloves, &c. &c.; a Complete Calen-  
dar; Bill, Stamp, and other Tables; Hints to Husband  
and Wives, Scraps for Scrap-Books, &c. &c.  
69, Fleet Street.

NATIONS**, (being Vol. I. of THE PARLOUR  
MAGAZINE) price 5s. The ParLOUR Magazine was the only  
Book printed in the Crystal Palace, and will remain as a  
handsome and appropriate memento of it. The PARLOUR  
LITERATURE OF ALL NATIONS will be completed in  
two Handsome Volumes, price Five Shillings each.  
Covers for Binding the Volumes, uniform with the  
above, may be had of all Booksellers, price 1s. 6d. each.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

**EXQUISITE OIL PICTURES.**—Six-  
pence each. KNIGHT & FOSTER, agents for the sale  
of Baxter's Oil Pictures. They are perfect gems of art;  
no lady's scrap-book can be perfect without them. A few  
of the subjects are named below, but an enlarged list will  
be sent on application.—Windsor Castle—Prince of Wales  
—Lover's Seat, Hastings—Dripping Well, Ditto—Bouquet  
of Flowers—Ben Yewig—Trentella Dance—Tintern Abbey  
—Welsh Drovers—Nelson's Victory—Bala Lake—Brougham  
Castle—Water-mill on the Wye—Llangollen—Lake Como  
—Warwick Castle—View on the Rhine. Two sent free  
by Post for 14 Stamps.  
When the value of Five Shillings is taken, they will be sent  
post free.—The above are each neatly mounted on  
Drawing Paper, 7 1/2 by 4 1/2. KNIGHT & FOSTER, Stationers,  
&c., 5, Fenchurch, London.

**PRIZE MEDAL FOR STEEL PENS.**  
This was given to KNIGHT & FOSTER, the celebrated  
Pen Manufacturers, of Fenchurch. Their Pens have been  
for several years extensively used in the Bank of England,  
Post Office, and Custom House, London, and in addition  
to the already brilliant success that has rewarded the Pro-  
prietors, for the care bestowed on the Manufacture of these  
Pens, they have the gratification to announce that to them  
was awarded the

**PRIZE MEDAL AT THE GREAT EXHIBITION,**  
for their great Excellence, Superior Merit, Utility and  
Cheapness. See Class 32—689, and 694; also Lord Can-  
ning's Report.

Sold by most stationers and booksellers. 1s. per box of  
3 dozen and holder, or direct for 15 stamps from the Pro-  
prietors, KNIGHT & FOSTER, Stationers, 5, Fenchurch.

**THE STANDARD ELOCUTIONIST,**  
Or in Numbers, in a neat wrapper, at 2d. each.  
The study of Elocution, both in Schools and Families,  
has become an indispensable feature in the educational  
business of our times. The value of this accomplishment  
is now universally acknowledged; indeed, without its cul-  
tivation, it is felt that our young folks would possess but  
few claims to a polished address, or a charming and grace-  
ful delivery. Falling in most cordially with this opinion,  
the Proprietor of the Standard Elocutionist ventures to  
send it forth as his feeble contribution to the cause of  
Educational Progress.  
London: Published by KENT & RICHARDS, Paternoster  
Row, and sold by all Booksellers.

**BARLOW'S POWDERS**—cure Tic  
Doloureux or Pain in the Teeth, Face, Head, &c.  
Sent Post Paid for 2s. 9d. in Stamps, by SAMUEL BAR-  
LOW, Chemist, Darlington. Reference as to their efficacy  
—Joseph Pease (late M.P.) Darlington; Lady Monson,  
Grantham; hundreds of the Nobility, Ministers,  
and others, whose bona fide Testimonials may be had of  
S. Barlow.

Grand Parade, St. Leonard's on the Sea.  
Sussex, Feb. 12th, 1847.

Mr. S. Barlow.  
Sir,—Under the favourable recommendation of  
Mr. Pease, of North Lodge, in regard to your Powder for  
the Tic Doloureux, I wish to try a packet of them. He  
assures me there is not anything mercurial in them, nor  
any drug that can possibly injure the constitution. From  
what Mr. Pease says, I think they are quite innocuous, and  
of a character to give tone to the nerves, stomachic and  
general.  
I am, Sir, your obedient servant,  
(Rev.) W. JACKSON.

**TUTOR'S ENGLISH GRAMMAR** is  
illustrated by numerous spirited Wood Engravings,  
by which a dry and tedious study is made peculiarly easy  
and interesting. Price 2s. 6d.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

**WORTH TEN GUINEAS A BOT-  
TLE.**—Two or Three Drops of MRS. DEMAIN'S  
LIQUID produce such a wonderfully Beautiful Change  
upon the Skin as can be produced by no other Article in  
the World. One application reddens the Skin, in Seven  
Days, White, Spotless, Youthfully Fair, and Delicately  
Transparent, like that of the Infant; and the complexion  
is restored to that clear and bright purity of expression  
from which the countenance in childhood derives its love-  
liness and charm. Requires using only once a year, by  
which the Complexion is preserved, even to old age, in its  
youthful and unblemished appearance. The change pro-  
duced is natural and permanent. In all cases the Skin  
becomes perfectly new. All Readers are invited to test its  
extraordinary properties. In Bottles, for One Year's Use,  
1s. 1 1/2d.

Sold by Messrs. HICK, Chemists, &c., 44, Drury Lane,  
London. Sent Free to any Address for 15 Stamps.  
Address, Mr. M. HICK, Chemist, Wakefield; Mr. JOSEPH  
HICK, Chemist, Bradford; or Mr. JOSEPH LUND, Book-  
seller, Westgate, Bradford.

In the Press, and shortly will be published,  
**GRANDFATHER WHITEHEAD'S  
CATECHISMS**, designed to make the Acquisition  
of Useful Knowledge by the Young, and by Beginners of  
all Ages, easy and pleasing. The Catechisms will be pub-  
lished Monthly, each containing 32 pages, crown 8vo.,  
illustrated by numerous Diagrams. The price of each  
Catechism will be 2d., stitched in a neat Wrapper. The  
whole Series, bound in cloth, 2s. 6d.

1. Natural Philosophy—Ele- mentary Principles.	9. Animal Physiology and Anatomy.
2. Natural History—Principles of Classification.	10. Zoology.
3. Mechanics.	11. Astronomy and Physical Geography.
4. Chemistry.	12. Geology and Metallurgy.
5. Electricity, Optics, & Acous- tics.	13. The Applied Sciences—La- comotion, Arts, Manufac- tures, Sanitary Improve- ments, &c. &c.
6. Pneumatics, Hydraulics, &c.	
7. Vegetable Physiology and Botany.	

London: HOULSTON & STONEMAN, 65, Paternoster Row.

**THE FAMILY FRIEND**, an established  
Magazine, published upon the First and Fifteenth of  
every Month, price Two-pence. Thirty-two pages, beauti-  
fully printed, and neatly covered. The following is a type  
of the opinion formed of *THE FAMILY FRIEND*, and ex-  
pressed by upwards of THREE HUNDRED NEWSPAPERS:—  
"The Boys and Girls will like it, for it contains good  
Stories; the Young Ladies will like it, for the sake of its  
pretty Poetry, and its Receipts for various kinds of Fancy-  
Work; Young Men will like it, for it smacks of Science;  
the Women will like it, for it abounds in useful Household  
Receipts; the Men will like it, for its treats of Gardening  
and Natural History, and advises wives to be kind to their  
husbands; those who love amusement will like it, for it  
swarms with Conundrums; everybody will like it, for it  
has a corner for everybody; and nobody need be afraid of  
finding any harm in it."—*Gateshead Observer*.

The Work may be had up to the end of December, 1851,  
in FIVE VOLUMES, price 2s. 6d. each.

The Fourth Volume contains a **QUADRUPLE INDEX**  
to the First Four Volumes, embodying about THREE THOU-  
SAND FIVE HUNDRED REFERENCES to matters of every-  
day usefulness. The Work forms a most perfect Encyclo-  
pedia of Domestic Economy.

London: HOULSTON & STONEMAN, 65, Paternoster Row;  
and all Booksellers.

Now ready, and may be had of all Booksellers, neatly  
bound in Cloth, price 2s. 6d.,

**FAMILY TUTOR, AND SCHOOL  
COMPANION.** Was published on the 1st of January,  
1851, and subsequently on the 1st and 15th of each Month,  
in Parts price 2d. each.

THE FAMILY TUTOR, as its name implies, is a Work of  
a highly instructive character, and realises, as far as can  
be accomplished in print, the advantages of a PRIVATE  
TUTOR to every reader—a Tutor whose teachings are lively,  
kind, and comprehensible, making the acquisition of  
knowledge a PLEASURE, not a TASK.

The First Volume contains—A COMPLETE ENGLISH  
GRAMMAR, improved and simplified; FAMILIAR LEC-  
TURES ON CHEMISTRY; TALES OF HISTORY AND OF TRAVEL;  
ZOOLOGY; THE PHYSICAL HISTORY OF MAN; THE  
PHYSIOLOGY OF HEALTH AND DISEASE; CELESTIAL AND  
TERRESTRIAL PHENOMENA OF THE MONTHS; MATHE-  
MATICAL, GEOMETRICAL, ARITHMETICAL, AND OTHER  
PROBLEMS; ELOCUTIONARY EXERCISES; "THE TUTOR  
AND HIS PUPILS," being Answers to Educational Ques-  
tions; and A VARIOUS MISCELLANY.

THE SECOND VOLUME contains a Complete System of  
NATURAL GEOGRAPHY, with Pictorial Illustrations, dis-  
playing the Customs and the Architectural and Natural  
Features of the various Peoples and Countries of the world.

THE FAMILY TUTOR may be had complete up  
of 1851, in Two Volumes, price 2s. 6d. each.

London: HOULSTON & STONEMAN, 65,  
and all Booksellers.

## Editor's Note-Book.

### WINTER EVENINGS' EMPLOYMENT.

S. S. B.—We have received numerous letters from correspondents, requesting advice on the employment of their time during the winter evenings, the following observations will therefore be of general application:—The winter evenings comprehend a large and invaluable portion of our time, upon the proper improvement of which depends, in a very great degree, the intellectual and moral improvement and happiness of individuals and families. These evening hours, on many accounts, are the best of our earthly existence. Gathered around life cheerful and comfortable fire, the world shut out, the gleaming lights dispelling their animating beams upon the family group, conversation flows with unobstructed freedom, the pleasant tale is told and listened to with vivid interest, reading from a good book is heard with attention and promptness, and in a well-managed household, while the members of the family generally are engaged in light but useful employments, some one may profitably entertain the rest; or all may engage in agreeable interchanges of thought and feeling. A great deal may be accomplished for the mind of a family by providing entertaining and instructive reading. It is wonderful how much may be done to open, enlarge, and improve the mind and heart of a household, through the medium of a book or magazine, read and commented upon while the family are collected around the fireside on a long winter evening. Suppose a family seated after tea, and while the mother and daughter are engaged in some light and ordinary employment, an intelligent boy takes down a new book which was brought to him to-day by his father, and commences reading aloud. The first two or three pages contain an interesting chapter of history, ancient or modern; next comes a touching moral story; then a beautiful little poem; then a chapter of travels, after that some information in geography, or a description of some curious trade or difficult art; and thus to the end of the book, article after article, each giving some new, valuable, and pleasing instruction, while the whole is suitably embellished with engraved representations of the things described. Surely an hour spent in this way will not only pass agreeably, but all will be benefited; they will be improved by the exercise, probably every member of such a family will know something he did not know before; and even without much advantage of school education, the children of this family would grow up to be intelligent, refined, and respectable members of society. We throw out these suggestions for the benefit of the families into which this work may find admission. But there may be individuals who are not so fortunate as to belong to families that feel an interest in such culture as we have spoken of. Let not such persons, therefore, despond. If any young person will diligently improve his winter evenings by himself, he will soon be abundantly compensated by the acquisition of a fund of knowledge which no pecuniary consideration would induce him to part with.

**CHILBLAINS.** J. B.—Put the hands and feet once a week into hot water, in which two or three handfuls of common salt have been thrown; this is a certain preventive as well as a cure.

**WARTS.** A. F.—Take a cake of dry pipe-clay, and scrape a little from it, then rub the wart or warts well with it four or six times a day until they disappear.

**MORSE EXERCISE.** A. R.—This is very good, and in some particular cases, remarkably useful; but, like every single form of exercise, it is too partial in its operation, calling into play only a few comparatively of the muscles in the body. It should consequently be combined with walking, the use of the dumb-bells, &c.

**NEEDLES AND PINS.** R. O.—These were in common use during the reign of Elizabeth. The making of the former was commenced in 1566, by Gouse, a German. Pins were known in Henry the Eighth's reign, and afforded the ladies a convenient substitute for ribbons, loop-holes, tags, clasps, and skewers made of wood, brass, silver, and gold.

**CURE FOR A COUGH.** J. F. H.—Half an ounce of marsh-mallow root half an ounce of liquorice root, both shred fine; boil in a pint and a half of water until reduced to a pint. Strain it, and sweeten to the taste with brown sugar-candy. Take half a teaspoonful in the same quantity of new milk, three times a day, particularly fasting, and the last thing before going to bed.

**REPLIES TO CORRESPONDENTS.** Matthew.—We are obliged to our correspondent for his friendly suggestion in this respect. We cannot, however, pledge ourselves to give publicity to all the questions forwarded to us for solution. Those only which would interest, and prove useful to our readers generally, must claim our attention. We have neither time nor space to satisfy inquiries of mere individual interest.

**SPONGE BISCUITS.** J. B.—Beat the yolks of twelve eggs for half an hour; then put in a pound and a half of beaten sifted sugar, and whisk it until it rises in bubbles; beat the whites to a strong froth, and whisk them well with the sugar and yolks; work in fourteen ounces of flour, with the rinds of two lemons grated. Bake them in tin moulds buttered, in a quick oven for an hour; before they are baked sift a little fine sugar over them.

**SMITHFIELD MARKET.** S. B.—Our correspondent, who is somewhat late in the field on this subject, enlarges upon the intensely proceedings which constantly occur in that great public eyecore of London—Smithfield Market. Obligated by the nature of his business to pass daily through that thoroughfare, he is the witness to scenes of reckless cruelty, to which the Torero of Madrid is but a faint shadow. "I observed a few days back," he writes, "one bull, who was evidently disgusted with the filthy quarters in which he had been introduced, after having lost the length of a savoury pasturage in the country, make a determined bolt for liberty. The scene that ensued baffles description. Dante might have made it a subject for his *Divine Comedy*. It appeared to be a positive recreation to the drivers, who raised full cry in chase with all the ardour of red-hot *McKenzies*; while the spectators of all this sport, (I) displayed equal agility in getting out of the bull's way. This exciting contest lasted some time, until the poor animal, goaded and panting, was brought back in triumph by his unscrupulous attendants, and the line of passengers became again interrupted."—We cordially agree with S. B. in the remarks he deduces from these facts. Smithfield is certainly the last place which a lover of nature would select as a fit spot for

CONTEMPLATING THE BEAUTIES OF THE ANIMAL KINGDOM

**JESUIT'S BARK.** W. S.—Jesuit's Bark (*Cortex Peruvianus*) called by the Spaniards, Fever-wood, was discovered, it is said, by a Jesuit about 1535. Its virtues were not generally known till 1635, when it cured of fever the lady of the viceroys at Peru. The Jesuits gave it to the sick, and hence its name. It sold at one period for its weight in silver. It was introduced into France as a medicine in 1649; and cured Louis XIV. of fever when he was dauphin of France. This bark came into general use in 1680.

**BRIBERY.** J. N. H.—In England it is an indictable offence to bribe persons in the administration of public justice. Thomas de Weyland, a Judge, was banished the land for bribery, in 1288; he was Chief Justice of the Common Pleas. William de Thorpe, Chief Justice of the King's Bench, was hanged for bribery in 1351. Another Judge was fined £20,000 for the like offence, 1616. Mr. Walpole, secretary-at-war, was sent to the Tower for bribery in 1712. Lord Strangford was suspended from voting in the Irish House of Lords, for soliciting a bribe, January 1781.

**GOOSE AT MICHAELMAS.** M. S.—This custom has been thus accounted for, and though the fact has been contradicted by some, it is yet pertinaciously maintained by others. Queen Elizabeth, on her way to Tilbury Fort, on the 29th September, 1588, dined at the ancient seat of Sir Neville Unfreyville, near that place; and among the good and substantial dishes which the knight had provided for her entertainment, were two fine geese. The queen ate heartily, and asking for a bumper of Burgundy, drank, "Destruction to the Spanish Armada!" At the moment that she returned the tankard to the knight, news arrived that the Spanish fleet had been destroyed by a storm. She immediately took another bumper, and was so much pleased with the event, that every year after on that day she had a goose served up. The court made it a custom, and the people the fashion, ever since.

**WIG.** R. J. B.—We suspect that our correspondent has some interested motive in addressing to us the eloquent eulogies of his self-ventilating imperishable wigs. We must inform him, however, that Nature, the best of all wig-makers, has been friendly to us in this particular, and we can gaze without envy on the artificial grass beholders to art. Not that we mean to decry the advantages of such a head-dress; far from it, we even inscribe on our pages the following anecdote to prove its value and utility:—While Count Laborde, the French traveller, was amongst the Arabs, he saw a very fine horse which he wished to purchase, but while bargaining, the Arabs thronged round and jostled him rudely. He drew his sword; but as quick as his ready steel flashed, he was assailed by the mob, and borne back by numbers, was on the point of being killed. Burning with rage, he plucked his head-dress, and with it his wig, and threw it among his assailants. The Arabs, on seeing this, fell back in wonder and fear, exclaiming, "Ya wallah! The Caffre has pulled his head off! God help us! God pardon us!" This gave time to appease all anger; the Count replaced his wig, which had proved to him a better defence than the triple shield of Ajax, or the petrifying head of Medusa; and he continued on his way unharmed. But certainly, if the wig made by our correspondent cannot inspire the brains they cover with better poetry than the following lines for a sign-board, which are sent for our approval, they might just as well remain on their blocks:—

"I tis with wig,  
Both small and big,  
Gents—walk inside and try 'em;  
And if for you,  
They do not do,  
Why, then—you needn't buy 'em."

**HINTS ON PICKLING.** W. E.—Do not keep pickles in common earthen-ware, as the glazing contains lead, and combines with the vinegar. Vinegar for pickling should be sharp, though not the sharpest kind, as it injures the pickles. If you use copper, bell-metal, or brass vessels, for pickling, never allow the vinegar to cool in them, as it then is poisonous. Add a teaspoonful of alum, and a teaspoon of salt to each three gallons of vinegar, and the

pickling. ~~except being only at room or room~~  
ware. Anything that has held grease will spoil pickles. Stir pickles occasionally, and if there are soft ones take them out and scald the vinegar, and pour it hot over the pickles. Keep enough vinegar to cover them well. If it is weak, take fresh vinegar and pour on hot. Do not boil vinegar or spice above five minutes.

# THE HOME COMPANION:

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 8.—Vol. I.]

SATURDAY, FEBRUARY 21, 1852.

[PRICE ONE PENNY.]

## TO THE WIND

Oh, Solemn Wind!  
Thou beautiful and free!  
Proudly, exultingly  
Roaming the world—  
With wild harmonious swell  
Of wing invisible,  
At will unfurled—  
How wondrous is thy power,  
At morn or evening hour,  
Or midnight heard;  
Like sweep and swell of waves,  
Or harps in secret caves,  
Viewlessly stirred!  
Stealing into the heart,  
Reading with charmed art  
Some hidden line;  
With angel melodies  
Lulling the soul to bliss,  
And peace divine!  
Kissing the tear-stained cheek,  
As with affection's neck  
Of loved ones nigh;  
Fanning the sufferer's brow,  
Answering each accent low,  
With plaintive sigh!

Thou sportive Wind!  
Waving each scented cup,  
Flinging its dew-drops up  
In fragrant rain;  
Fringing with pearls the wave,  
Lilting o'er grassy grave,  
For sound in vain!  
Making delicious shade  
With golden light inlaid  
As dense thoughts away,  
Till minute leaves unfold  
In flickering dreamy gold  
Dropping away,  
Wafting the bee along,  
Catching its murmured song;  
In shadowy dells,  
Rocking the wild bird's nest,  
And butterfly to rest  
In scented bells.

Ranging the solemn wood  
Whispering to Solitude  
Mysterious dreams;  
Stirring the forest-tops,  
Scattering the silvery dews  
From singing streams,  
Tossing the glossy leaves,  
Sporting round vine-clad eaves,  
With dreamy song;  
Setting each withered leaf  
To music sad and low,  
Rustling along,  
Wafting the winged seed  
O'er dewy vale and mead,  
And wastes untrod,  
Filling all space with sound,  
Deep, mighty and profound,  
Thy minds of God!

Mysterious Wind!  
Where is thy dwelling-place;  
Whence comest thou apace  
Sudden and strong;  
Like some primeval word  
Down the still ages heard  
From seraph throng?  
Flitting along the calm,  
With thy deep-sound of pain,  
Or hallowing sigh;  
Or with low stifled breath,  
And hush that tells of Death  
And mystery?  
A presence undefined,  
Filling with awe the mind,  
And reverent dread;  
Everywhere yet unseen,  
Pressing our thoughts between  
With mystic tread,  
Bearing the soul with might  
Far through the Infinite,  
Resistlessly;  
Glorious thou art, sublime,  
Image and type in Time  
Of Deity!

Drifts of sunshine from that season of blissful ignorance often come back, as lightly

As the winds of the May-time flow,  
And lift up the shadows brightly  
As the daffodil lifts the snow—

the shadows that have gathered with the years! It is pleasant to have them thus swept off—to find myself a child again—the crown of pale pain and sorrow that presses heavily now, unfelt, and the graves that lie lonesomely along my way, covered up with flowers—to feel my mother's dark locks fall upon my cheek, as she teaches me the lesson or the prayer—to see my father, now a sorrowful old man, whose hair has thinned and whitened almost to the limit of threescore years and ten, fresh and vigorous, strong for the race—and to see myself a little child, happy with a new hat and a pink ribbon, or even with the string of briar-buds that I called coral. Now I tie it about my neck, and now around my forehead, and now twist it among my hair, as I have somewhere read great ladies do their pearls. The winds are blowing the last yellow leaves from the cherry-tree—I know not why; but it makes me sad. I draw closer to the light of the window, and slyly peep within—all is quiet and cheerful; the logs on the hearth are blazing; my father is mending a bridle-rein, which "Traveller," the favourite riding-horse, snapt in two yesterday, when frightened at the elephant that (covered with a great white cloth), went by to be exhibited at the coming show—my mother is hemming a ruffle, perhaps for me to wear to school next quarter—my brother is reading in a newspaper, I know not what, but I see, on one side, the picture of a bear: let me listen—and flattening my cheek against the pane, I catch his words distinctly, for he reads loud and very clearly—it is an improbable story of a wild man who has recently been discovered in the woods of some far-away island—he seems to have been there a long time, for his nails are grown like claws, and his hair, in rough and matted strings, hangs to his knees; he makes a noise like something between the howl of a beast and a human cry, and, when pursued, runs with a nimbleness and swiftness that baffles the pursuers, though mounted on the fleetest of steeds, urged through brake and bush to their utmost speed. When first seen, he was sitting on the ground and cracking nuts with his teeth; his arms are corded with sinews that make it probable his strength is sufficient to strangle a dozen men; and yet on seeing human beings, he runs into the thick woods, giving such a hideous scream the while, as make his discoverers clasp their hands to their ears. It is suggested that this is not a solitary individual, become wild by isolation, but that a race exists, many of which are perhaps larger and of more terrible aspects; but whether they have any intelligible language, and whether they live in caverns of rocks, or in trunks of hollow trees, remains for discovery by some future and more daring explorers.

My brother puts down the paper and looks at the picture of the bear. "I would not read such foolish stories," says my father, as he holds the bridle up to the light, to see that it is neatly mended; my mother breaks the thread which gathers the ruffle; she is gentle and loving, and does not like to hear even implied reproof, but she says nothing; little Harry, who is playing on the floor, upsets his block-house, and my father, clapping his hands together, exclaims, "This is the house that Jack built!" and adds, patting Harry on the head, "Where is my little boy? this is not he, this is a little carpenter; you must make your houses stronger, little carpenter!" But Harry insists that he is the veritable little Harry, and no carpenter, and hides his tearful eyes in the lap of my mother, who assures him that he is her own little boy, and soothes his childish grief by buttoning on his neck the ruffle she completed; and off he scampers again, building a new house, the roof of which he makes very steep, and calls it grandfather's house, at which all laugh heartily.

While listening to the story of the wild man I am half afraid, but now, as the joyous laughter rings out, I am ashamed of my fears, and skipping forth, I sit down on a green ridge which cuts the door-yard diagonally, and where, I am told, there was once a fence. Did the rose-bushes and lilacs and flag that are in the garden, ever grow here? I think—no, it must have been long while ago, if indeed the fence were ever here, for I can't conceive possibility of such change; and then I fall to arranging my string of briar-buds into letters that will spell some name, now my own, and now that of some one I love. A dull strip of cloud, from which the hues of pink and red and gold have but lately faded out, hangs low in the west; below is a long reach of withering woods—the grey sprays of the beech clinging thickly still, and the gorgeous maples shooting up here and there like sparks of fire among the darkly magnificent oaks and silvery columned sycamores—the grey and murmuring twilight gives way to darker shadows and a deeper hush.

I hear, far away, the beating of quick hoof-strokes on the pavement; the horseman, I think to myself, is just coming down the hill through the thick woods beyond the bridge. I listen close, and presently a hollow rumbling sound indicates that I was right; and now I hear the strokes more faintly

## THE OLD MAN'S DEATH:

OR, A CHILD'S FIRST SORROW

BY ALICE CARRY.

CHANGE is the order of nature; the old makes way for the new; over the perished growth of last year brighten the blossoms of this. What changes are to be counted, even in a little noiseless life like mine! How many graves have grown green; how many locks have grown grey; how many, lately young, and strong in hope and courage, are faltering and fainting; how many hands that reached eagerly for the roses are drawn back bleeding and full of thorns; and, saddest of all, how many hearts are broken! I remember when I had no sad memory, when I first made room in my bosom for the consciousness of death.

We have gained the world's cold wisdom now,  
We have learned to pause and fear;  
But where are the living founts whose flow  
Was a joy of heart to hear?

I remember the twilight, as though it were yesterday—grey, and dim, and cold, for it was late in October, when the shadow first came over my heart that no subsequent sunshine has ever swept entirely away. From the window of our cottage home streamed a column of light, in which I sat stringing the red berries of the briar rose.

I had heard of death, but regarded it only with that vague apprehension which I felt for the demons and witches that gather poison-herbs under the new moon, in fairy forests, or strange harmless travellers with wands of the willow, or with vines of the wild grape or ivy. I did not much like to think about them, and yet I felt safe from their influence.

There might be people, somewhere, that would die some time; I didn't know, but it would not be myself, or any one I knew. They were so well and so strong, so full of joyous hopes, how could their feet falter, and their smiles grow dim, and their fainting hands lay away their work, and fold themselves together? No, no—it was not a thing to be believed.

he is climbing the hill that slopes directly away from me; but now, again, I hear distinctly—he has almost reached the hollow below me—the hollow that in summer is starry with dandelions, and now is full of brown nettles and withered weeds—he will presently have passed—where can he be going, and what is his errand? I will rise up and watch. The cloud passes from the face of the moon, and the light streams full and broad on the horizon—he tightens his rein, and looks eagerly towards the house—surely I know him, the long red curls streaming down his neck, and the straw hat, are not to be mistaken—it is Oliver Hillhouse, the miller, whom my grandfather, who lives in the steep-roofed house, has employed three years—longer than I can remember! He calls to me, and I laughingly bound forward, with an exclamation of delight, and put my arm about the slender neck of his horse, that is clamping the bit and pawing the pavement, and I say, "Why do you not come in?"

He smiles, but there is something very ominous in his smile as he hands me a folded paper, saying, "Give this to your mother;" and, gathering up his reins, he rides hurriedly forward. In a moment I am in the house, for my errand—"Here, mother, is a paper which Oliver Hillhouse gave me for you." Her hand trembles as she receives it, and waiting timidly near, I watch her as she reads—the tears come, and without speaking a word she hands it to my father.

That night there came upon my soul the shadows of an awful fear; sorrowful moans and plaints disturbed my dreams that have never since been wholly forgot. How cold and spectral-like the moonlight streamed across my pillow; how dismal the chirping of the cricket on the hearth; and how more than dismal the winds among the naked boughs that creaked against my window. For the first time in my life I could not sleep, and I lounged for the light of the morning. At last it came, whitening up the east, and the stars faded away, and there came a flush of crimson and purple fire, which was presently pushed aside by the golden disk of the sun. Daylight without, but within there was thick darkness still.

I kept close about my mother, for in her presence I felt a shelter and protection that I found no where else.

"Be a good girl till I come back," she said, stooping and kissing my forehead; "mother is going away to-day, your poor grandfather is very sick."

"Let me go, too," I said, clinging close to her hand. We were soon ready; little Harry pouted his lips and reached out his hands, and my father gave him his pocket-knife to play with; and the wind blowing the yellow curls over his eyes and forehead, he stood on the porch looking eagerly while my mother turned to see him again and again. We had before us a walk of perhaps two miles—northwardly along the turnpike nearly a mile, next, striking into a grass-grown road that crossed it, in an easterly direction nearly another mile, and then turning northwardly again, a narrow lane, bordered on each side by old and decaying cherry-trees, led us to the house, ancient fashioned, with high steep gables, narrow windows, and low, heavy chimneys of stone. In the rear was an old mill, with a plank sloping from the door-sill to the ground, by way of step, and a square open window in the gable, through which, with ropes and pulleys, the grain was drawn up.

This mill was an especial object of terror to me, and it was only when my Aunt Carry led me by the hand, and the cheerful smile of Oliver Hillhouse lighted up the dusky interior, that I could be persuaded to enter it. In truth it was a lonesome sort of place, with dark lotts, and curious bins, and ladders leading from place to place; and there were cat, creeping stealthily along the beams in wait for mice on the walls, and, as sometimes happened, the clay nest should be loosened from the rafters, and the whole trouble minously down. I used to wonder that Aunt Carry was not afraid in the old place, with its eternal rattle, and its great dusty wheel moving slowly round and round, beneath the steady tread of the two sober horses that never gained a hair's breadth for their pains; but, on the contrary, she seemed to like the mill, and never failed to show me through all its intricacies, on my visits. I have unravelled the mystery now, or rather, from the recollections I still retain, have apprehended what must have been clear to older eyes at the time.

A forest of oak and walnut stretched along this extremity of the farm, and on either side of the improvements (as the house and barn and mill were called) shot out two dark firs, completely cutting off the view, save toward the unfrequented road to the south, which was traversed mostly by persons coming to the mill, for my grandfather made the flour for all the neighbourhood round about, besides making corn meal for Johnny cakes, and "chops" for the cows.

He was an old man now, with a tall, athletic frame, slightly bent, thin locks white as the snow, and deep blue eyes full of fire and intelligence, and after long years of uninterrupted health and useful labour, he was suddenly stricken down, with no prospect of recovery.

"I hope he is better," said my mother, hearing the rumbling of the mill-wheel. She might have known my grandfather would permit no interruption of the usual business on account of his illness; the neighbours, he said, could not do without bread because he was sick, nor need they all be idle, waiting for him to die; when the time drew near, he would call them to take his farewell and his blessing, but till then let them sew and spin, and prepare dinner just as usual, so they would please him best. He was a stern man; even his kindness was unobtrusive and unflattering, and I remember his making toward me no manifestation of fondness, such as grandchildren usually receive, save once, when he gave me a bright red apple, without speaking a word till my timid thanks brought out his "Save your thanks for something better." The apple gave me no pleasure, and I even slipped into the mill to escape from his cold, forbidding presence.

Nevertheless, he was a good man, strictly honest and upright in all his dealings, and respected—almost revered—by everybody. I remember

once, when young Winters, the tenant of neighbor Granger's farm, who paid a great deal too much for his ground, as I have heard my father say, came to mill with some withered wheat, my grandfather filled up the sacks out of his own flour, while Tommy was in the house at dinner. That was a good deed, but Tommy Winters never suspected how his wheat happened to turn out so well.

As we drew near the house, it seemed to me more lonesome and desolate than it ever looked before. I wished I had stayed at home with little Harry. So eagerly I noted everything, that I remember to this day, that near a trough of water, in the lane, stood a little surly-looking cow, of a red colour, and with a white line running along her back. I had gone with Aunt Carry often when she went to milk her, but to-day she seemed not to have been milked. Near her was a black and white heifer, with sharp, short horns, and a square board tied over her eyes; two horses, one of them grey, and the other sorrel, with a short tail, were reaching their long necks into the garden, and browsing from the currant bushes. As we approached they trotted forward a little, and one of them—half playfully, half angrily—bit the other on the shoulder, after which they returned quietly to their cropping of the bushes, heedless of the voice that from across the field was calling to them.

A flock of turkeys were sunning themselves about the door, for no one came to scare them away; some were black, and some speckled, some with heads erect and tails spread, and some nibbling the grass; and with a gabbling noise, and a staid and dignified march, they made way for us. The smoke arose from the chimney in blue, graceful curls, and drifted away to the woods, the dead morning-glory vines had partly fallen from the windows, but the hands that tended them were grown careless, and they were suffered to remain blackened and void of beauty, as they were. Under these, the white curtain was partly put aside, and my grandmother, with the speckled handkerchief pinned across her bosom, and her pale face—a shade paler than usual—was looking out; and seeing us, she came forth, and in answer to my mother's look of inquiry, shook her head, and silently led the way in. The room we entered had some home-made carpet, about the size of a large tablecloth, spread in the middle of the floor, the remainder of which was scoured very white; the ceiling was of walnut-wood, and the side-walls were white-washed; a table, an old-fashioned desk, and some wooden chairs, comprised the furniture. On one of the chairs was a leather cushion; this was set on one side, my grandmother neither offering it to my mother, nor sitting in it herself; while, by way of composing herself, I suppose, she took off the black ribbon with which her cap was trimmed. This was a more simple process than the reader may fancy—the trimming consisting merely of a ribbon, always black, which she tied around her head after the cap was on, forming a bow and two ends just above the forehead. Aunt Carry, who was at what is termed an even disposition, received us with her usual cheerful demeanour, and then, reseating herself comfortably near the fire, resumed her work—the netting of some white fringes.

I liked Aunt Carry, because she always took especial pains to entertain me, showing me her patchwork, taking me with her to the cow-yard and dairy, as also to the mill—though in this last I fear she was a little selfish; however, that made no difference to me at the time, and I have always been sincerely grateful to her; children know more, and want more, and feel more, than people are apt to imagine.

On this occasion, she called me to her, and tried to teach me the mystery of netting, telling me I must get my father to buy me a little bureau, and then I could net fringes and make a nice cover for it. For a little time I thought I could, and arranged in my mind where it should be placed, and what should be put into it, and even went so far as to inquire how much fringe she thought would be necessary. I never attained to much proficiency in the netting of fringes, nor did I ever get the little bureau, and now it is quite reasonable to suppose I never shall.

Presently my father and mother were shown into an adjoining room, the interior of which I felt an irresistible desire to see, and by stealth I obtained a glimpse of it before the door closed behind them. There was a dull brown and yellow carpet on the floor, and on the bed, on which was a blue and white coverlid, stood a high-backed wooden chair, over which hung a towel, and on the bottom of which stood a patcher, of an unique pattern. I know not how I saw this, but I do, and perfectly remember it, notwithstanding my attention was in a moment completely absorbed by the sick man's face, which was turned towards the opening door—pale, livid, and ghastly. I trembled, and was so motionless; the rings beneath the eyes, which had always been deeply marked, were now almost black, and the blue eyes within looked glassy and cold and terrible. The expression of agony on the lips (for his disease was one of a most painful nature) gave place to a sort of smile; and the hand, twisted among the grey locks, was withdrawn, and extended to welcome my parents, as the door closed. That was a fearful moment; I was near the dark steep edges of the grave; I felt, for the first time, that I was mortal too, and I was afraid.

Aunt Carry put away her work, and taking from a nail in the window-frame a brown muslin sun bonnet, which seemed to me of half-a-yard in depth, she tied it on my head, and then clasped her hands as she looked into my face, saying, "Doopeep!" at which I half laughed and half cried; and, making provision for herself in grandmother's bonnet, which hung on the opposite side of the window, and was similar to mine, except that it was, perhaps, a little larger, she took my hand and we proceeded to the mill. Oliver, who was very busy, on our entrance, came forward, as Aunt Carry said, by way of introduction—"A little visitor I've brought you," and arranged a seat on a bag of meal for us, and, taking off his straw hat, pushed the red curls from his low, white forehead, and looked bewildered and anxious.

"It's quite warm for the season," said Aunt Carry, by way of breaking

silence, I suppose. The young man said "Yes," abstractedly, and then asked if the rumble of the mill was not a disturbance to the sick-room, to which Aunt Carry answered, "No, my father says it is his music."

"A good old man," said Oliver, "he will not hear it much longer, and then"—even more sadly—"everything will be changed." Aunt Carry was silent, and he added, "I have been here a long time, and it will make me very sorry to go away, especially when such trouble is about you all."

"Oh, Oliver," said Aunt Carry, "you don't mean to go away?"

"I see no alternative," he replied; "I shall have nothing to do; if I had gone a year ago it would have been better."

"Why?" asked Aunt Carry; but I think she understood why, and Oliver did not answer directly, but said, "Almost the last thing your father said to me was, that you should never marry any one who had not a house and twenty acres of land; if he has not, he will exact that promise of you, and I cannot ask you not to make it, nor would you refuse him if I did; I might have owned that long ago, but for my sister (she had lost her reason) and my lame brother, whom I must educate to be a schoolmaster, because he never can work; and my blind mother—but God forgive me! I must not, and do not complain; you will forget me, before long, Carry; and somebody who is richer and better, will be to you all I once hoped to be, and perhaps more."

I did not understand the meaning of the conversation at the time, but I felt out of place some way, and so, going to another part of the mill, I watched the sifting of the flour through the snowy bolter, listening to the rumbling of the wheel. When I looked around I perceived that Oliver had taken my place on the meal-bag, and that he had put his arm around the waist of Aunt Carry in a way I did not much like.

Great sorrow, like a storm, sweeps us aside from ordinary feelings, and we give our hearts into kindly hands—so cold, and hollow, and meaningless seem the formulae of the world. They had probably never spoken of love before, and now talked of it as calmly as they would have talked of anything else; but they felt that hope was hopeless; at best, their union was deferred, perhaps, for long years; the future was full of uncertainties. At last their tones became very low, so low I could not hear what they said; but I saw that they looked very sorrowful, and that Aunt Carry's hand lay in that of Oliver as though he were her brother.

"Why don't the flour come through?" I said, for the sifting had become trimmer and lighter, and at length quite ceased. Oliver smiled faintly as he arose, and saying, "This will never buy the child a rock"—poured a sack of wheat into the hopper, so that it nearly ran over. Seeing no child but myself, I supposed he meant to buy me a new frock, and at once resolved to put it in my little bureau, if he did.

"We have bothered Mr. Hillhouse long enough," said Aunt Carry, taking my hand, "and will go to the house, shall we not?"

I wondered why she said "Mr. Hillhouse," for I had never heard her say so before; and Oliver seemed to wonder, too; for he said reproachfully, laying particular stress on his own name. "You don't bother Mr. Hillhouse, I am sure, but I must not insist on your remaining if you wish to go."

"I don't want to insist on my staying," said Aunt Carry, "if you don't want to, and I see you don't," and fitting in out to the hopper, plunk, that I went beneath us, we descended.

"Carry," called a voice behind us, but she neither answered nor looked back, but seeming to feel a sudden and expressive frown. I then took me up in her arms, though I was almost too heavy for her to lift, and kissing me over and over, and I was light as a feather, at which she laughed as though neither sorrowful nor lacking for employment.

This little passage I could never precisely explain, aside from the reason that "the course of true love never did run smooth." Half-an-hour after we returned to the house, Oliver presented himself at the door, saying, "Miss Caroline, shall I trouble you for a cup to get a drink of water?" Carry accompanied him to the well, where they lingered some time, and when she returned, her face was sunshiny and cheerful as usual.

The day went slowly by, dinner was prepared, and removed scarcely tasted; Aunt Carry wrought at her fringe, and grandmother moved softly about, preparing teas and cordials.

Toward sunset the sick man became easy, and expressed a wish that the door of his chamber might be opened, that he might watch our occupations and hear our talk. It was done accordingly, and he was left alone. My mother smiled, saying she hoped he might yet get well, but my father shook his head mournfully, and answered, "He wishes to go without our knowledge." He made amplest provision for his family always, and I believe had a kind nature, but he manifested no little fondnesses, nor did he wish caresses for himself. Contrary to the general tenor of his character, was a love of quiet jests, that remained to the last. Once, as Carry gave him some drink, he said, "You know my wishes about your future, I expect you to be mindful."

I stole to the door of his room in the hope that he would say something to me, but he did not; and I went nearer, close to the bed, and timidly took his hand in mine; how damp and cold it felt! yet he spoke not, and climbing upon the chair, I put back his thin locks, and kissed his forehead. "Child, you trouble me," he said, and these were the last words he ever spoke to me.

The sun sank lower and lower, throwing a beam of light through the little window, quite across the carpet, and now it reached the sick man's room, climbed over the bed and up the wall; he turned his face away, and seemed to watch its glimmer upon the ceiling. The atmosphere grew dense and dusky, but without clouds, and the orange light changed to a dull, lurid red, and the dying and dead leaves dropped silently to the ground, for there was no wind, and the fowls flew into the trees, and the grey moths came from beneath the bushes and fluttered in the waning light. From the hollow tree by the mill came the bat, wheeling and flitting blindly about, and once or twice its wings struck the window of the sick man's chamber. The last sun-

light faded away at length, and the rumbling of the mill-wheel was still; he has fallen asleep in listening to its music.

Then came the funeral. What a desolate time it was! All down the lane were waggons, and carriages, and horses, for everybody that knew my grandfather had come to pay him the last honours. "We can do him no further good," they said, "but it seemed right that we should come." Close by the gate waited the little brown waggon to bear the coffin to the grave—the waggon in which he was used to ride while living. The heads of the horses were drooping, and I thought they looked consciously sad.

The day was mild, and the doors and windows of the old house stood all open, so that the people without could hear the words of the preacher. I remember nothing he said; I remember hearing my mother sob, and seeing my grandmother with her face buried in her hands, and seeing Aunt Carry sitting erect, her face pale but tearless, and Oliver near her, with his hands folded across his breast, save once or twice when he lifted them to brush away tears.

I did not cry, save from a frightened and strange feeling, but kept wishing that we were not so near the dead, and that it was another day. I tried to push the reality away with thoughts of pleasant things—in vain. I remember the hymn, and the very air in which it was sung—

"Ye fearful souls fresh courage take,  
The clouds ye so much dread  
Are big with mercy, and shall break  
In blessings on your head.  
Blind unbelief is sure to err,  
And scan His works in vain;  
God is His own interpreter,  
And He will make it plain."

Near the door, blue flagstones were laid, bordered with a row of shrubberies and trees, with lilacs, and roses, and pears, and peach-trees, which my grandfather had planted long ago, and here, in the open air, the coffin was placed, and the white cloth removed and folded over the lid. I remember how it shook and trembled as the gust came moaning from the woods, and died off over the next hill, and that two or three withered leaves fell on the face of the dead, which Oliver gently removed, and brushed aside a yellow-winged butterfly that hovered near.

The friends hung over the smiling corpse till they were led weeping one by one away; the hand of some one rested for a moment on the forehead, and then the white cloth was replaced, and the lid screwed down. The coffin was placed in the brown waggon, with a sheet folded about it, and the long train moved slowly to the woodland burial-ground, where the words "dust to dust" were followed by the rattling of the earth, and the sunset light fell there a moment, and the dead leaves blew across the smoothly-shapen mound.

When the will was read, Oliver found himself heir to a fortune, the mill and the hamstead, and half the farm—provided he married Carry, which I suppose he did, for though I do not remember the wedding, I have had an Aunt Caroline Hillhouse almost as long as I can remember. The lunatic sister was sent to an asylum, where she sung songs about a faithless lover, till death took her up and opened her eyes in heaven. The mother was brought home, and she and my grandmother lived at their ease, and sat in the corner, and told stories of ghosts, and wretches, and marriages, and deaths, for long years. Peace to their memories! for they have both gone home; and the lame brother is teaching school—in his leisure playing the flute and reading Shakespeare.

Years have come and separated me from my childhood, from its innocence and blessed unconsciousness of the dark, but often awakens the memory of its first sorrow.

Death is less terrible to me now.

## BOLD ROBIN.

BY MARY BENNETT.

Now the biting frost is come,  
And the trees are white with snow,  
Bitter cold your Robin's home;  
How he lives I do not know.  
Robin is a gallant bird;  
Robin's eye is bold and bright;  
Since the storm last night we heard  
Must have filled him with affright.  
But he looks as blithe as ever,  
Hopping to the cottage door;  
Gallant Robin, he will never  
Furtively his griefs deplore.  
Dauntless Robin, why not stay  
Hungry, chattering at home,  
Pining for a better day,  
Murmuring until it come.  
No, not he; at break of dawn  
He is on the cottage sill,  
Or hopping on the frozen lawn,  
Looking bold and merry still.

## ROBIN:

Good morning, children, Robin is come  
From sleeping in the snow,  
For every bush, and tree, and sod,  
Is frozen, you must know.  
And where shall Robin his breakfast get,  
If not at your kind door?  
So throw him out some crumbs, I pray,  
You will have all the more.  
And when a bit of sunshine breaks  
O'er the bare trees tall,  
Oh! listen how I will sing to you,  
Thanking you for all.

## CHILDREN:

Yes, Robin, you'll not plead in vain,  
This food is but your due;  
Here's plenty for you—come again;  
Courage we learn from you.

**BUCCANERS.**—These piratical adventurers, chiefly French, English, and Dutch, commenced their depredations on the Spanish coast of America, soon after the latter had taken possession of that continent and the West Indies. The principal commanders of the first expedition were Montbar, Colonis, Basco, and Morgan, who murdered thousands, and plundered millions. The expedition of Van Horn, of Ostend, was undertaken in 1608; that of Gramont in 1685; and that of Pointis in 1697.

## THE MAN WHO NURSES THE BABY.

LITTLE children, lonely little ones, white-souled buds of existence, fair dovelets of heaven's own empyrean: happy the man of the world who, turning his back on scenes of heartless frivolity and falsely alluring pleasure, seeks his dearest enjoyments among them, in their purifying association, for "of such is the kingdom of heaven."

Would, for the sake of you, my dear reader, I were endowed with a pencil embodying the delicate grace of Coreggio, and a palette spread with the magic tints of Titian, that I might worthily portray the excellencies and virtues of this noblest and most admirable of his kind, the man who nurses the baby.

"Who is he?" demands a fair damsel, in dulcet accents.

Oh, that must remain a secret, for a modest, modest person is the one in question; but a little patience, and I will enlighten you as far as the bounds of prudence admit of enlightenment.

"Paying a visit the other afternoon to a friend who resides somewhere in the precincts of ———, I, after sojourning for a brief interval in the drawing-room, was invited by the lady of the mansion up to her boudoir, which, entering rather unexpectedly, the first object my gaze lit upon was the lord of the household, esconced very comfortably on a low couch by the fire, with the baby on his lap, and wearing, meanwhile, an air the most placid and maternally in the world.

"Ah, this is pretty employment for you, Mr. H——, is it not?" quoth I, derisively.

"Yes, indeed," chimed in his wife; "he always will take the baby when he comes home from the city."

But while her nonchalant tones seemed to convey the impression that she but lightly appreciated the treasure of a husband she possessed, it was easy to discover from her beaming eye and self-gratulatory manner, that she considered him a very model of men—a pattern for extensive imitation.

The man who nurses the baby, in utter scorn of my continued raillery, only the more fondly caressed the magnificent little fellow, and, sweeping his eyes proudly over a circle of as lovely home-flowers as need to grace a fireside, from the hylthesome small maiden just hovering over the verge of her teens, down to the ringletted, frolicksome fairy of some three summers, who, nestling close to her mother's side, darted at me, from her violet peepers, shy, curious glances, smiled his reply—a mute response far more eloquent than words.

Little children are the keenest physiognomists imaginable, for they have an infallible instinct which teaches them whom to approach or avoid, and to distinguish, almost at first sight, a kindly and sincere nature from a morose and ungenial one. To the meek simplicity of a little child must return the haughtiest and loftiest spirit of man, ere it may become meet for the kingdom of God. The man who loves children, and is successful in winning their trust and affection, still catches through the clouds and darkening shades of perturbed life, bright glimpses of

"The heaven that lay about him in his infancy;"

and yet folds closely above his heart, even amidst the soils and tatters of his out-grown innocence, a small remnant of that glittering raiment of immaculate purity which robed the soul of the first infant when cradled, a tender nursing, in mother Eve's arm.

"Umph! I wonder whether father Adam ever nursed the baby?" methinks I hear muttered in tones of deep incredulous bass.

What a question! Why, my good sir, of course he did; and a beautiful sight it must have been to have seen that first family together. We will imagine a scene in that era; a bower, gorgeously draped with a profusion of fragrant blossoming vines, and furnished with an enamelled and flower-broidered carpet of luxurious velvet grass. Inside behold the majestic pair; Adam, reposing after the toils of the day, with the infant Abel in his arms, and graceful Eve kneeling beside him, playfully waving, just beyond the tiny grasp of the smiling little one, a bunch of rich, luscious, purple grapes. Not far off flows a picturesque river, and, straying on its gently sloping margin, may be seen young Cain, with curling locks and sunny brow, as yet unfurrowed with the scowl of unhallowed passions, gathering for his baby brother a nosegay of the superb lilies and other rare flowers that fringe it. The melodious ripple of the stream mingles faintly with the sweet glee of Abel as he welcomes, with a glad shout, the returning steps of his playmate. Sweet and placid picture!

Now, the creeping shades of evening, and the dew spangling each leaf and blossom, warn the sacred group that it is time to prepare for slumber. Philoel commences her vespertine hymn, and Adam, the baby still in his bosom, offers up his accustomed sacrifice of prayer and adoration to the Preserver of his happiness, the bestower of his wife and babes. That radiant band of angels, who have been bending with looks of love and admiration over the scene, now, ere their immortal eyes vanish from among the myriads of silver stars, pronounce a fervent Amen.

Let not for a moment be harboured the idea that my friend, the man who nurses the baby, is an effeminate or weak-minded individual! No! Nothing should be farther from the truth. Dignified in appearance is he, of portly and courteous mien, in tastes refined, and, withal, with a mercantile reputation that speaks well on 'Change.

Miss Bremer affirms that at no other time does a gentleman appear to such advantage as when presiding patriarchally in the bosom of his family. Certain it is, that a large majority of the more fascinating gentlemen one meets in society, are men of family. The man who reserves his sour moods for home—who regards up the spleen which he dared not wreak on strangers,

for the domestic circle—who slams the front door till the whole house quivers—who snatches off his beaver, and tears off his coat with a growl, and bounces into the room with a sharp snarl—who tosses poor Pussy off her comfortable cushion for sheer spite, and kicks Ponto till he fairly yells with pain; but, oh! oh! especially the man who never nurses the baby, is prepared to perpetrate any enormity whatever, and should be banished, with hue and cry, from the society of humanized beings. Mark him well; he is ripe for "treason, stratagems, and spoils; let no such man be trusted."

Therefore, all hail, to my friend! the man who nurses the baby, and does it, too, with such irresistible elegance; may he continue to flourish, until his crown blossoms like the almond tree. Much astonished will he be, in sooth, when, seizing on his favourite paper, the *Home Companion*, he finds himself and his modest merits immortalised in its delightful columns. But let him not blush, for right fortunate may he esteem himself, if, during the progress of life he earn no less honourable cognomen than this, the *Man who nurses the Baby!*

A. B.

## ODE TO AN OLD VIOLIN.

BY A POOR FIDDLER.

Torn,  
Worn,  
Oppressed, I mourn;  
Bad,  
Sad,

Three-quarters mad

Money gone,

Credit none;

Duns at door;

Half a score;

Wife in pain;

Twins again;

Others ailing;

Nurse a railing;

Billy whooping;

Hetty crouping;

Besides poor Joe

With foster'd toe.

Come, then, my Fiddle,

Come, my time worn friend,

With gay and brilliant sounds

Some sweet though transient solace end.

Thy polished neck in close embrace

I clasp, while joy illumines my face.

When o'er thy strings I draw my bow,

My drooping spirit pants to rise;

A lively strain I touch,—and lo!

I seem to mount above the skies.

There on Faun's wings I soar;

Heedless of the duns at door;

Olivious all I feel my woes no more;

But skip o'er the strings,

As my old Fiddle sings,

"Cheerily O! merrily go!

Presto! good master,

You very well know

I will find music,

If you will find bow,

From E, up in to, to G, down below."

Fatigued, I pause to change the time

For some *adagio* solemn and sublime.

With graceful action moves the sinuous arm;

My heart responsive to the soothing charm,

Throbs equally; whilst every health-corroding care

Lies prostrate, vanquished, by the mellifluous air.

More and more plaintive grown, my eyes with tears o'erflow,

And Resignation mild soon smooths my wrinkled brow.

Ready Hautboy may squeak, wailing Flauto may squall,

The Serpent may grunt and the Trombone may bawl;

But, by Poll,\* my old Fiddle is prince of them all.

Could e'en Dryden return thy praise to rehearse,

His Ode to Cecilia would seem rugged verse.

Now to thy case, in Flannel warn to lie,

Till call'd again to pipe thy master's eye.

**RAPIDITY OF THOUGHT IN DREAMING.**—A very remarkable circumstance, and an important point of analogy, is to be found in the extreme rapidity with which the mental operations are performed, or rather with which the material changes on which the ideas depend are excited in the hemispherical ganglia. It would appear as if a whole series of acts, that would really occupy a long lapse of time, pass ideally through the mind in one instant. We have in dreams no true perception of the lapse of time—a strange property of mind! for, if such be also its property when entered into the eternal, disembodied state, time will appear to us eternity. The relations of space as well as of time are also annihilated, so that while almost an eternity is compressed into a moment, infinite space is traversed more swiftly than by real thought. There are numerous illustrations of this on record. A gentleman dreamt that he had enlisted as a soldier, joined his regiment, deserted, was apprehended, carried back, tried, condemned to be shot, and at last led out for execution. After all the usual preparations, a gun was fired; he awoke with the report, and found that a noise in the adjoining room had, at the same moment, produced the dream and awakened him. A friend of Dr. Abercrombie's dreamt that he crossed the Atlantic, and spent a fortnight in America. In embarking on his return, he fell into the sea, and awakening in the fright, found that he had not been asleep ten minutes.—*Dr. Winslow's Psychological Journal.*

## THE PHANTOM LIGHT:

A CHRISTMAS STORY.—BY FITZ-JAMES O'BRIEN.

(Continued from Page 102.)

## VIII.

CHRISTMAS IS COMING! What a charm this brief sentence of three words conjures up! The schoolboy anticipates its approach by some six weeks of eager inquiry and watching. Day after day, as he dates his copy-book, he rejoices in the contemplation that the happy time draws nearer. He thinks not of the loss of days, of weeks, fled for ever past recall—no! "CHRISTMAS IS COMING" obliterates every other consideration; and many a simple soul has lacked its sought-for "proof," because the student's mind, instead of multiplying figures, would, in spite of every effort, fly off to calculations of cakes and puddings, "flip" and wine, parties and pantomimes, blind-man's-buff, forfeits, and kisses under the mistletoe! Nor is this a schoolboy's weakness alone. Who, from eight to eighty, does not delight to think of the joys of Christmas, when families shall draw together in charming circles, and renew the loves that unite their hearts? The anxieties of the counting-house fade before the conviviality and hospitality of the time. Animinities find their graves, and new loves and sympathies spring up to gladden the future. Oh, Christmas is, and was, and ever will be, a glorious time!

Somewhat—and others besides ourselves may have noticed it—the charm which the coming of Christmas brings with it dispels one-half of human ills. It is remarkable how old women forget their rheumatism, and plethoric men their gout. Corns forget to throb, and teeth to ache; a kind of chloroform pervades the atmosphere, and renders man almost insensible to pain. It must be a great sorrow that will stand up defiant of the congenial influence of the season: a gaunt and terrible grief that will dare intrude upon and sadden the human heart at such a time. And such a grief had entered the house of Mrs. Tregar and family.

The process of ejection had been served, and it was immediate and peremptory. There was, therefore, no preparation for the merry Christmas within the cottage. There was no lifting up and dusting of carpets—no scouring of floors and walls—no brushing away of cobwebs from unfrequented corners—no dusting of old pictures—no cleansing of old family faces, privileged with a gentle renovation once a year. True, there was bustle and change;

but it was to interrupt those ties of attachment to a spot endeared by many sweet recollections, and which can never be wholly forgotten but with the grave. Mrs. Tregar had already felt severely the blow occasioned by her removal from the castle; but she had at length become reconciled to her fate, and had cherished the ambition—a modest ambition, too, for the once wealthy and beautiful owner of the broad acres extending over a rich landscape as far as the eye could reach—the ambition to end her days in this cottage, the remnant of her former greatness; and ere the close of her own career to see Arthur and Avisia wedded and happy. Alas, with one blow every hope was now about to be crushed!

Arthur, Avisia, Uncle Tot, and Mrs. Tregar, were seated in the cottage, looking moodily at each other, when a gentle, timid knock came at the door of the room in which they were sitting. Arthur cried "Come in;" and at his summons, the door slowly opened, and the Poet's son slouched into the apartment, executing a series of agonised obsequies, and seemingly exceedingly ill at ease.

"Well, Poet's son," said Mrs. Tregar, kindly; "I am glad to see you. What is the matter? Have you discovered some treasure of game for Mr. Arthur? I am afraid, though, that your master is in no humour for sporting to-day."

The Poet's son extended his enormous mouth with the evident intention of executing a gigantic laugh; but suddenly recollecting that such mirth would be extremely unbecoming in the present sad state of family affairs, he made a tremendous effort to mould that feature into an expression of appropriate solemnity, which had the success of altering the incipient smile into a full-grown grin, of a most ghastly character.

"It ain't exactly that I cum about, yer honour, marm," said he, writhing his limbs in a sort of genteel torture, and thrusting his big hands alternately through the crown of an old hat, which he held, and which seemed to be conveniently constructed for the purpose. "It ain't that, yer honour, but you see—its—its something else."

"Well, let us hear what it is," said Mrs. Tregar, smiling at the evident agony which her protégé was suffering.

"Why, you see, yer honour, ma'am, that we heerd in the kitchen beyant, that the throuble was cum upon ye,—and, begor! more's the pity, that you or any of yer ancient and honourable family should ever see the dark day of misforthin'; for them and you wor always kind an' condescending, an' good to the poor; and more shame for—"

"Poet's son!" interrupted Mrs. Tregar, "this is not what you came to tell me. You are wandering from your subject. Pray, let the 'family' sleep in peace."

The Poet's son, who would have rambled on for about four hours in the track of family glories, was completely upset by this interruption to what he considered the thread of his discourse; and stood piercing the old hat with his hands, and endeavouring to tie his long legs into hopeless bow-knots, without being able to utter another syllable. At length—after a few minutes, during which time he put his body through such a series of contortions, that he seemed as if he had swallowed a few thousand live eels, and they were endeavouring to find the way out again—he made a number of telegraphic signals to some one apparently outside the parlour door.

These signals had the effect of producing the apparition of a large, shaggy grey head, which was thrust into the room, and which, after looking round for a second or two, uttered the words—"May I come in, ma'am?"

"Certainly, Donal," said Mrs. Tregar, and Donal Barrett entered.

"Donal, you and the Poet's son seem to have some mighty secret between you. I am afraid I have stopped the flow of your companion's eloquence too rudely, for he cannot speak. What have you to say?"

"Begor, ma'am, I fear he's but a gonnal ather all," said Donal, directing a contemptuous glance at the Poet's son, who looked as if he thought he deserved the title, and showed his humility by immediately putting the old hat upon his arm, like a large cuff: "I fear he's but a gonnal ather all," continued Donal: "for, if he wasn't a regular born nathral, he'd have sed what he had to say at wans't, an' not gone mayandhering about what didn't concern him."

"Don't blame him, Donal. At least he is faithful and true to us. He may not be eloquent, it is true; but it is not every one who can speak with your fluency, Donal."

The old fisherman blushed with gratification at this compliment.

"Thank yer ladyship," said he, "but you see the raison we gev him this little matter to conduct, was because he was the son of a poet, and we thought he must have some of the blood in him."

"But what is this important disclosure, Donal?"

"Why ma'am, we heerd something about a throuble that kom on you all of a suddint, an' we wor tould that it was some money which the lady at the big house beyant wanted to make you pay, and that if it was'n't ped, the old place would be sould for the debt."

"You heerd but the simple truth, Donal. The old place must go," and Mrs. Tregar sighed bitterly at the thought.

"Whethen bad cess to her for a spalpeen," cried Donal energetically, "shure 'tis she ought to be proud an' happy to be owed money by gentle-folks."

"Hush, Donal! You must not speak of Miss Saville in that way. She has a right to claim her debt when she please, and we have a right to pay it. Go on with what you have to say."

"Well, yer honor, we knew that it wasn't convenient for you to pay her her dirty money, so the Poet's son, and I, and Oonagh, thought we'd thry an' settle the matter for the honour of the family—and—and the Poet's son, there has it, yer honour, that's all."

"Has what?" asked Mrs. Tregar in amazement.

The Poet's son, the moment Donal mentioned his name, immediately commenced an agitated search in his garments. First, all his pockets, which were ingeniously concealed amongst numberless tattered shreds of cloth, then his waistcoat, then each individual pocket over again, finally concluding by thrusting his hand down his long woollen stocking, and drawing triumphantly from thence a dirty flannel bag, which he presented to Donal.

"We had it in the savings-bank in Skibbereen, yer honor," said Donal, as he untied the dirty bag, with a face glowing with pride, "but we dhrew it yesterday, an' here it is."

"What—what are you talking about, Donal?" cried Mrs. Tregar; "what have you got there?"

"The money, to be shure!" replied the old fisherman, taking out about twenty sovereigns in gold—"the money. Here, yer honour, take it an' welcome, an' pay the negur beyant her dirty money. Katty and I are ould, ma'am, and don't want it; and as for the Poet's son, shure all he wants is the bit he ates an' the dhrop he dhinks, and a warm corner by the kitchen fire. Take it, ma'am, with our blessing!"—and the old man held forth the money to his mistress.

If Mrs. Tregar had not been deeply affected by this instance of devotion on the part of her followers, she would have been inclined to laugh at the innocence of poor Donal in offering her twenty pounds to pay six thousand. As it was, however, the tears filled her eyes, and her heart swelled with gratitude at this proof of rude affection.

"My poor Donal," she said with a faltering voice, laying her hand gently on his outstretched arm, "I shall never forget your kindness in thus trying to shield us from misfortune; but you little know the extent of our fatal liabilities. How much money have you there, Donal?"

"Twenty pounds in gold, yer honor!" replied Donal, loftily. "But Oonagh ses that one of the sovereigns is bad."

"And we owe Miss Saville, Donal, the sum of six thousand pounds."

"Merciful mother!" ejaculated Donal, staggering back as the magnitude of the amount burst upon him in its full force, "Merciful mother! six thousand pounds! why the old Castle beyant wouldn't hould it!"—and he looked at his little store of gold with such a sad and disappointed gaze that all present were deeply affected by the simple devotion of the poor old man.

"You will be sorry to part with your mistress, Donal," said Avisia; "I do not think you will get a kinder one again."

"Is it part wid the mistress you mane, Miss?" he replied earnestly, "wisha then, Miss Avisia, 'tis funning me you are. Shure I'd as soon part wid my life. No, no; wherever the family goes, there I'll go too, wid the blessing of God. Six thousand pounds!" he continued, his mind evidently still absorbed in the contemplation of that mighty sum—"Six thousand pounds! wirrah! wirrah! but it's a world of money!"

"There goes as true a heart and noble a nature," said Arthur, as the old man departed with a drooping head, followed by the Poet's son, whose mouth was so distended with amazement at the unexpected fate of his monetary plot, that he looked as if he had got the entire six thousand in his mouth, and was vainly endeavouring to swallow it—"there goes as true a heart and noble a nature as ever made a suit of rude frieze, more dignified than robes of velvet or ermine."

"Bless him, poor old man," exclaimed Avisia in a low tone. "It will kill him parting with the place."

"Come, come, children," cried Mrs. Tregar, with an effort at cheerfulness, "let us have no more sad faces, or lamentations. We must be resigned and cheerful. Out, out into the fields, or on the lake, and drink your last of that pure air which our ancestors have breathed for ages, and which, ere long, will fan the brows of a stranger!"

Within a few days a large party of visitors had arrived at the Castle. They were some relations and friends of the Saville family, who had been invited down to spend the holidays. And nightly the windows were illuminated, and sounds of music were heard therein, and shadows were seen quickly passing to and fro; and there were some who thought that this was done in triumph over the fall of the Tregar family. But amidst the festivity there was one, however, who wore a face that spoke the trouble of her heart, and its wounded pride. Miss Saville was, indeed, unhappy, for her first love—wild and impassioned, had been coldly, scornfully rejected. She could confide her grief to no one, and therefore she bore in her own heart a deep and agonising sorrow.

"May I claim the honour of your hand in the next dance," said Mr. Freeman, one of the visitors.

"Excuse me for declining the pleasure," replied Miss Saville. "I have already danced to the utmost of my strength; and I confess I am not well."

"Pardon me," said her suitor, "if I suggest that your indisposition is of mind, and not of body; I have not been an indifferent spectator this evening, and I have more than once observed a shadow steal across your brow, as if some inward grief preyed upon the heart of my fair hostess."

"Indeed, sir," replied Miss Saville, "your suggestion is a strange one, I do not say a bold one—I have, no sorrow—at least none upon which you can offer me consolation!"

"I'm sorry," rejoined Mr. Freeman, "for I will confess, that from our past acquaintance, and more especially from my brief sojourn here, I have felt an interest in all that concerns you, which I may hardly dare to utter. You may have observed that I, too, have but seemed to enjoy the festivities of these occasions—that like yourself I have had a sorrow which none might hear—at length, I have become bold enough to believe that we may both find in mutual confidence."

"Sir!" exclaimed Miss Saville, rising from her seat, "I pray you say no

more. There are sorrows which may never be told—but yours can have—must have—no sympathy with mine."

"May I not presume again to —"

"Presume not to question me, nor seek to impart anything. I can offer you no consolation."

"Be not so resolute—grant me one opportunity —"

"On the ice, to-morrow," said Miss Saville, with a sarcastic smile.

"On the ice! a cold encouragement."

"You know," said Miss Saville, "our skating party occurs to-morrow;" and with this remark she left the banquet-room and was seen no more that evening.

The gentleman who thus addressed the fair heiress was a bachelor of some forty years' celibacy; a merchant of good position, but whose manners and appearance were far from prepossessing. He had confided to a married cousin of Miss Saville's, the fact, that he had serious thoughts of at length taking a wife, and that he had already begun to think most kindly of the lady whom they were going to visit. He communicated this serious and interesting matter to her, however, in the strictest secrecy; and the fidelity which the lady regarded the trust may be sufficiently inferred, when it is stated that Miss Saville had previously been put in possession of Mr. Freeman's wife-hunting intentions; and this will also explain the readiness with which that gentleman's views were anticipated and discouraged, in the conversation which we have just recorded.

The lake was still ice-bound. The intensity of the cold had somewhat abated, and at noon, the trees seemed to weep tears for the loss of Summer. But the nights were bitterly cold, and each morning beheld the conquest of stern Winter over the kindly influence of the sun.

The skating-party had gathered upon the lake. There were some bounding along like Mercuries, with winged feet—there were others jerking and twisting with out-thrown arms and spreading fingers—there were some stooping down and groping cautiously in anticipation of falls—there were timid ones being led and coaxed by their more accomplished companions, shouting all the while with fear, and displaying every distortion of countenance—some fell heavily but rose again with stubborn pertinacity to pursue the "sport," which must have had peculiar charms for them, judging from the fearful knocks which they bore contentedly—and there were little boys, with bare feet, who slid along in rapid succession—now twirling their arms about in the highest glee—then knocking each other down in a heap, amid the laughter of the uppermost, and the loud complaints of those who fell beneath. The most elegant of all the skaters was Miss Saville, who skimmed the ice gracefully, cutting upon its face figures of every variety. And struggling to follow her was her admirer, Mr. Freeman, who, to his latest moment will never forget his pursuing a wife upon skates—and who at last was obliged to lie down while some boys released his feet from their appendages, and then suffered himself to be slid off in a recumbent position until he reached *terra firma*! The day had far advanced, the atmosphere became particularly mild and clear, and the sun shone forth upon the icy sheet, glistening upon it as upon a mirror. The glee of the accomplished skaters was high as they skimmed along in rapid succession. In a moment a loud shriek was heard, with shouts of horror from various parts of the lake—there was an instant splash, and broken sheets of the ice were seen springing upward—the accomplished lady skater had disappeared. She had ventured upon a spot whereon the sun shone brightly, and the fearful truth was at once recognised, that Miss Saville had fallen through the ice into the water. It was a moment of intense anxiety. Many skaters came up, but feeling the ice yielding beneath their feet, turned back. Miss Saville continued to struggle in the water, until at last her cries became feeble and less frequent; at length there was an awful silence, and all seemed lost, when out from the margin of the lake there sprang one who skimmed the ice like a bird, and nearing the spot, he laid himself down upon it, and stretching out his hands reached the broken part, and seized hold of the garments of the drowning body. Raising the head out of the water, he held it there until a rope was procured, which he tied around the waist, and the rope being pulled by parties on and near the shore, the body was, with much difficulty, drawn up. No sooner, however, had this additional weight been added to the surface of the ice, than it broke again, and the heroic youth who had so nobly rescued a fellow-creature from death was himself precipitated in the water, and sank underneath the frozen surface. For some moments not a sound was heard; Miss Saville was drawn ashore and borne to her home, and the rope thrown immediately back to the spot where the ice was broken. The skaters kept aloof with agonised faces, and some of the boldest, who ventured to draw near, again turned back, alarmed by the cracking of the ice beneath their feet. At length, amidst a general burst of excitement, a hand was seen to rise feebly out of the water, and to grope about; in a second more the head appeared, and then there was a joyful shout of encouragement, with cries of "Seize the rope! seize the rope!" This was soon done; and the noble fellow who had nearly sacrificed his life was drawn ashore. It was Arthur Bell! He was found to be in a dreadful state of exhaustion; his eyes had become bloodshot, and his lips and cheeks were fearfully discoloured. He was borne to the cottage upon the shoulders of four sturdy fellows, followed by a long train of sympathisers, who implored every blessing upon his head.

Among the early visitors to the cottage was Helen Saville. She had soon recovered from her fright and suffering; and now it was as beautiful as it was unexpected to behold the rich and romantic heiress kneeling by the side of the couch of her deliverer, together with his mother and his bride elect—each administering to the wants of one whom they all loved, though their attachments differed.

## SHADOW AND SUNSHINE!

OR, WHO SHALL WIN?

BY CHARLES CRAYON.—(Continued from page 105.)

## CHAPTER XIX.

"And now I will unclasp a secret book,  
And to your quick-concealing discontents,  
I'll read you matter deep and dangerous;  
As full of peril and adventurous spirit,  
As to o'erwalk a current roaring loud.  
On the unsteady footing of a spear."—SHAKESPEARE.

WHITMAN sat in his office. He was not now the young man first introduced to the reader; but his features bore the stamp of mature manhood. Time had not omitted him in its changes; but as one gazed on his open, contented countenance, and the sunny smile that sometimes played upon it, they would at least have concluded, that the inexorable tyrant had dealt kindly with him. And so he had. Years had proved that the character of the attorney in youth, was only more fully developed. Now, his name stood high among those of his profession, in the city, not only for his talents and industry, but that he had shown himself, in all his dealings with others, a straightforward, upright, generous, honest man. The office he occupied at the commencement of our tale, he had left, and now he was found in a much larger one, in a more favourable and flourishing part of the city. But pardon our introduction—we promise that we will not inflict another upon the reader.

As we have said, Whitman sat in his office; several clerks were in different parts of the room, busily engaged in writing, while his partner sat at his desk, in the same occupation. He heeded them not, however, for he was busily engaged in thought, evidently resolving some knotty question in his mind. The door opened, and a man entered. A single glance would satisfy us, that he was the stranger who figured so conspicuously in our last chapter. He was dressed almost in the same manner; his sinewy and muscular form enveloped in a coat that fitted to his chin.

As he entered, Whitman merely cast a glance at him, and then resumed the subject that engrossed his attention. The stranger passed on to where the partner was, and seating himself by his side, soon engaged in a conversation with him, which apparently interested the lawyer much, but which was carried on in so low a tone, that it was audible to none except those who engaged in it. Whitman remained in his seat, but the single glance he had cast at the stranger, gave him a singular sensation. He could not define it; but notwithstanding the importance of the matter that claimed his attention, he could not refrain from casting his eyes towards the spot where the visitor was engaged in conversation with his partner. As he was situated, it was impossible to view his features except from the side; but even that view seemed to perplex the lawyer sadly. He attempted vainly to concentrate his mind on the object which had rivetted his attention, but he could not. Suddenly, as the stranger turned partly round, and he could see his features more distinctly, the ponderous volume before him was closed, and he leaned back in his seat, passing his hand over his brow, as if to render more particular some vague recollection. He looked again and again at him with renewed surprise, that sufficiently showed that startling thoughts were passing in his mind.

Evidently the stranger had noticed the emotion his appearance had caused; for speaking a few words to the person he was conversing with, he arose, and approached Whitman. After he had nearly reached him, he paused a moment, gazing intently upon him. The gaze was as earnestly returned, and it expressed wonder, doubt, and surprise. At length the stranger spoke:—

"Mr. Whitman," said he, "is it possible you do not recognise me?"

At the sound of that voice, the person addressed looked still more surprised.

"I ought to know you, sir."

"So I should think," replied the visitor with a smile.

"Your countenance has called up old recollections wonderfully."

"I have no doubt of it."

"There is a strangely familiar expression about it; but I cannot, by any effort, recall to whom it belonged."

"Look at me again."

"Oh! now I remember. But," added Whitman, mournfully shaking his head, "I was mistaken. The person you so vividly reminded me of, has long slept in the grave."

"May I ask who it was?"

"Henry Morton."

The stranger smiled again.

Whitman gazed upon him again, as if he would read his very soul.

"Examine me more minutely," said he, removing his hat, and pushing back a mass of light brown hair from his forehead. "Tell me," continued his interrogator, "does the resemblance now seem as plain?"

"More so; much more vivid. I had not supposed any one trod the earth who bore such a resemblance to my unfortunate friend."

"Mr. Whitman, I have perplexed you enough. You say that my features remind you of an early friend?"

"They do, most forcibly."

"Then do not be surprised if I tell you that I am that friend."

"Sir!"

"I am Henry Morton!"

Whitman sprang from his seat, but in a moment he resumed his position.

"You look incredulous," continued his companion.

"I am so."

"Did not my countenance remind you of the one you disbelieve me to be, when we met?"

"It did; but it was only a resemblance. True, it affected me greatly, but it cannot be."

"And why?"

"I saw my friend in the embrace of the Tyrant; I saw his remains deposited in their long home. Can earth give back her dead?"

"Listen a moment. Do you remember visiting your friend in his lonely cell?"

"I do."

"Do you remember the gloom that oppressed his mind as he spoke of his condition?"

"Vividly."

"Do you recollect the villain who had done it all?"

"I do. You could never have known of this, had you not been in some way connected with it. The more I gaze upon you, the more your features bring those scenes to memory. If it were not morally impossible, I should be certain that it must be him; but, as I told you, I followed him to the grave."

"I hardly wonder at your incredulity; but give your attention for a few moments, and I will explain the conflicting circumstances. You have not forgotten the mysterious manner in which I escaped?"

"By no means."

"Was you not struck with surprise?"

"Indeed I was. There was a mystery about it I could not penetrate."

"I will unravel it." In my gloomy cell a friend called upon me. True, he was a stranger, and I distrusted him at first, but he soon gave me convincing proof of his integrity. I knew that if I remained, my chance of escape was small, and he urged me to flee, promising to provide the means. Reluctantly I consented, half doubting his faith. But at the appointed time he came. By some powerful narcotic he had succeeded in lulling the sentinel—by means of false keys, he prevented all suspicion. When we were once more under the light of heaven, he took me to his home; a disguise was provided for me, and with a carriage he took me several miles from the city. Then, when we were so far as to prevent suspicion, we stepped on board the first train of cars. He was with me, but did not think it advisable to be too intimate there, so he was in another car. I was so much engrossed in my thoughts, that I heeded nothing else; when, after I was nearly a hundred miles from this, I found, to my great surprise, that some scoundrel had taken advantage of my condition, by robbing me of all the money I possessed. I cared not so much for this, as for the loss of some papers which revealed my name, and which I feared might afford some clue to my whereabouts. But it so turned out, that the event which I feared would cause suspicion, most effectually hushed it. The person who robbed me met with a terrible fate. As he was stepping from one car to another, he missed the platform, and fell between them.

"Of all the sights I ever beheld, none affected me so much as that. The corpse was mangled in the most horrid and sickening manner, and no one knew who the unfortunate person was. When he was searched, the papers of which I have spoken were found upon him. At first this filled me with apprehension; but I remembered that the body, in its state, could not be identified, and I knew that it would pass for my own. I consulted with my preserver about it, and he deemed it favourable to me, inasmuch as I never should be sought for again in the land of the living. So the body was returned, and, as I afterwards learned, was buried. Now can you understand and reconcile the anomalous circumstances?"

"I can," replied Whitman, as he grasped his old friend by the hand, now fully convinced of his identity. "Ah, little did I think, eight years ago, that I should ever meet you again this side the confines of the grave! But the mystery is explained; and after all, your enemies were confounded. Who was this mysterious friend who took such an interest in your welfare?"

"His name was Fenning; do you remember him?"

"Well; but he was the bosom friend of Duval."

"No; he had associated with him long, but it was only to foil him in his plans. He was his deadly enemy; Duval had once done him a foul wrong, and he followed him only to seek revenge. To me he was a friend indeed. He accompanied me to one of our southern cities, and there, under an assumed name, I attended to my profession. By untiring industry and perseverance, I soon gained many friends, and I found that wealth flowed in abundance to me. I heard often from Fenning, and finally, I joyed to know that he had found one whom he mourned as dead, and for whose sake he had exercised such a deadly hatred towards the one who sought my life. But he is no longer to be feared, for he has been conquered by our common enemy."

"How? Is he dead?"

"He is; Heaven knows that I sought not his blood; but he died while done in self-defence." And Morton related the events given in the last chapter to his friend. Then they conversed long over the scenes of old years, and Whitman took his unexpected visitor to his happy home. There was introduced to Ellen, for the first time. Whether or no he was pleased with her, the next chapter will disclose. To tell of the excitement and joy caused by the re-appearance of Morton, the death of Duval, and the explanation of all the circumstances connected with them, would be to extend the pages to a most unwarrantable length—if we have not done so already. Let them all be imagined. Another chapter, gentle reader, and we are weary you no longer.

"In the quiet, beautiful retreat where Ellen Gordon was first introduced to the reader, she now resides; and is still the pride of him whose bosom swelled with joy as he first clasped his lovely bride to his heart. Blessed with a bright-eyed girl and a merry boy, their days are gliding by as smoothly as they could hope."

## CHAPTER XX.

"Art thou a wanderer? hast thou seen  
 Overwhelming tempests drown thy bark?  
 A shipwrecked sufferer hast thou been,  
 Misfortune's mark?  
 Though long of winds and waves the sport,  
 Condemned in wretchedness to roam,  
 Ideo! thou shalt reach a sheltering port,  
 A quiet home."—MONTGOMERY

BRILLIANTLY blaze the chandeliers and candelabras in the elegant mansion of Alfred Whitman, for a gay and joyous company have assembled there. There are smiling faces and light hearts, and ever and anon the cheerful one and the merry laugh greet the ear. Familiar faces are there, many of whom have figured conspicuously in the foregoing pages. Let us glance at them. Is there not a familiar look about that noble, well-formed man, with dark, curling locks? See now, as he turns his countenance, so that we can obtain a fairer view of it; mark his deep, piercing eye—surely we have met him before; it is Fenning. Years have done little to change his appearance; but now a calm, contented smile, rests upon his face, denoting a peace and happiness to which, when first we saw him, he was a stranger. And that fair lady by his side, is his first, his only love. After years of sorrow and of suffering, they were united; and now, in a rural retreat, a few miles out of the city, they have found a peaceful, quiet home. And that stout, corpulent old gentleman, who is looking with such a happy heart on the assembly, evidently highly gratified to see every one else so well pleased—that is our old friend, Mr. Montrose. His hair is silvered by age, but he looks as hale and hearty as ever; and his round, full features are clothed in the same sunny smile. The hand of age has robbed him of none of that kindness of heart which ever characterised him; and now, as his wishes are gratified, he looks the very personification of peace and content. There are more of our old friends—Whitman and the partner of his joys, apparently enjoying the occasion, and entering into the hilarity with the warmest zest.

But why are these friends assembled? What has brought them together, and rendered them all so happy this evening? Here, in the corner, are two engaged in earnest conversation—perhaps we may gain some information from them. Let us listen.

"Well, Mason, this seems to be a happy occasion."

"Decidedly so."

"Mr. Montrose seems particularly pleased."

"Yes; he is in ecstasies. It does his kind-old heart good to see his dear boy, as he calls him, so happily situated, at last."

"This has been rather a strange affair."

"Very. Who would have dreamed of such a result a year since?"

"No one. But this is certainly a joyful denouement of a singular history."  
 "Aye, that it is! Do you remember the sensation caused when Morton was arrested?"

"Well; the excitement was intense."

"And well it might have been. Were you acquainted with him before that time?"

"Intimately. He was my companion at school, and afterwards we graduated at the same time."

"Indeed! How did the tidings of his arrest affect you?"

"They filled me with wonder."

"Did you believe him guilty?"

"At first I could not."

"Were you finally convinced?"

"The evidence against him seemed so strong, that I could hardly be otherwise."

"No one seemed to doubt his guilt."

"True; I never heard it hinted that there was even a possibility of his innocence."

"It is ever the case. We are prone to judge without evidence, and when there is an opportunity to do so, to judge against the dictates of charity and humanity."

"Undoubtedly; but that learned me a lesson which will never be effaced."

"It should learn us all one. What an excitement was caused by the tidings of his escape!"

"Yes; men were thirsting for his trial. They desired to hear the particulars of the supposed crime related, and witness its punishment. When they found they were to be disappointed, they only mourned that their morbid tastes could not be gratified."

"I remember it well; but did not the news of his escape surprise you?"

"Greatly. I had given him up for lost, and though I feared that he had, in an unguarded moment, committed the crime, I was thankful to hear of his escape."

"Every one seemed at a loss to account for the manner of it."

"Yes; but I only rejoiced at the belief that he was safe. A sad reaction came, however, when the next tidings reached me. I was at his funeral, and saw, as I thought, his remains committed to the earth."

"Then his enemies all fancied that they had triumphed?"

"True; and they rejoiced over what they supposed to be his fate. Did you know Duval?"

"I had seen him."

"For a long time he succeeded in covering his real character; but that connexion with Gordon revealed it. From that time all men marked him as a villain. But it was a fearful death he died."

"Ah, fearful, indeed! He recognised Morton, did he not?"

THE MOHAMEDAN FAMILY, NOW PERFORMING IN LEICESTER SQUARE.

"He did, and doubtless supposed it a warning from the spirit affected him strangely."

A period is suddenly put to the conversation by the opening of a door, and the entrance of two individuals. One we shall instantly recognise as Henry Morton. Years have changed the expression of his countenance to that of mature manhood since first we beheld him, and now his reputation is unsullied; and his name on the lips of his fellow-men is only associated with whatever is honourable and upright. But who is that fair being who leans on his arm? Her countenance is certainly familiar: it is Ellen Gordon. Morton first beheld her after he had reappeared to his old friends, and whether he was pleased with her or not, the present occasion will testify. Since the death of her father she has resided with her youthful friend, Mrs. Whitman, and her years have been those of peaceful and quiet happiness. She still possesses the same queenly, matchless beauty, and now she loves him who is soon to call her his own with all the fervour of a fond and trusting heart.

The ceremony is soon performed, and they are united by that holy tie which only the hand of death can sever. Congratulations and kindly wishes follow from many happy and friendly hearts, and as Henry Morton gazes on the fair being who has just become his bride, and remembers the pure devotion her heart offers to him, then, as he gazes on the happy countenances of those around him, who rejoice at the fulfilment of his fondest hopes, he feels that it is enough to recompense him for all the dark, weary hours of sorrow and suffering that are now numbered with the past. And as he looks at the countenance of Fenning, and remembers the kindness he showed him when his sky was dark and lowering, with not a solitary gleam of hope to pierce the black clouds of despair, the gratitude of a warm and grateful heart is felt towards him, and as he grasps the friendly hand, the eyes of both are blinded by a tear. And as Mr. Montrose gazes upon the scene, he, too, seems to be affected with the same weakness, for drops are seen chasing each other down his round, merry-looking cheek.

"Ah!" he says, "I always said that it would eventually prove for the best; but I little thought, when I supposed I saw his body deposited in its final resting-place, that the countenance of Henry would ever greet me again on earth. Now I feel that the injunction of his dying father is obeyed, and may he be as happy as he ever has been honourable and upright."

In the quiet, beautiful retreat where Ellen Gordon was first introduced to the reader, she now resides, and is still the bride of him whose bosom swelled with joy as he first clasped his lovely bride to his heart. Blessed with a bright-eyed girl and a merry boy, their days are gliding by, as smoothly as they could hope for in a rough world like this, happy in the enjoyment of each other's love, and the friendship and respect of those around them. The game is finished—who has won?

Reader, we will trespass on you no longer. Pardon the faults your eye may have detected, and rest assured that if, in the foregoing pages, you have found ought to interest or instruct, the labour of a few weary hours has been amply remunerated.

## THE MOHAMEDAN FAMILY.

THE Arabian family, which is now performing in the *Paradise of Mohamed*, in Leicester Square, under the superintendence of M. Yousouf Ben Ibrahim, is composed of seven members. It is the first family that ever ventured to abandon the East and live in Europe, free from the prejudices of the Mohammedan fanaticism.

The dresses, costumes, and jewellery are very splendid, and, when worn, are most picturesque. They are all strictly Oriental, as also are the various musical instruments, the songs and dances. The latter may appear rather monotonous to an English audience, because we are not familiar with the Arabian language and manners.

The principal musical instruments are—

1. The old viol, the origin of our modern violin. It was invented 5,800 years ago, under the reign of the Pharaohs of Egypt. One of those kings cast his prime minister into prison, placed a plank at his feet, and said that if he could make the wood speak he would grant him his liberty. The prisoner hollowed the plank, placed a rush across it with two chords, and thus the plank was transformed into a rough musical instrument, which is called the *old man* by the Orientals, because of its venerable antiquity.

2. The guitar, composed of eight pieces of wood, united together by means of whalebone, and played on eight chords, generally by the younger portion of the community. It was invented by King Solomon, whom the Orientals call Soliman.

3. The drums or tomtomes, a rough looking instrument, in the shape of a jug, made of earthenware, with its aperture covered by a skin, on which the young ladies knock their fingers.

4. The tambourine, similar to those which are used in Europe.

Their dances with scarfs, and with the *burnus*, are much more simple than those which they are in the habit of performing in their own country. The principal one is the dance of *Almek's*; but its effeminate character would not, perhaps, be thought acceptable to an English audience.

M. Yousouf Ben Ibrahim, the head of the family, is a very handsome looking man, with a manly and expressive countenance. He was for fourteen years a faithful warrior companion of Abd-al-Kader, and played an active and conspicuous part in several of the African campaigns.

The other principal members are—

Madlle. Aixa, his wife, who possesses a very intelligent countenance, and the manners of a perfect lady.

Madlle. Morni, his wife's sister, a very pretty young woman of seventeen.

Madlle. Baïa, sister of M. Yousouf, aged thirteen; and a little boy, brisk, lively, and promising, the son of M. Yousouf, and whose name is Mustapha. Madlle. Kadoudja, Lora, and M. Ibrahim, take also a useful part in these performances.

M. Yousouf and family are natives of Algiers, and speak the French and Italian languages very fluently.

We understand that they are to be introduced to Her Majesty

into a full preparation for that to which he will freely attach himself, on whom words of wisdom on any and every subject are not thrown away, but are cherished as

"Chance-pearls hung among the rocks by the sullen waters of oblivion,  
Which Diligence loveth to gather, and hang round the neck of Memory."

Those who so treasure up the teachings of nature and of art, of men and of books, will one day find the proper opportunity for their use, into whatever shape their early career may have been fashioned. What a mass of pleasure and delight would have been lost to the world if Sir Walter Scott had found his "last" in the lawyer's office, if that bright and humorous spirit had been chained down to musty records, and legal quibbles! But to him every incident, every action of life became blended with thought and feelings of a different hue and colour than the melancholy solemnity of courts. The defence of a worthless minister against a charge of drunkenness and impiety led him into those scenes which he has immortalised in *Guy Rimering*, and the names and characters of the witnesses form the basis of some of those in the novel. He was breaking away from his bondage to the "last," and finding for himself the true sources of his influence and his utility. So, too, with Burns; neither the serfdom of the plough, nor the inquisitorial office of the gauger could fetter his free soul; neither the poverty of his youth, nor the distresses of his manhood could bind him to his appointed "last." His mind soared in the free empyrean of thought; and whether when driving his cart he composed the songs of olden times verse by verse, or basking on the hill-side he clothed his own thoughts in burning words, committing them to memory because too poor to purchase paper, he was but seeking that fitting occupation from which the narrowness of his means had apparently debarred him. He is not the only shepherd who has found inspiration on the hill-side. James Hogg wrapped his plaid about his shoulders as he followed his flocks, and determined to become a literary man. But it was not merely in a poetical form that reveries among the hills found vent in the minds of the humble shepherds. James Ferguson, in the silence and solitude of the night, studied the stars in their appointed course as he tended his master's sheep, and with his own self-constructed, rude and simple instruments, measured their apparent distances, and ultimately became one of our greatest astronomers. If he had not gone beyond the "last," to which hard fortune seem to have bound him, he would have lived and died an unknown herdsman.

The benefactors of the human race are not always to be found among those who imagine that they have an hereditary right to the title, and think that humbler beings are going beyond their "last" when they aspire to effect some benefit for their fellow-men. Many a lordly name has stultified itself in titles and pedigrees, while those of meaner mould have gathered wisdom from the common things of nature, and raised themselves to high eminence merely by the effort to break through the shackles by which they were bound. And sometimes the effort is rendered more difficult by the scoffs and sneers of those above them, who too often look upon an artisan with a cultivated mind as an ass dressed in a lion's skin; they are content to rest quiet in the skin nature has given them, even if it be that of an ass; but they mock at the humble son of genius who seeks to cast his slough, who, to use the words of Horace, *in propriâ non pello quiescit*, who will not rest satisfied with the original skin, but seeks to elevate himself from out of the mental darkness. If Franklin, the printer's boy, had remained contented with his original skin, had stuck closely to his original "last," had done nothing but pick up little metal letters, and put them into the words of others for the press, he might have made a very good printer; but we should have lost all those experiments which drew down lightning from the skies, which gave a solid foundation to the science of electricity, and which now we use as a winged messenger to bear our thoughts from land to land. We should have lost all those discoveries in science and philosophy which have rendered his name famous; and America would have been deprived of the services of one of the greatest statesmen of his age. We can well imagine the pride with which he preserved the old coat in which he had been scoffed at by the high-born statesmen of England, to wear it in the presence of those same statesmen, when he signed the convention wresting America from their control, and guaranteeing her independence as the United States. Many a man who sneered at the printer's boy for going beyond his "last," lived to see that same boy the companion of princes, and respected and revered by men.

Gifford, the *Quarterly* reviewer, was a shoemaker; Samuel Drew, the metaphysician, was a shoemaker; Holcroft, the dramatist, was a shoemaker, and then a jockey, riding races; these men all went beyond their "last," and the world is the better for their having broken away from its bondage. For the great series of canals intersecting this country and bearing its enormous traffic, even still maintaining their utility when the speed of railroads had given such a new feature to our country, we are indebted to the genius of Brindley, a humble, uneducated millwright;—one would have imagined that the complicated levels, the whole series of locks, and embankments and tunnels, would have been beyond the capacity of one whose "last" seemed shaped for quite a different end; but his genius went beyond his "last," and produced these great results for developing the wealth of the country. And this wealth was still more developed by the genius of a barber, who, for forty years of his life had stuck to his "last," and shaved, cut hair, and made wigs for a whole generation; but at length, going beyond his "last," he invented the machinery for spinning cotton—produced an immense mass of wealth for the country, acquired an immense mass for himself and his posterity, and has added a greater honour to the name of Richard Arkwright than the title which was placed before it, for he has become one of the benefactors of mankind. But it still required some one else to "go beyond his

last" before the full benefits of Arkwright's invention could be obtained: the machines he had constructed could produce cotton-thread much faster than the weavers of those days could use it. And a parson, who for long years had preached and prayed with good effect, went "beyond his last," and Dr. Cartwright, without ever having seen a weaving-loom in his life, invented the power-loom, and thus gave an impetus to the trade and commerce of this country which has placed it in its present proud position; which has increased its capital to an enormous extent, and given employment to millions of the people!

In science, in literature, in the useful arts, we are greatly indebted to the men who have gone beyond their "last." In politics, it is pretty much the same. To say nothing of Alfred the Great, and Peter the Great, admirable reformers as they were of their age and countries, we may come down to modern times, and we shall find the greatest political good has been effected not by the "stick-to-your-last" statesmen, but by those who have ventured to go beyond it. It was said by a great wit, of Lord John Russell, that he was so bold a man that he would have assumed the office of archbishop of Canterbury, or taken command of the Channel fleet. We are not quite sure that he would not have filled either the one office or the other quite as well as many who have been placed in situations, and perhaps better; but of this we are certain, that if John Lubbock had continued to compound medicines and roll up pills, we not have reduced the expenditure of the country to its present form; that if, Richard Cobden had measured tape and displayed the beauties of his cottons to admiring sempstresses, we might not to this day have been blessed with cheap food. But these men went beyond their "last."

We hope we have now proved that this expression, however just it may have originally been in the mouth of the painter Apelles, has been so generally misapplied that it has become full of mischievousness and error; and that if we have robbed some gentlemen of a felicitous Latin quotation, we have done so without going beyond our own "last."

## THE MAN-BALLOON.

Our lively French friends extract fun out of everything, generally at the expense of that unfortunate being—the husband of his wife—a being whose mission in France seems to be to supply the journalists with an inexhaustible subject of ridicule. Everything is twisted into this somewhat demoralising channel of public instruction: Latterly, the balloon mania has furnished a large quota of lively anecdotes illustrative of the weakness and follies of Parisian Benedicts. As a specimen, we select the following, as it is told by P. Florentino in the pages of *Le Phare*:—

Whilst an immense balloon was filling in the Champ-de Mars, the impatient crowd were amused by the sending up of a small figure of a man, the perfect semblance of M. Thiers without the spectacles. The little man being filled with gas, rose majestically into the air, and was soon lost to view among the clouds. His adventures, which became known the next day, were curious. Thanks to a strong and favouring gale which impelled him on his course, the little balloon-man arrived the same afternoon in the sight of a fine country house in the neighbourhood of Bievro. It was near the hour of dinner, and the lady of the mansion, who naturally thought herself perfectly safe in her chamber, was occupied in the mysteries of her toilet. It was a warm day, and she had opened one of the windows, which looked out upon the park, and was safe from any prying eyes. Whilst tranquilly engaged by the assistance of a corset-lacing, in reducing her waist to a size and shape that would reflect credit on her husband's taste, she was suddenly startled by a blast of wind followed by a strange noise; and immediately the casement was thrown open and our little balloon-man enters her chamber unannounced. The lady utters a cry of terror, and throws a shawl over her shoulders. The little man, driven by the wind, throws himself upon the unhappy woman, who screaming louder than ever, pushes him off, and he comes himself under the bed.

Just as the wife, in a supplicating voice, says to this novel Don Juan—"Ah! Monsieur, go away, or you will ruin me!" the husband, furious, rushed in, crying:—

"Ah! the wretch, I have him now!"

And goes in search of his sword to run him through the body. The wife, more dead than alive, reiterates in the midst of sobs, "Fly, fly! Monsieur, and save me the sight of a dreadful tragedy."

The husband arrives, armed to the teeth, followed by the whole household, who seek to mollify his anger.

Whilst two of his friends hold the husband, a third, stooping down, perceives our little friend, who, for good cause, utters not a word, and catching him by the leg, draws him forth from his concealment, when lo! Monsieur Balloon, no longer held down by the bedstead, raises himself erect, swells out, and rises majestically to the ceiling, to the immense amusement of the spectators, whilst the poor jealous husband slinks away, sword and all, heartily ashamed of his causeless wrath.

The following is an excellent study in English for Frenchmen:—Thimberling Thistlewaite-thievishly thought to thrive through thick and thin by throwing his thimbles about. But he was thwarted, and thwacked, and thumped, and thrashed with thirty thousand thistles and thorns, for thievishly thinking to thrive through thick and thin by his thimbles about.

## REVIEW.

*The Family Tutor's English Grammar, and Miscellany.* London: Houlston & Stoneman. 1851.

ENGLISH education without an enlarged knowledge of the English language, may be likened to the play of *Hamlet* with the part of *Hamlet* left out. It is not important merely because enabling one to speak and write with propriety, as Murray imagined, and as many people believe, but for numerous higher reasons. Words are the gates by which we enter the palaces of thought. "Nothing is great," says Channing, "until it is expressed." It is, therefore, of consequence to ascertain how a knowledge of English words may be most easily, agreeably, and correctly obtained; especially as the subject is to many minds unattractive and beset with difficulties.

The old Grammar systems—of which the type and head was Lindley Murray—were truly unattractive and difficult. Latham also asserts that "out of every hundred statements made by the current writers on the English language, ninety-nine come under one of the two following predicaments: they either contain that which is incorrect and better not known at all, or something that was known before, and would have been known independent of any grammatical lesson whatever." At the same time, the strong sense that characterises the reasoning of Cobbett, affords intellectual exercise even where the facts upon which it works are wrong; whilst the copiousness of illustration in Lindley Murray has its value as *Exercises* and in the way of *practice*. Since their time, Grammars of various pretensions have multiplied around us, and Latham's masterly works on the English language have opened up new fountains of thought for advanced students. But none of all these have succeeded in making the subject simple, easy, and attractive to people generally. This is accomplished in the *Family Tutor's Grammar* by a plain and homely style, with familiar illustrations, full explanations, abundance of examples, and a gradual progression from the more simple and easy parts to those more advanced. The engravings form a new and remarkable feature, not merely pleasing, but greatly assisting the learner—as will be evident from the following development of

THE NOUN.

"The man shown in the cut may be spoken of as a man, a gentleman, an Englishman, a father, a husband, a friend, a merchant, a master, a householder, Sidney, or George Sidney. All these are name-words, or NOUNS. In like manner, the words, woman, Mrs. Sidney, Jane Sidney, lady, wife, mother, boy, Henry, girl, child, cat, book, John, tongue, fire, mug, fireside, are NOUNS, or names of things." \* \* \* Again. "If the scene represented in the above cut, there would be *heat* coming out from the fire, and *sound* from the girl who is reading, neither of which can be seen; yet the words, *heat* and *sound*, are undoubted NOUNS, or names of things.—There are some things which cannot be perceived by the outward senses, but of which the name; are nouns—*as* goodness, wisdom, knowledge, virtue, mercy, strength, happiness, woe, sorrow, freedom, fear. These, however, may be perceived by the inward mind."

The Adjective is pictured out with equal clearness.

THE ADJECTIVE.

"In the foregoing cut, we see several objects, the names of which are nouns: as the man, the woman, the boy, the balls. But we observe that the man is *old*, the woman is *young*, the boy is *little*, one ball is *black*, and the other ball is *white*. Those words in italics are adjectives, for they qualify the nouns, that is, tell us some qualities or properties of the nouns. They may be used along with the nouns, either in the way given above, or as follows: an *old* man, a *young* woman, a *little* boy, a *white* ball, a *black* ball."

THE PRONOUNS are in the same spirit.

"In the engraving we see a little boy who has taken his brother's ball, and the latter is complaining to his mamma. He would very likely say to her 'Please, mamma, would you speak to Tommy; he has taken the pretty white ball that grandpapa gave me, and he won't let me have it; and he won't let me play with him.' And mamma probably replies

—'Well, John, we will go to him, and hear what he will say to us about it.' The words in italics are pronouns. They are used instead of nouns—you instead of mamma; he and

THE PRONOUN.

him instead of Tommy; me instead of John himself, who is speaking; it instead of the ball; me and us instead of mamma and John taken together."

One example more of this graphic way of teaching; here is

THE VERB.

"Jane rides on her pony, while her papa walks at her side holding Tommy by the hand. Mamma follows, looking with pleasure at her little girl; and the dog runs behind, at a distance, for the pony kicked him yesterday.—The words in italics make assertions,—they are VERBS."

The learner who could not readily understand the nature of classes of words thus exhibited, must be dull indeed.

The examples are numerous, interesting, and valuable, increasing in difficulty as the learner advances:—

"The following passage, from *Cymbeline*, gives a number of examples of the relations which cause the noun or pronoun to be considered in the objective case; and, as this is a most important point in grammar, we recommend it to be attentively studied. The words in the objective case are marked by italics (not the proper names) it is for the latter to find out, from what has just been described, why these words are in that case.

IMOGEN. Thou shouldst have made him

As little as a crow, or less, ere left

To after-eye him.

PLISANIO. Madam, so I did.

IMOGEN. I would have broke mine eye-strings; cracked them, but

To look upon him; till the diminution

Of space had pointed him as sharp as my needle;

Nay, followed him, till he had melted from

The smallness of a gnat to air; and then

Have turn'd mine eyes and wept.—But, good Plisanio,

When shall we hear from him?"

Teachers who aim at informing the understandings of their pupils rather than loading their memories, and creating an interest in order to have essential ideas retained, will find this Grammar admirably suited to their purpose. Persons aiming at self-culture have not only in the *Tutor's Grammar* a full, correct, and animated treatise, but also ample instructions how to study.

In again especially recommending this Grammar to teachers, we advise them to keep in view that valuable principle of method which it exemplifies—that we should not teach children by the ear alone where it is practicable to teach by the eye. For general family use, this is the best Grammar yet published, and we hope to see it in every school-room, parlour, and study. The price, considering the engravings, is singularly cheap—half-a-crown, for which a Miscellany is included rich in information and suggestion for all who are seeking or imparting instruction. Truly, the schoolmaster is abroad, and so vigorous and accessible that knowledge ought to make swift progress.

YOU NOT SO BERRY FAT ARTER ALL.—A field-slave in the South, one day found in his trap a plump rabbit. He took him out alive, held him under his arm, patted him, and began to speculate on his qualities.

"Oh, how fat!—berry fat!—the fittest I eber did see! Let me see how I'll cook him! I broil him! No, he so fat he lose all de grease. I fry him! Ah, yes! he so berry fat he fry himself. Golly! how fat he be! No, I won't fry him—I stew him!"

The thought of the savoury stew made the negro forget himself, and in spreading out the feast in his imagination, his arms relaxed, when off hopped the rabbit, and squatting at a goodly distance, he eyed his late owner with cool composure.

The negro knew there was an end of the stew, and summoning up all his philosophy, he thus addressed the rabbit, at the same time shaking his fist at him:—

"You long-eared, white-whiskered rascal, you not so berry fat arter all!"

## CHARADE.

The organ ceased its solemn peal,  
The worshippers began to kneel,  
And turned from worldly thoughts away,

While the good priest looked up to pray.  
He asked forgiveness for the past—  
Implored a blissful home at last;  
Bosought escape from hell accus'd,  
And piously exclaimed my *first*.  
My *second's* found in every land,  
On every hill, on every strand,  
Where waters dance beneath the skies,  
Or where the thirsty camel dies.  
Years pass away, until my *whole*  
Is writ upon Time's lengthening scroll.  
Of ducats did old Shylock lend  
For purpose vile—not as a friend—  
My *whole* three times,—and wrought  
A deed  
Which would have made a Christian bleed.

[Answered in No. 9.]

## ENIGMAS.

1. When I am full, I run away,  
Because, in truth, I cannot stay.  
Though for a time I'm only gone,  
I soon return to fill my home.  
2. And play my pranks with some; so soon  
They're crazy long before 'tis noon  
Now catch and guess me if you can  
Some say they see in me a man.

[Answered in No. 9.]

But never on the earth am I;  
I'm seated far away—on high;  
So let not that be your reply;  
For I am wand'ring far away,  
Doomed from this ether earth to  
stray;  
Though due attendance I must give  
To all the world in which you live.

[Answered in No. 9.]

My *first* is a cleaner of shoes;  
My *second* a dresser of stews;  
And now for my *whole*, you must travel,  
To Greece for the point to unravel.

Two-thirds of a fairy take *first*, when you  
find her;  
Then, what is level, to which you must  
bind her;  
After that, to Rome's calendar, you may  
repair;  
Ten to one, if you look sharp, you'll find  
my *whole* there.

To say my *first* is the conclusion  
May put you all into confusion,  
But so it is you'll see;  
Whatever quantity you name,  
My *second*, cannot reach the same:  
My *whole's* eternity.

You may put on my *first* before you lie  
down;  
My *second*, you'll find an episcopal town,  
Which sometimes you only can enter by  
keys:  
My *whole* you must have, to guess me with

A witticism first look out, and place;  
Then to it add the first part of a chase;  
The whole, when you've completed, swallow  
soon,  
For it will cheer you, though a mere  
buffoon.

1. To an insect add nothing—take two  
away—then  
2. You may add if you please as many as  
ten.  
3. When your work is completed, I trust  
you will find,  
What is placed round your bed, if its  
made to your mind.  
4. Should you not see it there, you may  
go to the play.  
Though perhaps a good actor will send  
you away,  
Without giving you leave to look round  
about,  
To see if you can, or cannot find me  
out.  
5. Then home you may trudge, and, I  
think, you'll be able,  
To find me, when going to bed, on  
your table;  
But if, after all, I ne'er enter your head,  
Rest assur'd, you will find me as soon  
as you're dead.

[The above will be answered in No. 9.]

1. When statesmen deign to take me in  
their hand,  
They make me nimbly run at their  
command.  
When anxious lovers would their hours  
beguile,  
They tarry tenderly with me awhile;  
And clasp me round with frantic joy  
't' unfold  
Passions they fondly swear, as pure as  
gold.  
Poetic tales I frequently relate,  
And tell of trifling things as well as  
great.  
No genius of my own do I possess,  
But thoughts of other men I do ex-  
press.  
Sometimes they make me lie, blas-  
pheme and swear,  
And for my fate hereafter little care.  
But, yet—to them, I'm of the greatest  
use,  
2. Although the wildest offspring of a  
goose.

1. Faithful to beauty's charms and grace,  
The form of loveliness I trace;  
But every blemish I detect,  
And point out every defect.  
Though long a favorite with the fair,  
I sometimes fill them with despair.  
Still I'm consulted every day,  
By old and young—the sad—the gay;  
All fly to me, so fam'd for truth,  
Uninfluenced by age or youth;  
For I nor flatter nor defame,  
So now, I think, you'll guess my name.

I'm apt to grumble, fume, and fret,  
Whenever we meet together;  
And sometimes look as black as jet,  
Evince contentment—never.  
In vain it has been tried by some,  
To turn me to their will,  
But then I'm fierce and doubly queer,  
And turn to murmur still.

1. A man of wisdom, or a fool;  
2. A shape or figure, formed by rule;  
3. A source of happiness or woe;  
4. A negative reversed take now;  
5. Not any thing I fear you'll find,  
Now for a letter to your mind,  
But the initials you must name,  
To show a man of worth and fame;  
One of the seven men of Greece,  
Renown'd for wisdom, charity, and  
peace,  
The widow's friend, the orphan's shield,  
A foe to Draco's laws, he them repealed.  
Not one more hint you now need have  
To name a sage, both good and brave.

## ANSWERS TO THE PASTIME OF LAST EVENING.

Page 109.

PICTORIAL CHARADE.—Pass age.

CHARADES—1. Dumb-bell on. 2. A Nail 3. Moon-shine. 4. Death-watch.

## THE REMARKABLE ADVENTURES OF BARON BRAG.—AN UNNATURAL HISTORY FOUNDED UPON NATURAL HISTORY.

(To be Continued by Us, until Discontinued by the Baron.)

By a desperate thrust the Baron transfixes three of his terrible enemies, but is unable to release the fatal weapon!

The fourth barely escapes; and, excited by the fate of his companions, determines on revenge!

But the Baron is so emboldened, that he defies and trifles with the enraged animal. With what result we shall soon see!

## OUR CORNER CUPBOARD!

READ not books alone, but men; and chiefly be careful to read *thysself*.

NEVER apologise for a long letter—you only add to its length.

TO SAVE BUTTER.—Make it so salt nobody can eat it.

TRUTH may be expressed without art or affectation; but a lie stands in need of both.

DO good to him who does you evil, and by this means you will gain the victory over him.

IDLENESS prepares us for mischief, as loose company prepares us for corrupt habits.

TRUE wisdom is to select the good from the bad; so the bee draws honey from many an unlovely flower.

GO slowly to the entertainments of thy friends, but quickly to their misfortunes.

LEARNING is obtained only by labour: it cannot be bought with money; if it could, the rich would always be intelligent.

NEVER be afraid to do right; he that strives to please everybody pleases nobody.

WE never yet knew a man disposed to scorn the humble, who was not himself a fair object of scorn to the humblest.

Oh! what a tangled web we weave,

When first we labour to deceive.

WE seldom appreciate beauty until it is on the decline, and then we cling to and treasure its wreck with jealous care.

AN Irishman coming to Boston from Lowell, took the stage, in preference to the cars, because, as he said, he could ride four times as long for the same money.

THE following (as we learn from the *Maine Democrat*.) is a copy of an excuse recently handed in to a schoolmaster for the non-attendance of one of his scholars:—"cepatomtoogotaturing."—"Kept at home to go a-taturing!"

AN Irishman who had blistered his fingers by endeavouring to draw on a pair of boots, exclaimed, "I shall never get them on at all, until I wear them a day or two."

A PAISLEY manufacturer, having got, by some accident, a severe cut across the nose, and having no court-plaster at hand, stuck on his unfortunate organ one of his gum tickets, on which was the usual intimation:—"Warranted 350 yards long!"

A DUTCHMAN was relating his marvellous escape from drowning, when thirteen of his companions were lost by the upsetting of a boat, and he alone was saved. "And how did you escape their fate?" asked one of the hearers. "I did not go in to boar," was the Dutchman's placid answer.

IT is a musical fact that every orchestra contains at least two musicians with moustaches, one in spectacles, three with bald heads, and one very modest man in a white cravat, who, from force of circumstance, you will always observe, plays on a brass instrument.

A FRIEND in California writes us that they have fire-flies so large in that interesting State, that they use them to cook by. They hang their bottles on their hinder legs, which are bent for the purpose, like pot hooks. Great country that.

"THIS must be a very inconvenient town to live in," said a Cockney to an inhabitant of Hyde: "for I understand you have to get all your milk from Cowes?" "Not so bad as London," replied the Isle of Wight wag, "for they tell me you get all your milk from Wells!"

I SHALL set down at length the genealogical table of False Humour, and at the same time, place beside it the genealogy of True Humour, that the reader may at one view behold their different pedigrees and relation:—

Falsehood	Truth.
Nonsense.	Good Sense.
Frenzy	Wit.
False Laughter.	Mirth.
False Humour.	True Humour.

—Addition.

THE editor of the *American Mechanic* has encountered trials unknown to ordinary men. "Owing to the facts that our paper-maker disappointed, the mails failed and deprived us of our exchanges, a Dutch pedlar stole our scissors, the rats ran off with the paste, and the printers went to the circus, while the editor was at home tending the babies, our paper is unavoidably delayed beyond the proper period of publication."

**TAKE PHYSIC, CROSSNESS.**—A sensible woman, the mother of a young family, taught her children from their earliest childhood to consider ill-humour as a disorder which was to be cured by physic. Accordingly, she had always small doses ready, and the little patients, whenever it was thought needful, took rhubarb for the crossness. No punishment was required. Peevishness, ill-temper, and rhubarb were associated in their minds always as cause and effect.—*Southey's Literary Fastimes.*

A DROLL story is related of an honest farmer, who, attempting to drive a bull, got suddenly hoisted over the fence. Recovering himself, he saw the animal on the other side of the rails, sawing the air with his head and neck, and pawing the ground. The good old man looked steadily at him for a moment, and then shaking his fist at him, exclaimed, "Darn your apologies—you needn't stand there, you 'tarnal crittur, a bowin' and scrapin'—you did it a purpose, darn your curly picture!"

## OUR MEMORANDUM BOOK!

*Rules of Living.—Adapted from the German of A. Von Platen.*

1. READ frequently the following precepts; impress them carefully upon your mind, and let your purpose of living by them ever grow firmer and livelier, and let them be to you more inviolable than an oath.

2. Let your religion be that of sensible and reasonable men. Let it consist in faith in the goodness of the great all-pervading Spirit—in a Providence, whose guiding and directing presence is clearly manifested in all the events of your life.

3. Permit no doubt, nor doubter to perplex you. It is neither possible nor conceivable that you, with human understanding, should be able to comprehend the Deity and the original creation of things, since you can survey only so small a part of the universe, and can perceive that only through the senses, and externally.

4. Communicate your principles only to those who are animated by similar views. You will convince no one who does not convince himself. The reformation of the world advances at a slow pace: let time perform its work. All projects of sudden enlightenment have proved abortive.

5. Never engage in so-called religious disputes; break off such a conversation as soon as an opportunity of doing so is presented.

6. The idea of a Supreme Being will necessarily lead you to the belief of the spirit's immortality, without which life would be without meaning.

7. Neglect not the body, upon which your whole earthly existence depends. Inform yourself of what is beneficial, and what is pernicious to it. Despire it not; but on the other hand also consider what an inert, useless and mouldering mass it is, as soon as it lacks life, its animating principle.

8. Let the object of your life be, improvement in what is good. All is good which contributes to the health of your own body and mind, and that of others.

9. For the perception of the good, a sincere desire is sufficient. But it is only by reflection and observation of ourselves, that we attain to that rapid penetration and that nice power of distinction, which are necessary in the manifold and complicated events of life.

10. Never lose sight of that aim of life, not even in little things. Believe that no action is so insignificant that some virtue may not be promoted by it. In bodily suffering and disagreeable occupations, exercise at least patience, of which man stands so much and so frequently in need, and which is the best safeguard against ill-humour.

11. The good man contributes to the welfare of others not alone by positive act and instruction; but his life resembles a fruit-bearing shade tree, by which each passer-by finds shelter and refreshment, which disinterestedly and even involuntarily scatters happy germs upon the surrounding soil, whereby it produces what is like and similar itself.

12. Whatever you do, trust in Providence, and also in yourself. Both united, will extricate you from every dilemma, encourage you in every undertaking.

13. Should any misfortune threaten to plunge you into the deep gloom of despondency, stimulate your courage by an effort of resignation.

14. Shun not "as the wise Seneca says, to make yourself remarkable by no talent or other.

15. Yet do not devote yourself to one branch exclusively. Strive to get clear notions about all. Give up no science entirely, for science is but one.

16. Follow also the counsel of Garve; acquire the art and skill to render the whole man at least tolerable, although you may gain your real reputation in the world by a single part only. To a rational man this attainment is obligatory.

17. Let your watch-words be constant activity and daily contemplation of yourself and the ways of God. These will guard you against every false step.

18. Allow yourself, moreover, as much recreation, as is needful for you, but not more, unless you would reap the reward of disagreeable feelings.

19. Force yourself in the evil hour to no labour, except it be a positive duty. Yet on the other hand, fly procrastination, which Young justly calls the thief of time. These rules have their exceptions, not likely to be mistaken.

20. Introduce changes in your reading and studies. Who reads but little at a time, retains that little the better.

21. Guard against reading too much or too rapidly. Read rather with attention; lay the book often down; impress on your mind what you have read, and reflect upon it.

22. Weigh every step that you are about to take, whenever your passions become involved. How often do things assume a different aspect, when they are fairly considered.

23. On the other hand be prompt and decided in all that you have ascertained to be clear of doubt, irrefragable and in accordance with duty, and in which you can in no wise fear misconstruction.

24. Maintain your name blameless, and deliver it pure and stainless to posterity. Let no end induce a resort to questionable means.

25. In all things study moderation, a virtue more difficult than it appears, but more necessary than any other. Think not, however, that anything base can be ennobled by moderation.

**THE CHEAPEST ORIGINAL AND COPYRIGHT MUSIC IN THE WORLD.** The *Family Friend*, Vols. II. and III., contain numerous Original and Copyright Musical Productions by celebrated Composers. These may be had collectively, bound in the Volumes, price 2s. 6d., or separately in the Numbers, price 2d. each.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

**PARLOUR LITERATURE OF ALL NATIONS**, (being Vol. 1. of THE PARLOUR MAGAZINE) price 5s. The ParLOUR Magazine was the only Book printed in the Crystal Palace, and will remain as a handsome and appropriate memento of it. THE PARLOUR LITERATURE OF ALL NATIONS will be completed in two Handsome Volumes, price Five Shillings each. Covers for Binding the Volumes, uniform with the above, may be had of all Booksellers, price 1s. 6d. each.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

**EXQUISITE OIL PICTURES.**—Sixpence each. KNIGHT & FOSTER, agents for the sale of Baxter's Oil Pictures. They are perfect gems of art: no lady's oil-picture can be perfect without them. A few of the subjects, are named below, but an enlarged list will be sent on application. — Windsor Castle—Prince of Wales—Lover's Seat, Hastings—Dipping Well, Ditto—Banquet of Flowers—Ben Nevis—Tavernier's Dance—Tintern Abbey—Well-Diggers—Netley Abbey—Bala Lake—Brougham Castle—Water mill on the Wyke—Langollen—Llano Cnno—Warwick Castle—View on the Rhine. Two sent free by Post for 14 Stamps.

When the value of Five Shillings is taken, they will be sent post free.—The above are each neatly mounted on Drawing Paper, 7½ by 5½. KNIGHT & FOSTER, Stationers, &c., 5, Eastcheap, London.

**PRIZE MEDAL FOR STEEL PENS.**—This was given to KNIGHT & FOSTER, the celebrated Pen Manufacturers, of Eastcheap. Their Pens have been for several years extensively used in the Bank of England, Post Office, and Custom House, London, and in addition in the already brilliant success that has rewarded the Productions, for the care bestowed on the Manufacture of these Pens, they have the gratification to announce that to them was awarded the

**PRIZE MEDAL AT THE GREAT EXHIBITION**, for their great Excellence, Superior Merit, Utility and Cheapness.—See Class 22—689, and 694; also Lord Carnarvon's Report.  
Sold by most stationers and booksellers. 1s. per box of 3 dozen and holder, or direct for 15 stamps from the Proprietors, KNIGHT & FOSTER, Stationers, 5, Eastcheap, London.

**THE STANDARD ELOCUTIONIST,**  
Or in Numbers, in a neat wrapper, at 2d. each.  
The study of Elocution, both in Schools and Families, has become an indispensable feature in the educational business of our time. The value of this accomplishment is now universally acknowledged; indeed, without its cultivation, it is felt that our young folks would possess but few claims to a polished address, or a charming and graceful delivery. Falling in most cordially with this opinion, the Proprietor of the Standard Elocutionist ventures to send it forth as his feeble contribution to the cause of Educational Progress.  
London: Published by KENT & Co., Paternoster Row, and sold by all Booksellers.

**WORTH TEN GUINEAS A BOTTLE.**—Two or Three Drops of MRS. DEMAIN'S LIQUID produce such a wonderfully Beautiful Change upon the Skin as can be produced by no other Article in the World. One application renders the Skin, in Seven Days, White, Spotless, Youthfully Fair, and Delicately Transparent, like that of the Infant; and the complexion is restored to that clear and bright purity of expression from which the countenance in childhood derives its loveliness and charm. Requires using only once a year, by which the Complexion is preserved, even to old age, in its youthful and unblemished appearance. The change produced is natural and permanent. In all cases the Skin becomes perfectly new. All Readers are invited to test its extraordinary properties. In Bottles, for One Year's Use, 1s. 1d.  
Sold by Messrs. HICK, Chemists, &c., 44, Drury Lane, London. Sent Free to any Address for 15 Stamps. Address, Mr. M. HICK, Chemist, Wakefield; Mr. JOSEPH HICK, Chemist, Bradford; or Mr. JOSEPH LUND, Bookseller, Westgate, Bradford.

**TUTOR'S ENGLISH GRAMMAR** is illustrated by numerous spirited Wood Engravings, by which a dry and tedious study is made peculiarly easy and interesting. Price 2s. 6d.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

**50,000 CURES WITHOUT MEDICINE**, by DU HARRY'S REV. LENTA ARABIC FOOD. Cure 49,332.—"Fifty years' indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness at the stomach, and vomitings, have been removed by Du Barry's excellent food."—Maria Jolly Worthington, Lang, near Dron, Norfolk. Cure No. 71, of dyspepsia: from the Right Hon. the Lord Stuart de Decies:—"I have derived considerable benefit from your Food, and consider it due to yourself and the public to authorise the publication of those lines."—Stuart de Decies. Cure No. 4,308:—"Eight years' dyspepsia, nervousness, debility, with spasms, spasms, and nausea, have been effectually removed by Du Barry's delicious food in a very short time. I shall be happy to answer any inquiries." Rev. John W. Flavell, Ridlington Rectory, Northampton. Sold in canisters, with full instructions, weighing 1lb. at 2s. 6d., 2lb. at 4s. 6d.; 5lb. at 11s.; 12lb. at 22s. Super-refined quality, 10lb. at 8s.; 5lb. at 2s.; the 10lb. and 12lb. canisters are sent free of carriage on receipt of Post-office orders by Du HARRY & Co., 127, New Bond Street, London, also, Fournier, Mison, & Co., Purveyors to Her Majesty the Queen, Piccadilly; and at 60, Gracechurch Street.

In the Press, and shortly will be published,  
**GRANDFATHER WHITEHEAD'S CATECHISM**, designed to make the Acquisition of Useful Knowledge by the Young, and by Beginners of all Ages, easy and pleasing. The Catechisms will be published Monthly, each containing 82 pages, crown 8vo., illustrated by numerous Diagrams. The price of each Catechism will be 2d., stitched in a neat Wrapper. The whole Series, bound in cloth, 2s. 6d.  
1. Natural Philosophy.—Elementary Principles.  
2. Natural History.—Principles of Classification.  
3. Mechanics.  
4. Chemistry.  
5. Electricity, Optics, & Acoustics.  
6. Pneumatics, Hydraulics, &c.  
7. Vegetable Physiology and Botany.  
8. Animal Physiology and Anatomy.  
9. Zoology.  
10. Astronomy and Physical Geography.

12. The Applied Sciences.—Locomotion, Arts, Manufactures, Sanitary Improvements, &c. &c.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

**THE FAMILY FRIEND**, an established Magazine, published upon the First and Fifteenth of every Month, price Two-pence. Thirty-two pages, beautifully printed, and neatly covered. The following is a type of the OPINION formed of THE FAMILY FRIEND, and expressed by upwards of THREE HUNDRED NEWSPAPERS:—"The Boys and Girls will like it, for it contains good Stories; the Young Ladies will like it, for the sake of its pretty Poetry, and its Receipts for various kinds of Fancy-Work; Young Men will like it, for it attacks of Science; the Women will like it, for it abounds in useful Household Receipts; the Men will like it, for it treats of Gardening and Natural History, and advises wives to be kind to their husbands; those who love amusement will like it, for it swarms with Conundrums; everybody will like it, for it has a corner for every body; and nobody need be afraid of finding any harm in it."—*Outsized Observer*.

The Work may be had up to the end of December, 1851, in FIVE VOLUMES, price 2s. 6d. each.  
The Fourth Volume contains a QUADRUPLE INDEX to the First Four Volumes, embodying about THREE THOUSAND FIVE HUNDRED REFERENCES to matters of every-day usefulness. The Work forms a most perfect Encyclopedia of Domestic Economy.  
London: HOULSTON & STONEMAN, 65, Paternoster Row; and all Booksellers.

Now ready, and may be had of all Booksellers, neatly bound in Cloth, price 2s. 6d.,

**THE FAMILY TUTOR, AND SCHOOL COMPANION.** Was published on the 1st of January, 1851, and subsequently on the 1st and 15th of each Month, in Parts, price 2d. each.

THE FAMILY TUTOR, as its name implies, is a Work of a highly instructive character, and realises, as far as can be accomplished in print, the advantages of a PRIVATE TUTOR to every reader—a Tutor whose teachings are lively, kind, and comprehensible, making the acquirement of knowledge a PLEASURE, not a TASK.  
The First Volume contains—A COMPLETE ENGLISH GRAMMAR, Improved and Simplified; FAMILIAR LECTURES ON CHEMISTRY; TALES OF HISTORY AND OF TRAVEL; ZOOLOGY; THE PHYSICAL HISTORY OF MAN; THE PHYSIOLOGY OF HEALTH AND DISEASE; CELESTIAL AND TERRESTRIAL PHENOMENA OF THE MONTHS; MATHEMATICAL, GEOMETRICAL, ARITHMETICAL, AND OTHER PROBLEMS; EDUCATIONAL EXERCISES; "THE TUTOR AND HIS PUPIL," being Answers to Educational Questions; and A VARIOUS MISCELLANY.

THE SECOND VOLUME contains a Complete System of NATURAL GEOGRAPHY, with Pictures of Mountains, displaying the Costume and the Architectural and Natural Features of the various Peoples and Countries of the World.

THE FAMILY TUTOR may be had complete up to the end of 1851, in Two Volumes, price 2s. 6d. each.  
London: HOULSTON & STONEMAN, 65, Paternoster Row; and all Booksellers.

## Editor's Note-Book.

**ADVICE TO WIVES.**—A wife must learn how to form her husband's happiness, in what direction the secret lies; she must not cherish his weaknesses by working upon them; she must not rashly run counter to his prejudices; her motto must be, never to irritate. She must study never to draw largely on the small stock of patience in a man's nature, nor to increase his obstinacy by trying to drive him; never, never, if possible, to have scenes. We doubt much if a real quarrel, even made up, does not loosen the bond between man and wife, and sometimes, unless the affection of both be very sincere, lastingly. If irritation should occur, a woman must expect to hear from most men a strong and vehement language far more than the occasion requires. Mild, as well as stern men, are prone to this exaggeration of language; let not a woman be tempted to say anything sarcastic or violent in retaliation. The bitterest repentance must needs follow if she do. Men frequently forget what they have said, but seldom what is uttered by their wives. They are grateful, too, for forbearance in such cases; for, whilst asserting most loudly that they are right, they are often conscious that they are wrong. Give a little time, as the greatest boon you can bestow, to the irritated feelings of your husband.

**DRINKING HEALTHS.** R. F. S.—Our custom of drinking healths is derived from the Was-halle and Drinc heil, the usual ancient phrases of quaffing among the Anglo-Saxons, and synonymous with the "Come, here's to you," and "I'll pledge you," of the present day.

**CLEANING HAIR-BRUSHES.** G. Adey.—It is said that soda dissolved in cold water is better than soap and hot water. The latter very soon softens the hairs, and the rubbing completes their destruction. Soda having an affinity for grease, cleans the brush with a very little friction.

**MEDICAL DEGREES IN AMERICA.**—T. R. T.—The first medical degrees conferred in America were by King's College, New York, in 1769. The first medical work was *A Brief Guide on Small-pox and Measles*, by Thomas Thatcher, of Massachusetts, published in 1677.

**THE DRUNKARD'S CLOAK.** Wilson.—In the time of the Commonwealth, the magistrates of Newcastle-upon-Tyne punished drunkards by making them carry a tub with holes in the sides for the arms to pass through, called the "Drunkard's Cloak," through the streets of that town.

**SPINNING, WEAVING, AND DYING.** S. S.—Women originally spun, wove, and dyed; and the origin of these arts is ascribed, by ancient nations, to different women, as women's arts. The Egyptians ascribed it to Isis; the Greeks, to Minerva; and the Peruvians, to Menno Caepeo. But in China and India it is still more ancient.

**CHAP POSTAGE.** J. B. H.—The uniform rate of one penny per half ounce, for letters, came into operation on the tenth of January, 1840. The use of stamps, which formed one of the means suggested by Mr. Rowland Hill, for facilitating the despatch of letters, was introduced on the sixth of May following.

**RICHARD CŒUR DE LION.** G. R.—This king died from a cross-bow while besieging a small castle in France. It has been remarked, that he met his death by a weapon introduced into warfare by himself, much to the displeasure of the warriors of his time, who said that "heretofore brave men fought hand to hand, but now the bravest and noblest might be brought down by a cowardly knave lurking behind a tree."

**TO BROODER THIN.** T. R. C.—The following may be considered one of the most successful prescriptions in procuring leanness:—Take of anxiety as much as you can carry; of labour, twelve hours; of sleep, five hours; of food, one meal; of disappointed love, one season; of blighted friendship, half-a-dozen instances. Let these ingredients be mixed carefully with a considerable weight of debt, in a mind from which all religious remedies have been excluded, and excessive leanness will be produced.

**REWARD OF LABOUR.** Philo.—"Proposal of a plan to reward labour, and to perform it in a manner more conducive to the health and good morality of a great portion of our labouring population," &c. Such is the subject of a letter addressed to us by our correspondent, to whom we will willingly give the credit of being a well-wisher to his species, but the design is too vast to be treated upon in a few pages. We would not, however, discourage "Philo" from his benevolent scheme. The man whose inventive genius opens a source of additional happiness to mankind, fulfils an essential part in the purposes of his existence.

**A CROOKED COINCIDENCE.**—A pamphlet published in the year 1793, has the following strange title:—"The degeneracy of sinners. A sermon, preached at St. Michael's, Crooked-lane, before the Priests of Orange, by the Rev. James Crookshanks; sold by Matthew Dowton, at the Crooked Billet, near Cripplegate, and by all other Booksellers." The words of the text are, "Every crooked path shall be made straight." The prince before whom it was preached was deformed in his person.

**INDUSTRY.**—Every young man should remember that the world will always honour industry. The vulgar and useless idler whose energies of body and mind are rusting for the want of exercise, the mistaken being who pursues amusement, as relief to his enervated muscles, or engages in exercise that produces no useful end, may look with scorn on the labourer engaged in his toil; but his scorn is praise, his contempt is an honour. Honest industry will secure the respect of the wise and good among men, and yield the rich fruits of an easy conscience, and give that hearty self-respect that is above all price. Toil on then, young man and young woman. Be diligent in business—improve the heart and the mind.

**MR. SMITH ON THE BLOOMER COSTUME.**—We had thought that the excitement about Bloomerism, like all blooming things of which poets write, was on the wane; but the numerous letters we continue to receive on the subject, chiefly from our male correspondents, convince us that the ladies are not alone in this particular, but that the opposite sex are for once making an insane attempt to have the last word. This may imply a gallant anxiety to add to the comfort and happiness of the fair sex, or may arise from that fondness for quizzing inherent in some dispositions. We strongly suspect, however, dexterously the motives may be concealed, that the latter feeling predominates among those who have addressed us on this matter. Our friend Mr. Smith evidently belongs to this number, and has taken a one-sided glance of the question; but the ladies may have a more than equivalent satisfaction by criticising the decorative costume of certain "lions" who amply repay the dull formalities of dress, and are cut out for immortality by dint of sheer ingenuity.

"ITH PRETTY!—BUT DEFEHLENT IN THAT RETTING SIMPLICITY SOB VE-AY PHAWING!"

**POACHED EGGS.** W. S. S.—Poached eggs make several excellent dishes, but poaching them is rather a delicate operation, as in breaking the egg into the water, particular care must be taken to keep the white round the yolk. The best way is to open the small end of the egg with a knife. When the egg is done (it must be very soft) it should be thrown into cold water, where it may be pared, and its appearance improved, before it is dished up. Poached eggs are served up upon spinach, or stewed endive, or alone with rich gravy, or with stewed Spanish onions. They may also be fried in oil until they are brown, when they form a good dish with rich gravy.

**A RECIPE FOR LOW SPIRITS.**—F. H. has copied the following receipt for us:—Take an ounce of the seeds of resolution, mixed well with the oil of good conscience, infuse into it a large spoonful of the salt of patience; distil very carefully a composing plant called "other's woes," which you will find in every part of the garden of life, growing under the broad leaves of disguise; add a small quantity, and it will greatly assist the salt of patience in their operation; gather a handful of the blossom of hope, then sweeten them properly with balm of prudence, and if you can get any of the seeds of true friendship, you will then have the most valuable medicine that can be administered. But you must be careful to get some of the seeds of true friendship, as there is a weed very much like it, called "self-interest," which will spoil the whole composition. Make the ingredients into pills, which you must call "Pills of Comfort," take one night and morning, and the cure will be effected.

**THE POSITION OF THE HEAD AS INDICATION OF WHAT IS INSIDE OF IT.**—Alexander, all men of talent, genius and celebrity, have habitually held their heads inclined either to the right or to the left. Alexander, Cæsar,

Louis XIV., Newton, Charles XII., Voltaire, Frederick the Great, and Byron, all had this habit; Mirabeau, who defied his whole century and race, held his head stiffly and immovably erect. Napoleon never inclined his head, but looked straight at the battle-field mankind, and the world. Robespierre, about whom there are so many opinions, held his head up, but his eyes down, when he addressed the Assembly. Chateaubriand inclined his head to the left shoulder, and looked upwards. Beaumarchais looked straight before him, with his chin elevated; but he, like Mirabeau, was persecuted, and persecution aggrandises and ennobles a man of genius.

**CONTRADICTION.**—S. B. H.—Our correspondent inquires for a remedy to cure this most unconquerable of all habits. We confess our inability to satisfy him, except it is to avoid all discussions with persons of a contradictory disposition. There are some individuals who will not be persuaded into assentment, however reasonable may be the ideas submitted to them; and they remind us of the "better and worse" case we have seen somewhere:—"I have to inform you that I was married since I saw you. So much the better. Not so much the better; for my wife proved an arrant shrew. So much the worse. Not so much the worse; for she brought me a fortune. So much the better. Not so much the better; for with the money I bought a great number of sheep, which died of the rot. So much the worse. Not so much the worse; for I sold the wool, and with the produce I built a house. So much the better. Not so much the better; for my house was burned. So much the worse. Not so much the worse; for my wife was in it."

**OMEN, SWEARING.** Working Man.—We are much gratified by the observations addressed to us on this subject, and if space permitted, we would willingly insert the entire letter. Too much censure cannot be bestowed on this degrading vice, which would appear to be wholly confined to civilised (if) life. Mr. Schoolcraft, who resided thirty years with the Indian tribes on the American frontiers, affirms that the Indians never swear. "I have," he says, "made many inquiries into the state of their vocabulary, and do not, as yet, find any word which is more bitter or reproachful than *matchi anemowah*, which simply means 'bad dog.' I never heard of an imprecation or oath among them. The genius of the language does not seem to favour the formation of terms to be used in oaths, or for purposes of profanity. An Indian cannot curse. Surely, if these untutored wild men, as we are apt to term them, reject the language of swearing, how ashamed should those of our countrymen to feel, who interlard their daily converse with filthy and sinful oaths."

**TO MAKE COURT-PLASTER.** L. L.—Procure a small frame, that of an old school sixpenny-slate will suffice, strap tightly over it, in every direction, a piece of black silk. Prepare a size, by dissolving thirty grains, by weight, of the best small shred isinglass, in six drachmas, by measure, of common gin. Set this on the hob in a tripod, covered over, to acquire heat. When the isinglass is quite dissolved add gradually thirty drops of Friars' balsam (compound tincture of benzoin), occasionally stirring the fluid or size on every addition, with a strip of glass, or the small end of an ivory spoon. Then take a broad, flat camel-hair pencil, such as is used for the first wash of the sky in water colour drawings, and cover the silk with a coating of the fluid; then let it dry in a warm room. Repeat the coating as often as the silk shall become dry, and till the surface appears quite glossy. If the size should be found insufficient to finish the process, more must be prepared; eight to twelve applications of the fluid, according to the texture of the silk, will be required. Should the size become too thick, a few drops more gin may be added.

## LINES.

BY GEORGE D. PRENTICE.

Sweet moon, I love thee, yet I grieve  
To gaze on thy pale orb to-night,  
It tells me of that last dear eve  
I passed with her—my soul's delight  
Hill vale, and wood and stream were dyed  
In the pale glory of thy beams,  
As forth we wandered, side by side,  
Once more to tell love's burning dreams  
My fond arm was her living zone,  
My hand within her hand was pressed  
And love was in each earnest tongue,  
And rapture in each heaving breast.  
And many a high and fervent vow  
Was breathed from her full heart and  
mine,  
While thy calm light was on her brow  
I like pure religion's seal and sign  
We knew alas! that we must part  
We knew we must be severed long,  
Yet joy was in each throbbing heart  
For love was deep and faith was strong  
A thousand memories of the past  
Were busy in each glowing breast,  
And hope upon the future cast  
Her rainbow hues—and we were blest  
I craved a boon—oh! in that boon  
There was a wild delicious bliss

Ah! didst thou ever gaze, sweet moon,  
Upon a more impassioned kiss?  
The passing scene—one moment, brief  
Her dim and fading form I view'd—  
Twas gone—and there I stood in grief,  
Amid life's awful solitude  
Tell me sweet moon, for thou canst tell,  
If passion still unchanged is here!  
Do thoughts of me her heart still swell  
Among her many worshippers?  
Say, does she sometimes wander now  
At eve beneath thy gentle flame,  
To raise to heaven her angel brow,  
And breathe her absent lover's name?  
Oh when her gentle lids are wet  
I pray thee mark each falling gem,  
And tell me if my image yet  
Is pictured trembling in them  
Ay tell me, does her bosom thrill  
As wildly as of yore for me?  
Does her young heart adore me still  
Or is that young heart changed like  
these?  
Oh let thy beams that softest shine,  
If still my love to her is dear,  
Bear to her gentle heart from mine  
A sigh—a blessing—and a tear

## WHAT WOMEN CAN DO.

A DOMESTIC STORY—BY ANGELOICA HULL.

"What a terrible thing poverty must be!" exclaimed a young girl, who was standing at the window of a luxuriously furnished room, impervious to the cold piercing wind that was raging without. The soft Wilton carpets yielded to the foot the heavy velvet curtains shielded the large deep windows the cushioned chairs with open arms invited the idle and weary, and a bright coal-fire burned merrily in the grate. The table was set with beautiful porcelain and richly chased silver and well might the fair speaker look with pity on the many that passed before her exposed to all the horrors of cold and hunger—the hundreds who were homeless by night as well as by day. "What a terrible thing poverty must be!"

"It is, indeed," said Mrs. Herbert in a low voice. Alice turned round—her mother's eyes were full of tears. "Dear mother, said she going up to her, 'what affects you thus?'" "You little know, my child, how deeply I can feel for the poor," said Mrs. Herbert returning her fond caress, "for although I have not suffered from that actual poverty of which you were thinking, I have been sufficiently near it in my life to understand its terrors." "You, mother, you!" and her children crowded round her. There were five in number—Wallace, a fine spirited youth of eighteen; Alice, two years younger, Mary, Bertha, and Frank, a little rogue of eight summers. "When was that, darling, best of mothers?" said Wallace, seating himself at her side. "Tell us about this sad time of which we never dreamed." "Be silent, children, Frank shall sit on my knee and Bertha stand here. The mother smiled fondly on the little group, and passed an arm over Mary's shoulder.

"You all look so full of eager interest, my dear children, that I am afraid you will be disappointed, but my own experience may benefit you, should such trials ever be your share—which God forbid! and I will relate mine, and beg you to remember how I care for His own in the midst of suffering."

"Your father and myself were very young at the time of our marriage—too young, in fact, and I would not like to see my daughters leave their home at the age that I left mine. But lovers are ever sanguine, and we thought it impossible that anything but an unclouded future could be in store for us. Your grandmother was in favour of our early union, she could urge her own happiness as a powerful argument, and your grandfather yielded to her entreaties and ours. A few months previous to this, there came on the commercial horizon a dark spot, which, when we deemed ourselves comfortably settled for life, burst over our heads in spite of your father's struggles to avert it. He had been lately taken as a partner in the house to which he belonged, and all therein were crushed and ruined by the failures of thousands. Our happy home had to be given up, and I returned with one child, Wallace, to my old homestead, where I was received with open arms. Your father never lost his spirits or his energy, and to work he went again

with a small capital advanced him by my own father, for many others, his relatives now talked about the imprudence of our marriage, and left him to his own exertions. I never missed my comforts, for I could not feel their absence where I was, and cheerfully gave up my accustomed style of dress to wear plain bonnets and shawls. I am sure neither of us breathed a sigh of regret for our lost fortune, and with our dear boy to love and with the kindness from those around us, and a competence, we began life anew. Alas! how little human hearts foretell the storms that roll over them! My father, too, was a victim to the prevailing times. He had endorsed largely for others, and invested part of his fortune in stocks that proved worthless. His failure was to him a terrible blow. He had no youth to spare him—he had no strength to recommence, and he sunk under his misfortunes. Mother was very delicate—she had long been an invalid, and ere long I was left an orphan and penniless again. We were then dependent on the generosity of your grandparents for a salary; and never, never shall I forget my agony, as I left my childhood's home to strangers! All was given up, and I must have died, but for my husband's firmness under all this. He was the first to comfort and bid me smile again. He still hoped on, and busied himself with providing us a shelter in the storm. It was a small, poor place, my children, and boasted of three rooms. We furnished it as we could, and never dreamed of comfort, when it was hard to get food and raiment. This was about two months before Alice was born. I thought of my mother's tenderness, and the constant care with which she had surrounded me at Wallace's birth. I had not even clothes now for my little one, and set about cutting up my worn-out dresses, to convert them into a wardrobe for the coming stranger. It was neatly made, and I tried hard to think it pretty, but the faded calico seemed shabby enough by the side of one or two embroidered robes that had been worn by Wallace.

"It was bitter cold, my Alice, when your sweet eyes first opened to the light, and I pressed you close to my heart as my tears fell over you, wondering if God would spare you amidst so much affliction. We hired a woman to work and attend to my wants, but I knew full well how unable we were to indulge in the luxury of a nurse. So in spite of your father's entreaties that I would not overtask myself, I soon dismissed her and resumed my household duties. Little Wally could rock his baby sister, and watch the fire while I went about other things. Your father brought me water and coal for the day, before he set off to his business, and you cannot imagine how happy I was to sit down by my two little ones after the house was in order and baby dressed. At night I had a bright fire in the dining-room, supper prepared for my weary husband, and his gown and slippers all ready for his coming. I then we met so gladly, and chatted so cheerfully together, that no one would have imagined we had ever been otherwise than poor; but we knew the folly of repining, and the sinfulness of murmuring, and thus kept light hearts as long as there was enough for the morrow. We never despaired of making a way in the world and living comforts once more—and you should have seen our pleasure when your father brought home some little present for Wallace or Alice! Now it was a new toy, a pretty cup or mug, that served to ornament the chimney-piece, and hold the fresh flowers I gathered each day from our little garden. Sometimes a dress for baby, whose making was as interesting to Alfred as to me. We thought her such a beauty after it was on, and Wally's curls fastened on her neck and arms!"

"And where were my father's sisters?" asked Alice, whose deep-blue eyes were filled with tears, while Wallace covered his face with his hand. "Could they not help him, mother?"

"They were worldly women, and seemed to look upon our reverses as the effect of an imprudent union. They came occasionally to see us, but I learned to dread their visits and rude questions, as they glanced around our humble home and wondered how I managed to make it so comfortable. They never allowed me to suppose that they knew we were in want of anything, though Betaria once or twice sent you and Wallace a small gift that I longed to refuse, but accepted for your father's sake. They were of that number to whom poverty is as a disgrace, and brought up as they were, I could not blame them that they avoided us."

"Oh, mother! do not say that!" cried Alice, kissing her. "How could they let these poor hands toil so hard, and never offer to lighten your labours?"

"It was as well that we could feel independent, my love; and we were all glad when we left our native place to settle here."

"And did they bid you farewell?" said the same indignant questioner. "Did they let you leave without coming forward to your assistance?"

"We did not see them, my child—why should they have affected to care whether we left or not? It would have mortified them to contemplate our forlorn state; and the day we bade adieu to the scenes of our prosperity and adversity, they were preparing for a magnificent ball, that was afterwards mentioned in the newspapers. They could not regret our leaving, and they did not pretend to do so."

"We arrived here in good spirits, and left all regret behind us. Your father had secured us a good and comfortable home in a very respectable family, reduced like ourselves. Here I had nothing to do but to see to my children, of whom I was heartily proud, for whatever they want, people stopped to admire them. I began to long for the means of dressing them handsomely, and often have redeemed one of my own dresses that I might wear it longer and purchase some bright stuff for Wally. At length your father insisted on getting a servant for me, and I was once more free to spend my time as of yore. But you will smile, my dear ones, when I tell you of one cause of sorrow to me at that time. It was an old coat of your father's, that was entirely threadbare; his 'Sunday-suit,' as he called it, laughingly. How industriously I brushed that coat every Monday, for two years, folding it carefully, and laying it in a drawer, with the vest and coat; I could not tell you! But now it seemed so old and shabby, so worn, that I could not help crying bitterly every time I put it away. Often have my tears helped to clean it as I rubbed the spots, or sought for the thin places to darn before it commenced to tear. As you may imagine, we never went to places of amusement; but when I saw your handsome-looking father sally forth once a week in this much cared-for suit, I regularly burst out into a flood of tears that I took good care he should never see. But there came a ray of sunshine—then another, and we held up our heads. The day I saw your father dressed like himself once more I nearly cried for joy; and when I found myself housekeeping again, with something of the old comfort around us, I blessed God that he had given us trials, and taught us how to live.

"In my new home my little Alfred was born, and I thought myself the happiest of mothers. We did not improve much in wealth, but we became so poorer; and to us our way of living was quite a luxurious one compared to the past. I spent my time alone, until your father returned to his meals, for we made no acquaintances, and I rejoiced at it. I preferred centering my happiness in my loved ones at home. I was too secure of it, my darlings, for the year after I lost my little boy—my 'summer child.' Alas! I then found that I had never known sorrow before—none but a mother who has parted with her treasure can tell what I suffered—"

Mrs. Herbert paused, and the tears rolled over her face. Until now, she had been unmoved throughout her recital of their early misfortunes, but she could not recur to the death of her child without strong emotion. Alice pressed her hand fondly, and she went on after a pause.

"I no longer looked upon my comforts as things to gladden me; and poverty was a blessing compared to this! It is said that trials never come singly, and we were an example. Your father's health gave way under his terrible fatigues, and he was very ill for some time. His depression of mind increased his malady, and for three months he was an invalid, unable to leave the house. All that we had in the world was a small sum he had laid by in case of emergency, and day by day I saw it lessen, concealing from your father as well as I could the privation: I undertook to make it last. As he retired early, I put out the light as soon as he was gone to bed; and often, in the delightful spring evenings, I would sit at the door in the moonlight. When the moon rose too late to be my lamp, I would light a candle and sew on some piece of work laid by for the next day. I eat a piece of dry bread as I gave you your supper at night, but dispensed with my own tea that the sugar might last longer. I often wept when you have begged for something better than dry bread and tea, but we could not afford more, and I had to comfort my three little ones with caresses that they loved. My great care was to keep all this from your father; and many a time have I excused my extinguishing the light, by promising to sit on your bed and tell stories. How much I had to invent! My imagination was well-nigh exhausted; but I borrowed a book of fairy tales, and read them as I nursed Mary to keep her quiet while her father slept. Without his knowing it, I had dismissed my servant. There was little enough to cook, and as I always attended to our own room he did not miss her.

"One day he turned to me with a mournful look. 'Alice,' said he, 'your funds must be exhausted, my dear wife. Send Janet to me—I must make the trial, at least.'

"What trial, my dear Alfred?' said I, trying to smile. 'I am not, indeed, as poor as you think. There is enough to last for some time yet. Do let that relieve your mind, and leave Janet alone. Eat your toast, and don't wait until it is cold.'

"Alice,' said he, looking at me fixedly, 'you are trying to conceal it from me—I know that you have no more money in the house.'

"I went to the drawer and brought him what still remained in the box I used to call my bank.

"But you must pay Janet—she cannot work for nothing. And then what will be left?"

"Janet is paid, Alfred; do compose yourself," replied I, trembling now, lest he should agitate himself too much.

"Then to whom do you owe this?" asked he.

"Neither 'butcher, baker, nor candlestick maker,' can say I am in debt to him. This is fairly ours, and it will last until you are strong again; so look cheerful, dear husband, and take me for the fairy Good-Will."

"Alice!' he cried, 'then you and my children have been starving!'

"He burst into tears and sobbed bitterly. This I could not bear, and almost on my knees I implored him to be calm. He once more called for Janet. I asked him what he wanted with her.

"I want to write a note to Preston—he will lend me money. That small sum cannot support us for any time. Let me do it, Alice—I must. Tell Janet to get ready to go down to the office with my letter."

"Pat it off until I tell you I have no more, will you, Alfred? You might grant me this!" And I sat down by him with a look of entreaty that he said he could not resist—so I conquered. The assurance that we were

not starving, and his conviction of length that I could not give up my little sum, yet again, strengthened his resolve. Wish you could see us on that dear children the day he was well enough to go out—how poor! He walked into the yard, and called Janet. But so Janet came, and he wishing to disturb me, he went as far as the kitchen door. Then he read out my secret, and then he scolded and laughed by turns."

Mrs. Herbert had not seen her husband enter, he stole softly behind the little group, and looked fondly on the sharer of his early vicissitudes. As she paused at this part of her narrative he threw his arm around her. She turned her head to smile upon him, and he sat down beside her with her hand in his.

"Your mother has not told you all, my children," said he, with glistening eyes. "How often she went to the door and called Janet long after she had discharged her, pretending to take from her hands at the door whatever I had asked for. How, in the morning early she arose, and with our dear boy's help, set a box of wood and coal just within reach, that the invisible Janet might hand it in whenever I rang for it. It is singular how long I was deceived, but illness had made me inattentive, and I fear selfish, with regard to my Alice."

"Hush, Alfred! hush!" cried she, putting her hand before his mouth, "You were never selfish."

"Ah, dear ones! you were ever a merciful judge, but you must be blinded by affection. She did not tell you, Wallace, how her scanty stock of rings were sold to buy shoes for you and Alice while we were so poor. The very one your mother wears with her wedding-ring, I redeemed with the first sum that I dared to spare after I grew stronger. Do not sob so, my dear child—my good Alice! We would not now give up that time of trial, when our affection was so tested—our hearts so oppressed. We look back with gratitude for it all—assured now that we have been permitted to fulfil our marriage vow to the letter. I succeeded after a few years in establishing myself in a position of much advantage. I grew wealthy, and gained many friends in consequence, who fettered us, and sought our society. But through all, we found one who stood by us fast and firm. He is yet our beloved and esteemed guest; as often as the week comes round, do you, my children, welcome him as we do."

"Mr. Eldon!" they cried. "Is it not Mr. Eldon?"

"It is, indeed, my dears; and to this day he cannot recall, without emotion, his absence from the city at the time of my illness. He was travelling on urgent business, and my letters never reached him. We had known him then but a short time, yet we knew him to be a friend—we would have felt it no shame to be under obligations to him. When he left us we were doing tolerably well, and he expected to return after a few weeks, but he was detained, and your parents were in actual want before this host of friends reached our poor little home. His coming was like an angel's visit of mercy. He took up his residence with us, and never left until he was sure of my own certainty of success, enabling us by his generous bounty to live comfortably once more. He would never allow that we were under obligations to him, as he delicately insisted that he merely paid his board and lodging. We were much grieved when he left us long after we were on the high road to fortune, but his sister and her son were destitute, and he sent for them to come and live with him, proving himself the noblest of protectors—the kindest of brothers, and the best of uncles. I dare say, Alice, that you do not like Mr. Eldon the less for this, hey, girl?"

Alice blushed, and hid her face on her mother's bosom. Mr. Eldon's nephew was no indifferent person it would appear, and the parents exchanged smiles as the mother's gentle hand fondly stroked the shining hair that floated over her arm.

"I thought, dear mother, that I could not love you more than I have hitherto," said Wallace, kissing her tenderly; "but my affection must be twofold after to-day. The aim of our lives shall be to make ourselves worthy of such a devoted, self-sacrificing mother."

"I honour you for such sentiments, my fine fellow," said Mr. Eldon, entering familiarly, and holding out his hand. "I am sure we must all be proud of my friend Herbert's wife and children."

"And we, dear sir, of your friendship," said Wallace, as they gathered around the kind old gentleman. "We did not know until to-day how much we owed you, dearly as we love and respect you. Mother has been telling us—"

"Pshaw! pshaw, my dears!" interrupted he, with glistening eyes, and smiling merrily, "don't believe her! don't believe her! She makes it bigger every time she tells it, and I'm going to forbid the story's being told again."

"Ah! but you could not forbid our gratitude, Mr. Eldon," said little Mary, nestling up to him; "you can't do that, sir."

He stopped her mouth with kisses, and seating her on his knee, took a letter out of his pocket, and handed it to Mr. Herbert. "I took this out of the office for you, as Calvert told me you were not down yet."

A visible change came over Mr. Herbert's face as he read it, but a smile followed the change. He looked up at his wife as he finished it, and placed it before him.

"Read that aloud, my love, it concerns us all. The offer is a singular one, and the condescension rather equivocal. It is a letter from my sister, Mrs. Blunt."

An exclamation of astonishment escaped each one; but Mrs. Herbert was allowed to read it uninterrupted.

"Dear Brother—It must be seven or eight years since we have heard anything of you, and I am almost afraid that you have left the place you preferred to this one. As your circumstances were very poor, and you must have now a large family of children, I write to say that you can

send her to one of the girls I should prefer—and I will accept her as my own—she is a good girl, and Mr. Blunt's great wealth will allow me to bring her up and provide handsomely for her. Let her be sent on as soon as possible—don't mind giving her clothes, as I will save you that expense.

"If your wife is still living, you will remember me to her. She must be looking very old after working so hard. If you have any boys, Mr. Blunt might do a little to advance them—his business connections are very extensive and high. Your other sisters are well and advantageously married. I expect an immediate reply.

"Your affectionate sister,  
"OCTAVIA BLUNT"

The indignation with which this tender epistle was received was indescribable, and Alice was chosen to answer it by the entire assembly. So on the following morning she presented her father with her reply.

"DEAR AUNT,—Since you last heard of my father, he has been assailed by ill health and extreme poverty. From these two evils he was rescued by the affectionate care and wise economy of the best of wives who, I thank God, is not only well, but looking as youthful as a woman of twenty-five. They have found, too, a friend, who helped them kindly through their misfortunes, and still clings fondly to us all. I am the eldest girl; Mary and Bertha come next. My brother Wallace, is two years my senior, and Frank is the youngest of all. Within my recollection we have always lived in the most comfortable manner. We now manage to get on as decently as people can who have only four thousand a year, and beg to decline your very obliging offer of adopting any of us. We are the happiest family in the world, and pride ourselves upon the patience and firmness with which our parents bore their youthful trials.

"Very respectfully &c,  
"ALICE HERBERT"

"This will do, my love," said her father, placing the letter in its envelope. "In a few days we shall certainly have an answer, and I predict a very different style from the first. Mr. Blunt has altered wonderfully since I knew him. He worships gold.

A few days after Mr. Herbert brought home the following epistle, over which Alice's beautiful lip curled involuntarily.

"MY DEAR HERBERT—Octavia was much affected by your dear girl's communication. We were all so glad to hear from you at last, for we had often thought of and feared you might be in distress. I cannot tell you how glad we are to find how successful you have been. It has relieved our hearts of a load indeed. (Here Mr. Eldon gave a kind of groan and tossed Frank over his shoulder. Mr. Herbert smiled sadly but continued to read.) Your sisters are very anxious to see you and your lovely family, so you may look for Octavia and myself about the beginning of next month. With kindest love to Mrs. Herbert and your children, I bid you adieu.

"Very sincerely, yours  
"MACDUFF B. BLUNT"

"They shan't come shall they, mother?" cried Alice. "We do not want them to care for us now."

"For your father's sake they must be kindly received, my daughter. Was the mother a reply. They may yet learn to give us credit for whatever virtues we have and excuse our faults."

"And it is never too late to amend, Ally," said Mr. Eldon, patting her shoulder. "Forgive and forget," is a beautiful motto, my dear.

Alice blushed but held out her little white hand.

"I am ashamed of my childishness and do poor credit to my darling mother. Do try and let it be forgotten, and I will make up for it by playing the agreeable to my aunt because she is my father's sister."

"And more than that your father cannot expect my children," said Mr. Herbert, laying his hand on her soft locks. "He sees, however, one good to be derived from your aunt's visit."

"I know, I know," cried Bertha, clapping her hands.

"Well, what then, little prattler?" asked her father.

"Why you mean that we can now practise what we find it so hard to do—forgive as we would be forgiven."

"That's my good little Bertha!" said her mother, kissing her fondly. "That's my attentive Sunday-scholar. I do not waste my time when I preach in the afternoons."

And so, when Mr. and Mrs. Blunt arrived they were agreeably surprised with the reception they met. The Herberts made no professions—they were too sincere for that, but they were all polite from the beginning of the visit to its end. Mrs. Blunt was delighted with her brother's wife and family; and when, two years after, she was invited to Alice's wedding she presented the bride with a beautiful silver pitcher to which Mr. Blunt added a set of crystal for young Mrs. Eldon, to begin housekeeping with. Alice sighed as she looked at her splendid gifts and thought of the time when half their value would have made her poor mother feel rich! But with the bright years in her soft eyes, she wound her arms around that beloved mother, and laid her young face against hers.

"Dear mother! those who need not such rich and costly things are always filled with them. My uncle Eldon has to-day settled on me alone—Independently of what he gives Edward—an annuity of two hundred a-year. I have resolved to lay by so much a year for benevolent purposes, and together we will seek out the poor and the needy. Best of mothers! I cannot equal you in goodness, but I will do my best not to waste the great blessings God has given me."

## THE PHANTOM LIGHT.

A CHRISTMAS STORY.—BY FITZ-JAMES O'BRIEN.

(Continued from Page 114.)

It was a beautiful night. The frost had set in with increased power. Winter had renewed her robes of crystals, and the heavens bore an unusual lustre from the multitude of stars that seemed almost to mingle in an atmosphere of celestial light. The full moon just began to peep over the hills which surrounded the lake; the Queen of Night rose silently and stealthily, as if she would withhold the still beauty of the moon below, an unobserved observer. Walking up a fence-made beautiful by the tracery of the shadows of trees upon whose gnarled branches, tipped with frost and snow, the moonbeams fell like glistening silver—were almost a dozen persons. They stepped briskly along, and now and then, one more joyous song the rest broke from the string of arms with which he had been leading, and danced about, and beat his breast with his hands, partly to keep his heart warm, and partly to give vent to glad feelings. As they passed the cottage door, they became silent, and whispered until, drawing close to it, they entered in a circle and closed. Then the silence was broken by a few words as of direction, to which all listened; these uttered, for a moment a death-like quiet, when suddenly burst forth the strains of vocal music.

"While I stand here, my heart is full of joy."

All voices on the hill were hushed.

The angel of the Lord was here,

And glory shone around.

"Fear not! said he, for I am here."

His voice was full of love,

Glad tidings of great joy.

To you and all mankind.

"For who you this day is born."

Is born to David's line,

A Saviour who is Christ the Lord,

And this shall be the sign.

And so they continued. How deliciously sweet it sounded in the stillness of night—and in the solemn calm of such a night, how heavenly! The singers were rude, uncultivated men, with little more than a good sense of harmony to guide them in the execution of their simple songs. But they sang with a heartfelt earnestness, and their voices seemed to vibrate upon the air, and then die in faint echoes among the hills, as if the distant heavens had caught the strain, and the angelic hosts were chanting back the salutations of the humble fishermen.

The singers had not continued long, when an upper window of the cottage opened, amid the rustling of the branches of clustering ivy, and the fall of a shower of crystal stars that had settled upon its leaves. A form presented itself which was instantly recognised.

"Good morning, Mister Arthur!" exclaimed various voices. "A merry Christmas to ye an' bad luck to your enemies!"

"Good morning friends," replied Arthur. "Bless you for your good wishes. But let us not, with songs of peace upon our tongues, and with heaven smiling upon us on this auspicious morning, wish ill to any one. The true Christian has no enemies, and let us hope that we have none."

"That same's a good sentiment, Mister Arthur," said Donal Barrett, upon whose face at that moment, the blue light of a lucifer match glared as he lit his pipe. "That's a good sentiment, Mister Arthur," said Donal, pausing every word or two to draw breath through his pipe. "But will everybody deal wid ye ather that same? if not I'll not unsay what I've said, anyway—but God forgive me!" Heaven is watchful over us, said Arthur. "Already the clouds have begun to part away and there is little doubt but we shall be allowed to remain in the cottage a much longer time than we anticipated."

"Sure that's good news to Donal Barret!"

"And to Bonaparte!" cried a strong, husky voice.

"And to your old nurse, Oonagh," said a shrill and trembling tongue, shivering with cold—for Oonagh could not be persuaded to stay at home.

And the same to us all!" exclaimed the rest.

Tell me, said Arthur, "have you been to the Castle?"

Not at all," said Donal. "It's not the likes o' us to go there wasting our carols upon an unchristian lot as they are!"

Mind Donal, what I have already said," replied Arthur; "this is the time of Christian forgiveness, when we must bear enmity no more. Go you to the castle, and sing as nicely as you have to me; and who knows but every sweet note may be like an angel of love fanning the heart of a troubled man, and softening her passions!"

"If that same's your wish," said Donal, "we'll do it in right earnest; but it's for you, Mister Arthur, an' for nobody else unther the sun!"

"Well, then, for me," said Arthur, "but do it willingly, and well, forgetting all enmity."

"Come along, lads," said Donal, "though it goes against my heart to sing up agin those stony walls that seem to make ugly faces against their rightful owners. Mister Arthur knows better nor us, so we'll away and do his bidding."

And away they turned—all except old Oonagh, who dropped behind to warn her "dear child" to get out of the bitter cold, and to wrap herself well round with blankets and the like, or certainly he'd die an' be lost to old Oonagh for ever!" Arthur closed the window, and had just time to see Oonagh regale herself with a mouthful of whiskey, which she took from beneath her cloak, before she rejoined the minstrel party.

The singers had reached the Castle, having on their way repeatedly comforted themselves by asserting that it was for "Misther Arthur," and not Miss Saville, or the dirty spalpeens of her acquaintance, that they had consented to sing. They had no sooner arrived, however, than a difficulty presented itself. The gate which admitted the visitor within the outer wall was closed; the wall was of massive stone-work, and it stood many yards from the sleeping apartments, so that Boney and Donal, notwithstanding the stentorian power of their lungs, quite despaired of making themselves heard.

"What'll we be afther, now," said Donal to the rest?  
 "Sure an' we can do nothin'," exclaimed a voice, "for the spalpeens will be all thrunk an' asleep, an' I'll hear no more of our singing than if we were at the botthom of the lake unthir the ice!"

"Wisha, then," said Bonaparte, "bad luck to us if we brake a promise to Misther Arthur! Didn't he pull me up from the botthom of the lake, where I'd been frozen to death by this time, if he hadn't risked his life to save me. Look there," said he, pointing to a broken part of the wall; "len' me the loan of your shoulther, Donal, an' I'll scale the wall an' undo the gate; an' the devil take the dirty lot, if they complain of our determination to be civil."

"Well, here goes!" cried Donal, pitching his head against the wall, while two others assisted Bonaparte to get up.

"There now, are ye all right?"

"Right as Father Mathew!" said Boney, clutching the top of the wall, and scrambling away with his feet until he made a small cataraet of snow, dry earth, and stones, which fell to the ground with a rumbling noise.

"Marcoful Vargin!" shrieked Oonagh, "but the boy 'll fall and make away wid himself!"

And sure enough, Boney fell to the ground, making a capital mould of his prostrate figure upon the snow.

Miss Saville lay in her chamber a sleepless watcher. Painful thoughts constantly fled across her mind. True, they were not the thoughts that possessed her a few days ago. But she had not yet wholly ceased to love. A strange struggle was passing in her heart. The passion of a self-willed and imprudent woman was yielding to a deep veneration for the valorous opponent of her wrongs; and convictions of her duty to him who had twice saved her from horrible calamities, were hourly growing upon her. Moreover, in her visits to the cottage to wait upon Arthur during his illness, she had seen much of the dignified and lady-like demeanour of Mrs. Tregar, and of the sweet gentleness of her daughter Avisia. And strange to say, she almost felt a love for the former, and certainly she did not hate the latter. She only wished that Avisia had been Arthur's sister—or that she had never been—or,

having been, that she had never loved—for she did not know what she wished! But certainly she could do her no wrong—her heart was resigned for ever.

She lay sleepless upon her downy bed, rich, but poor, blessed but cursed! She looked out upon the still moon, and wondered whether there were lovers there, and whether, in that sphere, Providence had ordained such arduous trials of the heart? She sometimes dozed awhile, and dreamt that Avisia was dead, and that she was married to Arthur; then she awoke, and wept; and became calm—then dozed again, and fancied she heard the rush of water in her ears, and had a suffocating feeling, as though every blood-vessel of the body were bursting—and then she saw a shower of brilliant stars, which seemed to shoot up from the earth, and each one growing larger, became at length a flower of exquisite beauty, or a bird of gorgeous plumage—then she heard sweet strains of music floating on her ears, which became faint, then swelled out into a wild and rapturous chord, and then died away to a murmur again,—such a murmur that the head bent forth to catch it, and the ear seemed to thirst for its enchantment; then she opened her eyes, and dimly beheld the form of Arthur struggling to save her, from what she knew not.

She had lain for many nights in this state of sleepless delirium—but it was passing away—her brain was less feverish, and her heart beat less rapidly. The strange noises without the wall now alarmed her. She listened eagerly, and caught the various voices of men—she heard the fall of earth and stones, and of something that dropped heavily upon the ground. And then she caught renewed expressions of determination. A fearful anticipation crossed her mind. "It had become known to the peasants, by whom the Tregar family were much beloved, that she had ordered their ejection from the cottage, and more than once, when going to the lake, she was 'spoken at' by the peasants in a manner which too well told their ire. Her alarm increased, and raising herself in the bed, she gazed out of the window, and espied Bonaparte's rough head emerging over the wall! The exasperated peasants, she knew, had come to take her life, even at the moment of her repentance, and when she was about to perform a deed which should atone for her cruel act. She heard the man get over the wall, unfasten the gate, and admit a group of accomplices—she would have called for help, but was speechless—and stretching up to reach the bell-pull, she swooned away, and was lost at once to love, to reason, and to fear!

"Hist, come along," said Bony.

"Softly!" said Donald, "or ye'll frighten the critturs afore ye begin to plaze 'em."

"Come along, Pat, and M'Carthy, and Murphy. Where's Oonagh?"

"Och, and its here I be, darlint!" said Oonagh, tripping forward over the snow, and huddling her whiskey bottle out of sight.

"Now then, lads," said Donal, waving his hand "let's have the lanthem, the same that Father O'Grady tached us." So they began, or attempted to begin, when old Oonagh exclaimed, "Stay a bit, boys, for the honour of the Tregar's, sing like nightingales—remember its for the beautiful Misther Arthur, my own dear chield, and nobody else at all, at all, that you're giving 'em this benefit. Here, take a dhrop of the crame of the valley, it'll mollify your throats from the could, and make ye sing like thrushes!"

The hint was readily taken, and the whiskey more readily than the hint, by all except Patrick, a good lad, whom we shall have no other opportunity of noticing than to say now that he was a disciple of Father Matthew—he excused himself, saying, "No thank'ee, Oonagh, its not mysel' that'll put the dirty water down my clane throat!"

After this they began in earnest:—

"Awake! pft on thy strength, O Zion, put on thy beautiful garments, O Jerusalem, thou holy city. How beautiful upon the mountains are the feet of them that bring glad tidings, of peace, and salvation; that say unto Zion, thy God reigneth. Sing, oh Heavens, and be joyful, oh earth. Break forth into joy, Hallelujah! And all the world shall see the glory of the Lord!"

Miss Saville returned to consciousness while Patrick, who had a sweet and woman-like voice, was singing with young M'Carthy, who sang a rich full second, the duet, "How beautiful upon the mountains are the feet of them that bring glad tidings of peace and salvation." Oh, how sweetly those sounds broke upon her ear, and how deeply the lesson they conveyed sunk into her troubled heart! She wept until she became calm—then, in fancy, she heard the strain again—and the words brought fresh comfort to her heart.

"HOW BEAUTIFUL ARE THOSE THAT BRING GLAD TIDINGS OF SALVATION."

At length she slept—a calm long sleep, such as she had not known for many weary nights; and when she awoke the sun shone brightly in upon her, and she rose with her heart renewed!

Early in the morning, Avisia was looking out of the cottage window, when she espied a stranger at the gate. He wore a thick fur cap, and was wrapped around in a rough cloak which was thrown across his shoulders in a style that gave him a half military appearance. He bore with him a small portmanteau, and appeared as if he had travelled from afar. At first Avisia thought it must be a visitor to the Castle, who knew not his way; but she espied some villagers directing him to the gate; and his step thereto was so direct and willing, that this idea passed away; so she ran down to the gate, tripping like a fawn over the untrodden snow, which seemed spread out intentionally to receive her delicate foot-prints—so white, as untrodden its surface, that not even the track of a bird could be seen upon it.

"Does Mr. Arthur Bell live here?" inquired the stranger.

"He does," said Avisia. Who can he be, thought she—certainly not a lawyer—his countenance too open and cheerful for a bearer of unwelcome news.

"And is he at home?"

## THE FIRST DISAPPOINTMENT.

"He is," said the stranger, "at this moment he is in his chamber, but will soon be down. He has not been well of late; and last night the waits aroused him from sleep."

"Ah! Miss Avisia," said the stranger, opening the gate and entering, "you spoil him, you spoil him! I know you kill him with your kindness." "How did you know that my name was Avisia?" inquired she, looking astonished, as they walked toward the cottage.

"Woman's curiosity again!" said the stranger. "Now let that be my secret—at least for a little while. We are all of us more widely known than we are aware of, and should ever live as in the eye of an unseen observer. A capital idea, that, for our Professor of Moral Philosophy, the Rev. Tobias Forethought."

"Ah! now I see," said Avisia, "you are from Dublin, and are Arthur's particular college friend of whom I have heard so much!"

"There, now, I have let it out! But why his particular college friend? is there anything about me that requires so emphatic an application of that adjective?"

"Perhaps I should have said his *dearest* college friend. That would have done Arthur's representation of you greater justice!"

"And it has already given me greater pleasure. You see, Miss Bell—Miss—Miss Tregar, I should have said, I have been reading up for a surgeon's diploma, and am well-nigh sick of flexors and extensors, glands and ganglia, lacteals, veins, and verticles; in fact, I was becoming hypochondriacal myself, and am always predisposed that way in Arthur's absence. So, as he challenged me to come down at Christmas, declaring that he would send me to Coventry for ever after if I did not, I determined to come and take him unawares. For I fancy, from his not writing to me, he really felt offended."

"I will run and tell him, instantly," said Avisia, showing the stranger into the parlour.

"So ho!" said the visitor, unfolding his cloak, and taking his position before a blazing fire. "A nice girl, that—eyes that from their mildness would fascinate a woman-hater! No wonder, Mr. Arthur, that you remain your full time at home, and return to college looking as delicate as a candidate for the dissecting room."

In a moment Arthur was down—he had got on but one slipper, and had succeeded in getting one arm into the sleeve which rightly belonged to its opposite neighbour, and was blundering with the other; but he rushed into the parlour and embraced his friend with child-like fondness and simplicity. "Let me," said he to Mrs. Tregar and Uncle Tot, who had just entered the room—"Let me introduce to you my dear friend, Alfred Tremayne. Mr. Tremayne, my father and my aunt! Oh, joy! Your coming has set me right again; I have been dreadfully in my boots of late."

"Why, what's the matter?" asked Alfred.

"Oh, nothing! nothing! nothing the matter now!" said Arthur. "We'll have a merry time of it. Remember this is Christmas time, and comes but once a year!" said he, humming a snatch of an old song.

The party was soon at breakfast; in the midst of which Uncle Tot was delighted to find that his new acquaintance had a remarkable taste for mechanics, and listened with profound attention to descriptions of various inventions, past, present, and prospective.

The breakfast over, Arthur and Alfred had retired to talk over some college reminiscences, when Miss Saville called at the cottage. She was received by Mrs. Tregar and Uncle Tot, and there was now a cordiality in the manner of each of them which had never appeared before.

"I am glad," said Miss Saville, "that I have found you thus opportunely. I have come to ask your forgiveness for the pain I have caused you; and to say that I forego every intention of disturbing your present domestic arrangements. Your son, Mr. Arthur Bell, has twice saved my life, and thus he has a claim upon my gratitude, which, apart from every other consideration, entitles him and you to the utmost I can do for your happiness. But I now revere his valorous character, his fidelity to his first love, whose fond attachment to him my own eyes have witnessed; and I have learned that I must not seek to establish my own happiness by destroying hers. If it would not sadden you too much on a day which should be one of rejoicing—"

"Proceed," said Mrs. Tregar, who found that the speaker was becoming much affected.

"I should like to tell you of my own dear mother, who died when I was yet a child. All I remember of her is the kind caresses with which she granted my every desire; and that in her person, as in the tones of her voice, she closely resembled you; so much so, that when I knelt by Arthur's couch, and looked up into your face, I felt as if the days of my childhood had returned again, and that I was offering up my morning prayer by my mother's knee! She died, and I was left under the care of an illiterate nurse. My father cared little for the comforts of home; engaged in the strife of commercial life, he made the acquisition of wealth his chief aim. He loved me—but it was a cold and systematic love, which set apart my yearly income, and raised me to the position of a lady before I knew what it was to be a woman. Then he died, and I had none to guide me. I lost my mother at that age, when her sweet influences were most essential to a daughter's weal; when dangers surrounded me at every step. Followed by unprincipled flatterers, I wonder that I withstood the temptations that surrounded me. But I was blessed with a keen perception, which made me distrust hollow pretensions. In this my mother's spirit seemed to hover over me as a guardian angel. So events passed until I saw Arthur, which I had done several times before the first remarkable event, which for a time lost me my heart, and almost my reason. I will say no more, but will ask your forgiveness. I could look upon you as a mother, and could even

knelt and ask you to guide me in the future by your kind sympathy; for I have lost the pole-star of a daughter's life, and feel that I am alone and friendless in the world." Here her voice faltered, and she wept.

Mrs. Tregar wept, too, and so did Uncle Tot. But they soon dried their tears, because they saw occasion for joy to all. "Bless you, Miss Saville," exclaimed Mrs. Tregar, "I will love you, and be a mother to you in all things wherein the trials of a mother and a wife can serve you."

"I have but one request to ask," said Miss Saville, "that you will place this packet into Arthur's hands, and that then these circumstances—all except our love—shall be forgotten for ever."

Mrs. Tregar took the packet, and Miss Saville hastened from the cottage, for Arthur and Alfred were heard coming down stairs.

Arthur returned to his chamber, and hastily opened the packet which had been given him by Mrs. Tregar; while Uncle Tot entertained their visitor by a further elucidation of mechanical principles. The packet which Arthur had opened contained the following letter:—

"TO MY PRESERVER."

"Twice you have saved my life. Wonder not, therefore, that I love you. But my love is not that which I bore you when I told you, 'the Legend of Barlagh Cave.' I have seen Avisia, and her mother, and I love them too; for they are worthy. My heartfelt prayers are for the happiness of you all. I have enclosed the mortgage deeds of your aunt's cottage and lands; they are yours for ever. Be my friend, my brother, Arthur, and let us entwine the hearts of our families into one wreath, which shall not be divided. So shall these strange events be regarded only as thorny paths to the harbour of peace!"

Helen.

On the day following, there was a great gathering at the Castle. The old festive hall seemed alive with merry feet. By general consent it had been arranged that the Tregar family, including the visitor from college, should join the festivities thereat; that an *ammonition* should be conveyed, and bonds of unity be entered into. Old Uncle Tot, whose merry disposition made him a leader in every festive movement, was invited to be—not the master of the ceremonies, for there were none—but the mirth-maker for the evening. So, in a few hours, he ran up along the roof a series of well-contrived wires, by which the mistletoe, at his own will, while holding a string, was made to travel about the ceiling, thereby throwing blushing couples in awkward but not unwelcome predicaments. He also got a very tiny boy, and dressed him up as a Christmas tree, and it was droll to see a sort of diminutive laurel walking about the hall and delivering *bon-bons* to the boys and girls. A capital thought that of Uncle Tot's, to make the little living tree extend one of its branches and deliver to Miss Saville an apple, upon opening which a number of poetical blessings dropped out, signed variously by all the parties to the plot, not omitting old Oonagh, Donal Barrel, and Bonaparte. Poor old Oonagh put her *x* and her blessing to the rhyming couplet which Uncle Tot had selected for her, and tears ran down over her old face as she prayed forgiveness for having spoken unmannerly things of Miss Saville. And another pretty idea of Uncle Tot's was that of making the little walking tree deliver a wedding ring to Miss Avisia! And a foresighted stratagem it was when he drew the mistletoe over the heads of Helen Saville and Alfred Tremayne—what may not that kiss have wrought before another Christmas comes round! Some little incidents begin to excite reasonable and acceptable anticipations. And spirited, too, of Uncle Tot to take hold of Mrs. Tregar's hand, and say "Now, Sis, we must be young again!" and then to lead off the dance with her with as much life as though they were both in their teens! How joyful was all this—how truly in the spirit of the Anthem sung by the poets fishermen—

"HOW BEAUTIFUL ARE THOSE THAT BRING GLAD TIDINGS  
OF PEACE AND SALVATION!"

THE END.

## THE FIRST DISAPPOINTMENT.

BY MARY BENNETT.

MARGARET—poor Margaret!  
She a little plant had set  
On a high-raised window sill,  
And when winds blew loud and shrill,  
In the morning Margaret found  
Her flower broken on the ground,  
And weeps for it with fond regret;  
Ah, Margaret—poor Margaret!

Of disappointment, till this hour,  
She neither knew the name nor power;  
Her little life had been so blest,  
In childhood's sweetest colours dressed,  
Like to a pretty insect born  
In sunshine, on a summer morn;  
Bred in safe covert, green and fair,  
But now her tear-bedewed hair  
Droops from her mournful head full low,  
As if she were a child of woe;  
Dread o'er the perished plant she set.  
Ah, Margaret—poor Margaret!

"My money-box I emptied quite  
To buy this plant, it looked so bright,

And had so sweet a scent; and then  
The china pot came from Aunt Venn;  
It was so beautiful, the first  
Sweet plant that ever I have nursed;  
Now it is dead—my own dear flower—  
Why had the wind such evil power?  
I never had a plant before,  
And I will never have one more.

Ah, Margaret—poor Margaret!  
Full soon you will this loss forget;  
Blame not the wind, but blame yourself;  
You chose a high and perilous shelf.  
It was the duty of the wind  
To scatter all that it could find.  
Upon its course left insecure:  
With patience we should stand secure.  
The evils that our errors cause,  
All things, like winds, obey the laws  
That God has settled: so must we  
Be wise, or bear calamity;  
And we grow wise from grief and pain,  
(You will not trust that shaft again)  
Whilst the good Power above the wind  
Can strengthen and console the mind.

## THE PIONEER'S DAUGHTER:

## A TALE OF INDIAN CAPTIVITY.

## CHAPTER I.—ST. CLAIR'S DEFEAT.

ONE of the most disastrous battles for the whites ever fought on the Western frontier, was that known by the inglorious but significant appellation of "St. Clair's Defeat." This took place within the limits of what is now Dark County, on the Wabash river, in the present State of Ohio, on the 4th of November, 1791. The facts relating to it are briefly these:—

At the period above referred to, the depredations of the Indians had become so frequent and alarming, that the few whites who had ventured within the precincts of the North-Western territory, were in danger of being exterminated. In consequence of this, General St. Clair received orders to raise as large an army as possible, march from Fort Washington (now Cincinnati) along the whole Western frontier, and establish military posts at all such points as he might think advisable, in order to awe the savages, and put a check upon their bloody enterprises. In September, St. Clair left Ludlow's Station, six miles distant from Cincinnati, with 2,300 troops under his command, exclusive of some five or six hundred militia. Advancing northerly, he built Fort Hamilton, and soon after Fort Jefferson, and then continued his toilsome and perilous march through the wilderness.

The progress of the army was necessarily slow; for the troops were entering a new and unexplored country, full of blood-thirsty savages, where every inch of ground must be examined with great caution, and roads be prepared through thick woods, and over dangerous morasses and streams, in order to bring on in safety the baggage and cannon contingent upon such a body of hostile men. Accompanying the troops, was also a large number of women and children, who preferred pursuing the perilous journey of their husbands and fathers into the wilderness, to remaining in comparative safety in the forts and strongholds behind. To add to the discomfort of the march, much of the provision of the army was delayed in coming forward as fast as was expected, and some three hundred of the militia, becoming alarmed and discouraged, deserted, and returned to their homes. Fearing these latter might seize upon the army supplies in their retreat, General St. Clair finally determined on sending back the first regiment to bring up the provisions, and, if possible, overtake and arrest some of the deserters. Having put his plan in execution, he continued his march with what supplies he had on hand, and on the third of November arrived at a branch creek of the Wabash, on a commanding piece of ground, where he resolved to encamp, and await the return of the detachment from below. By order of the General, the main army encamped on the east side of the Wabash; the militia were advanced to a commanding point on the west side, some two hundred rods distant. In this position the forces rested through the night—it being the intention of the General to commence a work of defence on the following day. In this he was disappointed; "For, (to use the words of Judge Burnet,) on the next morning, November 4th, half an hour before sunrise, the men having been just dismissed from parade, an attack was made on the militia posted in front, who gave way, and rushed back into the camp, throwing the army into a state of disorder from which it could not be recovered, as the Indians followed close at their heels. They were, however, checked for a short time, by the fire of the first line; but immediately a very heavy fire was commenced on that line, and in a few minutes it was extended to the second."

"In each case, the great weight of the fire was directed to the centre, where the artillery was placed, from which the men were frequently driven with great slaughter. In that emergency, resort was had to the bayonet. Colonel Darke was ordered to make the charge with a part of the second line, which order was executed with great spirit. The Indians instantly gave way, and were driven back several hundred yards; but for want of a sufficient number of riflemen to preserve the advantage gained, the enemy soon renewed their attack, and the American troops in turn were forced to give way."

"At that instant, the Indians entered the American camp on the left, having forced back the troops stationed at that point. Another charge was then ordered and made, by the battalions of Majors Butler and Clark, with great success. Several other charges were afterwards made, and always with equal effect. These attacks, however, were attended with a very heavy loss of men, and particularly of officers. In the charge made by the second regiment, Major Butler was dangerously wounded, and every officer of that regiment fell, except three, one of whom was shot through the body. The artillery being silenced, and all the officers belonging to it killed but Captain Ford, who was dangerously wounded, and half of the army having fallen, it became necessary to gain the road, if possible, and make a retreat."

"For that purpose a successful charge was made on the enemy, as if to turn their right flank, but in reality to gain the road, which was effected. The militia then commenced a retreat, followed by the United States' troops. Major Clark, with his battalion, covering the rear. The retreat, as might be supposed, soon became a flight. The camp was abandoned, and so was this, for the want of horses to remove it. The men threw away their arms and accoutrements, even after the pursuit had ceased, which was not continued more than four miles. The road was almost covered with those articles for a great distance."

"All the horses of the General were killed, and he was mounted on a broken-down pack-horse, and could scarcely be forced out of a walk. It was, therefore, impossible for him to get forward in person to command a halt till regularity could be restored, and the orders which he despatched by

others for that purpose were wholly unattended to. The road continued to Fort Jefferson, where they arrived about dark, twenty-seven miles from the battle-ground. The retreat began at half-past nine in the morning, and as the battle commenced half an hour before sunrise, it must have lasted three hours, during which time, with only one exception, the troops behaved with great bravery. This fact accounts for the great slaughter which took place."

"When the fugitives arrived at Fort Jefferson, they found the first regiment, which was just returning from the service on which it had been sent, without either overtaking the deserters, or meeting the convoy of provisions. The absence of that regiment, at the time of the battle, was believed by some to be the cause of defeat; but General St. Clair expressed great doubt on that subject."

The foregoing is a brief outline of this disastrous battle; but the detail would be horrible, heart-sickening, revolting. It is impossible to ascertain the number of killed; but it must have been very great; for an old squaw was afterwards heard to say—"Oh! my arm, that night, was weary scalping white men." Some estimate of the loss to the country may be formed, when we state that not less than forty brave officers, some of them highly distinguished, were killed, and not less than twenty-five wounded; and of the women there present, it has been variously estimated that from fifty to two hundred were among the slain, besides a great number that were taken into barbarous and hopeless captivity."

But as it is not with the general features of the battle that we have especially to do, but rather with a certain train of incidents arising therefrom, we shall leave the former into the hands of historians, while we proceed to narrate the latter in the best manner consonant with our humble abilities."

It was, then, while the battle was raging at its greatest height, and on all sides the dead and dying were mingled in bloody confusion, and heaped one upon the other, over which the living forces were trampling, as they alternately rushed to and fro in their advance and retreat, that a tall veteran officer was riding up and down the lines, and encouraging his men, by look, gesture, speech, and action, to bear down upon the foe, and sell their lives as dearly as possible. His appearance was not a little remarkable, and needs a passing description. He was well mounted on a coal-black charger, and sat erect, with his head bared to the breeze, and his long, grey locks streaming out behind. In one hand he held a bloody sword, the point of which was broken, showing that its owner had been no idle spectator; and as he swung it to and fro, and shouted words of encouragement to his men, his lips compressed, and his dark eye flashed a fire that would have become one of half his years. Wherever the battle raged fiercest, and the danger was most imminent, there this gallant officer could be seen, doing his duty like a true hero."

So conspicuous a mark could not, of course, escape the quick eyes of the savages, and more than a hundred Indians made him a target. But in vain they burned their powder and spent their bullets. All failed to bring down their intended victim, or even check the progress of his fiery charger. Yet they did not shoot wide of the mark. More than twenty balls passed through his clothes, as many more penetrated the saddle on which he rode, and one even cut a lock of his grey hair from his right temple; and still he remained unharmed. Surely, a watchful Providence preserved him for another destiny! Colonel Danforth—for so we shall designate this brave veteran—was still in the thickest of the fight, encouraging his men, now reduced to a small number, to hold out to the very last, and die like Spartans, when a young officer, an aid to General Butler, came dashing up to him, on a horse nearly as fiery as his own, and cried out:—

"For heaven's sake, save yourself, Colonel Danforth, while yet there is time! General St. Clair has ordered a retreat, and already the men are flying in every direction, and you will soon be surrounded and cut off!"

The Colonel reined his horse directly in front of the speaker, and eyed him with almost savage sternness; while his men, catching the word retreat, and seeing their comrades flying, turned and rushed after them, leaving him and the aid for a moment alone."

"What's this?" shouted the Colonel, as soon as his astonishment would permit him to speak. "Retreat! say you?"

The young man made no reply; but with a gesture of impatience and alarm, he caught the bit of the Colonel's horse with one hand, struck the animal on the flank with a sword he carried in the other, and at the same time buried his heels in the sides of his own gallant charger. Both horses reared and plunged, and the next moment were rushing away with the speed of the wind, guided by the bold, strong arm of the young and daring aid. At first the Colonel was so astonished that he offered no resistance; and it was well he did not, for a large party of Indians had nearly surrounded them, and another minute's delay would have been fatal to their escape. As it was, they had barely time to dart through the nearly closed circles; and many a hatchet and ball came whizzing past them, too close for safety, though, fortunately, both remained unharmed."

"This is sheer cowardice, boy!" cried the Colonel, at length tightening his grasp upon the rein, and making an effort to check his horse."

"Your wife and daughter!" shouted the other.

"True! but are they not in safety?"

"Nothing is safe here, Colonel Danforth; but I trust they will escape; for I sent them down the road, with an escort, as you advised."

"We must join them, then, with all speed."

"So I thought, and therefore ventured on doing what I did."

"You did right, Edward, and I was at fault." But still, I cannot but think, it is cowardly to fly, and leave these poor wretches here to the mercy of the savages. Oh, woful day! How will it sound abroad, to say that a body of Indians defeated two thousand white men, in an open combat? Ah! St. Clair should have kept out spies! I told him so; but he did not heed my

advice—now will he reap his reward. The old man is brave, but he is not a good general, or this would not have happened. Look! behold the poor wretches flying on every side of us, and some of them entreating us with looks, gestures, and supplications, to save them! Oh, it is heart-rending! and were it not for my wife and daughter, I would dismount and die with them—for the shame of this day is more to be dreaded than death."

Such were the remarks of Colonel Danforth, as, side by side, he and Edward Allen dashed along the road, past the dead, and dying, and wounded, and parties of flying fugitives, who were straining every nerve to escape the horrible fate which awaited them, if overtaken by the pursuing savages. And there were women, too, and children—mothers with infants at their breast—all flying in hopeless despair; and in some cases these mothers dashed their tender offspring upon the ground, to lighten themselves, and enable them to flee faster from the shrieking and yelling horrors behind. Parties on foot, and on horse, all doing their utmost to escape, and all still regardless of every life but their own, were alternately passed by the unmercifully swift-footed steeds of Danforth and Allen. But though our friends passed them, the road ahead was still filled with fugitives; and the shrieks and Indian yells behind, proclaimed that the terrible work of human butchery was still going fearfully on in their rear.

"Oh, woe! woe! day! oh, woe! day!" groaned the Colonel; "that I should live to witness such a terrible death as this! Edward, we should have died on the field of battle, along with the brave comrades."

"Then what would have become of those who need our protection?"

"True, true—too true! my wife and daughter. But where are they, Edward?"

"They must be on ahead, I think."

"You think! Suppose we have passed them?"

"Do not say that, Colonel! It ranks me shudder," cried the young officer, turning deadly pale.

"You sent them by an escort, you say?"

"I did, as you advised."

"Where did you direct them to stop?"

"Nowhere short of Fort Jefferson."

"Of how many was the escort composed?"

"A sergeant and five privates."

"Where were any other ladies in company?"

"Yes, four—the wives and daughters of some of the officers of our regiment."

"God grant they may have escaped!"

"Amen! I trust we shall soon overtake them. Remember they have had nearly an hour the start."

"Spur on, then—our poor beasts must do their duty now."

For some twenty minutes longer, the Colonel and his young friend rode as fast as their gallant steeds could carry them, by which time they had passed all the fugitives on foot, and nearly all that were mounted. Not less than five or six miles now intervened between them and the battle-ground, and yet they had not overtaken them for whom they were in search.

"This is strange!" observed the Colonel, reining in his foaming and panting steed, and looking eagerly around, on every side. "Edward, they have either escaped faster than I should think it possible for them to do, or something serious, if not alarming has happened to them."

"God forbid the latter!" cried the young aid, again turning deadly pale, and reining in his horse so fiercely, as almost to throw him on his haunches. "It does seem strange, Colonel, I admit. Oh, Heaven be merciful to them, if we have unwittingly passed them! But that cannot be, if they kept the road. If they turned off—ha! what is that yonder?"

"Where? where?" eagerly demanded the other.

"Yonder—ahead—beside the road! As I live I do believe it is a dead soldier; and, if my eyes do not deceive me—oh! the thought is too horrible!" and burying his spurs in his horse's side as he spoke, he sped away like a meteor, followed instantly by the now really alarmed veteran officer.

A ride of less than a minute brought Edward to the object he had espied; and, again reining his horse to a halt, he uttered a cry of horror, and placed both hands before his eyes, and bowed his head in silence toward the saddle-bow, while his whole frame shook with heart-rending emotion.

"What is it, Edward?—what is it?" cried Colonel Danforth, riding up to his side.

The young aid raised his head slowly, withdrew his hands from a face of the ghastly hue of death, and pointing to the awful scene before him, fairly gasped—"Behold!"

"I see! I see!" returned the other, quickly; "six soldiers dead and scalped. Well?"

"The escort!" again faintly gasped Edward Allen.

"Merciful Heaven! the escort!" groaned the Colonel. "Then my wife and daughter are lost!"

"Lost!" echoed the other, in a hollow tone; then both remained silent for a moment, gazing shudderingly upon the bloody scene, and both experiencing such feelings as alone could be felt by a husband, father, and lover, in such a situation.

"My wife, my daughter—my daughter, my wife—death and defeat—oh! it is too much!" gasped Colonel Danforth.

At this moment several horsemen passed our friends; but, as each was intent on saving his own life, they merely glanced at the two officers with inquiring looks, and rode on without speaking.

"Ha! the sergeant!—see! he moves!" cried Edward; and instantly dismounting, he sprang to the poor fellow's side, and raised him in his arms.

In doing this, he exposed a deep wound in his left side, some two inches below the heart, from which the blood was slowly oozing. He had been

lying on his face, and was scalped; but changing his position, he managed to revive him; and opening his parched and livid lips, he gasped faintly—"Water! water!—oh, give me water!"

By this time the Colonel was dismounted, and standing by his side. "We must save him, if possible," said the latter. "There is a small stream about a mile ahead; and we must place him on one of our horses, and bear him to it with all speed."

As the Colonel spoke, he tore off the scarf which he wore about his waist, and bound it around the wounded man, in order to staunch the blood. Then placing him upon his own horse, both he and Edward remounted, and set off as fast as a pace as was deemed prudent for one to be carried in a situation as delicate.

In a short time they reached the stream; and having bathed the brow and temples of the wounded man, they scooped up water with their hands and placed it to his lips, which he drank eagerly, and soon revived as to open his eyes, look around, and speak distinctly.

"What are you?" was his first question, "and why am I here?" "Ah! I remember now," cried the Colonel Danforth and Major Allen—I remember all now. Dear, brave, gentlemen—I did my best to save them."

"And what happened to them? Where are they now?" cried the two officers in a breath.

"I cannot answer either of your questions. Oh! my side pains me."

"Be thankful for that, for it shows you would not get mental," rejoined the Colonel. "But tell us all you know of this matter, with a little delay as possible."

"Give me more water. There—I thank you. Ah! I revived again."

"Would that we had a stronger band!" said Colonel Danforth, putting his hand upon the sergeant's side, and feeling it still continued to bleed.

"Your wish is granted," rejoined the sergeant, looking up the road, where a horseman was reported approaching. "Here comes Dr. McAllister, one of the best in the army, was it not what I call his selfish, cold-hearted eccentricity?"

As the doctor approached the party, Colonel Danforth stepped forward, and bowed to him, and said, "What has happened?"

"Oh! my wife and daughter gone, ah! my wife, Sergeant wounded, ah! my daughter, Thibault—so her name. Oh!—had place for surgery."

Indians about, Colonel. Can do nothing here—must take him on to the fort. Terrible day, Colonel. Plenty for us men of science to do. Rare sport, if it wasn't for the danger. Can't do anything for that fellow here, Colonel."

"You can, at least, look at the man. Come, come, doctor, his life may be as valuable as yours or mine—so dismount, and see what can be done."

"Bother!" rejoined the eccentric doctor, slowly complying with the Colonel's request.

The surgeon, as we have intimated, was both a man of talent and eccentricity; and it were difficult to say which he prided himself most upon: his skill in his profession, or his oddity. He was a Scotchman by birth, but spoke English very smoothly, and only with a slight brogue. His costume was a compound of the old English and backwoods hunter. He wore a broad white scarf around his neck, and ruffles around his wrists, which latter were now not a little soiled by labours in his profession. His velvet breeches and buckles were mostly covered with deer-skin leggings; and his small, grey eyes, and sharp, bony, wiry countenance, had a rather comical look under his heavy wig, and small, three-cornered hat.

Having examined the sergeant's wound with a haste occasioned by his fears of being overtaken by the Indians, Dr. McAllister gave it as his professional opinion, that the man should be taken forthwith to Fort Jefferson, where he, the said doctor, would guarantee to save his life, by means only known to men of his scientific calibre.

"Then you must take him there, Doctor," said the Colonel. "For Major Allen and myself are about to set off in search of my wife and child."

"Nonsense, Colonel—can't find them; and if you did, what could two of you do against two thousand. Stuff! So-ho, Thibault, sag. Excuse me, I am afraid my horse will depart;" and the little doctor waddled off to secure the bridle of his beast, which was standing very quietly in the road.

"I think, Colonel Danforth," said the wounded man, "it is useless to search for your friends now. They are undoubtedly prisoners, and time must elapse ere they can be recovered, if ever. As soon as I am able, I will gladly accompany you; and in the meantime, you can perhaps collect a band of old hunters, who understand stratagem and manoeuvres better than ourselves. If you attempt anything now, you will be likely to lose your own lives, without rendering them any assistance."

"What think you, Edward?" asked the Colonel.

"Alas! sir, I fear it is as Sergeant Bomb says. We must wait and take our chance."

"Oh, it is terrible!" groaned the Colonel.

"But tell me, Bomb, how it happened."

"All I know, sir, is, that we were set upon by about twenty howling savages, and were despatched as fast as rifles, tomahawks, and knives could do. I saw two or three of the enemy fall, before I fell myself; and I saw the women hurried away, and that's all I know about it."

"Here comes fugitives on foot, and Indians behind them," said the doctor; and remounting Thibault, with all haste, he put spurs to his mount, and dashed away without any further ceremony.

"There goes a man, whose own life is of more consequence to him than all the rest of the world," observed Colonel Danforth, his lip curling with contempt, as he gazed for a moment after the retreating surgeon.

"Well, we must follow," returned Edward; "for the foot are coming up."

*"Both horses reared and plunged, and the next moment were rushing away with the speed of the wind, guided by the bold, strong arm of the young and daring aid. At first the Colonel was so astonished that he offered no resistance; and it was well he did not; for a large party of Indians had nearly surrounded them, and another minute's delay would have been fatal to their escape."*

rapidly, and the Indians may be close behind. We must take care of our own lives now, in order to save those near and dear to us."

"Right, Major—let us mount and away."

A minute or two later, Colonel Danforth and Major Allen were dashing the road, bearing the sergeant with them; while hundreds behind, in wild disorder, came panting after, afraid every nerve to escape the horrors they had so recently witnessed.

#### CHAPTER II.—OUR HERO AND HEROINE.

**COLONEL DANFORTH** was a native of New Jersey, and had served in the war of the Revolution with some distinction, first as Captain, and afterwards as Major. He had been married twice. By his first wife he had no issue; his second had borne him a daughter, some eighteen years previous to the writing of our story. As this was the only child he ever had, and he being a man of strong, ardent affections, it is not perhaps too much to say that he idolized her. At the close of the war, by which the Americans gained their independence, Major Danforth returned to his family, and for several years settled down to the quiet life of a farmer. But, being naturally restless and ambitious, this kind of occupation did not altogether suit him; and in 1800 he removed to the west, and located himself in Cincinnati, then a very small village. The encroachments of the Indians soon aroused his ire and ardour, and he signified his intention of again joining the army and his aid to the protection of the frontier. This was represented to Governor St. Clair, who, knowing something of his history, and anxious to secure so valuable an officer, tendered him a colonel's commission, which he accepted, and immediately took command of a regiment, with which he subsequently left Cincinnati, under the military direction of the Governor himself, and proceeded on that march of peril, the awful terminus of which we have already briefly chronicled.

It was neither the design nor wish of the Colonel that his wife and daughter should accompany him; but as they earnestly pleaded to be allowed to go, he readily gave his consent; which was the more readily accorded, from the fact that he believed that there would be no fighting with the Indians, and consequently that they would be as safe under his own immediate protection in remaining where they were.

And, during his journey to the west, that Colonel Danforth went in company with Edward Allen, who, his rents being dead, had joined a party of emigrants, for the purpose of trying his fortune in the new world. So many were then bending their steps westward, when coming contact with each other, to mingle most indistinguishably for the time, and share each other's company for

mutual protection. All, in those times and on a similar journey, were considered equals; for the poor man's arm and rifle were of as much account in the moment of peril, as those of him, who might in another clime, encase himself in an armour of gold, and stand aloof from the humble denizen of society. Nor did refinement and intellect then hold that distinction above the unlettered and vulgar which it does now. The man of flowery ideas, and classic lingo, was as likely to become a victim to the Indian's rifle, tomahawk, and scalping-knife, as he who could not call the letters of his own name. No; physical strength, native cunning, hard experience, a sure rifle, and a quick eye, were what was most needed then; and he who could excel in these took the highest station in the hour of danger; and, no matter what were his other qualifications, was regarded by all with a feeling akin to deference.

We do not wish the reader to infer from these remarks, that we are going to class our hero with the unrefined and unlettered. No, far from it; for his early training and education were of no inferior grade; but we merely state the facts to show how natural it was for Colonel Danforth's party to be united with another, not a single member of which was known to himself or any of his friends at the time of joining.

From the very first, a mutual liking sprang up between Colonel Danforth and Edward Allen; and this liking soon ripened into the warmest friendship, when both found themselves acquainted, through the memory of the father of Edward, who was mortally wounded in a severe engagement, while commanding a company of infantry in the same regiment to which Colonel Danforth belonged, who well remembered and lamented him as a brave and worthy officer. Had there been any of the polite and formal coldness of strangers between the Colonel and Edward, previous to this discovery, this would have been sufficient of itself to thaw it away, and let the genial warmth of friendship take its place; but, fortunately, nothing of this kind was needed for this purpose—though its effect was perhaps in equal ratio, in causing those who desired to be friends, to feel as if a sacred tie, amounting to more than friendship, bound them to each other.

The Colonel, in his enthusiastic delight, presented Edward to his wife and daughter as the son of a deceased and highly valued military friend—though, in truth, no intimacy had ever existed between himself and Captain Allen, than what naturally arises between a superior and inferior officer in the ordinary discharge of their general duties. But time, place, and circumstances rendered mere acquaintanceship friendship in the eyes of the Colonel; and he really felt—in reviewing the past and looking upon the offspring of the deceased captain—as if the latter had been regarded as a personal friend, rather than as a subordinate officer.

But if the mere meeting of the Colonel and Edward productive of an ardent, mutual attachment, what shall we say of the meeting between the Colonel's daughter, who was as impulsive, as generous, as as himself, and, withal, far more impressive! What does the

reader would be the natural consequence of bringing together a handsome, noble-looking youth of twenty, and a lovely, accomplished maiden of seventeen, under the circumstances we have described, provided that the affections of neither had been previously engaged, and that each saw in the other the identity of a perfect ideal! What, we say, does the reader suppose would be the natural consequence of such a meeting? Above at first sight, of course, with all the etceteras! And the reader supposes right; for such indeed was the result of the meeting between Edward Allen and Lucy Danforth. There are, we know, a few cold-hearted cynics in this world, who make a point of denying that there is any such thing as love at first sight, even if there be such a thing as love at all. But we have only one word for such sceptics, and that is, that we know them to be in error; and we speak from experience.

And Lucy Danforth was a being to love, and beloved. Her frank, artistic, beautiful countenance lighted with intellect, and the bloom of a maiden just verging upon womanhood, with her lustrous dark eyes sparkling with merriment, or beaming with tenderness, through which could be perceived a soul of depth and feeling, made her an object of admiration and fascination that would not have failed of exercising a strong influence on a heart less susceptible than was that of our hero. Nor was her outward appearance, lovely as it was, without a mind to correspond.

A good education, and, more important still, a mother's careful training, had enlarged her quick understanding, and instilled into her soul all those noble and holy virtues which most adorn the sex; and thus was she fitted to take her place, as becomes a true woman, in any station in life to which all eventful destiny might call her.

But, lovely in person, refined in manner, and noble in virtue as she was, Edward Allen was a meet companion for her. And this we consider as one of the highest encomiums we can pass upon him. Tall, handsome, and manly in person, he, too, possessed an intellect of no inferior order, well balanced by a sound, discriminating judgment, and a moral rectitude that would not suffer him to go astray from the path of duty and honour. He, too, had been fitted by a good education, and a pious mother's precepts and example, to enter properly upon the stage of action, and conducting himself becomingly through life. True, that mother was now no more; but the golden seed of virtue that she had early sown in his young breast had not been strawn on stony ground, but upon rich soil, capable of bearing fruit a hundred fold. Amid all the eventful circumstances in which he was subsequently placed, her righteous counsels were remembered; her holy precepts were not forgotten; and, whether in prosperity or adversity, he was one to acknowledge the wisdom of God in all.

Thus prepared, as it were, for each other, were this youth and maiden brought together; and, therefore, it can be no wonder that a pure and holy love was the spontaneous result—a love that would not weaken and dissolve, but rather strengthen and cement, by time and continued intercourse. Each saw in the other something to admire, and something worthy of imitation; and as they journeyed together through the wilds of the forest, and allowed their souls to expand in cordial union, each felt that his or her thoughts and expressions were properly understood by the other, and that the indescribable void which had heretofore existed in the heart, was now happily filled by a presence dearer than self. Both possessed a degree of romantic poetry which gave to every new object a secret charm; and as they journeyed under arching trees, over beds of flowers, and across sparkling streams, every object was noted and commented upon with a delight, a quiet inward rapture, known only to lovers. Thus, day after day, was their toilsome and perilous journey pursued, and the toils and perils wholly forgotten in the golden joys which each experienced in the society and converse of the other.

At last the party arrived in Cincinnati, the present destination of Colonel Danforth. As Edward had gone west without any settled purpose, other than to seek a change, and, if possible, better his pecuniary condition, it mattered little, in his view, where he took up his residence; and he cheerfully accepted a cordial invitation of the Colonel to make his house his home for the time being. Not so with the other members of the party. Some had one destination, and some another; and gradually they separated, to go to their respective places; so that, of the fifty persons that had crossed the mountains together, not more than a dozen landed at Cincinnati, and a part of these were destined for Symmes, a place since known as North Bend, the residence of the lamented General Harrison, whose remains still repose in a tomb on a high mound, conspicuous from the silvery Ohio.

Edward continued to reside with the Danforths for several months, and every day he enjoyed the company of her who was dearer to him than life. He had brought a few hundred dollars with him, being the amount received from the disposal of the little property his parents had left him; and these he placed in the hands of Lucy's father, to be invested in such real estate as he might deem proper. On learning the resolve of Colonel Danforth to volunteer his services in the defence of the frontier, a military ardour was awakened in the breast of Edward, and he privately expressed a desire to the Colonel to be allowed to accompany him in the event of his again betaking himself to the field. From this, at first, the Colonel endeavoured to dissuade him; but, finding him determined, he finally applauded his resolution, and said he would use his influence to procure him a commission. On receiving his own from Governor St. Clair, and learning that the latter was about to raise an army for the purpose already shown, Colonel Danforth wrote to him, giving a brief history and personal description of Edward, and soliciting as a great favour, that he would appoint him as one of his aids. In course of time he received an answer, to the effect that he, the governor, had already appointed his aids, but that he had written to General Butler on the subject, and doubted not the services of the young man would prove acceptable to that gallant officer. The result verified his expectations; and the

first knowledge Edward had of his so-conceived good fortune, was the receipt of a document in which he found himself elevated to the honorable post of aide-de-camp to General Butler, with the rank of Major.

It is difficult to portray the feelings which the reception of this mission awakened in the mind of the young, enthusiastic, and nobly ambitious Edward Allen. His father had died honoured with the rank of captain; and his wildest boy-dreams, and most sanguine expectations, had never led him to look beyond that without years of service, even if he ever entered the army and attained such an eminence at all; and now, without having struck a single blow, he was suddenly advanced to a grade above it.

"Love, honour, and glory, at twenty-one," mentally exclaimed Edward—"am I not blest?"

Alas! he knew not what the future had in store for him, or his exuberant joy would have suddenly changed to gloomy forebodings.

With his commission in his hand, and joy on his countenance, and his heart wildly beating with a thousand bright hopes for the future—in which rank, fame, honour, glory, and love were strangely mingled—he entered the presence of Lucy Danforth, and hurriedly told her all.

But, oh! instead of greeting his present joy and brilliant expectations with smiles of delight, and expressions of rapture, the poor girl burst into tears, threw her arms around his neck, and sobbed bitterly. To her simple, guileless mind—wherein fancy and the did—there came no visions of glory, fame, and distinction; but, in their place, the unwelcome prognostics of sickness, defeat, death, and despair. She was a soldier's daughter, it is true; but she had not a soldier's feelings. She did not delight in scenes of blood and carnage, and least of all, to hear of the war-like preparations now were to take from her friends both near and dear. Edward, relieved by her grief, did his best to tranquillize and console her; and so far succeeded, that when he left her presence, there was a faint smile upon her pale lovely features; but his own heart felt heavier and sadder than he had known it for a long time. All his dreams of greatness by military achievements he would now have gladly relinquished, for one hour of that quiet, peaceful joy he had ever before experienced in the society of her he loved. But it was now too late to repent of the step he had taken, and he made an effort to console himself with the reflection, that his country needed his services, and that he was only doing his duty as became a true and patriotic citizen.

As we have before stated, the pleadings of his wife and daughter to be allowed to accompany him on his march into the wilderness, at last gained the reluctant assent of Colonel Danforth; and, therefore, Edward and Lucy were spared that trial-scene to lovers—a parting with a great uncertainty of ever meeting again. During the toilsome march, whenever he could be released from duty, Edward was ever at the side of Lucy, breathing in her ear tales of love and words of encouragement; and thus the journey, fatiguing as it was, was rendered far less irksome to both than it would otherwise have been.

The sudden attack on the morning of the fourth of November, being wholly unexpected, no provision, of course, had been made for the protection of the females; and they were thus necessarily left exposed to all the surrounding dangers. Each officer was required to be at his post, by the performance of his duty; and there was consequently no time for tender partings with those he most dearly loved, but whom he might never behold again on earth. Lovers may imagine the feelings of Edward, husband and father, those of Colonel Danforth, as both plunged into the heat of battle, knowing the defenceless condition of those to save whose lives either would willingly have laid down his own.

Fortunately for Mrs. Danforth and Lucy, they occupied a marquee, pitched near the centre of the encampment, where the danger was less imminent than near the outer circle of tents, as the Indians would not be so likely to reach them without the interference of American soldiers to check and change their course. Here, locked in each other's embraces, more dead than alive with mortal dread and mental agony, they remained in terrible suspense, for two long hours, praying God to preserve them and their friends, yet expecting every moment would be their last. At length, in carrying orders from General Butler to one of his subordinate officers, Major Allen and Colonel Danforth met.

"My wife and daughter?" cried the latter.

"I have not seen them since the action commenced," was Edward's reply.

"For Heaven's sake, Edward, beg General Butler to allow you to send them away with an escort. If not butchered by these red devils, you will most likely find them in the marquee."

"I will," rejoined Edward; and the two parted.

Half an hour later, Edward again met the Colonel.

"I have followed your directions," said the former, "and I trust our friends are now in comparative safety."

"Thank God! my son, you take a weight from my heart. Now shall these accursed red-skins feel the force of an old man's arm."

And Colonel Danforth kept his word. Believing his wife and daughter to be out of danger, he entered into the spirit of the combat, and fought with a heroism worthy of a better fate. He was thus engaged, as the reader has already seen, when young Major Allen came to warn him of the order to retreat; and in fact to preserve his life, by boldly forcing his horse from the ensanguined field. General Butler, having in the meantime been killed, Major Allen, as his aide-de-camp, was of course free to depart with his friend; and the result of that departure is already known.

Having thus given a brief outline of matters necessary for the reader to know, in order to have everything clearly understood, we shall in our next resume the thread of our story.

## GREAT PRIZE ENIGMA COMPETITION!

The Editor of "The Family Friend," in announcing his intention of offering One Hundred and Seventy-five Guineas in Prizes for the best Solutions of Enigmas to be published in No. 61 of "The Friend," January 1, 1852, begs to announce that at the urgent request of numerous Friends, he has been induced to divide the above amount into the following Prizes:—

- |                           |  |
|---------------------------|--|
| Five Prizes of £10 10s... | For the best Correct Solutions of an Enigma submitted to Gentlemen.            |
| Two Prizes of £10 10s...  | For the best Correct Solutions of an Enigma submitted to Ladies.               |
| Six Prizes of £5 5s...    | For the best Correct Solutions of an Enigma submitted to youths of both sexes. |
| One Prize of £5 5s...     |  |
| Ten Prizes of £2 2s...    |  |

The Number containing the Three Prize Enigmas, and the Conditions of the Award, will be ready on the 1st of January, 1852, and may be had of all Booksellers everywhere, price 2d.

Intending Competitors are informed that various Prize Enigmas, Solutions, and Awards, have appeared in the following Numbers of the "Family Friend," which may be obtained on order, price 2d. each:—Nos. 9, 10, 13, 15, 16, 21, 22, 23, 24, 25, 26, 27, 37, and 56. Competitors may derive many useful suggestions by consulting the Enigmas, &c., contained in these Numbers. Volume II., price 2s. 6d., contains the larger proportion of them.

TRADE NOTICE.—A Number of the HOME COMPANION is issued at 69, Fleet Street, every MONDAY at Nine o'Clock.

PART I. of the HOME COMPANION, price 6d. is now ready.

## THE HOME COMPANION:

A WEEKLY MAGAZINE.

## PRACTICAL ILLUSTRATIONS OF POPULAR FALLACIES.

## No. 3.—"A LITTLE LEARNING IS A DANGEROUS THING."

When Mr. Pope wrote his far too celebrated lines—

"A little learning is a dangerous thing!  
Drink deep, or taste not the Pierian spring;"

he little thought of the mischievous effects that would be produced by them; that they would be continually used as the means of preventing education, and checking the spread of improvement among the people. But so it is. Men seize hold of a witty saying, and without examining into its truth, go on continually quoting it, until it assumes the dignity of a proverb, and is used as an authority to put down or prevent those things which the person using it is disinclined to. The answer to this particular saying may be found also in the works of the same Mr. Pope, and it is at least entitled to equal authority, nay, even greater authority, since it is the product of his mind in a more mature age:—

"The education forms the common mind;  
Just as the twig is bent, the tree's inclined."

The bending of the twig is the acquisition of a "little learning;" it is that which must give a direction to a whole life. A "little learning" is, in truth, the keystone to all knowledge; for he who does not begin with a little can never attain to much—can never be able to take a deep draught of the Pierian spring.

But is a little learning dangerous? We think not.

"The humblest measure of mind is bright in its humble sphere.  
The glow-worm, creeping in the hedge, lighteth her evening torch,  
And her far-off mate, on gossamer sail, steers his course by that star;  
But ignorance mocketh at prophecies, bringing out the glow-worm at noon."

The very first advances in learning have some influence in bringing us nearer to "prophecies;" in enabling us to cast off some of the utter brutishness which makes us the slave and the tool of every sensual desire. The humblest labourer that ever delved in field has some particles of the divine breath within him that may be stirred and excited by giving him a "little learning;" and with this movement of the intellect comes also a movement of the affections, and the whole nature is changed under their influence;—a tenderness and softness is spread over that which before was rude, and harsh, and brutal;—sympathies are aroused and communicated,—the lamp of the glow-worm is lit in the cottage home, and its attractions are love, affection, and domestic peace. We are wiser in our generation than in the days of Mr. Pope, brilliant as the wits and literary men of those times commonly were. But then, knowledge—nay, even the appreciation of knowledge was confined to a few: they were honoured with the title of the wits, and the two or three coffee-houses in which they were accustomed to assemble were looked upon with a degree of reverence which we can scarcely understand in these days, as the haunts of all that was eminent in literature and poetry, philosophy, and knowledge. The great mass of the people were uninstructed, unimproved; even the country gentlemen, the men of fortune, were more ignorant than a charity school-boy of the present day; they were mere Squire Westerns, devoted to the chase and the bottle; their only reading, *Baker's Chronicle*, or *Gentleman's Book of Horology*, which their family pride made them

delight in,—the only kind of music they could tolerate was *Juniper's* *James*, or *Robbing Joan*. "Philosopher Square" and "Professor's Weekham" are the types of those to whom the education of the youth of that age was committed. We need not be surprised, therefore, that the few who had elevated themselves out of the mire of ignorance by which they were surrounded,—who revelled in the bright thoughts which genius strikes out for itself, or which the cultivation of the intellect gathers from various sources, should look down upon the uninformed and brutal mass around them, and possess a degree of literary pride which is unknown in these our days to all who mix in the world at large. Within the walls of our colleges scarce a few may still be found who live in an atmosphere of their own; who dream in Greek, and pass their lives in the vain endeavour to trace the accurate meaning of a Greek particle, or the proper use of the digamma; and these still think that "a little learning is a dangerous thing;" they have no sympathies with any times or any people, but those of the classical æra;—from the days of Pericles to those of Augustus is their golden age, in which they still wander as in a kind of enchanted sleep. They have great acquisitions in their way—rare ones, such as few possess; but the world has run away from them—has gone a-head—has launched out boldly upon the ocean of knowledge, in which all may find rich freights, but in which all must have some instruction lest they strike upon the hidden rocks and shoals which may send their venture to the bottom. Here "a little learning" may be "dangerous," but not so dangerous as perfect ignorance. We must each endeavour to acquire as much as we can if we would pursue our voyage in hope, but if we taste not" our destruction is certain.

In the days of Pope, learning was confined to the few; scarce any ever thought of instructing the labourer—we do not say people, for as yet there was no such thing as a people in the world. It is only in our day, as the result of a "little learning," that peoples are springing into existence. Formerly it was by no means uncommon for men who were desirous of affording a little knowledge to the labourer—of giving them some elementary instruction—to be afraid to do so, lest it should make them less industrious. We have this fear stated in *Boswell's Life of Johnson*, with Johnson's comments on it as follows: "Mr. Langton told us he was about to establish a school upon his estate; but it had been suggested to him that it might have a tendency to make the people less industrious. Johnson: No, sir; while learning to read and write is a distinction, the few who have that distinction may be the less inclined to work; but when everybody learns to read and write, it is no longer a distinction. A man who has a laced waistcoat is too fine a man to work; but if everybody had laced waistcoats, we should have people working in laced waistcoats. There are no people whatever more industrious, none who work more, than our manufacturers; yet they have all learnt to read and write. Sir, you must not neglect doing a thing immediately good, from fear of remote evil; from fear of its being abused." And on another and later occasion, a gentleman, at a dinner at General Paoli's, maintained that a general diffusion of knowledge among a people was a disadvantage, for it made the vulgar rise above their sphere. Johnson's reply was in the same strain as that we have quoted. "Sir, while knowledge is a distinction, those who are possessed of it will naturally rise above those who are not. Merely to read and write was a distinction at first; but we see when reading and writing have become general, the common people keep their stations. And so, were higher attainments to become general, the effect would be the same." These expressions are remarkable as coming from the great leviathan of literature at a time when the pride of learning was at its height; when few had learnt to take the captive of ignorance by the hand, and lead him even to the portals of the temple of knowledge; when the green landscapes of literature, and the lovely scenery of the imagination were to him mere barren wastes. But in these our days, how great the contrast! Some few, ignorant themselves, still think "a little knowledge is a dangerous thing," and would keep the world in the mental darkness to which they have doomed themselves. But the light of knowledge has become common as the sunshine on our fields: it shines for all, it illuminates all. And we find a modern writer, Alexander Knox, working out Johnson's thought, with all the additional experience of the present day. "I do feel strongly,—and I thank God that I have the feeling,—that to neglect the mind for the sake of anything earthly, is high treason against the laws of nature. The great mass, hitherto, could not commit this crime; because, either they had not minds to cultivate, or their minds were never awakened to activity, or even consciousness. But Providence is now putting things on another footing. Knowledge is spreading into the dark places of the earth; and to be ignorant will be a disgrace of a far different kind from what it ever was before. A good English scholar has hitherto been a reputable character, because to be so was no common thing. Now, through the aid of Sunday Schools first, and of Dr. Bell and Joseph Lancaster next,—and through the means at the same time of Reviews, Magazines, and Newspapers innumerable,—good English scholars will be, in comparison of what they were, probably as one hundred to one; so that those who were sufficiently distinguished by being good English scholars, must now rise a step higher, or forfeit their place in the intellectual scale of society. I admit the wisdom of Providence in making such an advance in knowledge so easily attainable."

Let us suppose a child sent to school with this maxim impressed on his mind—"A little learning is a dangerous thing!" What progress could we expect him to make in his studies? Would it not furnish him with an excuse for neglecting every task, and devoting himself to idleness? An instance once came under our own knowledge, of a wealthy farmer who placed his sons at the National School, in the parish in which he resided, with a strict injunction to the schoolmaster not to bring them on too far! In those days the Masters of National Schools did not receive the same admirable training as at present: they were in truth nearly as ignorant as their

pupils themselves; and if they had been capable of imparting every atom of what they themselves knew, their pupils would still have been in the dangerous state of possessing only "a little learning," but so little did boys trained upon this principle possess, that they never acquired the taste or desire for attaining more. They live on in ignorance and prejudice; almost certain to be inferior in every species of information to the labourers they employ, and who perhaps have been educated at their expense in the schools of the parochial Unions. It is not the least advantage of these schools, that they force upon those of a higher station the necessity of acquiring something more than "a little learning," if they would maintain their position in the world. But, then, all those who send their little boys to school, with a desire that they shall not be brought on "too far!" are in a great fright about thus affording to the labouring classes "a little learning!" and they cry out with vehemence against a system which will compel their boys to be brought on a little farther. Thus, we hear loud talk of the danger of "a little learning," as unfitting men for the duties of their position,—giving them a smattering of useless things,—filling them with self-sufficiency, vanity, and pride. Dr. Johnson has answered the first and last of these objections;—as regards the second, it is better they should have a little knowledge of many things than be left in ignorance of all; it may, and most probably will, give them the desire to extend this little knowledge in one direction or another:

"By degrees, the mind  
Feels her young nerves shake; the plastic powers  
Labour for action."

And every fresh gleam of knowledge will awaken a more intense sensation of pleasure—a more earnest desire to acquire more information. It is idle to talk of the self-sufficiency, the vanity, and the pride engendered by a "little learning." Your true self-sufficient person is your thoroughly ignorant man. "Don't tell me, I know everything!" was an expression we ourselves have heard used by an old cattle-dealer, who had not an idea beyond the form of a bullock and the price of fat stock. The occasion was an accident that had befallen one of his horses, it had been goled by a bullock, and an artery was ruptured, the blood was streaming in torrents, and the farrier of the village was using his best endeavour to stop the effusion and repair the damage, but the old man shoved him on one side; "Stand aside!" said he, "don't tell me; I know everything. I'll stop the blood; bring me an egg-shell." The egg-shell was brought, he gravely caught some of the blood in it, carried it into the village inn, and placed it on the fire, in the firm conviction that as the blood in the shell boiled, the blood from the artery would cease to flow. He was pretty nearly right in his conclusion, for by the time the blood had boiled away and the shell was calcined, the horse was dead! A "little learning"—a very little, would have destroyed the self-sufficient confidence of the old man; would have lowered his vanity, and perhaps saved the life of a valuable animal. But he, like "Goodman Dull" in *Love's Labour's Lost*, "hath never fed on the dainties that are bred in a book; he hath not eaten paper, as it were; he hath not drunk ink; he is only an animal; only sensible in the duller parts. And such barren plants are set before us," goes on the pompous and pedantic schoolmaster Holofernes, "that we thankful should be (which we of taste and feeling are) for those parts that do fructify in us more than in he."

"For as it would ill become me to be vain, indiscreet, or a fool,  
So, were there a patch set on learning, to see him in a school!"

O virtuous Holofernes, thy little learning hath taught thee it is not right for thee to be vain, indiscreet, or a fool! but it hath not yet sufficiently fructified in thee to eradicate all the seeds of variety, indiscretion, and folly, from thy composition. In these our days, Holofernes would have felt no pride in his "little learning;" there would have been too many wearing the laced waistcoat besides himself. There is no danger now of a little learning fostering either pride or vanity; day by day we see elementary instruction, such as can be afforded even in the "Ragged Schools," softening, humanizing, and enlightening the very dregs of the community, bringing them nearer to the "proprieties" of life—sowing in them the good seed to fructify in due season. The "little learning" that has been spread abroad has done something towards striking down the pride of ignorance. Look abroad through the world, and you will find that it is ignorance that is self-willed, opinionated, assuming, prejudiced, fancying that it knows and understands every thing; while knowledge is modest, unassuming, patient, inquiring; aware of its own deficiencies, of how much it has yet to learn; and anxious to seek and derive instruction from every source—

"Finds tongues in trees, books in the running brooks;  
Sermons in stones, and good in every thing."

If, then, we would increase the knowledge of the world, we must blot out this fallacy from our list of proverbs, and exert ourselves to give a "little learning" to all, in the full and confident hope that many will strive to make that little much; and that even those who rest contented with the little, are better than when they possess none. It is in vain now for the pride of scholarship to sneer at a "little learning;" to throw obstacles in the way of its acquirement; to speak more for "barbarism" than for that angel, knowledge;—the fiat has gone forth:

"The dawn of mind, which upwards on a pinion  
Borne, swift as sunrise, far illumines space,  
And clasps this barren world in its own bright embrace."

This dawn of mind has already shed its beneficent light over this land, we feel its influence through all grades of society; we feel it in increased morality—in the diminution of sensuality—in the love of order—in wide-spread benevolence and kindly feeling; it must be the object of us all to guide the dawning to a brilliant noon. And many are the helps to this great work. Men are beginning to understand that learning, like the diamond, doubles in value with every carat that is added to its weight: that the infor-

mation we gain from one source, we immediately apply to the next subject of our inquiry, which renders that more easy of acquirement, and increases pleasure and advantage as we follow the pursuit. The conqueror of old, when he had reached the height of power, wept that no more worlds were left to conquer. But we, beginning with a "little learning," find new worlds opening and expanding before us in whatever direction we turn our gaze: here "Alps arise;" and however high we may rise, new wonders—new thoughts are presented to us, until at length our only grief will be not that no more worlds are left to conquer, but that we have not time, and life, and mind, sufficient to understand and comprehend them all. O, vain pride of man, that stigmatises a "little learning" as dangerous! What are the greatest attainments ever reached by man, more than a "little learning"—a drop in the great ocean of knowledge?

## A MEXICAN STRATAGEM.

A LADY of fortune, in the city of Mexico, owing to some combination of circumstances, found herself in difficulties, and in immediate want of a small sum of money.

Don —, being her friend, and a respectable merchant, she went to him to state her necessities, and offered him a case of valuable jewels as a security for repayment, provided he would advance her eight hundred dollars. He agreed, and the bargain was concluded without any written document, the lady depositing her jewels, and receiving the sum.

At the end of a few months, her temporary difficulties being ended, she went to her friend's house to repay the money and receive back her jewels. The man readily received the money, but declared to the astonished lady that as to the jewels, he had never heard of them, and that no such transaction had taken place.

The senora, indignant at the merchant's treachery, instantly repaired to the palace of the vice-king, hoping for justice from this western Solomon, though unable to conceive how it could be obtained. She was instantly received by Count Revillagigedo, who listened attentively to her account of the circumstances.

"Had you no witness?" said the Count. "None," replied she.

"Did no servants pass in or out during the transaction?" "Not one."

The viceroy reflected a moment. "Does your friend smoke?"

"No, sir," said the lady, astonished at this strange question.

"Does he take snuff?" asked the viceroy. "Yes, your excellency," said his visitor, who feared that his excellency's wife were wool-gathering.

"That is sufficient," said the viceroy; "retire into the adjoining chamber and keep quiet: your jewels shall be restored."

His excellency then despatched a messenger for the merchant, who immediately presented himself.

"I have sent for you," said the viceroy, "that we may talk over some matters in which your mercantile knowledge may be of use to the State."

The merchant was overwhelmed with gratitude and joy; while the viceroy entered into conversation with him upon various affairs connected with his profession.

Suddenly the viceroy put his hand, first into one pocket, then into the other, with the air of a man who had mislaid something. "Ah," said he, "my snuff-box! Excuse me for a moment while I fetch it from the next room."

"Sir," said the merchant, "permit me to have the honour of offering my box to your excellency." His excellency received it as if mechanically, holding it in his hand and talking, till, pretending some business, he went out; and calling an officer, desired him to take that snuff-box to the merchant's house, asking his wife, as from him, by that token to deliver to the bearer a case of jewels which he had there.

The viceroy returned to the apartment and remained in conversation with his guest until the officer returned, and delivered to him a jewel-case which he had received from the merchant's wife.

Revillagigedo then returned to his fair complainant, and under the pretence of showing her some rooms in the palace, led her into one, where, among many objects of value, the jewel-case stood open.

No sooner had she cast her eyes upon it, than she started forward in joy and amazement. The viceroy requested her to wait there a little longer, and returned to his other guest.

"Now," said he, "before going further, I wish to hear the truth concerning another affair in which you are interested. Are you acquainted with the Senorita de —?" "Intimately, sir; she is my friend."

"Did you lend her eight hundred dollars at such a date?" "I did."

"Did she give you a case of jewels in pledge?" "Never!" said the merchant, vehemently. "The money was lent without any security; merely an act of friendship; and she has invented a story concerning some jewels which has not the slightest foundation."

In vain the viceroy begged him to reflect, and not, by adding falsehood to treachery, force him to take measures of severity. The merchant persisted in his denial.

The viceroy left the room suddenly, and returned with the jewel-case in his hand; at which unexpected apparition, the astonished merchant changed colour, and entirely lost his presence of mind.

The viceroy ordered him from his presence, with a severe rebuke for falsehood and treachery, and an order never again to enter the palace. At the same time he commanded him to send him, the next morning, eight hundred dollars with five hundred more; which he did, and which were the viceroy's orders, distributed among the hospitals. His excellency gave a severe reprimand to the lady, for having made a bargain without writing.

## ONWARD!

**EXTINCTION OF VESUVIUS.**—In this age of "onward" nothing appears to be impossible. A project has been started to extinguish the fire of Vesuvius, which for thousands of years has spread terror and destruction among the inhabitants of the Stollan coast. The depths of the crater of Mount Vesuvius extend, it is known, several thousand feet beneath the surface of the sea. By means of a canal it is proposed to convey the waters of the Mediterranean into the heart of the fiery furnace. Mr. MacLaughlin, who has greatly interested himself in this scheme, goes so far as to detail the expenses of such an undertaking, which he estimates at two millions of piastres, an outlay that will be more than redeemed by the increased value of the land in the neighbourhood of Vesuvius. What a chance for Herculaneum and Pompeii if such a project had been conceived two thousand years sooner!

**PROPOSED JUNCTION OF RAILROADS IN THE CITY.**—With regard to Mr. Charles Pearson's scheme for effecting a junction between the centre of the City, and the several railways north of the Thames, plans have been deposited preparatory to an application to Parliament for powers. The projector has drawn a very striking, we may say astounding, picture of London City, with its coal trade, corn trade, banks, Stock Exchange, markets, India House, and other immense establishments, and showed the enormous interests centered in the 620 acres which form it, and contain a fixed property, the assessable value of which is a million and a quarter per annum. The worth of the moveable property he has called a hundred millions. The course of the proposed lines of railway to be constructed in a subway beneath a street 100 feet wide (less straight than is desirable) from Farringdon Street to King's Cross, with branch lines to passenger-stations, passing under Holborn Hill and Skinner Street.—*Builder*.

**FLOATING PALACE OF ENTERTAINMENT.**—The flying machines of Paris, its hippodromes and balloons; the largest ship in the world, advertised as now building in England, are nothing compared with the following. The Cincinnati *Register* says of a marine monster about to be constructed there:—"Dr. Spalding, the circus king, has been in town several days, closeted with architects and ship-builders, projecting an enterprise compared with which all other show projects are literally nothing. He has the drawings and working plans for a monster floating palace, for the construction of which he is getting estimates, 400 feet long and 60 feet beam, with luxurious accommodations for 4,000 spectators. The interior is to be an amphitheatre, much more capacious and costly than any theatre in the country; with cushioned and arm-chairs, dress circle, parquet and gallery, saloons, promenades, and with drawing-rooms, stage, drops, and scenery, well ventilated and lighted, with facilities for speedy ingress and egress, lighted with gas and Bengal lights, and every modern and elegant improvement. The exterior of this leviathan of the deep is to be like nothing in 'the earth beneath, or the waters under the earth.' An agent proceeded to Europe in the last steamer to procure rare novelties for this sumptuous place of entertainment—from Asia and Africa, wild animals from their native wilds; from France, equestrians and ballet girls; from England, acrobats and actors; and from home, some of those ingenious artists who would acquire no additional lustre from transatlantic endorsement. The 'Water Mountain' is to be towed by two steam tenders to the various towns upon the Mississippi and its tributaries in summer, and be moored at the levee in New Orleans in the winter. It is estimated to cost 40,000 dollars, and will be completed next spring, although Dr. S. has offered a large bonus to have it completed in time for this winter's campaign."

**PACIFIC RAILROAD.**—Mr. Whitney says we shall cross from the Atlantic to the Pacific in *five days* and for *forty dollars*. He relates some interesting things in his report made to the Geographical Society. We copy a passage or two:—"He had divided the world into three parts; Europe and Africa being one division, Asia a second, and America the third; the last being the centre of all, not only in a geographical sense, but commercially and politically the centre of the world. And as the great bulk of the population of the earth is north of the tropics, the North American Continent must become the axis upon which the commercial and political world must, for all time to come, move and revolve. In Europe, where civilisation and the arts have reached the highest point, we see the most misery—the few enjoying prodigal luxury, and the masses famishing in want. In China there is a greater amount of human misery. There, human life is purposely destroyed, because the population is so dense that the earth does not yield support for all. Between these two over-peopled points lies the American Continent, with soils and climates adapted to the wants of all portions of the human race, divided by a lofty mountain range into two great parts—the Atlantic and the Pacific slopes, as it were—for the especial accommodation of the Europeans on the one side, and the Asiatics on the other. . . . Mr. W. has sketched briefly the plan which he had laid before Congress for the construction of this great road—a plan which is by this time too well known to need repeating in our columns. He contended that the people could do nothing if he should go forward no more than fifty miles with the road, since even these fifty miles would add immensely to the value of the land upon its borders. In case the work should go on, it would furnish employment to thousands of those who are now in indigence; attract to comfortable homes the squallid population of eastern cities; enhance the value of the public domain immensely; pay into the treasury directly millions of dollars; create a mercantile marine on the Pacific; distribute more equally the population of the globe; unite more firmly the various sections of our union; and harmonise, civilise, and Christianise the world together.—*American Paper*."

## STATISTICS.

**POPULATION OF EUROPEAN CAPITALS.**—The capital of Great Britain has a population estimated at 2,000,000 of souls, exclusive of strangers. The population of Paris now exceeds 1,000,000; the population of Vienna is 330,000 souls; Berlin, 366,000; and St. Petersburg, 476,000.

**CHINESE WORSHIP.**—In China there are 1,560 temples dedicated to Confucius alone. The offerings brought to the shrine during the spring and autumn give rise to the consumption of 17,000 hogs, 2,800 sheep, 2,800 deer, and 27,000 rabbits, besides the use of an equal number of pieces of silk.

**THE COAL FIELDS OF LANCASHIRE.**—It has been calculated that the available coal-beds of Lancashire amount in weight to the enormous sum of 8,400,000,000 tons. The total annual consumption of this coal, it has been estimated, amounts to 3,400,120 tons. Hence it is inferred that the coal-fields of Lancashire, at the present rate of consumption, will last 2,470 years.

**SPECULATION HALF A CENTURY AGO.**—In August, 1792, England was in a ferment, created by a speculation in canals, which were projected, and incredible sums subscribed, chiefly in the midland counties. On the 18th of August, 1792, there appeared in the *Gazette* 19 different notices of intended applications to Parliament respecting internal navigation. The following were current premiums on single shares in those canals for which acts of parliament had been obtained:—Birmingham and Fazeley, £1,170; Stourbridge, £350; Melton, £56; Grand Trunk, £350; Leicester, £156; Worcester, £350.

**IVORY.**—At the quarterly meeting of the Geological and Polytechnic Society of the West Riding of Yorkshire, held in the Guildhall, in Doncaster, Mr. Dalton, of Sheffield, read a paper on "Ivory as an Article of Manufacture," in which he stated, that a few years ago, the value of the annual consumption in Sheffield was about £30,000, and about five hundred persons were employed in working it up for trade. The number of tusks to make up the weight consumed in Sheffield—about 180 tons—was 45,000. According to this, the number of elephants killed every year was 22,500; but supposing that some tusks were cast and some animals died, it might be fairly estimated that 18,000 were killed for the purpose.

**STATISTICS OF THE JEWS.**—An official publication informs us that there are hardly more than from 4,000,000 to 5,000,000 Jews in the whole world; whereas Buddhism numbers 400,000,000 adepts; Brahminism, 200,000,000; Christianity, 230,000,000 to 250,000,000; Mahometanism, from 130,000,000 to 150,000,000; and Fetishism (or pure idolatry), from 80,000,000 to 100,000,000. The 5,000,000 Jews are thus distributed:—There are some 600,000 in Syria and Asiatic Turkey; 250,000 in European Turkey; 600,000 in Morocco and North Africa; 50,000 to 80,000 in Eastern Asia; 100,000 in America; and about 200,000 in Europe—viz., 13,000 in England; 1,594 in Belgium; 850 in Sweden and Norway; 6,000 in Denmark; 70,000 in France; 52,000 in the Low Countries; 1,120,000 in Russia (more than one-fifth of the entire race); 631,000 in Austria and its dependencies; 214,431 in Prussia; 175,000 in the German States; and 4,000 in Italy.

## ANSWERS TO THE PASTIME OF LAST EVENING.

Page 125.

PICTORIAL CHARADE—Thousand.

ENIGMAS.

1. THE MOON.—1. Appears, disappears, re-appears. 2. Influences the human mind.—Lunatics generally affected at the changes.
2. Mat-a-pan (Cape Matapan).
3. Elf-even (Kleven).
4. End-less (Endless).
5. Cap-a-city (Capacity).
6. Pun-ch (Punch).
- 7.—1. From a B or take two, add nothing, (O.)
2. Then X.
3. A-bud in your garden.... Box.
4. At the theatre..... Box.
5. Dressing..... Box.
- 8.—1. A PEN I must say is of very great use;  
To men of all ranks; ay, even to a goose.  
Poor half-starved authors, their value much feel,  
Whether pluck'd from a goose, or made up of hard steel;  
And like horses, they drive them till ready to drop,  
Without knowing how to go on or to stop.  
"To proceed thus," says one, "you'll be no great winner!"  
"Should I stop short," asks scribe, "who'll give me a dinner?  
I every day should get thinner and thinner.  
So drive on I must, as long as I'm able,  
And when I have done I may sit down to table;  
And let my pen rest, as well as myself,  
For helping to furnish my larder and shelf."
9. What pencil ever sketch'd a lass,  
So truly as her looking-glass?
10. "Mur-mur."—Hum-rum,  
Tut-tut again to mur-mur.

A man of wisdom is a sage,

1. A simpleton, a fool.
2. An Octagon, a figure formed by rule.
3. Love is the source of happiness or woe;
4. The negative reversed is not;
5. Nothing will flourish, we find,  
With the best talent to our mind,  
And these initials soon will show,  
The man of worth we wish to know,  
Solon.

# THE LONDON ENIGMA.

Once on a time—no matter when or where—

There lived a seer,  
Who thus of modern Babylon foretold  
The wondrous things its boundary should hold—

- 1 A street whose name should a swiftness be,  
Since either side would yield a princely property;
- 2 Another street, with outlet at its end,  
Whose names may prove to watchful minds a friend,  
Since they'll suggest that those who live too fast,  
Shall wear the chains of poverty at last;
- 3 A place where pious souls may fly to pray;
- 4 Another place where they may rightly stay;
- 5 A street where men may seek to renovate their souls;
- 6 Another street that travels round the poles;
- 7 Another that a hungry man may eat,  
Or tread the staff of life beneath his feet;
- 8 Another that may form a scolding talk  
For those who bear their cups of water mix'd with chalk.
- 9 A place the weary traveller might see when he sees,  
And no wire Cookney sportsman find both game and treat.
- 10 A street which says that Henry did a wondrous deed;
- 11 And one which fired, might make a soldier bleed;
- 12 A place where men with crooked legs may go  
And one who says "Bloomers" ne'er should be allowed to show.
- 13 A place for those who dread the ill of alcohol
- 14 Another where hydropathists should often call.
- 15 Another where a famine ne'er can be
- 16 And one where there's a likelihood a coloured man to see
- 17 A place where King Alfred might have toiled,  
When Cæsar Danes his kingly rule deploiled.
- 18 A street that should belong unto a miller's man;
- 19 And one from which the frightened oft have ran.
- 20 One that may stand upon a bishop's head
- 21 A place where any nun may lie when dead
- 22 One that reminds us of the Hunter's fall,
- 23 When jumping over another dog's and all!
- 24 Places where holy Friars may be sought,
- 25 And one where coffin'd bodies may be brought,
- 26 One where the miller's man should always live;
- 27 One where unto travellers the road will joinings give
- 28 A gate that for another should be changed
- 29 And one where useless things should be arranged
- 30 A place whereto a piece of clay will go  
And one where men will straw abundant throw  
But straw or lay this clay will ne'er make a 'brick,'  
But from the brewing storm will cut his stick.  
And fly to his country to feel the bar  
Which free men give to the atrocities of war
- 31 A lane which seems to a traveller to impede,  
And one that tells him how he may proceed
- 32 A place beneath the sun a perfect bore  
And something like it though not so viewed before
- 33 A place that neath the sun would melt away
- 34 A street where many old men's hopes to stray
- 35 A square that is a quest onable name
- 36 And one reminding us of spinsters' shame
- 37 A sea from whence you may your Christmas puddings make,
- 38 A place whence you your Christmas log may take
- 39 A corner where a poet may be found  
To sing the joys that in his day abound

Thus spoke the Seer! Ye men of London show  
How many of these prophecies ye know  
Have come to pass Quick to your firebrands run,  
Read the Enigma and make known its fun  
Nor give it up until its myths unfold,  
To set sweet smiles upon the lips of young and old

## THE AMOUR.

Mr. First was one of high degree  
So thought he  
He fell in love with the Lady Blank  
With her eyes so bright and form so lank  
She was quite a beauty to his mind  
And had two little pages tripping behind

But the Lady Blank was already wed  
And was sad  
Till her lord had many a jealous shriek  
So he kept her in with his wonderful  
lock  
My second hung laughing by his side,  
With two little chains by which 'twas tied

The lady unto her lover spoke—  
(A capital joke)  
If you can pick the terrible lock  
I'll let you in at my chamber door  
I'll open my door in a twinkling  
And you shall behold my two little  
eyes

Said the nobleman of high degree  
I see—me—see!  
I know none so clever at these little jobs  
As the Yankee mechanic John Hobbs  
John Hobbs  
I'll send for him and he shall do it  
In two little nuts the door to you

At night John Hobbs he went to work  
And with a jerk

He picked back the lock and called to my first  
I set it in the second ward but he—  
With my first with delight he opened the door  
There came from within a satirical roar  
For the first and my whole stood face to face  
A queer looking pair in a queer looking place

## THE REMARKABLE ADVENTURES OF BARON BRAG—AN UNNATURAL HISTORY FOUNDED UPON NATURAL HISTORY.

(Given up by Us, because the Baron has gone down)

Confident in his invulnerability, the Baron continues his practical jokes with the lion!

Which the lion feeling to be no joke at all, becomes wild with rage, and opens his mouth to its utmost capacity!

The lion seizes a favourable opportunity of repaying his foe, and the beholder now witnesses—  
THE END OF THE BARON!

MONDAY.—All gentlemen who, like the Baron, may be disposed to brag, are hereby warned that although for a time their vain pretences may go down with the English lion, they will themselves eventually go down at last.

## OUR CORNER CUPBOARD!

**CURIOSITY**—A feather from the bed of the Mississippi!

**WHAT flower** most resembles a bull's mouth? A cowslip.

**THE** labouring man in the present age, if he does but read, has more helps to wisdom than Solomon had.

**MAN** wastes his mornings in anticipating his afternoons, and wastes his afternoons in regretting his mornings.

**SOMEBODY** asks,—What is more sole-harrowing than pegs in one's boots which tear one's stockings?

**THE** religion of Christ is peace and good-will; the religion of Christendom is war and ill-will.

**GENIUS** lights its own fire, but it is constantly collecting materials to keep alive the flame.

**IF** some men died, and others did not, death would indeed be a most mortifying evil.—*Brugere*

**WE** hope to grow old, and yet we fear old age—that is, we are willing to live, and afraid to die.—*Brugere*.

**A TAILOR** in Broadway has a bill in his window like this "Wanted, several thin coat-makers." This is a fine chance for spare tailors.

### DELAY

'Full many a day for ever is lost

By delaying its work till to-morrow,

The minutes of cloth have often cost

Long years of bootless sorrow

**THE** best bank ever known is a bank of earth; it never refuses to discount to honest labour, and the best share is the plough share, on which dividends are always liberal.

**IF** you would relish your food heartily labour to obtain it. If you would enjoy your raiment thoroughly, pay for it before you put it on. If you would sleep soundly, take a clear conscience to bed with you.

**IF** a man has a right to be proud of anything it is of a good action done as it ought to be, without any base interest lurking at the bottom of it.—*Storrs*

**DURING** the war, an Irish peasant, who was posted with a musket on duty, and had wandered a little out of his position, was accosted by an officer with "What are you here for?" "Faith, your honour," said Pat with his accustomed grin of good humour, "they tell me I'm here for a century."

**DEAL** gently with those who stray. Draw back by love and persuasion. A kiss is worth a thousand kicks. A kind word is more valuable to the lost than a mine of gold. Think of this and be on your guard, ye who would chase to the grave an erring brother!

**"WHAT'S** your name?" said an officer to a young coloured lad who was on board the receiving ship—"What's your name?" "Wallaboght Bay sir." "Where were you born?" "Wasn't I born at all sir." "Wasn't I born at all?" "No sir, was washed ashore in a storm."

**THE** length of the shelves in the new portion of the British Museum is eight miles—those in the library of Munich, fifteen miles—and those in the King's Library in Paris, twenty miles. The first contains 269,000 volumes, the second, 500,000; and the third, 650,000.

Our remedies oft in ourselves do lie,

Which we ascribe to heaven—the fated sky

Gives us free scope, only doth backward pull

Our slow designs where we ourselves are dull.—*Shakespeare*

**A PERSON** was holding forth, and gratifying his audience with his notions of liberty and equality. "Is not one man as good as another?" he exclaimed, coming to a point, and "pausing for a reply as the saying is—" "Ay, coorse he is," shouted an excited Irishman, "and bether!"

**POSITIVES AND COMPARATIVES**—The scorn produces the oak, but the earth, in some portions of its soil, furnishes *oaks*.—A person secretly watching the movements of an enemy is a *spy*, but the little insect which constructs cobwebs is a *spider*. The most expressive language of love is a *spig*, but the expressive juice of apples is *cider*.

**POPE, 4TH EDITION**—The *Richmond Whig* says, it will publish original poetry in the *Review*. We have received a few choice specimens of the *Review*, which we should be pleased to dispose of to the *Review*. And if the supply should not be equal to the demand, we can furnish any quantity, to make up the deficiency.

**THE** shopkeeper in the High street of Auld Scotch (Edinburgh), was exhibiting one day of a book which a very erudite doctor had published. "It's a bad one," said he. "How?" said his friend. "I thought Dr. Findlay had been a worthy, good man." "It's the worst book I ken," said the shopkeeper, "it's ower big for a pennyworth o' stuff, and it's no big enough for three bawbees' worth!"

**A WANKER** has just invented a method to catch rats. "He says," "Lodge your bed in a room much infested by these animals, and on retiring, put out a light. Then strow over your pillow some strong-smelling cheese, three or four red herrings, some barley meal or new malt, and a sprinkling of dried codfish. Keep awake till you find the rats at work, then make a grab."

## OUR MEMORANDUM BOOK!

*Rules of Living—Adapted from the German of A. Von Platen.*

(Continued from page 126)

26 Be prepared for the worst. Never let your sorrows get the mastery over you; conceal them always. Those things, says La Bruyère, which are most wished for, do not happen, or if they happen, it is not at the time and in the circumstances when they would have given the greatest pleasure.

27 Be always frank and true, and spurn every sort of affectation and disguise. Have the courage to confess your ignorance and awkwardness. Confide in your faults and follies to but few.

28 Observe, hear, and be silent. Judge little, imagine much.

29 Be not deterred by unfavourable appearances, provided your intentions are good. Be not too proud to dissipate a prejudice that happens to attach to you, whenever it lies in your power. If it does not, entrench yourself within your virtue, as Horace says.

30 When low-spirited, remain rather alone. In company be as cheerful as possible. It is incredible to what an extent a gloomy and surly deportment can disfigure—how prepossessing cheerfulness is.

31 When you are in ill humour, ask yourself seriously. What is the cause of my vexation? May it not be dispelled? What shall I do? In most cases an earnest effort will be successful.

32 Be punctual. Admit no disorder in your effects and papers. Look over the latter from time to time, destroying those that are useless.

33 Appear rather too liberal than too economical, but never lavish. Economize in little things. Learn self-denial.

34 In a strait betwixt truth and falsehood, decide unhesitatingly for the truth. Candour is always essential.

35 Be strictly on your guard against the risings of anger. Never vent your displeasure against those who cannot or dare not retort.

36 Restrain your self will. An opportunity will not be wanting for exhibiting your firmness. Banish obstinacy, however.

37 Let your repentance be a lively will a firm resolution. Complaints and mourning over past errors avail nothing, without a determination to amend them.

38 When you wake in the morning, think over the day. Endeavour to look at the bright side, though unpleasant business lies before you.

39 Keep a journal. The utility of it is manifold, as is also the pleasure. Make it, however, a point of duty to be rigidly candid. Let it not be to you merely a remembrancer but a means of self knowledge.

40 Preserve purity of mind under all circumstances. Guard against the follies of love. Allow due importance to first impressions, but do not let yourself be carried away by them. Study physiognomy in different persons, but not in those for whom you begin to feel affection, for in that case it will assuredly mislead you. Shun all self-deception. Accustom yourself to esteem only inward and acknowledge worth, and to regard exterior rather as a snare for your fier judgment. Do not delude yourself by fine-sounding words by self-created idols.

41 It is particularly necessary that you should be master of your thoughts. Difficult as it may be not to indulge one's darling ideas, be determined nevertheless to strive against them. Should they intrude themselves during your walks, take a book with you and read with attention. But read something that will change the tone of your mind, not Pastor Fido, which would only make it worse.

42 Attend scrupulously to the duties which your situation imposes on you.

43 Take a benevolent interest in all that concerns humanity and its progress as well as the welfare of individuals. Be sensible to the claims of all.

44 Let the judgment of the multitude make you reflect, but never despair.

45 Do not imagine that every person who lays claim to your sympathy at the first moment, is made to be your friend, for experience contradicts it.

46 Be the more confiding with your known friends. Do everything for them that lies in your power. For Pope was right in saying, that when we suspect what others feel and think, our joys are mean and false. Let no threats, no fate, induce you to forsake your friends.

47 Trust them, for without confidence never do two human beings get near to each other. On the other hand keep sacred not only every secret confided in you, but also every word not proper for all to hear.

48 Never read other people's papers, letters, or journals, that happen to be in your way.

49 See your friends neither too often nor too seldom.

50 Promise little, particularly in public life, but keep your promises in spite of all hindrances. Do not place reliance in the promises of those whom you do not well know.

51 Better trust too much than mistrust. Believe not with La Rochefoucault and his followers, that all men and all their words and actions are regulated simply by their interest, if indeed you deem yourself capable of a disinterested action.

52 Epistolary correspondence is pleasant as it is profitable, but do not extend it so far as to make it burdensome.

53 Be more polite to inferiors than superiors.

## WOMAN'S HEART.

What is woman's heart? A thing  
Whose all the deepest feelings spring;  
A heart, whose tender chords reply  
Unto the touch in harmony  
A world, whose fairy scenes are fraught  
With all the colour of dreams of thought;  
A heart that still will blindly move  
Upon the treacherous seas of love

What is its love? A ceaseless strife,  
A changeless stir, and restless dream;  
A smiling fever that will not die—  
A mystery and a mystery—  
Its storm as light as April showers,  
Its joy as bright as April flowers,  
Its hope as sweet as summer air,  
And dark as winter's deepest despair

What are its hopes? Rainbows that throw  
A radiant light where'er they go,  
Smiling when heaven is overcast,  
Yet melting into storms at last  
Bright clouds, that come with siren words,  
Beguiling it, like summer birds,  
That stay while nature pines their blooms,  
But flee away when winter comes

What is its hate? A passing frown,  
A single word mid blossoms sown,  
That cannot flourish there for long.  
An harsh note in an angel's song;  
A summer cloud, that all the while  
Is laden with a summer's smile,  
A passion that scarce hath a hint  
To lead the game of woman's heart.

And what is its despair? A deep  
Fever that leaves no tears to weep,  
A web that works its silent power,  
As easter-worms beneath a flower;  
A viper that shows no sign of life,  
Until the heart has preyed on life;  
A dark, cold, and a cold of light  
And a cold of light in darkest night

Then what is woman's heart? A thing  
Whose all the deepest feelings spring,  
A heart, whose tender chords reply  
Unto the touch in harmony  
A world, whose fairy scenes are fraught  
With all the colour of dreams of thought;  
A heart that still will blindly move  
Upon the treacherous seas of love

M A B

## THE FOUR LACE DEALERS.

M. Brisson, my employer, was an extensive lace merchant of Lyons. His establishment was the largest of its kind in France. His correspondents were scattered all over the Continent, but his principal agents were at Paris, which was at that time in a state of agitation and terror, consequent upon that daring act of the Convention—the decapitation, by the axe of the guillotine, of “the Austrian woman,” that is to say, Marie Antoinette, the Queen of France.

M. Brisson was in a state of feverish excitement. His large establishment presented the melancholy picture of a host of workmen and machinery, and an empty treasury. Worse than this, bills were rapidly falling due, and unless he received remittances from his Paris agents, who were very heavily in his debt, there was nothing to save him from that ultimatum, whose bare name is so appalling to the ear and mind of all honest tradesmen—bankruptcy.

In this condition of his affairs, M. Brisson came to me and said—

“François, you are my confidential clerk, and consequently understand my position without my telling it to you.”

“Yes, Monsieur.”

“It is in your power, François, my friend, to save me. Will you do it?”

“How could you ask such a question, Monsieur, when you know I am devoted to you? Explain to me how I can assist you, or take you out of this extremity, and you may rely upon me.”

“I understand you, my good François; for your nature is noble, your mind clear, your hand firm, and your heart brave. Therefore it is that I have selected you, in this perilous state of my affairs, to rescue me from annihilation—to save me from ruin. You keep the books, and consequently understand the delicacy of my position; you know that I have a large number of heavy bills to pay within the next thirty days, and that to pay them I have scarcely a shilling on hand or in expectation; you know that my Paris correspondents, who are deeply in my debt, and whom I have given on repeatedly without receiving any replies, are all gone; you know that all my hopes, my credit, my life, my reputation, hang on the Paris agents, and that, unless I hear from them speedily, I am ruined—lost.”

“Yes, Monsieur, I know all that.”

“And therefore,” said I, seeing that he paused, “if you will permit me, I will go to Paris, see those men, obtain what I can from them, then return in the morning and deliver it to you.”

“That is what I should, but had not the heart to ask of you; for it is at the risk of your life and health now. The capital is mad with blood; terror

is everywhere; the streets are guarded by Robespierre's soldiers, and the walls are covered with the names of the guillotined. To enter the place is comparatively easy; to emerge is impossible.”

“But you must go,” said he, half of whose face on the other side was pale and shivering; “for every man is either an assassin or a victim.”

“My dear Monsieur.”

“If you enter Paris, spies will hang upon your heels; if you engage them, would at once denounce you, and if they off you, till they had seen your head upon the block, and the guillotine neck.”

“I know it; and yet to save you—yes, you who have ever been my factor and a father, I will incur this peril, which in my eyes is not the danger of your bankruptcy—your ruin!”

M. Brisson's eyes were humid; his whole frame trembled with emotion. He threw his arms around me.

“I have an only child,” he exclaimed, “my daughter, my François, know that your heart has long worshipped her in secret. Return to her, and, whether you succeed or fail, she is yours!”

I could only return the pressure of his hand.

Two hours afterward, a passport was in my hand, and myself on my way to Paris.

In two days I was in the metropolis. I had ridden so hard that my horse dying upon the road, within a mile or two of the walls, I had my passport to an officer at the gate, and was at once admitted.

Paris presented a frightful picture. “Everybody was in the streets, presented the appearance of a gaily day. Men and women mingled indiscriminately together in crowds, dressed in the most brilliant costumes. Here was a group, chanting a hymn of rejoicing at the news of a victory of the army; there a crowd, listening to an orator who was extolling the virtues of Robespierre, “the incorruptible,” and denouncing the crimes of his enemies; at another point was a concourse following a cart, which was conveying a number of victims to the Place de la Revolution, where, on the scaffold, the drop, and the axe—the guillotine; look where you would, noisy, heterogeneous mass met your eye, wild with excitement, and filled with blasphemy and meaningless joy.

After some difficulty I procured lodgings, which I at once took possession of, as there was no telling, in the disordered state of society, how long I should be compelled to stay in the city, or what difficulties I should have to encounter and overcome ere I could return to Lyons.

I opened a private memorandum book that I had brought with me, and found the following—

M. Roignol, Rue Vivienne...	£2,000
M. Berthier, Rue de l'Étang...	3,000
M. Tonnerre, Rue St. Denis...	2,000
M. Malhouet, Rue Rachelieu...	2,000

£15,000

So that my first business was to call on M. Roignol, who was indebted to my employer in the sum of £2,000.

I proceeded to the Rue Vivienne, and after some difficulty, as I was a stranger in the city—discovered the establishment of the lace dealer. The windows were closed, the doors locked, and the shop appeared abandoned.

I was alarmed if Roignol were lost, or dead—if he were, I was not sufficient to pay my employer's claim, there was nothing to save me from bankruptcy; for it required every pound of the above, and some thousand pounds to enable him to meet his obligations.

I at once knocked at a side-door leading to the upper stories, and presented himself.

“Monsieur,” said I to him, “why is the establishment of M. Roignol, the lace dealer, closed?”

The man looked at me in surprise.  
“Monsieur is a stranger here,” he said, slowly, “but he is a man of respect.”

“You have guessed correctly.”

“Ah! then you had better apply to the prefect of police.”

“M. Roignol has been arrested then?”

“Yes, Monsieur.”

“For what?”

“Monsieur had better ask that question of the prefect of police.

I was more and more alarmed.

“Another word,” said I, seeing that the porter was about to retire.

“With pleasure, Monsieur.”

“When was M. Roignol arrested?”

“Yesterday.”

“Thank you.”

“Monsieur is very welcome,” replied the porter, as he closed the door.

I then proceeded out to me the direction of the prefect of police.

While passing down the Rue Vivienne, I noticed a gentleman

distance a-head, whose slight, noiseless step, and quiet, thoughtful appearance could not fail to command attention. His figure was small, his face pale, almost to lividness, his features sharp, and his keen, restless eyes of a deep, glittering blue. He was dressed in a dark suit, and wore a round hat with a broad rim, which was thrown so far back on his head that it exposed a small forehead projecting well forward over his temples. The expression of his face was that of a man born at byrigs and meditations. A sinuous line about his small, bloodless lips, warned the spectator that he was in the presence of a man of great intellectual power.

While examining this strange face, the sudden and quick trampling of hoofs upon the pavement caused me to look around, and I beheld a horse who had evidently thrown his rider, dashing wildly down the street, and, to my great horror, making directly toward the personage I have just described.

"Monsieur," I cried, "look out—you will be killed!"

The stranger raised his thoughtful eyes, and evidently still under the influence of his reverie, fixed them half consciously upon me.

Seeing that he was not aware of his danger, I sprang forward, seized him around the waist, and at one bound was in the middle of the highway.

The horse, at almost the same moment, dashed in his wild flight right over the spot, and, speeding down the street, was out of sight in an instant.

A moment later, and the stranger would have been knocked down, crushed, and in all probability slain by the affrighted animal.

The shock I had given him recalled the gentleman to self-possession, and wheeling round and catching a momentary glimpse of the flying steed, he saw in an instant the peril he had so fortunately escaped. As his mind took in the extent of the danger, he turned his eyes, humid with emotion, upon me, and exclaimed:—

"Monsieur, you have saved me! How can I repay you?"

"Name it not," I answered, desirous of avoiding thanks for so trifling a service. "I only performed a duty that I owed to humanity. It is sufficient for me that you are safe."

"Nay, Monsieur," said the stranger, "it is a life I owe you. Ha! what do I say—a life—I owe you ten, twenty, ay, a hundred lives, each one of which is priceless, because it is a life—that is to say, a soul, formed by God's own hands, and therefore more priceless than all the riches of the world. And it is a hundred of such jewels that I owe you from this hour, for having rescued me from the wretched and ignoble death to which you mid animal was so near consigning me!"

I looked at him in astonishment. "Who is this man?" thought I.

"In the hour of danger—in the hour of your greatest peril," continued the stranger, taking my hand and pressing it, "call on me, and I will prove to you—whatever the world may say to the contrary—that this breast contains a heart overflowing with gratitude!"

So saying, he lifted his hat and made me a profound bow; then turning on his heel, he resumed his quiet, noiseless step, bent his head as before in thought, and so passed on till he reached the next corner, around which he disappeared.

I looked after him till he had vanished, and then resumed my walk, wondering who this man could be whose life I had, in all probability, been the humble instrument of saving.

I reached in due time the office of the prefect of police, and was shown at once into the private room of that functionary, who sat writing at a small desk before a window, shaded by a crimson curtain, through which the sunlight penetrated, casting a soft, vermillion tint upon every object within the chamber.

"Your wish?" said the prefect—a tall, stout man of about fifty years, turning a pair of fierce eyes and shaggy brows full upon me.

"I desire, Monsieur," I replied, "to learn the whereabouts of a certain M. Rosignol."

"A lace merchant?"

"Yes, Monsieur."

"He is in the dungeons of the Conciergerie."

"For what crime, Monsieur?"

"Treason."

"Can I see him, Monsieur?"

"Yes."

"When?"

"To-morrow."

"At what hour?"

"Ten, A.M. At that hour he will, with his compeers in treason, leave the Conciergerie for the scaffold!"

At this brutal answer my heart sunk, and I was nigh falling. With an effort, however, I mastered my feelings, and left the prefect. Once in the open air, that confidence which had ever been my best and truest friend returned to me, and enabled me to think. The result of my reflections was, that it was necessary for me to see M. Rosignol at all hazards. To do this, it was necessary to get an order from one of the members of the Revolutionary Tribunal. I, therefore, resolved to wait upon one whose name and fame had spread all over France, and who was noted for his sympathy for the masses—Danton. I inquired his address, and posted at once to his house. The porter declined allowing me admittance; but a piece of gold at once removed his surliness, and served as a passport to the chamber of the patriot.

At a round table covered with books, papers, letters, and writing materials, I beheld a tall, stout man, with a bold, laughing eye, a pleasant countenance, and large light whiskers. I had heard his appearance described a thousand times, and at once recognised the bold and unscrupulous Danton.

"Who are you?" said he, in a rough voice; "and what do you want with me?"

"I am a Lyonese," I replied, "and have come to the great patriot of whom I have heard so much, and who is so popular in my own city, to ask a favour."

The flattery pleased him, and he was in a moment so polite. "So, they speak of me in Lyons, do they?" he said, with a smile of satisfied pride. "And how do they call me?"

"They speak of you as Danton, the Man of the People."

"Ha! they call me that!" And a smile of triumph gleamed in his large blue eyes. "The Man of the People! They but do me justice. I am of and for the people—that is to say, the many, the masses, and not the few. My heart, my sympathies, my feelings, are with the many, who suffer, and opposed to the few, who oppress. I am with the people, and against the aristocrats, who can exist only by riding over the heads of the people. The Lyonese but do me justice. Posterity also will do me justice, and France will do me justice, whatever they may say of me to-day; and future ages, in treating of my actions, will say with the Lyonese, 'He was, in truth, the Man of the People!' But what can I do for you? What is the favour you have come to ask of me?" he added, with an encouraging smile.

"I have a friend in the Conciergerie, whom it is a desire of my heart to see."

"You are young," he said, throwing a smiling glance at me. "This friend? is't a lady?"

"No, Monsieur, a gentleman."

"Ah!" he observed, coldly, seeing that he had overshot his mark. "His name?"

"M. Rosignol."

"A lace dealer?"

"Yes, Monsieur."

The pleasant expression of his face passed away, and was replaced by a disagreeable frown at this answer.

"You should beware of such acquaintances," he said, somewhat sternly. "These lace dealers are aristocrats. Their very business depends upon the aristocracy for an existence!"

This staggered me. So sweeping an assertion, if it were generally entertained by the Revolutionary Tribunal, boded me no good. If his business as a lace merchant was the cause of M. Rosignol's arrest, why, then, M. Berthier, M. Tondère, and M. Malhouet, were doubtless all traitors, and in the dungeons of the Conciergerie as well!

"You do not reply?" said Danton, eyeing me menacingly.

"I saw in a moment the necessity of avoiding all argument with this vain, but powerful man. It was my policy to appeal to his vanity, which was so conspicuously great, and not to his reason, which was as correspondingly small."

"It would not be becoming, Monsieur, for a rude, untutored man like me to attempt to dispute a point with a mind so keen, subtle, and enlarged in its views as yours."

"Well, well," he cried, with a condescending smile, and evidently pleased with the flattery, "we will say no more about it. It is very evident you are no aristocrat, at all events."

"Who—I, Monsieur! Oh, I am, like you, of the people. The only difference between us is, that God made me a common man, and you a great one!"

"Enough!" he said, with an affectation of majesty and magnanimity; "you shall not go back to Lyons without having seen your friend. Danton will, at all times, stretch a point to serve one of the people."

As he spoke, he drew towards him a slip of paper, on which he hurriedly traced a few words, and then, with an assumed air of condescension, handed it to me.

It was an order to the governor of the Conciergerie, authorising him to allow me an interview with M. Rosignol.

As I stammered my thanks, Danton waved his hand for me to depart, and leaving him, I hurried at once to the prison, and was instantly admitted.

The order of Danton was enough to insure me the highest attention and respect, and a turnkey at once conducted me to a low dungeon, in which were seven persons. As the jailer opened the door, these men turned their eyes upon him with an eager, inquiring look.

The turnkey, familiar with such scenes, at once understood what they would ask him. He shook his head, saying—

"No, messieurs, I bring you not a reprieve—I bring you no intelligence.—I bring nothing but a visitor: a visitor to M. Rosignol."

The prisoners turned away their heads with a groan, and all but one dropped their heads on their bosoms in despair. That one I felt satisfied was M. Rosignol.

The turnkey now left the dungeon, saying:—

"When Monsieur wishes to retire, let him knock thrice, and I will open the door."

The next moment the door closed, the lock was turned, and I was alone with the prisoners.

A lamp, suspended by three chains, hung from the ceiling, and threw a dim light through the dungeon.

"Which is M. Rosignol?" I asked, somewhat timidly.

The man whom I had taken for him answered:—

"You are looking at him, Monsieur."

"It is well," I answered. "My name is François Dumouriez; I am confidential clerk to M. Brissot, of Lyons, in whose name I now speak to you." At mention of M. Brissot's name, three others of the prisoners raised their heads, and threw their eyes upon me.

"Say on, Monsieur," said M. Rosignol, in a tone of subdued grief. "I am listening."

"Pardon me, Monsieur," said I, "but before I speak further, I would ask a question."

"Ask it, Monsieur."

"Are you acquainted with M. Berthier, of the Rue de l'Étang?"

"Yes."

"With M. Tonnèrre, of the Rue St. Denis?"

"Yes."

"And with M. Malhouet, of the Rue Richelieu?"

"And with him."

At mention of these names, the three prisoners to whom I have alluded pricked up their ears, and looked at one another in surprise.

"And can you tell me, M. Rosignol, if those three gentlemen are, like you, in the Conciergerie?"

"They are!"

"I feared it!" I exclaimed. "And are they here?"

"They are," answered M. Rosignol. "Messieurs," he added, turning to the three prisoners, "permit me to introduce you to Monsieur Dumourier, confidential clerk to our correspondent at Lyons, M. Brissot."

I was thunderstruck.

The three gentlemen bowed to me with that grace and politeness which never desert Frenchmen under any circumstances.

"Gentlemen," said I, as I recovered my self-possession, "I will not address you individually. What I have to say had better, I think, be said to you generally, as all of you are interested."

They bowed, and I went on.

"Gentlemen, before I begin, permit me to make my apologies for speaking to you on such matters here, and in this unfortunate position. Blame not me, but the necessity which brings me here."

"Say on, Monsieur!" said they, in that peculiar tone which is never heard save from the lips of those whose ill-starred destinies have sentenced them to the lowest depths of human suffering.

"Gentlemen," I began, "when M. Brissot requested me to come to Paris and learn the cause of your silence, it was not here, it was not in the Conciergerie that he expected me to see—that I expected to meet you!"

The four lace dealers each gave a low groan, and cast their eyes, moist with mental agony, upon the floor.

"Gentlemen," said I, struggling to repress my feelings at their frightful position, "will you pardon me for, in obedience to the duty I owe my employer, intruding my presence on your sorrows here?"

They raised their eyes, and by their looks I saw that I was forgiven.

"Gentlemen," I continued, "let me tell you in one word the cause of my presence in Paris. M. Brissot is on the eve of bankruptcy; and unless he can get some money from you, who are heavily on his books, he is lost. Gentlemen, in one word, can you do anything to save him?"

"Monsieur," said M. Rosignol, "I am in debt to the worthy M. Brissot, whom I sincerely love and respect, in the sum of two thousand pounds. Were I free, I could and would cheerfully pay it. But I am a prisoner in the Conciergerie, and condemned to lose my head at ten o'clock to-morrow!"

And he turned his head to the wall, murmuring, "My poor wife—my poor children—who will watch over ye now!"

I was like one who feels the ground giving way from under him.

"Monsieur," said M. Berthier, "I honestly owe the worthy man you represent three thousand pounds. Were I free, I could pay it in an hour. But I am a condemned man, and to-morrow, at ten o'clock, I am to die!"

And he turned his face to the wall, murmuring—"My wife—my poor, poor wife!"

I felt like a wretch on a wreck at sea, who sees, without the power of resistance, the waves wrenching his only support in pieces.

"Monsieur," said M. Tonnèrre, with an air of dignity, "I compassionate the troubles in which my friend and correspondent, M. Brissot, finds himself. I regret it the more, inasmuch as the large dealings between us leave me heavily in his debt. I owe him the sum of nine thousand pounds, which, large as it is, I could easily pay were I but one hour at liberty. But I am, as you see, a chained prisoner in the Conciergerie, and condemned to lose my head at the hour of ten to-morrow!"

And he turned away, exclaiming in accents of deep grief—"Oh, Emily—my only, my darling one—could I but see thee once more ere I die!"

As he concluded, I felt as if my blood had ceased to flow—as if my heart had ceased to beat.

"Monsieur," said Mr. Malhouet, "like my friends here—like every captive in this cell—I am a lost man, and doomed to lose my head at ten to-morrow. I am indebted to your worthy employer in the sum of three thousand pounds. Were I free, I could discharge the debt. I sympathize, like an honest tradesman, with M. Brissot in his troubles, and if at liberty would at once do my share, as a correspondent and friend, toward relieving him. But I am chained, imprisoned, helpless!"

And, like the others, he turned his face to the wall, murmuring—"My mother—my mother—who will preserve who will console thee, when I am gone!"

I could make no reply. The terrible intelligence they had given me—the frightful bearing it had on the position of my unfortunate benefactor and employer, had operated on me like a heavy blow. I felt confused, crushed, annihilated.

A messenger, to the door, gave the required signal, and, a few moments afterward was in the street, reeling like a drunkard.

I staggered to a coffee-house, called for a glass of brandy, drank it like so much water, and then, feeling still stupefied, hurried forth more like a lunatic than a sane man.

Men, women, and children stared at me as I passed by; but I cared neither for their smiles nor their jeers, but strode on, bold, savage, and defiant.

Suddenly, I found my progress arrested by two long pieces of steel, crossed against my breast. I looked up, and beheld two *gens d'armes*, with bayonets of their muskets pointed at me.

"Where is Monsieur going?" they demanded.

I made no reply, but gazed at them like one dreaming. I fell back a step or two from their guns, and found myself before the entrance of a large building.

"What place is this?" I asked of one of the *gens d'armes*.

"The Hotel de Ville," was the reply.

"Stand out of the way," he added, pushing me off with his bayonet; "make room for the Incorruptible!"

As the soldier spoke, there was a rattling of wheels upon the pavement, and a few moments afterward, a carriage drew up before the main entrance of the Hotel de Ville.

A short, slender gentleman, dressed in a suit of plain black, stepped from it, and was passing forward into the palace, when, as my eyes fell on him, all the blood in my body seemed mounting like hot lava to my head. In an instant every attribute of my nature, every sense of my intellect was alive. In the Incorruptible I had recognised the gentleman whose life I had saved in the morning!

An idea now flashed through my brain, and with it all my self-possession instantly returned.

"Who is that gentleman?" I asked of one standing near me.

"The Incorruptible, Maximilien Robespierre!" was the reply.

"Thank you!" I replied. "And can one see him? Is he visible to strangers?"

"Of course," answered the man, shrugging his shoulders at my ignorance. "The people have the right to visit him at any hour. And why should they not? Though the Dictator of France, he is nothing more than the people's steward. He says so himself."

"Thank you!" I repeated. And breaking from the crowd, I hurried to my lodgings, and penned the following note:—

"M. ROBESPIERRE.—Fortunately for France, I was this morning the humble instrument of preserving your valuable life. Your noble nature prompted you to say, in consideration of that service, that you owed me a hundred souls in return. I therefore now ask of your gratitude not a hundred, but four lives, who are as precious to me as my own existence. The names of the four men whose lives I have the honour to ask at your hands are M. Rosignol, of the Rue Vivienne; M. Berthier, of the Rue de l'Étang; M. Tonnèrre, of the Rue St. Denis; and M. Malhouet, of the Rue Richelieu. These men are in cell No. 28 of the Conciergerie, and unless previously set at liberty, will perish at ten o'clock to-morrow. They are charged with being aristocrats. I will answer for them that the charge is without the slightest foundation. I ask their lives of you, for the one I saved to France this morning. FRANCIS DUMOURIER."

This missive I folded and sealed, and then it took to the Hotel de Ville. Seeing a letter in my hand, and therefore taking me for one of the countless spies of the Revolutionary Tribunal, the guards permitted me to pass, and, following the stream that preceded me, I soon found myself in the vast reception hall. It was filled with a motley crowd, and to reach Robespierre, who was sitting at a round table with a number of his colleagues, it was necessary to work my way gradually along the line of spectators facing the slight railing which divided the Tribunal from the auditors. This was in due time accomplished, and I had now to bide my time till the Dictator's eyes should, by some fortunate chance, meet mine.

I had not long to wait; my uplifted hand, holding the letter, attracted the attention of the President of the Revolutionary Tribunal, and his glance, falling from the letter to the hand, and from that to the face of the person owning it, settled at length on me, and in an instant he was on his feet.

"Approach!" he said.

The crowd around me at once gave way, and an officer conducted me to the Dictator.

"Gentlemen," said he, in a loud voice, taking me by the hand, and turning to his colleagues, "permit me to introduce to you the hero of whom I have already spoken—the instrument, under God, of saving my poor life!"

The members rose and crowded around me, and at the same instant the vast crowd in the hall thundered forth—

"Gratitude to the preserver of our Dictator!"

And for a few moments the hall rang with a din so deafening that it almost bewildered me.

"You have a petition," said Robespierre, waving his hand to command silence, and then resuming his seat; "deliver it."

I modestly handed him the letter, and then stepped back a step or two, to watch the manner of its reception.

The Dictator perused it calmly, and then silently passed it over to a colleague, who at a sign from the former, read it aloud.

I could scarcely breathe during its recital, for on its acceptance depended all my hopes.

"What say you, gentlemen," said the Dictator, "has M. Dumourier sufficient claims on us to grant him the lives of those four men?"

"Yes—yes—yes!" resounded from all sides. Not a voice was in the negative.

"My heart was in my throat with joy. The members of the Tribunal, the chairs, the tables, the spectators, everything danced before me."

"St. Just," said the Dictator, turning to one near him, "write out the order of liberation."

I could scarcely see; everything around me began to grow dim.  
 "Here," said the Dictator, putting the paper, which he had just signed, into my hand, "go, and make yourself and four friends happy. France grants your petition and their deliverance. As for yourself, remember that while he lives, you have claims of an enduring character upon Robespierre!"  
 How I got away from the Hotel de Ville, I know not.

I hurried to the Conciergerie, presented the order, and shortly afterward left the prison with the four lace merchants. I shall not attempt to describe their gratitude, nor my happiness. Enough that they paid me their individual amounts in full before night fell.

I quitted Paris early the next morning, and two days afterward entered the establishment of my employer at Lyons, whom I made happy with the gold which was to save him from bankruptcy.

M. Brissot could scarcely control his emotion at the sight of the money. He heard the details of my absence with varied feelings; then, taking me by the hand, led me to his house, and there, raising the hand of his daughter Pauline, silently placed it in mine.

I was happy!

## FRANK LUDLOW.

A TALE FOR OUR YOUNG COMPANIONS. BY MRS. SIGOURNEY.

"It is time Frank and Edward were at home," said Mrs. Ludlow. So she stirred and replenished the fire, for it was a cold winter's evening.

"Mother, you gave them liberty to stay and play after school," said little Eliza.

"Yes, my daughter, but the time is expired. I wish my children to come home at the appointed time, as well as to obey me in all other things. The stars are already shining, and they are not allowed to stay out so late."

"Dear mother, I think I hear their voices now." Little Eliza climbed into a chair and drawing aside the window-curtain, said joyfully, "Oh yes, they are just coming up to the door."

Mrs. Ludlow told her to go to the kitchen, and see that the bread was toasted nice and warm for their bowls of milk, which had been some time ready.

Frank and Edward Ludlow were fine boys, of eleven and nine years old. They returned in high spirits from their sport on the frozen pond. They hung up their skates, and then hastened to kiss their mother.

"We have stayed longer at our play than we ought, my dear mother," said Edward.

"You are nearly an hour beyond the time," said Mrs. Ludlow.

"Edward reminded me twice," said Frank, "that we ought to go home. But oh, it was such excellent skating, that I could not help going round the pond a few times more. We left all the boys there when we came away. The next time we will try to be as true as the town-clock. And it is not Edward's fault now, mother."

"My sons, I always expect you to leave your sports at the time that I appoint. I know that you do not intend to disobey, or to give me anxiety. But you must take pains to be punctual. When you become men, it will be of great importance that you observe your engagements. Unless you perform what is expected of you, at the proper time, people will cease to have confidence in you."

The boys promised to be punctual and obedient, and their mother assured them that they were not often forgetful of these important duties.

Eliza came in with the bread nicely toasted, for their supper.

"What a good little one, to be thinking of her brothers when they are away. Come, sweet sister, sit between us."

Eliza felt very happy when her brothers each gave her a kiss, and she looked up in their faces, with a sweet smile.

The evening meal was a pleasant one. The mother and her children talked cheerfully together. Each had some little agreeable circumstance to relate, and they felt how happy it is for a family to live in love.

After supper, books and maps were laid on the table, and Mrs. Ludlow said:

"Come, boys, you go to school every day, and your sister does not. It is but fair that you should teach her something. First examine her in the lessons she has learned with me, and then you may add some gift of knowledge from your own store."

So Frank looked over her geography, and asked her a few questions on the map; and Edward explained to her a little arithmetic, and told a story from the history of England, with which she was much pleased. Soon, she grew sleepy, and kissing her brothers, wished them an affectionate good-night. Her mother went with her, to see her laid comfortably in bed, and to hear her repeat her evening hymns, and thank her Father in heaven for his care of her through the day.

When Mrs. Ludlow returned to the parlour, she found her sons busily employed in studying their lessons for the following day. She sat down beside them with her work, and when they now and then looked up from their books, they saw that their diligence was rewarded by her approving eye.

When they had completed their studies, they replaced the books which they had used, in the book-case, and drew their chairs nearer to the fire. The kind mother joined them, with a basket of fruit, and while they partook of it, they had the following conversation.

Mrs. Ludlow.—"I should like to hear, my dear boys, more of what you have learned to-day."

Frank.—"I have been much pleased with a book that I borrowed from one of the boys. Indeed, I have hardly thought of anything else. I must

confess that I put it inside of my geography, and read it while the master thought I was studying."

Mrs. Ludlow.—"I am truly sorry, Frank, that you should be willing to deceive. What are called *boy's tricks*, too often lead to falsehood, and end in disgrace. On this occasion you cheated yourself also. You lost the knowledge which you might have gained, for the sake of what, I suppose was only some book of amusement."

Frank.—"Mother, it was the life of Charles XII. of Sweden. You know that he was the bravest soldier of his times. He beat the king of Denmark when he was only eighteen years old. Then he defeated the Russians, at the battle of Narva, though they had 80,000 soldiers, and he had not a quarter of that number."

Mrs. Ludlow.—"How did he die?"

Frank.—"He went to make war in Norway. It was a terribly severe winter, but he feared no hardship. The cold was so great that his sentinels were often found frozen to death at their posts. He was besieging a town called Fredericksall. It was about the middle of December. He gave orders that they should continue to work on the trenches, though the feet of the soldiers were numb, and their hands froze to the tools. He got up very early one morning, to see if they were at their work. The stars shone clear and bright on the snow that covered everything. Sometimes a firing was heard from the enemy, but he was too courageous to mind that. Suddenly, a cannon-shot struck him, and he fell. When they took him up, his forehead was beat in, but his right hand still strongly grasped his sword. Mother, was not that dying like a brave man?"

Mrs. Ludlow.—"I should think there was more of rashness than bravery in thus exposing himself, for no better reason. Do you not feel that it was cruel to force his soldiers to such labours in that dreadful climate? and to make war when it was not necessary? The historians say that he undertook it, only to fill up an interval of time, until he could be prepared for his great campaign in Poland. So, to amuse his restless mind, he was willing to destroy his own soldiers, willing to see even his most faithful friends frozen every morning into statues. Edward, tell me what you remember."

Edward.—"My lesson in the history of Rome, was the character of Antoninus Pius. He was one of the best of the Roman emperors. While he was young he paid great respect to the aged, and when he grew rich he gave liberally to the poor. He greatly disliked war. He said he had rather save the life of one subject, than destroy a thousand enemies. Rome was prosperous and happy, under his government. He reigned 22 years, and died, with many friends surrounding his bed, at the age of 74."

Mrs. Ludlow.—"Was he not beloved by the people whom he ruled? I have read that they all mourned at his death, as if they had lost a father. Was it not better to be thus lamented, than to be remembered only by the numbers he had slain, and the miseries he had caused?"

Frank.—"But mother, the glory of Charles XII. of Sweden, was certainly greater than that of a quiet old man, who, I dare say, was afraid to fight. Antoninus Pius was clever enough, but you cannot deny that Alexander, and Cæsar, and Bonaparte, had far greater talents. They will be called heroes, and praised as long as the world endures."

Mrs. Ludlow.—"My dear children, those talents should be most admired which produce the greatest good. That fame is the highest which best agrees with our duty to God and man. Do not be dazzled by the false glory that surrounds the hero. Consider it your glory to live in peace, and to make others happy. Believe me, when you come to your death-bed—and oh, how soon will that be! for the longest life is short—it will give you more comfort to reflect that you have healed one broken heart, given one poor child the means of education, or sent to one heathen the book of salvation, than that you lifted your hand to destroy your fellow-creatures, and wrung forth the tears of widows and of orphans."

The hour of rest had come, and the mother opened the large family Bible, that they might together remember, and thank Him who had preserved them through the day. When Frank and Edward took leave of her for the night, they were grieved to see that there were tears in her eyes. They lingered by her side, hoping she would tell them if anything had troubled her. But she only said, "My sons, my dear sons, before you sleep, pray to God for a heart to love peace."

After they had retired, Frank said to his brother:—

"I cannot feel that it is wrong to be a soldier. Was not our father one? I shall never forget the fine stories he used to tell me about battles, when I was almost a baby. I remember that I used to climb up on his knee, and put my face close to his. Then I used to dream of prancing horses, and glittering swords and sounding trumpets, and wake up, and wish I was a soldier. Indeed, Edward, I wish so now. But I cannot tell dear mother what is in my heart, for it would grieve her."

"No, no; don't tell her so, dear Frank, and pray, never be a soldier. I have heard her say that father's ill health, and most of his troubles, came from the life that he led in camps. He said on his death-bed, that if he could live his youth over again, he would be a meek follower of the Saviour, and not a man of blood."

"Edward, our father was engaged in the war of the Revolution, without which we should all have been slaves. Do you pretend to say that it was not a holy war?"

"I pretend to say nothing, brother, only what the Bible says—'Render to no man evil for evil, but follow after the things that make for peace.'"

The boys had frequent conversations on the subject of war and peace. Their opinions still continued to differ. Their love for their mother prevented their holding these discourses often in her presence. For they perceived that Frank's admiration of martial renown gave her increased pain. She devoted her life to the education and happiness of her children. She

secured for them every opportunity in her power for the acquisition of useful knowledge; and, both by precept and example, urged them to add to their "knowledge, temperance; and to temperance, brotherly kindness and to brotherly kindness, charity."

This little family were models of kindness and affection among themselves. Each strove to make the other happy. Their fireside was always cheerful and the summer evening walks, which the mother took with her were sources both of delight and improvement.

Thus years passed away. The young saplings which they had cherished grew up to be trees, and the boys became men. The health of the kind and faithful mother became feeble. At length she visibly declined; but she wore on her brow the same sweet smile which had cheered their childhood.

Eliza watched over her night and day, with the tenderest care. She was not willing that any other hand should give the medicine, or smooth the pillow of the sufferer. She remembered the love that had nurtured her own childhood, and wished to perform every office that grateful affection could dictate.

Edward had completed his collegiate course, and was studying at a distant seminary, to prepare himself for the ministry. He had sustained a high character as a scholar, and had early chosen his place among the followers of the Redeemer. As often as was in his power, he visited his beloved parent; and during her long sickness his letters, full of fond regard and pious confidence, continually cheered her.

Frank resided at home. He had chosen to pursue the business of agriculture, and superintended their small family estate. He had an affectionate heart, and his attentions to his declining mother were unceasing. In her last moments he stood by her side. His spirit was deeply smitten as he supported his weeping sister at the bed of the dying. Pain had departed, and the meek Christian patiently awaited the coming of the Lord. She had given much counsel to her children, and sent tender messages to the absent one. She seemed to have done speaking. But, while they were uncertain whether she yet breathed, she raised her eyes once more to her first-born, and said, faintly—"My son, follow peace with all men."

These were her last words. They listened attentively, but her voice was heard no more.

Edward Ludlow was summoned to the funeral of his beloved mother. After she was committed to the dust, he remained a few days to mingle his sympathies with his brother and sister. He knew how to comfort them out of the Scriptures, for therein was his hope in all time of his tribulation.

Frank listened to all his admonitions with a serious countenance and a sorrowful heart. He loved his brother with great ardour, and to the mother for whom they mourned, he had always been dutiful. Yet she had felt painfully anxious for him to the last, because he had not made choice of religion for his guide, and secretly coveted the glory of the warrior.

After he became the head of the household, he continued to take the kindest care of his sister, who prudently managed all his affairs until his marriage. The companion whom he chose was a most amiable young woman, whose society and friendship greatly cheered the heart of Eliza. There seemed to be not a shadow over the happiness of that small and loving family.

But in little more than a year after Frank's marriage, the second war between America and Great Britain commenced. Eliza trembled as she saw him possessing himself of all its details, and neglecting his business to gather and relate every rumour of war. Still she relied on his affections for his wife to retain him at home. She could not understand the depth and force of the passion that prompted him to be a soldier.

At length, he rashly enlisted. It was a sad night for that affectionate family, when he informed them that he must leave them and join the army. His young wife felt it the more deeply, because she had but recently buried a new-born babe. He comforted her as well as he could. He assured her that his regiment would not probably be stationed at any great distance, that he would come home as often as possible, and that she should constantly receive letters from him. He told her that she could not imagine how restless and miserable he had been in his mind ever since war was declared. He could not bear to have his country insulted, and take no part in her defence. Now, he said, he should again feel a quiet conscience, because he had done his duty; that the war would undoubtedly soon be terminated, and then he should return home, and they would all be happy together. He hinted at the promotion which courage might win, but such ambition had no part in his wife's gentler nature. He begged her not to distress him by her lamentations, but to let him go away with a strong heart, like a hero.

When his wife and sister found that there was no alternative, they endeavoured to comply with his request, and to part with him as calmly as possible. So Frank Ludlow went to be a soldier. He was twenty-five years old, a tall, handsome, and healthful young man. At the regimental trainings in his native town, he had often been told how well he looked in a military dress. This had flattered his vanity. He loved martial music, and thought he should never be tired of serving his country.

But a life in camps has many evils, of which those who dwell at home are entirely ignorant. Frank Ludlow scorned to complain of hardships, and bore fatigue and privation as well as the best. He was undoubtedly a brave man, and never seemed in higher spirits than when preparing for battle.

When a few months had past, the novelty of his situation wore off. There were many things in which he thought of his quiet home, and his dear wife and sister, until his heart was heavy in his bosom. He longed to see them, but leave of absence could not be obtained. He felt so unhappy that he thought he could not endure it; and, always moved more by impulse than principle, absconded to visit them.

When he returned to the regiment, it was to be disgraced for disobedience. Thus humbled before his comrades, he felt indignant and disgusted. He

knew it was according to the rules of war, but he hoped that he might have been excused.

Some time after, a letter from home informed him of the birth of an infant. His feelings as a father were strong, and he yearned to see it. He attempted to obtain a furlough, but in vain. He was determined to go, and so departed without leave. On the second day of his journey, when at no great distance from the house, he was taken and brought back as a deserter.

The punishment that followed made him detest war in all its forms. He had seen it at a distance, in its garb of glory, and worshipped the splendour that enrobes the hero. But he had not taken into view the miseries of the private soldier, nor believed that the cup of glory was for others, and the dregs of bitterness for him. The patriotism of which he had boasted, vanished like a shadow in the hour of trial; for ambition, and not principle, had induced him to become a soldier.

His state of mind rendered him an object of compassion. The strains of martial music, which he once admired, were discordant to his ear. His daily duties became irksome to him. He shunned conversation, and thought continually of his sweet, forsaken home, of the admonitions of his departed mother, and the disappointment of all his gilded hopes.

The regiment to which he was attached, was ordered to a distant part of the country. It was an additional affliction to be so widely separated from the objects of his love. In utter desperation he again deserted.

He was greatly fatigued when he came in sight of his home. Its green trees, and the fair fields which he so oft had tilled, smiled as an Eden upon him. But he entered as a low spirit. His wife and sister wept with joy, as they embraced him, and put his infant son into his arms. His smiles and caresses woke him to agony, for he knew he must soon take his leave of it, perhaps for ever.

He mentioned that his furlough would expire in a few days, and that he had some hopes when winter came, of obtaining a substitute, and then they would be parted no more. He strove to appear cheerful, but his wife and sister saw that there was a weight upon his spirit, and a cloud on his brow, which they had never perceived before. He started at every sudden sound, for he feared that he should be sought for in his own house, and taken back to the army.

When he dared no longer remain, he tore himself away, but not, as his family supposed, to return to his duty. Disguising himself, he travelled rapidly in a different direction, resolving to conceal himself in the far west, or, if necessary, to fly his country rather than rejoin the army.

But, in spite of every precaution, he was recognised by a party of soldiers, who carried him back to his regiment, having been three times a deserter. He was bound, and taken to the guard-house, where a court-martial convened to try his offence.

It was now the summer of 1814. The morning sun shone forth brightly upon rock, and hill, and stream. But the quiet beauty of the rural landscape was vexed by the bustle and glare of a military encampment. Tent and barrack rose up among the verdure, and the shrill, spirit-stirring bugle echoed through the deep valley.

On the day of which we speak, the music seemed strangely subdued and solemn. Muffled drums, and wind instruments mournfully playing, announced the slow march of a procession. A pinioned prisoner came forth from his confinement. A coffin of rough boards was borne before him. By his side walked the chaplain, who had laboured to prepare his soul for its extremity, and went with him as a pitying and sustaining spirit, to the last verge of life.

The sentenced man wore a long white mantle, like a winding-sheet. On his head was a cap of the same colour, bordered with black. Behind him several prisoners walked, two and two. They had been confined for various offences, and a part of their punishment was to stand by and witness the age of their comrade. A strong guard of soldiers marched in order, with loaded muskets and fixed bayonets.

Such was the sad spectacle on that cloudless morning—a man in full strength and beauty, clad in burial garments, and walking onward to his grave. The procession halted at a broad open field. A mound of earth freshly thrown up in its centre, marked the yawning and untimely grave. Beyond it, many hundred men, drawn up in the form of a hollow square, stood in solemn silence.

The voice of the officer of the day, now and then heard giving brief orders or marshalling the soldiers, was low, and varied by feeling. In the line, but not yet called forth, were eight men drawn by lot as executioners. They stood motionless, revolting from their office, but not daring to disobey.

Between the coffin and the pit, he whose moments were numbered was directed to stand. His noble forehead and quivering lips, were alike pale. Yet, in his deportment, there was a struggle for fortitude, like one who had resolved to meet death unmoved.

"May I speak to the soldiers?" he said. It was the voice of Frank Ludlow. Permission was given, and he spoke something of warning against desertion, and something in deep bitterness against the spirit of war. But his ones were so hurried and agitated, that their import could scarcely be gathered. The eye of the commanding officer was fixed on the watch which he held in his hand. "The time has come," he said. "Kneel upon your knees."

The cap was drawn over the eyes of the miserable man. He with a stifled sob—"God, I thank thee, that my dear ones cannot see me from the bottom of this soul-bursting hole!"

"Oh, mother! mother! had I but believed!" Ere the sentence was finished, a sword glittered in the sunbeam. It was the death signal. Eight soldiers advanced from the ranks. There was a sharp report of arms; a shriek of piercing anguish! One convulsive leap. And then a dead man lay between his coffin and his

There was a shuddering silence. Afterwards, the whole line was directed to march by the lifeless body, that every one might for himself see the punishment of a deserter.

Suddenly, there was some confusion; and all eyes turned towards a horseman approaching at breathless speed. Alighting, he attempted to raise the dead man, who had fallen with face downward. Gazing earnestly upon the rigid features, he clasped the mangled and bleeding bosom to his own. Even the sternest veteran was moved, at the heart-rending cry of "Brother! Oh, my brother!"

"No one disturbed the bitter grief which the living poured forth in broken sentences over the dead.

"Gone to thine account! Gone to thine everlasting account! Is it indeed thy heart's blood that trickles warmly upon me? My brother, would that I might have been with thee in thy dreary prison! Would that we might have breathed together one more prayer, that I might have seen thee look unto Jesus of Nazareth!"

Rising up from the corpse, and turning to the commanding officer, he spoke through his tears, with a tremulous, yet sweet-toned voice.

"And what was the crime for which my brother was condemned to this death? There beat no more loyal heart in the bosom of any of these men, who do the bidding of their country. His greatest fault, the source of all his misery was the love of war. In the bright days of his boyhood, he said he would be content to die on the field of battle. See, you have taken away his life in cold blood, among his own people, and no eye hath pitied him."

The commandant stated briefly and calmly, that desertion thrice repeated was death; that the trial of his brother had been impartial, and the sentence just. Something too, he added, about the necessity of enforcing military discipline, and the exceeding danger of remissions in a point like this.

"If he must die, why was it hidden from those whose life was bound up in his? Why were they left to learn from the idle voice of rumour, this death-blow to their happiness? If they might not have gained his pardon from an earthly tribunal, they would have been comforted by knowing that he sought that mercy from above which hath no limit. Fearful power have ye, indeed, to kill the body; but why need you put the never-dying soul in jeopardy? There are those to whom the moving of the lips that you have silenced, would have been most dear, though their only word had been to say farewell. There are those to whom the glance of that eye, which you have sealed in blood, was like the clear shining of the sun after rain. The wife of his bosom would have thanked you, might she but have sat with him on the steps of his prison; and his infant son would have played with his fettered hands, and lighted up his dark soul with one more smile of innocence. The sister, to whom he has been as a father, would have soothed his despairing spirit with the hymn which, in infancy, she sang nightly with him at their blessed mother's knee. Nor would his only brother thus have mourned, might he but have poured the consolations of the gospel once more upon that stricken wanderer, and treasured up one tear of penitence."

A burst of grief overpowered him. The officer with kindness assured him that it was no fault of theirs that the family of his brother was not apprised of his situation; that he strenuously desired no tidings might be conveyed to them, saying that the sight of their sorrow would be more dreadful to him than his doom; and that, during the brief interval between his sentence and execution, he had had the devoted services of a clergyman to prepare him for the final hour.

Edward Ludlow composed himself to listen to every word. The shock of surprise, with its tempest of tears, had past. As he stood with uncovered brow, the bright locks clustering around his noble forehead, it was seen how strongly he resembled his fallen brother, ere care and sorrow had clouded his manly beauty. For a moment, his eyes were raised upward, and his lips moved. Pious hearts felt that he was asking strength from above to rule his emotions, and to attain that submission which, as a teacher of religion, he enforced on others.

Turning meekly towards the commanding officer, he asked for the body of the dead, that it might be borne once more to the desolate home of his birth, and buried by the side of his father and mother. The request was granted with sympathy.

He addressed himself to the services connected with the removal of the body, as one who bows himself down to bear the will of the Almighty. And as he raised the bleeding corpse of his beloved brother in his arms, he said: "Oh, war! war! whose tender mercies are cruel; what enmity is so fearful to the soul as friendship with thee?"

**CHOLERA.**—In Glossop, as well as in many of the manufacturing towns of Manchester, we have had, during the late splendid autumnal weather, multitudes of hasty cases, to which indiscriminately have been applied the terms, "bowel complaint," "English cholera," "diarrhoea," "vomiting and purging," the two latter terms being pretty constantly a correct description of the more prominent symptoms. Few cases have proved fatal; happily, in our practice, none; though many aged persons have suffered severely, still recovering from the debility produced by cramp and profuse watery purging more rapidly than could have been anticipated. In several instances of this latter class (seen by my partner, Dr. Hunt, as well as by myself), sulphuric acid, to use his own words, has acted "like a charm," and in none have we had recourse to any other remedy,—subduing cramp, restraining vomiting, rousing the pulse, and with it the heat of surface,—supporting, in fact, the whole vital energies, and apparently effecting this by checking profuse watery secretion, and its consequent discharge from the bowels.—*Dr. Smith, in the Lancet.*

PEOPLE speak strangely of *youth* and happy youth. Happy indeed it may be, but it has an eager, impulsive happiness, which is anything but calm. Youth is our most unquiet season. There is no rest for heart, or mind, or soul. We plunge eagerly into the active scenes of life, and even in our hours of solitude and bodily repose, Fancy is still busily at work, painting scenes of future exertion. Our passions have all the charms of novelty; none of them have been sated, many but just discovered by us. What broad fields of delight are spread before us—fame, love, pleasure; each yet to be explored! How the sunny spots are in bold relief, while the dark passages are but little seen, or but serve to make the brightness more bright. Every feeling then is different from what it becomes in later years. We may preserve these feelings when we are older—they may be strong and beautiful still—but they are not the same they were; their newness is gone.

Youth is the time for dreams, strange, contradictory, but most beautiful dreams, which, as we advance in life, we are doomed to see depart for ever.

There is the dream of Love—the most bewildering of all Youth's dreams. Love—when the heart is fresh and young, and strong—before we have loved unworthily, or perchance grown weary of loving—or become cold and hard, so that we cannot love—earnest, true, undoubting love—this is youth's first dream, and the hardest one of all to yield.

There is the dream of Ambition—when we could compass a universe—when nothing seems too arduous for us to accomplish. Oh! we can reach the dizzy heights of power—we will "lord it" over a world. But when we live a little longer, we see this proud dream crumble—*il faut céder*—we are but mortal.

There is the dream of Philanthropy—when we would renovate all mankind—would willingly sacrifice life and health for the good of others. We have the best possible opinion of every one; we are unsuspicious and benevolent; all women seem angels, all men heroes. But we discover that all are not faultless—we are deceived where we had trusted—we see, perhaps, kindness repaid with ingratitude; and often our disappointment brings us to the opposite extreme, and we become misanthropic for a season, at least.

And there is the Religion of Youth, which is not a dream, but a beautiful reality; the only thing which increases in strength and earnestness as we advance in years, without losing any of its primitive loveliness; the only feeling, be it passion or emotion, with which the heart is never sated. Religion, the saviour of youth, the life-giver of age! Happy are they who obtain this precious boon to teach them in youth that life should not be idolatrous, or ambition reckless; and in age that moderation should not become coldness, or happiness or content degenerate to apathy. E.

## A WINTER SALAD.

Two large potatoes, passed through kitchen-sieve,  
Unwonted softness to the salad give,  
Of mordent mustard add a single spoon—  
Distrust the condiment which bites so soon;  
But deem it not, thou man of herbs, a fault  
To add a double quantity of salt;  
Three times the spoon with oil of Lucca crown,  
And once with vinegar procured from town.  
True flavour needs it, and your poet begs,  
The pounded yellow of two well-boiled eggs.  
Let onion atoms lurk within the bowl,  
And, scarce suspected, animate the whole;  
And lastly on the favoured compound toss  
A magic teaspoon of anchovy sauce;  
Then, though green turtle fall, though venison's tough,  
And ham and turkey are not boiled enough,  
Serenely fill, the epicure may say—  
"Fate cannot harm me—I have dined to-day."

**THE WILD ANIMALS OF THE CAPE.**—The most troublesome of wild animals to the South African farmer is the hyena, or wolf, as he is always called in the colony. He is the great robber of the night. He is a cowardly brute, and never attacks a human being; indeed, he very rarely makes his appearance till night-time, when the farmers and their herds are asleep. By day he continues in his hole in the earth. These wolf-holes, by the way, are so numerous as to be very dangerous to a man galloping across the country. Many a time have I been hunting, and, when at full speed, my horse has put his foot into one of these holes and come down like a shot, sending me two or three yards over his head. These wolves seem to have diminished less before the spread of civilisation than any other wild beast. The truth is, they are very fond of beef and mutton, and their dwelling-places are very secure, and so they most sedulously remain where oxen and sheep are plenty. They are the toughest skinned of any animals covered with hair. I have seen a troop of dogs attacking one, and unable to draw blood; and a friend told me that he had frequently been unable to send a bullet into one at a distance from which he must have killed any ordinary animal. Next in mischief is the wild dog, which is only less destructive from being smaller. It can only attack sheep, while the hyena seizes oxen and horses into the bargain. Moreover, it is more easily killed by the curra which are kept at every kraal. Wild cats play vengeance amongst the poultry and the lambs, but they don't venture on a full-sized sheep. There are no foxes, but their place is worthily supplied by the jackal, who is equally partial to a tender chicken or a Michaelmas goose with his European relative.—*Bentley's Miscellany.*

## THE PIONEER'S DAUGHTER.

### A TALE OF INDIAN CAPTIVITY.

(Continued from page 150.)

#### CHAPTER III.—THE EXPEDITION FOR THE PRISONERS.

On reaching Fort Jefferson, Sergeant Bomb was immediately dispatched upon a rude pallet, and the McAllister called upon to dress his wounds. After a careful examination of the hurt in his side, the doctor declared that he was seriously, but not very dangerously, injured, and that with pure and good attendance he would recover and be about in a few days. The result verified the eccentric doctor's prediction. In less than a week the sergeant was enabled to sit up and walk about his room, and in the course of a fortnight was pronounced out of danger, and almost fit for duty.

Meantime Colonel Danforth and Major Allen had been active in raising a small party of experienced hunters and spies, to accompany them in their contemplated search for their missing men. For this purpose, he had remained behind at Fort Jefferson, and the majority of the soldiers had been forced to continue their march the same night they reached there, owing to want of provisions to last so large a number. The party in question was composed of men picked, namely, Colonel Danforth, Major Allen, Lieutenant Miller, Sergeant Bomb, who insisted on going, and six experienced athletic hunters and spies, whom the Colonel had by various means enlisted into his service. The day after day, one after another came dropping into the fort. This force the Colonel deemed sufficient for his purpose; and as it was generally supposed for the Indians to become quieted, after the excitement caused by their signal victory, it was decided the party should set off forthwith. Accordingly, the morning following the night on which this decision was made, this little, but hardy and intrepid band, armed with rifles, pistols, knives, tomahawks, and costumed as hunters, with hunting-frocks, leggins, moccasins, and deer-skin caps, quitted Fort Jefferson, and plunged into the forest on their adventurous and perilous expedition.

It may be as well for us to remark here, *en passant*, that the Lieutenant Wilkes mentioned was one of the officers in Colonel Danforth's regiment, whose wife had joined the escort commanded by Sergeant Bomb, and the only one on the field related to any of that party of four who had survived the fortunes of that ill-fated day.

It was an early hour in the morning when our friends left the fort, and the day was cloudy, raw, and cold, with a strong east wind, which betokened a storm. The frosts of autumn had browned the forest, and the dead leaves were falling in showers, and crumbling and rattling under their careful tread. It had been decided, by consultation, that the Piqua settlement, on the Great Miami, should first be visited, and if no traces of the prisoners were to be seen, other villages, in turn, should receive as close a scrutiny as should be consistent with their own safety. Accordingly, they set off in an easterly direction, bending their steps toward Piqua, distant some twenty-five miles from their place of starting.

For several hours they pursued their journey without any occurrence worthy of note, when one of the three scouts who had been sent forward in advance of the main party, hurriedly returned, and held his finger to his lips, in token of silence.

"What is it?" demanded the Colonel, in a low, guarded tone, motioning his friends to halt, as the other came up to him.

"Thar's Injen sign ahead," was the brief reply.

The speaker, whom we shall denominate John Carnele, was a true specimen of the backwoods' hunter—a class of beings now almost extinct, or which can only be found occasionally in the still far West, beyond the borders of civilization. He was a tall, athletic man, some six feet in stature, with coarse features, bronzed by exposure to all kinds of weather. He had a large Roman nose, and sharp, restless, keen black eyes, which were habitually turned from side to side in quick succession, as if continually on the look-out for danger. He wore the loose hunting-shirt, leggins, and moccasins of the regular woodsman, with a belt buckled around his waist, in which were confined tomahawk and scalping-knife; and a rude knapsack was strapped to his back, by leather thongs passing over his shoulders and under his arms.

"Well, what did you discover?" pursued the Colonel.

"Why, I was jest stealing keeffully along—I always go keefful, Curnel—and throwing my day-lights from side to side, before and behind, when all at once it struck me that I seed a leaf as had been crunched down in a way natur never did it. Well, I drapt on my hands and knees, stretched over for arid, and let my peepers rest right plump upon it. As soon as I'd tuk a good look, I knowed it was made by a red-skin's mocca; and then I sot to, to looking for other sign. I wasn't more nor a few minutes, afore I made out thar'd been a party of three about; but as they'd been dodging around considerable, I concluded on 'em being hunters. At fust, I thought I'd foller 'em, and make 'em out; but remembering your orders, Curnel, to come in and report on the fust sign, I tuk a back'ard trail, and here I is."

"And here comes the other," spoke up Edward, pointing to the right and left, where two men, from different directions, were seen approaching, so as to form an angle where the main party stood. "Probably they have seen the same track."

His conjecture was right. On coming up, the other scouts confirmed the

report of Carnele, and gave it as their opinion the Indians could not be far distant.

"What is to be done?" asked the Colonel. "I fear we may be discovered, the alarm be given, and our present design of reconnoitring Piqua be frustrated."

"Ef we could cotch one on 'em and kill tother two, without raising no alarm, it'd not impossible we could turn the hull side to our advantage," suggested Carnele; "for though a Injen prisoner is no great thing about his people's secrets, yet I've knowed that as you could shoot dead a white man; and ef we should happen to git hold on a black one, it's not impossible we could find out the secret about where the prisoners is."

"The idea is a good one, but how is it to be managed?" inquired Colonel Danforth.

"Jest let me, and Wade, and Miller fix it," rejoined Carnele. "Jest you and the rest stay h'reabouts, till we come back; and ef such a thing can be done decent, we'll do it. Ef you're too cold, jest start a fire to warm yourselves by, somewhar in the bushes here; but don't raise no smoke and blaze nor you can help, for the red-niggers has a powerful way, and they're as skerry as deers."

"Well, well, friends, do as you think best," said the Colonel; "only restore me my wife and daughter, and you shall have both my purse and my gratitude. But do not make any imprudent act, for I shall not sacrifice all my hopes by an imprudent act. Remember me to your man as experienced as yourselves, and remember that he is your friend and a father. Oh! it makes me groan in spirit to think what your wife and child may now be suffering."

"Alas!" sighed Wilkes, "it is terrible!" and Edward turned away to secretly give vent to the emotions which agitated his breast; nor was there one of the old hunters but felt a deep sympathy for the cause they had undertaken.

"Rest assured, Colonel, and gentlemen," said Miller, one of the three that had been out as a scout—"rest assured, we'll do our best; but don't count too much on us; for we're only human, and the best may fail. But the thing I'll promise you, for myself, and that is, if we are fortunate enough to discover the prisoners, they shall either be set free, or Harry Miller shall walk his last step."

"We say we'll," said Wade.

"Ay, ay, ay," echoed the others.

"Gentleman," said the Colonel, his voice husky with emotion, "I thank you from the depths of my heart, and may God preserve you from harm!"

"To which I will add, amen!" rejoined the lieutenant, hastily brushing a tear from his eye.

"Well, ef all's fixed, let's tramp," said Carnele, abruptly; and turning on his heel, with his long rifle thrown into the hollow of his left arm, he glided away, followed by Wade and Miller, in Indian file.

As soon as they had departed, the other three hunters declared they could not remain idle, but would just scout around, and be within sound of a rifle. Accordingly, they set off in another direction, leaving the Colonel, Major, Lieutenant, and Sergeant to themselves.

"Come, said the senior officer, "since we can do nothing for the present in the way of assisting our friends, let us start a fire, for I am chilled to the bone with this piercing cold wind."

Leaving our friends in the act of carrying out Colonel Danforth's suggestion, we will follow the first party of scouts. For something like a quarter of a mile, they proceeded in the same manner as at first—silently, steadily, warily. This brought them to a deep hollow or glen, through which ran a small stream, one of the western branches of the Miami. Crossing this, they began their ascent of the opposite hill; but had scarcely advanced fifty yards, when the foremost suddenly came to a halt, and dropping quietly upon his knees, examined the earth with great care.

"I make it out one o' the same varmints," he said, at length, in a whisper, as he rose to his feet: "what think you, Bill Wade, and Harry Miller?"

The two hunters appealed to now stopped forward, and after a close examination of the ground, asserted that, to the best of their judgment, it was one of the three moccasin prints they had previously discovered.

"Let's divide," rejoined Carnele. "This trail as comes in from the left, and goes straight up the hill, I'll foller, while you two strike off ayther way. Ef ye discover anything new or startling, make a bee line for the top o' this hill, so as to hit a straight line from here, and you'll find me thar a waitin'."

As he spoke, Carnele glided stealthily forward, parting the bushes carefully, while the others, separating, moved away to the right and left, in the same silent and cautious manner. To the brow of the hill, in a direct line, was not less than a hundred yards; and it was therefore several minutes before Carnele reached it. The side of the hill which he ascended was heavily timbered; but on its summit was an opening of several acres in extent, where the tangled, withered grass, interspersed with innumerable wild-flowers, all now in a state of blight and decay, proclaimed the fertility of the soil, and gave one an idea of the Eden-like beauty of the scene, when viewed in all the bright and golden luxuriance of midsummer. This opening extended some half-way down the opposite side of the hill, toward the small stream our scouts had crossed, which wound around its base in the form of an ox-bow or magnet. What seemed a little remarkable, not a living tree or bush was to be seen within its open space; but all around it, the forest stood up dark, bold, and abrupt, reminding one of a light, pleasant, airy picture, set in a black, heavy, cumbersome frame.

But though there was not a tree, bush, or stone, for the eye to rest upon within the area described, there were three dark objects that failed not to rivet the attention of the wily old hunter, as he carefully parted the bushes.

*"Along the edge of the opening lay a fallen tree; and resting their rifles on this, Carnele and Wade took a preparatory glance at their victims across the barrels. The Indians were in high glee; and as they roasted and devoured their meat they chatted and laughed, and occasionally jumping up, cut wild and grotesque antics around the fire."*

which skirted the clearing at the point where he gained the top of the eminence. On a little knoll, which commanded a view of the whole opening, and squatted around a fire that had been kindled of dried grass and brush, for the double purpose of warming them, and cooking their mid-day meal, were three half-naked savages, busily engaged in roasting and devouring slices of meat, which ever and anon they cut from the carcass of a deer that lay within reaching distance. From the spot where Carnele first beheld them, the distance was too great for a certain shot; but below them, to the nearest cover, was apparently not over a hundred yards; and there he felt certain a sure aim would tell.

He had not been watching the Indians long, when the bushes to the right were carefully parted, and Harry Miller glided silently to his side; and a moment or two later Bill Wade also made his appearance, so alike had these two scouts timed their movements.

"Well," observed Carnele, scarcely above his breath, "you see the three varmints—so what hev you got to propose?"

"That we gain the nearest cover to them, and give them the contents of our rifles," said Wade.

"Two on 'em, you mean," rejoined Carnele; "for one on 'em, you know, has got to be tuk alive."

"Exactly."

"Well, you and I, I reckon, had best do the shootin' part, and let Harry here, do the runnin'; for his legs is a heap the longest, and I've knowed him do some tall walkin' afore now."

This personal allusion of the old hunter occasioned a smile, which was extended to a broad grin on the face of Wade, as Harry threw forward one foot, and displayed a leg which certainly had its full share of extension. In other respects, he was well proportioned, and would pass for a very good-looking man of thirty. His countenance was one expressive of more than ordinary intelligence, which was particularly perceptible in his clear hazel eyes. He was noted as one of the fleetest runners on the frontier; and there were the very fewest number, even among the savages, that could keep him company on a trial race. His history was somewhat eventful. When quite a youth, he and a younger brother, named Christopher, had been taken prisoner by the Indians, during one of their marauding expeditions into the State of Kentucky. On returning home, two of the Indians adopted the brothers; and in course of time the latter became real savages—at least in appearance, manners, and customs, if not in feelings. For a number of years Harry remained with his captors, apparently contented; but at last he began to tire of Indian life, and longed to return to his white friends. Taking advantage of a favourable opportunity, he set out alone, after vainly trying to persuade his brother to accompany him. He finally succeeded in reaching the settlements, though he suffered severely on his journey for want of food. But during his residence among the Indians, he had imbibed new

habits, and could never afterwards content himself to settle down to a quiet life. Hunting and scouting had since been his principal delight and employment. He could speak the Shawnee and Wyandott languages almost as fluently as a native, and had often acted as an interpreter between the white men and red. He enjoyed his wild life remarkably—as, in fact, a true woodsman can alone enjoy it; and had been often heard to say, that he only needed the company of his brother to render him perfectly happy.

"Well," he answered, in reply to Carnele, "if it's decided that I'm to do the running, we had better be on the move, or the game will be lost."

"Nothing more truer nor that thar argement," rejoined Carnele, who, being the oldest hunter,—his age was about forty,—took it upon himself to act as leader to the party.

Accordingly, all three set off, Carnele in advance, and in about five minutes arrived at the cover nearest to the savages. Along the edge of the opening lay a fallen tree; and resting their rifles on this, Carnele and Wade took a preparatory glance at their victims across the barrels. The Indians were in high glee; and, as they roasted and devoured their meat, they chatted and laughed, and occasionally jumping up, cut wild and grotesque antics around the fire. For several minutes the scouts watched them in silence, as the cat does her game; and then Carnele said hastily, in a whisper:—

"Come, come, we must stop their fun, for the Curnel 'll git tired o' waitin'. I think it 'll do—eh, Bill?"

"A sure shot, I reckon," replied the one addressed.

"Well, then, you take the right one, I'll take the left, and the cent'r varmint we'll leave to Harry's legs."

"All right," rejoined the other. "I'm ready."

"One moment," said the old hunter, sighting his rifle—"we must both shoot together. Harry, give the word."

"Fire!" returned the other, after a moment's pause.

Both rifles flashed together as he spoke—only one report was heard; and with cries of pain, two of the savages sprang up suddenly, and fell back upon the earth.

With a wild, loud whoop, Harry Miller instantly bounded through the bushes into the opening, in pursuit of the third; who, changing a merry laugh to a yell of dismay, on witnessing the horrible tragedy that had taken place before him, turned and fled, shaping his course down the hill, so as to gain the forest at a point about a hundred and fifty yards distant from where Miller emerged from it. Perceiving his intention, the scout redoubled his exertions, well knowing if he could head him off, and keep him in the open field, his capture would be comparatively easy. It was a closely contested race, and for several moments it was doubtful which would win. The superiority of Miller as a runner was now made strikingly apparent. He had a third further to run than the Indian; and yet, for a time, it was thought he would beat him, notwithstanding the remarkable odds against him. But

the Indian won by a few feet, and bounded into the cover with a yell, though Miller was so near him that he could easily have buried his tomahawk in his head, had it been his design to kill, instead of taking his life.

But the savage had no time to congratulate himself on so trivial a victory for scarcely a moment elapsed after his entering the cover, and the rustling of the bushes and dried leaves announced that his pursuer was close upon him. Just below him was a steep bank, which overlooking the little stream we have before mentioned, and finding there was no chance of escape for him; either to the right or left, the panting and frightened savage, as a desperate resort, gave a loud yell, and a leap, and down he went out of sight. The next moment the scout, without thought of consequences, and only fearful the fugitive might escape, leaped boldly after him. Down, down he went, some fifteen or twenty feet, and then found himself quietly sticking in mud and water up to his waist, within reaching distance of the object of his pursuit, who was alike in the same disagreeable predicament.

The moment the Indian found his pursuer in such close proximity, he drew his knife, the only weapon he had retained in his flight, and under the expectation of an immediate attack, prepared to sell his life as dearly as possible. Turning fiercely upon him, Harry brandished his tomahawk, and addressing him in Shawnee, informed him that he did not seek his life, but that, unless he threw away his knife instantly, he would brain him on the spot.

On hearing this, the Indian gave one quick, eager glance around, as if to convince himself there was no hope of escape, and then quietly sunk his knife in the mud, thus tacitly surrendering himself a prisoner.

Miller now made several desperate efforts to extricate himself; but, finding it to be impossible without assistance, as each attempt only sunk him deeper in the mire, he called lustily to his companions to come to his assistance. Presently, Carnele and Wade made their appearance on the high bank above; but, on beholding the discomfiture of their friend and his captive, both with faces elongated to a woful extent, the sight impressed them so forcibly with the ridiculous, that for several minutes they could do nothing more effective than hold their sides and laugh. This over, they set to work in earnest, and by means of deer-skin ropes, which they carried with them, succeeded at last in getting Miller and his captive upon dry land. Carnele then despatched Wade to inform the Colonel and his party of their success, and to bid them hasten forward, as the day was wearing away, and he was anxious to get within sight of the Piqua village by dark, if such a thing were possible. He then bound the hands of the Indian, and, in company with Miller, set off for the fire, driving the captive along before him.

We have said it was a bitter cold day; and in consequence Miller felt greatly chilled and benumbed, by reason of his immersion in the mud and water. The fire, however, soon restored warmth and circulation to his blood, and he began to view the whole affair in the light of a most excellent joke; though at first, during the detriment of his companions, he had regarded himself in the same category with the frog in the fable—"if it were fun to them, it was death to him."

Meantime, Carnele had busied himself in trying to gather some information from the captive, as to who he was, and to what tribe he belonged; but the savage kept a stubborn silence, and would not answer.

"I say, Harry, I can't make nothin' out o' the varmint—so 'spose you try your hand at him," said the scout, at last, turning away to examine the dead Indians, and take off their scalps.

Miller now put questions to his captive in Shawnee, Huron, and English; but the latter preserved an immovable countenance, never so much as showing, by the change of a single feature, or by the gleam of his eye, that he understood what was addressed to him. He was apparently a young warrior, about twenty-five years of age, and his features seemed to bespeak intelligence—though so bedaubed were they with paint and mud, that it was almost impossible to make out their original expression. He was of medium stature, stood erect, and had altogether a very light and nimble appearance, though he was not, as we have seen, any match for such a runner as Miller. With the exception of the before-mentioned mud and paint, his arms, neck, breast, and a part of his legs, were mostly bare—his only covering being a large panther skin around his loins, with a strip of the same passing obliquely from left to right across his back and breast, together with short leggings below his knees, and rude moccasins on his feet.

"Now, I'll tell you what it is, young red-skin," said Miller, at length, in a rather savage tone, greatly vexed at the other's obstinacy—"I know you understand Shawnee, for it was that language I used when I ordered you to throw away your knife; and so, if you don't answer my questions before the party comes that I'm expecting, I'll have you roasted at a slow fire."

But still the young Indian made no reply, and with an air of much dissatisfaction, Miller turned away, and seated himself at the fire, to await the arrival of Colonel Danforth, and receive further instructions. It was not many minutes after this, before the expected party made their appearance, and on informing the Colonel of the obstinacy of the prisoner, he decided that it would not be worth while to lose any more time, but that all should set off for Piqua, taking the young savage along, and that, at the first stream they crossed, the latter should receive a thorough washing—stating it as his belief, from what little he had seen of his features, that he would turn out to be a white man. Accordingly, the whole party again set out, taking along a good supply of the deer-meat, to serve them for their supper, and leaving the remainder of the carcass, and the dead Indians, to be devoured by wild beasts.

Their most direct route to Piqua lying across the stream below, the party halted for a few minutes on its bank, while a couple of the scouts took the prisoner down to the water, and effectually removed the dirt and paint from his face. As the Colonel had anticipated, he, indeed, turned out to be a white man; and after gazing upon him in silence for a few minutes, during

which time emotions deep and strange agitated his breast, Miller walked up to him, and exclaimed in Shawnee:—

To the surprise of all, the prisoner started, and looking wonderingly on the other, replied, in the same dialect:—

"Who speaks?—who is it that knows Posetha?"

"My brother! my long lost brother!" cried Miller, in English, instantly throwing his arms around the captive's neck, and shedding tears of joy, while the latter stood passive and amazed at what was taking place.

"Oh, God! I thank thee that at last thou hast granted my prayer!" pursued Henry Miller, fervently. "Oh! Christopher, don't you know me?" he continued, looking eagerly into the other's face. "Don't you remember your brother Henry? that was taken by the Indians at the same time you were, but who afterward got away from them?"

"Yes, me now know," replied Christopher, in broken English the warm embrace of the other; and then, suddenly started:—

"Posetha warrior now—no cry—saw you?"

"Posetha is warrior no longer," rejoined Henry—"he must fight the pale-face, and not fight against his brothers."

"No," returned the other, with dignity, "Posetha's brothers Indian—him got no other."

"We are all your brothers," now interposed Colonel Danforth, who, with the rest, had stood looking on in amazement; during this wonderful scene. "Christopher—for so I hear you are called—you must have been taken with us, and fight no more against your race; the red-man is our enemy."

"The red-man Posetha's brother," persisted the other, drawing himself up haughtily, with an air of defiance.

The Colonel was about to make some reply, when Henry stepped forward, and in a low tone said:—

"Pray, Colonel Danforth, let me deal with him, for I know his nature better than you, and an ill-timed word might ruin all our hopes."

"You are right," returned the veteran officer. "Draw him aside, and confer with him, and we will await the result; and, as the other complied with his request, he added—"This is indeed most wonderful! that brother should meet brother under such strange circumstances!"

"The ways of Providence are sometimes very remarkable," observed Edward, reflectively.

"May we not take this as a good augury of our own success?" rejoined

"We will hope," replied Danforth, heaving a deep sigh; "we will—and he relapsed into a thoughtful mood.

Some ten minutes elapsed, and then, rejoining the party, Miller said, in a low tone, so as not to be overheard by his brother:—

"I've got good news for you all. Christopher says that there's a number of women prisoners, in Piqua; and that, for my sake, he'll help us to get them away, provided we'll set him free, and allow him to take his own course."

"Truly, this is cheering!" rejoined Colonel Danforth, not a little excited, as indeed were all the others. "But can you trust him, Harry?"

"I think we can, Colonel. I never knew him to break a promise."

"Act, then, as you think best, and may Heaven in its wisdom guide you aright!"

"Yes, I'd jest let him go," observed Carnele, who stood alongside, and who felt himself privileged to bestow his advice on all occasions—"yes, I'd jest let him go; for sence we've got the grease and mud off on him, he looks a heap honest. Besides, he's your brother, Harry, and nothin' good'll come o' keepin' him tied up like a snappin' bull-dog. No, no—let him go,—that's the advice of old John Carnele, and he's seed a few snakes in his day."

Harry held another short conference with his brother, and then, cutting his hands loose, told him he was free. Posetha uttered a few emphatic words in Shawnee, and then, with a whoop, as of triumph, he bounded away, and disappeared in the forest.

"Alas! I fear we have been imprudent," exclaimed Colonel Danforth, anxiously. "If he betrays us now, we are certainly lost. What do you think, Harry?"

"I don't think he'll betray us, Colonel. His last words give me reason to hope we've made him our friend; but I can't tell how much Indian life may have altered his nature. It's too late to repent, at all events; and so I think we had best resume our journey."

"Yes, yes, we must reach Piqua to-night—for something tells me we shall then be near our friends," cried Edward, with energy.

"Forward, then," rejoined the Colonel, "and may a watchful Providence guide our steps aright, and deliver from evil hands those that are near and dear to us!"

With this the whole party again set off at a rapid pace, the scouts as usual taking the lead. A little after nightfall, they arrived at a point commanding a view of the lights of the Piqua village. Here they halted, ate a hasty meal, held a council of war, and finally decided on reconnoitring the town forthwith. For this purpose they divided into pairs, and separated, with the understanding that all should rendezvous at the place of separation before midnight, and each report on what they had seen.

Alas! for human calculations. Midnight came, and a part of the party met according to agreement—but it was a gloomy meeting. Let us not anticipate the result, but first, in order, to follow the advent of our hero, and his companion, John Carnele.

(Continued in No. 11.)

My brother, Posetha, or Cat. This incident of the meeting of the brothers may as it may seem, is an historical fact.

## GREAT PRIZE ENIGMA COMPETITION!

The Editor of "The Family Friend," in announcing his intention of offering One Hundred and Seventy-five Guineas in Prizes for the best Solutions of Enigmas to be published in No. 61 of "The Friend," January 1, 1862, begs to intimate that at the urgent request of numerous Friends, he has been induced to divide the above amount into the following Prizes:—

- Five Prizes of £10 10s... For the best Correct Solutions of an Enigma submitted to Gentlemen.
- Ten Prizes of £5 5s... For the best Correct Solutions of an Enigma submitted to Ladies.
- Two Prizes of £10 10s... For the best Correct Solutions of an Enigma submitted to youths of both sexes.
- Six Prizes of £5 5s... For the best Correct Solutions of an Enigma submitted to youths of both sexes.
- One Prize of £5 5s... For the best Correct Solutions of an Enigma submitted to youths of both sexes.
- Ten Prizes of £2 2s... For the best Correct Solutions of an Enigma submitted to youths of both sexes.

The Number containing the Three Prize Enigmas, and the Conditions of the Award, will be ready on the 1st of January, 1862, and may be had of all Booksellers everywhere, price 2d.

Intending Competitors are informed that various Prize Enigmas, Solutions, and Awards, have appeared in the following Numbers of the "Family Friend," which may be obtained to order, price 2d. each:—Nos. 9, 10, 13, 15, 18, 21, 22, 23, 24, 25, 26, 27, 37, and 56. Competitors may derive many useful suggestions by consulting the Enigmas, &c., contained in these Numbers. Volume II., price 2s. 6d., contains the larger proportion of them.

TRADE NOTICE.—A Number of the HOME COMPANION is issued at 69, Fleet Street, every MONDAY at Nine o'Clock.

PARTS I. and II. of the HOME COMPANION, price 6d., is now ready.

## THE HOME COMPANION:

A WEEKLY MAGAZINE.

## PRACTICAL ILLUSTRATIONS OF POPULAR FALLACIES.

### No. IV.—"HE'S A GOOD 'FELLOW!—NOBODY'S ENEMY BUT HIS OWN!"

"THE world," says Longfellow, in his beautiful tale of *Hyperion*—which we heartily commend to all our readers for perusal—"the world loves a spice of wickedness. Talk as you will about principle, impulse is more attractive, even when it goes too far. The passions of youth, like unhooded hawks, fly high, with musical bells upon their jesses; and we forget the cruelty of the sport in the dauntless bearing of the gallant bird." It is this inclination for "a spice of wickedness" which has given currency to the saying we purpose to illustrate, and which, with its double fallacy, deludes so many to their destruction. The two fallacies are, first, that the kind of character to whom the name of "a good fellow" is applied, is in reality, a thorough scoundrel; second, instead of being "nobody's enemy but his own," he is the enemy of all with whom he is in any way connected. Sir Lytton Bulwer, in his novel of *The Cartons*, has given us an example of this double fallacy in the character of Guy Bolding, who, he tells us, "was one of those excellent creatures, who are nobody's enemies but their own." This "excellent creature" is introduced to us as "a tall fellow, somewhat more than six feet high, in a cut-away sporting-coat, with a dog-whistle tied to the button-hole, drab shorts and gaiters, and a waistcoat with all manner of strange furtive pockets. Guy Bolding had lived a year and a half at Oxford as a 'fast man,' so 'fast' had he lived, that there was scarcely a tradesman at Oxford into whose books he had not contrived to run. His father was compelled to withdraw him from the university, at which he had already had the honour of being plucked for the *Little go*; and the young gentleman, on being asked for what profession he was fit, had replied with conscious pride, 'that he could tool a coach.' His father was a clergyman, whom he had compelled to make great pecuniary sacrifice, to say nothing of mental distress suffered; and we are told that the meditated portion for his infant sister had been half swallowed up in the payment of his college debts. And yet this man is held up to us as an "excellent creature," "a good fellow, who is nobody's enemy but his own." At all events, the Oxford tradesmen, we should think, did not exactly agree in this panegyric—at least, while they were kept waiting for their money; and the father, when he paid it, must have felt very much as if an enemy had been despoiling his property. Still, this Guy Bolding is about one of the most favourable examples that can be quoted of the "good fellow, who is nobody's enemy but his own;" for he is not described as possessing any very vicious habits—he is not presented to us either as a drunkard or a gambler; but more as a reckless, extravagant youth, who has an utter impossibility either to use or to keep his money, but suffers it to flow away from him almost unconsciously, regardless of those on whom his extravagance may inflict injury. And this is done with such an imperturbable air of good-humour, such an overbearing relish for fun, that you cannot help liking the fellow in spite of his recklessness. His good-temper, his gallant bearing, are like the musical bells upon the jesses of the hawk; and

we forget the injuries he inflicts on others in our liking for his own bold bearing—for the better feelings that are discerned beneath the sporting-coat, and the waistcoat with "furtive pockets." And through these feelings we are led to hope that, in time, the weapons of evil may be "turned against itself, fighting under better banners."

We have an older and a higher example of one who may be called, in the phraseology of our adage, the king of "good fellows," in the portraiture which Shakespeare has drawn for us of the "mad-cap Prince of Wales," he who "doff'd the world aside, and let it pass." But it cannot be said that he was "nobody's enemy but his own." From the very first mention of him, we have him described "as dissolute as desperate" from the very first he is a "plague" hanging over his father; the

"One fatal remembrance, one sorrow that throws,  
Its deep shade alike o'er his joys and his woes."

He sees "riot and disorder stain the brows of his young Harry," until, when surrounded with dangers, when rebellion rears its hideous front, and the great nobles of the land "capitulate" against him, then we find the old king lamenting that this "good fellow" is only marked "for the hot vengeance and the rod of Heaven

"To punish my misreadings;"

and in the wild and debauched youth who calls him father, sees only his "nearest and dearest enemy." But Shakespeare understood human nature too well to make the riotous Prince all evil. From the very first, "some sparks of better hope" are seen, and our interest is excited by the development of these indications of better things. We are never in any doubt as to the ultimate conquest over the ardent passions of his youth—the "breaking through the foul and ugly mists of vapours"—the casting off "his Rose behaviour"—

"Redeeming time when men least think I will;"

and we follow him through the dramatic action with ever increasing pleasure, as we see in him something more than the "good fellowship" which endears him to Falstaff and the rest of his followers. Shakespeare has endowed him with strong intellect, and strong affections. The conventionalities of the court were too tame for his ardent nature—he must mingle with his fellow-men. He does not come entirely unscathed from the contact; he yields himself up to the idleness of the moment, smoothes his higher thoughts, and gives way to their "unyoked humours." But he has been learning the great lessons of humanity amidst men with whom his follies made him an equal; and we see him come out of the encounter, not altogether debased, as inferior minds would have been, but with enlarged sympathies for human nature, which he might have sought in vain in courts. It is when we see him breaking away from the bondage of "good fellowship"—

"When consideration, like an angel, came,  
And whipp'd the offending Adam out of him!"

when his lower impulses give place to higher thoughts, and he has cast aside the vile habits that obscured his nobler nature, that he justifies the interest we have felt for him, even in his wildness, his riot, and dishonour.

Henry the Fifth is here a poetical creation moulded according to the poet's will; giving full scope to the misdirected energies of youth—full scope to its impulses; but, at the same time, commingling with them a lofty intellect—a high and noble nature, glowing aspirations for a better state of things. Yet, even here, we find the "good fellow" mixed up with much that is vile, debasing, and wicked; engaged in highway robbery; "touching the base string of humility" with drawers and serving-men; revelling in foul jests and "most unsavoury similies;" and gaining "rotten opinions" from the great and good. It might suit the poet's purpose to make the "musical bells" strike out their loudest notes—to enlist our sympathies on the side of his "good fellow." It might, perhaps, be wise to show us that there is a possibility of becoming something better than a "good fellow;" of redeeming time, putting aside that "loose behaviour" of early life, by which the title was earned, and doing some little good in our generation. But, we fear, in real life the examples of this change are almost as rare as that of one deserting the mysteries of a betting-book, to guide the mysteries of a nation's finances. If Harry the Fifth redeemed the errors of the Prince of Wales, George the Fourth died as he had lived.

Let us now look into real life. Who are these "good fellows?" Who are these excellent creatures who are "nobody's enemies but their own?" Are they to be found among the great philanthropists of their age? When Howard passed years of his life in visiting the jails and prisons throughout Europe; when he braved the fever and the pestilence in dungeon and lazaretto; when he spent his fortune in the endeavour to relieve the miseries of the oppressed, to give comfort to the sick and health to the criminal; when he laid the foundations of those changes which purified our hospitals, and gave cleanliness, fresh air, and wholesome food to the criminals in the dungeon; was he called a "good fellow?" When periling his own life to give health to others, was he styled "nobody's enemy but his own?" Far from it: he was met by the sneers, and scoffs, and calumnies of the world; he was ridiculed as a dreamer, as a knight-errant; he came under the ban of officials for the trouble he was giving; he was on all sides thwarted and opposed; and it was left to a subsequent generation to recognise his worth, and erect a statue to his memory. When Father Mathew was devoting time and fortune to get rid of the monster vice of his country, instead of being hailed as a "good fellow"—"nobody's enemy but his own," all the "good fellows" of the land were loud in their outcry against him. They felt as if he was robbing them of their "occupation"—depriving them of their good name; for, singular to say, there is never an instance known of a man

obtaining the appellation of a "good fellow—nobody's enemy but his own," unless he is notorious for his love of strong potations. This seems to be the one thing necessary to obtain this title. He may possess wit, humour, earning, a ready flow of conversation, a never-failing good-nature, a love for human kind; but unless there is mingled with this "a voice of wickedness," unless his "impulses" are stronger than his "principles," unless he brings himself down to the level of meaner capacities by drowning his better propensities in drink, he never gains the title of a "good fellow—nobody's enemy but his own." There is a kind of contemptuous pity in the very sound of it. When we see a fine intellect and bright nature, calculated to attain the highest eminence, degrading and brutalizing itself, then it is that the common herd cry out, "he is a good fellow," as if they rejoiced to see a great spirit brought down to their own low level. And if we find he makes an effort to redeem himself—if, for instance, he casts off the habit of indulgence—then, although still retaining all his other qualities, and displaying them in still greater vigour, the tone of his quondam admirers is altered; he is no longer a "good fellow," but we hear him spoken of as one who was formerly a "good fellow—nobody's enemy but his own," but now he is a "milksop," a "prig," who can no longer take his glass like a man.

The irregularities and frailties of men of genius have done much to promote the fallacy which we condemn. The very brilliancy of one portion of their lives has served to blind us to the profligacy of the other. And men who cannot compete with them in intellect and wit, imagine they are imitating them when they rival them in the number of bottles they can drink, or when they exceed them in some act of profligacy. But if we look into the lives of those public men who have been famed as "good fellows," who have been the life and soul of society, without whose presence the richest dinners were a blank, we shall find that so far from being "nobody's enemy but their own," they spread difficulty and distress over all around them. It is with a faltering hand that we write the name of Sheridan; it is with a saddened spirit that we recall the memory of this "good fellow, nobody's enemy but his own." In him, we have the "dauntless bearing of the noble bird" that claims our admiration; the "musical bells" fastened to his jesses, which gives us so much delight; but, alas! in him, also, we have impulse overmastering principle, and leading him to evil, to ruin, and to death: the fire of his genius breaking out and flashing upon the world in spite of his undisciplined youth and half-trained mind: winning for himself a position amongst the highest and noblest in the land: the highest in station, the noblest in intellect. In all he attempted achieving the greatest success: as an orator, making the best speech; as an author, writing the best comedy, the best opera, the best farce; as the companion of wits, taking the highest place and outshining them all. But, withal, reckless, improvident, seeking inspiration in wine, and rewarding it with wine when it came, until reduced to a state of mental and bodily imbecility. Distress accumulating around him, but in the midst of distress preserving his political independence, and refusing to go into Parliament with the badge of a master upon him. His whole life one long paroxysm of excitement; his moral character disorganised; and, in the end, sinking under pecuniary embarrassments, amidst the ingratitude of those who had hailed him as a "good fellow—nobody's enemy but his own!"

"Oh, it sickens the heart to see bosoms so hollow,  
And friendships so false in the great and highborn;  
To think what a long line of titles may follow  
The relics of him who died, friendless and lorn!

"How proud they can press to the funeral array  
Of him whom they shunned in his sickness and sorrow;  
How baillifs may seize his last blanket to-day,  
Whose pall shall be held up by nobles to-morrow."

Another name arises to our memory as we stand by the grave of Sheridan, not so lofty in its nature, indeed, though gifted with even greater readiness of wit; not playing so prominent a part in public life, but a "good fellow," of infinite jest and merriment, who kept the table continually on the roar. If in Sheridan we see and grieve over the prostration of a noble mind, in Theodore Hook we have the man of bright parts, but with an earthiness about him that keeps him down to the level of a mere "good fellow:" the spirit of funkeyism is strong in him who could be content to be the lion of the night, to roar when called upon by assembled lords and ladies, and then to be as little thought of as the showman who manages the squeakings of Punch. In all his works there is wit that amuses, talent that dazzles, verbal jokes and practical jokes without end or number; but rarely a thought or sentiment that touches the feelings and goes home to the heart. It is all of the earth, earthy. So, too, in his political writings there was wit, and fancy, and pungent ridicule; but all tending to lessen our respect for human nature—to degrade man in the eyes of his fellow-men. No one good thing for the improvement of the human race was ever proposed but he had a gibe and sneer against it. He strove to crush education with a song, freedom with a sarcasm, character with a scandalous jest. And yet he maintained the reputation of a "good fellow," who was "nobody's enemy but his own" to the very last. It is pitiable, in his later years, to see this martyr to the world striving against the effects of his follies, and at the same time clinging to the folly itself; wearing out body and mind in an incessant round of excitement—one minute writing for the press, then priming himself with stimulants to meet the fatigues of amusing others; until, wearied, diseased, worn out, his effects seized by his own political friends to repay some Government debt, he sinks into the grave, unremembered by those he had wasted his powers to please—had sacrificed his life to amuse. The miserable end of a "good fellow—nobody's enemy but his own."

These good fellows had some redeeming traits; wit and intellect shed a halo over their career, which softened down its coarser points and attached

some hearts to them in spite of their errors and their vices. But there are men without one redeeming quality, who walk about the world as "good fellows;" who know no guide but their passions, whose life is merely different gradations in folly and in vice. Ardent young men who stake a fortune on the cast of a die, or the speed of a horse; who rush from the stable to the bottle, from the bottle to the gaming-table; who begin by being dupes, and end by becoming cheats; sinking gradually lower and lower in the scale, until, from being "good fellows" in good society, they come to be "good fellows" among black-legs and jockeys, and at last, perhaps, are "good fellows" only among billiard-markers and stable-boys. The Alleyne, who cheated Lieutenant Kennedy out of so large a portion of his fortune, were, doubtless, "good fellows," with the reputation of being "nobody's enemy but their own;" we can well imagine the reckless gaiety with which they booked the bets of their unlucky dupe, saw hundreds swell into thousands, and the right good fellowship with which the three brothers, soldiers and parson, combined to cheat the unsuspecting victim and divide the spoil among them. And the poor dupe, too; he was a "good fellow, nobody's enemy but his own," as long as he was dolt enough to play into their hands; but the sequel proves that these "good fellows" were thorough knaves, the enemies to all around them as well as to themselves. Their tricks and wickedness recoil upon themselves, as the curses in the Arabian proverb, which says—"Curses, like chickens, aye come home to roost."

And so it ever will be; wherever impulse is stronger than principle, wherever sensuality is more prized than intellectuality, the impulsive and the sensuous may be liked and admired for a time, may be hailed as "good fellows," and said to be "nobody's enemy but their own." But the end of their good fellowship is contempt; and while they have most effectually been enemies to themselves, they have also been inflicting the most grievous wrongs on society at large, and dealing the heaviest and severest blows on those who are nearest and dearest to them. The world of man is not like that of the limpet, confined within the compass of its own shell. He cannot be his own enemy without inflicting harm on his neighbours; he cannot play the part assigned to him in society badly, without damaging all those around him. And the higher the abilities with which he is endowed, the more musical the bells upon his jesses—the greater the damage he inflicts. "It hath oftentimes," says a modern writer who adopts the name, and copies the style of Sir Thomas Browne, speaking of the adage we have been commenting on—"It hath oftentimes been matter of wonderment to me, how many phrases do come to be received as current coin in the world, which for certain were never stamped in the mint of either religion or reason; and among these brass shillings of society, I know none that better deserveth to be nailed to the counter than the one above placed; for many an idle young man hath, before now, found it the last in his pocket, and haply hath exchanged it for a pistol-bullet, thinking himself a gainer by the bargain."

## THE WANDERING BEE.

BY MARY BENNETT.

A BEE in the wild wood one morning awoke,  
And left its home in the hollow oak  
Ere the dove began to coo;  
Ere the young rooks were on the wing,  
This honey-bee, a careless thing,  
Rov'd hither and thither, murmuring  
All the wild wood through.

Often he div'd in greeny glooms  
For honey from the sleepy blooms  
Of wood flowers 'mong the moss.  
Then off he flew with swift wild flight,  
Full of gay hopes and fond delight:  
He little thought before the night  
That he would suffer loss.

Sometimes he mounted to the sky,  
Then o'er the wide green fields would fly,  
Singing away the hours!  
And now he follows—thoughtless bee!—  
A cart that jogs on merrily,  
Laden with plants of fragrancy,  
And many beautiful flowers.

The cart jogged on toward the town,  
And till the sun at eve went down  
The wheels found no repose.

All through the crowded city vast,  
The flower-cart with its sweet load pass'd,  
Till plants and flowers are sold at last,  
And home the gardener goes.

The bee had followed to the town,  
The fragrant flower-cart, up and down,  
Till chill'd and faint was he.  
Fast fell the rain—close crouch'd he lay  
Within a lily bell of May—  
O how he wish'd he were away,  
At home in the old oak tree!

Where all his dear companions dwell  
In honied hive and well-stor'd cell,  
Their voices sure he hears!  
The squirrel leaps, loud caws the rook;  
Merrily flows the restless brook;  
In its waters bright he loves to look,  
Whilst there his form appears.

Vain visions of delight—he dies!  
Struck from the lily flower, he lies  
(Wood, hive, no more he'll see  
Crush'd low where ruthless footsteps press.  
Thus, children, from inauspicious  
Fools may come past all redress;  
So found the Wandering Bee,

**BURKE'S FONDNESS FOR CHILDREN.**—Burke was so very partial to children that he would play at teetotum and push-pin with them, and apparently take as much delight in the stories of *Jack the Giant Killer*, and *Tom Thumb*, as themselves. "Half an hour might pass," says Murphy, "during which he would keep speaking in such a way that you could see no more in him than in an ordinary man, good-naturedly amusing his young auditors; when some observation or suggestion called his attention, a remark of the most profound wisdom would slip out, and he would return to his teetotum. It is related of him, that one day, after dining with Fox, Sheridan, Lord John Townshend, and several other eminent men, at Sheridan's cottage, he amused himself by rapidly wheeling his host's little son round the front garden, in a child's hand-chaise. While thus employed, the great orator, it is added, evinced by his looks and activity that he enjoyed the sport nearly as much as his delighted playfellow.

## ONWARD!

**SUMMARY TELEGRAPH BETWEEN ENGLAND AND IRELAND.**—Active measures are about to be taken for carrying out this species of communication between England and Ireland. It will require about sixty miles of cable, or three times the length of that between Dover and Calais.

**ELECTRO-TELEGRAPHIC PROGRESS.**—A gentleman in Newport, Kentucky, is perfecting an application of electricity for propelling a box containing letters over wires, from place to place, on the telegraphic principle. It is said that the experiment over wires of 600 yards has worked successfully.

**BRICKS FOR THE MILLION.**—At Stourbridge, it is reported, a machine is at work producing perfect bricks from untempered clay, at the rate of forty-eight a minute. The bricks are said to be of such consistency as to be immediately fit for the kiln. It is added that there is little doubt the machine would produce them at the rate of 100 a minute, if required.

**IRON PAVEMENT.**—We some short time since noticed an experiment which had just been made at Glasgow, under a new patent, by Mr. Allan, of Spring Bank Iron Works. The pavement laid down has now had a trial of several weeks' duration, and the result is reported to be favourable to its adoption in the place of granite pavement, on the score of first cost, at least, and of adaptation to its purposes, if not also of durability, which has not yet been sufficiently tested. It is grooved in zig-zags, and thus prevents the horses' feet from slipping.—*Builder.*

**NEW FEATURE IN STEAM NAVIGATION.**—The application of the screw-propeller, as an auxiliary power to sailing vessels, promises to be greatly extended and simplified by the introduction of a portable screw-propeller, patented by Mr. Winshurst, the ship-builder, which, it is stated, can be applied to sailing vessels at a moderate expense, and possesses the advantage of being shipped or unshipped in a few minutes. In conjunction with the screw, an engine has also been patented, said to possess great advantages as a means of applying steam power to the working of the propeller. For the purpose of extending the advantages of Mr. Winshurst's invention a company is now in course of formation.

**TOWAGE BY STEAM ON CANALS.**—An interesting series of experiments, originating in a desire to test the applicability of steam power to towing purposes, has recently been made by the Directors of the Grand Junction Canal Company. The locality selected for the purpose was the vicinity of West Drayton. Eight deeply-laden brick-barges, each containing thirty tons of brick, equivalent in the whole to 240 tons of dead weight, were attached to a steam-tug, and conveyed from Bull's-bridge to Paddington, at the rate of two-and-a-quarter miles per hour, a speed equal to that attained by the brick-boats at present towed by horses on the canal. The line of barges on this occasion extended over a length of 79½ feet, presenting a sight novel in canal navigation. The results were satisfactory, and it was universally admitted that much benefit to canals must result from the adoption of this economical motive power.

**GREAT RAILWAY BRIDGE AND VIADUCT.**—The break that occurs at Chepstow in the railway communication on the South Wales Railway, is not likely to be soon filled up by the completion of the great bridge now in course of erection over the Wye; but, though no time can be fixed with certainty as to the period of its completion, still it is rapidly progressing. It will acquire a fame equal to that of the Britannia or Menai-bridge. The whole will be made of wrought iron, and will combine the principles of the suspension with those of the tubular bridges. Including the viaduct, the bridge is 623 feet in length; the span, or suspended part, being 290 feet. There are two separate roadways, each being perfectly independent of the other, and their height is 70 feet over the river Wye at high water-mark, so that vessels can pass under. The roadways of the bridge are formed of iron, put together in plates.

**IMPROVEMENTS IN LONDON.**—To the various other proposed and commenced improvements in London—railways, streets, squares, and terraces—we have now to add rumours of two new bridges across the Thames. A notice of motion is on the London Corporation books—"That it be referred to the Bridge-house Estates Committee to cause to be surveyed the property running parallel with the Old Change down to the river side, and in a direct line with the eastern side of St. Paul's Churchyard, and to report to this court the probable cost of a new street to be constructed in that direction, such street to be at least sixty feet wide; and also to procure an estimate of the cost of a new stone bridge across the Thames, to be communicated with by the suggested new street." Rumour also states that the South-Western Railway Company are considering a project for throwing a new bridge across the Thames, as a free road for their passengers.—*Athenæum.*

**STREET RAILWAYS FOR HORSE-TRAINS.**—A new project has been started whereby it is proposed, not only to centralize the metropolitan railway traffic, but also that of the omnibuses, in such a way as to virtually clear the streets from much confused and conflicting traffic, while, at the same time, affording increased accommodation to the public. This project contemplates simply the laying down of lines of rail flush with the streets, to radiate from the centre of the metropolis through all the principal lines of thoroughfare, and of course to all the railway stations, the gauge being the ordinary one suitable to railway carriages, by a modification in the construction of which it is proposed to adapt them also for street traffic, when detached one by one, and driven off by horses from each station towards the centre, stations being set down, at least, every quarter of a mile along the course.—*Builder.*

## THE GLASGOW ENIGMA.

Good people of Glasgow, of sannie Scotch breed,  
Who breathe the keen air of the "north of the Tweed,"  
Perhaps you will try these strange queries to scan,  
They've been scribbled for yow by a bonnie Scotchman.  
While the lamp giveth light, and the burning coal flames,  
Yow'll be pleased to unfold this Enigma of names.

1. Of all your good townsmen who stands the first one?
2. And who's no relation, and yet is his son?
3. Who seemeth a man, but is only a pain?
4. Who may be called those that bring gambles their gain?
5. Who might supply shavings to light people's fires?
6. And who for a battle attire served our sires?
7. Say who could jump backwards with very great grace?
8. And who has found many an unwelcome place?
9. Say who in processions your standard should bear?
10. And who are most sadly deficient of hair?
11. Say who can from robbers your houses secure?
12. And who are most heard when folks call at your door?
13. Say who is a serpent in name, not in fact?
14. And whose trade from his name will nothing detract?
15. Say whose name represents a studious girl?
16. And whose may imply an illiterate churl?
17. Say which of your neighbours should carry another?
18. And who in a walk takes more room than another?
19. Who'd make famous scavengers? Who are really untrue?
20. And who would be found very painful by you?
21. Which one of your neighbours in another might hide?
22. And who of your unlucky townsmen are tried?
23. Who do your shopkeepers most like to see?
24. And who do those shopkeepers most like to be?
25. Say which of your people are most to be loved?
26. And by whom may a barrow be easily shoved?
27. Say who gently falleth down every night?
28. And who hath the power of sparkling bright?
29. Say who in America would be received?
30. And who have full often our hunger relieved?
31. Say who can an untruth most truthfully tell?
32. And who will abide with you for a long spell?
33. There's one of your townsmen yow'd all like to get,
34. And one that you often we rise in a jet!
35. There are some in demand on the first of September;
36. And others that spendthrifts should ever remember!
37. There are some that are wanted on other folks' heads;
38. And some that are heard where the feet in their treads.
39. There are some that the maidens are all very fond of;
40. And some that a miser would honour the bond of;
41. There are some that the ladies are sure to pursue;
42. And a doctor whose name is quite suited thereto.
43. There's a noted assembly in London will name
44. A host of your townsmen—so many the same.
45. There are some that Britannia is oft said to rule;
46. And some that are gloomy as dunces at school.
47. There are ladies that bear quite a masculine name;
48. And some that are wholly protected from shame.
49. Some are quite cheerful, and some are quite witty;
50. Some like the spring flowers, simple and pretty.
51. Some are like birds that are kept for mere show;
52. And some bid the mists of November to go.
53. Some always are gentle, though ever so rude;
54. And others are much too polite to intrude.
55. One though a man is not man at all;
56. Another is like one who once had a fall.
57. One gives his son his own name on the head;
58. And another is known to be very well read.
59. One is well known to be full of conceit;
60. And one shows the same by his tread in the street.
61. One seems to walk in a path red with gore;
62. And one seems to have fallen therein, head before!
63. One seems in himself a sort of Enigma;
64. Another expresses a sort of a stigma.
65. One, were he insane, would be stark staring mad;
66. And one finds it impossible to become bad.
67. It would take three of one sort to make a whole man;
68. Whilst another might yield a very good ham!
69. One may be relied on for all that he says;
70. Whilst another talks nonsense the whole of his days.
71. One looks at the girls in a very rude way;
72. Whilst one we may judge is quite honest at play.

So now, bonnie Scotchmen, in your festive games,  
Try to unravel this puzzle of names.  
You have Potts in some number, and of Porter a plenty;  
Of Sparrows and Ducks from a dozen to twenty.  
You've men of all colours, White, Black, Brown, and Green,  
But the best of the puzzle remains to be seen.

## ANSWER TO THE LONDON ENIGMA.

- |                                      |                              |   |
|--------------------------------------|------------------------------|---|
| 1. Cheapside.                        | 15. Pump Court.              | 31. Lumber Court.   |
| 2. Fleet Street and Fetter Lane.     | 16. Cold Bath Fields.        | 32. Bar-clays brewery, where straw was thrown on Hay-nau! |
| 3. Anson Corner.                     | 17. Cornhill.                |   |
| 4. Goodmen's Fields.                 | 18. Blackman Street.         | 33. Crooked Lane.   |

| 9. Mile End.                         | 23. Nunhead Cemetery.        | 38. Bride Lane.   |
| 10. Hare Wood Street.                | 24. Horse-ly-down.           | 39. School Square.  |
| 11. Henrietta Street (Henry-street). | 25. Hounds-ditch.            | 40. Wood-stock Street.                                    |
| 12. Cannon Street (Lane).            | 26. Black and Whitefriars.   | 41. Batter-sea.   |
| 13. Bandy-leg Walk (Gravel).         | 27. Bury Street.             | 42. Foot's Corner (Old Palace Yard).                      |
| 14. Petticoat Lane.                  | 28. Windmill Street.         |   |
|                                      | 29. Rutland Road.            |   |
|                                      | 30. Cripplegate for Newgate. |   |

SIR KENNETH.

Sir Kenneth rode forth from his castle gate,  
On a pouncing steed rode he;  
He was my first of large estate,  
And he went the Lady Ellen to see.

The Lady Ellen had been wedded five years,  
And a goodly wife proved she;  
She'd a lovely boy, and a lovelier girl,  
And they sported upon their mother's knee.

Sir Kenneth well knew that the lady was true,  
But a crafty foe was he;  
And he hated fiercely her rightful lord,  
That so lov'd by the beautiful Ellen was he.

Sir Kenneth dismounted and donn'd my second,  
And seemed a monk to be;  
And with pious face he knock'd at the gate,  
And asked the Lady Ellen to see.

Then forth from the gate the stout porter he  
Came:

"Monk, what can thy errand be?"  
"I come on a mission of mercy," he said—  
"The Lady Ellen, pray where is she?"

But to hide himself, with sword in hand,  
Where none might him or his bright  
blade see.

Sir Kenneth he set aside my second,  
And drept upon his knee;  
And the lady she cried for help aloud,  
And the swordsman in rushed he.

Sir Kenneth he struggled, but 'twas in vain,  
A prisoner soon was he:  
Strip'd of my whole, they cast him down,  
In a dungeon evermore to be.

The Lady Ellen at her morning prayers,  
Now lowly bends her knee:  
Come on, and when she the cloister leaves,  
You shall the pious lady see."

The lady forth from the cloister came,  
And her lord there chanced to be;  
And when the monk in lying accents spoke,  
Her lord suspected no monk was he.

So he called a trusty swordsman, and  
Bade him by his mistress be;

ENIGMAS.

1. TAKE one from nine, add nothing to it,  
2. A useful beast you'll see;  
3. And what is mighty strange—the number ten  
Instead of eight will be.
- 2.
1. WHEN divided by nature, 'tis my friendly part,  
To unite my good neighbours by labour and art.  
Now, my outward appearance is stately and fine,  
I'm as firm as a rock, and straight as a line.  
2. But doubtful within, oft destruction I find,  
When in warfare the foe is pursuing behind.  
For to friend or opponent, I lend equal aid:  
Thus the routed in battle, of me are afraid.  
No wonder I'm sacrificed then to their ends,  
As on my ruined state, their safety depends.  
For although my ark-ways, long protect me from harm,  
I, like many great wage, sink at last through alarm.
- 3.
1. ON happy occasions, when people rejoice,  
Very seldom I fail to raise my strong voice;  
And spread the good tidings around, far and near,  
As loud as I can for my neighbours to hear.  
On great public events, I'm sensibly moved,  
And always my temper is sure to be proved.  
For, like a good Christian, I often have had,  
To enlighten the gay, and to mourn with the sad:  
2. And sometimes collect, as far as I am able,  
A party of friends to sit down at table.  
3. The last thing I do is to call for a light,  
The company then wish each other good-night.  
[The whole contained in No. 11.]

FARMER HODGE.

My first was one of a hardy breed,  
A capital help in time of need,  
And always ready for work or speed.  
Trot, trot!

My second (reversed) was a farming  
man;  
He had a wife, and her name was Nan;  
After her the pigs and poultry ran,  
Trot, trot!

My whole was exciting an agitation,  
And stirring the masses throughout the  
nation,  
By a sort of political peregrination—  
Trot, trot!

My second I went out and said to my  
first,  
(Remember my second throughout is  
reversed)—  
"The demagogues they are doing their  
worst,  
Trot, trot!

"Come, finish the corn that is now in  
your 'trot!'  
We'll teach the Radicals how to scoff!  
So let us both to the town be off."  
Trot, trot!

My first and my second the town soon reach'd,  
And came to a place where a radical preached;  
The men hurra'd! and the women screech'd!  
Trot, trot!

My first the noise couldn't understand;  
My second grew nervous heel and hand,  
And over my first lost all command.  
Trot, trot!

My second was ruddy, short, and fat;  
He lost the reins, and he lost his hat,  
And the people ran on it and trampled it flat!  
Trot, trot!

My first he made a terrible plunge;  
My second he made an awkward lunge,  
And fell in the pond, where he soak'd like  
a sponge.  
Trot, trot!

Then my second he got up quite dismay'd,  
Saying my whole was a rascally blade,  
And grumbling that he in the pond had  
been laid.  
Trot, trot!

ENIGMAS.

- 4.
1. At most weddings I'm present as well as the bride,  
And the contract I solemnly seal and decide:  
2. And sometimes on the death of a friend I appear,  
To remind the survivors of one they held dear,  
The wise and the simple—the poor and the great,  
3. I sometimes chain together, according to fate,  
In short, the whole world, by Almighty decree,  
Is confined by my limits, in ev'ry degree.
- 5.
- READ me backwards or forwards, I still am the same,  
Divide me in two, I turn crazy;  
If you put me together, divide me again,  
I'm a mother bereav'd, you may say.  
Now join me together again, if you please,  
Then cut off my head in a hurry;  
You'll find I'm a man and a father, with ease,  
But don't put yourself in a hurry.  
Return me my head, you will find me once more  
A lady rever'd though detected:  
Nor crazy, nor many, though from me you tore,  
Ev'ry limb that first made me respected.

## OUR CORNER CUPBOARD!

Every virtue carried to excess approaches its kindred vice.  
 There is no condition that does not sit well upon a wise man.  
 Amusement is the happiness of those who cannot think.—*Pope*.  
 Bounce is not industry; any more than impudence is courage.  
 Falstaff could do little mischief, if it did not gain the credit of truth.  
 The best adhesive label you can put on luggage is to stick to it yourself.  
 Nothing ever touched the heart of a reader that did not come from the heart of a writer.

When is a mason more than a mason? When he's a building. When is a smith less than a smith? When he's a filling.

This regard one shows economy, is like that we show an old aunt who is to leave us something at last.—*Shenstone*.

Why cannot a gentleman legally possess a short walking-stick? Because it never can be long to him.

There are but few who know how to be idle and innocent—by doing nothing we learn to do ill.

The worst education which teaches self-denial is better than the best which teaches everything but that.

Why is Charybdis like a vicious donkey? Because it is an eddy particularly to be avoided.

To pray together, in whatever tongue or ritual, is the most tender brotherhood of hope and sympathy that men can contract in this life.

The Chinese have a saying, that an unlucky word dropped from the tongue cannot be brought back again by a coach and six horses.

The familiar parting expression, "Good bye!" means "God be with you!" "Adieu!" signifies "To God," or "God protect you."

A country editor thinks that Columbus is not entitled to much credit for discovering America, as the country is so large he could not well have mis-  
 sed it.

A Yankee, who has just commenced the study of Italian, wants to know how it is, if they have no *to* in that language, that "them chaps spells waggan?"

An Irish guide told Dr. James Johnson, who wished for a reason why echo was always of the feminine gender, that, "May be it was because she always had the last word."

When travelling, put your watch and wallet at night into one of your stockings, and then place the stocking under your head. It will then be impossible to leave them, unless you have been accustomed to go barefoot.

A celebrated poet at one time advertised that he would supply "Lines for any occasion." A fisherman sought him shortly after, and "wanted a line strong enough to catch a porpoise."

An American paper says, "We are anxious to collect the autographs of all our subscribers, and therefore request all, whether in city or country, to enclose the amount due in a letter, with their several signatures."

The Duchess of Marlborough was pressing the Duke to take medicine, and with her usual warmth said, "I'll be hanged if it does not prove serviceable." Dr. Garth, who was present, exclaimed, "Do take it then, My lord duke, for it must be of service in one way or the other."

If twenty-seven inches of snow give three inches of water, how much milk will a cow give when fed on Swedish turnips? Multiply the flakes of snow by the hairs of the cow's tail, then divide the product by a turnip, add a pound of chalk, and the sum will be the answer.

A man would do well to carry a penoil in his pocket, and write down the thoughts of the moment. Those that come unsought for are commonly the most valuable, and should be secured, because they seldom return.—*Lord Bacon*.

A cobbler at Leyden, who used to attend the public disputations held at the Academy, was once asked if he understood Latin. "No," replied the mechanic, "but I know who is wrong in the argument." "How?" replied his friend. "Why, by seeing who is angry first."

"Are you an Odd Fellow?" "No, sir; I've been married for a week." "I mean, do you belong to the Order of Odd Fellows?" "No, no; I belong to the order of married men." "Mercy, how dull! Are you a mason?" "No, I am a carpenter." "Worse and worse! Are you a Son of Temperance?" "Bother you, no; I am a son of Mr. John Gosling."

What so foolish as the chase of fame?  
 How vain the prize! how impotent our aim!  
 For what are men who grasp at praise sublime  
 But bubbles on the rapid stream of time,  
 That rise and fall, that swell, and are no more.  
 Born, and forgot, ten thousand in an hour!—*Pope*.

According to Camden and Spelman, the ancient English penny was the first silver coin struck in England, and the only one current among our Saxon ancestors. In the time of Ethelred it was equal in weight to our three-pence. Till the time of King Edward I. the penny was so deeply indented that it might be easily broken, and parted, on occasion, into two parts—these were called *halfpence*; or into four, these were called *four things*, or *farthings*.

## OUR MEMORANDUM BOOK.

ALWAYS do as the sun does—look at the bright side of everything, it is just as cheap, and three times as good for digestion.

Discussion.—Truth cannot be found without some labour and intention of the mind, and the thoughts dwelling a considerable time upon the survey and discussion of each particular.

Wisdom is a fox who, when hunting, will at last cost you the pain to dig out; it is a sheep, when by how much the wool has the thicker, the homelier, and the coarser coat; and whereas to a few stout fellows, the maggots are best. It is a sick pocket, when the deeper you dig, the more you find it the sweeter. Wisdom is a box whose contents are numerous and consider, because it is attended with no egg. But what it is, what unless you choose with judgment, may cost you dear, and for you will nothing but a worm.—*Swift*.

Pleasures are like poppies spread;  
 You seize the flower, its bloom is shed;  
 Or like the snow-falls in the river,  
 A moment white—then melts for ever;  
 Or like the borealis race,  
 That flit ere you can point their place;  
 Or like the rainbow's lovely form  
 Evanescent amid the storm—  
 Nae man can tether time or tide.—*Burns*.

SCHOOL FALSEHOODS.—The scholar who plays truant is guilty of falsehood. He intends to deceive both his teacher and his parents in the very act of truantship. But this is not all. To avoid reproof, he gives false pretences, equivocates, and often, in the end, is guilty of the downright lie. And more than this, the habitual truant keeps his mind in a state ready to lie the whole time, and thus injures his sense of truth and prepares himself for the commission of other crimes. If a written excuse is presented at a time different from that which the parent intended; it is an *actual* lie. Another way of lying is, when a scholar procures some person to work out a problem or to write a composition for him, and then presents it as the product of his own labour. The prompting of a fellow-pupil during recitation comes under the same head. Scholars perhaps think they speak the truth when they say, "I know the answer, but cannot say it." For no one can be said truly to have an idea until he can express it.

MALE FLIRTATIONS.—A man has no right to sport with the feelings of a young woman, though he stop short of positive promises. Vanity is generally the tempter in this case; a desire to be regarded as being admired by the women—a very despicable species of vanity, but frequently greatly mischievous, notwithstanding. You do not, indeed, actually, in so many words, promise to marry; but the general tenor of your language and deportment has that meaning. You know that your meaning is so understood; and if you have not such meaning—if you be fixed by some previous engagement with, or greater liking for, another—if you know you are here sowing the seeds of disappointment—and if you, keeping your previous engagement or greater liking a secret, persevere, in spite of the admonitions of conscience, you are guilty of deliberate deception, injustice, and cruelty; you make to God an ungrateful return for those endowments which have enabled you to achieve this inglorious and tummy triumph; and if, as is frequently the case, you glory in such triumph, you may have person, riches, talents, to excite envy, but every just and humane man will abhor your heart.—*Cobbett*.

HUMILITY.—Bishop Jeremy Taylor, whose writings cannot be too much studied, says of humility that it is like the root of a goodly tree, thrust very far into the ground, and this we may know by the goodly fruits which appear above ground. Of these fruits the worthy Bishop sums up seventeen varieties. The catalogue (with slight abridgment) in some of the articles, is as follows:—1. The humble man trusts not to his own discretion, but in matters of concernment relies rather upon the judgment of his friends, counsellors, or spiritual guides. 2. He does not pertinaciously pursue the choice of his own will. 3. He does not murmur against commands. 4. He is not inquisitive into the reasonableness of indifferent and unimportant commands, but believes their command to be reason enough in such cases to exact his obedience. 5. He lives according to a rule, and with compliance to public customs, without any affectation or singularity. 6. He is meek and indifferent in all accidents and chances. 7. He patiently bears injuries—"verum humilium patientia ostendit." He is always unsatisfied in his own conduct, resolutions, and councils. 8. He is a great lover of good men, and a praiser of wise men, and a censurer of no man. 9. He is modest in his speech and reserved in his laughter. 10. He fears when he hears himself commended. 11. He gives no pert or saucy answers when he is reproved, whether justly or unjustly. 12. He loves to sit down in private, and, if he may, he refuses the temptation of offices and new honours. 13. He is ingenuous, free, and open in his actions and discourses. 14. He mends his fault, and gives thanks when he is admonished. 15. He is ready to do good to the murderers of his fame, to his slanderers, backbiters, and defectors. 16. He is contented to be suspected of indiscretion, so he may really be innocent, and not offensive to his neighbour, nor wanting to his just and prudent interest. These, it may be said, are very many fruits to spring from the one root of humility. But this is of so very great and excellent a virtue that it draws with it most others.

Just Published, with Illustrated Title,  
**THE FESTIVE QUADRILLES.**  
We have no hesitation in saying these Quadrilles  
will be the favourite of the season. — *Family Friend*.  
London: H.oulston & Stoneman, 65, Paternoster Row.

Useful and Interesting Miscellany, is now ready, Price 2s. 6d.  
London: Houlston & Stoneman, 65, Paternoster Row.

With No. 25 of *The Family Tutor*, will be presented,  
Gratis, a beautiful Allegorical Engraving, 22 inches by  
18 inches, illustrative of the Scriptural Maxim—  
"TRAIN UP A CHILD IN THE  
WAY HE SHOULD GO."  
Designed and Engraved by George Meason.  
The Engraving will form a Handsome Present, em-  
inently adapted for extensive use by the Promoters of  
Education. The execution of the Design will be wholly  
unsectarian. Ready January 1, 1852.  
London: Houlston & Stoneman, 65, Paternoster Row.

Now Ready,  
**FAMILY PASTIME**, Vol. II., price  
1s., containing a Christmas Tale, and a New Assort-  
ment of Enigmas, Charades, Relucses, Conundrums, &c.  
In this Volume, the whole of the *Family Friend* Prize  
Enigmas up to the end of 1851 will be inserted, with their  
Solutions.  
London: Houlston & Stoneman, 65, Paternoster Row.

**EMPLOYMENT GIVEN.**—Ladies and  
gentlemen may profitably occupy leisure time by ac-  
quiring the elegant ART OF ORNAMENTING PAPER  
MACHINE, in pearl, gold, &c., as practically imparted on  
an improved system, by which £2 a week can be realized.  
Premium one guinea. As the number is limited, those  
desirous of engagements should make early application to  
Mr. Wright, 20, Tavistock street, Covent Garden.

**DR. LOCOCK'S PULMONIC  
WAFERS** give instant relief and a rapid cure of  
asthma, coughs, and all disorders of the breath and lungs.  
To singers and public speakers they are invaluable for  
clearing and strengthening the voice. They have a plea-  
sant taste. Price 1s. 1d., 2s. 6d., and 11s. per box. Sold  
by all Druggists.  
Also Dr. LOCOCK'S ANTIBILIOUS WAFERS, a mild  
and gentle Aperient Medicine, having a most agreeable  
taste, and of great efficacy for regulating the secretions  
and correcting the action of the Stomach and Liver.

**HOLLOWAY'S PILLS** A SAFE and  
CERTAIN CURE FOR DROPSY.—This insidious  
disease arises from various causes, and frequently from  
some obstruction to the free circulation of the blood,  
generally exhibiting itself by a swelling of the feet and  
ankles, ascending gradually until it affects the whole of the  
body. Those who are thus afflicted should immediately  
take Holloway's Pills. This invaluable medicine purifies  
the blood, and invigorates the system, so that many of the  
worst cases of Dropsy have been cured by its means.  
Females at the turn of life should have recourse to these  
excellent Pills, being the safest and most effectual remedy  
ever used. Sold by all vendors of medicines, and at  
Professor Holloway's Establishment, 244, Strand, London.

**MONEY LENT ON PERSONAL  
SECURITY**, for two years, one year, or six months.  
Registered pursuant to the 38th section of 7 and 8 Vic-  
cap. 110: Sums from £5 to £200 may be obtained three  
days after application, repayable by weekly or monthly in-  
stallments of 3s. or 4s. per £5 per week; and sums of  
£25 onwards at 1s. or 1s. 6d. per week. Other terms by  
special arrangement. This office being open daily, the  
unpleasant necessity of applicants having to explain their  
affairs before a large number of persons is entirely avoided.  
—FINSBURY LOAN OFFICE, 144, St. John-street,  
road, (between the Adelphi and New), N.B. If more than twenty  
rupees from London, a week's notice will be necessary  
before the money can be advanced.

## THE HOME COMPANION PORTFOLIO.

We strongly recommend to our Subscribers the ad-  
option of the "Home Companion Portfolio," for the  
preservation of the Weekly Numbers or the Monthly  
Parts. These Portfolios are made with elastic cords at  
the back, to hold Fifty-two Numbers, or Twelve Monthly  
Parts, which comprise one Volume. At the end of each  
year they may be taken out and bound, and the Portfolio  
may be employed to preserve the Numbers or Parts of the  
succeeding Volume. The Price is Two Shillings. The  
outlay will be saved by the preservation of the Numbers,  
which, heretofore may be difficult to obtain. The Por-  
tfolio is beautifully embossed, and illuminated with silver,  
by a new invention introduced by LINTON, SOH, &  
HOBBS. It is an ornament for the drawing-room table.—  
Order of any Bookseller.

The only memento of the Great Exhibition produced  
within its walls.

Just published, in Two Volumes, price 5s. each, elegantly  
bound in cloth and gold, with a View of the Crystal  
Palace gilt upon the cover.

**THE PARLOUR MAGAZINE**  
OF THE LITERATURE OF ALL NATIONS, Printed in  
the Crystal Palace, Hyde Park, at Machines No. 153, and  
162, Class 6.

We have no doubt that the two volumes of the PARLOUR  
MAGAZINE will be treasured by many future generations.  
People flocked to the Crystal Palace after its close, and  
eagerly bought up, at enormous prices, articles that had  
been exhibited there, that they might possess some me-  
mories of the Exhibition. We supply not only a work ex-  
hibited there, but one actually produced by machinery  
within its crystal walls, and in the view of millions of spec-  
tators. The value of our book will therefore increase with  
the advance of years, until it will be regarded as a rarity  
and a treasure.

These volumes contain translations of Literary Treasures  
from the

CHINESE.	HUNGARIAN.	POLISH.
DANISH.	INDO-CHINESE.	RUSSIAN.
DUTCH.	IRISH.	SPANISH.
FRENCH.	ITALIAN.	SWEDISH.
GERMAN.	MEXICAN.	TARTARIAN.
GREEK.	MORLACHIAN.	WELSH, &c.
	PERSIAN.	

With original ENGLISH Contributions by celebrated  
authors, and choice adaptations from the American. Each  
Volume is embellished by a superior Steel Engraving, and  
by numerous Woodcuts.

**RE-ISSUE OF THE PARLOUR MAGAZINE.**  
In order to meet the wishes of numerous persons of the  
middle and working classes, who, during the excitement  
of the Exhibition, were unable to obtain the mementos of  
that great event, the work will be re-issued in Weekly  
Numbers, price 2d., and Monthly Parts, price 3d. or 10d.  
Order of any Bookseller.  
London: Houlston & Stoneman, 65, Paternoster Row.

**THE QUADRUPLE INDEX.**—The  
Fourth Volume of the *Family Friend* contains a  
Quadruple Index, embodying upwards of Three Thousand  
and Five Hundred References to the Contents of the Work.  
Persons wishing to judge of *The Friend*, may receive  
copies of this Index Gratis, by applying, post paid, to  
Mr. J. BENNETT, 69, Fleet Street, London.

**EXQUISITE OIL PICTURES.**—Six-  
pence each. KNIGHT & FOSTER, agents for the sale  
of Baxter's Oil Pictures. They are perfect gems of art:  
no lady's scrap-book can be perfect without them. A few  
of the subjects are named below, but an enlarged list will  
be sent on application:—Windsor Castle—Prince of Wales  
—Lover's Seat, Hastings—Dripping Well, Dutton—Bouquet  
of Flowers—Ben Nevis—Tarentola Dance—Tintern Abbey  
—Welsh Drovers—Nedley Abbey—Bala Lake—Brougham  
Castle—Water-mill on the Wye—Llangollen—Lake Como  
—Warwick Castle—View on the Rhine. Two sent free  
by Post for 14 Stamps.  
When the value of Five Shillings is taken, they will be  
sent post free.—The above are each neatly mounted on  
Drawing Paper, 7½ by 5½. KNIGHT & FOSTER, Stationers,  
No. 5, Eastcheap, London.

**PRIZE MEDAL FOR STEEL PENS.**  
This was given to KNIGHT & FOSTER, the celebrated  
Pen Manufacturers, of Eastcheap. Their Pens have been  
for several years extensively used in the Bank of England,  
Post Office, and Custom House, London, and in addition  
to the already brilliant success that has rewarded the Pro-  
prietors, for the care bestowed on the Manufacture of these  
Pens, they have gratification to announce that to them  
was awarded the

**PRIZE MEDAL AT THE GREAT EXHIBITION**,  
for their great Excellence, Superior Merit, Utility and  
Cheapness.—See Class 22—680, and 694: also Lord Can-  
ning's Report.  
Sold by most stationers and booksellers. 1s. per box of  
5 dozen and holder, or direct for 15 stamps from the Pro-  
prietors, KNIGHT & FOSTER, Stationers, 5, Eastcheap,  
London.

**TUTOR'S ENGLISH GRAMMAR** is  
illustrated by numerous spirited Wood Engravings,  
by which a dry and tedious study is made peculiarly easy  
and interesting. Price 2s. 6d.  
London: Houlston & Stoneman, 65, Paternoster Row.

Now publishing.  
**GRANDFATHER WHITEHEAD'S  
CATECHISMS**, compiled to make the acquirement  
of Useful Knowledge by the Young, and by Beginners of  
all Ages, easy and pleasing. The Catechisms are pub-  
lished Monthly, each containing 32 pages, crown 8vo.,  
illustrated by numerous Diagrams. The price of each  
Catechism will be 2d., stitched in a neat Wrapper. The  
whole Series, bound in cloth, 2s. 6d.

## Editor's Note-Book.

**THE EVIL OF A BAD TEMPER.**—A bad temper is a curse to the possessor, and its influence is most deadly wherever it is found. It is allied to martyrdom, to be obliged to live with one of a complaining temper. To hear one eternal round of complaint and murmuring, to have every pleasant thought scared away by their evil spirit, is, in truth, a sore trial. It is like the sting of a scorpion—a perpetual nettle, destroying your peace, rendering life a burden. Its influence is most deadly; and the purest and sweetest atmosphere is contaminated into a deadly miasma whenever this evil genius prevails. It has been said truly, that while we ought not to let the bad tempers of others influence us, it would be as unreasonable to spread a plaster of Spanish flies upon the skin, and not expect it to draw, as to think of a family not suffering because of the bad temper of any of its inmates. One string out of tune will destroy the music of an instrument, otherwise perfect; so, if all the members of a neighbourhood and family do not cultivate a kind and affectionate temper, there will be discord and every evil work.

**TO PRESERVE FRUITS OR FLOWERS THE WHOLE YEAR WITHOUT SPOILING.** W.W.—Mix 1 lb. of nitre with 2 lbs. of bole ammoniac and 3 lbs. of fine common sand; then, in dry weather, take fruit of any sort, which is not fully ripe, allowing the stalks to remain, and put them one by one into an open glass till it is quite full; cover the glass with oiled cloth closely tied down. Put the glass 3 or 4 inches down in the earth, in a dry cellar, and surround it on all sides to the depth of 3 or 4 inches with the above mixture. The fruit will thus be preserved quite fresh all the year round.

**EXCESSIVE FROSTS.** T.R.S.—Albert Crants relates that the German Ocean was frozen over in the year 1323, so that men passed on foot from Lubeck to Denmark, and to Prussia by sea, ice being erected on the ice in such places as were commodious. In 1399, during the whole of the winter, persons crossed on foot from Lubeck to Sunden; and again, in 1523, horsemen went from Gedan in Prussia to Lubeck, and then from Magnopolis into Denmark, ice being built as usual. Olaus notes notice of a frost as severe, still earlier, in 1207, when people rode across from Jathia to Astoria. It is remarkable that the cold has in later winters been more intense.

**EMPLOYMENT OF TIME.** J.VENIS.—Our young correspondent expresses a great desire to improve himself, and wishes to be informed what are the best means of acquiring knowledge. We cannot do better than reply to him in the words of Elihu Barritt, the eloquent advocate for human progress in every department. He says:—"You have heard of blacksmiths who became mayors and magistrates of towns and cities, had men of great wealth and influence. What was the secret of their success? Why, they picked up nails and pins in the streets, and carried them home in the pockets of their waistcoats. Now, you must pick up thoughts in the same way, and fill your mind with them, and they will grow into other thoughts, and you will find them strewn everywhere in your path."

**USEFUL KNOWLEDGE.** Washing.—A little pipe-clay dissolved in the water employed in washing linen, cleans the dirtiest linen thoroughly, with about one-half the labour, and saving full one-half of soap. The clothes will be improved in colour equally as if they were bleached. **Flannels.** Soak flannel before you make it up, as it shrinks in the first washing. Much of the shrinking arises from there being too much soap, and the water being too cool. Never use soda for flannels. **Dyeing.** A painful of ley, with a piece of green copperas half as big as a hen's egg boiled in it, will be a fine nankin dye, which will never wash out, and be very useful for lining of furniture. **Crope.** Skimmed milk and water, with a bit of glue in it, made scalding hot, is excellent to restore old rusty black Italian crope. If clapped and pulled dry, like muslin, it will look as well or better than new.

**ENGRAVING IN MARGOTINTO.** W. S. C.—Prince Rupert is supposed to have discovered this mode of engraving, and it is said to have been suggested to him by observing a soldier once engraving rubbing off from the barrel of his musket the spot which it had contracted from being exposed to the night dew. The prince perceived, on examination, that the dew had left on the surface of the steel a collection of very minute holes, so as to form the

resemblance of a dark engraving, parts of which had been here and there already rubbed away by the soldier. From this he conceived the idea that it would be practicable to find a way of covering a plate of copper in the same manner with little holes, which, being lifted and laid upon the paper, would undoubtedly produce a black impression; while, by scraping away, in different degrees, such parts of the surface as might be required, the paper would be left white, where or there were no holes.

**HOME AMUSEMENTS FOR THE YOUNG.**—In our Note-Book of No. 7, we gave a few hints in answer to various inquiries on the subject of winter evening's employments for the young; and we have since received several letters approving our suggestions. Home is essentially the place where principles of morality and usefulness should be inculcated, and where much that is pernicious, and constantly meets the gaze in the outer world, may be counteracted. The pugnacious propensities of Punch that are exhibited in the streets to admiring juveniles, are scarcely calculated to render them in after life very active members of the Peace Congress. Everything designed to inspire fear, even at the sacrifice of that absorbing feeling, wonder, should be carefully avoided. We would banish from the house all shows that send children shivering to their beds, pursued by a wild array of phantoms as the followers of Jam o' Shanter, at Kirk-Alloway, when he was "o'er the ill of life victorious." Such sights leave a lasting impression, and create a morbid liking for the marvellous and unnatural, wholly opposed to the matter-of-fact realities of life. The magic lantern is a fruitful source of home recreation, and employed to illustrate the sciences of astronomy, botany, entomology, geography, &c., may be rendered highly instructive. But too many uncles and aunts fall into the error of exhibiting to children pictures of "Old Bogies," and other imaginary demons and sprites, which are calculated to supply anything but

## NATIONAL RECREATION.

**TO CLEAN SILK.** B.F.—Dresses cleaned by the following method have not the appearance of being cleaned:—Quarter of a pound of honey; quarter of a pound of soft soap; two wine glasses of gin; three gills of boiling water. Mix and let stand until blood-warm. Spread the silk on a clean table with a cloth under it—there must be no gathers. Dip a nail-brush into the mixture and rub the silk well, especially where there are stains, or the most dirt or spots, and with a sponge wet the whole breadth generally, and rub gently. Then rinse the silk in cold soft water, hang it up to drain, and iron it damp. The quantity stated is for a plain dress.

**HOW TO GET SLEEP.** T. T.—How to get sleep is to many persons a matter of high importance. Nervous persons, who are troubled with wakefulness and excitability, usually have a strong tendency of blood on the brain, with cold extremities. The pressure of the blood on the brain keeps it in a stimulated or wakeful state, and the pulsations in the head are often painful. Let such rise and shake the body and extremities with a brush or towel, or rub smartly with the hands, to promote circulation, and withdraw the excessive amount of blood from the brain, and they will fall asleep in a few moments. A cold bath, or a sponge bath and rubbing, or a good run, or a rapid walk in the open air, or going up or down stairs a few times just before retiring, will aid in equalizing circulation; and promoting sleep. These rules are simple and easy of application in castle or cabin, and may minister to the comfort of thousands who would freely expend money for an anodyne to promote "Nature's sweet restorer, balmy sleep!"

**BEEF STEAKS.** C. R. B.—"Mr. Editor,—Probably some of your readers may smile on seeing directions for serving up what is 'everybody's dish,' but I believe it will be found, with many other good things that are common, there is still room for improvement. With this conviction I leave the following observations in your hands:—Steaks should never be covered after they are laid upon the dish; a cover smother them, and thus they lose their best flavour. Beefsteaks should be eaten as soon as

they are cooked. The best place for steak are the rump and the round. The top part of the round, next to the ribs, is the best, and by pounding it with a mallet may be made as tender as the rump. The steak should be cut nearly as thick as it is long. It is not necessary to grease the gridiron before putting on the steak; indeed, the flavour of the meat is much improved by so doing. Prepare a brisk fire of coals, put your gridiron over it, but do not let your gridiron get hot before you put on the steak. As soon as the sinews become crisp and light, turn the steak. Do not spill the gravy upon the fire. Take up the steak on a hot dish, turn the steak and replace it upon the gridiron. It will require ten minutes to broil it through and brown the outside. As soon as the steak is broiled, place it upon a dish and serve."

**COMMUNICATIONS RECEIVED.**—LORRIMO (the best medicine for strengthening the nerves and exorcising and moderate living).—J. W. S. CONWAY (many thanks for the suggestion offered to us, they shall be attended to).—J. H. (we audaciously avoid any interference in religious or political discussion).—W. W. (apply to an attorney).—N. WAGGAS (the communications of our correspondents always receive due attention).—R. S. C. (it should be expressed "a banker's leather case").—W. W. (thanks for the paper sent).—HAWLEY (we have not heard of the scheme alluded to).—J. M. M. (there is always room for improvement).—FRIEND TO COMPANION had better consult some bird-fancier).—ELKAN M. (cheerful disposition compensates for any exterior defect).—R. M. ("Knight's Excursions from London," in one volume).—JOSSELYN (had better apply to a professed teacher of shorthand).—S. R. (Gobett's French Grammar is an excellent elementary work).—STANISLAV (we do not undertake to return all manuscripts, as this would absorb too much of our time; of course there are some few exceptions to this rule).—VEXAS (will find his question answered in our general notice to correspondents in No. 9).—W. B. (thanks for the suggestion).—SPICULAZION (apply to the excise-office).—E. WYNDHAM (we thank our correspondent, and will attend to his suggestion).—SUBSCRIBER (consult Mrs. Lee's Taxidermy, published by Longman).—R. FARRMAN (write legibly, and on one side of the leaf only).—S. J. ROSE (Dr. Gall himself would have been puzzled to answer the Phrenological question proposed to us; our correspondent must explain his meaning).—AOLAKEMON (procure the music from a publisher, we have no space for the score).—T. TRAVELL (we are obliged by the suggestion of our fair correspondent, and shall be happy to see the papers she mentions).—LORRIMO M. (under commencing "What's in a name," &c.).—J. L. (many thanks for his suggestions).—T. J. SAKSBERG (thanks).—B. (the subject will scarcely admit of insertion).—A. P. (thanks).—R. B. (will find his request attended to).—M. S. (the Home Companion Postoffice will be found to answer every purpose).—T. ARDUS, consult a professional adviser).—WILKEY (we cannot for prudential reasons adopt his advice).—D. O. I. (our correspondent's remarks are excellent, and will receive due attention).—E. M. (we cannot offer any opinion on a subject of such difficulty).—M. N. B. (we have never heard of the work).—W. J. J. (to ensure the rights of citizenship in America, a person must become naturalized).—ROBIN HOOD (should remember the wise adage, first catch the hare and then cook it).—J. A. M. (no subjects of the nature described will be inserted).—J. P. B. ("Brauder's Town and Country Brewing Book," A. F. (we are not sufficiently acquainted with the object of the company to offer an opinion).—UNIAUX (close and hard application).—W. H. (will see his wishes attended to).—B. W. (can send when he pleases).—P. R. S. (consult some hairdresser).—G. J. L. (undoubtedly we shall).—J. W. (a chemist will supply the required article).—H. STANLEY (it would be incorrect).—W. W. W. W. (the cost of a special licence is five pounds, and that of a non-special one ten shillings).—H. HOWARD (Thanks for suggestions).—J. J. (We cannot give any information respecting the Labour Academy).—LORRIMO had better be enlightened by a professional adviser).—NEW SUBSCRIBER (three shillings per quarter).—GUSTAVUS G. (consult the London Directory).—J. MASON (what cannon is alluded to?).—S. S. (will find full instructions for making a galvanic cell in the Family Friend, vol. 4, p. 20, Appendix).—J. S. (apply to the publisher.)

# THE HOME COMPANION:

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 11.—Vol. I.]

SATURDAY, MARCH 13, 1852.

[PRICE ONE PENNY.]

## A WINTER SKETCH.

BY JOHN CRITCHLEY PRINCE.

'Tis eventide, Roofed and shut in from the storm,  
How dear is the hearthstone, so laughing and warm,  
Where my cat sits composing her puritan face,  
And my dog at my feet has his privilege'd place;  
While a friend I have tried, and a wife who is true,  
And a sweet child of promise all smile in my view.  
With the blessing of books, and a spirit to The glory and goodness their pages reveal,  
I cling to the gods of my household—and hark!  
Like a sorrowful outcast that roams in the The wind waileth by, and the fierce, falling rain  
Knocketh loud at my window, but knocketh With the time-cherish'd legend, the heart-waking song,  
With the prattle of childhood that never seems wrong;  
With the voice of my friend in good-humour'd debate,  
And the smile of my wife as she listens sedate.  
I feel the infusion of Heavenly things,  
As the hours hurry past on invisible wings;  
Then a shake of the hand, and a look at the sky,  
Where the stars through a cloud-rift are winking on high,  
And I turn with a satisfied calmness of breast,  
Unto sleep and the dream-life that colours my rest.

'Tis morn, and I mark on my dim lattice-pane,  
But yesterday dull'd with a deluge of rain,  
Quaint pictures of wavelet, and tendril, and curl,  
[pearl:] Array'd in the moon colour'd tints of the And woodland, and waterfall, temple, and tree,  
And shapes of the coralline depths of the sea,

In deep confusion most cunningly toss'd  
By the fanciful pencil of frolicsome frost.

I am out (who would prison his senses by walls,  
When health holy nature so lovingly calls?)  
I am out, and my vigils and my vision are rife

With a positive feeling of glorious life;  
For my step is a triumph, my breathing a joy,  
[alley:] My thoughts a sweet madness unmixed with  
I am out in the country, and who will gainsay

That pleasure and profit await me to-day?

I am walking the woodlands, whose tribe of old trees,  
[In vain:] Erect in adversity, baffle the breeze;

Where the foathery pine, and the weather-warp'd oak,  
Seem bent with the weight of their white winter cloak;

Where berries, like ruby-drops, nestle between  
The leaves of the holly bough, glossy and green;

Where the pool hath no ripple, the river no And the petrified rill hangs aloof from the ground;

Where the sociable robin, alone on the spray,

Salutes my ear with his querulous lay,  
And shaketh to earth, by the stir of his wings,

Such jewels as deck not the ermine of  
While the scene hath a beauty no words can disclose,

As it lies in a solemn, but splendid repose.  
And the whole realm of majesty, silence, and light,

In the trance of mid-winter, appears to my Like the worship of mute and manigabe things,

O'er-shadow'd and hush'd by Omnipotent And my soul in accordance with nature lies bare,

O'erburden'd with wordless, but eloquent prayer.

## THE STORY OF ERIC THE FOURTEENTH, KING OF SWEDEN.

FROM THE SWEDISH CHRONICLES; BY W. JONES.

GUSTAVUS VASA, the liberator of Sweden, dying in 1560, left three sons, Eric the Fourteenth, John the Third, and Charles the Ninth. The eldest was remarkable for his comely and handsome person. He had also a brilliant and poetical imagination; but his temper was exceedingly hasty and violent.

Capable of the most virtuous actions, and the greatest crimes, King Eric, soon after his accession to the throne, was one day passing through the great market-place at Stockholm, when he observed a maiden of singular beauty seated in front of a small shop stored with fruit and flowers. She presented a nosegay to the monarch, who, struck with her graceful appearance, directed one of his officers, on his return to the palace, to make some inquiries respecting her.

"Sire," observed the messenger on his return, "Karine Magnus is the daughter of an old soldier. She is lovely indeed, but wholly uneducated. It is delightful to observe her; but the moment she speaks, the charm is lost."

"The work is then incomplete, is it?" returned the disappointed monarch. "Well, let the young Karine be sent away until she becomes perfection itself. See that she is conducted to a suitable dwelling, where she can be brought up as a princess; and let her be instructed by the most talented professors in Sweden. When her education is finished, I will marry her."

\* History informs us that Eric, before his love for Karine, had been a suitor to Queen Elizabeth. A correspondence between the sovereigns proves this, and the letters are still preserved in the library at Upsal. John, the king's brother, had been sent to London, charged with this negotiation. Tradition affirms that an order had been given to assassinate Robert Dudley, Earl of Leicester, by whose influence this match was said to be thwarted, but Gryllensierne, who was employed on this mission, refused to execute it.

The commands of the monarch were promptly obeyed; and Karine, by dint of great application and tuition, became a model of talent, beauty, and virtue. She was then introduced to Eric, who became enthusiastically attached to her. In vain the royal family and his councillors endeavoured to dissuade him from this marriage; their opposition only tended to increase his passion; and, in spite of all remonstrances, he was united to Karine; who, from a simple child of the people, became Queen of Sweden.

Eric was a poet and musician. Every evening when the duties of his high position permitted him, he would proceed with his lovely companion to Lake Malar; and, seated at her side in the boat, he would take his guitar and improvise verses to Karine; several of which have been preserved from the ravages of time.

The following is an almost literal translation of one of these poems:—

"The skies at thy birth had denied thee its treasures,  
Nor riches, nor lineage, yet maidens wreathline;  
What matters it now? Thou art sharing my pleasures,  
The queen of my bosom, and all that is mine!"

"Thou hast brought to thine Eric a blessing far greater,  
Outvying in lustre gold, silver, or gem;  
Of love thou hast been the delightful creator,  
Enchelling with glory the proud diadem.  
Let others seek happiness where they think best,  
My idol is Karine, who dwells in my breast."

A fatal destiny had placed among the councillors of King Eric, an officer of the court, named Goran Peterson, who had the reputation of being the first astrologer in Europe, and entirely possessed the confidence of his royal master. The king was a firm believer in the dark science; and the unworthy favourite, making use of the subterfuges of his art, had gained by degrees such influence over the mind of the monarch, that he may be said to have governed Sweden.

Peterson, detested by every one, and addicted to gross immorality, was one of those men who prove by their actions the existence of God, by displaying the worst attributes of the evil spirit; for, without the beneficent aid of religion to counteract wickedness, what would the world become?

Three persons alone were able to compete with him in their power over the king. These were Prince John, the brother of Eric; Nils Sture, one of the greatest nobles in the kingdom; and the queen herself.

"Sire," said Peterson one day to the monarch, "while I was yesterday contemplating the starry host, I observed your planet on the point of disappearing entirely. 'You are menaced with some real danger.'"

"What is it? Explain yourself, Peterson."

"Another star is rising in the heavens; and, sire, it has great chances of success. Your crown is in peril!"

"Where is this star?"

"Near the throne, sire."

Prince John had often been an obstacle to the accomplishment of the imperious caprices of his brother, and had opposed his marriage to Karine. He had also evinced a profound contempt for the astrologer and his pretended art.

Eric doubted not for a moment that Prince John was the fatal star by which his own was menaced to be superseded, and he took advantage of a violent altercation that ensued shortly afterwards between them, to order his brother into confinement in the dungeons of Gripsholm.

Nils Sture was the next victim of Peterson. He belonged to one of the most powerful families in Sweden. Stenon Sture had governed the kingdom as Regent in 1477, before Gustavus Vasa mounted the throne; and Swante Sture, the father of young Nils, was the brother-in-law of the last king.\*

Peterson, to effect the ruin of the young nobleman, caused calumnies against him to be justified into the ears of King Eric. Nils had openly expressed an enthusiastic admiration of the queen, and her virtuous conduct. This was magnified by persons employed for that purpose, into a mutual attachment between the royal lady and her subject. Nor was this all. A great conspiracy was suddenly pretended to be discovered, and reports were spread that the Sture family coveted the crown. It was insinuated that Swante Sture was the brother-in-law of Eric, and numerous partizans had already declared for Nils. The horizon was dark and troubled. These deceptions were successful, and the violent Eric believing them, consulted the astrologer.

\* Swante Sture loved Margarita Leyouhufoud, who returned his affection. He was seventeen and the maiden had attained her eighteenth year, when Swante was obliged to undertake a voyage, on his return from which he found Margarita was married to King Gustavus Vasa. Troubled in mind and desperate, he forced his way into the palace, sought the Queen, and fell on his knees before her. The monarch entered the apartment at this moment. "What means this?" he demanded, sternly. "Sire," replied Margarita, with admirable presence of mind, "Sture is passionately in love with my sister, and on his knees has demanded her in marriage from me; but I dared not give my consent without your majesty's permission." "I grant it to him," replied the monarch. Sture thus saw himself compelled to become the brother-in-law of the king.

Peterson mounted to his observatory, and affected to read in the skies that Sture would occasion misfortune to the monarch, and he swore solemnly that the prediction was correct. Eric immediately caused the unhappy Nils to be seized, but unwilling to inflict the last punishment, he caused the young nobleman to be degraded.

On the fifteenth of January, 1566, Nils Sture was accordingly conducted to Stockholm, to the same public place called Star-Torget, where the tyrant Christian, King of Sweden, had ordered the execution of the principal noblemen in the kingdom, including the father of Gustavus Vasa, to be beheaded. Nils was clothed in a ridiculous costume, and had a crown of straw placed on his head. A large open book was placed in his hands, upon which was inscribed—"Register of all the dignities and riches of Sture." He was afterwards seated in a miserable house, and followed by the public executioner, was paraded through the streets of the city, between files of the vilest population, who had been bribed to maltreat him and cover him with mud. The handsome and valiant Sture, worn down with misery and shame, struggled in vain to liberate himself. The soldiers held him down, bound hand and foot to the horse. The blood gushed from his mouth and eyes, but King Eric remained pitiless.

The Queen now became the chief object of hatred to Peterson, not only because her influence over the king continued unaltered, but she had on several occasions expressed great horror at the conduct of the astrologer. It remained to be seen which of the two would obtain the greatest ascendancy over the weak-minded monarch. Peterson had one great advantage, for he guided the helm of state, and, in fact, governed Sweden. The king never performing any action without first consulting his unprincipled adviser.

Nils Sture and his father were imprisoned in the dungeons of the castle of Upsal. At the suggestion of Peterson, King Eric went to pass a few days in the magnificent residence constructed in the same building by Gustavus Vasa, and he was accompanied by the Queen and his court.

Plunged in profound grief the mother of Nils Sture could only think by what means her husband and her son could be released from captivity. She was aware that the people were murmuring at the tyranny of Peterson, and that a party might easily be raised against Eric; but she knew also that such proceedings would be rejected with scorn by the noble Sture. While she was reflecting, an anonymous letter reached her in secret, containing the following words:—

"Address yourself to the Queen, the prisoners. The king always is desirous of saving Sture, wherever is

reference to him and if she is re-

Who had written this letter? Ah! if the mother of Nils had been aware that it was the work of the infamous astrologer, what ill might have been averted. Conceiving that such advice came from a friend, she hastened at once to the Queen.

"Sire," observed Peterson to King Eric as he watched the monarch, and beheld two plaid league is forming against your majesty. I da-

"Speak, I command you!"

"Sire, the Queen is in the plot!"

"Silence, miserable wretch; what thy fearful science hath announced to me, I know. Art thou aware that men speak to the public voice is like a priest who believes his father's voice? Away from me!"

An officer of the palace announced to the Queen:

"Did her enter; she is my pardon-angel!" exclaimed Eric enthusiastically.

"Then fate may do its worst," murmured the astrologer, gloomily.

"Dear Karine," said the monarch, when he was alone with the Queen, "hast thou any favour to command? Speak freely, and thou shalt have thy desire gratified. I place thy pretty head under this crown of ears; and I seem to be girdling thee, my most charming diamonds of love and joy. What is thy wish?"

"Sire, pardon the miserable Sture!"

"Pardon? He could not control his anger. His gloom became more and more oppressive. The astrologer pointed to his mind, and they seemed to be in the midst of his torches of fire and vengeance. With an ironical laugh of scorn and triumph, he exclaimed, "Ah! you loved Sture, madam!"

Karine drew back from her furious husband, who added, in a terrible voice—"Hence! You desire his pardon. He shall die!"

The terrified Queen quitted the apartment hastily, well aware, by experience, that it was useless to reason with the King in these fits of obstinate madness. She was overcome with grief, on reflecting that instead of restoring Nils Sture to freedom, she had been the means of his condemnation to death; for she knew the desperate resolution of Eric would lead him to put the threat into execution. One part of the misfortune of Sture had arisen from his expression of respect to himself; and he could not but feel sympathy for his sufferings. Sture also, faithful to the dictates of chivalric honour, was still attached to his sovereign, notwithstanding the cruelty and hatred of the King towards him. Nils accused the astrologer alone for what had passed. Karine could not forbear admiring these noble qualities, and wishing to repair the evil she had unintentionally caused, to save his life became now her absorbing feeling; and in this she was not actuated by love, but by motives of duty and justice.

One of the Queen's attendants was in the interest of Peterson, who had

purchased her services. This person was acquainted with all the secret sufferings of her royal mistress.

"Madam," she observed to Karine, one day, "you have an opportunity of liberating the prisoner this evening. By a fortunate hazard, the officer who commands the guard stationed at the cell of Sture, is my affianced husband. Come yourself this night to the vaulted chamber where he keeps watch, and the captive will be restored to freedom. He has sworn it upon his honour."

"I will not fail to be there," replied the unsuspecting Queen, in a low and decided voice.

Strong in the purity of her motives, she implored the protection of Heaven.

The evening shadows gathered around the castle. Who is that man, who, mounted on an iron-grey charger, crosses with a rapid pace the plains of Upsal? He is clad in armour of a funereal hue, and the black plumes of his casque wave in the wind. He might have been taken for Hamlet in his madness, pursued by some phantom. The horseman proceeded through the increasing darkness towards the tomb of Odin; and reached the spot where the deity was supposed to repose, who drinks mead in Walhalla from the skulls of his enemies.

"Vengeance!" shouted the monarch (for it was Eric), until the walls of the old temple, where human sacrifices were wont to be offered formally, seemed to shake with the cry. The king seated himself on the ground in a state of great excitement. He fancied a dagger of fire was suspended over his head, and that unearthly beings repeated his threat of vengeance. Was it the echo from the runes? or could it be the accents of Odin himself?

The monarch at this moment raised his head, and a man was standing before him. It was his evil genius, Peterson, the astrologer.

"Who called thee? Retire instantly!" exclaimed the exasperated Eric.

"Thou art sentencing new murders, art thou not? I will have no more blood shed—no hit shall be sacrificed. Hence!—away!"

"When you may have the will to order, you may no longer have the power," returned Peterson, coldly.

"I do not understand thee."

"Why explain my words when it will be too late? I am silent."

"Speak, and be brief,—I command thee."

"Be it so. The Queen, at midnight, intends to visit the prison of Sture, and unlock with her own hands his fetters."

"Thou!"

"You shall see for yourself, if you will take the trouble."

"When?"

"The moment approaches. Sture once at liberty, there will be revolt throughout Sweden."

"Oh, then, I will follow thee."

King Eric retraced his steps to Upsal, murmuring at intervals on the way, "What ill might have been averted. Conceiving that such advice came from a friend, she hastened at once to the Queen."

They arrived shortly before midnight at the gate of the castle. The monarch dismounted, and took his position in a hidden recess, near the cell of Sture. Where were the soldiers of the guard? The officer in command had taken care to remove them. The treason appeared evident to the King, who, with Peterson at his side, crept closer to the wall, and waited impatiently, his hand grasping the dagger in readiness.

The white figure of a woman advanced slowly down the passage. She held a lantern in one hand, and a bunch of keys in the other. Her step faltered, for she was alone, and Eric thought she might have left her companion behind, in order to effect her object more securely. The figure approached the door of the cell, and the light falling on her features, partly concealed by a veil, discovered Karine. She turned the key in the lock, opened the door, and was about to enter, when an iron grasp seized her arm.

"Wretch!" cried Eric, his poignard gleaming in the light.

The Queen uttered a cry of terror, and fell on her knees, while her veil, falling back, exposed her countenance deadly pale with terror. Eric raised his guilty hand to strike, but Karine was at his feet, her hands joined, and in an attitude of supplication, that was not, however, that of a criminal. In this situation she appeared to him more beautiful than he had ever beheld her.

"I am only guilty of pitying misfortune," murmured the Queen, in a low and tremulous voice; "strike, but I shall die pure and blameless."

"No, thou shalt not die, faithless though thou art," replied Eric, furiously. "Coward that I am, I love thee still! Fly without delay! Hence! and escape this dagger."

Karine arose and fled.

"Sture, now for thy turn!" exclaimed the monarch, bursting into the cell of his victim.

A small lamp feebly lighted the interior. Nils suddenly perceived before him what appeared to be a black phantom, but speedily recognised his sovereign.

"What is thy purpose, Sire?" he said.

"Death!"

Eric struck the young noble without pity, but the dagger in the blind fury of the king entered the arm of Nils Sture. The sufferer, drawing the weapon forth, kissed it, and then returned it to Eric, saying—

"Mercy, Sire, thou art deceived. None love thee better than I do."

But, mad with rage, the monarch felled him to the earth, where Nils expired instantly.

A profound silence succeeded the last imprecation of hatred and the sigh of death. Eric gazed for a few moments stupefied at the body of his victim. Horror, fear, and remorse took possession of him. He suddenly remembered

\* In the cathedral of Upsal may still be seen the blood-stained dress of Sture, and the marks inflicted by the dagger of King Eric.

that in the next cell Swante, the father of the murdered Nils, was confined, and running there, he fell on his knees before the noble old man, exclaiming—  
 "Stare! Stare! forgive me."  
 The reeking poignard was still in his hands, and his clothes were stained with blood.

"I will pardon everything," replied the unhappy father, "provided you have not killed my son."  
 "It is just," said Eric, speaking to himself in a tone of bitter reproach; "this man will not, cannot pardon me. I am cursed alike by Heaven and by man."

He arose from his kneeling posture, and threw away his casque, beneath which his head was almost bursting with fever. The black plumes were trampled under foot, and casting off his armour he quitted the castle at a rapid pace, bareheaded, and in his under garments only, traversing field and woods like a madman. Peterson took care not to follow him.

One of his principal officers met the king in this condition by accident.  
 "Go to the prison," cried the monarch in a decided tone to the soldier, "and order all the inmates to be slain."  
 The same night he was obeyed.

The old governor of Eric, the venerable Burraeus, on being informed of the king's frenzy, followed him in the hope that his voice would reach him to reason. Several soldiers accompanied the patriarch. Eric, on beholding him, ordered his attendants to seize and slay his former tutor.

Burraeus was massacred.

"Leave me now," exclaimed the king, in a melancholy voice. "I am contented, for Sture is avenged. I have made a glorious sacrifice of blood to his name, and this will atone for his death."

During three days and nights the monarch wandered about the country, refusing nourishment and shelter, and without closing his eyes. The fourth day he was discovered lying insensible at the foot of an isolated rock, and he was removed to the palace in a state of mental alienation.

"I am like Nero," he constantly repeated, "for I have also killed my Burrhus."\*

Karine could induce Eric to take some food, and by her tender attentions reason partially returned. Her voice, like the harp of David the Saint, calmed his excited mind. He could only sleep when alone, and now that Karine had justified her conduct in her conduct towards him, the king gave his whole affections to her, and, by her influence, distributed rewards to his surviving partisans, and the distemper.

His great desire was to expiate his crimes.  
 "Karine," he observed one day to the Queen, "to gain the pardon of Heaven, I will curse me my life no longer to love and pleasure, but to the glory of Providence and immortality. For although deeply sinful, I believe in God sincerely; and a soul without such faith is like the world without a sun."

He visited the widow of Sture, and loaded her with honours and riches. None of his present were missed, but they were received coldly, and without one word of gratitude.

"Demand," said King Eric to her, "what yet thou wilt, and it shall be met."

"Gold, plenty of gold," replied the widow, "and other officers."

Prince John, his brother, was still a prisoner in the castle of Gripsholm, but an order was now sent for his release. Peterson remonstrated with the king, but in vain.

"Silence," cried Eric, "thy part is played. I have spared thy life, and in return desire no advice from thee. Bid me of thy presence instantly."

The astrologer was driven ignominiously from the court. Once in freedom, Prince John had but one absorbing thing, that of vengeance. The people murmured against Eric, whose crimes and madness had terrified the country. The embers of revolt, long smouldering, required only a spark to flame forth.

"The hour of justice has sounded," said the widow of Sture to Prince John, "you have only to say the word, and Sweden will rise to a man in thy cause, and crush the man of blood. To arms! The throne is yours!"

"Money is required," replied John.

"My coffers are filled with gold at your service."

"From whence hast thou these riches?"

"They were the gift of Eric."

Shortly after this interview, the king's brother, at the head of a numerous army, marched as a conqueror to Stockholm. The treasures given by the mother of Nils Sture were melted at the mint, and new coins, with the effigy of John the Third, were distributed among the rebels, and called blood-money.† John overcame every obstacle, and vanquished Eric, who was unable to meet the storm. Abandoned, betrayed, and delivered into the power of his brother, the unhappy monarch was, in his turn, sent a prisoner to the castle of Gripsholm, where Prince John had been confined. But the latter had been treated, while there, with the respect due to his rank, and lodged in magnificent apartments. Eric, on the contrary, was incarcerated like the meanest felon, in a frightful dungeon. Weary and sad were the hours of captivity. Days and months passed on, and the unhappy monarch, not allowed to quit his cell, lost his health. At length the guard placed at his door, taking pity, permitted him to walk in a gallery overlooking the beautiful lake Melar.

This prospect, enchanting as it was, added to the sorrowful reflections of King Eric; for it was on the quiet waters of this lake, in the happiest period of his life, he had chaunted his songs in honour of Karine and love. It was there, seated at her side in a boat, he had composed the lines—

"Thou hast brought to thine Eric a blessing far greater,  
 Outvying in lustre gold, silver, or gem:  
 Of love, thou hast been the delightful creator,  
 Encircling with glory the proud diadem."

One evening, while watching from his solitary place the magnificent rays of the departing sun, he observed a small boat gliding over the waters towards the spot where he was seated. The notes of a lyre sounded on the breeze. He listened, and like Richard of the Lion Heart, he recognised the song of past days. The words, the music, and the instrument, were his own.

"My idol is Karine, who dwells in my breast!" was repeated by a voice that sounded familiar to him. A gleam of hope and joy brightened his heart. The boat contained a female form, clothed in black; and although he could not distinguish the features of the stranger, he felt persuaded she must be his wife. This was soon confirmed by a low sweet voice calling from beneath the gallery, "Eric, I am Karine!"

A few moments afterwards the door of the prison opened, and the Queen sank into his arms.\*

By dint of prayers, entreaties, and bribery, Karine had succeeded in obtaining permission to behold her husband. The transports and delight of this meeting may easily be conceived.

"Listen," said the Queen, in a subdued voice. "A hope is still left us. Some noble and faithful warriors, armed in your cause, have sworn to save you or perish. At their head is the gallant Charles de Mornay."†

"The chief of my Scotch guard!" interrupted Eric.
